**Matthews**, STANLEY (b. 1913). English footballer. Born at Stoke-on-Trent, he played for the North against the South in the schoolboys' Association football trials in 1927. When 16 he joined Stoke City and played for the club reserve team 22 times in his first season. In 1930 he signed professional forms with Stoke City, and quickly attracted attention as an outside right, being judged one of the finest exponents the game has ever seen. He first played for England when 19, and by May, 1950, had been capped 57 times (including war-time appearances). In 1947 he joined Blackpool.

**Matthews**, WALTER ROBERT (b. 1881). British divine. Born in London, he was educated at Wilson's grammar school, Camberwell, and King's College, London.

Matthews was appointed lecturer in philosophy at King's College in

W. R. Matthews,  
British divine

1908, and in dogmatic theology, 1909; dean of the theological faculty and professor of the philosophy of religion, 1918. He was chaplain to Gray's Inn, 1920, and to the king, 1925. Celebrated as a preacher and lecturer, when dean of Exeter, 1932–34, he was chosen to succeed W. R. Inge as dean of S. Paul's, 1934. He was created K.C.V.O. in 1935. Matthews's published works include *Studies in Christian Philosophy*, 1921; *God and Evolution*, 1926; *Dogma in History and Thought*, 1929; *Seven Words*, 1933; *Our Faith in God*, 1936; *Teaching of Christ*, 1939; *The Foundations of Peace*, 1942; *Strangers and Pilgrims*, 1945.

**Matthias**. Saint and apostle. He was chosen by lot (Acts 1) to fill the place among the disciples left vacant by the death of Judas Iscariot. Tradition identifies him with the publican Zacchaeus. His festival is Feb. 24, a red-letter day in the Church of England calendar.

**Matthias** (1557–1619). Emperor of the Holy Roman Empire. A younger son of Maximilian II, he was born in Vienna, Feb. 24, 1557. Governor of the Netherlands 1578, Austria 1593, and Hungary 1605, he displayed a pacific and tolerant outlook. Recognized heir to the imperial throne, he seized the kingdom of Hungary, also Austria and Moravia, in 1608, and was chosen king of Bohemia in 1611. Becoming emperor next year on the death of his brother Rudolph, he soon withdrew from active government. The Thirty Years' War had just opened when he died childless on March 20, 1619.

**Matthias Corvinus** (1443–90). King of Hungary. Son of John Hunyadi, he was born at Klausenburg (Cluj), March 27, 1443. On the death of his father he was imprisoned in Prague by Ladislas V, but after the latter's death was elected king of Hungary, Jan. 29, 1458.

He undertook a crusade against the Turks, defeated them, cap-

Matthias Corvinus,  
King of Hungary

tured Jassy, and drove the Mahomedans from every part of his realm. In 1468, at the command of Pope Paul II, he declared war on George Podiebrad, king of Bohemia. A long campaign followed, during which Matthias was elected king of Bohemia, but the title was never confirmed by the pope, and did not become effective. Matthias carried on a struggle with the emperor Frederick III, and in 1485 entered Vienna, which he made his capital, the whole of S. Austria as far as the Adriatic falling into his hands. He died at Vienna, April 6, 1490. Matthias founded Budapest university and collected a great library.

**Matthiesen**, AUGUSTUS (1831-70). British chemist. Born in London, Jan. 2, 1831, he became lecturer in chemistry at S. Mary's Hospital, 1868. He made valuable researches into the properties of various alloys, and was the first to isolate calcium and strontium. He committed suicide, Oct. 6, 1870.

**Matting**. Coarse fabric, made of hemp, fibre, straw, grass, and similar materials, for use as a floor covering, or sometimes for packing and kindred purposes. The principal sources of the European supply are India for coconut and plaited straw matting, and China and Japan for the finer and more closely woven varieties. See Coir.

**Matto Grosso** (Port., dense forest). The second largest state in Brazil. Bordering Bolivia and Paraguay, it is partly a plain, and marshy in the S.W. It is traversed by ranges of low mts. and many rivers, and contains a number of lakes. There are large forested areas in which medicinal plants abound; the state is rich in minerals, silver, gold, lead, iron, platinum, salt, and diamonds being found. Coffee, sugar, tobacco, and maté are produced, rubber is exploited, and cattle are reared. The capital is Cuyaba, but Corumbá is the chief commercial centre. Area, 532,210 sq. m. Pop. 427,629.

**Maturin**, CHARLES ROBERT (1782-1824). Irish novelist and dramatist. Born in Dublin in 1782, he was educated at Trinity College and entered holy orders. He published his first novel, *The Fatal Revenge*, in 1807 under the pseudonym Dennis Jasper Murphy. It was modelled on Walpole's *Castle of Otranto*, and was followed by other gruesome tales. Melmoth the Wanderer (1820) is considered his masterpiece and was greatly praised by Scott. Balzac published a sequel in 1835 under the

title of *Melmoth Reconcilié à L'Église*. He also wrote plays, of which the most notable, *Bertram*, was produced by Kean at Drury Lane in 1816. Maturin died Oct. 30, 1824. His biography by N. Idman was published in 1924. Consult *Letters to Lady Ewan-Smith*, ed. J. Bramforth, 1927.

**Matz**. River of France, in the dept. of Oise. It is a tributary of the river Oise, starting N.W. of Lassigny and joining that river at Montmacq. See Montdidier.

**Mau**. Two towns of India, in the Uttar union. One lies in the Jhansi dist. and the other in the Azamgarh dist. The first, 117 m. S.W. of Cawnpore, manufactures cloth, and is an important trading centre. Pop. 16,000. The second is 55 m. N. E. of Benares, and manufactures tussore silk. Pop. 30,000.

**Mauberge**. Fortress and town of N.E. France, in the dept. of Nord. It is situated on the Sambre, close to the Belgian frontier.

Mauberge arms

Hardware and metal goods are manufactured. The town was besieged in 1793, but was relieved by the battle of Wattignies. It was the capital of Hainault, but became French in 1678. Stevenson describes the town in *An Inland Voyage*. Pop. 20,859.

Strategically, Mauberge was one of the most important junctions in N. France in the First Great War, five rly. lines meeting there to connect with the French and Belgian coalfields. The fortifications consisted of 15 detached forts, sited 2 to 2½ m. from the town and mounting 435 medium guns. Mauberge was the advanced base of the B.E.F., and after the Allied retreat large numbers of stragglers joined the French garrison of 30,000. The Germans invested it on Aug. 25, 1914, and after a heavy bombardment it surrendered on Sept. 8. The garrison had twice as many troops as the Germans, and the French commander was court-martialled for his conduct of operations, but acquitted. Mauberge was reoccupied by the British on Nov. 9, 1918.

Between the wars Mauberge became one of the points fortified in the expansion towards the W. of the Maginot line, and when the Germans invaded France in May, 1940, it played a vital part in the consequent "battle of the bulge." It formed one end of the salient created in the Allied line, the other end being at Sedan, and fell to enemy storm troops on May 21 after three days of bitter fighting. During the assault the French lost most of the armour concentrated for a general counter-attack against the German advance. Mauberge was liberated during the rapid Allied advance through N. France in Aug.-Sept., 1944.

**Maubin**. Dist. and town of Burma, in the Irawadi division. The dist. comprises an inland portion of the great delta, and has almost the densest pop. in Burma. Rice is the chief article of cultivation. The town is a fishery centre, and is built on low ground less than a foot above high-water mark. Area, 1,648 sq. m. Pop.: dist., 428,092; town, 9,000.

**Mauch, KARL** (1837-75). German traveller. Born at Stetten, Württemberg, May 7, 1837, most of his life was spent in the exploration of Africa. In the course of various journeys he found two extensive goldfields in 1867, and discovered, about 10 m. from Victoria, the remarkable ruins of Zimbabwe, which have been identified by some with Ophir, although it is now agreed that they are of comparatively recent date. He died April 4, 1875. He was the author of *Travels in the Interior of South Africa*, 1872.

**Mauchberg**. Mountain peak of the Drakensberg chain in S.E. Africa. It is in the Transvaal, alt. 8,700 ft. It is situated 15 m. E. of Lydenburg, and is the highest point in the Transvaal.

**Mauchline**. Parish and town of Ayrshire, Scotland. It is 9 m. S.E. of Kilmarnock and has a

Mauchline, Ayrshire. Jolly Beggars hostelry, a famous Burns landmark  
Valentine

riety station. Important cattle and horse markets are held, and fancy articles and snuff boxes are manufactured. Mauchline is the scene of Burns's Jolly Beggars and Holy Fair, and 1 m. to the N. is Moss-giel, the farm at which the poet lived from 1784 to 1788. Pop. 2,484.

**Maud.** Poem by Alfred Tennyson. First published in 1855, it was described by its author as "a little Hamlet, the history of a morbid poetic soul, under the blighting influence of a recklessly speculative age." In varied verse the hero records his love for Maud, his acceptance, and then his duel with her brother. Maud dies and the lover, having passed through madness, goes out to fight in the Crimean War. Though unequal, the poem includes some of its author's best remembered lines.

**Maud** (1869-1938). Queen of Norway. Maud Charlotte Mary Victoria was born Nov. 26, 1869, third daughter and youngest child of Edward VII and Queen Alexandra. On July 22, 1896, she married Prince Charles, son of the then Crown Prince of Denmark.

Maud, Queen of Norway

On Norway's separation from Sweden in 1905, Charles was chosen by popular vote as king of Norway, reigning as Haakon VII, and Princess Maud went with him as his queen. Among more usual accomplishments, she was a talented chess player. Her death occurred in a London hospital, Nov. 20, 1938; her body was taken to Oslo in the British battleship Royal Oak, and laid to rest in the chapel of the castle of Akershus. See Haakon VII.

**Maunder, Aylmer** (1858-1938). British author and translator.

Born at Ipswich, Mar. 28, 1858, he left Christ's Hospital at the age of 16 to attend the Lyceum at Moscow, and a great part of his early life was spent in that city, first as a tutor and later as a business man. He

Aylmer Maunder, British author  
Elliott & Fry

made a close study of Tolstoy, whom he knew intimately and whose works he translated into

English. He also published translations of Turgenev and Dostoevsky, in some of which his wife collaborated with him. In 1897 he helped to arrange the emigration to Canada of the Doukhobors (*q.v.*). His *Life of Tolstoy* in two volumes appeared 1908-1910; he also translated Count Sergius Tolstoy's *The Final Struggle*. He died Aug. 25, 1938.

**Maude, Cyril** (b. 1862). British actor. Born in London, April 24, 1862, he was educated at

Cyril Maude, British actor

Charterhouse, and studied for the stage under Charles Cartwright. He left England owing to ill health, and later appeared on the American stage, making his New York debut, 1884. His first London appearance was in *The Great Divorce Case*, 1886, and after joining Wyndham in 1890 he played in *London Assurance* and *The Second Mrs. Tanqueray*, 1893. He went into partnership with Frederick Harrison at the Haymarket, 1896-1905, and the following year opened the Playhouse (*q.v.*). One of his most famous parts was that of the title-rôle in *Grumpy*, 1914. He also played Peer Gynt in a silent film version of Ibsen's play. Later successes included *Lord Richard* in the *Pantry*, 1919; *Aren't We All?* 1923; *Once a Husband*, 1932. President of the R.A.D.A., 1936, he played *Sir Peter Teazle* in the quarrel scene from *The School for Scandal* at the Haymarket on the occasion of his 80th birthday, and subsequently was heard in a number of broadcast plays. He published his reminiscences in 1927. Maude's first wife was the actress Winifred Emery (*q.v.*).

**Maude, Sir Frederick Stanley** (1864-1917). British soldier. The son of General Sir F. Maude, V.C., a member of an Irish family, he was born June 24, 1864. Educated at Eton and Sandhurst, he joined the Coldstream Guards, 1884, and in 1885 served in the Sudan. Having passed through the staff college, he joined the staff in 1897. He served in S. Africa, where

Sir Stanley Maude, British soldier  
Swaine

he was in the operations of Lord Methuen's force, and afterwards in the Transvaal: there he won the D.S.O. During 1901-04 he was military secretary to the governor-general of Canada, after which he was for a time at the War office. Staff officer at Plymouth, 1906-08, he was assistant-director of the territorial force, 1909-12.

When the First Great War broke out, Maude was on the staff of the 5th division, with which he went to France. In Oct., 1914, he was appointed to command the 14th brigade, but soon returned wounded to England. He took command of the 13th division, with which he went in 1915 to Gallipoli, Egypt, and Mesopotamia. In Gallipoli he shared in the withdrawal from both Suvla and Helles. In Aug., 1916, Maude was selected, after the failure to relieve Kut, for the chief command in that area. He reorganized the forces there, and in Dec., 1916, began his advance. The Turks were driven from Kut, and a successful campaign ended in Maude's entry into Bagdad in March, 1917. After a pause for preparation came another forward move, marked by a victory at Ramadiah and other successes. Again in Bagdad, Maude was struck down suddenly by cholera, and on Nov. 18, 1917, he died. Parliament voted £25,000 to his widow. A man of tact, patience, and skill, Maude ranks by common consent as one of the successful generals of the First Great War. A crucifix erected in the churchyard of S. Paul's, Knightsbridge, was unveiled to his memory in Jan., 1921, and an equestrian statue in Bagdad in 1922. See Mesopotamia, Conquest of. *Consult* Life, Sir C. E. Callwell, 1920.

**Maudit, MONT.** Lofty peak of the Mont Blanc mass, between Mont Blanc and Mont Blanc du Tacul. Its alt. is 14,665 ft. The ascent is made from the Glacier du Géant. See Aiguille du Géant.

**Maudslay, HENRY** (1771-1831). English mechanic. Born at Woolwich, Aug. 22, 1771, he became a blacksmith at Woolwich arsenal, and when 18 was engaged by Joseph Bramah to construct models of his inventions. Later he established his own business as manufacturer of machine-tools. His inventions included the slide-rest, which, with a number of other improvements, revolutionised the lathe, and the first screw-cutting machine. He died Feb. 14, 1831.

**Maufe, EDWARD** (b. 1883). British architect. Born at Bexley Heath, Kent, he was educated at

S. John's College, Oxford, and after the First Great War he became principal architect to the Imperial War Graves commission. Member of the Royal Academy Replanning Committee, he was awarded the Royal Gold Medal for architecture in 1944. His chief works included Guildford cathedral, buildings for Trinity and S. John's colleges, Cambridge, and S. John's college, Oxford; Morley College, London; the "chapel" in Broadcasting House, London; Festival Theatre, Cambridge; and the churches of S. Saviour's, Acton, and S. Thomas's, Hanwell. He was also architect for the reconstruction of Gray's Inn and Middle Temple, London. He was elected R.A. in 1947.

**Maugham, FREDERIC HERBERT MAUGHAM, VISCOUNT (b. 1866).** British lawyer. From Dover College he went up to Trinity Hall, Cambridge, where he was president of the Union and rowed in the university eight, 1888-89. He became a barrister in Lincoln's Inn, 1890, took silk in 1913, and in 1928 was appointed a judge of the high court of justice, in the Chancery division. He was a lord of appeal in ordinary, 1935-38 and 1939-41, receiving a life peerage; from 1938 to 1939 he was lord chancellor. He retired in 1941. He published *The Tichborne Case*, 1936, and several books on Hitler and the Nazis. His brother was Somerset Maugham.

**Maugham, WILLIAM SOMERSET (b. 1874).** British writer. He was born in Paris, Jan. 25, 1874, and educated at King's school, Canterbury, and Heidelberg university. He qualified as a doctor at S. Thomas's hospital, and in his first year of practice wrote *Liza of Lambeth* (1897), the success of which led him to abandon medicine for literature. Many other novels followed, of which the most distinguished were *Of Human Bondage*, 1915; *The Moon and Sixpence* (partially based on the

life of Gauguin), 1919; *Ashenden*, 1928; *Cakes and Ale*, 1930; *Don Fernando*, 1935; *The Razor's Edge*, 1944; *Catalina*, 1948. He also wrote many short stories and books of travel, such as *The Gentleman in the Parlour*, 1930, which reflected his interest in the Far East. Maugham made a considerable name as a dramatist, his witty social comedies, such as *A Man of Honour*, 1903; *Jack Straw*, 1908; *Home and Beauty*, 1919; *The Circle*, 1921; *The Sacred Flame*, 1929, being highly successful. His last play, *Sheppey*, 1933, was a failure, and he announced his intention of writing no more for the theatre.

Maugham was one of the most distinguished writers of his generation, appealing both to the critics and to the larger public. His sense of character was acute and his brilliant wit and narrative ability placed him above almost all novelists of his day. He admittedly owed much to French models (especially, in his short stories, de Maupassant), but everything he wrote bore the mark of his own individuality. In *The Summing-Up*, 1938, he stated his stoical philosophy of life, and explained his own attitude towards literature. *Consult Lives*, R. A. Cordell, 1937; R. H. Ward, 1939.

John Rowland

**Maui.** Polynesian demigod. In the cosmic legends of the Pacific Islands he appears in varying guise, performing exploits which sometimes resemble those familiar in Aryan mythology. Thus, like Hephaestus, he was lame and, like Prometheus, he stole fire for the use of man, either from the sun, from a volcano, or from firesticks cut from trees wherein fire was imprisoned by magical means. In Samoa he became an earthquake god. A Maori legend avers that he fished up the N. island of New Zealand from the ocean floor with a hook made from a jawbone, and elsewhere he is credited with inventing barbed hooks. In Rarotonga he was a son of Tangaroa, whom he supplanted in New Zealand, becoming the supreme sky-god.

**Maui.** One of the Hawaiian Islands. Situated 26 m. N.W. of Hawaii, it comprises two peninsulas joined by a low neck of shifting sand. The E. peninsula rises to Haleakala (10,030 ft.), with a crater 20 m. round and 2,780 ft. deep. The W. peninsula attains 5,788 ft., with plains to the N. and S. There are large plantations of sugar-cane. Lahaina is the chief town. Area, 728 sq. m. Pop. 46,919.

**Maule.** Maritime prov. of Central Chile. It is bounded N. by Talca, E. by Linares and Nuble, and S. by Concepción. Mountainous in the interior, the prov. is drained by the river Maule and its tributaries. The climate is temperate, and agriculture and stock-raising are the main industries. The capital is Cauquenes; the chief port is Constitución, a former capital. Maule city is in the prov. of Talca, 45 m. N.E. of Cauquenes. Area, 2,172 sq. m. Pop. 74,383.

**Maumbury Rings.** Reputed Roman amphitheatre near Dorchester, Dorset. The largest in Britain, measuring 345 ft. by 333 ft., and originally accommodating 12,000 spectators, it was a timbered earthwork upon the site of a neolithic flint quarry, with an arena 196 ft. by 176 ft. The gateway and den for circus beasts have been traced.

**Mauna Kea (White Mountain).** Extinct volcano of Hawaii. It is situated along the N. and N. central portions of the island, and is 13,805 ft. high, the highest peak in the Pacific. Beginning 18,000 ft. below sea level, it has the greatest cubic content of any mt., and discharges the most lava. Its slopes are thickly wooded, and peaks are covered with snow during the greater part of the year.

**Mauna Loa (Great Mountain).** Active volcano of Hawaii. Situated in the central and S. portions of the island, it rises from 15,000 ft. below to 13,760 ft. above sea level, forming with the above Mauna Kea the world's biggest volcano. During periods of activity its lava streams have occasionally extended for 50 m. On its S.E. slopes is Kilauea (q.v.), an enormous active crater.

**Maund, BENJAMIN (1790-1863).** British botanist. Living at Bromsgrove, Worcs, where he kept a stationer's and chemist's shop, he studied botany, and in 1827 was elected a fellow of the Linnean Society, having already produced a periodical, *The Botanic Garden*, in 1825. This, together with other works, was reprinted 1851-54, as *The Botanic Garden and Fruitist*. In 1837 he collaborated with W. Holl in editing the first volume of *The Naturalist*. Maund died April 21, 1863, at Sandown, I.O.W.

**Maundy (Lat. mandatum, commandment).** Name given to the ceremony of washing the feet of the poor on the Thursday before Easter, to the dole then made, and formerly to the Last Supper. The word refers to the words "A new commandment give I unto you,"

Viscount Maugham,  
British lawyer

Somerset Maugham,  
British writer

spoken by Christ at the Last Supper after He had washed the disciples' feet. The custom of foot-washing on Maundy Thursday was originally kept by noblemen and prelates as well as by the pope and R.C. sovereigns. In England the ceremony, which was performed by the sovereign personally until the reign of William III, when it was transferred to the lord high almoner, was abolished in 1754.

In Great Britain the Maundy usage is now confined to gifts of money at Westminster Abbey to as many old men and women as there are years in the sovereign's age, one penny for each year, together with money in lieu of the clothes formerly given. The Maundy pennies, first coined under Charles II, are silver and unmilld, and are legal tender. The Yeomen of the Guard carry the doles, which are distributed by the lord high almoner. The washing ceremony is still observed in several R.C. countries. Maundy Thursday is sometimes called Sheer or Chare Thursday, possibly in allusion to the soul purified by confession, or to the washing of the altars on that day, the word sheer having formerly meant pure.

**Maungdaw.** Village of Burma, on the Arakan coast at the mouth of the river Naff. It is connected by road with Chittagong to the N., Akyab to the S., and, by a series of tunnels through the Mayu hills, with Buthidaung to the E. Evacuated by the British in the spring of 1942 during the Japanese offensive in Burma, it was reoccupied and evacuated twice, before, at the end of the 1944 monsoon, the British, who had gained control of the Maungdaw-Buthidaung road tunnels in June, secured both places by Dec. 19.

**Maunoury, MICHEL JOSEPH** (1847-1923). French soldier. He was born at Maintenon, Dec. 17, 1847, and educated at the École Polytechnique, from which in 1869 he entered the army as a lieutenant of artillery. In 1907 he became director of the École Supérieure de Guerre. A general from 1901, he became a member of the war council in 1910. He had retired from the army, but was recalled by Joffre and placed in command of the 6th army, which suddenly fell upon the left of von Kluck in the first battle of the Marne, Sept., 1914. Maunoury was military governor of Paris, 1915-16, and died March 28, 1923.

**Maupassant, (HENRI RENÉ ALBERT), GUY DE** (1850-93). French writer. Born at the château

of Miromesnil, Normandy, Aug. 5, 1850, he belonged to an aristocratic family, and entered the civil service. He spent much time at the house of Flaubert and there met Daudet, Zola, Turgenev, and other writers. At first he pre-

Guy de Maupassant

ferred field sports to literature, but after seven years' training as a writer under Flaubert, his career began with the publication in 1880 of a volume of poems, *Des Vers*. When the same year his *Boule de Suif* appeared in *Soirées de Medan*, a collection of short stories by many hands, it established his reputation and confirmed Maupassant in his intention of writing stories.

His first full-length novel, *Une Vie*, appeared in 1883. There appeared in rapid succession some of his most characteristic stories: *Clair de Lune*, *Miss Harriet*, *Yvette*, *Contes et Nouvelles*, and *Monsieur Parent*. One of his best-known works, the novel *Bel-amie*, was published in 1885. With *Mont-Oriol* and *Le Horla*, 1887, failing powers and mental hallucinations were evident, though he continued to write such masterly studies as *Pierre et Jean*, 1888; and *Inutile Beauté*, 1890. With the publication of a volume of travels, *La Vie Errante*, 1890, his literary career came to an end.

In spite of robust health and athletic prowess, the inherited mental disorders which led to his brother's death undermined Maupassant's constitution. The "Brittany Bull" found himself entrapped in a Bohemian life which gave him no pleasure, and completed the mischief with drugs and sexual excesses. He died painfully in a private asylum in Paris, July 6, 1893. But in his stories there is a healthy exuberance. He never allowed his rendering of "the humble truth" to be distorted by personal feeling or didactic purpose. His characters are delineated with profound feeling and insight. He remains perhaps the greatest master of the short story.

**Bibliography.** *La Vie et l'Oeuvre* de G. de M., E. Maynial, 1906; *Souvenirs sur G. de M.*, by his valet, François, 1911. *Lives*, P. Mahn, 1908; J. Rolland, 1924; E. Boyd, 1926; R. V. Sherrard, 1926; S. Jackson, 1938.

**Maupertuis, PIERRE LOUIS MOREAU DE** (1698-1759). French mathematician. Born at St. Malo, July 17, 1698, he served, 1718-23, in the army, where he studied mathematics. He afterwards became a member of the academy of science, of which he was made director in 1742. In 1736 he was given charge of the expedition to Lapland to measure a degree of longitude, and embodied the result of his calculations in *Sur la Figure de la Terre*, 1738. The success of his expedition established his reputation. Settling in Berlin in 1744, he became president of the Prussian academy of science. Having quarrelled with Voltaire, he retired in 1758 to Basel, where he died July 27, 1759. In his *Essai de Philosophie Morale*, 1749, he laid down the theory of pessimism afterwards elaborated by Schopenhauer, Hartmann, and others.

**Maurandia** (*M. barclaiana* and *M. scandens*). Climbing herbs of the family Scrophulariaceae, natives of Mexico. The first named has five-lobed, somewhat ivy-shaped leaves; the second heart-shaped, toothed leaves. Both have tubular violet-purple flowers.

**Maurepas, JEAN FRÉDÉRIC PHÉLIPPEAUX, COMTE DE** (1701-81). French politician. Born at Versailles, July 9,

Comte de Maurepas, French politician

1701, he succeeded his father as secretary for the marine in 1724. His naval administration was progressive but he angered Madame de Pompadour in 1749, was exiled from court, and during the remainder of the reign lived in seclusion. On his accession in 1774 Louis XVI took Maurepas into his inmost counsel, but he was a bad adviser at so critical a period, while owing to his jealousy and ambition first Turgot and then Necker were sacrificed. He died Nov. 21, 1781.

**Mauretania.** Name of two British liners. The earlier launched Sept. 29, 1906, was a sister ship to the *Lusitania* (q.v.) and owned by the Cunard Line. Having a displacement of 31,938 tons and a designed speed of 25 knots, she won the blue ribbon of the Atlantic in 1907, with an average speed of 23.69 knots, a record that stood until broken by the German liner *Bremen* in 1929. This *Mauretania* was broken up in 1935.

The second Mauretania, of 35,677 tons, was launched in 1938 for the Cunard-White Star line. She had a designed speed of 23 knots. Engaged as a troopship during the Second Great War, she rejoined the Atlantic passenger service in 1947. See

Mauretania. Top, first liner of this name, launched in 1906 and broken up in 1935. Below, the second Mauretania, launched in 1938 for the Cunard-White Star line

Launching illus. p. 5009.

**Mauriac, François** (b. 1885). French writer. He was born at Bordeaux, Oct. 11, 1885, and educated at a Jesuit college. In religious poems, *Les Mains Jointes*, 1910, and in a long series of poignant novels (mainly set in the Landes country), he dealt with the struggle between the material and spiritual worlds. His works include *La Chair et le Sang*, 1913; *Le Désert de l'Amour*, 1925; *Thérèse Desqueyroux*, 1926; *Le Noeud des Vipères*, 1932; *Le Mystère Frontenac*, 1933; *Le Fleuve de Feu*, 1938. An Eng. trans. of his *Life of Jesus* appeared 1937. A play, *Asmodée*, trans. as *The Intruder*, was seen in London, 1939. His literary criticism included a life of Racine, 1930. Elected to the Academy 1933, Mauriac had received the grand prix 1926.

**Maurice** (1567-1625). Prince of Orange. The second son of William the Silent, he was born Nov. 13, 1567, and was named after his grandfather, Maurice of Saxony. When his father was murdered in 1584, the people of the Netherlands looked to him as their leader,

Maurice of Nassau, Prince of Orange

and one after another the states made him their stadtholder. It is, however, as a soldier that Maurice is best known. He led the Dutch in their war against the Spaniards,

fell into a quarrel with his former supporter and friend, Barneveldt, and by using his power secured his execution. He died, April 23, 1625, during the renewed war with Spain.

**Maurice** (1521-53). Elector of Saxony. Born at Freiberg, March 21, 1521, he succeeded his father in the dukedom of Saxony in 1541. Although he had become a Lutheran in 1539, his ambition led him to help Charles V against the Protestant league of Schmalkalden,

Maurice, Elector of Saxony

1546, in return for which he gained the emperor's assistance in the war against John Frederick, elector of Saxony. The victory of Mühlberg, 1547, gave him the electorate, but, unfaithful to his imperial ally, he joined the Protestant princes and, in 1552, unexpectedly attacked and routed Charles at Augsburg. Maurice proceeded to Hungary to drive back the Turks, but, hastening back to resist an invasion, he was fatally wounded at the battle of Sievershausen, July 9, 1553, and died two days later.

**Maurice, Sir Frederick Barton** (b. 1871). British soldier. The eldest son of Sir J. F. Maurice (v.i.), he was born Jan. 19, 1871, and entered the army in 1892. He served with the Sherwood Foresters in the Tirah, 1897-98, and in the S. African War. In France from

Aug., 1914, he was chief staff officer of the 3rd div. in the retreat from Mons. In Dec., 1915, he was made director of military operations at the War office. After he had written a letter to the press challenging the accuracy of ministerial statements about disasters in France, he was in 1918 placed on retired pay as major-general. Knighted that year, Maurice was principal of the Working Men's College, St. Pancras, 1922-33, and of Queen Mary College, London university, 1933-44. He was president of the British Legion in 1932. His books include *Forty Days* in 1914, 1919; *Life of Lord Rawlinson*, 1928; *History of the Scots Guards*, 1934; *Life of Lord Haldane*, 2 vols., 1937-38; *Adventures of Edward Wogan*, 1945.

Sir F. B. Maurice, British soldier Russell

Maurice, Sir John Frederick (1841-1912). British soldier and writer. Born May 24, 1841, a son of John Frederick Denison Maurice (v.i.), he was educated at Addiscombe and Woolwich. Entering the Royal Artillery, he saw service in the Ashanti War, 1873-74; in the Zulu War, 1879; and in the Egyptian War, 1882. He became brevet-colonel in 1885 and major-general in 1895. He was professor of military history at the Staff College, Camberley, 1885-92, and died Jan. 11, 1912. Maurice's reputation is chiefly based on the *History of the War in S. Africa*, 1906-10, which he undertook on the death of G. F. R. Henderson.

**Maurice, John Frederick Denison** (1805-72). British divine and social reformer. The son of a Unitarian minister, he was born near Lowestoft, Aug. 29, 1805, and was educated at Trinity College and Trinity Hall, Cambridge. Having been ordained in 1834, he became curate of Bubbenthal, and in 1837 chaplain of Guy's Hospital, London. He was appointed professor of English literature and history at King's College, London, in 1840, and professor of theology there in 1846.

J. F. D. Maurice, British divine

In 1853, the controversy aroused by Maurice's Theological Essays led to his resignation; and for the next few years he devoted himself to literary work and to the principalship of the Working Men's College, London, of which he was one of the founders, as also of Queen's College for Women. In 1860 he became incumbent of S. Peter's, Vere Street, London; in 1866 professor of moral philosophy at Cambridge; and in 1869 incumbent of S. Edward's, Cambridge. He died April 1, 1872.

Maurice was a colleague of Kingsley in the Christian Socialist movement, an enthusiast for national education, and a friend of all movements for bettering the condition of the poor. Strenuously denouncing party spirit in religion, he stood apart from all parties in the Church, but was bitterly attacked for his alleged heretical teaching on the Atonement and eternal life. His books include *Moral and Metaphysical Philosophy*, 1871-72; *The Claims of the Bible and of Science*, 1863. His *Life* was written by his son, Sir J. F. Maurice (v.s.), 1883-84.

**Maurists.** Reformed congregation of the Benedictine Order named from S. Maurus, a monk associated with S. Benedict. It originated about 1618, when the abbey of S. Maur-sur-Loire was founded near Saumur. A hundred years later there were six provinces in France, including 180 houses, the headquarters being at the abbey of S. Germain-des-Près, Paris. They had the political support of Cardinals de Retz and Richelieu, were famed for their learning, and produced the Benedictine editions of the fathers. The congregation was suppressed in 1792, and the abbey of S. Maur destroyed.

**Mauritania** or **MAURETANIA.** Roman province of North-West Africa. Its area corresponded with that of Morocco and W. Algeria, and it was bounded on the E. by the province of Numidia. The Romans became acquainted with the country during the war with Jugurtha, 106 B.C., and it was formed into a province by the emperor Claudius.

**Mauritania.** French colony in North-West Africa. Bounded N. by the Spanish territory of Rio de Oro and lat. 26° N., S. by the French colony of Senegal, and E. by French Sudan, it was made a protectorate in 1903 and a colony in 1920. Boundaries were revised in 1945. Area, 323,310 sq. m. Mauritania consists principally of

sandy desert, and the inhabitants are nomad Berbers and Arabs, generally termed Moors. The chief products are gum, salt, and cattle, and the Moors possess large flocks of sheep. Pop. 497,000.

**Mauritia.** Genus of palms, natives of tropical America. See *Moriche Palm*.

**Mauritius** or **ÎLE DE FRANCE.** Island in the Indian Ocean, British crown colony. Situated 530 m. E.

Mauritius arms

of Madagascar, and about 2,300 m. N.E. of the Cape, it is 39 m. long and 29 m. broad, and its area is 720 sq. m. Surrounded by coral reefs, it is a rugged, hilly mass of volcanic origin, the chief heights being Black River Peak, 2,711 ft., and Pieter Both, 2,676 ft., with fairly large valleys of great fertility. It has a heavy rainfall, and the hot, moist climate is generally unhealthy. It exports sugar, molasses, rum, aloe fibre, coconut oil, copra, and vanilla. It has no inland navigation, and Port Louis, the capital, has the only good harbour. There are about 120 m. of rlys.

Mauritius was discovered by the Portuguese in 1505; it was then uninhabited, and showed no signs of ever having been peopled. The Portuguese abandoned it, and the Dutch occupied it in 1598, naming it in honour of

Prince Maurice of Orange-Nassau. They left in 1710, and five years later the French began to settle; they renamed it Île de France, and brought great prosperity.

The British conquered the island in 1810, and it was ceded to Great Britain by the treaty of Paris in 1814, the inhabitants being permitted to retain their laws and religion. Renamed Mauritius by the British, and made a crown colony, it has partially representative institutions, and is administered by a

governor, assisted by a legislative council of 35 members—19 elected, 12 nominated, four ex officio.

French is the language still chiefly spoken; English is used in the courts of justice, but both languages are employed in the council of government. The state aids the Protestant and R.C. Churches. Primary education is free, but not entirely compulsory, though literacy is the qualification for the vote. There are an agricultural and a training college, and secondary schools for boys and girls. Pop. est. 424,453, many of Indian descent.

An important link in the sea routes to India and the Far East, Mauritius was covered from attack by the Japanese in the Second Great War by British garrisons in Ceylon and Madagascar. Compulsory service for the home guard was introduced in 1941, but no units were sent overseas. When the shah of Persia was deposed in 1941, he was given refuge here.

In literature Mauritius is famous as the scene of St. Pierre's *Paul et Virginie*, and in ornithology as the one-time home of the dodo. Among the dependencies of the colony, administered by its governor, are Rodriguez Island, the Oil Islands, of which Diego Garcia is the most important, the St. Brandon or Cargados Islands, and the Trois Frères or Eagle Islands, the whole having an area of about 90 sq. m., and a pop. of about 7,000.

Mauritius. Map of the island in the Indian Ocean, a British crown colony since 1814

**Maurois, André** (b. 1885). French writer. Born at Elbeuf, of Jewish parents, his real name was Émile Herzog, and he was educated at Rouen. During the First Great War he served as an interpreter, gaining that insight into the British character which appears in his first successful novel, *Les Silences du Colonel Bramble*, 1918, and its sequel, *Les Discours du Docteur O'Grady*, 1920. A confirmed Anglophile, he produced biographies which dealt brilliantly and intimately as in fiction with central characters: Ariel (Shelley) in 1923; Disraeli, 1927; Byron, 1930; Dickens, 1934. Marshal Lyautey was among his French heroes (biography 1931). In 1938 he was elected to the Academy (see illus. p. 54). Maurois lived in the U.S.A. during the Second Great War, and pub. *The Art of Living*, 1940; and the autobiographical *I Remember, I Remember*, 1942; *Call No Man Happy*, 1943. He also published histories of England (1917), U.S.A. (1944), and France (1949).

André Maurois,  
French writer

**Maurras, Charles** (b. 1868). French writer. Born at Martigues, Bouches-du-Rhône, April 20, 1868, he became a journalist on the staff of *L'Action Française*, which he transformed into a royalist journal, and in 1908, in association with Léon Daudet, into a daily paper. In *Trois Idées Politiques*, 1898, and *L'Avenir de l'Intelligence*, 1905, he advocated restoration of the monarchy and formation of a state that would have been later called fascist. Because of his atheism some of his books were placed on the Index Expurgatorius in 1926, and he suffered imprisonment. He wrote *L'Enquête sur la Monarchie*, 1900-09; *Napoléon avec la France ou contre la France*, 1933; *Dictionnaire Politique et Critique*, 5 vols., 1933-34. An academician from 1938, Maurras was a leading prose writer in historical, political, and literary studies, and produced novels and poetry. He was arrested Sept. 12, 1944, tried as collaborator during the German occupation of France, and condemned Jan. 27, 1945, to solitary confinement for life.

**Maury, Jean Siffrein** (1746-1817). French prelate. Born at Valréas, Vaucluse, June 26, 1746, he was ordained at Avignon. In Paris his eloquence brought him fame, and he gained the royal favour, being presented to the living of Frénade. Elected to the Academy in 1785, he became a clerical deputy to the states-general of 1789, and proved a staunch champion of Church and king. In 1791 he went to Italy, was made bishop of Nicaea, and in 1794 a cardinal. Louis XVIII, then count of Provence, named him ambassador at the papal court, but, making his peace with Napoleon, Maury returned to France in 1806, and in 1810 was nominated archbishop of Paris. The pope declined to ratify his appointment, which was declared null on the Restoration. On repatriation to Rome Maury was imprisoned for six months for contumacy, being released on the sole condition of resigning all his ecclesiastical dignities and preferences. He died May 11, 1817.

J. S. Maury,  
French prelate

**Mauser Rifle.** Rifle used for both military and sporting purposes, invented by Paul Mauser, a German mechanic. The German government equipped their army with the weapon in 1872, and retained it until the end of the Second Great War. It is also the standard infantry weapon of the Belgian, Spanish, Brazilian, and Turkish, and other armies. It has a bolt action with a charger-loaded magazine. The bolt-head is integral with the bolt, and the locking lugs of the latter are at the forward end close to the cartridge, giving a stronger construction than that of the Enfield. The rifling consists of four grooves, twisting to the right. The rifle is extremely durable, very accurate, and has a long life of barrel. It has

a double pull off like the Enfield. See Rifle.

Mauser Rifle. Section showing firing and loading mechanism. A. Bolt head. B. Striker spring. C. Striker. D. Cartridges in magazine. E. Chamber. F. Barrel. G. Trigger. H. Magazine spring.

The Mauser automatic pistol, introduced in 1898, has a clip of 10 rounds in the grip and is made in varying calibres. The .9 mm. model was provided with a wooden holster, which could be attached to form a shoulder-butt, and was sighted up to 1,000 yds. The pistol was adopted as the standard weapon for officers by many Continental and S. American armies, but shortly before and during the Second Great War was largely replaced in the German army by the Luger.

**Mausoleum.** Name applied to a tomb or cenotaph of unusual size and importance. It was first

Mausoleum. Reconstruction of the tomb of Mausolus at Halicarnassus. From model by A. J. Stevenson, British Museum, by permission of the Trustees.

used of the tomb of King Mausolus of Caria, Asia Minor, erected at Halicarnassus, 353 B.C., of which some of the sculptures are in the British Museum. This monument, accounted one of the seven wonders of the world, was 111 ft. in circumference and 140 ft. high, and was crowned by a colossal statue group of Mausolus and his wife, Artemisia, standing in a triumphal chariot. Other classic mausoleums were those of Augustus in the Campus Martius, Rome, which was nearly 300 ft. in diameter, and of Hadrian, Rome, known since the addition of a medieval superstructure as the Castel Sant' Angelo. Modern examples are those of Frederick William III and Queen Louisa of Prussia at Charlottenburg, of Queen Victoria and the prince consort in Windsor Park, and of Napoleon III at Farnborough. See Halicarnassus.

**Mauve.** The first synthetic dye used industrially. It was discovered by W. H. Perkin accidentally, while he was trying to make quinine synthetically, in 1856 (English patent 1,984 of 1856), and manufactured at his factory at Greenford. It was used in making the mauve pigment for printing the penny stamps of Queen Victoria; for calico printing; and for whitening skein silk, a use that survives to some extent. Production and manufacture of mauve mark the foundation of the great synthetic organic chemical industry, which supplies not only dyestuffs but explosives, drugs, and other useful products.

**Mauve, ANTON** (1838-88). Dutch painter. Born at Zaandam, he was a pupil of Pieter Frederik van Os

Anton Mauve,  
Dutch painter

of Haarlem and W. Verschuur. In 1870 he settled at The Hague, removing to Laren in 1885. His pictures mostly represent landscapes with cattle and figures. The National Gallery, London, has a small oil painting, *Watering Horses*, and the National Gallery of Scotland has several examples.

**Maverick.** Term applied in the cattle-raising districts of the U.S.A. to an unbranded animal found straying. It is derived from Samuel Maverick, a Texan rancher who did not brand his cattle, and, when they escaped, claimed every unbranded animal found in the district. Mavericks are either branded by the owner of the ranch on which they are found, or sold for the common benefit of the ranchers in the district. The word is also used to denote anything obtained fraudulently, as a name for a roving person, and, as a verb, in the sense of "to acquire illegally."

**Mavis.** Another name of the song thrush or throistle. Formerly in general use in England, the word is in common use in Scotland, and is still met with in poetry.

**Mavrocordato, ALEXANDER** (1791-1865). Greek statesman. Born at Constantinople, Feb. 11, 1791, a member of a famous Phanariot family, he went at 21 to the court of his maternal uncle, Ioannes Caradja, at Bukarest, and followed that prince into exile. He rendered a supreme service to the cause of Greek independence by seeking to direct to a common

A. Mavrocordato,  
Greek statesman

national aim the many different revolts which broke out in 1820-21 against Turkish rule. A principal author of the Greek constitution proclaimed at Epidaurus, Jan. 1, 1822, he successfully directed the national movement for two years. Although the monarchy established by the great powers in 1832 did not fulfil his hopes for Greece, he served successively as minister in Munich, Berlin, London, Constantinople, and in Paris. Recalled in the crisis of 1853, he succeeded in conciliating the European powers and re-establishing peaceful relations with Turkey. He died at Aegina, Aug. 18, 1865.

**Maver, SIR ALLEN** (1879-1942). British philologist. Born on May 8, 1879, he was educated at Coopers' Company's grammar school, University College, London, and Gonville and Caius College, Cambridge. From 1905 to 1908 he was lecturer in English at Sheffield university, and was Baines professor of English at Liverpool university, 1921-29, returning to University College as provost in 1930. He was director of the survey of English place-names and wrote many books on that subject. He was knighted in 1937, and died on July 22, 1942.

**Mawson, SIR DOUGLAS** (b. 1882). A British explorer. Born at Bradford, Yorkshire, England, May 5, 1882, he went in his youth to Australia, where he graduated at Sydney university in 1901, becoming demonstrator in chemistry the following year. In 1903 he carried out a geological exploration of the New Hebrides, and in 1905 was appointed a lecturer in Adelaide university, becoming professor of geology and mineralogy in 1920. On the scientific staff of Sir Ernest Shackleton's Antarctic expedition of 1908, he helped to locate the S. magnetic pole in Victoria Land, and led the Australasian expedition of 1911-14. He discovered and explored King George V Land and was also leader of the British, Australian, and New Zealand expedi-

Sir Douglas Mawson,  
British explorer

tion of 1929-31. He published in 1915 *The Home of the Blizzard*. Mawson was knighted in 1914. See Antarctic Exploration.

**Max, ADOLPHE** (1869-1939). Belgian administrator. Born in Brussels, Dec. 31, 1869, he became a journalist, and was dramatic critic for the *Petit Bleu*. He also studied law and accountancy, and in Aug., 1909, after some years as councillor and alderman, he was appointed burgomaster of Brussels.

Adolphe Max,  
Belgian administrator

When the Germans approached Brussels on Aug., 1909, he met them and at once began his great battle on behalf of the rights of the Belgian population against the occupying forces. The story is told that the German commander opened an interview by laying his revolver on the desk; whereupon Max placed beside it his only weapon—his fountain-pen. He publicly urged resistance to German demands, and when the fine of £8,000,000 imposed by the Germans on the city of Brussels was not paid he was sent to a prison in Celle, Germany, where he remained until the end of the war. He escaped during the confusion of the German revolution, and on Nov. 17, 1918, was reinstated as burgomaster, holding the post until his death. He was made a minister of state, elected to the chamber of representatives as a Liberal, and received many honours. He died Nov. 6, 1939. Consult Burgomaster Max, A. Vierset and O. E. Millard, 1936.

**Maxentius, MARCUS AURELIUS VALERIUS.** Roman emperor, A.D. 306-312, a son of Maximian, the colleague of Diocletian. His tenure of imperial power, which he had seized with the help of the praetorian guard, came to an end when he was defeated by Constantine at Saxa Rubra, outside Rome, and drowned in the Tiber in his flight, Oct. 27, 312. See Constantine.

**Maxilla.** Large bone in the upper jaw of most vertebrates. On it are borne, in higher forms, the canine teeth, pre-molars, and molars. It is a membrane bone, overlying and not really forming part of the original cartilaginous upper jaw.

**Maxillaria.** Large genus of terrestrial orchids. Of the family Orchidaceae, they are natives of tropical America and the W. Indies.

They have slender, leathery, or fleshy leaves. Many have only small flowers, but *M. grandiflora*, *M. sanderiana*, and *M. venusta*, all with white flowers, are larger and more showy.

**Maxim**, SIR HIRAM STEVENS (1840-1916). An Anglo-American inventor. Born at Sangerville,

Sir Hiram Maxim,  
Anglo-American  
inventor  
Russell

Maine, Feb. 5, 1840. Maxim served an apprenticeship to a coachbuilder, afterwards working in a machine shop and a ship-building yard. His inventive faculty was developed early, and

demonstrated in improvements in lamps for electric lighting, and in gas-generating plants, steam and vacuum pumps, engine governors, steam pumping engines, etc. His name is best known in connexion with the Maxim gun. He was also interested in aeronautics. In 1872 he made a drawing of a proposed helicopter, and in 1894 built a machine which was tried, not very successfully, at Bisley. Maxim became a naturalised British subject, was knighted in 1901, and died Nov. 24, 1916. See *Machine-Gun*; consult also his autobiography, *My Life*, 1915.

**Maxim**, HUDSON (1853-1927). American inventor. Born at Orneville, Maine, Feb. 3, 1853, he took up the study of chemistry and engineering, and in 1875 suggested an hypothesis on the compound nature of atoms. During 1883-88 he was engaged with a publishing firm, and then began to study explosives and ordnance, being one of the first to make smokeless powder in the U.S.A. His invention was bought by the American government, and in 1901 he invented the explosive maximate. He died May 6, 1927.

**Maxima and Minima**. Term used in mathematics for the certain values that a variable quantity or

Maxima and Minima. Curve showing maxima points, A, B, C, D, E; and minima points, a, b, c, d, e

Maxillaria. Example of *M. sanguinea* of Central America, a cultivated specimen  
E. J. Wallis

magnitude may have. At a maximum the function ceases to increase and begins to decrease. There may be any number of maximum and minimum values of a function, a statement which may be understood by reference to the curve. A B C D E are maximum points, points to which the value of the function is continually increasing, and a b c d e are minimum. It will be seen that a maximum need not be greater than a minimum in actual value. Values at maxima or minima points should be distinguished from the greatest and least value of the function.

**Maxim Gun**. Automatic machine-gun. Hiram Maxim saw the early types of machine-gun, such as the Gatling, Nordenfeldt, and Gardner, and being impressed with the possibilities of obtaining more rapid fire by harnessing the waste force of the explosion, designed the gun which has his name. The weapon was adopted by the British army in 1889. See *Machine-Gun*.

**Maximianus I**, MARCUS AURELIUS VALERIUS (d. 310). Roman emperor, 286-305. A Pannonian of humble origin, he was chosen by Diocletian as colleague, with the western half of the empire as his portion, and when in 293 the empire was divided into four parts, Maximian had charge of Italy and Africa. When Diocletian abdicated in 305 he compelled Maximian to do the same. In 306 the elevation of his son Maxentius to the rank of Augustus induced him to resume the imperial dignity. In 310, having vainly urged his daughter to murder her husband, he was compelled

Maximianus I,  
Roman emperor  
From a medallion

by his son-in-law Constantine to commit suicide. Maximian was a violent persecutor of Christians. See *Diocletian*.

**Maximianus II**. Roman emperor, 305-311, better known as Galerius (*q.v.*).

**Maximilian I** (1459-1519). German king and Roman emperor. Son of the emperor Frederick III, and so a Hapsburg, he was born in Vienna, March 22, 1459. He married in 1477 Mary, daughter and heiress of Charles the Bold, duke of Burgundy, and the death of Charles in the same year threw on him the duty of defending his wife's lands against numerous aggressors, especially the king of France. This took him into the Netherlands, where he gained his first experience of statecraft. In 1486 he was chosen king of the Romans. He recovered Vienna from the Hungarians, 1490, overthrew the Turks at Villach in 1492, and compelled the king of France to cede Artois and the Franche Comté. He became emperor in 1493.

Maximilian's reign of 26 years was full of incident. He warred against the king of France, with-

Maximilian I,  
Holy Roman emperor

out great success, and joined and forsook leagues made by the pope, Henry VII, Ferdinand of Aragon, and other sovereigns. He was continually hampered by lack of means. The Swiss won their independence after a short war in 1499, and no great victories attended his campaigns in Italy. In Germany itself he did something to redress the lack of organization and unity that was the main cause of his military weakness. He set up an imperial court of justice, the Reichskammergericht, and also an aulic council.

The emperor took an interest in military matters, organizing the Landsknechte and improving the fighting forces in other ways. Under him Tirol was added to the family lands, and he arranged the marriages which eventually brought Hungary and Bohemia to the Hapsburgs, and gave a great inheritance to his grandson, Charles V. He was the first to take the title of emperor without being crowned as such by the pope.

Maximilian, a well educated and versatile but restless man, was a writer or inspirer of books, one being an autobiography; also a

dreamer, one theory being that he wished to unite in himself the offices of pope and emperor. He befriended learned men and societies, and from an adventurous strain in his nature has been called the last of the knights. He married a Sforza for his second wife, and died at Wels in Upper Austria, Jan. 12, 1519. He was buried at Innsbruck (*q.v.*). *Consult* Life, I. R. W. Seton-Watson, 1902.

**Maximilian II** (1527-76). German king and Roman emperor. The eldest son of the emperor

Maximilian II,  
Holy Roman emperor  
After Moris

Ferdinand I, he was born in Vienna July 31, 1527. He was educated there, but spent some time in Spain. He began to assist his father and his uncle, Charles V, whose daughter Maria he married, in the business of government about 1548, and in 1549 he was recognized by the Bohemians as their future ruler. In 1562 he was chosen king of the Romans by the German electors, and in 1563 elected king by the Hungarians. Having become emperor and king in 1564, Maximilian carried on a short war with the Turks, and was largely occupied in efforts to compose the religious difficulties resulting from the Reformation. He died Oct. 12, 1576.

**Maximilian** (1867-1929). Prince of Baden and German politician. Born July 10, 1867, a nephew of the

grand duke Frederick I, he entered the Prussian army, and rose to the rank of cavalry general. President of the upper chamber of Baden, he delivered a notable speech on the war, Dec. 14, 1917, but was little known in the politics of Germany until on Oct. 3, 1918, he succeeded Hertling as imperial chancellor. His first action was to appeal to President Wilson, through Switzerland, to initiate peace negotiations, and he conducted the difficult questions relating to the armistice and the abdication of the Kaiser. He remained in office until the republican government was fully established. On Nov. 6, 1929, he died in retirement at Constance.

Maximilian,  
Prince of Baden

**Maximilian** (1832-67). Emperor of Mexico, 1863-67. He was born July 6, 1832, a younger son of the archduke Francis Charles and brother of the emperor Francis Joseph of Austria. In 1857 he married Charlotte, daughter of Leopold I, king of the

Maximilian,  
Emperor of Mexico

Belgians, and in the same year was appointed governor of Lombardo-Venetia. In 1863, when French troops invading Mexico had captured Puebla, they proclaimed, in agreement with the Mexican clerical party, the archduke Maximilian as emperor of Mexico. He accepted the crown, renouncing his rights as an Austrian prince on doing so, and on May 29, 1864, landed at Vera Cruz.

It was but a section of the Mexican people that recognized Maximilian, and he found himself at war with his new subjects from the first. In 1866 he lost the support of the French force on its return to Europe, and in May of the following year he was betrayed to his enemies and on June 19, 1867, was shot at Queretaro. The empress Charlotte (1840-1927) had gone to Europe to enlist aid and, learning of his fate, went out of her mind, but lived until Jan. 19, 1927. Maximilian wrote *Aus Meinem Leben*, 7 vols., 1867. *Consult* Maximilian and Charlotte, Count Corti, 1928; Phantom Crown, B. Harding, 1935; Mexican Empire, M. Hyde, 1945.

**Maximinus**, GAIUS JULIUS VERUS. Roman emperor, 235-38. By birth a Thracian peasant, hence

surnamed Thrax, of gigantic stature and immense strength, he rose to high command in the army. He was proclaimed emperor by the legions of the Rhine, and the murder of Alexander Severus within a month made his way clear to the throne. His elevation to the purple marks a stage in the decline of the empire, for he was the first to obtain supreme power without having held a single administrative post, being simply a creation of the soldiery. Maximinus gained some successes

against the Germans, but soon alienated his subjects by tyranny and cruelty, which caused a revolt in Africa. He was murdered by his own soldiers at Aquileia, June 17, 238. *See* Balbinus: Gordian.

**Maximus**, MAGNUS CLEMENS. Roman emperor, 383-88. Born in Spain, he was proclaimed emperor by the troops in Britain, crossed over to Gaul, and defeated Gratian, his rule beyond the Alps being recognized by both Theodosius and Valentinian II. With the design of making himself master of the entire Western empire, he invaded Italy, 387, but was defeated, taken prisoner, and put to death at Aquileia by order of Theodosius.

**Maximus**, PETRONIUS. Roman emperor in 455. A senator of noble birth, whose wife had been seduced by Valentinian III, he murdered the latter and secured the throne by forcing the widowed empress Eudoxia to marry him. When Eudoxia learnt the truth about her husband's death, she sought the aid of Gaiseric the Vandal, who attacked and plundered Rome. Maximus, while attempting to escape, was cut down by a band of Burgundian mercenaries.

**Maximus Tyrannus** (ex. 422). Roman emperor, 409-11. When Gerontius, general of the usurper Constantinus (*q.v.*), led a revolt against his master in Spain, Maximus was set up as counter-emperor. After the defeat of Gerontius two years later, Maximus, who had been deposed by Constantinus, in 418 started a fresh rebellion in Spain, but was taken prisoner, removed to Ravenna, and there executed.

**Maxixe**. Brazilian dance for two people. With something of the character of the tango (*q.v.*), it reached England through Paris in 1913, but did not attain wide popularity.

**Max Müller**, FRIEDRICH (1823-1900). Anglo-German philologist, Sanskrit scholar, and orientalist.

Only son of the poet Wilhelm Müller, he was born at Dessau, Dec. 6, 1823, and studied at Leipzig, Berlin, and Paris. He came to England with an introduction to Bunsen and a recommendation to the East India Company, who commissioned him to edit the Rigveda. He be-

Gaius Maximinus,  
Roman emperor  
From a medallion

F. Max Müller,  
Anglo-German  
philologist

came professor of modern languages at Oxford, 1854, and of comparative philology, 1866. He died at Oxford, Oct. 28, 1900. His lectures on the Science of Language, 1861-64, simple in style, unlike most German works of the kind, introduced the English public to the latest results of the study of comparative philology and religion. Many of his theories were attacked and are now superseded, but his influence was stimulating at the time. He edited the Sacred Books of the East series, and translated Kant's Critique of Pure Reason. His Autobiography was edited by his son.

**Maxstoke Castle.** Castellated dwelling-house in Warwickshire, England. Situated E. of Birmingham,

Maxstoke Castle. A 14th century dwelling-house, with drawbridge and embattled walls

ham, between Shustoke and Maxstoke, near to Blyth Hall, the home of William Dugdale, the antiquary, it is an interesting example of the style of architecture adopted by powerful English families, when the feudal castle began to give way to the more comfortable dwelling-house. Begun by William de Clinton in 1345, it has a high embattled wall, with octagonal towers at each angle, a gatehouse with towers commanding the drawbridge, and a moat about 40 yds. wide. Near by are the ruins of a 14th century Austinian priory.

**Maxton, JAMES** (1885-1946). Scottish politician. He was born June 22, 1885, and educated in

James Maxton. Scottish politician

Glasgow at Hutcheson's grammar school and the university, becoming a school teacher. An organizer of the Glasgow federation of the Independent Labour party, he opposed the First Great War and was imprisoned for making seditious speeches. He entered parliament in 1922 as I.L.P. member for Bridgeton, and though a fiery advocate of unpopular causes like republicanism and pacifism, gained respect by his sincerity and disinterest in the fruits of office. Maxton was chairman of the I.L.P., 1926-31 and 1934-39, and published a study of Lenin, 1932:

If I Were Dictator, 1936. He died at Largs, July 23, 1946.

**Maxwell.** Unit of magnetic flux. One maxwell per sq. cm. is equivalent to a field of one gauss normal to the area.

**Maxwell, SIR HERBERT EUSTACE** (1845-1937). British author. The son of Sir William Maxwell 6th baronet, of Monreith, he was born in Edinburgh, Jan. 8, 1845, and educated at Eton and Christ Church, Oxford. In 1877 he succeeded to the baronetcy, and was M.P. for Wigtonshire 1880-96, being a lord of the treasury 1886-92. He was elected F.R.S. in 1898, and created a knight of the thistle in 1933. Distinguished in many fields of literature, he excelled as a writer on angling. His

works include Meridiana, 1892. Sixty Years a Queen, 1897; Salmon and Sea Trout, 1898; British Freshwater Fishes, 1904; The Making of Scotland, 1911; Evening Memories, 1932. He edited the Creevey Papers, 1903. He died Oct. 30, 1937.

**Maxwell, SIR RONALD CHARLES** (1852-1924). A British soldier. Born Dec. 26, 1852, he joined the Royal Engineers in 1872 and served in the Afghan and S. African wars. In 1909 he was promoted major-general. Early in the First Great War he went to France as inspector-general of communications, and was Q.M.G. to the British forces in France and Flanders, 1915-17. Created K.C.B. in 1915, he became lieutenant-general in 1916, and died July 20, 1924.

**Maxwell, WILLIAM BABINGTON** (1876-1938). British novelist. Son of John Maxwell publisher, and M. E. Braddon (q.v.), he grew up in a

literary atmosphere, and after editing one of his father's magazines, published in 1901 his first novel, The Countess of Maybury. His stories were notable for skilful characterisation, generally set in credible but exciting situations. The most successful included The Ragged Messenger, 1904; The Guarded Flame, 1906; The Devil's Garden, 1913; The Mirror and the Lamp, 1918. His last works formed a trilogy, Tudor Green, The Emotional Journey, and Everslade, published under the general title Men and Women, 1935-37. His autobiography, Time Gathered, appeared in 1938, and he died Aug. 4.

**Maxwellian Distribution.**

Conception in physics. The molecules of a gas at a definite temperature may be considered to possess a certain average kinetic energy, but in effect the speeds of the various molecules cannot all be equal, for they are repeatedly in collision and this will tend to abolish any attainment of equality. In the steady state at a constant temperature the distribution of velocities assumes a particular function first deduced by Clerk-Maxwell. This function, giving the probability of a molecule having component velocities, in perpendicular directions, of  $u, v, w$ , is given by

$$f(u, v, w) = \frac{(hm)^{3/2}}{\pi} e^{-hm(u^2 + v^2 + w^2)},$$

where  $h$  is Planck's constant and  $m$  is the mass of a gas molecule. Clerk-Maxwell's law indicates that the possibility of a gas molecule having a large kinetic energy falls off exponentially with the value of the kinetic energy.

**Maxwelltown.** Part of the Scottish burgh of Dumfries. Formerly a Kirkcudbrightshire burgh of barony, it has since 1929 been amalgamated with Dumfries, to which it is linked by four bridges

Maxwellton, Dumfriesshire, scene of the ballad, Annie Laurie. See next page

across the Nith. The chief industries are making woollen underwear, hosiery, and gloves, milk processing, and the repair and manufacture of agricultural implements.

Maxwelltown arms

Until 1810 the place was known as Bridgend of Dumfries, but it was then renamed, the district being a stronghold of the Maxwell family. The town is dominated by the museum and a Benedictine convent, both on Corbely Hill. On the outskirts are the fine remains of Lincluden Abbey.

**Maxwellton.** Estate in the parish of Glencairn, S.W. Dumfriesshire, Scotland. It is 3 m. E. of Moniaive, and is the Maxwellton of the ballad, Annie Laurie. See illus. p. 5593; Laurie, Annie.

**May.** Fifth month of the Christian calendar. The Latin name *Maius*, connected with *major*, probably signifies the month of growth. The Romans sacrificed to Maia, an old Italian goddess, on the 1st of the month. They considered May an unlucky month for marriages, because the festival of the Lemuria to the spirits of the unhappy dead was held during the month, and this old notion survives in popular superstition.

**May.** This tree is described under its alternative name of hawthorn.

**May.** Island of Scotland, in the Firth of Forth, forming part of the co. of Fife, 5 m. S.E. of Crail. It has remains of a 12th cent. priory, and at its highest elevation (160 ft.) there is a lighthouse. Area, 2 sq. m.

**May, GEORGE ERNEST MAY, 1st BARON (1871-1946)** British financier. He was born June 20, 1871, and went to Cranleigh school. Employed by the Prudential Assurance co. in 1887, he rose to be its secretary. He was manager of the American dollar securities committee, 1916-18, being knighted in 1918. Chairman of the economy committee in 1931, he issued the May report which advised reductions in unemployment benefit and in the salaries of all state servants; it was accepted by some as a masterly survey, but precipitated a government crisis (see Means Test). In 1932 he presided over the import duties advisory committee. He was raised to the peerage in 1935, and died April 10, 1946; his son, John Lawrence May (b. 1904), succeeded.

**May. EDNA (1878-1948).** Stage name of Edna May Pettie, American actress. Born at Syracuse, N.Y., Sept. 2, 1878, she appeared on the stage as a child in Gilbert and Sullivan operas, and after studying at New York conservatoire, made her reputation in *The Belle of New York*, produced in that city, 1897 and in London 1898. Other musical comedies in which she scored notably were *The School Girl*, *The Catch of the Season*, *The Belle of Mayfair*, and *Nelly Neil*, 1907. She then married Oscar Lewisohn and retired from the stage, reappearing in 1911 for one week of charity performances of *The Belle of New York*. She died at Lausanne, Jan. 2, 1948.

**May, PHIL (1864-1903).** British caricaturist. Born in Leeds, April 22, 1864, he was left in great poverty on his father's death in 1873. In 1878 he was assistant scene painter at the Grand Theatre, Leeds, where he also drew portraits of actors. About 1882 he came to London and drew cartoons for *Society* and *St. Stephen's Review*. He then went to Australia and worked for the *Sydney Bulletin*.

The primitive conditions of printing in vogue there compelled him to develop a style in which everything but absolute essentials

was discarded. His work thus attained a brilliant simplicity of line and vividness of character. Of incomparable originality, it had the appearance of having been achieved by a lucky chance, though each drawing was the result of much labour and many studies. He returned to London about 1890, and worked for the *St. Stephen's Review*, *Pick-me-Up*, *Pall Mall Budget*, *The Graphic*, for which he travelled in America, and *Punch*, on the staff of which

Phil May, British caricaturist Elliott & Fry

paper he succeeded to the place formerly held by George du Maurier. His publications include *The Parson and the Painter*, 1891; *Guttersnipes*, 1896; and *Phil May's Annual* from 1892. He died in London, Aug. 5, 1903. A study by J. Thorpe appeared in 1932.

**May, THOMAS ERSKINE.** English historian who was raised to the peerage as Lord Farnborough (q.v.).

**Māya (Sanskrit, matter).** In the Vedānta philosophy, the veil of Nature which obscures the True. Alternatively, the term signifies a charm-weaver who conjures up

Phil May. "The First Smoke," a typical example of this artist's humorous line work

Maya. Mural tablet, elaborate example of Maya art. The priest, seen on the right, is represented offering the body of a newly born child as a propitiatory sacrifice to the gods, a custom observed on religious festivals, and in order to avert threatened calamities. The tablet was executed with the aid of blunt instruments of flint

visions of the transient glories of this earth in order to captivate *Ātma*, or the soul. According to the Hindu philosophy all are born in *Māya*, the conception of which is akin to the Christian's idea of original sin.

**MAYA OR MAHAMAYA.** Mother of Gautama Buddha. *Suddhodana*, a Kshatriya chief ruling a small state whose capital was *Kapilavastu*, in S. Nepal, wedded two sisters, *Maya* and *Prajapati*, whose father *Grihapati* was a chief of similar rank. The elder sister, when about 45, set out in the second month of spring, c. 560 B.C., for her parents' home in anticipation of childbearing. Midway on the journey she reached a grove sacred to the goddess *Lumbini*, and here *Gautama* was born. The sacred grove was visited c. 250 B.C. by *Asoka*, who erected there an inscribed stone pillar which, in 1895, was identified *in situ* 3 m. N. of *Bhagwanpur*. In after ages, in emulation of Christian history, the Buddhist nativity became encrusted with legendary features. See *Buddha*.

**MAYA.** American Indian stock, comprising about 20 tribes in middle America. In Mexico they number nearly 400,000 including the *Maya* proper, mostly in *Yucatan* and *Campeche*; *Tzendal* and *Tzotzil*, in *Chiapas*; and *Huastec*, in *Vera Cruz* and *San Luis Potosi*. Comprising the bulk of the Indian population in N. Guatemala, they are numerous in Honduras, and

have spread into British Honduras. Thickset and roundish-headed, 5 ft. 1 in. in height, and pale to dark-bronze in skin-colour, they are now mostly agricultural peasants. Although from time to time between 1839 and 1910 they rose in rebellion against the Latin-American administrations, they share in general the unprogressive spirit characteristic of American Indian life.

The modern *Maya* are directly descended from a people who, at the Spanish conquest, had behind them 16 centuries of cultural history of high importance and interest. Their name is associated with an advanced civilization, which reached levels of architectural and sculptural achievement unsurpassed elsewhere in pre-Columbian America. Out of the prolonged archaic period, during which the primitive peoples of middle America were slowly developing maize cultivation and producing crude pottery, there suddenly emerged, c. 200 B.C., a marked cultural impetus. Its stone sculpture and architecture, its conventional pictography, its calendar system corrected by astronomical observations, and its complex religious ritual, were so alien to the general course of aboriginal development, and so reminiscent of the results attained in the Old World after millennium of effort, that the arrival of new cultural influences across the Pacific may be accepted as the most reasonable explanation.

The starting point of *Maya* civilization is still undetermined. The oldest dated monument yet identified in the *Maya* region, found in 1916 at *Uaxactun* in N. Guatemala, approximates to A.D. 50. In the same neighbourhood *Tikal* has yielded the date 214, together with monuments in an earlier style, and *Copan*, in Honduras, traced back to 250 at least, used dressed-stone courses with bonded corners.

From these early civic centres, with temples raised upon terraced pyramidal platforms, which bore very strong suggestions of Asiatic inspiration, the movement spread to *Quirigua* and, through *Piedras Negras*, *Palenque*, and *Yaxchilan*, into *Yucatan*, which was reached early in the 5th century, when the southern cities were at their zenith. By 600 they were already in decay, and were unknown to the early Spanish historians, who left detailed accounts of the great northern cities, notably *Uxmal*, *Chichen Itza*, and *Mayapan*, which was abandoned in 1442. These sources are supplemented by the *Chilan Balam* digests of ancient chronicles in the *Mayan* language, but in Spanish script, and also by three pre-Columbian codices. These illuminated MSS. on agave-fibre paper bear pictures and records in a syllabic script called hieroglyphic, which awaits full deciphering.

After *Maya* art lost its impulse in the primal centres of development its principles spread into S.

Maya. Carved stela, one of many archaeological treasures discovered in 1947 at Bonampak, ancient Maya city in the jungles of Yucatan

Mexico, where it was adopted by the Zapotec people, and onward into the Anahuac tableland. Here it apparently owed its dissemination to the Toltec, from whom it was afterwards absorbed by the Aztec communities. Maya sculpture and handicraft were at all points superior in creative power to the Aztec, towards which it stood in the same organic relationship as Greek to Roman.

In the intellectual domain, Maya mathematics not only reached a system of notation based on 20—instead of our 10—but also used it in a calendar comprising 18 “months,” each of 20 days, followed by five nameless days, devoted to religious rites. There was also a calendar based on the apparent revolution of Venus, and a Quirigua stela records calculations apparently designed to rectify the accumulated errors due to the fact that the true year does not contain an integral number of days. The religious rites, less sanguinary than the Aztec, included sacrificial offerings by professional priests to deities deemed to control the means of subsistence. Designed to ensure rainfall and abundant crops, they were addressed to many deities, at whose head stood the aboriginal tribal god Itzamna, who in the later Yucatan period was displaced by the feathered-snake culture-hero Kukulcan, cognate to the Aztec Quetzalcoatl. *See Art; Mexico: Archaeology; Yucatan.*

Hieroglyphs, S. G. Morley, 1915; Ancient Civilizations of Mexico and Central America, Spinden, 1917-18; The Maya Indians, T. W. F. Gann, 1918; Maya and Mexican Art, A. Joyce, 1927; Glories of the Maya, Gann, 1938.

**Mayaguana, OR MARIQUANA.** Island of the Bahamas. It was leased by Great Britain to the U.S.A. in 1940 for use as a naval and air base. Pop. 591.

**Mayáñez.** City of Puerto Rico. The capital of the dept. of Mayáñez, it stands on the river of that name, close to the W. coast. The third largest city of the island, it has a large and secure harbour, is served by rly., and has regular steamship communication with New York. A prosperous commercial centre, it trades extensively in coffee, sugar, and fruit, principally oranges. It has an agricultural experimental station. Founded in 1836, Mayáñez became a city in 1873. Pop. 76,487.

**Máyavaram.** Town of India, in Madras state, in the dist. of Tanjore. It is a rly. junction on the main line from Madras down the coast, with connexions to Karikal and Negapatam. Pop. 29,200.

**Maybole.** Police burgh and market town of Ayrshire, Scotland. It is 9 m. S.S.W. of Ayr, with a rly. station. The chief buildings are the town hall and several churches, and the chief industry the making of footwear.

Maybole arms

Maybole became important as capital of Carrick. It was incorporated in 1193, and had a castle in which the earls of Carrick lived. Later it passed to the family of Kennedy, now represented by the marquess of Ailsa. In the neighbourhood are Kirkoswald, famous for its associations with Burns, and Culzean Castle. Pop. 5,000.

**Maybrick Case.** Trial of Mrs. Maybrick for the murder of her husband in April, 1889. Kate Maybrick was then 26, her husband being twice her age. Early in 1889 she formed a liaison with a young cotton broker in Liverpool, and shortly afterwards she and her husband had a violent quarrel. Within six weeks of that quarrel Maybrick was dead, and in that time incriminating correspondence had been intercepted between Mrs. Maybrick and her lover. Maybrick's doctor withheld his certificate; an inquest was held, with the result that the widow was charged with the wilful murder of her husband by arsenic poisoning, a charge made more serious by the fact that a short while before her husband's death she had purchased fly-papers containing arsenic.

The accused woman was defended by Lord Russell of Killowen. According to Mrs. Maybrick's own statement, she used the extract of arsenic she made from the fly-papers as a complexion wash, and the chief arguments used in her defence were that her husband was a hypochondriac given to dosing himself with the poison, and in any case it was not certain that arsenic was the direct cause of death. Mrs. Maybrick was reprieved, mainly on the grounds of the conflict of the medical evidence, but despite influential efforts in Great Britain and America she was not released until 1904.

**May Day.** First day of May. The May Day festivities probably originated in the Roman Floralia, the festival in honour of Flora, goddess of flowers. In England flowers and boughs of hawthorn (“may”) were brought from the woods, the prettiest girl in the village was crowned with flowers as queen of the may, and the maypole was set up. May Day was the chimney-sweeps' holiday. On the Celtic May Day festival, called Beltane, fires were kindled on the hill-tops. Of recent years the day has been observed as Labour Day. *See* Beltane; Labour Day; Maypole; Morris Dance.

**Mayen.** Town of W. Germany, in the Land of Rhineland-Palatinate. It is situated 16 m.

1. Temple ruins, Uxmal, Yucatan 2. Restoration of the temple of Kab-ul, Izamal. 3. Bas-relief, now in British Museum, depicting the god Kukulkan, before whom kneels the high priest, offering a blood sacrifice by tearing his tongue with a rope studded with thorns

4. Page from the Maya MS., now at Dresden, an example of early decorative art. The inscriptions have not been deciphered. 5. Western façade of Nunnery Quadrangle at Uxmal, with pyramidal Temple of the Magician on right

**MAYA: REMAINS OF AN EARLY AMERICAN CIVILIZATION**  
No. 5 by courtesy of The American Museum of Natural History

W.S.W. of Coblenz, with which it is connected by rly., being on the edge of the Eifel Mountains and at the mouth of the Nette Valley. The principal building is a Late Gothic church. Mayen originated as a Roman settlement. In the later Middle Ages it rose again, and in the 13th century, or earlier, was a walled town with a castle. There are some remains of both walls and castle. Pop. 14,000.

**Mayence.** French name for the city better known by its German name of Mainz (*q.v.*).

**Mayenne.** River in the N.W. of France. It rises in the dept. of Orne and flows S. across the dept. of Mayenne to join the Sarthe near Angers and form the Maine, which itself soon falls into the Loire. It is navigable for small craft for 75 m., its total length being 125 m.

**Mayenne.** Dept. of France. In the N.W. of the country, the area is 1,986 sq. m. The chief river is the Mayenne; others are its tributaries, including the Jouanne, Colmont, and Oudon. The surface is fairly level, the highest point being under 1,400 ft. high, and the soil is fertile. Cattle, horses, and pigs are reared in large quantities; wheat, oats, barley, and flax are grown, as are apples for cider. A good deal of the land is forest. Laval is the capital; other places are Château Gontier, Mayenne, and Lassay. Before the Revolution the dept. was partly in Maine and partly in Anjou. Pop. 256,317.

**Mayenne.** A town of France. In the dept. of Mayenne, it stands on the river of that name, being on both banks, 19 m. N.N.E. of Laval. It is a rly. junction, and has manufactures of linen and other textiles. The chief building is the church of Notre Dame; dating from the 12th century, it was partly restored in the 19th. Of the castle, around which the town grew, there are some remains, including the chapel and tower. Mayenne dates from about 1100, and the castle was several times besieged and captured during the various civil wars. In 1573 Charles, a son of the duke of Guise, was made duke of Mayenne, the castle and surrounding territory being then in possession of his family. During the Second Great War it was liberated Aug. 6, 1944, by U.S. armour.

**Mayer, JOHANN TOBIAS** (1723-62). German astronomer. Born at Marbach, Württemberg, Feb. 17, 1723, he was a self-taught mathematician and entered a cartographic establishment in Nuremberg in 1746, where he gained a considerable scientific reputation.

In 1751 he was elected to the chair of economy and mathematics at Göttingen, becoming superintendent of the observatory three years later. His fame rests chiefly on his lunar tables, 1752 and 1770, of which an amended form was submitted to the British Admiralty. He died Feb. 20, 1762.

**Mayer, JULIUS ROBERT VON** (1814-78). A German physicist. Born Nov. 25, 1814, in Heilbronn, and educated at the gymnasium there, and at Tübingen, Munich, and Paris, studying medicine, he made a voyage to Java in 1840. There he investigated the phenomenon of animal heat. Taking an interest in science, he practically abandoned medicine, and in 1842

Mayflower. Model of the famous Pilgrim ship of 1620  
By permission of Goulding & Co., Plymouth

published his discovery of the principle underlying the conservation of energy, one of the most important principles in physics. In 1845 he published a fuller account of his discovery, and in 1851 his essay on the mechanical equivalent of heat, which was more accurately stated by Joule (*q.v.*). Mayer died March 20, 1878.

**Mayfair.** District of W. London. Lying to the N. of Piccadilly (*q.v.*), it is covered by once fashionable streets and squares where the aristocracy had their town houses. It derives its name from a fair held during May in the Brook Field, near Chesterfield House. The fair, which originated at the beginning of the 18th century, was suppressed in 1708, revived, and finally done away with in the time of George III. The Tybourne flowed through Brook Field.

What is known as Shepherd's Market, after Edward Shepherd, who built it in 1735, was rebuilt in 1860. Sunderland House is on the site of Mayfair or Curzon Chapel, 1730-1899. Until excommunicated in 1742, the Rev. Alexander Keith ministered here; he then founded another chapel near by at which he

celebrated some 7,000 clandestine marriages. The mews of Mayfair have been turned into garages, and during the Second Great War there was a general evacuation of the district, but though its character is lost, its name remains as a symbol of society. *Consult* Looking Back on London, D. Hood, 1933.

**Mayfield.** A town of Sussex, England, lying 11 m. S. of Tunbridge Wells. It is served by rly. The church is dedicated to St. Dunstan. The archbishop of Canterbury had a palace, of which there are some remains, partly incorporated in a convent built 1866. The banqueting hall became the chapel. Mayfield was a market town in the Middle Ages, and had an iron industry later. Pop. 3,080.

**Mayflower, THE.** Sailing vessel in which the Pilgrim Fathers (*q.v.*) left Plymouth, England, Sept. 6, 1620, and reached the shores of Massachusetts, Dec. 21. A square-rigged brigantine, double-decked, broad in beam, with upper works rising high in the stern, the Mayflower had been used in the whaling service. Christopher Jones was her master and part owner. In her cabin, off Cape Cod, Nov. 2, was signed by the pilgrims the famous agreement, drawn up by William Brewster (*q.v.*). *See* Jordans. *consult* The Pilgrims and Their History, R. G. Usher, 1918; The Last of the Mayflower. J. R. Harris, 1920.

**May Fly.** Popular name for the common English species of ephemera. It appears about the end of May, hence its name, and lives only for a few days, sometimes only a few hours. About 50 species are found in Great Britain, and are in great favour with anglers for bait, especially for trout. *See* Angling: Ephemera; Fly-fishing.

**Mayhem.** In law, the violent deprivation of a person of a member proper for his defence in fight. It is battery, aggravated by the fact that it ever thereafter disables the injured person from making so good a defence against external injury as he otherwise might have done. Members specified as proper for defence included, besides the hands, arms, and legs, the fingers, eyes, and front teeth, but not the nose, ears, or jaw teeth, which are of no use in fighting. The old penalty for mayhem was retaliation—a limb for a limb—afterwards discarded in favour of fine and imprisonment and payment of damages for the civil injury. Mayhem is now included in the Offences against the Person Act of 1861. *See* Battery.

**Mayhew, HENRY** (1812-87). British author. Born in London, Nov. 25, 1812, and educated at Westminster school, he was articled to his father, an attorney, for three years. With Gilbert & Beckett he founded the weekly paper *Figaro* in London, 1831-39.

Henry Mayhew,  
British author

He was joint founder with Mark Lemon and the first editor of *Punch*, and collaborated with his brother Augustus (1826-75) in the production of fairy tales, farces, and popular fiction. His book, *London Labour and the London Poor*, 1851-62, in which he was assisted by John Binny, is almost encyclopedic in scope. He died July 25, 1887.

**Maymyo.** A hill station of Burma. Situated 30 m. by rly. N.E. of Mandalay, in the dry dist. of Central Burma and at an elevation of 3,500 ft., it was formerly the residence of the British governor of Burma. Maymyo was evacuated by Allied troops in May, 1942, during the Japanese offensive in Burma. Gurkhas of the 19th Indian div. recaptured it by surprise on March 13, 1945. Pop. 8,000.

**Maynooth.** Village of co. Kildare, Eire. Situated 15 m. W. of Dublin, with a rly. station, it contains the ruins of a castle, formerly the seat of the Fitzgeralds, while near it is Carton, the seat of the present head of that family, the duke of Leinster.

Maynooth is chiefly famous for its R.C. college, founded by the Irish parliament in 1795. The chief Irish college for the education of priests, it has accommodation for 600 students. The building, by A. W. Pugin, is in the Gothic style. The present chapel, with some elaborate decorations, was added later. Until 1871 the college received an annual state subsidy; it was then granted an endowment of £369,040 from public funds.

**Mayo.** County of Eire. In the prov. of Connacht, it is the third largest in the country, having a land area of 2,084 sq. m. It has a long and irregular coastline on the Atlantic, penetrated by Killala, Blacksod, and Clew Bays, Killary Harbour, and

Mayo arms

Broad Haven. The peninsula of Mullet juts out, and in parts the cliff scenery is wild and magnificent. Achill, Clare, Inishturk, and other islands belong to Mayo. It is drained by the Moy, Owenmore, and other rivers; it contains loughs Mask, Conn, Carra, and Beltra. The surface is fairly level in the E., but mountainous in the W., where are Mulrea, Nephin, and other heights of over 2,500 ft. The soil is poor, but cattle, sheep, and pigs are reared, and oats and potatoes grown. Fishing is an industry. Mayo is served by Eire state rlys. Castlebar is the co. town, other places being Ballina, Newport, and Westport. There are remains of religious houses and round towers. The pop. has fallen dramatically from 388,887 in 1841 to 148,200 in 1946.

**Mayo, RICHARD SOUTHWELL BOURKE, 6TH EARL OF** (1822-72). British statesman. Born in Dublin,

6th Earl of Mayo,  
British statesman

Feb. 21, 1822, he graduated at Trinity College in 1841, travelled in Russia in 1845, and in 1847 became M.P. for co. Kildare. Five years later he became chief secretary for Ireland, holding the post until appointed viceroy of India in 1869. There he introduced financial reforms and much improved the public services, but while calling at the penal settlement of Port Blair, Andaman Is., he was assassinated, Feb. 8, 1872.

**Mayo, KATHERINE** (1867-1940). Irish-American writer and reformer. Born at Ridgeway, Pa., she wrote on police politics, the Y.M.C.A., and the Philippines. But her most famous book was *Mother India*, 1927, the outcome of a visit to India the previous year. Her exposure of the evils of child marriage caused a sensation on both sides of the Atlantic and helped to move the Indian legislative assembly to reformative action. In 1935 she published *The Face of Mother India*. She died Oct. 10th, 1940.

**Mayo Clinic.** American medical and surgical foundation, started at Rochester, Minn., by the brothers Mayo, William James (1861-1939) and Charles Horace (1865-1939). It began with 13 patients but by 1925 the members exceeded 23,000 and the clinic had become world renowned in every branch of surgery. The

brothers founded a graduate school in Minnesota and gave more than £600,000 to establish in Rochester the Mayo Foundation for medical education and research. In the First Great War the Mayos were in joint charge of all U.S. army surgical services.

**Mayo College.** Indian public school at Ajmer, Rajputana. It was founded on the lines of Eton College for the education of Rajput aristocracy and endowed by the states of Rajputana with the addition of government grants. Named after the 6th earl of Mayo (v.s.), a former viceroy, it was opened in 1875.

**Mayor** (Lat. *major*, greater). Name given in England and many English-speaking countries to the chief officer of a municipality. It was first used in the early Middle Ages for a high official of any kind. In England the title appeared about 1100 for the chief official of London, and was soon in fairly general use in the chartered towns. The mayor is elected annually by the town council to preside over its meetings and act as the official head of the town. He is the chief magistrate, and is styled his worship. Many large towns now pay him a salary. The corresponding Scottish official is the provost. In France every town, commune, and district has a maire. See Borough; Burgomaster; Lord Mayor; Provost.

**Mayor of Casterbridge, THE.** Tenth novel by Thomas Hardy. It appeared in 1886, and depicts a group of characters of a county town (Dorchester). Man's conflict against inexorable forces is here shown in the dimensions of man's own experience. The book belongs to the group which includes *Two on a Tower*, 1882, and *The Woodlanders*, 1887.

**Mayotte OR MAYOTTA.** One of the Comoro group of islands in the Mozambique Channel off E. Africa. It has been a French possession since 1851. The island has an area of 140 sq. m. and a pop. of 17,477. Its former industry of sugar planting has now largely given way to the cultivation of vanilla. During the Second Great War British forces occupied Mayotte on July 2, 1942, as a security measure. See Comoro Islands.

**Mayow, JOHN** (1640-79). British physiologist and chemist. Born in London, May 24, 1640, he was educated at Wadham College, Oxford. He practised medicine at Bath, making a chemical study of the waters there. His tract on Respiration, 1668, ex-

plained the double articulation of the ribs with the spine, and put forward views on the intercostals, developed in *Tractatus Quinque*, 1674. In his treatise *On Saltpetre* and the Nitroserian Spirit, Mayow developed a theory of combustion closely resembling that followed by Lavoisier a century later. He was buried in S. Paul's church, Covent Garden, Oct. 10, 1679. His premature death probably delayed the development of chemistry a hundred years.

**Maypole.** Tall pole formerly set up on village greens, or in the open spaces of towns in England, to form the centre of the festivities associated with the coming of May. It was garlanded with leaves and flowers, and long coloured ribbons attached to the top were held by dancers, who plaited and unplaited them in the course of their evolutions. The custom was assailed by the Puritans of the 16th and 17th centuries as a survival of ancient idolatry. In some places the maypole was a permanent fixture. The London maypole, demolished by the Commonwealth, was replaced at the Restoration by a pole 134 ft. in height. It stood in the Strand near Somerset House, and was removed to Wanstead, Essex in 1717. Maypole dances have been revived in many English centres. According to Sir James Frazer, the maypole and all the rites associated with it are a survival of primitive tree worship. See *Dancing*; *May Day*.

**Mayu.** Name of a river and a range of hills in Burma. The river, some 80 m. long, rises in the Chittagong hills and drains into the Bay of Bengal just N. of Akyab. The hills, which lie close to the Arakan coast, are penetrated by a series of tunnels carrying the road from Maungdaw to Buthidaung, and were the scene of much fighting between British and Japanese, 1942-44.

**Mayurbhanj.** Former state of India, lying between Bengal to the N.E. and Orissa to the S. and S.E. It was merged in Orissa, 1949. Before the changed constitution of 1947 it was in the Eastern states agency. It entered into treaty relations with the East India Co.

Maypole. Some of the eight maypoles at a children's dance festival at Letchworth, Herts. Top picture, dancing round the maypole in Merrie England, after Joseph Nash

Mayweed. White and gold flower-heads

like flower-head is white with a yellow centre, and is about 2 ins. across. Stinking Mayweed (*Anthemiscotula*) has similar flowers. The wild camomile is another common species.

**May Week.** At Cambridge university, the period in which bumping races between college eights, called the Mays, are rowed on the river Cam. Each college normally enters from one to three crews, and the races are held in several divisions. In spite of its name, May Week lasts only four days and occurs in the first half of June. A social occasion, guests being entertained in the evenings by concerts, dances, etc., it corresponds with Eights Week at Oxford. See *Bumping Race*.

**Mazade, FERNAND** (b. 1863). French poet. He was born at the château de Monac, Provence, and though in later life he avoided publicity, he became an influence in contemporary French poetry. A supreme lyricist, he excelled alike in classic and romantic verse, and in his symbolist pieces was influenced by Mallarmé. His works include *Athena*, 1912; *Dionysos et les Nymphes*, 1913; *De Sable et d'Or*, 1921. He also compiled an outstanding anthology of French poetry.

**Mazagan.** Town and seaport of Morocco. It stands on the Atlantic, about 110 miles N. of Marrakesh, for which it is the port. There is accommodation for shipping and a considerable trade passes through here. It has large granaries, and the buildings include a R.C. church. Mazagan owes its origin to the Portuguese, who built it about 1510, and held it until 1770. Pop. 38,000.

**Mazama.** Volcanic cone in the Cascade Range, S. Oregon, U.S.A. Situated in Crater Lake national park, it is reached by road from Medford, 79 m. to the W., on the Shasta rly from Seattle to San Francisco. Once it was a great peak with permanent snow and glacier carved valleys, but the top fell in and the hole is occupied by Crater Lake (q.v.). The rim of the hole rises in a cliff nearly 2,000 ft. at its highest point above lake level at 6,177 ft.

**Mazamet.** Town of France. In the dept. of Tarn, it is situated 40 miles from Albi and 12 m. S.E. of Castres, on a rly. from Certe to

in 1829. Springing from an ancient Bhanja kingdom, it has notable artistic traditions. A hilly area, it culminates in Meghasani, 3,824 ft. Baripada, the only important town, is on a branch line to the coast rly. Area of state, 4,243 sq. m. Pop. 990,977.

**Mayweed** (*Matricaria inodora*). Annual or biennial herb of the family Compositae. It is a native of Europe and N. and W. Asia. The narrow leaves are twice divided into thread-like segments. The daisy

Toulouse. The Arnette flows by it. The chief building is the church of S. Sauveur. The manufactures are mainly cloth and leather, with tanning, dyeing, and other attendant industries. Mazamet was in Languedoc until the Revolution, and was known as a Protestant stronghold. Pop. 15,083.

Mazamet arm:

**Mazanderan.** Province of N. Persia. It lies between the Caspian and the Elburz Mts. with Teheran prov. to the S. It is a fertile region with a marshy, malarious lake shore, producing silk, wool, cotton, rice, sugar, and fruit. It has a caviare industry, and a considerable trade in horses, donkeys, and mules, while there are deposits of iron and petroleum. The capital is Sari, about 20 m. E. of Babal. The area is about 10,000 sq. m. and the pop. about 200,000.

**Mazarin, Jules** (1602-61). French statesman and cardinal. He was born at Piscina, July 14,

Jules Mazarin,  
French statesman

1602, the son of Pietro Mazarini, a Sicilian in the employment of the Colonna family. Having taken minor orders, he entered the papal service, and was sent to France on a diplomatic mission. There he attracted the attention of Richelieu, who took him into the French service, 1639, and dying, named him as his own successor in 1642. On the death of Louis XIII in 1643 Mazarin, who had received the cardinal's hat in 1641, retained the confidence of the regent, Anne of Austria, and continued to be first minister. It has been suggested that he secretly married Anne.

Wily and pliant, a strong contrast to his predecessor, Mazarin continued in his own way Richelieu's policy of concentrating control in the hands of the crown. The Thirty Years War was terminated in 1648. The contest between France and Spain was suspended by the internal struggles of France known as the Fronde (q.v.), in which sundry nobles sought to recover their lost ascendancy. This continued until 1653, ending in the complete triumph of Mazarin. The war with Spain was now renewed. Mazarin

procured the alliance of Cromwell, and secured his triumph in the treaty of the Pyrenees, 1659.

Next year the cardinal retired from the active direction of affairs, and died March 9, 1661.

Greedy and dishonest, he had amassed a fortune while leaving the finances in chaos: but he was a patron of Descartes and Corneille. A consummate judge of men, he was an artist in diplomacy, and unswervingly worked for the aggrandizement of France. Consult his Letters, 9 vols., 1872-74; Life A. Hassall, 1903.

**Mazarin Bible.** Reputed to be the first complete book printed from movable types (1452-56). So named from its having been discovered in the library of Cardinal Mazarin, it is in two volumes and was printed in Latin at Mainz, probably by Gutenberg or Fust.

**Mazar-i-Sherif.** A town of Afghanistan. About 10 m. S.E. of Balkh, near the Dehas-rud or Balkh river, it is the capital of Afghan Turkistan, and contains a famous mosque and the shrine of Hazrat Shah. Swords and other weapons are made. Pop. 30,000

**Mazarron.** Town of Spain, in the prov. of Murcia, formerly known as Almazarron. It is 3 m. from its port (Puerto) on the Mediterranean and 19 m. W. of Cartagena by rly. The neighbouring iron, copper, and lead mines supply its metal works, and it manufactures soap and flour. The port has salt works and a coasting trade. Pop. 18,210.

**Mazatlan.** City and principal Pacific seaport of Mexico. It is in the state of Sinaloa, at the entrance to the Gulf of California. The harbour is merely an exposed roadstead. Foundry products, cotton, and rope are manufactured; minerals, pearls, fish, rubber, and fruit are exported. With a sub-tropical climate, Mazatlan is a popular modern seaside resort. There are good roads to the interior, rlys. to Mexico City and Nogales, U.S.A., and an air service. Pop. 31,000

Mazatlan Mexico. Sea wall and promenade leading to the harbour of this Pacific port

**Maze.** The modern term for a garden labyrinth or puzzle-garden. There is a notable example at Hampton Court, laid out in the time of William III. Mazes were

Maze. Example at Hampton Court, of mixed hedgerow vegetation

common in S.W. England in former times, e.g. at Pimperne, Leigh, and Troy Town, Dorset. The name of Troy Town is derived from the old British word *troi*, a turning or winding. See Labyrinth.

**Mazeppa - Koledinski, Ivan Stepanovitch** (1644-1709). Cossack soldier. Of a noble Polish

Mazeppa-Koledinski,  
Cossack soldier

family, he was educated by the Jesuits, and was beginning a brilliant career at the court of John Casimir, king of Poland, when he was discovered in a liaison with a noble lady. The husband bound him naked to a wild horse, which, it is said, fled with him to the Ukraine. His education and ability gained him a reputation with John Samoilovich, the Cossack hetman, whom he succeeded in 1687.

He won the favour of Peter the Great in the war against the Turks, and was employed in the Swedish War in 1704-05; but in 1708 he deserted Peter and took 7,000 men to the assistance of Charles XII. Peter razed to the ground Baturin, Mazeppa's capital, and the hetman lost the allegiance of his Cossacks. He was present at the battle of Poltava,

1709, after which he went to Turkey, and died, perhaps by suicide, at Bender, Sept. 22. The story of Mazeppa has been treated by Byron, Victor Hugo, Bulgarian, and Gottschalk.

**Mazo**, **JUAN BAUTISTA MARTINEZ DEL** (c. 1610-67). Spanish painter. Born at Madrid, he was a pupil of Velazquez, whose daughter he married in 1634. He remained with his father-in-law until his death, and succeeded him as court painter in 1661, imitating his work with such skill as to be described as a second-hand Velazquez. Many replicas of portraits ascribed to that master are probably the work of del Mazo. He also copied Titian, Tintoretto, and Paul Veronese. Don Tiburcio y Cruzat, in the Prado, is his best work. He occasionally painted hunting scenes, sea pieces, and landscapes, such as his view of the Zaragoza. His portrait of Mariana of Austria (1666) is in the National Gallery, London, where a Portrait of a Man is also attributed to him. He died at Madrid, Feb. 9, 1667.

**Mazovia**. Region of Poland, otherwise known as Masuria (*q.v.*).

**Mazurka** or **MASUREK**. National Polish dance in triple time. Originating in Mazovia, or Masuria, in the 16th century, the dance was adopted in Russia after the subjugation of Poland, and became popular in Germany in the middle of the 18th century, and in France and England later. Characteristics of the early mazurka tunes were the monotony of the bass—usually a reiteration of the keynote—accents on the third beats of many of the bars, and the finishing on the second beat of the final bar. Chopin lifted the music of the simple folk-dance into the region of art and greatly extended its variety, but his mazurkas still emphasise at times these three features, and the 46th mazurka, Op. 68, No. 1, contains all three in its first phrase given below:

**Mazzarà del Vallo**. City of Sicily, in the prov. of Trapani. The ancient Mazara, it stands on the coast at the mouth of the river Mazaras, 15 m. by rly. S.E. of Marsala. Its cathedral, founded in the 11th century, was rebuilt in the

17th. The castle dates from 1073. In the neighbourhood are sulphur springs, quarries, and grottoes. Originally a colony of Selinus, Mazara was destroyed in 409 B.C., but again became a prosperous town and fell to Rome after the first Punic war. It exports grain, oil, and linseed. Pop. 22,000.

**Mazzeba** (Hebrew, thing-set-up). Semitic unhewn pillar-stone. The A.V. translates pillar and image; the R.V. uses pillar throughout. The earliest record (Gen. 28) is Jacob's Beth-el pillar (house of God), whence the Greeks called such stone symbols baityls. Perhaps originally memorials of the dead, they passed into ritual use, as at Beth-shemesh, Gezer, Petra, sometimes with cup-markings. See Menhir; Pillar-worship.

**Mazzini**, **GIUSEPPE** (1805-72). Italian patriot and author. Born at Genoa, June 22, 1805, he was

Giuseppe Mazzini

educated for the law, but his love of literature and the coterie of young patriots, of whom he soon became the chief, gave his inclinations a more generous turn in the

direction of politics. He joined the Carbonari (*q.v.*) in 1827, and being arrested on suspicion in 1830 was sentenced to exile. Proceeding to Marseilles, he organized a small

band of conspirators, who, in abject poverty and constant danger, spread the doctrines of the secret society, Giovine Italia (Young Italy), already founded by Mazzini.

When, alarmed at his secret politics, the French government

banished him in 1832, Mazzini moved to Geneva, and in 1837 to London, where he made the acquaintance of the Carlyles and gained many friendships of literary and social distinction. Encumbered by poverty, he continued his work of preaching and organizing the cause of Italian unification, stirring the breasts of his fellow countrymen with passionately eloquent appeals to their patriotism. The revolutions of 1848 recalled him to Italy. From Milan he went to Rome, where he launched the republic, of which he became the leading triumvir, 1849. The French crushed the Roman republic and Mazzini fled back to London to spend the next ten years, broken by one or two furtive visits abroad, at his desk and his propaganda. Intensely distrustful of monarchies, whether in the person of Napoleon III or of Victor Emmanuel, he took as his watchword God and The People.

In 1859 came the Franco-Piedmontese War against Austria, and thousands of Young Italy, headed by Garibaldi, joined Victor Emmanuel's army. Once again the cause of Italian freedom was burked by France, and Mazzini, who had hurried out to Florence, threw himself into conspiracies to thwart Austria, liberate Rome, and drive the Bourbons from Naples. But he was a proscribed man, and after Garibaldi's conquest of the Two Sicilies, and delivery of their crown to Victor Emmanuel, Mazzini made his way back to London. Despairing of unifying Italy under the republic he had planned, he remained a constant opponent of the new order of government, and making his home in Lugano, he continued his plots and conspiracies. In the pursuit of one of these he was arrested in 1870, but was soon released and allowed to settle in Lugano. Refusing the amnesty granted him by the king, he paid visits to Italy, and was at Pisa, under the name of Brown, when he died, March 10, 1872.

It is impossible to overestimate the value of Mazzini's writings in the cause of Italian freedom. An idealist and philosopher, he was useless in action, but his writings, in Italian which became classic in his own lifetime, stirred all that was best in a nation plunged in ignorance and oppression. The moving spirit of the Risorgimento, with Garibaldi, Cavour, and Victor Emmanuel he takes his place among the makers of Italian freedom. He was the selfless idealist inspired by, and inspiring in others,

a sublime devotion to liberty and duty; a patriot who, for the sake of a great cause, spent the main part of his life as an exile. His books are many, but *Il Dove dell' Uomo*, 1853 (Eng. trans. *The Duties of Man*, 1862), is the best and most characteristic of his essays. Byron e Goethe, 1847, gave an index to his views on literature. His influence in Europe was mostly through writings in his own journals, *La Giovine Italia*, 1832-36; *L'Italia del Popolo*, 1848-51; *Pensiere ed Azione*, 1859-60; *La Roma del Popolo*, 1870-72.

**Arthur Hayward**

**Bibliography.** *Memoir*, E. A. Venturi, 1875; *Selections*, C. W. Stubbs, 1891; *Lives*, B. King, 1903; A. Rudman, 1922; *Letters*, Eng. trans. A. de R. Jervis, 1930; *Selected Writings*, edited by N. Gangulee, 1945.

**Mead.** Alcoholic beverage made from fermented honey and water. It is often strengthened with brandy and flavoured with hops, currant-juice, etc. Known in classic and medieval times, it was a common drink in both N. and S. Europe. Metheglin, from the Welsh *meddyglyn*, is a medicated mead. Made from exhausted honeycomb, mead is still popular among country folk in many parts of England. Forms of it are made in Russia and Abyssinia.

**Mead, RICHARD** (1673-1754). English physician. Born on Aug. 11, 1673, at Stepney, London, he studied at Utrecht and Leyden and graduated in philosophy and physics at Padua in 1695. His *Mechanical Account of Poisons* was published in 1702 and in the following year he was elected to the Royal Society, contributing a paper on the parasitic nature of scabies. Becoming physician to S. Thomas's hospital in 1703, he was regarded as the head of his profession after the death of John Radcliffe in 1714. He was physician to George II, and died in London, Feb. 16, 1754.

**Meade, ELIZABETH THOMASINA** (d. 1914). British novelist. She was born at Bandon, co. Cork, daughter of the Rev. R. T. Meade, rector of Nohaval. She always wrote as L. T. Meade, even after her marriage in 1879 to Alfred Toulmin-Smith. She began writing stories for young people about 1875 and throughout her life was a most

prolific author, particularly known as a writer of popular stories for girls and novels of a sentimental character. Her output of these was regular from 1886 until her death at Oxford, Oct. 26, 1914.

**Meade, GEORGE GORDON** (1815-72). An American soldier. Born at Cadiz, Spain, Dec. 31, 1815, he graduated from West Point in 1835, and served as an artillery officer against the Seminoles. He resigned in 1836, and took up railway work, but was a staff officer in the Mexican War.

On the outbreak of the Civil War he was appointed a brigadier-general of volunteers; after the second battle of Bull Run he was given a division, and distinguished himself at the battles of South Mountain and Gettysburg. At Fredericksburg (*q.v.*) he directed the attack on Jackson's corps. Promoted major-general, he was given the command of the fifth federal corps. On the eve of the battle of Gettysburg (*q.v.*) he was appointed to succeed Hooker, and defeated Lee, after which he conducted a war of manoeuvre, successfully pressing back the enemy. Grant took over the command in 1864, but retained Meade as his chief subordinate. The latter lacked brilliance, but achieved success by his soundness of judgement. He died at Philadelphia, Nov. 6, 1872. A statue at Gettysburg was erected to his memory. *Consult* Life, J. R. Pennypacker, 1901.

**Meadow.** Strictly, the name for mown land, laid down for grass and cut for hay. Since such land is commonly grazed after the hay crop has been taken, the word has been extended to grass land reserved entirely for grazing. *See* Grass; Ley Farming.

**Meadow Grass** (*Poa*). Genus of grasses of the family Gramineae, more particularly *P. pratensis* and *P. trivialis*. The first is a native of the N. temperate and cold regions; the second of Europe, N. Asia, and N. Africa. They are perennials with creeping rootstocks, which send out runners in the first-named species. They have flat pale-green leaves and pyramidal panicles of flowers. *P. nemoralis* grows in copses and woods, not objecting to the shade of trees.

**Meadow Rue** (*Thalictrum flavum*). Perennial herb of the family Ranunculaceae. A native of Europe and N. Asia, it has a creeping yellow rootstock and furrowed stems 3-4 ft. high. The leaves are divided into numerous three-lobed leaflets. The small

yellow flowers are massed in a large pyramidal cluster. There are no petals and the sepals are small, but the flower-clusters are made attractive by the numerous stamens.

**Meadow Saffron** (*Colchicum autumnale*). Tuberos-rooted perennial of the family Liliaceae.

Meadow Saffron. Pale purple flowers of this field plant; it is also known as autumn crocus

native of Europe. It has pale purple, crocus-like flowers which appear in autumn; the long slender lance-shaped leaves appear in spring. From the dried corms and the seeds is prepared the alkaloid known as colchicine.

**Meadow Sweet** (*Spiraea ulmaria*). Perennial herb of the family Rosaceae. It is a native of

Meadow Sweet. Flowers and buds of the fragrant herb

Europe, N. Asia and Asia Minor. It has a short rootstock, from which arise the handsome leaves about 6 ins. long, broken into toothed leaflets and lobes, white and downy on the underside. The flowers are small, creamy-white, in dense clusters, and very fragrant. The plant delights in wet meadows and water-sides. A popular name for it in some parts of England is queen of the meadows.

**Meadville.** City of Pennsylvania, U.S.A., the co. seat of Crawford co. On French Creek, 120 m. N. of Pittsburgh, it is served by the Erie and other rlys. The buildings of Allegheny college (founded 1815) furnish classical examples of late American Geor-

L. T. Meade, British novelist

gian and Greek Revival architecture; here also is a collection of letters from Thomas Jefferson, James Madison, James Monroe, and John Wesley. Best known industrial products are visual education equipment, rayon, and "zip" (slide) fasteners, mass production of which began in Meadville in 1913, the principle having been patented by a Meadville citizen. Settled in 1788, Meadville was incorporated in 1823, and became a city in 1866. Pop. 16,698.

**Meagher, THOMAS FRANCIS** (1823-67). Irish politician. Born at Waterford, Aug. 3, 1823, he was

T. F. Meagher,  
Irish politician

educated by the Jesuits at Kildare, and then at Stonyhurst. Settling in Dublin he became a violent advocate of repeal, becoming known as Meagher of the Sword for his advocacy of physical force rather than constitutional methods. One of the founders in 1847 of the Irish Confederation, he embarked on a revolutionary campaign, and in 1848 was arrested and convicted of high treason. The death sentence was commuted to penal servitude for life in Tasmania, but in 1852 he escaped to America, and in 1855 was admitted to the bar in New York. He served in the Northern army in the Civil War, and organized and led the Irish Brigade. Temporary governor of Montana, he was accidentally drowned, July 1, 1867.

**Meal.** Word used in two main senses. Originally it meant something ground, hence its present use for the prepared product of oats or maize, the former being oatmeal, while the latter is known in the U.S.A. simply as meal. (See Maize: Oats.) It is also used for the act of taking food in a regular way, breakfast, tea, supper, etc.

**Mealies** (Dutch *milje*, maize). South African name for the cob containing the edible part of maize. It is also applied to the whole plant. See Maize.

**Meal Tub Plot.** Alleged conspiracy by the Presbyterians in 1679 to dethrone Charles II and re-establish the Commonwealth. It had no existence outside the brain of the informer Thomas Dangerfield, who, when charged with imposture, endeavoured to save himself by declaring that the supposed conspiracy was a fabrication of the R.C.s to hide a Popish

plot for the subversion of the state. The whole affair took its name from the meal tub in the house of a Mrs. Cellier in which, according to Dangerfield, the incriminating papers were to be found. Mrs. Cellier and Lady Powys were brought to trial but acquitted, and Dangerfield was killed by a spectator on his way back from the pillory at Tyburn.

**Meal Worm.** Popular name for the larva of a small beetle, *Tenebrio molitor*, which infests granaries and mills. The larva is over an inch long, and is yellow, with darker bands. It is reared as food for cage birds and small reptiles. The beetle is black or brown above and reddish brown below. See Beetle.

**Mean.** In ordinary language, that which occupies a place midway between two extremes. In ethics, the term golden mean is used for that balance between the extremes of excess and deficiency, which constitutes the essence of virtuous action. Thus, truthfulness is the mean between boastfulness and excessive modesty of speech, bravery between fear and excessive self-confidence. In Plato the "mean" of Aristotle appears as moderation, the application of the principle of the finite (limit proportion) to the infinite (desires and passions). In logic, the mean is the middle term of the syllogism.

In mathematics, a mean is a term interpolated between two other terms of a series. If  $a$  and  $b$  are two terms of a series, then their arithmetic mean is  $(a + b)/2$ , their geometric mean is  $\sqrt{ab}$ , and their harmonic mean is  $2ab/(a + b)$ .

In astronomy the word is used in the phrases mean sun, mean moon, mean longitude, etc. In this sense it signifies an imaginary sun, moon, or planet, the movements of which are uniform. e.g. the mean moon is a moon which moves round the earth with uniform velocity in the same time as the actual moon does.

**Meander** (Gr. *Maiandros*, ancient name of a river of Phrygia now called Menderes). Term applied to the swinging curves developed by rivers flowing on nearly level flood-plains, from the nature of the *Maiandros*. Because the velocity of the water is greater on the outside and downstream sides of the curves than on the insides, rivers tend to undercut their concave banks and to deposit material on the insides of curves. This causes meanders to change their shape and position continually, and where parish or county boundaries have been fixed by the

course of a meandering stream such shifts in the channel become of legal or economic importance. If a river breaks through from one meander to the next a complete curve may be cut off, and an oxbow lake (*q.v.*) formed.

Incised meanders are formed when the river having developed a meandering course becomes capable of cutting its bed downwards again. The valley thus formed is steep-sided and gorge-like in cross-section, but its plan is that of the original winding meander pattern.

**Mean Sea Level.** Value derived from a long series of observations made at equal intervals of time. Considerable fluctuations occur in sea level, owing to waves, swell, tides, etc., but the mean value at any place is constant for all practical purposes. The sea at Newlyn, Cornwall, which is exposed to the Atlantic, provides the datum upon which Ordnance Survey maps are based. Previously, the level assumed at Liverpool, about one inch higher than at Newlyn, was the standard. Measurements of height on land are often referred to mean sea level. Barometric pressure is generally reduced to the value which the observer would read if situated at sea level.

**Mean Solar Time.** Method of reckoning the length of a day. The average interval of time is taken from the instant the sun reaches the meridian to the moment when the revolution of the earth brings the sun again into the same position. The time indicated by a sundial, called apparent solar time does not agree with mean solar time, for the length of the actual solar day varies for two reasons: the earth's orbit is elliptical, and the plane of the equator does not coincide with that of the ecliptic.

To obtain a constant measure of time, the apparent solar day is ignored and a purely arbitrary unit has been established. The zero adopted for mean solar time is the instant when a fictitious body known as the mean sun, sometimes in front and sometimes behind the actual sun, is on some chosen meridian. This gives the local solar mean time of any place through which that meridian passes and the time of that meridian is used throughout a whole country (see Greenwich Mean Time). When determined by local observation, mean solar time is true only for places on the same meridian. To overcome variations, which in certain places are as much as a minute for every 10 miles on the earth's surface, most countries

have established time zones, approximately 15° of longitude wide throughout each of which a standard time is observed. *See Time.*

**Means Test.** Term used in Great Britain for the investigation of an applicant's resources before the granting of aid. Such an investigation was part of the Poor Law administration, and was made under the Old Age Pension Act, 1908. The idea of a means test also underlay the National Insurance Act of 1911 and subsequent amendments (up to 1946), the application of which was limited to persons whose income was below a certain figure. A means test is, or has been, applied to those seeking to take legal action as poor persons; to the parents of a single man enlisting in the armed forces if he wants an allowance to be made to them; to patients in hospitals; to parents claiming allowances for children who have won scholarships, etc. The term was used in particular, however, of the test imposed during the 1930s on those among the unemployed whose period of statutory benefit under the National Insurance Acts had come to an end.

The world-wide depression which followed the American slump of 1929 caused unemployment in the U.K. to increase unprecedentedly, until in 1931 the number of registered unemployed men and women rose to over 2½ millions, or more than one in five of insured workers, about half of whom had been unemployed for more than a year; as examples, 55 p.c. of shipbuilding workers, 42 p.c. of cotton workers, 31 p.c. of coalminers, were out of work. An Act of 1927 had removed the limit of 26 weeks' benefit in a benefit year, and reduced the number of contributions necessary for uncovenanted, or transitional, benefit from 30 to eight in the previous two years. But the unemployment fund was running heavily into debt, and in 1930 an Act made transitional benefit a liability of the exchequer instead. Even so, owing to increasing unemployment, contributions to the fund decreased, and during 1930 unemployment expenditure (including transitional benefit of £16,725,000) was double the unemployment fund's income. Acts were therefore passed gradually raising the limit to which the fund might borrow from £80 million to £115 million.

Against this background an economy committee under Sir George May was set up by Ramsay MacDonald's Labour ministry

in 1931. It proposed cuts in govt. expenditure amounting to £96,103,000, of which £66,500,000 was to be the result of reducing unemployment benefits and increasing unemployment insurance contributions. The attempt by the govt. to implement these proposals led to a political crisis, and the formation by MacDonald, Aug. 25, of his first national govt. Snowden, chancellor of the exchequer, in Sept. introduced a budget imposing the cuts, and an order of Oct. reduced rates of unemployment benefit and restored the limit of 26 weeks' benefit in a benefit year, after which an unemployed person could apply for transitional benefit, but to receive it must pass before a public assistance authority a test of need applied not to the personal but to the family income. No rules guided the authorities making the tests, with the result that administration varied. Some authorities ignored savings up to £20, £50, £100, or £200; others insisted that all savings must be spent, and all property sold (as in the worst days of Poor Law administration).

#### How the Test Worked

Of 571,000 claimants between April 2 and Sept. 3, 1932, 180,000 were allowed less than the full rate, 107,000 were allowed nothing. Serious rioting occurred in Birkenhead on Sept. 17, 1932; Durham and Rotherham public assistance committees refused to administer the test, and other authorities did so under protest; hunger marchers from all parts of the country converged on London. In Nov. the Transitional Payments (Determination of Need) Act, commonly called the Means Test Act, decreed that in estimating needs, one-half a wound or disability pension, one-half workmen's compensation payments, any sum a claimant might be able to obtain by selling or mortgaging his house, and the first £25 of capital were to be disregarded. Each £25 of capital beyond the first up to £300 was to be treated as worth 1s. a week.

Full rates of unemployment benefit were restored in the 1934 budget, but the means test remained on the statute book until the passing of the National Insurance Act of 1946. Although the main part of this Act became operative only on July 1, 1948, a regulation made by the minister of national insurance brought into effect from Feb. 10, 1947, that section dealing with extended payments of unemployed benefit.

Irene Clephane

**Mearns.** Alternative name for the Scottish county of Kincardine. A district therein, a continuation of the valley of Strathmore, is known as the Howe or hollow of the Mearns. The name is supposed to be that of an early king. *See Kincardineshire.*

**Measles.** An acute contagious disease caused by a filter-passing virus. The disease is most frequent in childhood. The period of incubation, i.e. the interval from actual infection to the commencement of symptoms, is 7 to 18 days, most often 14 days. During incubation the patient is not contagious; a school may keep open several days after an outbreak. Infection is a "droplet" infection, communicated directly by the breath or nasal secretion.

The disease usually starts apparently as a feverish cold, with sneezing and running at the nose, coughing, and redness of the eyes. Headache, nausea, and vomiting may be the first symptoms. There may be a blotchy redness about the skin, and, generally on the fourth day, little red spots resembling flea bites appear on the face. The skin of the chest and abdomen exhibits a mottled, blotchy appearance. Improvement in the general symptoms usually begins about the fifth or sixth day. An early diagnostic symptom is the presence of whitish spots, surrounded by a red area, on the insides of the cheek. These are called Koplik's spots, after the observer who first described them. After the rash has faded, the superficial layer of the skin flakes off in fine scales (desquamation).

Common complications of measles are laryngitis, bronchitis, and broncho-pneumonia. More rarely, Bright's disease, endocarditis, inflammation of the middle ear, and other complications occur. These are due to secondary invading germs and usually respond to sera, penicillin, and the sulpha drugs. Treatment consists in keeping the patient in bed in a warm, well ventilated room, and in good nursing. Particular care should be taken during convalescence, as at this stage the complications of bronchitis and broncho-pneumonia arise.

Malignant or black measles is a severe form, occasionally seen, in which bleeding from the skin leading from the mucous membranes, or into the skin, may occur.

Measles is responsible for a considerable mortality. The disease varies in severity with climate, in different generations, with the strength of the virus, and with the

resistance of the victim. Serum from a convalescent patient, if injected within a few days of contagion, may ward off the disease or allow only a mild attack to develop. Peoples who have no inbred resistance often suffer very severely if an epidemic occurs. One attack of true measles protects the patient for life.

**Measure** (Lat. *mensura*, measure). Word used in a number of senses. Instruments for determining the lengths of objects, vessels of known capacity, etc., are called measures, e.g. yard measure, tape measure, etc. A system of measurement is also called a measure, as board measure, long measure, etc. (See Surveying.)

In dancing, the word is used to indicate regulated movement, which corresponds to the time in which the accompanying music is performed. In poetry, the word is used to indicate the arrangement of the syllables, e.g. iambic measure.

In arithmetic, greatest common measure is the greatest number which is contained without remainder in two or more numbers; in printing, the measure of a column or page is its width; and in geology, beds or strata are called measures, e.g. coral measures.

In fencing, the word is used for the limit of distance at which one opponent can reach the other by lunging. In architecture, a measure-and-a-half door is one which has moulding on one side only. See Weights and Measures.

**Measure.** Term in music. (1) A dance-tune, especially of a stately type. The term is much used by poets from the 16th century onwards, but no specific dance has been identified with it. (2) The space between two bar-lines. See Bar; Tonic Sol-fa.

**Measure for Measure.** Tragicomedy by Shakespeare. Angelo, an ascetic, made deputy for Vincentio, duke of Vienna, revises certain laws against immorality, and has Claudio condemned to death for an offence against them. He refuses the plea for mercy made by Isabella, Claudio's sister, save on the condition that she shall become his mistress. When he thinks she has consented, he orders Claudio to immediate execution. The duke returning, disguised as a friar, rescues Isabella by persuading Mariana, whom Angelo has jilted, to take Isabella's place at the assignation with him; saves Claudio by inducing the provost of the prison to postpone his execution; and having listened in his

real character of duke to the denunciation of Angelo by Isabella, takes her for his wife, and pardoning Angelo, compels him to marry Mariana. None of the characters is wholly likeable, and the play is interesting rather for its arguments on mercy and justice, and two speeches, that by the duke beginning "Be absolute for death," and Claudio's "Ay, but to die, and go we know not where." The scene of the play is laid in Vienna.

Written 1603-04, Measure for Measure was first published in the 1623 folio. It is a remodelling and refining by Shakespeare of a story in Giraldi Cinthio's Hecatommiti, 1565, which in turn inspired Whetstone's play of Promos and Cassandra, 1578, a prose version of which is in his Heptameron of Civil Discourses, 1582. The play contains 2,809 lines (1,134 prose, 1,574 blank verse, and 73 pentametric rhymes). Angelo has been played notably in modern times by Oscar Asche, Charles Laughton, and John Gielgud; Isabella by Lily Brayton and Flora Robson.

**Meat** (A.S. *mete*). Food obtained from many classes of animals. These include mammals, such as cattle, sheep, swine; birds; and in the broad sense also fish, amphibians, molluscs, and crustaceans. In general application meat is the flesh of animals used for food, including their edible organs and glands. The flesh of the carcass is the skeletal muscles, which are voluntary or striated, whereas in organs of the digestive tract, the type commonly found is smooth or non-striated. Heart muscle is of special form, striated and involuntary. As forming part of muscle, the fat, ligaments, tendons, blood vessels, and nerves can be termed meat.

Degree of fatness has profound influence on the value of meat. More fat means a higher calorific value, but less protein and water. The amount of bone normally expected in a beef carcass is 13-20 p.c.; in lamb, 15-18 p.c.; in pork, 14-16 p.c.; and in a side of bacon, 11-13 p.c. Representative analyses of the edible portion of carcasses give this table:

	Water p.c.	Protein p.c.	Fat p.c.	Calories per 100 gms.
Beef (lean)	65	16	18	226
" (average)	56	15	28	312
" (fat)	48	13	38	394
Lamb	55	13	31	331
Pork	47	12	40	408

Animal proteins contain the ten essential amino-acids and are

therefore of high biological value and termed first-class protein, though gelatine, from the collagen fibres, lacks at least one of the essential amino-acids (tryptophane). Fats, formerly valued chiefly as a source of energy, may act as carriers for vitamins. Meat is deficient in calcium, but a good source of phosphorus and iron, liver and kidney being particularly rich in both. Meat generally is unimportant as a source of vitamin A, though liver is an excellent source. The vitamin B complex, aneurin, nicotinic acid, and riboflavin, is found in meat, but the substances are affected by heat and lost by dissolving in water, especially aneurin. Meat has a high satiety value, for its fat content tends to retard digestion in the stomach. Beef and mutton pass through it in about 3 hours, pork in 3½ hours. The pre-1939 annual consumption of meat in Great Britain was 140 lb. a head.

Frank Gerrard, M.Inst.M.

**Meat Extracts.** Palatable extracts of meat are made by digesting chopped meat in boiling water, removing the fat, and concentrating the liquor. About 10 lb. of meat yields 1 lb. of extract which contains meat bases, amino-acids, gelatine, lactic acid, proteoses, peptones, and inorganic salts. Large quantities are obtained as a by-product in the corned beef industry. Meat extracts have a stimulant action on the gastric mucosa, improving appetite.

**Meath.** County of Eire. In the prov. of Leinster, it has an area of 903 sq. m. and a coastline of about 10 m. on the Irish Sea. It is largely a level area, although there are hills in the west. The chief rivers are the Boyne and its tributary, the Blackwater. The soil is fairly fertile. Oats and potatoes are grown; cattle, sheep, and pigs are reared. Meath is served by Eire state rlys. Trim is the county town; other places are Navan, Kells, Oldcastle, and Athboy. Meath was the name of one of the kingdoms of Ireland, including Meath, Westmeath, Longford, and parts of other counties. The kings disappeared in the 12th century, but not until the 16th century was the province, as it was called, divided into counties as at present. There are many ecclesiastical remains, those at Duleek, Bective, and Clonard being of interest, while in

Meath are Tara and New Grange, with its burial mounds. There are R.C. and Protestant dioceses. Meath and Westmeath join to send five members to the Dáil. Pop. 65,298.

**Meath, EARL OF.** Irish title borne since 1627 by the family of Brabazon. In 1616 Sir Edward Brabazon, an Irish M.P., was made an Irish peer as Lord Ardee, and his son William, the 2nd baron, was made an earl. His descendants succeeded until the earldom came to John, 10th earl, who in 1831 was made a peer of the U.K. as Baron Chaworth. Reginald (1841-1929), who became 12th earl in 1887, was known as a promoter of

12th Earl of Meath, Irish philanthropist

Empire Day and as a philanthropist. The 13th earl was his son, also Reginald (1869-1949), a brig.-gen. from 1918. The 14th earl, Anthony (b. 1910), was his son. Lord Ardee is the title of an eldest son. The earl's estates are mainly in co. Wicklow.

**Meaux.** Town of N.E. France, in the dept. of Seine-et-Marne. It is situated at a hairpin bend of the Marne, 25 m. N.E. of Paris. The handsome cathedral of S. Etienne contains the remains of Bossuet, its most noted bishop (1681-1704). There is a large trade in grain and dairy produce, and sugar, flour, textiles, and steel are manufactured. Meaux was besieged by the

Meaux, France. West front of the cathedral, which was begun in the 12th century

Mecca, Arabia. Holy city of Islam, and since June, 1916, capital of the new kingdom of the Hejaz. The sacred Ka'aba is seen in the centre of the great mosque

English in 1520. It marks the nearest approach of the Germans to Paris in their opening offensive, Sept., 1914. It was held by the Germans in the Second Great War from June, 1940, until U.S. troops crossed the Marne here Aug. 28, 1944, in the rapid Allied advance through N.E. France. Pop. 14,223.

**Mecca, MAKKAH, OR BAKKAH.** City of Arabia, the ancient Macoraba, and now one of the capitals of Saudi Arabia. It lies about 45 m. E. of Jeddah, its port. As the birthplace of Mahomet, it is the chief Holy City of the Muslim world. It lies in a narrow valley, surrounded with hills, and as many of its houses are of stone it has a well-built appearance. Roads and the supply of water and electricity are being developed by Egyptians. The centre of interest is El Haram, the great mosque which has within it the sacred Ka'aba, surrounded by a vast court said to be capable of holding 30,000 worshippers. The pop. is about 200,000, but much more in time of pilgrimage.

At one time Mecca was an important emporium of trade, but latterly its main commercial enterprise has been supplying the pilgrims with souvenirs. Although all non-Muslims are strictly forbidden to enter the Holy City, it has been visited by several Christian observers, such as Sir R. Burton, who gave an account of it in his *Personal Narrative of a Pilgrimage to El Medinah and Meccah*, 1855.

In the First Great War Hussein Ibn Ali, the grand sherif, revolted against the Turks, and captured Mecca from them in 1916. In 1924 the city fell to the Wahabis as the result of the victory of the sultan of Nejd over King Hussein. In 1925 King Ali, who had acceded on his father Hussein's abdication,

surrendered to Ibn Saud, the Wahabi sultan, and in 1926, the latter proclaimed himself king in Mecca. See *Arafat*; *Hejaz*; *Holy Carpet*; *Ka'aba*; *Mahomedanism*; *Mahomet*.

**Mechanical Engineers, INSTITUTION OF.** A British scientific society. Founded in 1847 at Birmingham by George Stephenson, it removed to London in 1877 and was registered under the Companies Act, 1878. The society holds regular meetings for the purpose of reading papers on engineering. The address is Storey's Gate, St. James's Park, London, S.W.

**Mechanics.** That branch of science which treats of forces and motion. It is usually divided into two parts: statics, which deals with the action of forces on bodies at rest, and dynamics, which is concerned with the action of forces on bodies in motion. The whole science rests on the three laws of motion formulated by Newton: (a) a body will remain at rest or in a given state of motion until it is acted upon by an external force; (b) the acceleration of a body takes place in the direction of the force which produces it and is directly proportional to the magnitude of the force and inversely proportional to the mass of the body; (c) every action is accompanied by an equal and opposite reaction. These laws cannot be proved by experiment, but every conclusion based on them has been found to be in accord with experience when they are applied to any finite material system.

The first law defines a property of matter known as its inertia, which is proportional to its mass. Mass is the quantity of matter in a body and the standard units of mass are the pound and the kilogramme, which are certain pieces

of metal preserved in London and in Paris respectively. The second law defines force in terms of its ability to overcome inertia. It is expressed mathematically by the relationship:  $F = M \times a$ , where  $F$  is the magnitude of the force,  $M$  is the mass of the body on which the force acts, and  $a$  is the rate of change in the velocity of the body, or its acceleration. Putting  $M = 1$  and  $a = 1$ , the unit force is thus defined as the force required to produce unit acceleration in unit mass.

In the C.G.S. (centimetre, gramme, second) systems the fundamental or absolute unit of force is the dyne. The magnitude of this unit can be deduced from the fact that a body falls near the earth's surface with an acceleration of 981 cm. per sec. per sec. The force of gravity on unit mass is the weight of 1 gm., therefore 981 dynes will balance a weight of 1 gm. It must be remembered, however, that a given mass will have different weights, according to its distance from the centre of the earth, whereas the absolute unit of force has the same value throughout the universe.

In the English or foot-pound-second (F.P.S.) system the absolute unit of force is the poundal. The magnitude of this force can be deduced from the fact that a body falling freely under gravity near the earth's surface has an acceleration of 32.2 ft. per sec. per sec., and since the force per unit mass is then a pound weight 32.2 poundals will balance the weight of 1 lb.

A force is completely specified by its magnitude, direction, and point of application. A force is thus a vector quantity which can be represented graphically by a line of finite length with an arrowhead to indicate the direction in which it is acting.

**COMPOUNDING AND RESOLUTION OF FORCES.** If any two concurrent forces  $P$  and  $Q$  (Fig. 1),

acting at the point O are represented in magnitude and direction by the adjacent sides OA and OB of the parallelogram OACB, their resultant R is represented by the diagonal OC, and the force R will

therefore have the same effect as the forces P and Q combined. Conversely, if R is a single force acting on the body at the point O, it can be resolved into any two component forces such as P and Q. Any number of concurrent and coplanar forces can be compounded into a single resultant force, and if the latter is zero the forces are in equilibrium among themselves. The principle of the parallelogram of forces enables the engineer to apply graphical methods to analyse stresses and to determine the stability of structures under the action of any number of forces provided that the problem is determinate. If R in Fig. 1 is reversed, then P, Q, and R acting together are in equilibrium; therefore it follows that if three concurrent forces are in equilibrium they can be represented by the three sides of a triangle taken in order, such as OBCO or OACO.

The moment of a force P about a point O, Fig. 2, is a measure of its tendency to produce rotation about an axis passing through O. The moment is equal to the product of the magnitude of the force and the perpendicular distance between the line of action of the force and the axis of rotation, thus  $T = P \times OA$ , where T is the moment in poundals-feet, or in lb.-ft. if the force is measured in pounds weight.

The moment of inertia of a body about any axis is the sum of the products of the mass of each element of the body and the square of its distance from the axis; thus  $I = \sum mx^2$  where I is the moment of inertia, m the mass of any particle in the body and x is the distance of the particle from the axis. The relationship between the moment of the force and the angular acceleration which it produces

is given by  $T = I \frac{d\omega}{dt}$  where  $\omega$  is the angular velocity of the body in radians per sec. Two equal and parallel forces, PP (Fig. 3), acting in opposite directions produce a

couple or pure turning moment without a resultant force tending to cause translational motion. The couple is measured by the product of one of the forces and the perpendicular distance between their lines of action.

The impulse of a force is the product of the magnitude of the force and the time during which it is applied. The momentum of a body is the product of its mass and its velocity. The relationship between impulse and momentum is, given by  $F \times t = M \times v$ , which follows immediately from Newton's second law.

**WORK AND ENERGY.** Work is done by a force only when it produces displacement. The work done and the energy expended is measured by the product of the force and the displacement in the direction of the line of application of the force. The absolute units of work or energy are the foot-pound in the English system and the dyne-centimeter or erg in the C.G.S. system. Engineers find it convenient to use the foot-pound and kilogramme-metre as units of energy. The commercial unit of energy is the kilowatt-hour.

Power is the rate of doing work. One horse-power is equal to 33,000 ft.-lb. per min. and 1 kilowatt is equal to 44,240 ft.-lb. per min.

**Mechanics' Institute.** Institution designed originally for the education and improvement of working men. The first was established at Glasgow in 1823 by Dr. George Birkbeck. The London Mechanics' Institution founded in 1823, renamed the Birkbeck Institution, and later known as Birkbeck College (q.v.), is still an important centre for the teaching of science. The movement spread throughout the country, and institutes, often managed by a committee of working men, were established in many towns to provide usually a reading-room, a library, and a room for debates and lectures. They are now replaced for the most part by free libraries, etc.

**Mechitarists.** Society of Armenian Christians. It was founded in 1701 by Mechitar da Pietro (1716-1749), who became an Armenian priest in 1699, his object being to establish an organization for educating his fellow-countrymen and improving their religious condition. In 1715 he secured the island of San Lazzaro between the Lido and Venice, and founded there the Armenian convent. The Mechitarists have translated and published in Armenian many of the chief productions of European

literature. They have also an academy at Vienna which was founded in 1810.

**Mechlin.** An alternative name for the Belgian town of Malines (Flem. Mechelen). The word often designates a variety of lace which was originally made there. See Lace; Malines.

**Mecklenburg.** *Land* of E. Germany, lying N. of Brandenburg and W. of Pomerania. It was split into two grand duchies until 1918, and two free states under the Weimar republic. Together in area 6,200 sq. m., with 822,000 inhabitants, and called after their capitals Mecklenburg-Schwerin and Mecklenburg-Strelitz, they covered agricultural plains interspersed with hundreds of lakes (Müritz-See, 53 sq.m.). They contained the Baltic ports of Wismar and Rostock, the latter with the oldest university in N. Germany. Cattle and horse-breeding, fishing, ship-building, engineering, and industries connected with agriculture and with seaside resorts secured moderate prosperity.

Originally inhabited by Slavonic tribes, Mecklenburg was conquered by Henry the Lion in the 12th century. The Obotrite rulers were baptized and continued in succession until the 1918 revolution, though parts of their lands, with Wismar, were annexed by Sweden in 1648 and not recovered until 1803. Both countries had until early in the 20th century a reactionary constitution. In 1918 they adopted republican forms. In 1934 the Nazis placed them, together with Lübeck, under a Reich statthalter.

British troops entering Mecklenburg from the W., Russians from the E. in the last stages of the Second Great War met on the Baltic near Wismar, May 2, 1945. After the German surrender, Mecklenburg lay within the zone of Russian occupation.

Several Mecklenburg rulers have been related by marriage to the British royal house, Charlotte of Mecklenburg-Strelitz being queen of George III.

**Mecklenburg Bay.** Wide bay of the Baltic Sea in N. Germany. It is nearly 50 m. wide between Fehmarn Island and Darss, and 30 m. long. See Lübeck Bay.

**Mecklenburgh Square.** London square. It lies to the W. of Gray's Inn Road, W.C., and E. of the grounds of the old Foundling Hospital, on part of the estate of which it was built early in the 19th century. It was named after Mecklenburg-Strelitz, of which

Charlotte, consort of George III, was a princess. London House, a residential centre for students from the dominions, occupies the S. side of the square. In 1950 a fund was raised by the lord mayor of London (in thanksgiving for food parcels sent from the U.S.A. and the dominions) to provide further accommodation for overseas students on the N. and E. sides of the square.

**Médaille Militaire.** French decoration. It was founded in 1852 to reward French private soldiers and non-commissioned officers for bravery in the field. During both Great Wars several Allied soldiers were recipients, and in 1947 the medal was awarded to Winston Churchill, Marshal Stalin, and posthumously F.D. Roosevelt.

Médaille Militaire  
Spink & Sons

**Medal** (Fr. *medaille*, from Ital. *medaglia*, a coin, from Low Lat. *medalia*, a small coin, corrupted from Lat. *metallum*, metal). Piece of metal struck to preserve the memory of some eminent person, to commemorate some illustrious action or event, or as an award for gallantry or merit. Medals form a branch of the art of numismatics and, like coins, may be cast or struck from gold, silver, or alloys of base metals.

The Greeks and the Romans struck large medals as medallions in honour of certain events or personages. One such was that awarded to victors at the Olympic games. Other Greek medals commemorated military successes, or were issued in honour of poets, artists, and philosophers. Roman medals usually carried on the reverse the reigning emperor's head, and on the obverse representations of heroes, divinities, or places associated with the event or object commemorated.

After the fall of the Roman empire, the art of the medallist rapidly declined and few medals were struck apart from miraculous and scapular medals distributed to the faithful by the Holy See. With the Renaissance, the design and production of medals revived. The greatest exponent of medallic art was the Veronese painter, Vittore Pisano (1380-1456). His medals, generally signed Opus Pisani Pictoris, founded a tradi-

tion of vivid sculpture and simplicity of treatment that continued until the end of the 16th century. Cellini, in Italy, Dürer in Germany, Pilon and Dupré in France also designed outstanding medals.

Most modern medals are struck to commemorate war service or to award gallantry in action: they are a development of the badges suspended from the chains of knighthood. The first recognizable war medal was a papal medal specially struck in 1430 and presented to John Kendall, Prior of the knights of S. John, for his relief of Rhodes.

Queen Elizabeth was the first sovereign to bestow a medal for particular military service to the crown. This was the Ark in Flood medal (so called from its design) to commemorate the victory over the Armada in 1588, and granted to certain captains in the makeshift fleet that defeated the Spanish. A modified version was issued by James I to successful admirals. Under royal warrant dated May 18, 1643, Charles I authorised the first army medal. This was a silver badge bearing the royal effigy and cypher, and was awarded to every man who had done faithful service in the forlorn hope, i.e. the tactical advance guard of those days. In 1649 the Commonwealth parliament struck gold medals for the navy, and a year later authorised the medal of parliament for the army. These medals were worn round the neck suspended from a gold chain, and their bestowal was restricted to officers in command. The first English campaign medal, a small silver badge pinned to the coat, was issued by Cromwell to all officers and men who took part in the battle of Dunbar, Sept. 3, 1650. Thereafter, however, the issue of medals was again confined to commanding officers. The one awarded for the suppression of the Monmouth rebellion was bestowed upon Bishop Mew, who had commanded the royal artillery at Sedgemoor. An unofficial medal was given by the Cumberland society to certain officers who had taken part in the battle of Culloden in 1745. The only British medal issued for the American War of Independence was that specially struck by parliament to reward Captain Ewing's distinguished service at Bunker Hill.

In 1795, gold medals were awarded to the admirals and captains who had commanded in Lord Howe's victory over the

French fleet on June 1, 1794. Admiralty orders laid down that admirals were to wear them suspended from a blue and white ribbon round the neck, while captains were to attach them to the third buttonhole of their coats with a similar ribbon. This was the first official mention of medal ribbon.

Because there was no official medal for the lower deck at the battle of the Nile Nelson's prize agent, Alexander Davison, had medals struck at his own expense and distributed to all ratings who had taken part in the action. Similar private distribution of commemorative medals was made by the Soho mint after Trafalgar. The East India Co. awarded the Deccan medal to all European and native troops participating in the 1778-84 campaigns.

#### Introduction of the Clasp

During the early campaigns of the Peninsular War field officers received a gold medal for every battle in which they took part. But owing to expense clasps (the first instance of medal clasps) were introduced: when an officer had earned a medal and four clasps, he surrendered the decoration and received a gold cross in its place. Clasps were then added to the ribbon of the cross for additional battles. The first campaign medal similar in design and metal to be issued to all ranks was the Waterloo medal, awarded in 1816. The China medal (1840-42) was also given to all ranks as was the East India Co. medal for Jellalabad (1842).

Medals for rank and file who served in the Peninsular War were not issued until 1847, 34 years after the date of the last battle, and then only to surviving claimants. This accounts for the fact that the profile of Queen Victoria appears on medals bearing bars for Maida, Corunna, etc. In 1848 a silver medal was struck by the govt. for naval ratings who had taken part in the sea operations of the Napoleonic wars. These two medals eventually became the General Service medal for army and for navy.

Since the issue of the China medal in 1842, every British naval and military operation of importance has been officially recognized by the grant to all ranks participating of a medal, or of a clasp to a previous medal. Of the medals issued for service in the First Great War the Victory medal was unique in that its design and ribbon were common

to all the Allied navies and armies. The largest number of campaign medals issued for any one war were those of the Second Great War; one of these, the Defence medal, was the most widely distributed of any war medal, and was unique in being awarded to civilians as well as military personnel. (*See Campaign Stars.*)

Until the institution of the Meritorious Service medal in 1845 there was no gallantry award for non-commissioned ranks in the navy or the army; gallantry and distinguished service in officers was recognized by making them knights or companions of one of the orders, usually the Bath. In 1854 the Distinguished Conduct medal was instituted for all ranks; this was followed by the Victoria Cross in 1856 and the Conspicuous Gallantry medal in 1874.

Other groups of medals worthy of notice are navy, army, and R.A.F. long service and good conduct medals; also ceremonial medals, such as those issued for coronations and jubilees; official civil awards, notably the Albert and Edward medals; and unofficial civil medals, such as those presented by the Royal Humane Society, Lloyd's, and the Royal National Lifeboat Institution.

#### Design of Ribbons

Medals and decorations are worn suspended from a ribbon, the colours of which generally symbolise the event or campaign for which the medal was issued. So much ingenuity is displayed in evolving colour combinations that among the ribbons of the 3,500 distinct British and foreign medals and decorations is less than half-a-dozen instances are the colours duplicated, e.g. the British jubilee ribbon of 1935 is the same as that of the Massachusetts Civil medal; and the Arkansas State medal has its ribbon duplicated in a Yugoslav order.

Amongst the most appropriately coloured British medal ribbons are: the yellow, red, and black of the Omdurman medal, symbolising the red-coated British troops in the desert repelling the black followers of the Mahdi; the white and blue ribbon of the Egyptian wars, referring to the country lying between the White and Blue Niles; and the green and red separated by a white stripe of the Mercantile Marine medal (1914-1918), representing the port, starboard, and masthead lights of a ship.

One of the most successfully symbolic ribbons of the Second

Great War is that of the Defence medal: flame, for air attack; green for "England's green and pleasant land"; two black stripes for the black-out. The red, white, and green of the Italy Star is a unique instance of a victor's war medal ribbon adopting the national colours of the vanquished; the red, white, and blue of the France and Germany Star are the colours notably of the U.K., but also of France, the country liberated. *See Numismatics; also the separate entries on the principal medals and decorations. Consult British Medals and Decorations, D. H. Irwin, 1899; The Medal Collector, S. C. Johnson, 1921; Ribbons and Medals, H. Taprell Dorling, 1947.*

David Le Roi

**Medea.** In Greek mythology, daughter of Aëtes, king of Colchis. When Jason came to Colchis in search of the Golden Fleece, Medea fell in love with him, and by magic

Medea. A 16th century copy of a 5th century B.C. Greek relief

arts assisted him to obtain possession of the prize. She returned with Jason to Iolcus as his wife. There it was found that Pelias the king had murdered his half-brother Aeson, Jason's father. In revenge, Medea persuaded the daughters of Pelias to cut their father in pieces and boil him, deceiving them into the belief that he would thereby become young again. Expelled from Iolcus for this deed, Medea and Jason next went to Corinth, where Jason deserted Medea for Creusa, daughter of Creon, the king. Medea avenged herself on Creusa by sending her a poisoned garment, which killed her, and by murdering the two children whom she had borne to Jason. Medea is said then to have fled to Athens, and to have there married king Aegeus. A plot by her to poison Theseus

having been discovered, she escaped from Athens to Asia. The tragic life of Medea is the subject of fine plays by Euripides and Corneille. See Argonauts; Jason.

**Médecin Malgré Lui**, *Le* (The Doctor in Spite of Himself). Farical comedy in three acts by Molière, produced at the Palais-Royal, Paris, Aug. 6, 1666. Sganarelle, a character acted by the author, having been taunted into thrashing his wife, she retaliates by proclaiming that he is an eccentric but learned physician who will not admit his learning unless he is soundly beaten. The play was founded on an old fabliau.

**Medellin**. Second largest city of Colombia and capital of the dept. of Antioquia. It is built at an alt. of 5,042 ft. and enjoys a summer-like climate throughout the year. It is 42 m. S.E. of Antioquia and 125 m. N.W. of Bogotá, and connected by rly. with Puerto Berrio on the Magdalena. The seat of an archbishop, it was founded in 1674, and has a university (instituted 1822), schools of mining and engineering, a mint, libraries, and tennis, football, and polo grounds. A centre of gold and silver mining, it also produces silk, cotton, wool, coffee, chocolate, cigarettes and cigars, hats, crockery, glassware, matches, and shoes. The district contains good motor roads. Pop. 198,100.

**Medes** (Assyr. *Amadd*). Aryan people closely associated in language and descent with the Persians. When the Assyrians invaded their country in the 9th century B.C. they were settled in the Kurdish Mts. east of Lake Urumiyeh. In later times the name included the inhabitants of the countries into which the Medes migrated. They are mentioned several times in the O.T., first in Gen. 10 as the Madai, descendants of Japheth. In the Assyrian tablets they are first mentioned, as Amada, by Shalmaneser II. Darius the Mede (Dan. 5) has been identified with the Gubaru or Ugbaru of the Babylonian inscriptions. "The laws of the Medes and Persians" became a synonym for the unalterable. See Media.

**Bibliography**. The Five Great Monarchies of the Ancient Eastern World, G. Rawlinson, 1862-67; Cuneiform Inscriptions of W. Asia, H. C. Rawlinson, 1870-91; Le Peuple et la Langue des Médes, J. Oppert, 1879; Races of the O.T., A. H. Sayce, 1891.

**Medford**. City of Massachusetts, U.S.A. In Middlesex co. and virtually a N.W. suburb of Boston, it is linked by rly. with

that city, and stands on the Mystic river. Historic buildings, all of the 17th century, are Cradock, Wellington, and Royall Houses, for Medford was founded in 1630, though not a city until 1892. Tuft's College, now with 770 teachers, was opened in 1852. Medford rum and Medford-built sailing ships once were famous names, but both industries declined with the coming of steam, and now machinery and chemicals are made. Pop. 63,083. Another Medford is in Oregon; pop. 11,281.

**Media**. Ancient country of W. Asia, lying S. and S.W. of the Caspian Sea, and wholly contained in the territory of the modern state of Persia. Its surface was part of the great Iranian tableland, mostly 3,000 ft.-5,000 ft. above sea level. It enjoyed a temperate climate, with cold winters and a fertile soil. The capital was Ecbatana, the modern Hamadan. Shortly after 700 B.C. the Medes threw off the Assyrian yoke, and became a great nation under their kings Phraortes and his son Cyaxares. The successive steps in the extension of the Median empire are obscure, but in 606 Cyaxares took Nineveh and overthrew the Assyrians.

In 549 Cyrus of Persia, who acknowledged the sovereignty of Astyages, son of Cyaxares, rebelled, and by 500 was ruler of a combined empire of Medes and Persians. With the overthrow of the Persians by Alexander the Great after the battle of Arbela in 331, Media became part of Alexander's empire. After his death in 323, it formed part of the kingdom of the Seleucidae, until in 147 it was conquered by the Parthians and was finally merged in Persia under the Sassanians in the 3rd cent. A.D. See Cyrus; Persia.

**Median**. In geometry, each of the three lines drawn from the middle points of the sides of a triangle to the vertices. Such lines meet in a point which is geometrically the centroid or commonly the centre of gravity of the triangle.

Figure showing medians, A F, B D, C E, of a triangle, A C B. The medians meet at the centroid or centre of gravity, G, of the triangle.

**Median Nerve**. One of the main nerves of the arm. It rises from the brachial plexus

on the outer side of the armpit, runs at first close to the axillary

artery, then inclines outwards, and passes down the middle of the forearm to the palm. It gives off branches, which supply all the superficial flexors of the forearm except the flexor carpi ulnaris; while a branch, the anterior interosseus, given off just below the elbow joint, supplies the deep muscles of the forearm. In the hand, the nerve supplies various muscles of the thumb and fingers, and is also a nerve of sensation to the thumb, the index and middle fingers, and the outer side of the ring finger.

**Mediant**. Third note of the musical scale, so called from its position midway between the other two principal notes, the tonic and the dominant. The mediant has the important function of determining the mode as major or minor, thus:

See Mode.

**Mediatiation** (late Lat. *mediatus*, middle). Term derived from feudal usages. In feudal times land was held immediately, i.e. direct from the king, or mediately, i.e. from some other lord who in his turn was the king's vassal. In 1803, during the changes occasioned by the French Revolution, certain princes ceased to be the emperor's vassals direct, but were placed under rulers of lesser rank. To this process, which amounted in practice to depriving these princes of their sovereign rights, for the emperor's authority over them had been nominal, the name mediatiation was given. It was carried further in 1806 in order to provide for Napoleon's territorial changes, and these rights were never restored, although the mediatized princes of Germany formed for some time a distinct class, retaining equality of birth with the reigning princes.

**Medical Association, BRITISH**. Details of this organization of medical men will be found under British Medical Association.

**Medical Directory**. British reference book of the medical profession. First published in 1844, the number of doctors listed increased from 10,962 (1850) to 68,235 (1944). The directory is issued by J. and A. Churchill Ltd.

**Medical Officer of Health**. In Great Britain an official appointed by all county, borough, and district councils. He must be a qualified medical practitioner and must have additional qualifications

in public health. His duties are prescribed by various Acts of Parliament, by the ministry of Health, or by the council employing him. He receives notices of all births, and is concerned with the sale of food and drugs, housing, infectious diseases, sanitation, and with public health generally.

**Medical Practitioner.** One who practises medicine. In the British Isles the term is usually restricted to a registered medical practitioner, *i.e.* a person who, having obtained a registrable qualification, has been registered under the Medical Act of 1858. The qualifications are granted after a specified course of study has been followed and certain examinations have been passed. The holder of these qualifications may have a university degree in medicine (M.B., Ch.B., or M.D.). He may also, or alternatively, hold a diploma from some recognized professional body such as the Royal College of Physicians. Such qualifications do not attach to him special privileges

tive direction of a committee of the privy council and applies money voted by parliament or received from private sources for medical research. Its laboratories, and the National Institute for Medical Research, opened 1950, are at Mill Hill, Middlesex. Offices: 38, Old Queen St., London, S.W.1.

**Medici.** Ruling family in Florence. It was prominent in the Florentine republic from the 13th century, and amassed wealth by trade, especially banking. Giovanni, father of Cosimo the elder, was the real founder of the greatness of the family, in which the headship of the state became hereditary. His great-grandson, Lorenzo, was succeeded by his son Piero II, who made cowardly concessions to the French, and was expelled with the rest of the family by the Florentines in 1494, but in 1512 they were recalled. Piero's brother Giuliano II was restored to the old pre-eminence, and in 1513 the third brother, Giovanni, became Pope Leo X (*q.v.*).

father's death in 1429 occupied a leading position, but in 1433 was banished. Recalled the next year by the citizens, he expelled his enemies, and while remaining nominally a private citizen, was the virtual despot of Florence for the rest of his life. A generous patron of art and learning, he founded a Platonic academy and collected many ancient MSS. He died Aug. 1, 1464, and the words Father of his Country were inscribed on his tomb. *See* Florence.

**Medici, COSIMO DE' (1519-74).** Grand duke of Tuscany. The son of the condottiere Giovanni de' Medici, he belonged to a junior branch of the family, and on the murder of Alessandro de' Medici, duke of Florence, in 1537, he was proposed as a candidate by the historian Guicciardini and acknowledged as duke by the emperor Charles V. He maintained his rule by a system of espionage and secret murder. He was, however, an able ruler, organized the Tuscan state as a political unit, and established a strong army. In 1555 he took Siena, which two years later was formally ceded to him. In 1569 Cosimo was raised by Pope Pius V to the rank of grand duke. He died April 21, 1574. *See* Florence; Tuscany.

**Medici, LORENZO DE' (1449-92).** Ruler of Florence. The elder son of Piero de' Medici, he was born Jan. 1, 1449, and in 1469, on his father's death, he and his brother Giuliano were declared the chiefs of the state. He escaped the Pazzi conspiracy, 1478, though Giuliano was assassinated. Vengeance on the conspirators, who included the archbishop of Pisa, led to an invasion of Florence by Pope Sixtus IV, and the king of Naples, who, however, was won over by Lorenzo in 1479, and peace was made. An able diplomatist, Lorenzo cultivated the friendship of Milan in order to weaken Venice. He consolidated his power at home by creating a subservient senate, and won popularity by lavishing his wealth on the city, which he raised to great splendour. Himself a poet and scholar, he assembled a brilliant group of literary men, both Greek and Italian, at his court, and encouraged painters and sculptors. He enriched the Laurentian library with priceless MSS., collected antique sculpture, founded a Platonic academy, and numbered Politian and Pico among his friends. Lorenzo, who was styled the Magnificent, died April 8, 1492. *See* Florence; Renaissance. *Consult* Lives, D. G. Loth, 1930. G. Maguire, 1936.

Medici. Members of the famous Florentine family. Left to right: Cosimo the elder; Cosimo (d. 1574); Giuliano (by Botticelli); Lorenzo (by Titian)

To secure these he must be registered by the General Medical Council.

Only a registered medical practitioner is entitled to practise medicine and to sue for his fees. Further, only a registered practitioner can give a medical certificate valid for public purposes, or hold a public medical appointment. Registered practitioners are exempt from service on juries. Disciplinary control of medical practitioners in professional matters is exercised by the General Medical Council, but medical practitioners may have their names removed from the lists under the National Health Acts by a tribunal. In 1950 a bill provided that a registered medical practitioner must have had hospital experience, and proposed a medical disciplinary committee to replace the G. M. C. *See* Medicine; Surgery.

**Medical Research Council.** British medical institution. Established in 1913, it was formerly the Medical Research Committee, being incorporated under its present title by royal charter on April 1, 1920. It is under the administra-

Two years after Leo's death in 1521, Giulio de' Medici, an illegitimate nephew of the great Lorenzo, became pope as Clement VII, and died in 1534. Meanwhile Florence had been ruled by other members of the Medici family or by nominees of the Medici popes; and in 1530 Alessandro de' Medici was recognized as hereditary duke of Florence by the emperor Charles V. After a vicious and tyrannical career, he was murdered by his cousin in 1537. As dukes, and from 1569 as grand dukes, the family continued to reign in Florence until the line was extinguished in 1737. Two of the daughters of the house also acquired fame as Queen Mother in France, Catherine de' Medici (*q.v.*), wife of Henry II, and Marie de' Medici (*q.v.*), second wife of Henry IV. *See* Florence; Tuscany.

**Medici, COSIMO DE', THE ELDER (1389-1464).** Florentine statesman. The elder son of Giovanni de' Medici, he inherited great wealth. On the deposition of Pope John XXIII, he ransomed him from the duke of Bavaria, and sheltered him at Florence. Cosimo after his

# MEDICINE AND ITS MASTERS

Charles Singer, M.D., D.Sc., F.R.C.P., Emeritus Professor of the History of Medicine, London University

*A history of medicine, this article forms a useful commentary on those dealing with the various diseases, e.g. Leprosy; Smallpox; Tuberculosis; Typhus, etc. See also Anaesthesia; Anatomy; Bacteriology; Physiology; Surgery; the biographies of Harvey, Hunter, Jenner, and others*

The earliest group of scientific medical documents is the Hippocratic Collection, put together about 300 B.C. Only a small portion is by Hippocrates, and some portions are at least as old as the 6th century. Even the most ancient of these evidently implies a long and settled civilization, but of this earlier history we are almost ignorant. As regards the knowledge that they contain, the strongest feature of the Hippocratic writings is close and accurate observation of the course of disease and consequent accuracy of prognosis, and, within certain limits, also of diagnosis. The general theoretical basis of the collection is that doctrine of the humours which lasted till the 18th century. As regards treatment, the best and clearest works are the surgical, especially that on fractures and dislocations, the treatment of which is in many cases that of current practice. The weakest feature is the ignorance of anatomy, making accurate diagnosis often impossible. There is no evidence of dissection.

The lack of anatomical knowledge was partially repaired by the Lyceum in the 4th, and by the Alexandrian school in the 3rd century. Both these bodies made advances also in experimental physiology. The result of this evolution is evident in the work of Celsus at the beginning of the 1st century A.D. Celsus gives a very exact account of surgical practice, and has an accurate though limited knowledge of anatomy. He is clear and definite in prognosis and diagnosis, while his line of treatment, especially in surgery, is sane, useful, and humane. He is totally devoid of any theurgic element. Dioscorides, who acted as surgeon in the service of Nero, carried on the botanical work of Theophrastus (370-286 B.C.), the pupil of Aristotle, and adapted the knowledge of herbs to medical purposes.

## Galen's Great Work

The 2nd century of the Christian era is a very brilliant period in medical history. Rufus of Ephesus and Soranus of Ephesus made anatomical and physiological investigations, but especially industrious and scientific was Galen of Pergamum. His books form a "gigantic encyclopaedia of the

knowledge of his time. He gave us the four classic symptoms of inflammation, differentiated pneumonia from pleurisy, was the first to mention aneurism, and described the different forms of phthisis, mentioning its infectious nature." (Garrison.) He dissected a number of animals and gave accurate anatomical descriptions. He made numerous physiological experiments, and though his deductions were often hasty, his methods were sound.

The ages that followed Galen seized on his conclusions rather than his methods, and progressively misunderstood them. The flickering light of medical science burned for a while in Magna Graecia, and was still dimly glowing at Salerno in the 11th century, when it was fanned into a feeble flame by Arabian learning. From the 8th until the 12th century the intellectual hegemony was with the Orient, whither Greek learning passed. This material was received again into the West by retranslation from Arabic into Latin, and provided the staple medical treatises from the 12th to the 16th century.

## Harvey and Modern Medicine

With the 16th century this was changed. Among the earliest medical writers to free themselves from Arabian tradition was Fracastor, who placed the theory of infection on a sound basis, and Paracelsus, who introduced chemical conceptions into medicine. It was, however, the anatomists who did most to create the new era in medicine, and among them the greatest was Vesalius. His anatomy was used by Ambroise Paré for the improvement of surgical technique. The absence of exact anatomical description had hitherto rendered rational physiology impossible, but now the researches of Michael Servetus, Mateo Realdo Colombo, and Hieronymus Fabricius culminated in the immortal work of William Harvey, whose discovery was published in 1628.

The circulation of the blood is the central doctrine of modern medicine, and its acceptance and comprehension were essential for that progress in all departments which characterised the 17th century. This period saw the first application of the microscope, with which the names of Gahleo, Mar-

cello Malpighi, Anthony Leeuwenhoeck, and Robert Hooke are associated.

The earliest years of the 18th century saw clinical teaching placed on a recognized footing by Hermann Boerhaave, for foreign students flocked to him at Leiden, and his reputation became world-wide. Among his most famous pupils were Albert von Haller, perhaps the most learned of all physicians and a profound and original physiologist, Sir John Pringle, the pioneer of antiseptics, who did much to humanise warfare and to organize an efficient ambulance service, and William Cullen, who lacked originality, but who introduced improved methods of medical teaching into England. With these men may be mentioned three great English clinicians, William Heberden, a man of one book which absorbed his whole life and contained numerous valuable observations on general medicine, John Huxham, who did valuable work in epidemiology, and Edward Jenner, whose name will always be associated with vaccination.

All these names pale before the brilliance of John Hunter, who is to be classed with the very greatest names in medicine. "His permanent position in science is based upon the fact that he was the founder of experimental and surgical pathology and a pioneer in comparative physiology and experimental morphology" (Garrison). Important Continental contemporaries of Hunter were Leopold Auenbrugger, the discoverer of auscultation, and Giovanni Morgagni, who did for pathology what Vesalius had done for anatomy. In England the work of Morgagni was continued by Matthew Baillie.

## Some French Pioneers

In the early part of the 19th century the greatest advances were made in France, where Pierre Louis, the founder of medical statistics, René Laennec, the inventor of the stethoscope and elucidator of thoracic disease, Pierre Bretonneau, the epidemiologist, Jean Nicholas Corvisart, the founder of modern cardiology, Philippe Pinel, the reformer of the asylum system, and Marie François Bichat, the father of modern histology, form a very remarkable group.

Somewhat later in the field appeared the Austrians, Skoda, the great clinical expert, Rokitsansky, with his vast pathological experience, Hebra, the founder of scientific dermatology, Semmelweis, who introduced antiseptic

methods into midwifery, and Politzer, one of the earliest of the modern specialists. These men contributed to the high reputation of the Vienna school. In Germany the men of distinction in the mid-19th century were more scattered than in Austria. Among them were, the histologists Friedrich Henle, Rudolph Kölliker, and Wilhelm Waldeyer. H. L. F. von Helmholtz takes his place in medicine as a physiologist, and as inventor of the ophthalmoscope. Hoppe Seyler, Rudolph Virchow, Albert Billroth, and Johann von Esmarch all did fundamental work.

The same period in England was marked chiefly by clinical, and especially surgical advance, following the stimulus of Hunter. Here Charles Bell attained distinction alike in surgery, anatomy, physiology, and art; Sharpey and Bowman followed in the footsteps of Abernethy in the organization of medical teaching; Astley Cooper, Syme, Liston, and Brodie laid the foundation of more recent surgical developments. Towards the end of the period in which these men lived surgery was revolutionised by the introduction of anaesthesia in America by Morton. This was popularised later in Great Britain by the obstetric practice of Simpson.

#### Contemporary Developments

The latest period of medicine has been profoundly influenced by two men, neither of whom possessed a medical diploma. Darwin, by placing the doctrine of evolution on an observational basis, gave a new stimulus and meaning to all forms of biological research, while Pasteur, and after him Koch and Lister, by their demonstration of the germinal origin of pathological processes, elucidated a vast number of phenomena which were previously inexplicable.

The great practical changes thus wrought have been the universal adoption of aseptic principles in surgery and the rise into the front rank of importance of the study of infective phenomena in medicine. Preventive medicine and aseptic surgery have saved more lives than any previous medical measures, and they have become of great economic importance, since by reducing deaths they have counterbalanced some effects of the fall in the birth-rate that has set in almost universally.

1933; History of Medicine, D. Guthrie, 1945; Short History of Medicine, C. Singer, 2nd ed. 1945.

**Medicine, FORENSIC, or MEDICAL JURISPRUDENCE.** The application of medical knowledge to purposes of the law. The most frequent occasions for its employment occur in the investigation of sudden deaths or deaths from causes other than natural. In the coroner's court, the police court, and the higher criminal courts, knowledge of medicine aids the law in the detection of crime. When a dead body has been found, the medical jurist may be called upon to express opinion as to the time which has elapsed since death.

Various forms of deaths from violence, e.g. hanging, strangulation, drowning, shooting, poisoning, leave distinctive features in the body, by the aid of which it may be possible to determine whether death was due to accident, suicide, or homicide. Among the living, various matters relating to birth or sex may demand the help of the medical jurist, such as questions arising in connexion with illegal operations, suits for nullity of marriage, and questions of paternity. Another sphere in which the law seeks the help of the medical man is insanity. Certain stringently enforced conditions must be complied with before lunatics can be certified as insane. Medical evidence is also required when irresponsibility for crime on the ground of insanity is pleaded in a criminal charge, and in questions relating to the validity of wills or contracts made by persons who are alleged to be insane.

Finally, the sphere of medical jurisprudence is now held to cover numerous matters pertaining to the conduct and control of medical practitioners, such as the constitution and functions of the General Medical Council; the question of professional secrecy; and the obligation of a medical practitioner to exercise reasonable skill and care in the treatment of patients.

The earliest rules governing medical practitioners occur in the Hammurabi Code (*q.v.*). Moses laid down laws for the examination of and report on wounds. In ancient Egypt medical practice was governed in detail by law. Among the Greeks medicine was comparatively free from restriction by law. The celebrated oath of Hippocrates enunciates the ethical principle which is today regarded as binding upon medical men generally, namely, that information gained at the bedside shall be regarded as inviolable. In Rome, under the republic, medicine was closely controlled by law. Justinian dealt with questions of impotence, hermaphroditism, etc., and fixed the maximum duration of pregnancy at 300 days.

Medical jurisprudence became a distinct branch early in the 16th century, and George, bishop of Bamberg, in 1507 drew up a code for medical evidence in courts of law. One of the earliest applications of medical jurisprudence was in the investigation of witchcraft, and about 1545 Dr. Johannes Wier of Arnheim published a book attacking the folly and superstition of witchcraft. This drew upon him the fury of the Church, and the book was placed upon the Index. The earliest work on the subject published in Great Britain was Dr. Samuel Farr's *Elements of Medical Jurisprudence*, 1787. A chair of medical jurisprudence was established in Edinburgh University in 1806. On the Continent, the science was developed by Fodere and Tardieu in France, Orfila in Spain, Casper in Berlin.

**Medicine Hat.** Town and co. of Alberta, Canada. The co. is in the S.E. of the prov., and contains the E. section of the best ranching country. The city stands on the S. Saskatchewan river, 176 m. S.E. of Calgary and 656 m. W. of Winnipeg. It is served by the main line of the C.P.R. The buildings include the Dominion Lands Office, general hospital, churches, and schools.

Medicine Hat, Alberta, Canada. View of the town, showing Riverside Park between the two bridges

It is the trading centre for a large district, and among the industries are the manufacture of flour, bricks, and cement. Natural gas is used for generating power. Coal and shale are found in the neighbourhood. Pop. 10,571.

**Medicine-Man.** A practitioner of the healing art and cognate mysteries in primitive culture. The

term, now generally preferred to the synonym witch-doctor, conveniently embraces such native names as the Eskimo *angekok*, the S. American *paya*, the Hausa *bori*, and the Zulu *inyanga*. It implies the professional exercise of magical powers in all levels of culture up to and including Shamanism, beyond which leechcraft and

consisting of three variable leaflets, with a pair of slender stipules at the base of the leaf-stalk. The yellow, occasionally violet, flowers are clustered in short sprays, and the seedpod is sickle-shaped. Another species is the black medick, or nonsuch (*M. lupulina*), a trailing biennial with its yellow flowers in an oval head, like a miniature hop-cone. The smooth, kidney-shaped pods of this species are black when ripe. Several others occur, but are rare in England. Lucerne (*q.v.*), or purple medick (*M. sativa*), a plant of the Mediterranean region, is largely grown as a green fodder plant, and has become naturalised here.

**Medina.** City of Arabia. It lies about 240 m. N. of Mecca, and is connected by the Hejaz rly. with the Palestine, Syrian, and Baghdad rlys. It is the second holy city of the Muslims, because it contains the tomb of Mahomet, and it is often called the Prophet's City. The tomb stands in a mosque of great magnificence, which is the chief feature of the place. The residence of Mahomet after his flight from Mecca, 622, it was also the home of the earliest caliphs. As a terminus of the Hejaz Rly., which reached it in 1908, Medina has a considerable trade. Its port on the Red Sea is Yembo, 125 m. to the S.W.

Before the First Great War all non-Muslims were rigidly excluded from it, but, like Mecca, it was visited by Burton and other Christian observers. During the First Great War it was attacked by the Hejaz army, in 1916, but the attempt failed. Thereafter it was invested, but somewhat loosely, and it did not finally yield till Jan., 1919, when, on representations from Constantinople insisting on its compliance with the terms of the armistice, its garrison laid down their arms. Pop. 50,000, but this number is greatly exceeded during the pilgrimage season.

**Medina Sandstones.** In geology, a group of sandstones, etc., of Silurian age, occurring near Medina in Orleans co., N. Y., where they are quarried for building.

**Medina Sidonia.** A town of Spain, in the prov. of Cadiz. It stands on a hill overlooking the Sequillo river, 20 m. S.E. of Cadiz. A ruined castle of the dukes of Medina Sidonia crowns the hill. The town is noted for its manufacture of pottery. Pop. 13,416.

**Medina Sidonia, ALONZO PEREZ DE GUZMAN, 7TH DUKE OF (1550-1615).** Spanish admiral. Born Sept. 10, 1550, a member of the famous Spanish house of Guzman, he was chosen by Philip II of Spain to command the Armada sent against England in 1588, on the ground that his rank

Medicine-Man. Medicine-Owl, famous Medicine-Man of the Black-foot Indians in Montana, U.S.A.

priestcraft tend to diverge. Usually set apart by initiation into the conventional secrets of their vocation, carrying their mysteries in a medicine-bag, and wearing a distinctive dress, medicine-men profess to control physical and psychical phenomena by various means, including incantation, dancing, drums, rattles, horns, sacrifice, appeal, amulets, ventriloquism, sleight of hand, and suggestion. In some cultural regions are added such preventive and curative methods as sweating, massage, counter-irritation, blood-letting, empirical decoctions, emetics, and crude surgery. See Exorcism; Magic; Rain-making Customs.

**Medick** (*Medicago falcata*). Perennial herb of the family Leguminosae. A native of Europe (including the E. counties of England), India, and N. Asia, it attains a height of 6 ins. to 2 ft., and has leaves

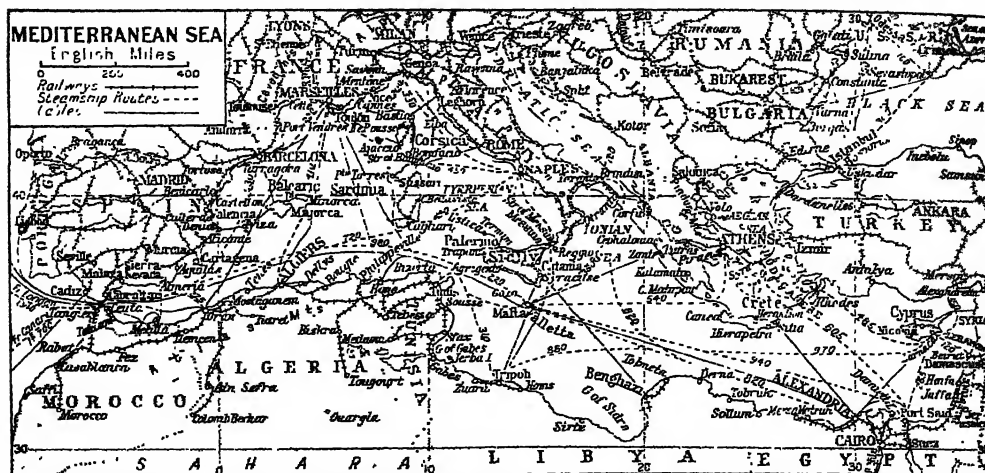

Medick. *Medicago sativa*, flower sprays of a Mediterranean medick

Medina, Arabia. Main street of the city, leading to the tomb of the Prophet

as the highest of Spanish grandees would ensure obedience. He had no qualifications, and was to be guided by advisers and instructions. On his return he hid himself in his palace at San Lucar. Subsequent disasters to the Spanish navy under his charge were the failure to protect Cadiz from the British and Dutch in 1596, and a defeat off Gibraltar in 1606. See Armada.

**Medinet-el-Fayum.** City in the Fayum district of Egypt, 25 m. S.W. of Cairo by rail. It is picturesquely situated on a branch of the Bahr Yusuf. N. of the town is the site of the ancient Arsinoë, and 6 m. S.E. is Hawara, where was the

**Mediterranean Sea.** Map of the world's largest enclosed sea, which lies between Europe, Asia, and Africa, has one connexion, the Straits of Gibraltar, with the open ocean, and is fed directly by one great river, the Nile

labyrinth described by Herodotus, which was regarded as one of the wonders of the world. Pop. 63,703. See Fayum.

**Medinet Habu** or **ABU**. Early Christian village on the W. plain of Thebes, Upper Egypt. Its more ancient remains include Rameses III's funerary temple, approached through a three-storeyed pavilion with inverted battlements of Syrian design. Its sculptured scenes comprise figures of Philistines and their wagons, and the earliest representation of a naval battle.

**Mediolanum.** Latin name for the city now known as Milan (q.v.).

**Meditations of Marcus Aurelius, THE.** Volume of thoughts setting forth the Stoic philosophy as received and modified by the Emperor Marcus Aurelius Antoninus. The work has long occupied a prominent place among ethical writings, and is notable for being suffused and softened by almost Christian feeling. The best known translation is that of George Long, 1862, though an earlier one is that of Jeremy Collier, 1701. See Marcus Aurelius.

**Mediterranean Fleet.** Title of units of the Royal Navy serving in the Mediterranean Sea. Entrusted with the maintenance of imperial lines of communication with India, the Far East, and Australia, and with the defence of the northern termination of the Suez Canal, the fleet was based on Malta and Alexandria until the latter port was handed over to the Egyptian government in 1946. It is not concerned with the defence of Gibraltar, which is the joint responsibility of the army and the Home Fleet. Between the two

Great Wars the strength of the Mediterranean force was kept at such a level that, in conjunction with the French navy, parity was maintained with the Italian navy.

The fleet was heavily reinforced after the surrender of France in June, 1940, but was always numerically inferior to the Italians. If it had not succeeded in controlling the eastern basin of the Mediterranean in 1940-41, Malta, Alexandria, and Port Said might all have fallen, the campaigns in Abyssinia, Libya, and Syria could scarcely have been conducted, and the British position in the Middle East would have been jeopardised. In addition to defeating the Italian navy, hunting U-boats, and withdrawing the army from Greece and Crete, the Mediterranean fleet also escorted vital Malta convoys. See Mediterranean Theatre.

**Mediterranean Sea** (Lat. *media*, middle; *terra*, land). Largest expanse of inland water in the world. It washes the shores of Europe, Africa, and Asia, and is, physically, a relic of a much larger sheet of water which extended in earlier geological times E. and N.E. to the Arctic. To the S. and S.E. is the geologically old plateau of Africa, to the N. the comparatively young mountains of S. Europe.

It comprises three basins: E., central, and W. The E. basin, about 1,200 m. long, between Sicily and Palestine, is almost surrounded by the plateaux of Asia Minor, Syria, and Palestine; most of it is more than a mile deep, while the greatest depth, 14,400 ft., has been sounded between Malta and Crete. The W. basin is about 960 m. long, and is deepest in the Tyrrhenian

Sea, 12,200 ft. This basin has been left by a foundering of ancient land, and round it there are still areas of weakness in the earth's crust; round it also the mountain system—Atlas, Apennines, Alps—belongs to the same geological period, the Tertiary, when the backbone of Europe was made. The central basin S. of Sicily is comparatively small, 200 m. long, and shallow, with a maximum depth of 4,200 ft.

The Adriatic Sea is shallow at the N. end and deep in the S., where the sea occupies an area which used to form the geologically ancient Dalmatia; the Aegean Sea, with its scattered islets and scattered deeps, similarly occupies part of an ancient Aegean plateau. The large islands of the Mediterranean are either relics of ancient land-masses—Corsica and Sardinia of the ancient Tyrrhenis, Chios and Rhodes of the ancient Aegean plateau—or they are detached fragments of the great E.-W. mountain system of Eurasia. The Balearic Islands connect the Sierra Nevada and the Alps; Sicily joins the Atlas Mts. to the Apennines, while Crete and Cyprus connect the Pindus Mts. with the Taurus Mts. and the Caucasus.

The waters of the Mediterranean evaporate very rapidly, for immediately to the S. is the rainless Sahara. During summer the Mediterranean area is almost everywhere arid and hot. Rains fall in the late autumn and winter, but the total quantity is small. The Nile is the only great river which feeds the sea directly, and its output is small except during the flood, and the flood water is gradually

being retained for irrigation; the output of the Po, Rhône, and Ebro is of little value.

The Mediterranean has two water gates; one to the Black Sea in the N.E. and one to the Atlantic Ocean in the W.; each is a sill between deep basins on either side. Because of the great evaporation, the water of the Mediterranean Sea is more saline and denser than the waters beyond the sills, so that in each case lighter and fresher water flows into the Mediterranean Sea as a surface current, while saltier and heavier water creeps over the sill as an outward current of less volume. The Mediterranean Sea is virtually tideless.

The hot, dry, almost cloudless summers and the warm winters of the Mediterranean area, with their accompaniment of rain, have produced a definite type of vegetation which can survive the summer scorching.

#### Cradle of Western Civilization

It is one of the commonplaces of the history of Western civilization that progress came westward along the Mediterranean; from Levantine sources in ancient times Rome learned from Greece and Egypt, from Levantine sources in the Middle Ages Christian Europe learned from the Saracens. From the Mediterranean Western Europe learned the art of seamanship; from the trading communities of the Italian peninsula Western Europe imbibed ideas of cooperative companies of merchant adventurers, with the consequence that England achieved through the East India, Hudson Bay, and other companies, the possession of large areas overseas. Of these India was early of greatest value, and the need for quick transit between the U.K. and India eventually led to the cutting of the Suez Canal, and to the British interest in Egypt. See Aragon; Atlantic; Levant; Sea-Power.

**Mediterranean Theatre of Operations.** After the opening of the Suez canal, 1869, control of the Mediterranean, in order to maintain imperial communications with India, the Far East, and Australasia, became a prime object of British policy. Until the advent of the submarine and of bombing from the air, Great Britain's strategic position in the Mediterranean proved unassailable. With naval bases at Malta and Gibraltar, she required only a comparatively small army to defend the canal; sea power made it possible for British Mediterranean garrisons to be reinforced at will, while the arid Sinai, Western, and Libyan deserts

protected Egypt against invasion by land.

Britain's strategic strength in the Mediterranean first showed deterioration in the First Great War, when German submarines took heavy toll of Allied shipping using the inland sea. After that war the increasing range and power of land-based artillery suggested that, while Gibraltar might remain impregnable against direct assault, it was no longer a safe naval base in the event of a hostile Spain. Because of its central position, beyond the range of coastal artillery, Malta was developed as the principal British naval base in the Mediterranean.

Italy's rise under Mussolini and her development of bombing aircraft altered the strategic position of Great Britain in the Mediterranean considerably. From bases on the Italian mainland, the Dodecanese Is., and Pantellaria, Italian bombers, submarines, and surface craft could render extremely dangerous the passage of British shipping through the Sicilian channel and adjacent waters, and threatened the security of Malta. The construction by Mussolini of a motor road along the 1,100 m. of seaboard from Tunisia to the Egyptian frontier, and his maintenance of a large and mobile army in Libya, became a potential threat to the security of Egypt; and operations of Italian mechanised columns in the suppression of tribal revolts showed that the desert was no longer impassable.

#### The Second Great War

When war broke out in Sept., 1939, Great Britain and France had a good margin of strategic advantage in the Mediterranean; a considerable British fleet was based on Gibraltar, Malta, and Alexandria, while a large part of the French navy was concentrated at bases on both sides of the western Mediterranean. Italy through her seizure of Albania (*q.v.*), had complete control of the Adriatic.

With the defeat of France and the entry of Italy into the war in June, 1940, Italy's formidable naval forces were ranged against the R.N., deprived not only of the aid of the French fleet, but also of the use of French bases in the Mediterranean; while French armies in Syria, Tunisia, Algeria, and Morocco, remaining under Vichy control, were lost to the British cause.

Immediately after her declaration of war, Italy opened a submarine campaign which resulted in the sinking of a considerable number of British ships. How-

ever, the Italians, despite their numerical superiority, preferred to preserve their cruisers and battleships. The R.N. made up for its weakness by an aggressive policy of seeking out Italian warships and bringing them to action.

The first surface action was on July 9, 1940, when a British squadron made contact with Italian battleships and cruisers E. of Malta; an enemy cruiser and a battleship were damaged before the Italians found refuge under their shore batteries. Ten days later the Italian cruiser Bartolomeo Colleoni (*q.v.*) was sunk by the Australian cruiser Sydney.

#### Struggle by Sea and Air

But it was Axis air power, particularly when it passed under the operational control of the Luftwaffe, that was the most serious threat to the British Mediterranean position. On June 11, 1940, Italian aircraft made their first raid on Malta, beginning an air siege that was to last for over two years. British routes through the Mediterranean were severed, and even naval communication between the bases at Gibraltar, Malta, and Alexandria became hazardous.

On Oct. 28, 1940, Italy attacked Greece (*q.v.*), and the R.N. and the R.A.F., coming to the support of the Greek navy and to ensure a flow of supplies and reinforcements to the Greek army, established air and naval bases in Greece and on Crete. The increase in British strategic naval and air power resulted in the offensive that captured Benghazi, Feb. 6, 1941.

Italy concentrated her main fleet at Taranto to protect the Adriatic. On Nov. 11, 1940, 19 torpedo-carrying aircraft from the carriers *Illustrious* and *Ark Royal* (*q.v.*) attacked the anchored warships and put three battleships and two cruisers out of action.

Early in 1941, the Luftwaffe virtually replaced the Regia Aeronautica, and air attacks on British ships, especially by dive-bombing, greatly increased; while Italian submarines, officered by Germans, intensified underwater attack.

An Allied naval bombardment of Genoa, Feb. 9, 1941, seriously disorganized for a time Axis supplies to N. Africa. At the same time, a concentrated air attack on a large British convoy to Greece was beaten off, though the cruiser *Southampton* was sunk and the carrier *Illustrious* badly damaged.

On March 27, 1941, Adm. Cunningham, C.-in-C. British Mediterranean fleet, received reports from air reconnaissance that a consider-

able Italian fleet was making for Crete. Putting to sea from Alexandria, he made contact with the enemy off Matapan (*q.v.*), and in the subsequent action sank three cruisers and two destroyers, and damaged one battleship. Matapan was a signal victory for the R.N., but while the British fleet had been drawn off by the Italian sortie, the enemy had moved a large convoy from Italy to N. Africa which enabled the Axis armies to force the British back to the Egyptian frontier once more, and the R.N. was confronted with the further heavy task of supplying the British garrison left behind at Tobruk.

On April 6, 1941, German armoured divisions invaded Greece and Yugoslavia. Within three weeks the Allies had to evacuate the Greek mainland, an operation completed under cover of the R.N. on May 1. A gallant stand was made on Crete, but this, too, was evacuated May 28–June 1 under naval cover for the loss of three cruisers and four destroyers.

#### The Turning Point

Throughout the rest of 1941, the British position in the Mediterranean gradually worsened. On Nov. 14 the carrier *Ark Royal* was torpedoed and sunk, to be followed by the Australian cruiser *Sydney* six days later. On the 24th the cruiser *Dunedin* was lost, on the 25th the battleship *Barham*; shortly afterwards the *Queen Elizabeth* was damaged. After the Japanese attack on Malaya, British naval ships were transferred from the Mediterranean to the Far East, and at one period the heaviest British naval force in the Mediterranean consisted of three cruisers.

By continuing its aggressive policy, however, the R.N. concealed its weakness. British destroyers and submarines, the R.A.F. and Fleet Air Arm between them, despite the cover provided by enemy aircraft based on Crete, destroyed at least half the Axis transports and supply ships for N. Africa; some 40 British submarines were lost in these operations. Nevertheless the Axis was able to build up and maintain in N. Africa an army of 150,000 men.

But the British managed to retain air and naval control over the S.E. Mediterranean, though by June, 1942, the British armies in N. Africa had been forced back a second time to the Egyptian frontier, Tobruk had been lost, and the maintenance of Malta imposed a constant drain on ships, aircraft, and men. The central Mediterranean was almost untenable even

for British naval craft. The evil effects of this situation became apparent politically in the attitude of Spain, Turkey, and Vichy France.

Then came the decisive British victory at Alamein and the Anglo-U.S. landings in French N. Africa. When the 8th army captured Tripoli, the Mediterranean, from Gibraltar to Alexandria, was virtually closed to Axis ships, and the German armies in N. Africa were trapped. Now in complete command of the air, Allied aircraft were able to prevent all but a few of the enemy being flown out, and on May 12, 1943, the last enemy forces in N. Africa surrendered. Malta immediately became an advanced base, Algiers becoming the main Allied base for Mediterranean operations until this was transferred to Italy, June 30, 1944. After the 8th army entered Tunis, by arrangements made at Casablanca in Jan., 1943, the command was reorganized, with Gen. Eisenhower supreme *c.-in-c.* of all Allied forces, Gen. Alexander as his deputy, in charge of ground operations, Air Marshal Tedder, as air *c.-in-c.*, and Sir Andrew Cunningham as *c.-in-c.* Mediterranean naval forces. Pantellaria (*q.v.*) surrendered to the Allies on June 11, and Lampedusa (*q.v.*) the next day; and on July 10 Allied troops landed on Sicily with little air or naval interference from the enemy. Italy capitulated unconditionally\* to the Allies on Sept. 3, and on the 10th the surrendered Italian fleet reached Malta. On Sept. 3 also the Allies invaded Italy, thus securing their first foothold on the European mainland. Corsica was liberated between Sept. 13 and Oct. 4; and the Germans evacuated Sardinia, Sept. 18, but they did not, as the Allies had hoped, evacuate Italy. Instead they turned their former ally's country into a battleground over which the longest drawn-out and one of the most destructive campaigns of the war was fought. In the Mediterranean basin, however, despite such setbacks as the occupation by the Germans of the Dodecanese (*q.v.*), the Allies now had supremacy in the Mediterranean; a supremacy that made possible the landing on the French Riviera against negligible opposition except on land in Aug., 1944. See Crete; Eighth Army; Gibraltar; Greece, Campaign in; Italy, Cam-

paign in; Malta in the Second Great War; North Africa Campaigns; Royal Navy; Second Great War, etc.

**Mediterranean Stages.** In geology, two subdivisions of the Miocene. The first Mediterranean stage resulted in the marine deposits on the floor of the great Hungarian Sea, and comprises the first Miocene period. During the second stage, corresponding to the third Miocene period, the Hungarian plain was again covered by the sea. Between these stages the plain was covered by a series of salt lakes. See Miocene.

**Medjerda.** Tunisian river. It rises near Khamissa, between Tebessa and Suk-Ahras in Algeria, and flows about 300 m. eastwards. It enters Tunisia through wild gorges and falls into the sea through the salt lake at Porto Farina. It is much too rapid to be navigable. Its valley was the scene of violent fighting during the Second Great War. See North Africa campaign.

**Medlar** (*Mespilus germanica*).

Hardy tree, member of the family Rosaceae. It is a native of Greece, Persia, and Asia Minor, and is found wild in Britain occasionally, though it is not indigenous. As a wild tree it has spiny branches, but in orchards the spines disappear. The lance-shaped leaves are downy on the underside, and the solitary white flowers are 1½ in. across, with woolly calyx. These appear

Medlar. Fruit and leaves of this hardy tree

in May or June, and give place to the globular green fruit, which has the depressed top marked out by the persistent calyx-lobes. It has a sub-acid flavour. It thrives in any ordinary moist soil. The fruit should be stored in a cool room to "blet" until it is brown and on the verge of decomposition. It is useful for flavouring purposes and for making jellies. Medlars are propagated by budding or grafting on pear or quince stocks.

**Medmenham.** Parish and village of Bucks, England. It is 3 m. S.W. of Marlow. A Cistercian abbey was founded here in 1204. On the site a residence was built, where, in the 18th cent. Sir Francis Dashwood established a mock order of Franciscans, notorious as the Hell Fire Club. Medmenham was a photographic interpretation centre of the R.A.F. in the Second Great War. *Pron.* Mednam.

**Médoc.** Dist. of France, W. of the Gironde estuary. The chief subdivision of the Gironde viticultural region, it produces little white wine, but yields some of the most famous varieties of red Bordeaux. Vineyards in the parishes of Pauillac, Margaux, St. Julien, etc., give the Médoc wines their specific names.

**Medulla.** Biological term applied to the marrow of the bones, especially the spinal cord. It is also used to describe the central nuclei of organs such as the kidney, and, in botany, to the pith of stems, roots, and other parts of plants which are constructed in layers. The medulla oblongata is the lowest part of the brain, containing the nuclei of cranial nerves, which govern such vital functions of the body as respiration and the movements of the heart.

**Medum** or **MEYDUM.** Ancient necropolis on the left bank of the Nile, 40 m. upstream from Cairo, Upper Egypt. It contains the oldest true pyramid, originally a seven-staged mastaba, attributed to Cheops' predecessor Sneferu. Mastaba-tombs of IVth dynasty officials yielded sculptured scenes; that of Rahotep and his wife Nefert incomparable funerary statues; that of Atet a fresco of geese, now at Cairo. *Pron.* Maydoom.

**Medusa.** In Greek mythology, one of the three Gorgons. *See* Celin, B.; Gorgon; Perseus.

**Medusa.** Name applied to many types of jelly-fish (*q.v.*) which assume the form of free-swimming bells or parachutes. They are marine animals, and vary in size from microscopic forms to bells measuring over 6 ft. in diameter. Many species occur round the British coasts, but the finest are restricted to the tropics. Fossil remains of medusae are rare on account of their structure, but some have been found in Cambrian and Jurassic rocks. These remains are nearly always in the form of impressions or casts. *See* Coelenterata.

**Medway.** River of England. It rises in three headstreams, two in Sussex and one in Surrey, in the Weald, and flows generally N.E. through Kent to the mouth of the Thames, which it enters by a wide estuary. Tonbridge, Maidstone, Rochester, and Chatham are on its banks, and large vessels can ascend to Rochester. Sheerness stands at the E. entrance to the estuary. Its length is 70 m., including 12 m. of estuary. The river preserves a curious distinction in nomenclature, those born on the right bank

being known as men of Kent, those on the left as Kentish men.

**Mee, ARTHUR** (1875-1943). British journalist and author.

Arthur Mee, British journalist

Born at Stapleford, Notts, July 21, 1875, and educated there, he became in 1891 a junior reporter on the Nottingham Daily Express then edited by J. A. (later Sir John) Hammerton. At 20 he was editor of the Nottingham Evening News. He moved to London, edited Black and White, 1901-03, and was active as a free-lance. Lord Northcliffe made him literary editor of the Daily Mail, 1903-05; and then with the Harmsworth Self-Educator began the series of instructional books for which he is chiefly remembered. In 1908 he began the editing of the work with which his name is chiefly associated, The Children's Encyclopedia (*q.v.*), which was strikingly successful and was translated into French, Italian, Arabic, Spanish, Chinese, and other languages, selling millions of sets. Working on the same lines, Mee next developed My Magazine (first called The New Children's Encyclopedia, then The Children's Magazine). A feature of this was a supplement called the Little Paper, which in 1919 was established as a separate publication, The Children's Newspaper. He collaborated with Sir John Hammerton in the editing of some earlier publications, including The World's Great Books and series on natural history and popular science, and the life of Jesus. His last work was The King's England, a series of guides to the English counties. He died May 27, 1943. His life is related in Child of Wonder, Sir J. Hammerton, 1947.

**Meer, JAN VAN DER** (1628-91). Dutch painter. Born at Haarlem, he was a pupil of Jacob de Wet, visited Italy when young with Lieven van der Schuur, and painted landscapes with cattle and figures. He died at Haarlem. Vermeer (*q.v.*) was also named van der Meer.

**Meerane.** Town of E. Germany, in Saxony. It is situated 21 m. W. of Chemnitz and 38 m. S. of

Leipzig. The chief building was a church, dating mainly from the 13th century. The town manufactured woollen goods and textiles of other kinds, also machinery.

**Meeraugen Spitze.** Peak of the High Tatra Mts. in Central Europe, alt. 8,212 ft. It is situated near the boundary of Poland and Czecho-Slovakia, 4 m. N.W. of the Franz-Josephs or Gerlsdorfer Spitze, the culminating point in the range. It is one of the most celebrated view points in a picturesque region of peaks and lakes. To the N.W. at the foot of a sharp slope lies the lake Meerauge.

**Meerkat** (Dutch, sea cat) or **SURICATE** (*Rhizaena*). A carnivorous mammal related to the mongoose and civet. It is about 14 ins. in length, including the tail,

and its soft fur is of a greyish colour. Its sharp nose and remarkably long claws are two of its distinguishing characteristics. It is very common in Cape Colony, where it lives in burrows in the sand. Although a member of the carnivora it lives mainly on bulbs

Meerkat, a bulb-eating mammal related to the mongoose  
W. S. Berridge, F.Z.S.

which grow in the sand. It is in favour in South Africa as a pet.

**Meerschamm, OR SEPIOLITE.** Earthy or fibrous mineral, a hydrated magnesium silicate,  $2\text{MgO} \cdot 3\text{SiO}_2 \cdot 2\text{H}_2\text{O}$ . It is apparently a mixture of amorphous material (meerschamm) and fibrous crystals (sepiolite) and is white, greyish, or yellowish in colour. It occurs in irregular masses derived from serpentine (Asia Minor), and in siliceous veins (New Mexico); it is found in quantity also in Spain, Morocco, and the Grecian Archipelago. It is originally soft and floats on water when dry. The industrial treatment is to soak it first in tallow and then in wax before it is fashioned into pipe bowls, etc., and polished. It is occasionally used as a building stone and was formerly used as a substitute for soap in North Africa.

**Meerut.** Division and district of India, in the Uttar union. The division comprises the N. half of the Ganges-Jumna doab, and a Himalayan area in Saharanpur and Dehra Dun. The dist. is in the middle of the division to the N.E. of Delhi. Irrigation is necessary for a quarter of the area; the chief crops are wheat, barley, and sugarcane. Area, div., 9,230 sq. m.;

dist., 2,344 sq. m. Pop. div., 6,716,451; dist., 1,596,582.

**Meerut.** Town of India, in the Uttar union. An ancient city situated N.E. of Delhi almost midway between the Ganges and the Jumna, it had lapsed into a ruinous condition until it became a garrison and military headquarters. It contains 62 mosques and 60 temples, and is the seat of a college; the Jama Masjid dates from 1019. S. John's church, dating from 1821, was the first erected in N. India. The mutiny of 1857 broke out here. Pop. 169,290.

**Meeting.** A gathering of people. One of the most important constitutional rights is the right of public meeting, i.e. the right of persons to assemble so long as they do not commit a breach of the law. A meeting must not be held on private property without official permission. There is no general rule that meetings in a public street are illegal, but they must not amount to a nuisance, i.e. traffic must not be interfered with. An assembly becomes unlawful if its object is the commission of a crime or if it causes reasonable persons to apprehend a breach of the peace. By the Public Meeting Act, 1908, disorderly conduct at a meeting is a crime, and under the Public Order Act, 1936, a police officer may at the request of the chairman ask an offender for his name and address and, if he refuses or there is reasonable suspicion that he is not giving his true name and address, he may be arrested. By this last Act, the use of political uniforms in public places or at public meetings is forbidden without a permit as is offensive conduct or the possession of offensive weapons at public meetings or processions. A borough or urban district council or, in London, the police may, with the consent of the Home Secretary, forbid meetings for a period not exceeding 3 months.

During the Second Great War the home secretary had power to prohibit meetings of certain organizations where there was a danger that the organization might be used for purposes prejudicial to the defence of the realm.

**Megacycle.** Term in wireless telephony denoting a million cycles. It is also used as a contraction for megacycle per second.

**Megalesia.** Roman festival. Instituted in honour of Rhea Cybelē, the Great Mother (Gr. *megalē mētēr*) of the gods, in 204 B.C., when a black stone, supposed to represent her, was brought from

Pessinus in Phrygia, it was celebrated April 4-10, some days before the festival of Ceres (Cerealia). The Galli or priests of Cybelē marched in procession through the streets of Rome, singing and asking alms for the goddess, and games were held on the Palatine. The festival, celebrated by patrician women, which in imperial times became more orientalised and orgiastic, was kept up until the 5th century A.D.

**Megalithic** (Gr. *megas*, great; *lithos*, stone). Term denoting a homogeneous class of primitive stone monuments, their builders, and their associated culture. The problems presented by their distribution have been marked by keen controversy, and are not solved.

It is common ground that these monuments did not arise in different localities and among different peoples through independent efforts of the mind, but are ultimately due to a single originating impulse. It would also appear that the first impetus to massive stone architecture was given by the invention of metal-working, even when stone tools continued in general use, as in the pyramids of Egypt. Knowledge of these great achievements was disseminated slowly by migration and trade, and it is significant that the megalithic regions in Europe and N. Africa are not only accessible from the sea, but may be linked together by a track coincident with that which marks the early quest for gold and the baser metals. Megalithic remains are rare in east-central Europe, E. England, and other regions deficient in metallic mines, at least in antiquity.

No general agreement has been reached as to whether the dolmen, deemed to mark the beginning of megalithic building, originated in N. Africa, W. Asia, or Europe. One view is that this culture spread westward across N. Africa and thence through Spain and Portugal to Brittany, Britain, Holland, and Scandinavia, other paths being traced into Syria, the Caucasus, and across the Urals. But, whatever the route may have been, the homogeneity of the structural form and attendant features is such that the racial relationship of the builders, or those who directed the operations, may be regarded as a reasonable explanation.

The occurrence of similar structures in other parts of the world, admittedly later in time, has resulted in attempts to elucidate their organic relationship to the early megalithic civilization. An

interesting theory has been propounded which, although lacking general acceptance, claims to be the most coherent synthesis yet suggested of many facts otherwise unexplained. It points out that a dominant part was played from the outset by Aegean maritime enterprise, which began before 1500 B.C. From the 9th century onward new impulses were imparted by improvements in ocean navigation due to the general use of iron tools, and by the growing luxury of the civilized world. Africa was circumnavigated, and the exploitation of Indian mines was attended by a sudden outburst of megalithic building. This, it is maintained, diffused eastward to the Malay Archipelago, China, Korea, and Japan, subsequently reaching the Pacific in the Carolines, Marquesas, Tahiti, and Easter Island. One migratory wave seems to have found its termination in a fanwise extension from Central America through Mexico to the mound-building region; another culminated in the massive monolithic construction and affiliated culture of the Peruvian highlands.

#### Helio-lithic Culture

For this later culture, associated with a complex of customs discernible only in germ in the early megalithic phase, Brockwell proposed the distinguishing term helio-lithic which was later used extensively by Perry and Dexter. It includes such uses as mummification, carved stone idols, a homogeneous deluge-legend, sun-worship and serpent-worship, conch trumpets, circumcision and other mutilations, tattooing and skull-deformation, the couvade, terraced cultivation, arbitrary methods of boat-building, linen-weaving, traffic in shell-purple, pearls, and gems, certain games, and a peculiar calendar system. Some of these ideas were perhaps derived from Ethiopian survivals of discarded Egyptian usages, some from Babylonian and other Asiatic practices; hence their absence from megalithic Europe. According to the theory under consideration they were picked up and engrafted upon primitive megalithism by the intrepid mariners to whom mankind owes the most widespread cultural migration of the ancient world. See Archaeology; Dolmen; Stone Age; Stone Monuments.

of Indonesia, W. J. Perry, 1918; Children of the Sun, W. J. Perry, 1923; The Sacred Stone, T. F. G. Dexter, 1930.

**Megalomania** (Gr. *megas*, great; *mania*, madness). Delusion of greatness; an erroneous and exaggerated idea of one's own importance in the matter of social position, worldly possessions, bodily and mental powers. Thus, persons imagine themselves to be kings, generals, millionaires, prophets, or endowed with divine powers. Such ideas are frequently accompanied by other mental disturbances, and are characteristic of general paralysis of the insane and the manic phases of manic-depressive insanity. Unlike other classes of maniacs, megalomaniacs are merry and gay for much of the time, though trouble ensues if they meet other patients with the same delusion, since these may be regarded as rivals, traitors, impersonators, etc.

**Megalopolis.** City of Arcadia, ancient Greece. Founded by Epaminondas in 371 B.C., it became a prosperous place, but was captured and destroyed by the Spartans in 222. It was one of the chief cities of the Achaean League (q.v.). Considerable excavations have been made, including that of the site of the theatre, the largest in Greece.

**Megalosaurus** (Gr. *megas*, great; *sauros*, lizard). An extinct fossil reptile found in the Jurassic and Cretaceous deposits of Europe, part of Asia, and N. America. The reptile was a large carnivorous dinosaur, 15-20 ft. in length, possessing formidable teeth and a long, heavy tail. The megalosaurus had only small forefeet, but large hind legs, and toes with strong claws. See Dinosaur.

**Megaphone** (Gr. *megas*, great, *phônê*, voice). Appliance for magnifying or collecting sound. One form is a speaking trumpet, used largely at sea, for enabling the voice to be heard at a distance. It consists of a hollow cone of papier mâché, fibre, etc., fitted at the smaller end with a mouthpiece. Another is a hearing-trumpet, de-

vised by Edison, for use by deaf persons, or to enable ordinary sounds to be heard at a distance; and a third is a device for enabling persons to converse from a distance. This comprises two large funnel-shaped receivers for collecting the sound waves, which are conducted to the ear by flexible tubes, and commonly fitted with speaking-trumpets. See Sound.

**Megara.** City of ancient Greece. It was situated opposite the island of Salamis, 1 m. from the sea and about 30 m. E.N.E. of Corinth. The capital of the small district of Megaris, it became important early in Greek history, and founded the flourishing colonies of Chalcedon, Byzantium, and the Sicilian Megara. It was for some time a member of the Athenian alliance, but the connexion ceased when the pro-Athenian democratic government gave place to an oligarchy, 441 B.C. During the Peloponnesian war Megara sided with Sparta. Theognis, the poet, was a native.

The small modern town of Megara lies in the same site. Pop. 8,500. It was the centre of an area from which British Imperial troops were evacuated at the end of April, 1941, after which it remained in German occupation until the German withdrawal from Greece in 1944. See Greece: Second Great War.

**Megatherium** (Gr. *megas*, great; *thêrion*, wild beast). Large extinct mammal, whose fossil re-

Megatherium. Giant ground sloth of the Pleistocene age  
Amer. Mus. Nat. Hist.

mains are found in Pleistocene deposits of S. America. One of the Edentata, allied to the anteaters and sloths, it was about 20 ft. in length, and fed upon small twigs and leaves of trees. When feeding, it supported its huge bulk on its hind legs and tail, the forearms being chiefly used for procuring food. The megatherium was one of the earliest fossil mammals to receive scientific attention, a skeleton being found in 1789 near Buenos Aires. See Fossil.

**Meghna.** River of Assam and E. Bengal. In Sylhet the river Barak rises near the mountainous border of Burma; it splits into the Surma and Kusiya, which in turn join to form the Meghna. The latter, flowing into the Bay of Bengal, has a tidal bore, making navigation dangerous.

**Megiddo.** Locality in Palestine, in the plain of Esdraelon. Sisera was defeated near by: Solomon restored the fortifications; and it was the scene of the deaths of Ahaziah and Josiah. The 1st Viscount Allenby took his title of Megiddo from this place which he captured on Sept. 19, 1918. See Armageddon.

**Megohm.** In electricity, a measurement of resistance equivalent to 1,000,000 ohms. See Ohm.

**Megrims.** Disease of horses. It is caused by interference with the blood supply to the brain. The horse staggers, throws up its head, and usually falls unconscious. Underfeeding and overworking are associated with the condition, but so are overfeeding and underworking. Harness horses seem most liable to attacks, possibly because of the pressure of the collar. The underlying cause is unknown and no treatment has been found.

**Mehadia.** Town of Rumania. It is 15 m. by rly. N. of Orsova, near the W. end of the Transylvanian Alps. The baths, frequently called the Baths of Hercules, with a temperature of 117°-132° F., were known to the Romans.

**Mehemet Ali** (1769-1849). Pasha of Egypt. Born at Kavala of an Albanian family, he distinguished himself in Egypt against Napoleon in 1799 and in 1805 obtained recognition as pasha of Egypt. At Cairo, in 1811, he massacred the Mamelukes, subdued the Wahabis, obtained possession of Mecca and Medina in 1818, and then sent his son Ibrahim Pasha to the Sudan, to extend Egyptian rule over those regions.

In 1824 the sultan called upon Mehemet for help against the Greeks, promising him Syria as a reward. The promise, however, was not fulfilled, so Mehemet seized Syria by force, and secured a good part of the rest of Asia Minor. The Turks, attempting to regain it, were repulsed, but Mehemet gave way when a fleet of British

Mehemet Ali,  
Pasha of Egypt

Megaphone. Simple form, as used for giving directions at a distance

and other vessels appeared. Eventually a compromise was arranged, by which Mehemet was made hereditary pasha of Egypt and governor of the Sudan. He died Aug. 2, 1849. See Egypt.

**Meighen**, ARTHUR (b. 1874). Canadian statesman. Born June 16, 1874, in Perth co., Ontario, he graduated at Toronto, was for a time a teacher, and afterwards a barrister. He entered the dominion house of commons in 1908. A Conservative in politics, he became solicitor-general in 1913. In 1917 Meighen entered Borden's coalition cabinet as secretary of state and minister of mines. In a few months, however, he was made minister of the interior, and in 1920 succeeded Sir Robert as premier. He owed his selection to his skill as a debater, and to his following among the Conservatives of the western provinces. Defeated in 1921, he resigned, but was again premier, July-Sept., 1926. Later he held the position of leader of the government in the senate and was leader of the Conservative party during 1941-42.

**Meiktila**. District and town of Burma. The district occupies the depression E. of the Pegu Mts. and S. of Mandalay div. It is part of the comparatively dry area of Central Burma, with an annual rainfall of 38 ins. It is crossed by the rly. from Rangoon to Mandalay; rice and oil seeds are the principal crops. The town, about 80 m. S. of Mandalay, is on the road and rly. S.E. from Myingyan on the Irawadi. The Meiktila lake, an old Burmese work, covers 4 sq. m. and is divided by the rly. into N. and S. lake. It irrigates 40,000 acres. Area, dist., 2,183 sq. m. Pop., dist., 344,025; town, 8,700.

Meiktila was occupied by Japanese troops in April, 1942. The town was retaken Feb. 28, 1945, in a surprise dash eastwards across the Irawadi by the 17th Indian div.; the main Meiktila airfield was secured at the end of March.

**Meilhac**, HENRI (1831-97). French dramatist. He was born in Paris, Feb. 21, 1831, and during

1861-81 collaborated with Ludovic Halévy in nearly 50 plays, including many librettos for Offenbach's operas (e.g. *La Belle Hélène*). Afterwards, in association

with other writers, he produced some 25 more pieces, of which *Frou-Frou* and *La Grande Duchesse* are specially notable. He died in Paris, July 6, 1897.

**Meiningen**. A town of Thuringia, Germany. It was from 1680 to 1918 capital of the duchy of Saxe-Meiningen.

It is situated on the river Merra 43 m. by rly. N.W. of Coburg. It won international fame under Duke George II who, late in the 19th century, trained and directed a group of actors which took a prominent part in the development of the German theatre. A theatrical school is still one of the town's main features, apart from its palace Elisabethenburg (1682), which contains great collections of works of art, coins, etc., remnants of a monastery of 1239, libraries, museums, and schools. As a town it dates back to the year 982. Economically unimportant, it had a pop. in 1935 of 21,035.

**Mein Kampf** (Ger., *My Struggle*). Book by Adolf Hitler, in which he laid down the principles of National Socialism. He began it, with the help of Rudolph Hess, in April, 1924, while imprisoned in the fortress of Landsberg-am-Lech for his part in the Munich *putsch*. After his release he wrote the second vol., the whole work covering some thousand pages. It describes accurately the *Weltanschauung* of Nazism, with its emotional-ethical-intellectual basis and outlines the methods by which the Nazis would seize power in Germany and the way in which they would use that power at home and abroad, including their plans for foreign conquests. The style is turgid and rhetorical, but its influence was tremendous. It became a sort of bible of National Socialism, and millions of copies were sold; after Hitler's advent to power, a copy was presented to every bridal couple. It was said that the royalties from its sale were the sole source of Hitler's income. The first English trans. of the full text was published 1939, though abridged editions appeared earlier.

**Meiosis** (Gr., reduction). In literary composition, a figure of speech which underestimates or belittles. Frequently this intends, and produces, humorous effect. Litotes has a similar meaning.

**Meiosis** (Gr., reduction). The occurrence of two divisions of a reproductive cell accompanied by only one reduplication of its chromosomes. This leads to a reduction of the number of chromosomes in the cell by half. Whereas in mitosis (*q.v.*) the chromosomes reduplicate before the cell division, which distributes one set to each daughter cell, in meiosis cell division takes place once during the reduplication and again at its completion. Chromosomes (*q.v.*) acquire the capacity to take up certain stains during cell division. At this time the genes in the chromosomes appear to attract each other in a very particular way. Each gene attracts, and attracts only, its homologue on that similar chromosome which was derived from the animal's other parent. In mitosis this does not happen because the attraction is, as it were, "used up" in the apposition of replicas to each other. In meiosis, as there are no replicas to begin with, the members of the two sets of chromosomes become attached to each other along their lengths. While they are so associated they reduplicate.

Chromosomes appear to have an essentially spiral internal structure. While the two members of an homologous pair are attached side by side in meiosis they lose some of their internal spirals and this leads to their becoming relationally coiled round each other. This can be very clearly shown by taking two pieces of knitting wool and increasing their internal spirals by twisting each more tightly than it was twisted when first picked up. If these two pieces of wool are now firmly held touching along their length and then allowed to untwist internally by letting go of one end of the pair they will in fact coil relationally around each other.

The reduplication of the chromosomes, which takes place when they are relationally coiled, is itself spiral so that the two replicas are relationally coiled round each other as well. When the replication is complete the attraction of gene for gene is used up in the attraction of replica for replica, so that the original homologous whole, now double, chromosomes are no longer held together by anything except their relational coiling. This relational coiling is undone by force—by the force that separates the centromeres shown by small circles in the

Meiningen arms

Henri Meilhac,  
French dramatist

fig., which, in each chromosome, become attached to the spindle (q.v.).

This forcible separation of the homologous chromosomes, each consisting of a couple of replicas, when relationally coiled leads to breakages, the physical basis of crossing over (q.v.), and the formation of chiasmata, X-shaped figures. After the homologous chromosomes, whole, or broken as to one of their moieties and repaired by a bit of a moiety of a homologue, have been separated by the completion of the first division of meiosis, a second division separates the whole or broken and repaired replicas, often called chromatids. After this second division each of the four resulting cells has one whole or broken and repaired chromatid of each possible kind present in the species, instead of two chromosomes of each kind present in the species. Meiosis has therefore taken place. *Consult* M. J. D. White, *The Chromosomes*, 2nd ed., rev. 1942; *The Evolution of Genetic Systems*, C. D. Darlington, 1939.

**Meiringen.** A large village of Switzerland, in the canton of Berne. It stands on the river Aar, 7½ m. by rly. S.E. of Brienz. The chief village of the Hasli-Thal, and the principal station on the Brunig rly., it is a popular tourist centre. Close to the Reichenbach Fall and the gorges of the Aar and the Alpbach, it has an English church and many hotels. It is noted for its wood-carving.

**Meissen.** Town and district of Germany, in Saxony. The town is on the left bank of the Elbe, and possesses the huge Albrechtsburg castle (1471-85) and a fine Gothic cathedral (13th-14th cent., renovated 1912) as well as other remnants going back to the

Meissen arms

10th cent. when the "burggraves of Misnia" were set up against Slavonic neighbours. Meissen is a romantic town in a beautiful hilly setting; the churches of S. Afra (1208), Our Lady (15th century), S. Francis (1266), and S. Nicholas (1390), and the town hall (15th century) and pharmacy (16th century) are other remnants of its old glory. Its world fame, however, derives from its china, often identified with the similar Dresden product. It was at Meissen, however, that Johan

Frederick Böttger produced the first china for Augustus the Strong, and it has maintained its reputation from 1701, when the first porcelain was made in the Albrechtsburg. Other industries concern textiles, furniture, machinery, stoves, and chemical products. Meissen was a R.C. bishopric from 968 to 1581. In 1945 it came under Russian occupation, and its industries suffered heavy losses by dismantling and transfer to Russia. Its pre-war pop. was 46,992. *See* China; Saxony.

**Meissonier, JEAN LOUIS ERNEST** (1815-91). French painter. Born at Lyons, Feb. 21, 1815, he became pupil of Julien Pothier and Léon Cogniet. Influenced by the 17th century Dutch painters, he excelled in dramatic and costume works. His first important work was *The Little Messenger*, 1836. In 1855 his picture *La Rixe* won him fame. His chief pictures include *The Cavalry Charge*, *The Amused Cavalier*, *Soldiers Gambling*, and *Cuirassiers*. He also painted a few portraits. The Wallace Collection has a good many examples of his work, such as *A Sentinel*; time of Louis XIII, 1851; *The Guard Room*, 1857; *The Lost Game*, 1858; *Napoleon I and his Staff*, 1868; He died in Paris, Jan. 31, 1891.

J. L. E. Meissonier, French painter

**Meistersinger** or **MASTERSINGERS.** Members of guilds of musicians and poets, founded in Germany from the 14th to 16th centuries. The earlier Minnesingers were connected with the courts, but on the decline of feudalism the cultivation of the art of singing passed down to the burgher class. Heinrich von Meissen, called *Frauenlob*, one of the last of the Minnesinger, seems to have been a connecting link between

the two kinds of guild, for he was the founder of the first company of Meistersinger at Mainz in 1311. Tyll Eulenspiegel, Brandt, and Hans Sachs were among the most distinguished of later followers of the cult. At Ulm the Meistersinger survived till 1839. Wagner revived popular interest in the Meistersinger, and immortalised Hans Sachs by his opera *Die Meistersinger von Nürnberg*, 1867. In this he faithfully mirrors the degeneracy due to rules which were intended to safeguard the purity of the arts of lyrical poetry and music, but which have become outworn and now merely paralyse. The most famous aria in the opera is the *Prize Song* (tenor).

**Mejillones del Sur.** Seaport of Chile, in the prov. of Antofagasta. It is 38 m. direct N. of Antofagasta, with which it is connected by rly. It has a large and well-protected harbour, and is a port for the Caracoles silver mines. Nearby there are large guano deposits. It is the terminus of a rly. to Bolivia, to which it belonged up to 1882. *Mejillones del Norte*, a port in the prov. of Tarapaca, 25 m. from Iquique, was ceded to Chile by Peru in 1883. Nitrate and tin are shipped. Pop. 3,000.

**Meker Burner.** A type of gas burner similar to the famous Bunsen burner, but said to give rather more heat. It has numerous applications in the chemical laboratory. The name is that of the inventor.

**Meklong.** Seaport of Siam. At the mouth of the river of the same name, it is 45 m. S.W. of Bangkok. The river drains the S.W. of Siam, and enters the sea at the W. end of the Menam delta in the Gulf of Siam. The town has a large export trade in salt. Pop. 16,000.

**Mekong.** River of S.E. Asia. It rises in the Tibetan plateau, and flows S. through China and Indo-China. In its upper reaches it flows with torrential speed through deep, rocky gorges. It forms for part of its course the boundary

Meissen, Saxony. View across the Elbe, showing the old town and bridge with Albrechtsburg and the cathedral on right

between Siam and Indo-China, and empties itself in the China Sea. Total length, 2,800 m.

**Melampus.** In Greek legend, the first prophet and physician among mankind. As he lay sleeping two serpents which he had reared licked his ears, thus enabling him to interpret the language of beasts and birds. Having been cast into prison, he learned from the wood-worms that the prison would soon fall, and having told this to Iphicles, the king who had imprisoned him, he received from him many favours. He rendered Iphicles other services by means of his supernatural gifts, and eventually became king of a third of Argos. Melampus learnt the art of medicine from Apollo.

**Melancholia.** A disease of the mind characterised by marked depression. Melancholia may be exhibited alone, but sometimes it is associated with periods of mania (*q.v.*), forming one phase of the disease known as manic-depressive insanity. It may also be exhibited as a symptom in other forms of mental disorder, *e.g.* dementia or general paralysis of the insane. The cause of the condition is not known. Hereditary influences play an important part, and sepsis of the sinuses of the head, such as may occur after acute influenza, are a predisposing factor. Some psychologists hold that melancholia represents a turning from life and a regression to the state found in earliest childhood in which there is a minimum of mental effort and all interest is centred in oneself. This regression is caused by a gross exaggeration of the unconscious guilt which normally accompanies losses and failures.

The types may be divided into simple and active melancholia and melancholia with stupor. In simple melancholia the patient is markedly depressed, lethargic in his movements, and sits listlessly, speaking slowly, or weeping and bemoaning his fate. Delusions are frequent, and often of a religious character, the patient, for example, believing that he has committed the unpardonable sin, and is actually in hell. Others believe that they have lost important bodily organs, and will state that they have no brain or bowels. Sometimes the delusions are of a sexual nature. There is considerable risk of suicide in cases of severe melancholia.

In active melancholia, similar mental symptoms are exhibited, but in addition the patient is restless and agitated. In melancholia

with stupor, the patient will sit motionless for hours together, apparently oblivious of his surroundings, but if left alone he may seize the opportunity of committing suicide. The patient may refuse food, necessitating artificial feeding. Each case must be considered on its own merits as regards management. Treatment includes general hygienic measures, fresh air, exercise and rest. Hypnotics must be given to combat insomnia and restlessness. In some types of melancholia considerable success has followed the use of convulsant electric therapy. A strong electric current is passed through the brain, probably upon several occasions, the result often being a dramatic improvement. The delicate operation of frontal leucotomy is often successful; a knife is inserted through a point in the skull, disconnecting the fibres between the front and hind brain. Consult Mourning and Melancholia, S. Freud, in vol. 4 of *Collected Papers*.

**Melamine Plastics.** Type of synthetic material. Melamine, discovered over a century ago by Liebig, belongs to the urea family, and reacts with formaldehyde to produce a soluble and fusible resin which is water-clear and colourless, hygroscopic, and miscible with water and water-alcohol mixtures. Under the application of controlled heat these resins are cured, *i.e.* converted to the infusible and insoluble stage, and by contrast with others of the thermo-hardening class, this change takes place over a wide range of acidity and basicity. The unconverted resins react with alcohols to yield resins which are soluble in a wide range of organic solvents. The outstanding characteristics of melamine plastics in comparison with aminoplastics are their increased water resistance and non-cracking properties. This resulted in their increased use during the Second Great War both as compression moulded units and also as laminates.

Moulding powders have been developed with mineral and asbestos fillers for special usage, such as handles of medical instruments which have to be repeatedly sterilized. Moulding compositions in pearl and a range of bright and stable colours were also produced in combination with alpha cellulose fillers. This has already found application, particularly in America, in the production of moulded tableware which needs scratch and stain resistance. Melamine laminates have found wide

application in the production of resistant table tops, nameplates, and translucent panels. Melamine resins have also been applied as hot-set waterproof "glues" for ply and laminated wood, giving products of remarkable glue-line strength in tension and shear, with good water and fungi resistance. The addition of 2 to 5 p.c. of melamine to urea resins has largely eliminated joint failures. Similar additions have also imparted boiling water resistance to urea resin bonding compositions.

The hydrophobic properties of melamine resins have also been used in the production of paper which retains strength when wet. Approximately 3 p.c. of a melamine resin acid colloid is incorporated in paper at the beater stage to yield a paper which is over 60 p.c. as strong when wet as when dry. Paper so treated has been used for maps, towing, blueprints, currency, and heavy duty packaging, and other applications from which paper had been hitherto excluded.

At the present time melamine resins are mainly produced in America, where the necessary raw materials are readily available at competitive prices. Only limited quantities are produced in Great Britain. American materials are sold under trade names.

**Melanchthon, PHILIP** (1497-1560). German reformer. His name was Schwarzert, *i.e.* black earth, which was rendered into Greek as Melanchthon. He was born at Bretten, in the Palatinate, Feb. 16, 1497, and educated at Heidelberg and Tübingen. In 1518 he was appointed professor of Greek at Wittenberg, where he came into contact with Luther, became a Protestant, and three years later published his *Commonplaces of Theological Matters*.

The Augsburg Confession was drawn up by him in 1530, and he became recognized as the leading scholar of the German Reformation. He took part in the conferences of Worms and Ratisbon, and proved himself a formidable opponent to the R.C. representatives. On the death of Luther, he became the dominant spirit in the movement. A great humanist and a man of serene and conciliatory temper, he did much to moderate the violence of the extreme partisans. He was the author of many books, including theological and controversial treatises, commentaries on the classical authors, and works on history and philosophy. See Luther: Reformation; Re-

naissance; *consult* Works, ed. Bretschneider and Bindsell, in Corpus Reformatum, 28 vols., 1834-60; Lives, B. Saunders, 1897; G. Wilson, 1897; M. Alien or Ally, F. Hildebrandt, 1946.

**Melanesia** (Gr. *melas*, black; *nēsos*, island). Collective name of a number of groups of islands in the Pacific Ocean. They lie between the equator and the Tropic of Capricorn, and between Papua and the Fiji Islands. The chief groups are the Solomon, Admiralty, Loyalty, Bismarck, Santa Cruz, New Hebrides, etc. They were politically apportioned among Great Britain, France, and Ger-

become more frequent since the middle of the 19th century, in association with industrialisation. According to Ford, industrial melanism, as this phenomenon is called, depends on hereditary factors each exhibiting complete or partial dominance. Black areas of black and white guinea-pigs are due to the presence of melanin granules in the epidermis of the black areas, in what may be called dendritic cells. If black skin from a spotted guinea-pig is grafted to a non-pigmented area, the superficial epidermis, but not the hairs, of the white skin become black; conversely, white grafts transplanted to black areas become

under Marchesi in Paris, and made her first appearance in opera at Brussels, 1887, taking the name of Melba as a tribute to her native city. The following year she made her début at Covent Garden, where she scored an immediate success.

Dame Nellie Melba,  
Australian singer  
Soprano

A soprano of great sweetness and brilliant execution, her voice had extraordinary flexibility and perfect sense of restraint. She became world-famous, appearing regularly in London, Paris, and New York. In 1894 she created the part of Nedda in *I Pagliacci*, and her most famous operatic characters included Lucia, Gilda, Mimi, and Violetta. After 1902 she made repeated world tours, dividing her interests between England and Australia. Created D.B.E. in 1918, she retired in 1926, and died Feb. 23, 1931. Her reminiscences, *Melodies and Memories* appeared in 1925. *Consult* biographies by A. Murphy, 1909; P. Colson, 1932.

**Melbourne.** Parish and town, Derbyshire, England, 7 m. S.E. of Derby. It has a Norman church built about 1090. The Dutch gardens of Melbourne Hall were laid out in 1720. Boots and shoes and silk goods are manufactured. It is also noted for its market gardens. Pop. 4,000.

**Melbourne.** Capital of Victoria, Australia. It is situated at the N. of Port Phillip, in Bourke co., on the banks of the river Yarra, which flows into Hobson's Bay, an inlet of Port Phillip. Hobson's Bay has anchorage for 800 vessels, with a varying depth of from 3 to 5 fathoms, while three-fourths of the 800 sq. m. of Port Phillip Bay are similarly available. The Yarra, a stream 100 m. long, is navigable to the heart of the city for vessels of 22 ft. draught, and is tidal to Richmond, the Coode canal shortening the distance from its mouth to the city by more than 1 m. Port Melbourne, formerly Sandridge, is 2½ m. S.W. of the city by road, and has steamboat and rly. connexion with Williamstown, at the opposite side of Hobson's Bay.

Melbourne arms

Melanesia. Map of the Eastern Pacific, showing the principal groups of islands

many, but the German possessions were captured in the First Great War, and are now administered by Australia and New Zealand.

**Melanesian.** Term denoting the dominant ethnic stock in Melanesia. Formed by the intermingling of an aboriginal black, woolly-haired population with an immigrant Indonesian stock previously modified by proto-Malayan blood and culture, it is of medium to tall stature, chocolate to copper-coloured, often wavy-haired, and usually long-headed. Fishing and agriculture are practised.

**Melanins.** Chemical term applied to the pigments of the body, usually found in the epidermal organs, such as hair.

**Melanism.** Term used in zoology to describe the presence of black coloration in animals normally of a lighter colour. This phenomenon occurs in moths, e.g. Boarmia, and among many species there can be no doubt that it has

progressively pigmented. This process of infective melanin spread does not entail the wholesale replacement of the tissues, for a claw from the white area grafted to a black portion of the sole of the foot changes colour without any loss of form.

**Melaphyre.** In geology, a general term for altered basic lavas such as basalts. Melaphyres are soft rocks, decomposed by the passage of steam or hot water. In colour they are usually reddish or green.

**Melba, DAME NELLIE** (1859-1931). Australian singer. Born Helen Porter Mitchell, she was the daughter of a building contractor, and was born at Burnley, Melbourne, Australia, May 19, 1859. She sang as a child in Melbourne, but owing to parental opposition it was not until after her marriage to Charles Armstrong in 1882 that she became a professional singer. She studied

Melbourne, Australia. Map of the environs of the city, showing also Geelong harbour and the bay of Port Phillip

The city proper covers an area of about 8,000 acres, and there are extensive suburbs, some of which have city rank. The principal streets in the city, named after Australian notabilities, are 1 m. long and 99 ft. wide, and run at right angles to each other. The public buildings, among the finest of any city of equal size in the world, include the houses of par-

liament, built 1855-91, which, pending the building of Canberra (*q.v.*), houses the parliament of the Commonwealth; Exhibition Building, 1881; Trades Hall; and town hall, with an assembly hall holding 2,500 people and a magnificent organ.

Other buildings include the G.P.O., custom house, mint, 1872; public library, with over 300,000

volumes; national art gallery, technological museum, law courts, treasury, university, hospitals, observatory, etc. The banks, stores, and other business premises are on a handsome scale, and there are several markets. The ecclesiastical buildings include S. Patrick's Cathedral, R.C., the Anglican cathedral of S. Paul, the Scots, Independent, and a number of other churches. There are theatres, an opera house, and music and con-

cert halls, zoological and botanical gardens, and parks.

Rly. and air facilities afford communication with all the other state capitals, and electric suburban services are supplemented by electric tramways. The holiday resorts include South Melbourne, St. Kilda, Brighton, Sandringham, Beaumaris, Mentone, Ascendale, and Heidelberg. The racecourses include Flemington, where the Melbourne Cup race is run. A great annual aquatic festival is held at Henley-on-Yarra.

Apart from the shipping, there are foundries, flour and woollen mills, boot and clothing factories, potteries, soap works, tan yards, and wool-washing works; and gold, meat, wool, fruit, etc., are exported. Except for periodical hot N. winds, the climate is fine; mean temperature, 58°; average rainfall, 25.62 ins. A metropolitan board of works was established in 1891. Three systems of water-supply provide 90,000,000 galls. daily.

First occupied by whites in 1835, Melbourne was in 1837 named after Lord Melbourne at the suggestion of Sir R. Bourke when he was governor of New South Wales. In 1836 it consisted of 13 meagre buildings. By 1841 the pop. had increased to 11,000. Incorporated Aug. 12, 1842, it was made an episcopal see Aug. 3, 1849. When the goldfields were opened in 1851, and what was then Port Phillip province became the colony of Victoria, Melbourne was made its capital. In 1947 the pop. was 1,226,923. Centenary celebrations in 1934 included a £10,000 London-Melbourne air race. *See* Australia; Port Phillip; Victoria.

**Melbourne, UNIVERSITY OF.** Established in 1853 by the Victorian Legislature, it receives an annual subvention from the government. There are faculties of arts, science, law, medicine, dentistry, veterinary science, and of engineering, including mining and agriculture. Affiliated colleges are four residential colleges controlled by representatives of the churches and the Australian college of dentistry.

**Melbourne, WILLIAM LAMB, 2ND VISCOUNT (1779-1848).** British politician. A son of Peniston Lamb, created Viscount Melbourne in 1781, he was born March 15, 1779. Educated at Eton and Trinity College, Cambridge, he be-

**MELBOURNE: NOTABLE FEATURES OF THE CAPITAL CITY OF VICTORIA, AUSTRALIA**

came a barrister. In 1805 he married Lady Caroline, the eccentric daughter of the earl of Bessborough, but the two soon separated. In 1806 he entered

parliament as Whig M.P. for Leominster and represented a succession of constituencies until he succeeded to the peerage in 1829. For a time he supported the Tories,

and his official career began when, in 1827, he was chief secretary for Ireland under Canning, but he resigned the following year.

Having rejoined the Whigs, he entered Earl Grey's ministry as home secretary, and four years later succeeded him as prime minister. He resigned a few months later, but again became premier in April, 1835. In 1838 he resigned, but difficulties arose when Peel tried to form a ministry, and at the instance of the queen Melbourne returned. (See *Bedchamber Question*.) After defeats in the House of Commons, he finally left office in Aug., 1841. He died Nov. 24, 1848. He was a successful politician, although he lacked nearly all the qualities of a statesman, save perhaps tact. He is best known as the guide of the young Queen Victoria. His brother Frederick, British ambassador in Vienna, 1831-41, succeeded to his title, but on his death in 1853 it became extinct. *Consult* *Memoirs*, W. T. MacCullagh Torrens, 2nd ed. 1890; *Life*, B. Newman, 1930.

**Melbourne Age**, *THE*. Morning newspaper published in the capital of Victoria, Australia, and founded in 1854. An illustrated weekly, *The Leader*, intended mainly for the farming community, is issued from the same office.

**Melbourne Argus**. Morning newspaper published in the metropolis of Victoria, Australia. It was founded in 1846 and issues a half-yearly index. Its companion weekly publication, *The Australasian*, now the *Illustrated Australasian Post*, was established in 1864.

**Melchett**, ALFRED MORITZ MOND, 1ST BARON (1868-1930). British industrialist and politician. He was born at Farnworth, Lancs, Oct. 23, 1868, a son of Ludwig Mond, the scientist, and educated at Cheltenham College; S. John's College, Cambridge; and Edin-

burgh university. Mond entered the firm of Brunner, Mond and Co., and was called to the bar in 1894. Liberal M.P. for Chester (1906) and Swansea (1910), he joined the coalition government in 1916 as first commissioner of works. Mond was minister of Health 1921-22, and in 1924 was elected M.P. for Carmarthen, joining the Unionist party in 1926. He was responsible for the formation of the great combine, Imperial Chemical Industries (*q.v.*). In 1910 Mond was made a baronet and in 1928 a baron. He died Dec. 27, 1930. His son Henry (1898-1949) succeeded as 2nd baron. He was educated at Winchester, was Lib-

Lord Melchett,  
British politician  
*Russell*

eral M.P. for Isle of Ely 1923-24, and, after joining the Conservative party, represented East Toxteth 1929-30. In 1933 he reverted to the Jewish faith, and became an ardent Zionist. His son Julian (born 1925) succeeded him as 3rd baron.

**Melchites**. Word meaning followers of the king, i.e. the East Roman emperor, adopted in the 5th century as a name for the Orthodox Egyptian Christians to distinguish them from the Jacobites (*q.v.*), who supported the Monophysite heresy. They are now in union with the Church of Rome, but retain many of their traditional usages.

**Melchizedek**. A priest-king of Salem. He is described as Priest of the Most High God, and Abraham received his blessing and paid him tithes after one of his victories (Gen. 14). Salem was probably Jerusalem, and the Tell-el-Amarna tablets mention a priest-king of the place, appointed neither by his father nor his mother, who is styled Servant of the Good One. As a priest-king with high prerogatives, Melchizedek is mystically regarded in Ps. 110 and Heb. 5 and 7 as a type of the Messiah.

**Melcombe**, GEORGE BUBB DODDINGTON, BARON (1691-1762). English politician. The son of Jeremias Bubb, he took the additional name of Doddington on succeeding to the estate of his maternal uncle. In 1715 he was M.P. for Winchelsea. From 1722-54 he represented Bridgwater. He was a lord of the treasury, 1724-40, and afterwards was twice treasurer of the navy.

In 1761 he was made a baron, and he died July 28, 1762. He was a member of the Hell Fire Club. His *Diary* was published in 1784. *See* *Medmenham*.

Lord Melcombe,  
English politician

**Melcombe Regis**. Parish of Dorset, England, within the borough of Weymouth and Melcombe Regis. The first victims of the Black Death in England died here in Aug., 1348. *See* *Weymouth*.

**Meldola**, RAPHAEL (1849-1915). British chemist. Born in London and educated at the Royal School of Mines, he afterwards became assistant to Sir Edward Frankland at the Royal College of Science, and to Sir Norman Lockyer at the Solar Physics Laboratory. From 1878-85 he was chemist to a firm of aniline dye makers, and then was appointed professor of chemistry at the Finsbury Technical College, a position he held at the time of his death. Meldola discovered several important aniline colours, as naphthol blue (Meldola's blue), alkali blue, and viridine. He first prepared the photographic developer eikonogen. Two of his best known books are *Chemical Synthesis of Vital Products*, 1904; and *The Chemistry of Photography*, 1889. He died Nov. 16, 1915.

**Meldrum**, OLD. Burgh of Scotland. In Aberdeenshire, it is 16 m. N.W. of Aberdeen and has been a burgh since 1672. Cotton goods are manufactured here. About  $\frac{1}{2}$  m. to the S. lies Barra Hill, with a prehistoric fort, said to be the site of the battle between Robert Bruce and Comyn, Earl of Buchan, in 1308. Pop. 1,015.

**Meleager**. In Greek legend, a famous hero and hunter. The Fates having foretold that he should live only as long as a firebrand which was then burning should be unconsumed, his mother, Althaea, put it out, and locked it up in a chest. When Meleager grew up to manhood, the goddess Artemis offended by his father Oeneus, sent a monstrous boar to ravage the land of Aetolia. All the heroes were invited to assist in the killing of the boar, and among them came the famous huntress Atalanta. The boar was finally killed by Meleager, who gave the skin and head to Atalanta, as she had given the animal the first wound. This compliment gave offence to the other

hunters, and two brothers of Althaea endeavoured to take the trophies from Atalanta, but were killed by Meleager. Althaea threw the brand into the fire, and Meleager immediately died. See Atalanta; Calydon.

**Meleda** or **MLJET**. Southernmost of the larger of the Yugoslavian Dalmatian Islands in the Adriatic Sea. It is long, narrow, and hilly, 17 m. from Ragusa, with the harbour of Palazzo in the N.

**Melfi**. City of Italy, in the prov. of Potenza. It stands on the slopes of the volcanic peak of Monte Vulture, at an alt. of 1,590 ft., with a splendid view of the plain of Capitanata. Its old castle, founded by Robert Guiscard, was restored by the Dorias. The cathedral, consecrated in 1155, was rebuilt after the earthquake of 1851, which destroyed most of the town. Melfi trades in cereals, oil, and wine. The capital of Apulia under the Normans, its history consists of a long sequence of revolt, massacre, siege, capture, and spoliation. It suffered no damage during the Second Great War, being overrun in Sept., 1943, by Canadian forces advancing against little opposition. Pop. 15,000.

**Meli**, **GIOVANNI** (1740-1815). Sicilian poet. He was born March 4, 1740, at Palermo, educated for the medical profession, and became professor of chemistry at Palermo University in 1787, dying Dec. 10, 1815. He wrote many eclogues, odes, and epigrams, chiefly in the Sicilian dialect, and his fables gained for him the name of the Sicilian La Fontaine. A complete edition of his poems was published in 1814, and a later one, including an ode to Lord Nelson, in 1830. A revised edition was published in 1908 by A. Alfano.

**Melilite**. A complex calcium aluminium magnesium silicate occurring in basic lavas low in silica and without feldspar. It is commonly found in slags.

**Melilla**. Harbour of Morocco. On the N.E. coast, it is within the Spanish zone, and forms the main port of entry into the Rif country. It lies on the E. side of the mountainous promontory of Tres Forcas. Extensive harbour works have been undertaken by the Spanish, and narrow-gauge railways have been built through Nador to Seluan (Zeluan) and Tafersit, and to the lead mines at Afra Minas, as well as to the iron ore mined in the E. region. Melilla was acquired by Spain in 1496. Fighting took place in the Melilla zone in July, 1921, the tribesmen

Melilot. Leaves and flower-heads

inflicting a serious defeat on the Spanish troops. Pop. 60,500.

**Melilot** (*Melilotus officinalis* and *M. alba*). Herbs of the family Leguminosae, natives of Europe and Asia. The leaves are divided into three narrow, oblong, toothed leaflets. The flowers in appearance are like those of furze, but only a quarter of an inch long, drooping, in an erect one-sided spray; those of *M. officinalis* are deep-yellow, and of *M. alba* white. When dry the plants give off the odour of new mown hay.

**Méline**, **FÉLIX JULES** (1838-1925). French statesman. Born at Remiremont, Vosges, May 20, 1838, he was deputy for the Vosges from 1872 to 1903. Keenly interested in the increase of agricultural production, he founded the order of merit of agriculture, was president of the chamber 1888-89, and prime minister 1896-98. The fall of his ministry was caused partly by the Dreyfus agitation, and partly by the failure of the Government to deal with nationalist pretensions. He died Dec. 21, 1925.

**Melinite**. Name under which trinitrophenol is used as a military explosive in France. See Lyddite.

**Melitopol**.

Town of the Crimea, R.S.F.S.R., 125 m. N.N.E. of Simferopol, with which it is connected by rly. It was captured by German troops early in Oct., 1941, during the advance on Rostov. It eventually became the Germans' most important strategic position E. of the Lower Dnieper. It was recaptured by the Russians on Oct. 23, 1943, after 11 days of fighting through the streets of the town. Pop. 75,735.

**Melkart** (king of the city). Phoenician deity. He was especially worshipped in Tyre, where Hiram I, about 950 B.C., erected the great temple mentioned by Herodotus. The twin pillars facing its portal, long since destroyed, were imitated in Solomon's temple at Jerusalem. The name of the temple, "Pillars of Hercules," in Tyre, perhaps became applied symbolically to the rocks flanking the Strait of Gibraltar. Identified with Heracles, Melkart—whose name in Greek was Melicertes—was in part a sun-god, in part the patron of mariners. Jezebel, Ahab's Tyrian consort, introduced into Samaria the Melkart worship, and her daughter Athaliah encouraged it in Jerusalem.

**Melksham**. Market town of Wilts, England. It stands on the Avon, 6 m. S. of Chippenham and 98 m. by rly. from London. The chief building is the church, in which a little Norman work remains; it has a fine chapel of somewhat later date. There is a town hall. The industries include the making of cloth and flour. The town has saline springs. Market day, Tues. Pop. 3,881.

**Mellawei**, **MALLAWI**, **MELLAWI**, or **MELAWI-EL-ARISH**. Town on the Nile, 184 m. S. of Cairo by rly. Near by are the celebrated alabaster quarries of Hat Nub, with inscriptions of the IVth, VIth, and XIIth dynasties. Pop. est. 20,000.

**Melle**. Town of France, in the dept. of Deux-Sèvres, 17 m. E.S.E. of Niort. S. Hilaire, one of two 12th cent. churches has remarkable sculptures. The Romans here worked a silver-lead mine. Pop. 2,600.

**Mellifont**. Village of co. Louth, Eire. It stands on the Mattock,

Melksham, Wiltshire. S. Michael's Church, restored 1881

and is famous for the ruins of its Cistercian abbey, founded 1142.

**Mellitic Acid**. A crystalline body first discovered in 1799 by Klaproth in honey-stone, and for a long time called honey-stone acid. Mellitic acid is prepared by boiling honey-stone with ammonium car-

bonate to form ammonium mellitate, adding lead acetate, and decomposing the lead mellitate by means of sulphuretted hydrogen.

**Mellitus** (d. 624). Archbishop of Canterbury. Sent to England as a missionary by Gregory the Great, he was consecrated by Augustine, and for him King Ethelbert of Kent built S. Paul's church in London, Mellitus being the first bishop of the city. He succeeded Laurentius as primate in 619 and died April 24, 624.

**Mellon, Andrew William** (1855-1937). American financier and politician. Born in Pittsburgh,

Mar. 24, 1855,

he graduated

from the

Western Uni-

versity of

Pennsylvania

in 1873. He

became presi-

dent of the

Mellon Na-

tional Bank,

but resigned

in 1921 on his

appointment as secretary of the treasury, an office he held until 1932. He played an important part in the international debt settlement after the First Great War, maintaining that, while the Allies should repay the debts incurred to the U.S.A., they should not be pressed beyond their capacity for repayment. In Feb., 1932, he became ambassador in London, but was replaced when Roosevelt became president a year later. A generous patron of music and art, he gave to the American nation a collection of paintings worth £10,000,000, and paid a further £2,000,000 towards a gallery to house them. In 1913 he founded the Mellon Institute of Industrial Research (*q.v.*). He died Aug. 27, 1937, leaving his estate, believed to be worth over £40,000,000, to the Mellon Educational and Charitable Trust.

**Mellon Institute.** The Mellon Institute of Industrial Research was established in 1913 at the University of Pittsburgh by the late Andrew W. Mellon, to provide qualified workers with facilities for the investigation of problems in pure and applied science. During the Second Great War its activities were largely switched over to researches in scientific questions bearing directly on military operations. According to a report issued after the resumption of normal work, 82 research programmes were in operation, most of them in chemistry, industrial hygiene,

metallurgy, and ceramics. The institute awards annually a number of valuable fellowships to scientists and engineers.

**Melocactus** (Melon - shaped Cactus). Genus of perennial succulent plants of the family Cactaceae.

**Melocactus.** Tropical American plant; inset, tubular flower

Natives of Mexico, Brazil, and the W. Indies, they have globular, ribbed stems, with a short central cylindrical extension upwards, which is clothed with woolly hairs and soft spines. The ridges of the swollen base bear stouter spines in clusters at regular intervals. The rosy, tubular flowers are produced at the summit of the short column. The Turk's cap (*M. communis*) is the best known species.

**Melodrama** (Gr. *melos*, song; *drama*, action). Strictly, a stage play in which appropriate music, vocal and instrumental, is introduced to heighten emotional or dramatic effect. In its original form it is said to have been first perfected in France as a natural and orderly development of opera, differing essentially from that higher form of dramatic art in that the music was accessory to, and the songs were interpolations in, spoken dialogue, whereas in opera the story is told exclusively in recitative and aria. Rousseau's *Pygmalion* (1775) is often named as the first play of the kind.

Gradually melodrama developed into a composite of sensational drama derived from tragedy and of domestic drama derived from the comedy of life. Sensational incident and sentimental appeal were variously underlined by snatches of appropriate orchestral music. Its convention requires that virtue shall ultimately triumph over vice. It relies on primitive passions shown in conflict in elemental conditions rather than on subtle analysis of character as developed in the hothouse atmosphere of artificial civilization, and on crude colouring in the presentation of

moral qualities. The figures of the melodrama are as conventional as were those of the old morality play, and the *jeune premier* or juvenile lead, the *ingénue* or innocent heroine, the heavy father, the villain, and the rustic clown or other fool who supplied the comic relief, are types as rigid as Vice and the rest. As the conventions of modern melodrama require that the figures shall need no labels round their necks to indicate the qualities they personify, so they require that nothing shall be left to the imagination in respect of the environment in which they are brought into mutual conflict.

Nevertheless, while the melodrama is comparatively easy to ridicule or to burlesque, it is a dramatic form requiring of its author considerable knowledge of human nature and great technical skill in construction. As acclimatised in England it became a notable part of the English drama in the hands of such producers as the brothers Gatti at the Adelphi Theatre, Augustus Harris and Arthur Collins at Drury Lane, and Walter Melville at The Lyceum.

**Melon** (*Cucumis melo*). Plant of the family Cucurbitaceae. It is a trailing plant, and, a native of Asia, was introduced into Great Britain about 1570. Many varieties and sizes are cultivated, the flesh being sometimes green, sometimes white, and sometimes orange. The water melon (*Citrullus vulgaris*) of the same family, but different genus, is a native of S. and tropical Africa.

The number of fruits on each plant should be limited to two, otherwise the quality and size of the fruit will suffer. Where melons are grown in a frame instead of a house the swelling fruits should have a piece of brick, tile, or other similar material placed underneath them to avoid direct contact with the soil. See Cucumber; Gourd.

**Melon.** Fruit of the cultivated variety, *Eminence*  
J. Wallis, Kew

**Meloria.** Island in the Mediterranean, 4 m. W. of Leghorn. It is known on account of two naval fights named after it. The first was fought on May 3, 1241, when a Genoese fleet under Enzo was defeated by the ships of the emperor Frederick II and those of Pisa. The second and more important was fought Aug. 6, 1284, when the Pisan fleet of over 70 galleys, commanded by the Venetian Morosini, was defeated by the Genoese, with 88 galleys under Uberto Doria. The defeat of Pisa here marked the end of her rivalry with Genoa. See Genoa; Pisa.

**Melos.** Former name for the Greek island of the Cyclades now known as Milo (*q.v.*).

**Melozzo da Forlì (1438-94).** Italian painter. Born at Forlì, June 6, 1438, he was perhaps a pupil of Piero della Francesca, visited Rome in the service of Count Girolamo Riario in 1472, and worked at Urbino, under the patronage of Federigo of Montefeltro, duke of Urbino, 1473-76. He is said to have executed some of the portraits in the palace of Urbino, several of which are in the Louvre. He died at Forlì, Nov. 8, 1494. Few of his paintings remain. His Vatican fresco Sixtus IV and his Court (c. 1476-81) may still be seen. In the Quirinal there is an Ascension of the same period, and in the inner sacristy of S. Peter's are his frescoes of The Music-making Angels, by which he is best known. See Angel.

**Melrose.** A police burgh and market town of Roxburghshire, Scotland. It stands on the S. bank of the Tweed, 37 m. S. by E. of Edinburgh on the rly. An ancient town pleasantly situated at the base of the Eildon Hills, Melrose is chiefly noted for the abbey founded in 1136 by David I, once the most magnificent edifice in Scotland, and now a splendid ruin. Destroyed by Edward II in 1322, and partly razed by fire in 1385, it was completely ruined by the Reformers in 1545. The abbey contains the remains of Alexander II and Michael Scott, the legendary magician. Scott's lines on Melrose in *The Lay of The Last Minstrel* are well known. In 1918 the abbey was presented to the nation by the duke of Buccleuch. A heart found in a leaden casket during excavations

Melrose arms

Melrose, Roxburghshire. The town as seen from Quarry Hill

in 1921 was believed to be that of Robert Bruce.

In the market place is a market cross of 1642. The town is associated with Scott, who made it the Kennaquhair of The Abbot and The Monastery. In the vicinity is Old Melrose, where S. Aidan founded a Columban monastery in the 7th century, and the Eildon tree, celebrated for Thomas the Rhymer's meeting with the queen of the fairies. On the other side of the Tweed, and connected by a suspension bridge, is Gattonside, where Sir David Brewster lived. Pop. 2,052. See Abbey.

**Melrose.** City of Massachusetts, U.S.A., in Middlesex co. Situated 7 m. N. of Boston, and served by the Boston and Maine Rly., it is chiefly a residential city. Part of Middlesex Fells, a fine state reservation of 1,800 acres, lies within its limits. Chief industry is the manufacture of "Boston Butter Beans," sold throughout the U.S.A. Settled about 1633, Melrose was incorporated in 1850, and became a city in 1900. Pop. 25,333.

**Meltham.** Urban dist. and town of the W. Riding of Yorkshire, England. It is 5 m. S.W. of Huddersfield on the rly., and has flourishing cotton and woollen industries and makes tractors. Pop. 5,000.

**Melting Point.** Temperature at which a substance becomes entirely molten or liquid. More strictly the melting point of a substance at a given pressure is the temperature at which solid and liquid are in equilibrium at that pressure. The effect of pressure on the melting point is given by the Clausius-Clapeyron equation  $\frac{dT}{dp} = \frac{T(v_l - v_s)}{LJ}$  where

$dT$  is the change in the absolute temperature  $T$  of the melting point due to a change  $dp$  in pressure,  $L$  is the latent heat of fusion (cal/gm.),  $J$  is Joule's equivalent (the mechanical equivalent of heat), and  $v_l$  and  $v_s$  are respectively the volumes of unit mass of liquid and of solid, e.g. the melting point of ice falls by  $\cdot 0072^\circ$  C. for each

atmospheric increase of pressure. At one time it was supposed that this temperature would be always constant for each pure substance, but it is now known that mere allotropic modifications—or a metal, for example—may affect the melting point. Nevertheless, the melting points of substances are so far invariable that they are universally regarded as among the physical constants of science. The melting points of metals are of particular importance in metallurgy. Some typical melting points ( $^\circ\text{C}$ ) are: Hydrogen chloride,  $-111$ ; Ammonia,  $-78$ ; Carbon dioxide,  $-57$ ; Mercury,  $-38.9$ ; Beeswax,  $62$ ; Soft Solder,  $180$ ; Tin,  $232$ ; Lead,  $327$ ; Zinc,  $419$ ; Sodium chloride,  $801$ ; Brass,  $900$ ; Copper,  $1083$ ; Steel,  $1400$ ; Platinum,  $1773$ ; Tungsten,  $3380$ .

**Melton.** Woollen or woollen and cotton cloth, plain woven. The best meltons are all-wool, and in the course of their finishing are well milled or fulled, and their surface, after being brushed up, is closely sheared. The thread structure of the fabric is concealed, and a fine but not bright surface results. Some of the cheapest mixed woollen fabrics for women's dress are described as meltons, but do not possess the characteristics of the original heavy weight melton suitable for overcoats.

**Melton Mowbray.** Market town and urban dist. of Leicestershire. It is situated 14 m. N.E. of

Leicester and 102 m. by rly. from London. Melton Mowbray stands where the little rivers, Eye and Wreak, join. The chief building is the beautiful church of S. Mary, with a fine central tower, partly early English, enlarged in the reign of Elizabeth. The town has cattle markets, and is famous for its pork pies and cheese. It is also known as a hunting centre, being in the midst of the Quorn country. In Feb.,

Melton Mowbray arms

1644, the Parliamentarians were defeated here by the Royalists. It is mentioned in Domesday Book as

Melton Mowbray, Leicestershire. Parish church of S. Mary  
Valentine

Medeltune, the second name being in consequence of its association with the great family of Mowbray. Market day, Tues. Pop. 12,000.

**Melun.** Town of France, in the dept. of Seine-et-Marne. It occupies an island in the middle of the Seine, and has spread on both banks, 27 m. S. E. of Paris. There are medieval churches, a fine town hall in the Renaissance style; and ruins of a royal palace.

Melun arms

It was captured by Henry V in 1420, and held by the English for 10 years. Textiles, leather, and pottery are manufactured. Pop. 17,573.

**Melusina.** The heroine of a medieval French romance, and the legendary ancestress of the house of Lusignan. She was to all appearance a beautiful young woman and married a young nobleman, Raymond of Lusignan, on condition that he should never see her on a Saturday. One day the husband spied upon her at the time of taboo, and saw that she was then half-serpent in form. She flew away in the form of a dragon, to reappear before the death of each of her descendants. The story is a variant of a folk-tale based on the idea of taboo, and found in many parts of the world. The earliest forms of the Melusina legend have been published by the Early English Text Society. The story is dealt with in S. Baring Gould's *Curious Myths of the Middle Ages*, new ed. 1897. See *Psyché*; *Taboo*.

**Melville, Viscount.** Scottish title borne by the family of Dundas since 1802. Henry Dundas, the politician, was the first holder; he was succeeded by his son Robert,

who became president of the board of control in 1807. From 1812-27, and again, 1828-30, he was in the Tory ministry as first lord of the admiralty. Melville Sound was named after him. His son, Henry, the 3rd viscount, became a general in the army, after having taken a prominent part in the Sikh War. The 5th viscount (born March 5, 1909) succeeded to the title in 1935. The family seat is Melville Castle, Lasswade, Midlothian. The earldom of Melville is borne with that of Leven. See Leven and Melville, Earl of.

**Melville, HENRY DUNDAS, 1ST VISCOUNT (1742-1811).** A British politician. Born and educated in Edinburgh, he became an advocate; in 1766 he was made solicitor-general for Scotland, and in 1775 lord advocate. In 1774 Melville entered parliament as M.P. for Midlothian, and in 1783 Pitt chose him as treasurer of the navy. In 1791 he was made home secretary, in 1794 secretary at war, and during 1804-05 was first lord of the admiralty. In 1806 he was impeached for misappropriating public money while treasurer of the navy, but was acquitted. He died May 28, 1811. Consult *Lives*, H. Furber, 1931; C. Matheson, 1933.

**Melville OR MELVILL, ANDREW (1545-1622).** Scottish reformer. He was born at Baldovie, Angus, Aug. 1, 1545, and was educated at St. Andrews, Paris, and Poitiers. In 1574 he became principal of Glasgow College, and later of S. Mary's College, St. Andrews. He was a very strong Presbyterian, and his outspoken utterances more than once brought him into trouble. In 1597 he was deprived of the rectorship of St. Andrews, and nine years later was summoned to London by James I to give an account of certain irregular proceedings at Aberdeen. He then proved so contumacious that he was imprisoned for five years in the Tower. On his release, in 1611,

the king having forbidden his return to Scotland, he went to France, and became professor of biblical theology at Sedan, where he died. A violent controversialist, but generous and patriotic, Melville was one of the chief organizers of the Scottish Church.

**Melville, HERMAN (1819-91).** American author. He was born in New York City, Aug. 1, 1819, of Scottish descent. At the age of 17 he went to sea and crossed the Atlantic as a foremast man. On his return he acted as school-master during 1837-40, and on Jan. 1, 1841, went to sea again in a Pacific whaling vessel. In the following year, when at the Marquesas Islands, he ran away from his ship and for four months was a captive among the cannibal natives of Nukuhewa. After being rescued he served as a clerk for a time in Honolulu, and returned to Boston in 1844.

In 1846 he published the first of his books, *Typee: a Peep at Polynesian Life*. This received a cordial welcome both in America and England, as a fascinating narrative of life in the Pacific. His later books included *Omoo*, 1847, and a *Voyage Thither*, 1849; *Redburn, His First Voyage*, 1849; *White Jacket, or The World in a Man-of-War*, 1850; and his most famous book, *Moby Dick, or The White Whale*, 1851. He died in New York, Sept. 27, 1891. Consult H. M.: *The Tragedy of a Mind*, W. E. Sedgwick, 1945.

**Melville, SIR JAMES (1535-1617).** Scottish writer. Sent to France as page to Mary Queen of Scots, he was engaged in the unsuccessful negotiations for the marriage of John Casimir, second son of the elector palatine, to Queen Elizabeth, and of the archduke Charles of Austria to Mary Queen of Scots. He died Nov. 13, 1617. His *Memoirs*, the MS. of which was discovered in 1660, are of great value in studying the history of the period.

**Melville, JAMES (1556-1614).** A Scottish reformer. Born near Montrose, July 26, 1556, a nephew of Andrew Melville, he was educated at Glasgow university, where he became a tutor. In 1580 he was appointed professor of Oriental languages at St. Andrews. Nine years later he was moderator of

Herman Melville,  
American author

Melville  
After Raeburn

the general assembly of the Church of Scotland; and he took a leading part in the ecclesiastical disputes of his day. He died at Berwick-on-Tweed, Jan. 13, 1614.

**Melville Bay.** Opening of Baffin Bay, on the N.W. coast of Greenland. It lies between Cape York on the N. and Wilcox Head on the S., contains numerous islands, and is usually blocked with floating ice.

**Melville Island.** Large island of British N. America. In the Arctic Ocean, between Bathurst and Prince Patrick islands, it is deeply indented. Its maximum length is 210 m., and width about 130 m. It was discovered by Parry, who wintered here 1819-20.

**Melville Peninsula.** N.E. projection from the Canadian mainland. It is separated from Baffin Island on the E. by Fox Channel and on the N. by Fury and Hecla Strait. To the W. is Committee Bay, while to the S. are Frozen Strait and Lyon Inlet, besides other bays. The chief settlements are Pingitkalik and Agwisewiwik, which are situated on the N.E. coast. Its length is 265 m., and average breadth 110 m.

**Melville Sound.** Large opening of the Arctic Ocean. Situated between Melville Island on the N. and Victoria Island on the S., it communicates with Beaufort Sea through Banks Channel or Macure Strait, and with the ocean through Byam Martin Channel. Its length is 240 m., and width 140 m.

**Member of Parliament.** Person elected by popular franchise to represent a constituency in the house of commons. Any adult British subject by birth or naturalisation is entitled to stand as a parliamentary candidate, except if a 'peer of the realm, a minister of the established Church, a member of the regular armed forces or the civil service, an undischarged bankrupt, a convicted criminal, or a lunatic.

A prospective candidate must be nominated and seconded by two parliamentary electors in the constituency, his nomination paper being signed by eight others. He must deposit with the returning officer on the eve of nomination day £150 in notes. Unless the candidate receives one-eighth of the total votes cast at the election, this deposit is forfeit to the Treasury. Unsuccessful candidates who get a sufficient quota of the votes have their deposits returned immediately, but elected candidates only when they have taken the oath in parliament. Candidates are required to have agents for

election expenses, and to ensure that these expenses are kept within certain legal limits; under the 1948 Act the limit was £450, plus 2d. per elector in counties and 1½d. in boroughs. This includes the agent's fee, clerical assistance, printing, stationery, rent of committee room and halls for meetings, and a sum for personal expenses. Usually half the outlay is met from party funds, but the Labour party bears the whole cost.

Since 1946 an M.P. has been paid £1,000 a year and receives free railway warrants when travelling between the house of commons and his constituency. A pension scheme for indigent ex-M.P.s is in force, all members contributing £12 per annum. Members of parliament are exempt from jury service and compulsory service in the armed forces, and are also exempted from attending as witnesses upon subpoena. They cannot be prosecuted for libel arising out of any statements made in debate, but such statements may be ruled out of order by the Speaker. Freedom from arrest by the civil or military power was once a prized privilege, but it is now confined to civil causes. Where applicable, freedom from arrest applies only to forty days after the prorogation of parliament and forty days before the next meeting.

Members who offend against the rules or privileges of the house of commons are dealt with by the house itself. Such breaches of privilege consist of disobedience to the orders of the house; assaults on or insults to members or libels on them; and interference with the officers of the house. After a minor offence the guilty member may be suspended for a sitting or longer period, but where the offence is serious the member may be expelled from parliament.

While the house is in session, a member must not enter it wearing an overcoat or carrying an umbrella. He must not display any papers or books not directly concerned with the business under discussion. Smoking is not permitted in the house, division lobbies, or corridors; food must not be taken in side; but there is no restriction on beverages. No member in debate may mention

another's name; he must refer to the hon. member for such-and-such a constituency. Ministers are addressed by the name of the office each holds, e.g. the secretary of state for war.

Once a member has taken the oath (one of allegiance to the crown), there is no obligation on him to attend sittings of the house. No duly elected M.P. may resign his seat. If he wishes to cease representing his constituency, he must apply for an office of profit under the crown, and so vacate his seat by the provisions of the Act of Settlement (1707). The usual practice is to apply for the stewardship of the Chiltern Hundreds (g.v.) or of the manors of Poynings or Northstead, or the escheatorship of Munster. The seat is thereupon declared vacant under the Place Act of 1742, and a writ is issued for a by-election to be held. When an M.P. dies, the Speaker issues a writ for a by-election. Should the member die within the precincts of the house, his body cannot be removed without the consent of the king's coroner, as the houses of parliament rank as a royal palace. See Commons, House of; Lords, House of; Parliament.

**Memel** (Lithuanian, Klaipėda). Town and seaport of the Lithuanian S.S.R. It stands on the Baltic Sea at the mouth of the Dange, which flows into the E. end of the Kurisches Haff. It is 90 m. to the N.N.E. of Kaliningrad (Königsberg), and possesses iron foundries, ship-building yards, and chemical and soap factories. Normally it has a transit trade in timber and grain. The town was founded in 1252 by the Teutonic Order and soon became a trading centre, joining the Hanseatic League. In the 17th century, after a troubled period,

Memel arms

Memel. The Rathaus in this Baltic town and port

it was for some time in the possession of Sweden, and in 1757 and again in 1813 was occupied by Russian troops. Before the First Great War the town, with a strip of territory E. of the river, belonged to Germany, the hinterland being Russian.

On March 17, 1915, during the First Great War, a Russian detachment occupied Memel after a bombardment, but evacuated it soon on the approach of superior German forces. Intermittent fighting occurred in the neighbourhood throughout April. Under the Versailles treaty Memel was detached from Germany to be made autonomous on the model of Danzig; but was annexed by Lithuania early in 1923. This annexation was recognized by the League of Nations, and the Memel statute provided for a large measure of self-government. There was constant friction between the German and the Lithuanian communities, and the government granted many concessions to the former in an attempt to forestall their secession. But in 1938 the Germans had a large majority in the diet, and on March 22, 1939, Hitler presented Lithuania with an ultimatum for the surrender of Memel and the adjoining territory, which were reincorporated in Germany, Lithuania retaining a free zone in the port. During the Second Great War the Russians took Memel by storm Jan. 28, 1945. It was reincorporated in the Lithuanian S.S.R.

**Memento Mori** (Lat. remember (you have) to die). Name given to a ring or article of personal adornment fashioned as a reminder of the brevity of life and the certainty of death. A device of medieval origin, it extended to inscriptions and decorations of dwelling-houses, and was adapted to memorial and mourning rings, a death's head or human skeleton of white enamel being attached to the ring by a swivel mounting. Luther wore a gold finger ring with a small death's head in enamel inscribed with the words *Mors saepe cogita* (Think often of death); and round the setting, *O Mors, ero mors tua* (O death, I will be thy death), part of an antiphon. Mary Stuart had a similar ring. Shakespeare has several references to the memento mori, e.g. in *Love's Labour's Lost*, v. 2, where Biron compares the countenances of Holofernes to "a death's face in a ring," and in *King Henry IV*, part 1, iii, 3, where Falstaff declares that he will make as good

use of Bardolph's face "as many a man doth of a death's head or a memento mori."

**Memlinc** OR **MEMLING**, **HANS** (c. 1430-94). Flemish painter. Born at Mümling, near Mainz, or at Memlynck, near Alkmaar, he was apprenticed to a painter in Cologne or Mainz before going to Bruges about 1465. He became a master painter there in 1467, and there he painted Nicolas Spinelli (Royal Museum, Antwerp) and the Donne triptych (Chatsworth). In 1479 he painted *The Adoration of the Kings* in S. John's Hospital, Bruges, and in 1480 the large *Christ the Light of the World* (Munich). The altar-piece, S. Christopher (Bruges Museum), was painted in 1484. In 1489 he completed the famous shrine of S. Ursula at Bruges. His altar-piece in Lübeck cathedral was finished 1491. He died at Bruges, Aug. 11, 1494. See Bruges; Flemish School of Painting.

**Hans Memlinc**  
Supposed self-portrait  
of the Flemish artist,  
at Frankfurt

**Memminger arm:**

Memminger arm: 15th cent.), church of the Knights of the Cross (1480), town hall (1589), and guild houses. There are textile and brewing industries. In 1945 the town was placed in the American zone of Germany. Pop. 14,849.

**Memnon**. In Greek mythology, son of Tithonus and Eos (Dawn). He came to help the Trojans against the Greeks in the last period of the war. Antilochus, son of Nestor, fell before him, but he was in turn killed by Achilles. Memnon was a beautiful youth and beloved of the gods. When he met Achilles in the fatal battle, Zeus weighed the fates of the two heroes in the scales, and that of Memnon sank. According to tradition Memnon came from Ethiopia, and it was doubtless due to this tradition that the colossal statue near Thebes, which produced a musical note at sunrise, was supposed to

represent him, though really the statue of the Egyptian king, Amenhotep III.

**Memoirs**. Literary composition occupying a place midway between the diary and autobiography. Relying largely upon the former for substantiation of facts and dates, it differs in having greater literary finish; it differs from autobiography in its intention of being less a conscious self-portrait than a series of sketches of persons and events with which the narrator has been associated.

As a specific form of literature memoirs made their first appearance in France, the genius of whose people finds in it particularly happy expression. Memoirs, says Demogot, are the flower, history the ripe fruit, of a people, and he points to the fact that the whole 16th century produced but one historian in France, while in the second half of it alone no fewer than 26 writers left permanent memoirs of the events of which they were contemporaries and part. One of the earliest of these was Marguerite de Valois. Other notable names include Madame de Sevigné, Saint-Simon, Madame de Staël, and Madame de Genlis.

No such list of memoirs can be shown by the literature of any other people, however rich in autobiographies, diaries, or reminiscences, set down in their old age by cultivated men and women of the world. Italy's supreme example is Casanova. Germany has no classics in this medium. Greville, and perhaps Lucy Hutchinson, and the Chevalier de Johnstone practically exhaust the list of names that England can produce, for the memoirs of the count de Grammont, though written by Anthony Hamilton, are as foreign as his brother-in-law who is their shameless hero, and of the so-called memoirs that have appeared since the last decade of the 19th century, few have the quality of permanence. See *Autobiography*; *Literature*.

**Memorial Day**. An American public holiday. It was first observed in 1869 to do honour to the memory of Northern soldiers and sailors who fell in the Civil War, and has been held annually ever since on May 30 in the states that fought on the Union side. It now commemorates also those who lost their lives in the Spanish-American War and the two Great Wars. As part of the original celebration consisted in placing flowers on graves, the anniversary is popularly known also as Decoration Day. Southern states observe a

Confederate Memorial Day, but not on a uniform date.

**Memorial Hall.** Headquarters of the Congregational Union of England and Wales. It is situated on the E. side of Farringdon Street, London, near Ludgate Circus, on the site of the Old Fleet Prison in which were confined two noted divines, Henry Barrows and John Greenwood, for their "persistent Nonconformity." Its erection, completed in 1874, was one of the objects of the bicentenary commemoration of 1862 "to commemorate the fidelity to conscience shown by the ejected ministers of 1662, and to provide accommodation for the Congregational library and denominational societies." Various religious agencies have offices in the building, which is also the headquarters of the National Free Church Council.

**Memories and Portraits.** Vol. of essays by R. L. Stevenson, published in 1887. The essays, all but three of which first appeared in magazines, are largely autobiographical. They include some college and other memories of the author's early life and vivid studies of his father and grandfather. Among them are *Talk and Talkers*, and *A Gossip on Romance*.

**Memory** (Lat. *memoria*). The retention in the mind of experiences, ideas, and images which have once been conscious, and their automatic or voluntary recall. Physiologically memory is connected with brain tissue, for destruction of specific areas of this tissue produces amnesia. Definite processes in the nerve fibres of the brain accompany the exercise of memory, but their nature is not yet known.

If two things or events are closely connected in experience (e.g. the scent and the shape of a rose), repetition of experience of one tends to recall the other. When events follow one another in time (e.g. gong—meal) the first will generally recall the second more readily than the second will recall the first. Psychological investigation has demonstrated that no experience important to the individual passes completely from the mind, whether or not it received much attention at the time, though most or all of it will pass sooner or later beyond the power of voluntary recall. This phenomenon was first noticed early in the 18th century when an illiterate German servant girl in delirium was heard to rave in Latin, Greek, and Hebrew. Doctors were able to trace the sentences she spoke to

Memorial Hall, Headquarters, in Farringdon Street, London, of the Congregational Union of England and Wales

books used by a learned rabbi whose servant she had been, and who had been accustomed to read aloud to himself in the course of his studies. Such unconscious retention is now recognized as general, for the buried material can be brought back by hypnosis and in the course of psycho-analysis. In normal life, forgotten occurrences are often enough recalled by some external stimulus such as a scent or a tune.

Factors which assist experience to remain within the power of voluntary recall are subjective importance (one's name and address), constant repetition (common words), and attention. Many memories, therefore, are hardly thought of as such, for they rise to the mind as soon as they are needed without apparent effort. This is true also of "muscular memory" (e.g. playing an instrument) which makes it possible for complicated processes to be repeated without conscious thought. Although close attention given to a happening is one of the things which make it easy to remember, it is not a decisive factor (e.g. a lesson over which great pains have been taken may not be remembered). Nor is repetition decisive, for a single event like a bomb explosion may be remembered in every detail, whereas a succession of such events tend to become confused with one another, and only their common features will remain in mind.

Forgetting is of three kinds—a gradual fading out, and losses of memory due to suppression or to repression. In repression thoughts, etc., can be driven deliberately from the conscious mind until it

has formed the habit of not attending to them (e.g. thoughts of cricket during work), or they may disappear automatically and instantaneously, as when a loss of memory follows a violent shock. the cause of the mind's behaviour is the undesirable or painful character of what is blotted from consciousness. Since both suppression and repression use up energy and entail some mental conflict, they may produce a general weakening of retentive power.

The wide differences between the kinds of events that different human beings find it easy to remember are partly accounted for by this tendency to forget what causes anxiety or guilt. Another cause of such discrepancies is the direction taken by sublimation (q.v.) in the individual. Where a strong primitive impulse has found satisfaction through some particular channel (e.g. combativeness in games, sex in art or mountain-climbing) everything appertaining to the substitute gratification will be relatively easy to remember, though memory in regard to the original impulse may be poor.

Investigation of memory training has shown that (a) working the memory in one field (say Latin grammar) does not improve its performance in another; (b) in learning by heart the matter to be retained should be memorised as a whole, or in as large sections as possible, rather than piecemeal.

The false memories known as "Déjà Vu"—the impression that one has seen before something which in fact is new to one, or been in a place where one is in truth a stranger—are probably due to the fact that the sight, the place, would normally recall a previous experience of a very similar kind, but some disagreeable aspect of the first occurrence makes it impossible to remember it as it was, and all that penetrates to consciousness is the general feeling, "I have seen this—have been here—before." Consult *Psycho-Pathology of Everyday Life*, S. Freud, new ed., 1914; *Psychology of Study*, C. A. Mace, 1932.

**Memory Training.** The art of cultivating a good memory. The possibility of training the memory has been studied in successive ages from the days of Simonides of Ceos onwards, Roger Bacon, Giordano Bruno, and Leibniz being among the philosophers who devoted much attention to the subject. Recent revival of interest in the matter has produced a number of rival systems. Distinction must

Memphis, Egypt. Colossal statue of Ramses II amid the ruins (shown above) of the ancient capital of Egypt. The site is now known as Badreshen or El Badrashein

be made between systems which aim at improving memory by what may be called rational means and systems worked by mnemonics.

There are generally said to be three kinds of memorising—mechanical or sensational, depending on the grouping of ideas in a certain order by repetition of the words representing them; artificial, the deliberate association of certain ideas with certain words or symbols, i.e. by the use of ordinary mnemonics; logical, by the association of the idea with others with which it is logically connected by a thorough grasp of the idea and its implications. The last, being associated with a sound general education, is obviously the best method of memory training, though it may not yield phenomenal results.

**Memphis.** Ancient capital of Lower Egypt. Situated on the left bank of the Nile, 14 m. S. of Cairo, it was founded by Menes, the first historical king of ancient Egypt. The Greek form of the Egyptian Mennofer, good house, denoting originally Pepi I's VIth dynasty pyramid, the name appears in Hebrew as Moph (Hosea) and Noph (Isaiah). Before the time of Menes, there had been a city here called White Wall. Under the kings of various dynasties it was embellished with pyramids and palaces, and, in spite of foreign invasions and other vicissitudes, it remained an important place until the rise of Alexandria, although it was not constantly the country's capital. The Romans expressed admiration at its beautiful build-

ings, which included a temple to Ptah, the god of the city, and a number built by Ramses II. The existing monuments include the colossal statues of Ramses II. The ruins were mostly employed for building Cairo. Petrie excavated the Ptah temple, Apries' palace, XXVIth dynasty, and many workshops and dwellings, in 1909-13. See Rosetta Stone; Sak-kara; Serapeum.

**Memphis.** City and port of entry of Tennessee, the co. seat of Shelby co. The largest and the chief commercial city of Tennessee, it stands on a high bluff on the Mississippi, in the S.W. angle of the state. The city commands a wide area annually flooded; hence its name, since the Egyptian city is similarly situated on the Nile. The U.S. army engineers' flood control is directed from Memphis. In 1937 floods caused a sudden influx of 60,000 refugees into the city. Memphis was the centre of an epidemic of yellow fever in 1878, when 25,000 people fled the city in a fortnight. More than one-third of the pop. is negro, but the death-rate of negroes in the city exceeds the birth-rate, the coloured pop. being maintained by influx from the countryside. The rlys. and two steamboat lines serve the city; it is one of the world's greatest cotton ports and has a large export trade in cotton oil cake, used as cattle food. The annual trade of the port is \$250,000,000.

Memphis occupies the site of a fort built in 1739. The town was founded in 1819, incorporated

1826, and became a city in 1849. Pop. 292,942.

**Memphremagog.** Lake of Quebec, Canada. It measures 30 m. by 4 m. and the S. end, in Vermont, is a noted tourist resort. It drains by the Magog into the river St. Francis at Sherbrooke.

**Mena.** Traditional founder of the 1st dynasty of Egyptian kings. The Menes of Herodotus, he was born at Thinis, near Abydos. He was reputed to have erected at Memphis a defensive frontier between Upper and Lower Egypt, the crowns of which he united. Abydos and Nagada have yielded royal tombs of that age, notably of Narmer and Aha, whose relationship to Mena awaits further investigation.

**Menaechmi.** Name of a comedy by Plautus. The plot turns upon the extraordinary resemblance of two twin brothers, sons of a Syracusan merchant. Having been separated from childhood, after many years they meet at Epidamnus, where one of them has settled, and where the other has landed during his search for his long-lost brother. Each is mistaken for the other by the inhabitants and by the Epidamnian's relatives, which gives rise to highly amusing incidents. The Comedy of Errors (*q.v.*) of Shakespeare is based upon the Menaechmi of Plautus.

**Menagerie.** Collection of wild animals kept in captivity for study or exhibition. These collections originated in very early times, when monarchs brought back specimens of the larger fauna of distant lands they had conquered, to be used in displays and combats in the arena. Later monarchs often maintained private collections, one of the best known being that kept in the Tower of London until early in the 19th cent. The admittance of the public to see such collections led to the establishment of zoological gardens. Another development was in the travelling shows popular in the last half of the 19th century. Private menageries have been kept by many wealthy zoologists, e.g. the

Menaggio, Italy. Tourist resort on the W. shore of Lake Como

11th duke of Bedford, at Woburn Abbey, and the 2nd Lord Rothschild, at Tring, Herts. See Zoological Gardens.

**Menaggio.** Village and tourist resort of Italy, in Lombardy. On the W. shore of Lake Como, at the mouth of the Senagra river, it is 16 m. N.N.E. of Como, and in the prov. of that name. It is the starting place of the light rly. to Porlezza, 8 m. distant, on Lake Lugano. Pop. 2,000.

**Menahem, TRIBUTE OF.** Tribute of 1,000 silver talents—3,000,000 shekels—paid by Menahem, king of Israel, to the Assyrian king Pul (2 Kings 15). The cuneiform annals of this monarch, now generally identified with Tiglath-Pileser III, for 738 B.C. record "the tribute of Rezin of Damascus, Menahem of Samaria, Hiram of Tyre" and others. An important synchronism between Assyrian and Hebrew chronology was thereby established.

**Menai Strait.** Channel between Carnarvonshire and Anglesey, Wales, 14 m. long and from one furlong to 2 m. in breadth. It is crossed by two bridges. The Menai suspension bridge, which carries the turnpike road, was constructed by Telford and opened in 1826; it is 1,710 ft. in length and 100 ft. above high water mark. The Britannia tubular bridge was erected by Stephenson and Fairbairn and opened in 1850; it is 1,841 ft. long

and 104 ft. above high water mark, and is traversed by the rly. from Chester to Holyhead. In 1947 a plan was announced for harnessing the tidal energy of the strait by damming it at three points to create two basins.

In the strait is stationed the Conway training ship for officers of

the Merchant Navy. Menai Bridge, N.E. of the suspension bridge, is an urban dist. in Anglesey.

**Menam.** River of Siam. It rises near the N. frontier and flows almost due S. by a tortuous course of some 900 m. to the head of the Gulf of Siam. Its chief tributary, the Meping, drains the N.W. of Siam. Of its deltaic channels, the Taching is the chief and westernmost. Bangkok, the Siamese capital, is 25 m. upstream, and can be reached by vessels which are able to cross the bar at the river mouth. The river is a great national highway.

**Menander** (342–291 B.C.). Athenian comic poet, chief representative of the New Comedy. A native of Athens, belonging to a wealthy family, he was intimate with the philosophers Theophrastus and Epicurus, and learnt the art of play-writing from his uncle Alexis. He is said to have written 105 comedies, and to have gained the prize eight times. Until the 20th cent. only fragments of his works were known, but papyrus finds in Egypt brought to light more than 1,000 lines from four plays, from which an idea of his style and plots can be formed. Menander enjoyed until the Middle Ages, a high reputation, which, in the opinion of modern scholars, an examination of the fragments has failed to justify. He was especially strong in moral maxims. Terence, called

by Caesar the "half Menander," adapted four comedies from the earlier poet.

Menander's *Mirror* was the general title of a series of essays contributed weekly by Charles Morgan to *The Times Literary Supplement* from Oct. 31, 1942. They were reprinted in a book, *Reflections in a Mirror*, 1944. See *Comedy*.

**Mencius** (Latinised form of Meng-tse). Chinese moral philosopher (c. 372–289 B.C.), belonging to the school of Confucius. Born in Shantung, he travelled from court to court in search of a prince who would carry out his political principles. He held the people to be the most important part of a state and superior to their rulers, as to whom he expresses himself freely in the treatise which bears his name. He believed in the original goodness of human nature. As economist and social reformer, he was in advance of his age. See *Confucianism*.

**Mencken, HENRY LOUIS** (b. 1880). American critic. Born at Baltimore, Sept. 12, 1880, he was

H. L. Mencken, American critic

educated at its polytechnic and became a reporter. By 1908 he was literary critic for the magazine *Smart Set*, of which he was joint editor, 1914–23. With G. J. Nathan he founded the *American Mercury* in 1924, being sole editor 1925–33. Fearless in criticism, Mencken took generally a satirical line and laboured the academic and "moronic" element in the literary world. His books include *In Defence of Women*, 1917; *The American Language*, 1918 (supplements 1945, 1947); *Prejudices*, 6 series, 1919–27; *Treatise on Right and Wrong*, 1932; and the autobiographical *Happy Days*, 1939; *Newspaper Days*, 1941; *Heaven Days*, 1943. See *United States of America: Literature*.

**Mende.** Town of France, in the dept. of Lozère. It is 75 m. N.W. of Avignon, on the left bank of the Lot, at the foot of the Causse de Mende, which rises sheer above it for 1,000 ft. The 14th century cathedral was rebuilt three centuries later. The neighbouring hermitage of S. Privat is a famous place of pilgrimage.

**Mendel, GREGOR JOHANN** (1822–84). Austrian scientist. Born near Odrau in Austrian Silesia, he became a priest and an inmate

Menai Strait, showing, left, the suspension bridge, and, right, the Britannia tubular bridge, which cross the channel

of an Augustinian monastery at Brunn, 1843. There as monk, and

Gregor Mendel,  
Austrian scientist

from 1860 as a b b o t , he passed his life, while for about 15 years he taught natural history in the school at Brunn. He carried out experiments in the

monastery garden from which developed Mendel's laws of heredity. He published his theory in 1866. It lacked recognition until rediscovered 1900, and Mendel died a disappointed man, Jan. 6, 1884. See Mendelism.

**Mendeleev**, DMITRI IVANOVICH (1834-1907). Russian chemist. He was born Feb. 7, 1834, at

Tobolsk, being educated there and at St. Petersburg university. In 1863 he was appointed professor of chemistry at the technological institute, St. Petersburg

and in 1866 occupied the chair of chemistry at the university. There he wrote his Principles of Chemistry, and during this time the periodic law, with which his name is associated, occurred to him. He embodied the results of a comparison of the atomic weights and general properties of the elements, which he undertook with a view of

Dmitri Mendeleev,  
Russian chemist

proving his theory of periodicity, in a paper read in 1869 before the Russian Chemical Society.

In drawing up the table of the elements according to his periodic conception he left gaps which he predicted would be filled by elements at that time undiscovered. Most of these have since been discovered, and the experimental proof of the existence of universal ether—a corpuscular substance with an atomic weight of 0.000,000,000,053—which he postulated, may yet be forthcoming. Mendeleev died Feb. 2, 1907.

**Mendelism**. Name given to a set of natural laws controlling the transmission of characters, due to genes in the chromosomes, from one generation of organisms to another. It derives its name from Gregor Mendel (v.s.) who, by paying attention to simple "unit" characters showed that some characters of related organisms are contrastable in pairs, and that among the second generation of progeny from a cross between parents differing in such characters there are to be found members resembling each parent: and deduced that this segregation of characters is explicable only by assuming that a gamete can carry the factor (gene) for one only out of each pair.

Later researches on similar lines have shown that the dominance, which Mendel found one character to exhibit to the exclusion of the other when they were both inherited, does not invariably occur. Mendel crossed a pure bred plant which under normal conditions of self pollination would produce round seeds with another which similarly would form wrinkled seeds. The seeds resulting from this monohybrid (one factor) cross were all round and when the plants into which they grew were allowed to pollinate themselves they formed seeds in the proportions of three round to every one wrinkled, as shown in the table:

starch grains which dry out slowly so that shrinkage is uniform. On the other hand in wrinkled seeds few starch grains are formed and much sugar left so that drying is rapid and shrinkage uneven. Seeds resulting directly from the cross have a starch content less than one parent and greater than the other, as have two out of every four of their offspring by selfing. All these heterozygotes, despite the fact that their starch content is sufficient to make them round, are intermediates in the real character of starch content. Another example of incomplete dominance is seen in the cross between red and white varieties of *Mirabilis jalapa* which results in an F1 (first filial generation) with pink flowers. Thus both allelic genes may take effect in the heterozygote, though to a degree which varies in various instances from that of complete dominance as in Mendel's tall peas to equality as in *Mirabilis*.

The implication in Mendel's work that characters of related organisms are pairable alternatives has also turned out to be too narrow. Numerous cases are known among both plants and animals in which there is a series of alternatives any one of which may serve as the allelomorph of another. A frequently cited example of this multiple allelomorphism is shown by maize. Here redness may appear in any one or more of husks, silks, pericarp, and cob, giving sixteen possible colour patterns. Any two colour patterns are allelic, and crosses followed by inbreeding of the F1 hybrids result in segregation of parental patterns in a typical monohybrid manner.

Even Mendel's conception of the unity of characters may prove misleading unless it is realized that, as in the round and wrinkled peas, the readily observable feature is not necessarily an intrinsic character of the organism. Without this knowledge it might rea-

Mende, France. Tower of the ancient citadel, now used as belfry. See p. 5637.

It has since been discovered that roundness of the seed is due to the conversion, as the seed ripens, of most of its sugar into many

sonably be expected that a cross between any two strains of white flowered sweet peas would yield white flowered offspring. Actually

when two particular strains of such peas are crossed the F1 have coloured flowers. This is because colour results from two internal conditions engendered by two dominant genes, say C and P. One white parent has the capacity due to C for forming a substance which becomes coloured when in contact with another substance formed by the second parent because its nuclei contain P. There is not one pair of characters, colour and white, but two, productions of two substances with alleles of non-production corresponding to recessive genes c and p. The readily obvious character is often considered as due to the interaction of genes. See the table:

The two white flowered parents  
Their gametes which unite ..  
The F1 coloured plant ..  
The four kinds of gamete formed  
by the F1 ..

Within the rectangle the sixteen kinds of plant in F2 resulting in equal numbers from chance mating of F1 gametes.

Of these 9 contain C and P and hence will form coloured flowers; 3 contain C and not P and hence form one only of the substances necessary for colour; 3 contain P and not C and form the other substance only; and 1 contains neither C nor P and forms neither substance: 7 plants out of 16 consequently have white flowers.

In one other way did Mendel fall short of the truth. The characters he selected in peas for his experiments behaved in breeding independently of one another and he drew the conclusion that all characters would do so. The present state of knowledge is that characters are generally transmitted in groups (linked) corresponding to the chromosomes in which their genes occur. Two kinds of deviation from this rule are well known. Reciprocal exchange of members of allelic groups (recombination) occurs in certain instances in a definite proportion of individuals of each generation. This is due to formation of chiasmata between chromatids during meiosis. Members of one group may become transferred without reciprocation to another group in a fortuitous manner. This is in some cases due to the translocation of a part of one chromosome to another during aberrant nuclear division.

Comyns J. A. Berkeley

**Mendel Pass.** Mountain route in the Trentino, N. Italy. It is on the carriage road from Kaltern to Fondo, alt. 4,460 ft. The rly. from Bolzano continues to St. Anton, whence a cable rly. ascends to Mendel station. On the summit are hotels, etc., the locality being an excursion centre, famed for its fine views of the Brenta, Presanella, Mannolata, etc. See Alps.

**Mendelsohn, ERIC** (b. 1887). Anglo-German architect. Born in Berlin, March 21, 1887, he studied there and at Munich. He won international reputation by designing such buildings as the Einstein observatory tower at Potsdam, and the Columbus House in Berlin. Leaving Germany in 1933 to reside in London, he built the Hebrew university in Jerusalem, a government hospital in Haifa, and the De La Warr pavilion in Bexhill. Member of the Berlin academy of arts before severing his connexion with Germany, he was elected F.R.I.B.A.

**Mendelssohn, MOSES** (1729-86). Jewish philosopher. Born at Dessau, Germany, Sept. 6, 1729,

the incidental music in 1842); this masterpiece established his reputation for genius. Now began lifelong friendship with the pianist Moscheles, and in 1825 his father took him to Paris, where he met Rossini and Meyerbeer, the musical giants of the day.

J. L. F. Mendelssohn-Bartholdy, German composer

Mendelssohn conducted Bach's neglected S. Matthew Passion in 1828, and initiated the revival of interest in that composer by forming the Bach Gesellschaft. In 1829 he paid the first of many visits to England and Scotland, where he derived inspiration for his Scottish symphony and Hebrides overture. The Italian symphony was finished in 1833, and from that year he occupied positions as conductor and musical director at Düsseldorf, Leipzig, and Berlin, varied by visits to London. After a short residence in Frankfurt he returned to Leipzig, directing concerts, teaching, and at the same time working at his oratorio Elijah, the first performance of which he conducted in Birmingham, Aug. 26, 1846. After having visited England on no less than ten occasions, he died at Leipzig, Nov. 4, 1847.

Mendelssohn's position in musical history has been subject to fluctuation. Early popularity led on to rapturous acclaim, and he was lionised both socially and musically. Now it is conceded that together with a gift for delicious melody and flawless craftsmanship he had a certain speciality of approach which caused his music to lapse into the sentimental. His most played works besides those mentioned include the overture Ruy Blas; the great violin concerto, string octet, two austere piano trios; and 48 songs without words for the piano, in which category come also characteristic capriccios and fantasies. Mendelssohn's some 80 songs introduced *Lieder* into England; their day has waned, but they educated public taste and prepared the ground for Schumann and Brahms. Elijah remains a standard work, almost rivalling Handel's Messiah in popularity.

**Bibliography.** Lives, W. Lampadius, 1848; J. Benedict, 1850; F. Hiller, 1874; S. Stratton, 1901; W. Dahms, 1919. Letters, ed. by his brother and eldest son, 1861-63; by G. Selden-Goth, 1947; M. and His Friends in Kensington, ed. R. B. Gotch, 1934.

Moses Mendelssohn, Jewish philosopher

he was at first in straitened circumstances, but a rich silk merchant in Berlin, to whose children he was tutor, left him the business. He was a friend and collaborator of Lessing, whose Nathan the Wise perpetuates his memory. His works are especially devoted to the promotion of religious enlightenment. Although a jealous defender of his own religion he advocated entire freedom of thought. Mendelssohn contributed greatly to the intellectual enlightenment of the Jews of Germany, and to their social and political emancipation. He died Jan. 4, 1786. His grandson was the composer Felix Mendelssohn-Bartholdy (v.i.).

**Mendelssohn-Bartholdy, (JAKOB LUDWIG) FELIX** (1809-47). German composer. Son of a wealthy Jewish banker, he was born in Hamburg, Feb. 3, 1809, and early showed exceptional musical talent. He studied composition with Zelter, whose friend Goethe he met at Weimar. At nine he appeared at a public chamber concert, and completed his first symphony in 1824. Two years later he wrote the overture to A Midsummer Night's Dream (completing

**Mendere**, **MENDERES**, or **MENDER**. River of Asia Minor. It flows into the Aegean, S.W. of Aidin, after a course of about 240 m. Anciently it was called the Maeander, and divided Lydia and Caria. So winding is it that the word meander has become a synonym for a circuitous, twisting way of any kind.

**Mendes**. Grecised name of an ancient city near Tmai el-Amdid, S.E. of Mansura, Lower Egypt. It was the cradle of the XXIXth dynasty. In the IIInd dynasty it was already the seat of worship of the sacred ram, usually represented with branching horns surmounted by a uraeus or symbolic serpent. The cult, suppressed by the Persian invaders, was revived by Ptolemy II Philadelphus, 309-246 B.C. Some stone tombs in which the rams were interred are extant.

**Mendès**, **CATULLE ABRAHAM** (1841-1909). French poet, novelist, and playwright. Of Jewish origin,

Catulle Mendès,  
French poet

he was born at Bordeaux on May 22, 1841, and founded the *Revue Fantaisiste* in 1859, an early rallying-point of the Parnassian movement, of which Mendès was a member. Among his early books of poems were *Philoméla*, 1863, and *Odelette Guerrière*, 1870. He published numerous novels and volumes of short stories, for the most part sensuous and licentious in character, but well constructed and brilliantly written. He also wrote plays and operettes, as *La Part du Roi*, 1872; *Le Capitaine Fracasse*, 1878 (after Gautier); and *La Reine Fiamette*, 1898. From 1893 dramatic critic of *Le Journal*, he was accidentally killed in a tunnel on the Paris-St. Germain rly., Feb. 8, 1909.

**Mendez Nunez**, **Casto** (1824-69). Spanish admiral. Born at Vigo, July 1, 1824, he is chiefly known as the commander of the fleet which, in May, 1866, bombarded the Peruvian port of Callao. In this engagement he was wounded and his fleet badly damaged, so he withdrew it, reaching the Philippines in ten days. He died at Vigo, Aug. 21, 1869.

**Mendi**. Negro people in Sierra Leone, W. Africa. Well formed, of good physique, their social life is governed by secret societies. After a period of bush-school training, youths are initiated into the Poro mysteries; girls are similarly received into the Bundu society.

Among the fetish-objects are ancient steatite figurines, numori, derived from Pre-Mendian caves. In 1898 the British forbade the imposition of food-taboos by the Poro executive, and a massacre of British and American missionaries led to a punitive expedition.

**Mendicancy** (Lat. *mendicare*, to beg). Condition or profession of begging. Specifically, the term is applied to the rule of certain religious devotees and monastic orders whereby they are forbidden to acquire any property, but are required to subsist on the charity of the faithful. The difficulties attending the continued practice of such counsel of perfection, and the defects inherent in the system as a rule of communal life, may be traced in the history of all the mendicant orders that were instituted in Europe from the 13th century onwards. See Monasticism.

**Mendicant Friars** (Lat. *mendicams*, begging). Religious orders which depend entirely on the alms of the faithful for their support. While no individual monk or nun can hold or use property for personal profit, most communities as such possess property in the form of endowments or commercial enterprises for their common support.

In the 13th century a new spirit of enthusiasm sprang up under the teaching of SS. Francis and Dominic, and orders of friars were founded, which were forbidden to possess property in any form beyond the houses in which they dwelt. The most notable of these were the Carmelites, Franciscans, and Dominicans. The Augustinians soon followed their example; and in 1497 the Servites were also officially recognized as a mendicant order. At first the members of these orders actually begged their bread from door to door; but this soon ceased. See Dominicans; Franciscans.

**Mendicity**. Term applied in sociology to the habitual practice of begging as a means of livelihood. Persons who, being able to maintain themselves by lawful labour, refuse to work and resort to begging to get their living, have been the object of penal enactments in England since the time of Edward III, and are now liable to penalties under the vagrancy law. A society for the suppression of mendicity was founded in London in 1818, its principle being to refuse money to beggars, and to give them instead tickets referring them to district officers, where their case is inquired into and dealt with on its merits, labour tests being applied to all fit applicants. See Family Welfare Association; Pauperism.

**Mendip Hills**. Plateau of S.W. England. It lies between the valleys of the Parret and Salisbury Avon in Somerset, and is connected by the island of Steep Holm with Glamorganshire across the Bristol Channel. Composed of carboniferous limestone. It duplicates the physical features of the Southern Pennines, with swallow holes, caverns, lead mines, and neighbouring deposits of coal. Cheddar cliffs are, however, unique. The highest point is Black Down, 1,068 ft.

**Mendoza**. Province and city of W. Argentina. Bounded on the W. by the Andes, it is elsewhere level

Mendoza arms

and fertile, and produces wine, maize, olives, fruit, cereals, cattle, hides, and wool. Its mineral resources include valuable deposits of gold, silver, copper, lead, coal, and petroleum. Area 57,445 sq. m. Pop. 549,276. Mendoza, the capital, is some 645 m. by rly. W. of Buenos Aires, and is important as the chief centre of trade between Argentina and Chile, with which it communicates by the Trans-Andean Rly. to Valparaiso, opened in 1910. Destroyed by earthquake, 1861, it has been rebuilt. Pop. 103,879.

**Mendoza**, **DANIEL** (1764-1836). English pugilist, a Jew, born in London. His first big fight was when

he beat Sam Martin, the Bath butcher, at Barnett, April 17, 1787. A very quick and clever fighter, he twice defeated Richard Humphries and William Warr, but

Daniel Mendoza,  
Jewish pugilist

was beaten by John Jackson at Hornchurch, April 15, 1795. On March 21, 1806, he was successful over Henry Lee at Grinstead Green, Kent. Mendoza's last appearance in the ring was in July, 1820, when he was defeated by Tom Owen. He wrote *The Art of Boxing*, 1789. Mendoza died in London, Sept. 3, 1836. See *Boxing*.

**Menelaus**. In Greek legend, king of Sparta, brother of Agamemnon, and husband of Helen, daughter of Tyndarus, king of Sparta. She selected Menelaus as her husband, whereupon Tyndarus resigned the throne to his son-in-law. At the Spartan court Paris, son of Priam king of Troy, was hospitably received, but during the absence of

Menelaus in Crete, he carried off Helen, she being the bride promised him by Aphroditē (see Paris). The result of the rape of Helen was the Trojan war. Menelaus fought with Paris, and would have killed him, had not Aphroditē intervened to save her favourite. At the capture of the city, Menelaus regained possession of Helen, whom he forgave for her faithlessness, and after eight years' wandering again reached Sparta, where he and Helen (*q.v.*) lived happily for many years.

**Menelek II** or **MENELIK II** (1844–1913). Emperor of Abyssinia. Born at Choa, Aug. 18, 1844, of a long line of Ethiopian kings, he claimed descent from Solomon and the queen of Sheba. In fact his father was a little more than one chief among

Menelik II, Abyssinian emperor

many, but Menelek established his authority on solid and wide foundations. Italian operations on the coast of the Red Sea in 1885 threatened Abyssinian independence, and the treaty of Ucciali signed by Menelek in 1889 was interpreted as giving Italy a protectorate over Abyssinia. But on March 1, 1896, the Italians were defeated at Adowa (*q.v.*). Eritrea was given to Italy, and Menelek was left in peace to develop his country. He showed on the whole an enlightened policy, abolished slavery, and encouraged trade. He died at Addis Ababa, Dec. 12, 1913. See Abyssinia.

**Menendez y Pelayo, MARCELINO** (1856–1912). Spanish poet and critic. Born at Santander, Nov. 3, 1856, he was educated at Barcelona and Madrid universities, his academic career being so extraordinarily brilliant that in 1878 a special Act was passed to authorise his appointment as a professor at 22. A man of great intellectual range, he wrote on poetry, the drama, history, philosophical criticism, and science, besides producing original poems. Two of his most notable works are *Historia de las Ideas Estéticas en España*, and *Historia de los Heterodoxos Españoles*. He died at Santander, May 19, 1912.

**Menevia**. Name of a bishopric in Wales of the R.C. Church. The name is that of a traditionally Roman settlement at St. Davids, Pembrokeshire.

**Meng-Chiang**. Former puppet government of Inner Mongolia. On Nov. 22, 1937, the Japanese established the federated council of Meng-Chiang, having supervisory functions over three so-called federations: (1) the United Leagues of Mongolia, with its capital at Hoko-hoto; (2) Chin-Pei (N. Shansi), capital Tatung; (3) Cha-Nan (S. Chahar), capital Kalgan. In 1939 Meng-Chiang was reorganized under the style of the federal autonomous government of Mongolia, which collapsed with the defeat of Japan in Aug., 1945. The area involved was about 200,000 sq. m., with a pop. of from 5 to 7 millions.

**Mengo**. Hill near Kampala, N. of Victoria Nyanza, in Uganda. Here is the residence of the king of Buganda and the native parliamentary house. Mengo is one of the administrative divisions of Uganda.

**Mengs, ANTON RAPHAEL** (1728–79). Bohemian painter. Born at Aussig, March 12, 1728, he received lessons from his father before proceeding to Rome in 1741. In 1749 he was painter to the king of Saxony. He resided at Dresden till 1762, when he again visited Rome, and became in 1764 a director of the Vatican academy. His ceiling of S. Eusebius and his Mount Parnassus in the Villa Albani were painted in 1757. In 1761 the king of Spain invited him to Madrid. In 1770 he was at work in the Vatican, and returning to Madrid in 1773 he decorated the royal palace. He also painted many portraits. He died June 29, 1779.

**Mengtse**. Former treaty port in the S.E. of Yunnan prov., China, opened to foreign trade in 1889. The town, situated 3,500 ft. above sea level, is on the Kunming-Laokai rly. The existing walls were built in 1615, and a temple to Confucius dates from the 14th century. Mengtse is the chief distributing centre for this part of Yunnan for the trade from Canton to Tongking. It exports tin, mined at Kochn, 20 m. away. Pop. 193,004.

**Menhir** (Celt., long stone). Prehistoric unhewn pillar-stone with earth-sunk base. The largest in Europe is the Men-er-Hroek, Morbihan, Brittany, once 67 ft. high, weighing 342 tons. Those at Plésidy, Côtes-du-Nord, and at

Plouarzel, Finistère, are 37 ft. high. There are 1,600 in France, besides 4,600 in rows or circles. They are scattered over Dartmoor, Cornwall, Northumberland, and Wales, often near stone circles; of the three Devil's Arrows, Boroughbridge, Yorks, one is 31 ft. high. There are hundreds in Ireland, the most renowned at Tara, Meath; fewer in Scotland, that at Clach-an-Truiseil, Lewis, being 18½ ft. high.

Sometimes perforated—Odin stone at Stenness (*q.v.*); Men-an-tol, Cornwall; Cuil-Irra, Sligo—they occasion much local folklore. Many stand near neolithic sepulchres. In Sardinia some bear carvings representing breasts; in Great Britain, Scandinavia, and elsewhere, they often bear cup and ring markings, ogams, and Christian devices. They occur along the megalithic track in N. Africa, Syria, India, and the Pacific. In the Malay Archipelago they sometimes display carved human forms. See Hoar-stone; Mazzeba; Obelisk; Stone Monuments.

**Ménière's Disease**. Disease characterised by sudden attacks of intense giddiness associated with noises in the ears, jerking of the eyeballs, sudden falling to the ground, and other symptoms. Due to disease of the labyrinth of the ear caused by degenerative changes, it was first described in 1861 by the French doctor, E. A. Ménière. Administration of bromide or phenol barbitone affords relief, as does that of the salicylate family. In intractable cases the diseased labyrinth must be destroyed.

**Menin** (Flemish, Meenen). Town of Belgium, in the prov. of W. Flanders, it lies on the Franco-Belgian frontier, on the left bank of the Lys, 6½ m. by rly. from Courtrai. An old centre of the Flemish spinning and lacemaking industries, it suffered extensive damage from its proximity to the

Menin Gate at Ypres, rebuilt and unveiled in 1927 as a memorial to British soldiers who fell here

fighting line in the First Great War, during which it was behind the German front from Oct., 1914, to Oct., 1918. The Menin Road (to Ypres) was the scene of much heavy fighting. At the Ypres end of the Menin Road, known as the Menin Gate, a handsome archway, designed as a memorial to 54,896 missing British soldiers, was unveiled by Lord Plumer in July, 1927. Menin was captured by Turenne in 1658, passed to Spain in 1678, and was taken by Louis XV in 1744. Its fortifications were demolished under the terms of the treaty of Aix-la-Chapelle, 1748. It was also the scene of a French victory over the Allies, Sept., 1793. See illus. p. 5641.

**Meningai.** Volcanic mt. of Kenya, close to Lake Nakuru. Its height is 7,478 ft., and its crater, 2,000 ft. deep and 8½ m. wide, is the world's second largest.

**Meninges.** Membranes covering the brain and spinal cord. The most external, the *dura mater*, is closely attached to the bones of the skull. It consists of two layers, in most places firmly adherent, but separated along certain lines to form blood sinuses, or spaces for the conveyance of venous blood, and in other places where the inner layer dips into the brain forming strong folds, which run between and support its various parts. The second layer is the *arachnoid*, and the innermost is the *pia mater*, a delicate membrane supporting the blood vessels and closely investing the brain.

**Meningitis.** Inflammation of the meninges. The term *pachymeningitis* is sometimes used for inflammation of the *dura mater*, or outermost covering of the brain, and *leptomeningitis* for inflammation of the *arachnoid* and *pia mater*, or inner covering of the brain. Simple acute meningitis may be due to injury of the brain, or abscess or extension of a septic inflammation from the ear, and may also arise in the course of acute infectious diseases, such as small-pox. Tuberculous meningitis is most often met with in children. Cerebro-spinal fever is a form caused by infection by a specific micro-organism. Syphilis is yet another cause.

In tuberculous meningitis there is a preliminary stage before the definite symptoms develop, in which the patient is irritable, sleepless, loses appetite, and becomes emaciated. Irregular fever is frequent. Other symptoms are headache, vertigo, nausea, vomiting.

Convulsions and muscular spasms may occur. Delirium, coma, and paralysis may precede death. Cerebro-spinal fever is described under its own heading. The death rate in cases of meningitis is high, and if recovery occurs there may be permanent paralysis of groups of muscles, or impairment of mental faculties. Treatment is mainly symptomatic, after the sera proper to the cause; streptomycin in cases of tubercle, penicillin and the sulpha group in their appropriate usage have been employed. When the condition has run on to abscess formation, surgical measures are generally necessitated.

**Meniscium.** Small genus of tropical ferns of the family Polypodiaceae. They have the leaves

Meniscium. Leaves of the tropical fern. Inset, back of leaf showing spore cases

undivided, or cut from the edges into simple leaflets. The spore cases are arranged in uncovered, oblong, or curved masses.

**Meniscus.** Name given to the curved upper surface which a liquid exhibits when contained in a tube. The curvature in the case of water is downwards, i.e. at the sides of the tube the water is drawn up and in the middle it has its lowest level. In a barometer the mercury surface is curved upwards, the level of the top of the column, this time in the centre, being read. Narrow tubes produce greater curvature which can introduce appreciable errors into barometry. The term is also used in optics, a meniscus lens being convex on one side and concave on the other.

**Menispermaceae.** Family of tropical shrubs, mostly of a trailing habit. They have alternate leaves, and small flowers with the sexes distinct, the sepals and petals similar. The family includes species of *Anamirta*, whose poisonous berries are known commercially as *cocculus indicus*.

**Menkaura.** Egyptian king of the IVth dynasty. The Mycerinus

of Herodotus, he built the third pyramid of Gizeh. A basalt sarcophagus removed by Vyse in 1838, and intended for England, was lost at sea. A wood coffin with his inscription, now in the British Museum, contained a skeleton, apparently of a later age. He was probably interred at Abu Roash.

**Menken, ADAH ISAACS** (1835-68). An American actress. Born Dolores Adios Fuertes, at New Orleans, she married a Jewish musician John Isaacs Menken in 1856, and was, in turn, ballet dancer, circus performer, artist's model, and equestrienne. She performed at Astley's Theatre, London, 1864, where her equestrian act Mazeppa caused a sensation. The friend of Swinburne (who immortalised her as Dolores) and of the elder Dumas, she died Aug. 10, 1868. Consult *The Naked Lady*, B. Falk, 1934.

**Mennonites** OR MEMNONITES. Protestant sect founded by Menno Simons (1492-1559) in Friesland. Analogous to the Anabaptists (*q.v.*) from whom they arose, the Mennonites reject all authority in religious matters, believe in the individual interpretation of the Scriptures, and refrain from war, punishment, administration of oaths, and such public duties as the magistracy. The Fundamental Book of Christian Faith, by the founder of the sect, appeared in 1539. The movement spread through Holland, N. Germany, Alsace, and other parts, though variations of doctrine and practice were frequent, and small congregations are still found in these regions. In the U.S.A. and Canada the Mennonite Church, which dates in America from a settlement in Pennsylvania in 1683, is divided into some twelve branches, and counts about 150,000 members.

**Men of Harlech.** Welsh song, the full title being *The March of the Men of Harlech*. See *Harlech*.

**Menominee.** City of Michigan. U.S.A., the co. seat of Menominee co. It stands on the Menominee river, at its influx to Green Bay, 164 m. N. of Milwaukee, and is served by the Chicago, Milwaukee, and St. Paul, and other rlys. Founded in 1833 as a fur trading centre (chartered 1883), it soon developed an export trade, and became known for cheese production, 2,000,000 pounds of cheese being annually manufactured in the surrounding countryside. It is also a fishing centre, especially for smelt. Pop. 10,230.

**Menomonie.** City of Wisconsin, U.S.A., the co. seat of Dunn co. It is on the Red Cedar river, 70 m. E.

of St. Paul, and is served by the Chicago, Milwaukee, and St. Paul, and the Chicago and N.W. rlys. Settled in 1846, it was a thriving centre of timber production for the next forty years, being chartered in 1882, but the city declined with the clearing of the Wisconsin pine forests. It is now mainly an agricultural centre. Pop. 6,582.

**Menopause.** That point in the cycle of a woman's life when the monthly periods cease. This generally marks the end of her reproductive, though not of her sexual, life. See Change of Life; Menstruation.

**Menpes, MORTIMER** (1859-1938). Anglo-Australian painter and etcher. Born in Australia and educated at Port Adelaide, he came to England, and studied in London, afterwards travelling in nearly all parts of the world. Besides producing much original work, he perfected a process for reproducing oil paintings known by his name, founded the Menpes Press, instituted fruit farms at Pangbourne, and wrote a number of books, including reminiscences of J. M. Whistler, his friend and confidant, 1904. He died April 1, 1938.

**Menshevik** (Russ. *meshinstvo*, minority). Russian political label, dating from 1903. When the Russian Social Democratic party split over the issue of radicalism or moderation in 1903, the less extreme portion were in the minority and were styled Mensheviks. They withdrew from the party and opposed the Bolsheviks in the revolution of 1917. See Bolshevik.

**Meshikov, ALEXANDER DANILOVITCH** (1672-1729). Russian soldier and statesman. Born in Moscow, Nov. 16, 1672, he entered the service of Peter the Great by way of the army, and rose to be field-marshal. He was the chief adviser of Peter, and of Catherine I. The power exercised by one who had risen from the masses provoked the jealousy of the old aristocracy, and Meshikov was deprived of his estates and banished to Siberia in 1727. He died Nov. 2, 1729.

**Menshikov, ALEXANDER SERGEYEVITCH, PRINCE** (1787-1869). Russian diplomatist. Born Sept. 11, 1787, he entered the imperial service in 1805, and became the Russian ambassador at Constantinople in 1853, when his conduct of the negotiations with regard to the guardianship of the Holy Places led to the rupture followed by the Crimean War. He was made governor of the Crimea and after the battle of the Alma, where he commanded in person, proceeded to

fortify Sevastopol. He was recalled in 1855, broken in health by the hardships he endured, and as a member of the Council of the Empire was one of the leaders of the reactionary party till his death on May 2, 1869.

**Mens Rea.** Legal term. The blameworthy condition of mind which with a very few exceptions a person must possess before he can be guilty of a crime. It is not necessary that the accused should know that what he was doing was a crime. In some crimes a specific intent is required, e.g. an assault with intent to do grievous bodily harm, but in other cases it is sufficient to show the accused must have known the act was wrong. Negligence may also be sufficient.

**Menstruation** (Lat. *menstruus*, monthly). Term for the discharge of blood and mucus which occurs approx. monthly from the uterus of adult women. It is the breaking down and coming away of the uterine mucus-membrane which, in pregnancy the site of a fertilised ovum, at other times grows afresh after each menstrual period. In temperate climates menstruation begins between the years of 11 and 15; in warm climates, and among peoples belonging to warm climates, it begins earlier. The contemporary tendency, for some unknown reason, is towards a later start; but if the function is not established by the age of 16 years medical help should be sought, because too late a beginning implies deficient glandular or organic development which, if untreated, may result in sterility.

Menstruation marks the entry into puberty, and the secondary sexual characteristics become manifest, e.g. enlargement of the breasts in preparation for lactation, and such psychological changes as modesty and manifestations of the maternal instinct.

Menstruation ceases 30 to 40 years after it begins, according to the constitution and family history of the individual. In general, the earlier the beginning, the later the ending. At the time of the menopause, or change of life, the loss of blood may be considerable or irregular; but if slight bleeding persists, medical help must be sought, as this may indicate that the lining of the uterus is unhealthy. Non-appearance of the menstrual flow after the function has begun is called amenorrhoea (Gr. *a*, not, *mên*, month, *hrein*, to flow). This is normal during pregnancy and the early months of lactation; the glandular secretion from one part

of the ovaries inhibits that from another part which causes the menstrual flow. Ovarian secretions are under the remote but all powerful control of the pituitary (*q.v.*) gland. Shock or change in habit, e.g. removal from one neighbourhood to another may cause amenorrhoea. So also may diseases, e.g. tuberculosis, when amenorrhoea is an economy mechanism to save the patient's strength.

Too much or too frequent loss of blood may be due to glandular disbalance which can be corrected by the physician; or to a tumour or inflammation which needs the attention of the gynaecologist. Too slight a loss also needs gynaecological treatment. Painful menstruation is called dysmenorrhoea (Gr. *dus*, bad, *mên*, month, *hrein*, to flow). It may be caused by bad position of the uterus, inflammation, or tumour, but is more frequently due to pain in the nerves near the mouth of the uterus, and can then be relieved by certain drugs, of which the aspirin and the belladonna groups are particularly useful; or by mechanical stretching of the neck of the uterus. Unless there is some underlying medical or surgical reason for pain, menstruation should not be painful. Some nervous unbalance is common during the menstrual period. Exercise is the essential remedy for discomfort, since it prevents congestion of the uterus, a possible cause of pain, and is a great sedative of the nervous system. See Change of Life.

Hilary Ledgerwood, M.D.

**Mensuration.** (Lat. *mensuro*, I measure). The application of mathematics to ascertain the lengths of lines, the areas of surfaces, and the volumes of solids. As the word geometry (literally, land measurement) suggests, mathematical principles and methods were developed in grappling with mensuration problems. Many mensuration formulae can be proved geometrically; others involve trigonometry or the calculus.

The following principles simplify much mensuration:

(a) An approximate result may be quite satisfactory for practical purposes, since few measurements can be made accurately to more than four figures.

(b) The length of an irregularly curved line can sometimes be most easily calculated by dividing it into straight portions and curved portions, and calculating the length of each portion separately. The shorter the portions, the more accurate the result will be.

(c) An irregularly shaped surface can often be divided into triangles or rectangles.

(d) An area remains the same if areas are added to it in some places and equal areas are subtracted in others; thus a straight line may be substituted for an irregularly curved part of the boundary, if the areas discarded are equal to those added.

(e) An area can be calculated approx. by tracing it on squared paper and then counting the squares within the boundary, parts of a square being counted as whole squares if they are at least half a square and ignored when they are less.

(f) The volume of an irregular solid can often be ascertained by submerging it in water, and accurately measuring the volume of the water displaced; or by weighing the solid, and then weighing a known quantity of the solid, say, a cubic inch, and dividing the second weight into the first.

(g) In similar figures, that is, figures of the same shape, the lengths of corresponding sides or dimensions are proportional; thus, if two right-angled triangles each have a base angle of  $40^\circ$ , and the base of one is 2 ft. and the base of the other 40 ft., the perpendicular of the second will be 20 times that of the first.

(h) The areas of similar figures are proportional to the squares of corresponding sides; thus, if one circle has a diameter of 3 ins. and another a diameter of 5 ins., while the length of the circumference will be in the ratio 3 : 5, the areas will be in the ratio  $3^2 : 5^2$ , that is, 9 : 25. This rule applies to areas depicted on maps.

(i) The volumes of similar solids are proportional to the cubes of like dimensions. Thus, if a statue is 6 ft. high and an exact model of it is 5 ins. high, the volume of the statue will be  $72^3/5^3$  times that of the model.

(j) Borders are most easily calculated as the difference between the area contained by the border and the area including the border. Thus, the area of a 1-in. border surrounding a rectangle 4 ins. by 3 ins. is  $(6 \times 5) - (4 \times 3)$  sq. ins., that is, 18 sq. ins. Similarly, the volume of solid containers can be calculated as the difference between the interior and the exterior volume. Thus the volume of the wood in a box of internal dimensions 1 ft.  $\times$  1 ft. 6 ins.  $\times$  2 ft., the wood being  $\frac{1}{2}$  in. thick throughout is  $(13 \times 19 \times 25) - (12 \times 18 \times 24)$  cu. ins.

#### IMPORTANT FORMULAE.

*Triangle*: Area =  $\frac{bh}{2}$ , where  $b$

is the base and  $h$  is the perpendicular distance of the vertex from the base; also, when the three sides,  $a$ ,  $b$ ,  $c$ , are known, area =  $\sqrt{s(s-a)(s-b)(s-c)}$ ,  $s$  being half the perimeter, that is,  $\frac{(a+b+c)}{2}$ .

*Square*: Area =  $s^2$ , where  $s$  is the length of the sides; diagonal =  $\sqrt{(2s^2)}$ .

*Rectangle*: Area =  $ab$ , if  $a$  and  $b$  are the lengths of the sides; diagonal =  $\sqrt{a^2 + b^2}$ .

*Parallelogram*: Area =  $ad$ , if  $a$  is the length of one side and  $d$  is the distance between it and the other parallel side.

*Trapezium*: Area =  $\frac{1}{2}d(a+b)$ , if  $a$  and  $b$  are the parallel sides and  $d$  is the distance between them.

*Circle*: Circumference =  $\pi d$ ,  $d$  being the diam. and  $\pi$  approx. 3.14159 (say,  $\frac{22}{7}$ ). Area of circle =  $\pi r^2$ ,  $r$  being the radius or  $\frac{d}{2}$ .

*Ellipse*: Area =  $\pi ab$ , where  $a$  and  $b$  are the semi-axes.

*Cube*: Vol. =  $s^3$ , where  $s$  is the length of a side. Area of six faces =  $6s^2$ .

*Regular prism*: Vol. =  $(c.s.)l$ , where  $(c.s.)$  is the cross-section and  $l$  is the length.

*Cylinder*: Vol. =  $\pi r^2l$ ; curved surface of cylinder =  $2\pi rl$ .

*Sphere*: Vol. =  $\frac{4}{3}\pi r^3$ ; area of surface =  $4\pi r^2$ .

*Pyramid*: Vol. =  $\frac{1}{3}$  area of base  $\times$  perp. height.

*Cone*: Vol. =  $\frac{1}{3}$  area of base  $\times$  height. Curved surface =  $\pi r \times$  slant height.

**Mental Deficiency.** Legal term meaning a condition of arrested or incomplete development of mind existing before the age of 18. The Mental Deficiency Acts 1913 to 1927 provide for the safe custody of defectives in institutions or under guardians, subject to supervision by a board of control, of which county and borough councils are constituted committees, and further provide for the management and administration of defectives' property. In Scotland mental defectives come under the Mental Deficiency and Lunacy (Scotland) Act, 1913. See Mental Disorder.

## MENTAL DISORDER AND ITS CAUSES

W. Gordon Masefield, M.R.C.S., L.R.C.P., D.P.M., J.P.,  
Superintendent, Brentwood Mental Hospital, 1925-46

*Here is given an account of the various forms taken by mental disorder, their causation, and their treatment. For legal aspects of the subject, see Insanity. See also Psycho-analysis, Psychology, etc.*

Mental disorder is a medical term which includes all forms of abnormality or ill-health of the mind. The psychoses are mental states in which the personality is seriously disturbed and in which the patient's reaction to his environment and to reality is at fault. These types of mental illness constitute what are popularly known as mental breakdowns. The psychoneuroses (or neuroses) are mental states in which there is a partial disturbance of the personality owing to mental conflict or disharmony, but in which the patient retains insight into his condition and a considerable degree of control over his behaviour. Patients in these categories are able to accept and benefit from psychotherapy. The popular name for such minor mental disorder is nervous breakdown. There is no clear-cut difference between the two forms, and the symptoms in both are evidence of some degree of failure to adjust to the conditions of life. The term mental deficiency is used where there is a

condition of arrested or incomplete development of the mind. The mentally deficient are handicapped from an early age, often from birth, either constitutionally or as a result of disease or injury.

In considering the causation of any case of mental disorder it is necessary to take into account the factors of heredity and environment. Direct inheritance of any specific form of mental illness is not common, but in those who spring from a stock of marked mental or neurotic instability heredity plays an important part as a predisposing cause. In such persons the resistance to stresses, whether they be mental (e.g. fears, losses, disappointments) or physical (e.g. infections, injury, disease), is materially lessened and a breakdown results the more readily. It is true, however, to say that if the stress or strain is sufficient the breaking-point may be found in any individual. So every case of mental disorder, whatever the degree, should be considered in detail from the point

of view of (1) family history, (2) bodily or physical condition, (3) psychological background.

The Mental Treatment Act (1930) was a great step forward in bringing the medical treatment of mental disorder more nearly into line with that of other forms of illness. Under Section I treatment on a purely voluntary basis is possible for "any person who is desirous of voluntarily submitting himself to treatment for mental illness and who makes a written application for the purpose." He can then be received into any hospital, nursing home, or place approved by the board of control without a reception order, and he may leave at any time by giving 72 hours' notice in writing of his intention to do so. This period of time is solely for the purpose of notifying the relatives of the patient's decision to leave the place of treatment. During 1947 approx. 50 p.c. of patients admitted to county or county borough mental hospitals were received on a voluntary basis, i.e. they had sufficient understanding to enable them to be willing to receive treatment.

Under Section V of the Mental Treatment Act (1930) certain patients who (a) suffer from mental illness, (b) are likely to benefit by temporary treatment, (c) are for the time being incapable of expressing themselves as willing or unwilling to receive such treatment, may, after a written application of a near relative (or an authorised officer of the local authority) and without a reception order or any legal formality, be received into hospitals or approved homes for a period of six months. Two medical recommendations, one signed by the usual medical attendant and the other by a practitioner approved by the board of control, accompany the application. From the medical point of view cases which are strictly suitable for admission within the meaning of this section of the Act as temporary patients are some of the most acutely ill and yet the most hopeful as regards recovery. Some 14 p.c. of admissions come under this heading.

Even when the facilities for voluntary and temporary treatment are utilised fully, there yet remain, in the present state of the law, 35-40 p.c. of patients for whom certification with legal formalities is necessary because by reason of the nature of the disability the patient can have no proper insight and therefore must be considered to be "unwilling."

The classification of mental disorder is not an easy matter, and no entirely satisfactory scheme has yet been evolved. The following is a practical list and in the present state of knowledge may be considered as useful as any other.

I. Mental Deficiency (*Amentia* or *Oligophrenia*). (a) Idiocy. (b) Imbecility. (c) Feeble-mindedness. (d) Moral Deficiency.

II. Neuroses and Psycho-Neuroses. (a) Neurasthenia (exhaustion neurosis). (b) Anxiety states. (c) Hysteria. (d) Compulsions, obsessions, and phobias.

III. Schizophrenic Psychoses. (a) Dementia Praecox. (b) Paraphrenia. (c) Paranoia.

IV. Psychopathic Constitution.

V. Affective (Emotional) Psychoses. (a) Manic-depressive Psychosis. (b) Involuntional melancholia.

VI. Psychoses with toxins or infections.

VII. Epileptic Psychoses.

VIII. Psychoses with organic brain disease.

IX. Psychoses with other organic bodily disease.

X. Senile or Pre-Senile dementia.

#### Psychological Methods

The treatment of the neuroses is by some form of psychological method (psychotherapy), which aims at solving the problems or mental conflicts that harass the patient—suggestion, persuasion, reassurance, explanation, psychoanalysis, and re-education are the methods used by psychotherapists. Such treatment, for the most part, may be carried out successfully without admission to hospital; but some of the more difficult cases require a period of institutional treatment. On the other hand the main need for the psychoses is hospital treatment, although early diagnosis in an out-patient clinic is the first step. Methods include certain physical treatments, used in carefully selected cases, e.g. shock therapy by cardiazol or electrically produced convulsions; prolonged narcosis; insulin therapy; surgical operations on the brain, termed prefrontal leucotomy. Thorough physical examination of the patient followed by treatment of any abnormal bodily condition must accompany any specific therapeutic measure designed to alleviate the mental illness. Skilled and specialised nursing is also necessary, with occupational therapy to assist rehabilitation.

The treatment of cases of mental deficiency is summed up in early recognition of the disability

and concentration on training suitable for the individual child.

Advice and treatment in psychiatric clinics, especially in those equipped for dealing with mal-adjusted children, can assist in the prevention of serious mental illness. Developments in social medicine are also needed towards the same end.

**Mental Hospital** OR **MENTAL INSTITUTION**. Institution for the treatment of those suffering from all forms of mental disorder. Until the National Health Service Act, 1946, came into effect, July, 1948, and all hospitals became the responsibility of the ministry of Health, county and county borough mental hospitals supplied the need for rate-aided patients, the term used for those who were unable to afford private fees. Registered hospitals, founded as charitable institutions, maintained by bequests, voluntary contributions, and fees of paying patients, and managed by committees, catered for those of limited means.

Private mental homes (licensed houses), owned by individuals, charge fees according to the accommodation; they provide treatment. A patient may be received, under certain regulations, in "single care" in a private house. In all cases patients under care and treatment are visited and reported upon by the commissioners of the board of control. Under the Home office, an institution for insane criminals exists at Broadmoor.

Those suffering from mental deficiency are treated in certified institutions maintained at public expense unless their parents or guardians can pay the fees charged by certified houses under private management. There is provision for criminal or dangerous mental defectives in state institutions.

Some cases of mental deficiency can be boarded out under guardianship (Mental Deficiency Acts 1913 and 1927). See *Insanity*; *Mental Disorder*.

**Menteith**, LAKE OF. Lake in the S.W. of Perthshire, Scotland. It is 17 m. W.N.W. of Stirling, 1½ m. long and 1 m. broad, and is the only sheet of water in Scotland termed a lake. It contains three islands, one of which, Inchmahome, are the remains of a priory, the residence of Mary Queen of Scots in 1547-48, and on another, Inchalla, the ruins of a stronghold of the earls of Menteith.

**Menthol** (C<sub>10</sub>H<sub>20</sub>O). Crystalline constituent of peppermint oil, which deposits from the oil on long keeping or cooling to a low temper-

ature. It is also known as peppermint camphor and is classed as a stearoptene. The peppermint plant is cultivated in England, China, Japan, and the U.S.A., but the menthol content of the oil distilled from the plants varies according to the locality and variety of the plant. The Japanese peppermint is the *Mentha arvensis* var. *piperascens*, and the oil contains such a large proportion of menthol that it is solid at ordinary temperatures. The application of cold ensures the complete separation of the menthol, the liquid oil being removed by pressing the crystals. Menthol has a local anaesthetic effect in cases of neuralgia. It finds uses in confectionery and perfumery.

**Mentone** (Fr. Menton). Health resort of France, in the dept. of Alpes-Maritimes. It is on the coast of the Riviera, 14 m. N.E. of Nice. The neighbourhood is noted for its orange and lemon groves. Owing to its mild climate and charming surroundings, it is visited by thousands every year. There is a casino, with a winter garden, skating rink, and other attractions, several promenades, including the promenade du midi, beautiful pub-

Mentone arms

Mentone. Popular health resort of the French Riviera

lic gardens, a museum, etc. St. Michael's Church has been largely rebuilt. The old town has a harbour. Since 1861, when the prince of Monaco sold his rights, it has been French. Olive oil and perfumes are exported.

During the Second Great War Mentone was occupied by the Italians, June 24, 1940, but was "returned" to France by the Germans, and occupied by them, Sept., 1943, after the Italian surrender to the Allies. Allied landings, under cover of naval bombardment, were made in the area on

Sept. 8, 1944: the town was liberated by U.S. forces, Sept. 24.

**Mentor.** In Greek mythology, the faithful and prudent friend to whom Odysseus, when he left home for the Trojan War, entrusted the care of his affairs and the education of Telemachus. Mentor has become synonymous with a wise counsellor.

**Mentzelia.** Genus of herbs, of the family Loasaceae, natives of the warmer parts of America.

Mentzelia. Leaves and flowers of this American herb. Inset, single flower

They have coarsely toothed leaves, and large orange or white flowers, which expand only in sunshine. *M. bartonioides*, with yellow flowers containing a profusion of stamens twice the length of the petals, is a very showy annual.

**Menufiyeh.** Province in Lower Egypt. It contains the districts of Ashmun, Menuf, Quesna, Shihin-el-Kom, and Tala, and comprises the S. portion of the fertile Nile delta. Area, 606 sq. m. Pop. 1,159,701.

**Menuhin, YEHUDI** (b. 1916). American violinist. Born of Jewish stock in New York, April 22, 1916, he received his musical training from Persinger at San Francisco, Georges Enesco in

Yehudi Menuhin, American violinist

Paris, and Adolf Busch in Switzerland. At seven he appeared as violin soloist with the San Francisco symphony orchestra; at eleven he played in Paris and with the New York symphony orchestra, giving brilliant performances of the Beethoven concerto. With his sister Hepzibah (b. 1921), herself a fine pianist and frequently his accompanist, he achieved world fame, and in 1929 made his Berlin debut and appeared at Queen's Hall, London. In 1935 he completed his first world tour, then retired to his Californian ranch, to return to the concert platform in 1937. During the Second Great War he raised by recitals large sums for the benefit of victims and refugees. Menuhin's playing was marked by its warm, sympathetic tone as well as virtuosity. His researches rescued from oblivion concertos by Schumann and Mozart, and Paganini's complete Urtext edition.

**Menzala, MANZALA, OR MENZALEH.** Lagoon in Egypt, extending from the Damietta branch of the Nile to Port Said and the Suez Canal. With an area of about 400 sq. m., it is separated from the Mediterranean by a narrow strip of sand through which are several openings, and contains several small islands, including Tannis or Tennessee, the ancient Tennesus. The lake produces fish and salt.

**Menzel, ADOLF FRIEDRICH ERDMANN VON** (1815-1905). German artist. Born at Breslau, Dec. 8, 1815, he executed pen-and-ink drawings for Goethe's *Künstlers Erdewallen*, 1833. Between 1839-42 he published over 400 drawings. An exhibition of his work was held in London, 1903. He died in Berlin, Feb. 9, 1905.

A. F. E. Menzel, German artist

**Menzel, WOLFGANG** (1798-1873). German author. He was born at Waldenburg, Silesia, June 21, 1798, and educated at Breslau, Jena, and Bonn. In 1825 he settled at Stuttgart, where he lived for many years. His most important works were a *History of the Germans*, 1824, Eng. trans. 1848; *German Literature*, 1827, Eng. trans. 1840; *German Poetry*, 1858; and *Europe*, 1853. He died April 23, 1873.

**Menzies.** A mining town in Western Australia, 466 miles by rail from Perth. It is the centre

of North Coolgardie and Mt. Magnet Goldfield. Pop. 2,500.

**Menzies, ROBERT GORDON** (b. 1894). Australian statesman. He was born December 20, 1894, at

R. G. Menzies,  
Australian statesman

Jeparit, Victoria, and educated at Grenville College, Ballarat, and Melbourne University. Menzies practised as a barrister and entered the Victorian parliament in

1928, going to the Federal House of Representatives in 1934. He was Commonwealth attorney-general, 1935-39, and prime minister of Australia, 1939-41. Leader of the opposition from 1943, he became premier of the 1949 coalition govt. He was made a privy councillor in 1937.

**Mepacrine.** Another name for the quinine substitute Atebrin (*q.v.*).

**Mephistopheles.** In German legend, the familiar spirit attendant upon Faust. He is summoned, with terrible incantations, by the doctor, as recorded in the old History of Dr. Faustus. Frequently misunderstood as being Satan himself, he is properly a subordinate demon. The name, perhaps of Hebrew origin, is found in Shakespeare's *Merry Wives of Windsor* in the Grecoised form Mephostophilus, *i.e.* not loving light. See Faust.

**Meppel.** Town of the Netherlands, in the prov. of Drenthe. It is situated on the Meppeler Diep and other waterways, 16 m. by rly. N.N.E. of Zwolle, and is the junction of the Leeuwarden and Groningen lines. Pop. 12,133.

**Mequinez** or **MEKNES.** City of Morocco. It is 34 m. W.S.W. of Fez, and lies in a fertile valley with the forested slopes of the Middle Atlas at the S.E. Under the French régime, Mequinez and the other Moroccan cities in the French zone have been extended, the native and European sections being kept separate. Pop. 109,500.

**Merano.** Inland health resort of N. Italy,

in the Trentino. The German name is Meran. It is 15 m. N.W. of Bolzano (Bozen) on the Passer, a tributary of the Adige. In the neighbourhood is the half-ruined castle, the earliest residence of the counts of Tirol. The district is noted for its orchards and vineyards. Pop. 19,000.

**Mercantile Agent.** An agent who in the ordinary course of his business has authority to sell or buy or raise money on the security of goods. Both factors and brokers are mercantile agents. A sale by him of goods in his possession may be binding on his principal even though the sale was unauthorised.

**Mercantile Law.** In England, the law as it especially affects merchants, *i.e.* people whose business it is to buy and sell. At one time the Law Merchant (*q.v.*), as it is properly called, only affected traders; but now it is universally binding. Within the province of mercantile law falls the law relating to negotiable instruments, which indeed are negotiable only by the usages of merchants. Besides cheques, bills of exchange, and promissory notes, any other instrument may become negotiable by the universal usage of merchants who deal in them, unless such negotiability is in some way opposed to their terms. The sale of goods, mercantile contracts of carriage, involving charter-parties, bills of lading, freight notes, contracts of marine insurance, are also part of mercantile law; and so are contracts of commercial agency, involving the law as to brokers, factors, warehousemen, and the like.

The main feature of mercantile law is that it is made up almost entirely of the customs and usages of traders. No one, however, will be entitled to rely on a usage against commercial morality—as where a broker on the tallow

market proved that it was the custom for brokers in that market to buy large parcels of tallow, and then, when they received orders to buy for customers, to allot some of their own tallow to meet the order at market price. The court held that no man employed as an agent to buy could sell his own goods to his principal, because it was contrary to morals.

**Mercantile System.** Name given, especially by writers of the 18th century, to attempts to secure by artificial restrictions an excess of exports over imports. Until comparatively recent times it was generally believed that a country's wealth consisted solely of gold and silver. This belief gave rise to repeated prohibitions in most European countries, from Cicero's time to that of Henry VIII, against the export of coin or bullion. But in 1600 the E. India Co. obtained permission to export foreign coin or bullion to the amount of £30,000 a year, on condition that an equal amount was imported after the return voyage. This concession was supported by the argument that most of the commodities brought to England were re-exported, thus bringing back in exchange more bullion than was required for their original purchase. From this arose the theories of the balance of trade and of the desirability of ensuring an excess of exports over imports. In 1663 the prohibition against the export of foreign coin and bullion was removed by parliament. See Exchange; Free Trade; Freezing; Political Economy; Protection; Tariff Reform.

**Mercaptans** or **THIO-ALCOHOLS.** Name given to a class of organic chemical compounds, constituted like alcohols, but with the oxygen of the hydroxyl group replaced by sulphur. The liquids of the group are colourless, with most offensive odours. They may be made by the action of potassium hydrosulphide on alkyl halides.

**Mercator, GERARDUS** (1512-94). Flemish geographer. His real name was Gerhard Kremer. Born at Rupelmonde, March 5, 1512, he graduated at Louvain, and devoted himself to mathematics and geography. In 1534 Charles V employed him as cartographer in his campaigns. His survey of Flanders was made 1537-40, his Map of the World in 1538, and in 1541 he constructed his terrestrial globe. In 1552 he went to Duisburg, and in 1559 became cosmographer to the duke of Cleves. In

Merano. General view of this Italian health resort

Gerardus Mercator,  
Flemish geographer

1568 he produced the first maps on his system of projection with parallels and meridians at right angles known as Mercator's projection, or gnomonic projection

(*q.v.*) Other maps followed, and in 1585 the first portion of his atlas was produced. He died at Duisburg, Dec. 2, 1594. *See* Map.

**Mercedario.** Peak of the Andes in S. Chile. It reaches a height of 22,000 ft.

**Mercedes.** (1) Town of Argentina, in the prov. of Buenos Aires. It stands in a plain, 56 m. by rly. W of Buenos Aires. A rising town, it has steam mills and soap works. There is a large Irish colony. Pop. 40,000. (2) Town of Argentina, in the prov. of San Luis, 54 m. by rly. E.S.E. of San Luis city. Pop. 22,800. (3) Town of Uruguay, the cap. of the prov. of Soriano. It stands on the Rio Negro, 21 m. E.S.E. of Fray Bentos. It is a popular health resort, with many fine buildings, and carries on a large trade in animal products, chiefly wool. Pop. 24,000.

**Mércédès-Benz.** German engineering firm. From the very early days of motoring the names of Mércédès and Benz have been renowned. The Mércédès cars gained a reputation for advanced features of design and were among the fastest standard cars in the world, the racing models attaining successes in many classic races. The firm also made aero and Diesel engines which were extremely efficient. One of the principal factories at Mannheim was destroyed by Allied aircraft during the Second Great War.

**Mercenary** (Lat. *mercenarius*, from *merces*, reward). Term applied specifically to a soldier who hired his services to any state or prince that would employ them, or who was so hired out by the sovereign to whose army he belonged. Mercenaries were used by Greece and Rome, and the employment of barbarian troops was one of the chief causes of the downfall of the Roman empire. In the 16th century Coligny and the Huguenot leaders hired Protestant English and Germans to fight against the French Catholics under the duke of Guise, who engaged Swiss troops. These soldiers of fortune were apt to mutiny when their pay was in

arrears, though pillage was regarded as one of their emoluments. On being disbanded they often took to brigandage. In the 18th century the British Government employed Hanoverian and other German troops, who were hired out by their own sovereigns. The German Legion attached to Wellington's army in Spain bore a high reputation. After the introduction of conscription by Prussia it was common for German writers to refer to the British and American armies as "mercenaries," because the men were more highly paid under the free contract system called enlistment (*q.v.*).

**Mercer.** Person whose business consists in retailing silks, velvets, and other rich stuffs. The term seems to have applied at one time to dealers in any textiles, but the differentiation between mercer and draper was very early made. *See* Mercers' Company.

**Mercer, JOHN** (1791-1866). English dye chemist. Born at Dean, near Blackburn, Feb. 21, 1791, he was apprenticed in 1809 at the Oakenshaw Print Works, where he studied dyeing. He was almost entirely self-educated, but made many important discoveries connected with dyeing and calico printing, and he is chiefly known for the invention of mercerisation (*v.i.*). Elected F.R.S. in 1852, Mercer died Nov. 30, 1866.

**Mercerisation.** A process by which cotton is given a silky lustre or sheen resembling silk. It derives its name from John Mercer, who patented his discovery, in 1850, of the action of alkalis upon vegetable fibres. When cotton fibres are immersed in a strong bath of caustic soda, their structure is altered, the fibres becoming thicker and shorter. If, however, the fibres are kept at a tension and washed, the material takes on the characteristic sheen. Not only is the appearance of the cotton improved, but it gains a greater affinity for dyes. Mercerising is done either upon yarn or upon the cloth. The latter, after being impregnated with dye and allowed to contract, is pulled out to its former width upon a stentering frame, sprayed and washed. By treatment with acids mercerised cotton has been made to imitate silk very closely. *See* Cotton.

**Mercers' Company.** Premier livery company of the city of London. Originally a guild of dealers in small wares, i.e. articles sold retail by the little balance, and then vendors of silks and velvets, the Mercers are first mentioned as

a guild in 1172. The company of Merchant Adventurers arose from this guild in 1296, and down to 1526 the two organizations recorded their transactions in the same books. The Mercers' parent charter, one of ten, was granted in 1394. Its members have included Sir Richard Whit-

Mercers'  
Company arms

tington, Sir Geoffrey Bullen, great-grandfather of Queen Elizabeth, Sir Henry Colet, father of Dean Colet, Sir Thomas Gresham, Sir Hugh Clopton, Sir Richard Gresham, and Sir Baptist Hicks, later Viscount Campden, and also Richard II, Queen Elizabeth, Edward VII, George V, Edward VIII, and George VI.

The company governs S. Paul's School, now at Hammersmith, and the Mercers' School, now occupying the site of Barnard's Inn, Holborn; and in addition to administering many other important charities, is trustee in perpetuity of the estates of Sir Richard Whittington and Dean Colet, the founder of S. Paul's school. The arms, including a figure of the Virgin, and the precedence of the company are the subject of a song written in 1686. In 1519 the company erected a chapel and hall next to S. Thomas of Acon's church in Cheapside; at the dissolution of the monasteries the company purchased the site of the hospital of S. Thomas of Acon. The hall and much other property was burnt in 1666, involving the company in debt until 1804. The hall was rebuilt in 1672 and in 1941 it was destroyed in an air-raid. With valuable portraits and other relics the company possesses in the Leigh Cup a fine example of English medieval plate. The Mercers' School originated as a school attached to the hospital of S. Thomas of Acon. A condition of acquiring this hospital was that the company should maintain the school. Address: 4, Ironmonger Lane, London, E.C.2. *Consult* The Worshipful Company of Mercers, E. W. Brabrook, 1889; The Mercers' Company, Sir John Westway, 1914; Mercers' Hall, A. E. Royden, 1947.

**Merchandise Marks Act.** British statutes designed to protect manufacturers against imitations of their marks. The Merchandise Marks Act of 1887 made it an offence falsely to apply to goods any trade mark or description. That of 1926 required all imported goods bearing the name or

trade mark of a British manufacturer to indicate also where the goods were made.

**Merchant.** Person whose business is the purchase and sale of commodities. In modern English the term is applied only to wholesale dealers, i.e. intermediaries between the manufacturer and the retailer whose profits are not restricted to brokerage, and to those who purchase foreign goods direct from abroad, or from importing houses for distribution to the home trade. See Broker.

**Merchant Adventurers.** Name of an English regulated company for the conduct of foreign commerce. The exact date of its foundation is uncertain, but its growth coincided with the great development of the English cloth trade in the 14th century. Chiefly concerned with the export of cloth, its members were the leading merchants from all parts of England, and its foreign staple or trading centre was fixed at Bruges by Edward III in 1344. In 1407 they acquired the right of choosing their own governor; in 1501 a charter gave them rights of managing their own trade and of punishing those who broke their rules. Leaving Bruges for Antwerp, they gradually obtained privileges in other Netherlandish towns, and in 1578 they moved their foreign headquarters to Hamburg. Expelled thence by the influence of the Hanseatic League (*q.v.*), in return for which the English expelled the Hanse traders from England in 1597, they afterwards recovered their position in Hamburg. The constitution of the Merchant Adventurers formed the model for many similar associations of great commercial importance, e.g. there were companies of Merchant Adventurers at Bristol and at York. See Staple.

**Merchant Aircraft Carrier.** Type of small escort vessel developed in the Second Great War to combine the function of cargo vessel and aircraft carrier. They were generally grain ships or oil tankers fitted with flight decks for the take-off and landing of fighter aircraft. They were operated by Fleet Air Arm pilots. Introduced in 1943, merchant aircraft carriers played an exceedingly important part in defeating the U-boats in the battle of the Atlantic by providing air cover for themselves and other vessels negotiating the passage through the 500-mile "air gap" which at that time was out of range of land-based aircraft. See Aircraft Carrier.

## MERCHANT NAVY OF GREAT BRITAIN

W. E. Stanton-Hope, F.R.G.S.

*The history, from its beginnings, of the seafaring service which has carried British trade and influence all over the world. Other articles bearing on the subject include Blue Ensign; Lifeboat; Lloyd's; Lloyd's Register of Shipping; Red Ensign; Trade, Board of; Transport, Ministry of*

The name merchant navy is given to shipping engaged in commerce. It includes all sea-going vessels that convey passengers and/or cargo; also cable ships, tugs, etc. Those employed in this service are described as members of the merchant navy. The flag worn by British merchant vessels is the red ensign, or, in ships manned by a stipulated proportion of Royal Naval reserve officers and ratings, the blue ensign.

Formerly the service was known as the mercantile marine. The change in name was made in April, 1928, when George V created the new office of Master of the Merchant Navy and Fisheries, and appointed the then prince of Wales to be its first holder.

From the reign of Richard II, the English shipping industry has been assisted by protective legislation. In the 17th century the merchants benefited by the Navigation Acts designed to eliminate foreign competition. These Acts provided among other conditions that no cargoes could be brought to England from, or exported from England to, many parts of the world except in English ships.

### Freedom of the Seas

The substantial development of England's commercial sea-power, however, dates from the declaration of Elizabeth that "the use of the sea and air is common to all, and no title to the ocean can belong to any nation..." Thereby defiance was given to "the closed sea" policy of Spain and Portugal, the great maritime powers of that period who claimed sovereignty over the seas discovered by their pioneer navigators. Not long afterwards (in 1577) the new era of "the freedom of the seas" was inaugurated by Drake who sailed from Plymouth in the Pelican, 120 tons (later renamed the Golden Hind), the largest of five ships of a squadron that set out to circumnavigate the world.

An early result of the declaration was that English merchants formed companies—the famous Merchant Venturers among the number—and sought charters for trading privileges in distant parts of the globe. The East India Co., greatest and most enduring of all, was granted a charter by Queen

Elizabeth in 1600, and built a fleet of ships which were armed as a defensive measure.

When England was threatened by war in the Middle Ages and under the Tudors, it was not unusual for small coasting vessels and fishing craft to be commandeered for troop transports. Structures of wood were added fore and aft to serve roughly the purpose of fighting-tops. These were known as "castles," probably an ironic term, but one that survives in the word forecastle (usually abbreviated to fo'c'sle).

### Decline and Recovery

British shipping suffered a decline in the first half of Victoria's reign. Many ships were ill-found, and indiscipline and inefficiency were not uncommon among merchant officers and crews. Traders claimed that the Navigation Laws, designed against foreign seaborne trade, had become a handicap rather than a help, and they were repealed gradually, the last being abolished in 1854. From that date British shipping embarked on an era of prosperity, partly due to the stimulus of keen competition, but chiefly to the industrial revolution at home and the vast new markets that it opened overseas.

The average size of British merchant ships increased only by 80–100 tons during the 18th century; before the close of the 19th there were vessels afloat of several thousand tons. The period 1800–1900 witnessed the heyday of sail and the coming of steam. The fast clippers and other sailing craft produced generations of hardy seamen. Great Britain seized the opportunities in ship-building offered by the substitution of iron and steel for wood, of engines for sail, and the high standard of efficiency in the British merchant navy of today is due in large measure to the unequalled skill of British shipbuilders and marine engineers.

### The First Great War

Almost immediately after the outbreak of war on Aug. 4, 1914, the Admiralty acquired 22 liners for conversion to auxiliary cruisers, and a large number of merchant officers and ratings transferred to service under the white ensign. At least 100 such auxiliary

cruisers were on active service during the First Great War, and a similar number of cargo vessels were in commission as "mercantile fleet auxiliaries." The latter class performed the duty of supplying stores and other necessities to warships of the fleet. Pleasure steamers and innumerable fishing craft—steam trawlers and drifters—were used for minesweeping or anti-submarine patrol. A total of 4,696 merchant ships, totalling 9,412,275 gross tons, were lost during that war. Of these 915, representing 1,048,498 tons, became casualties owing to storm, fog, or other causes officially classed as acts of God. The rest were lost through enemy action; 14,287 officers and ratings sacrificed their lives. But for the introduction of the convoy system in 1917, the losses of ships and men might have continued on a scale fatal to Britain's chance of victory. Honours won by members of the British merchant service totalled 1,519, including six V.C.s. In 1919 George V awarded the British war medal to those who had served at sea for not less than six months during the period of hostilities. A mercantile marine medal was granted also to those with not less than six months' wartime service at sea who, in addition, had served for at least one voyage through an officially recognized danger zone.

#### Between the Wars

The vessels to standardised design built during the war for specific purposes proved unsuited to trade requirements of peacetime; the depleted British merchant fleet was out-of-date and inadequate to meet post-war demands. Feverish activity in the shipyards produced new keels at appallingly high prices. Favourable conditions for seaborne trade, however, proved only a flash in the pan. A temporary boom was followed by a sharp slump in 1921.

By 1934 the position was desperate. The owners of tramp cargo-carriers were hardest hit, and a distressing spectacle was provided by the scores of tramp steamers and cargo liners rusting at their anchors in the estuaries around the British coasts. The companies owning passenger liners also suffered in the general depression of the 1930s, and endeavoured to bolster business by running holiday cruises. Not only were shipyard workers thrown out of work, but thousands of officers and men of the merchant service were among the unemployed.

#### The Second Great War

On the outbreak of the Second Great War in Sept., 1939, the merchant tonnage under the British flag was dangerously inadequate. Fortunately, there were about 8,000,000 tons of Allied, neutral, and enemy shipping in U.K. ports. Much of this was used to supplement the British merchant navy in its task of conveying troops, munitions, food, etc., while ship-building yards at home and overseas expanded their facilities for launching new keels.

Twice within 25 years the officers and men of the merchant navy faced the perils of enemy submarines, mines, and surface raiders and, in the Second Great War, hostile aircraft. Fewer ships were lost in the Second than in the First Great War, though, owing to the greater size of vessels, the tonnage lost was greater. In the Second Great War the convoy system was brought promptly into operation, and counter-measures against U-boats were more effective through the use of aircraft, radar, rockets, and other new inventions. Many merchant vessels also had their crews reinforced by highly trained personnel of the D.E.M.S. organization (Defensive Equipping of Merchant Ships).

Control was vested in the ministry of Shipping, later called the ministry of War Transport.

British merchant vessels (excluding fishing vessels) lost by enemy action during the Second Great War numbered 2,426 with a gross tonnage of 11,331,933. Of these 1,332 (7,595,645 gross tonnage) were destroyed by U-boats, 296 (816,255 gross tonnage) by mines, 209 (969,087 gross tonnage) by surface craft, 383 (1,575,230 gross tonnage) by aircraft, and 206 (375,716 gross tonnage) by other or unknown causes. Losses year by year were:

	No. of ships	Gross tonnage
1939 ..	96 ..	419,015
1940 ..	548 ..	2,435,667
1941 ..	717 ..	2,824,056
1942 ..	646 ..	3,459,923
1943 ..	273 ..	1,514,221
1944 ..	103 ..	489,040
1945 ..	43 ..	190,011

In addition, 136 fishing vessels (24,525 gross tonnage) were lost, 55 of them in 1941.

Deaths of seamen of all nationalities who served in British ships, and of British seamen who served in foreign ships chartered or requisitioned by the British government, from Sept. 3, 1939, to Aug. 31, 1945, totalled 29,180 in merchant, plus 814 in fishing vessels.

In both wars, the courage and skill of merchant navy officers and men in defensive action against the enemy, and their resolution in salvaging damaged ships, proved an important factor in reducing losses. Those who served under the red ensign retained status as civilians, but by special dispensation certain decorations for exceptional gallantry previously reserved for the military services, were awarded also to members of the merchant navy. Honours won in the Second Great War by members of the merchant navy and the fishing fleet totalled 8,449, among them five George Crosses.

As a result of the Second Great War, 109 enemy merchant vessels were added to the merchant navy. This figure covers dry cargo vessels and tankers of 500 gross tons and over, flying the British flag on July 31, 1947. Other ships were allocated but had not been transferred by that date.

#### Improving the Seaman's Lot

The claim that it needed two world wars to improve the lot of merchant seamen may appear a cynicism, but it is not without a strong foundation of truth. In the past, wages were on a parsimonious scale, and men had no guarantee of regular employment. The food was monotonous and poor, the accommodation in many ships deplorable. Much talk of "coffin ships" was heard during the 19th century, and the belief persists that there was an almost universal disregard of seafarers' interests. The truth is that from 1850 onwards, parliament appointed numerous commissions to inquire into mercantile marine affairs and passed many Acts with the object of improving conditions. Reputable shipowners, too, recognized the need for reforms.

Famous among Victorian agitators on behalf of merchant seamen is Samuel Plimsoll, a member of parliament and a landsman. His name and accomplishment are commemorated in the Plimsoll mark painted on the hull of every ship on Lloyd's Register; this mark indicates the lowest level to which the vessel can safely be sunk in the sea, and is intended to prevent overloading. J. Havelock Wilson, who founded the national sailors' and firemen's union in 1887, did much to improve wages, food, accommodation, and safety arrangements at sea. He it was who secured the introduction of trained cooks in all British ships except the smallest types. From his original organization developed

the exceedingly powerful National Union of Seamen.

Between 1890 and 1903 there was an increase of foreign seamen in British ships from 27,000 to 40,000, and a decrease of British of about 10,000. By 1912 there were 9,000 fewer foreign and 30,000 more British seamen. The estimated strength of the merchant navy in 1914 was 48,500 officers and 151,500 ratings, plus about 50,000 Indians, Chinese, and others. In 1919 there were 35,000 officers and 142,000 ratings, plus about 45,000 Indians, etc. In 1938 a census of employed seamen gave 27,020 officers and 87,111 ratings, plus 45,182 Indians, etc. In 1947 the total strength of the merchant navy was estimated to be 41,000 officers and 84,000 ratings, plus approx. 35,000 Indians, Chinese, and others.

#### Seamen's Organizations

Through many decades British shipping has benefited by the institution of Lloyd's, and the board of Trade has acted as avuncular authority to the industry. Shipowners and their associations are represented by the Shipping Federation. The interests of shipmasters are represented by the Mercantile Marine Service Association, officers by the Navigators and Engineer Officers Union and the Radio Officers Union. These three organizations cooperate with each other, and with seven other British officers' organizations overseas, through the Officers' (Merchant Navy) Federation, which secured the introduction in 1938 of the M.N. Officers Pension Fund, to which shipowners and officers jointly contribute toward pensions payable at the age of 65.

Some improvements in seagoing conditions made voluntarily by the shipowners have been of a revolutionary nature. For example, the New Zealand Shipping co., in their refrigerated meat-ship *Hororata*, provides two and four-berth cabins amidships for its seamen. An air-conditioning system keeps the quarters warm in cold weather and cool in the tropics. The cabins have hand-basins with hot and cold water. The dining-saloons and mess-rooms radiate about a large galley where food is cooked by electric grills and ovens.

In 1947 a far-reaching agreement negotiated by the National Maritime Board on behalf of shipmasters, officers, ratings, and the shipowners was ratified; it included (1) standard rates of pay, that *e.g.* for an able seaman being

£20 per month in a ship where food is provided free; (2) the principle of a progressive wage with increased length of service; (3) the introduction of a scheme to make sea service a stable and continuous career; (4) the provision of leave with pay; (5) reduction of working hours in certain categories and increases in overtime pay.

#### Welfare Work

In bygone days the British mercantile marine recruited many fine, adventurous youths, but was regarded also as a refuse dump for misfits and delinquents. That phase is over. Recruits are selected with care and many enter from training-ships and sea schools. There was a time, too, when a sailor's well-being ashore was heeded by few save well meaning members of Christian missions. But tea and tracts, however generously provided, still left much to be desired. The establishment of the Seamen's Welfare Board early in the Second Great War led to the introduction of many amenities for seafarers ashore. The ministry of War Transport sponsored clubs and canteens overseas. Religious organizations and other voluntary bodies did much good and highly appreciated work in providing comforts and recreational centres.

Residential and non-residential clubs, etc., for men of the Merchant Navy include the former Bedford Head hotel in London; the Henry Radcliffe convalescent home in Surrey; Springbok village, Surrey, acquired by funds subscribed mainly in S. Africa, for retired and disabled seamen. The Seafarers' Education Service provides libraries in ships, and its associated college conducts courses by correspondence in English literature, modern languages, music, astronomy, etc.

**Bibliography.** History of Merchant Shipping, W. S. Lindsay, 1874; The Nation's Key Men W. H. Coombs, 1926; Century of Atlantic Travel, F. C. Bowen, 1932; British Shipping, R. H. Thornton, 1939; H.M. Merchant Navy, ed. E. C. Talbot-Booth, R.N.R., 1944; Ocean Odyssey, W. E. Stanton-Hope, 1944; Seafood Ships, A. C. Hardy, 1947; and publications issued by H.M.S.O.

**Merchant of Venice, THE.** Romantic comedy by Shakespeare. The chief character is the Jew, Shylock, who demands from Antonio, a merchant, a pound of flesh in forfeiture of a debt of money. The central scene is the trial in which Portia, disguised as

a doctor of law, turns the tables on the Jew.

This play was first published in quarto in 1600. A second quarto that year provided the text for the 1623 folio. Other quartos were issued in 1637 and 1652. Mentioned by Meres in 1598, parts of the story are found in the *Gesta Romanorum*, partly Englished by Robinson in 1577; The Adventures of Giannetto in Giovanni Fiorentino's *Il Pecorone*, 1378, first published 1558; The Orator of Alexandre Silvayn, Englished by Munday, 1596; Robert Wilson's play, *The Three Ladies of London*, 1584; and two old ballads, *Gernutus a Jew* (in Percy's *Reliques*) and *The Northern Lord*, quoted by W. C. Hazlitt in Shakespeare's Library.

The rôle of Shylock was once acted as a low comedy part. Now it is usually assumed that the speech "Hath not a Jew eyes?" etc., represents a plea for recognition of the dignity of all men irrespective of race. Of modern interpretations of the character the most idealised was by Henry Irving, at The Lyceum, 1879, when Ellen Terry was Portia. The play contains 2,705 lines, including 673 prose, 1,896 blank verse, and 93 pentametric rhymes.

**Merchant Shipping Acts.** Statutes regulating various matters connected with the mercantile marine. In Great Britain the Merchant Shipping Act, 1894, is a statute of 748 sections and several appendices or schedules. It has been modified by later Acts.

These are intended to be a code of sea-law, and apply to a large number of subjects. Among these are: the registration of British ships, their transfer on sale or mortgage, their names, and the general liability of owners; the national character and flag; measurements and tonnage; the engagements, rights, duties, rating, pay, privileges, feeding, and sleeping of masters and seamen; volunteering into the navy; discipline on board ship; the regulation of passenger and emigrant ships; the carriage of dangerous goods, cattle, and military stores; overloading; passengers' contracts; fishing-boats, their registry; pay and discipline of fishermen and apprentices; certain apprenticeship agreements; special provisions as to trawlers; "rules of the road" at sea, and collisions generally; life-saving appliances; penalties for and prevention of sending unseaworthy ships to sea; the "survey" of ships; the limitation of a

ship-owner's liability for damage to goods; wreck and salvage; lighthouses; pilots and pilotage.

As for seamen, the object of the Acts is to secure for them just treatment, protection from "crimps" and others who prey upon them, and the prevention of such atrocities as leaving seamen sick and stranded on foreign shores. The Acts also try to prevent the provision of rotten tackle and other practices dangerous to the life of the sailor. As the result of international conventions Acts have been passed to secure uniformity in the laws of the world relating to shipping.

**Merchants' Marks.** Term used in heraldry. From remote antiquity individual and associated merchants adopted marks to distinguish their goods. In time these were engraved on seals, and so in a way were substituted for the badges, crests, and other insignia of the knights and squires. In the 16th and the early 17th century many rich merchants impaled shields bearing their marks with the arms of their wives, others quartered them with armorial bearings, and so a number of such marks were adopted as heraldic charges. According to heralds such marks could only be placed on round shields; but the court of chivalry failed to enforce that.

**Merchant Taylors' Company.** Seventh in order of precedence of the twelve great livery companies

Merchant Taylors' Company arms

of the City of London. Founded as a guild of S. John the Baptist, it received its first licence as a fraternity of Taylors and Linen Armourers from Edward I, in 1300, and the first of its numerous charters from Edward III in 1327. It was incorporated by Henry VII as a fraternity of merchant taylors, and until the 11th year of Richard II the master was styled the Pilgrim and the wardens purveyors of alms. Arms were granted in 1480. In the 14th century it had a chapel in S. Paul's Cathedral. It contributed to the Ulster adventure of James I, and entertained that monarch at a banquet, for which Ben Jonson wrote the dramatic entertainment. Its first meeting-place was in Basing Lane. The site of the present hall in Threadneedle Street, E.C., was acquired in 1331. Rebuilt by E. Jerman after the fire of 1666 and damaged by fire in 1765,

the hall was reconstructed and redecorated during the 19th century, a new ceiling being installed c. 1850 and new panelling in 1893. The windows date from 1793, and new stained glass was added 1928.

One of the finest buildings of its kind in the City of London, it is notable for its stained glass, art treasures, crypt, collection of old plate, and the silver cloth yard, with which officers of the company tested the cloth merchants' meas-

Merchant Taylors' Hall, Threadneedle Street, London. Begun in 1331 and reconstructed 1844, it is notable for its stained glass, crypt, and art treasures

ures at Cloth (or Bartholomew) Fair. Possessing a corporate income of £37,000 and a trust income of £13,000, the company has contributed largely to educational institutions; it maintains almshouses at Lee, in Kent. The company granted an annuity to John Stow, the antiquary, and restored his monument in the church of S. Andrew Undershaft. See Memorials of the Guild of Merchant Taylors, 1875; Early History of the Guild of Merchant Taylors, Clode, 1888.

**Merchant Taylors' School.** English public school. Founded in Suffolk Lane, Upper Thames Street, London, in 1561, by the Merchant Taylors' Company, it was removed to Charterhouse Sq., E.C., 1873-75, and to Sandy Lodge, Northwood, Middlesex, in 1933. It is a day school for about 500 boys, with a boarding house accommodating 56, and its governors from the first have been members of the company. It is divided into classical, modern, and scientific sides, and has valuable scholarships to S. John's College, Oxford and Pembroke College, Cambridge. Spenser, Archbishop Juxon, and Lord Clive were educated at the school. During the First Great War some 1,600 former pupils joined the various services, of whom over 200 lost their lives.

The Merchant Taylors' School at Great Crosby, Liverpool, was

founded in 1618 by a London merchant taylor, and until 1910 was controlled by the Merchant Taylors' Company. It is now controlled jointly by local borough councils, the universities, and the old boys' association. New buildings were erected for the school in 1878 and these were enlarged in 1913. It is chiefly a day school, with accommodation for 500.

**Merchiston Castle School.** Public school in Edinburgh.

Founded in 1833, it was a private undertaking until 1896, when it was placed under a board of Governors. Merchiston Castle, where the school was housed from its foundation until 1930, was the residence of Napier, inventor of logarithms. In 1924 an estate of some ninety acres was purchased and a new school built, surrounded by playing fields.

There is accommodation for some 220 boarders, and a few day-boys.

**Mercia.** One of the largest of the kingdoms of England in Anglo-Saxon times. The word means the march land. At first Mercia only included Derby, Stafford, Warwick, Nottingham, and Leicester, but increased to contain everything between Thames and Humber, except East Anglia, and including London. Lichfield and Tamworth were its chief towns, and Repton, near Derby, was also an important place. The kingdom came into existence about 582. At first subject to Northumbria, in the 7th century under its famous king, the heathen Penda, it became independent, and other kingdoms were brought under its authority, making it the leading state in the land. Then came a short period of decline which lasted until Ethelbald and Offa restored Mercia to a position of pre-eminence. After Offa's death in 795 his successors were the vassals of the Wessex kings, and Mercia was conquered by Egbert in 825. Its sub-kings were ultimately replaced by earls. See Offa; Penda.

**Mercié, ANTONIN** (1845-1916). French sculptor. Born at Toulouse, Oct. 30, 1845, he was a pupil of Joffroy and Falguère. In 1868 he gained the Grand Prix de Rome. His chief works are the group Gloria Victis in Montholon Square,

Paris, 1874: the bronze group in high relief, *Le Génie des Arts*, at one of the gates of the Louvre, 1877; *Le Souvenir* on the tomb of Mme. Charles Ferry at Thann, Alsace; *Quand Même* in the Tuileries Gardens, Paris; and monuments to Bauery and Michelet in Père-Lachaise cemetery, Paris. He died Dec. 12, 1916.

**Mercier**, DESIRÉ JOSEPH (1851–1926). Belgian prelate. Born at Braine-l'Alleud, Brabant, Nov. 21,

Cardinal Mercier,  
Belgian prelate

1851, he was educated for the church at Malines, Paris, and Leipzig. Ordained in 1874, in 1906 he became archbishop of Malines and primate of Belgium, and the following year was made a cardinal. After the German occupation of Belgium he was uncompromising in his championship of the rights of the Belgian people and his allegiance to the Belgian king, and the Germans imprisoned him in his residence. He died Jan. 23, 1926. His writings include *Les Origines de la Psychologie Contemporaine*, 1897; *Métaphysique Générale*, 1905. His War memories appeared 1920. *Consul Life*, J. A. Gade, 1934.

**Mercury** (Lat. *Mercurius*, from *merx*, gain). In Roman mythology the god of trade. He was the patron deity of the guild of Roman merchants. The Romans identified him with the Greek *Hermes*. See *Caduceus*; *Flaxman*, J.; *Hermes*.

**Mercury**. Nearest planet to the sun. It revolves round the sun at a mean distance of 36,010,000 m. in a period of 88 days. The closeness of the planet to the sun makes observation of it difficult, and many of the planet's data are uncertain. Schiaparelli and others have concluded from the permanency of its markings that the period of rotation about its own axis is the same as the period of rotation round the sun, so that it always presents the same face to the latter. This is confirmed by measurements of the temperature of its sunlit face,  $770^{\circ}\text{F}$ . The dark hemisphere must be almost at absolute zero,  $-459^{\circ}\text{F}$ .

The orbit of the planet is extremely eccentric, with the result that on its nearest approach to the sun it receives more than twice as much heat as when it is at its greatest distance. The mass of the planet is one-twentieth that of

the earth, its density about three-quarters, and its diameter approximately 3,100 miles. It is improbable that Mercury has an atmosphere. Its orbit is subject to considerable perturbations, which early suggested the theory that there exists another planet between Mercury and the sun. Such a planet has not been found, however (see *Intra-Mercurial Planet*), and the observed effect is exactly accounted for by the theory of relativity, an accordance which has largely led to the acceptance of the theory. Mercury can be seen under favourable conditions shortly after sunset, or before sunrise, looking like a first magnitude star.

**Mercury**. British training ship. Lying at Hamble, Southampton, it was established in 1885 to prepare cadets for service as officers with the merchant navy. There is also an advanced class for those desirous of entering the Royal Navy. Commander C. B. Fry holds an honorary directorship.

**Mercury**, or **QUICKSILVER**. Silver-white metal, the only metal which remains liquid at ordinary temperatures. Chemical symbol, Hg, lying at the end of the second group of the periodic table; atomic number, 80; atomic weight,

200.61; melting point,  $-38.5^{\circ}\text{C}$ .; boiling point,  $356.7^{\circ}\text{C}$ .; specific gravity, 13.56; electrical conductivity, 1.7 (silver being 100). The crystal form of the solidified metal is simple rhombohedral.

It is not affected by air, oxygen, or carbonic acid at normal temperatures, but oxidised slowly when near boiling point. It dissolves readily in nitric acid and in hot sulphuric acid. It has a remarkable power of dissolving, or combining with, other metals without the aid of heat to form amalgams, some of which have high technical and commercial importance, e.g. in dentistry.

Mercury has been known for many centuries, having been regarded until the middle of the 18th cent. as an imperfect metal or

Mercury. British training ship, primarily for the merchant navy, lying at Hamble, Southampton

Mercury. Telescopic view of the planet, as seen by the Italian astronomer Schiaparelli, showing N. and S. poles, E. and W. points, degrees of latitude and longitude, the faint streaky markings *a b c . . . w*, and the points A B the outside limits of libration of longitude each side of the centre point O

semi-metal. The Spanish mines were worked by the Greeks at least as early as 700 B.C. The medieval alchemists claimed the metal as a constituent, perhaps the vital principle, of all metals.

A little mercury is formed in nature as small globules in certain rocks, but virtually the whole of the world's production is obtained from cinnabar, or mercury sulphide,  $\text{HgS}$ . When pure this contains 86.2 per cent mercury and is bright red. It is deposited from hot aqueous solutions during periods of volcanic activity, and found in fractured rocks of many types, mostly Tertiary, comparatively near the surface.

At the present time cinnabar is being deposited from the hot springs in many volcanic regions.

The most productive and deepest mercury mine is that of Almaden (*q.v.*), in southern Spain, where work on veins has reached a depth of 1300 ft. in Silurian quartzes. Impregnations in shales and limestones are mined in Tuscany and near Trieste; and deposits are worked in California, the Ukraine, Mexico, Japan, Czecho-Slovakia, and elsewhere. Other ores occur in small quantities, *e.g.* horn quicksilver or calomel, a chloride; coccinite, the iodide; tiemannite, the selenide; coloradoite, a telluride; arguerite, native amalgam with silver (found in Chile); and other amalgams with silver, gold, and copper. None of these is as important as cinnabar.

#### Treatment of the Ores

Because of their low mercury content, ores usually have to be concentrated before treatment for recovery of the metal. This dressing of the ores is particularly important for mercury ores, as crushing normally produces large amounts of slime. The coarsely crushed ore is best treated by hand-picking at the mine, the rich mineral lumps being easily recognized by their red colour. The remaining ore is then classified into various sizes. High-grade mercury concentrates may be treated by volatilisation direct in retorts; but the coarse material is usually treated in shaft furnaces. Medium-coarse ore, pieces under 1½ ins., may also be so treated, as in the U.S.A.; but in Europe, shelf or tile furnaces are preferred. The fine material is sometimes treated in reverberatory furnaces in Europe, but with modern improvements in flotation practice the fines and slimes are very often concentrated by this method. Cinnabar is now quite easily floated in solutions containing aerofloat and copper sulphate.

The mercury sulphide is only partially decomposed by heating alone or with carbon, so the sulphur is locked up, either by forming some other more stable sulphide or by oxidising it to  $\text{SO}_2$  with air. The three chemical reactions available are the oxidation already mentioned, leaving mercury with the sulphur burned off; the formation of calcium sulphide and sulphate by heating with lime; or the formation of iron sulphide by heating with iron. Free mercury is liberated by each method.

All these reactions take place at temperatures above the boiling

point of mercury, and the mercury comes off as a vapour, which must subsequently be condensed to liquid metal by cooling. The first process, known as air reduction, is found to be the simplest in practice, although the presence of large amounts of gas, excess air, and dust results in the production of a considerable quantity of mercury dust or "stupp." This consists of fine globules of mercury so coated with dust that they will not coalesce. The product is therefore specially treated in modern plants by a mechanical extractor.

#### Types of Furnace

Processes are much the same all over the world, differences being chiefly in the design of furnaces and condensers. In modern practice there are two types, shaft furnace and reverberatory furnace. The latter, conventional in design, are used only for fine ore and for ores which decrepitate, *i.e.* burst into fine particles on heating. For coarse ores a straight shaft furnace is used, the most modern being a square vertical shaft of ordinary firebrick, with a bell arrangement for charging at the top and discharge plates for the spent ore at the bottom. The ore is mixed with 2-3 p.c. charcoal. This, with the sulphur in the ore itself, is sufficient fuel to raise the temperature to 800° C. For coarse, medium, and sometimes even fine ore, shaft furnaces with inclined shelves are everywhere replacing the older furnaces. Typical is one consisting of four rectangular shafts, fed from the same grate and each containing a series of tiles inclined at an angle of 45°. The ore slides down these tiles, being met by the hot gases from the grate, air for the fire being pre-heated by the hot spent ore. The ore must be dry or it sticks to the tiles. This drying is effected in rotary driers. Other variations are an intermediate between a reverberatory and a shaft furnace; the rotary kiln furnace; and furnaces with rotating rabbling-arms.

Very large condensing space is needed to collect all the mercury; for a furnace treating 50 tons of an ordinary ore 20,000 cu. ft. would be required. In America a series of large brickwork chambers is employed, while in Europe usually a number of stoneware tubes are used followed by chambers constructed of wood or glass (*see* Condenser). The fine dust may be removed by an electrostatic precipitator. A wet process is used in a few localities. Mercury is still used to some extent for the recovery of gold and silver from their

ores by amalgamation. It can be frozen into a solid, which can be hammered, rolled, or welded, like other metals. Forty p.c. of the world's production is used in the manufacture of drugs and chemicals, while the fulminate is used for making detonators. Large amounts are used by manufacturers of electrical apparatus, thermometers, barometers, and many other scientific instruments, and for floating the lanterns of lighthouses. Recently various solders containing mercury have been developed for joining galvanised iron, etc. Other users are the makers of vermilion, which is a mercuric sulphide, and of felt, caustic soda, and glacial acetic acid.

#### Compounds of Mercury

Two oxides of mercury are known, the black mercurous oxide,  $\text{Hg}_2\text{O}$ , and the red mercuric oxide,  $\text{HgO}$ , the latter being the substance used by Priestley in his original preparation of oxygen. The two chlorides are both white, but while one, mercurous chloride or calomel,  $\text{Hg}_2\text{Cl}_2$ , is much used in medicine, the other, mercuric chloride,  $\text{HgCl}_2$ , or corrosive sublimate, is extremely poisonous; it is used in surgery for disinfecting the skin. Mercurous iodide,  $\text{Hg}_2\text{I}_2$ , is greenish yellow, and mercuric iodide,  $\text{HgI}_2$ , is a brilliant scarlet, the latter being used in veterinary practice as a blistering agent. Various other compounds are used medically, *e.g.* mercuric salicylate for the treatment of "athlete's foot." In photography, mercuric iodide and perchloride may be used for intensification. Mercury in its metallic form was used to develop the image in the Daguerreotype process. *See* Calomel; Condensation; Corrosive Sublimate; Flotation; Fulminate of Mercury; Mersalyl; Metallurgy; Reverberatory Furnace; Wedge Roaster.

**Mercury Theatre.** London playhouse in Ladbroke Road, W.8. Opened by Ashley Dukes in 1933, it was launched on the strength of £10,000 which Dukes made by his play, *The Man with a Load of Mischief*. A parish hall and two adjoining houses were converted into a miniature theatre seating about 150. In 1935 T. S. Eliot's *Murder in the Cathedral* (*q.v.*) ran there for nine months. Experimental plays and revivals included *The Ascent of F6*, *The Playboy of the Western World*, and *Hedda Gabler*. Closed during the Second Great War, the Mercury was reopened in 1945 as a "poets' theatre," under the direction of Martin Browne, who put on *This Way to*

the Tomb, The Shadow Factory, Happy as Larry.

**Mercutio.** Character in Shakespeare's play *Romeo and Juliet* (q.v.). Kinsman to the prince of Verona, friend to Romeo, and a man of overflowing wit, fancy, and bawdy humour, he delivers the famous speech about the Fairy Queen Mab. He is killed in an encounter with Tybalt, Juliet's cousin, dies with a jest on his lips, and is avenged by Romeo, who slays Tybalt.

**Mercy.** In a Scriptural sense, an attribute of God. Much discussion has arisen regarding the translation of the word from the Hebrew. It is variously interpreted as compassion, yearning, pity, kindness, benignity, or loving-kindness, and is associated with truth. The believer is taught to pray for it, that Divine justice may be tempered by it, and is enjoined to show it to others. It has an affinity with grace. Generally speaking, the assumption seems to be that it may be extended where punishment cannot be withheld, but where wrong-doing is mitigated by the possession of a record not wholly blameworthy. The expression *Be merciful*, Deut. 21, v. 8, and 32, v. 43, in the A.V. is rendered in the R.V. by the words *Forgive and make expiation*. The common meaning of the word is eloquently expressed in Portia's speech in *The Merchant of Venice*, Act IV, scene 1. See *Charity*.

**Mercy, PREROGATIVE OF.** In English law, the right of the crown to grant a pardon to a person who has committed a criminal offence. See *Pardon*.

**Mercy, SISTERS OF.** Religious order of women who devote themselves to active work for the good of the community, especially among the poor and sick. It was founded in 1831 by Mary Catherine McAuley in Dublin. The sisters differ from nuns in not being enclosed within their convents, but going about in the exercise of their work.

All sisters of mercy take the threefold vow of poverty, chastity, and obedience; some annually, and others for life. In the Church of England the terms *Sisters*

of Mercy is used in a general sense; but in the Church of Rome it is usually restricted to the congregation founded by Mother McAuley, who seems to have taken the name from an order of Sisters of Mercy started at Barcelona about 1265. This congregation adapted the rule of S. Augustine and devoted itself to the instruction of poor girls, the visitation of the sick, and the protection of distressed women of good character. It now has about 112 houses in England and about 215 in Ireland, with some 877 convents in the U.S.A. The mother house is in Baggot Street, Dublin; but each convent is run independently. There are 22,000 sisters.

**Mer de Glace** (Fr., Sea of Ice). Famous Alpine glacier of France,

in the dept. of Haute-Savoie, near Chamonix. Over 9 m. long, it descends from the N. slope of Mont Blanc by three branches, the Talèfre, the Tacul (or Géant), and the Lechaux glaciers. It almost reaches the river Arve, having accumulated a large moraine. Below the Montanvert it is called the Glacier des Bois. It is noted for its beautiful scenery. See *Glacier*.

**Mere.** Name for a lake, e.g. Windermere, Buttermere, and Thirlmere, all in the English Lake District, and the meres of Cheshire. These last have been formed by the dissolving of salt by underground water, and the collapses on the removal of the brine by springs or pumps. The meres are formed in the depressions caused by the subsidences of the overlying soil.

## GEORGE MEREDITH: POET & NOVELIST

Sir John Hammerton, Author of *Meredith: His Life and Art*

See articles on Meredith's works, e.g. *Ordeal of Richard Feverel*, *Egoist*; and those on Hardy, Kipling, and others of his contemporaries. See also *English Language and Literature*; *Novel*

George Meredith was born Feb. 12, 1828, at 73, High Street, Portsmouth, of mixed Welsh and Irish parentage. His father was Augustus Armstrong Meredith, a naval outfitter, and his mother Jane, daughter of Michael Macnamara of the same town. He received his early schooling at Portsmouth, and at 14 was sent to the Moravian school at Neuwied on the Rhine, where he stayed for two years. Returning to London, he was articled to a city solicitor of literary tastes, but before he was 21 he had abandoned the law and turned to letters, his first and quite unpromising poem, *Chillianwallah*, appearing in *Chambers's Journal*, July 7, 1849.

On Aug. 9 Meredith married Mary Ellen Nicholls, nine years his senior, widow of a naval officer and daughter of Thomas Love Peacock. In 1851 he published *Poems*, the remarkable quality of which was recognized by Kingsley and by Tennyson, who went about declaiming the haunting stanzas of that masterpiece, *Love in the Valley*; in 1856 a fantastic and fascinating Oriental tale, *The Shaving of Shagpat*, was warmly welcomed by George Eliot and other competent critics; and in 1857 another, though less remarkable, fantastic tale, *Farina: a Legend of Cologne*, was inspired by his residence in Rhineland.

Of Meredith's activities between his marriage and the publication of *Shagpat* little or nothing is

known. He was not yet able to make a living by his pen, and a shadow was deepening on his home

*George Meredith*

But in 1856 he secured regular journalistic work as absentee editor of *The Ipswich Journal*, writing his leading articles and news paragraphs at his Weybridge home, and continued this connexion for some years, also contributing to *The Morning Post*, edited by his friend, Sir William Hardman. In 1858 Meredith and his wife separated, he and the only child of the marriage, Arthur, going to live at Copsham Cottage between Esher and Oxshott.

The Ordeal of Richard Feverel 1859, won the author new friends among those who could discern great work unguided, but far from gaining him a popular success, it was decried for its impropriety and even preached against from the pulpit: not then, as a generation later, a valuable form of advertisement. In 1861 Mrs. Meredith died, and after serial appearance in *Once a Week* there was published Evan Harrington, a masterly novel, in which the author gives a fictional study of members of that Portsmouth tailor's family whence he sprang, and exhibits certain aspects of English snobbery that make it a true mirror of its time. *Modern Love* and *Other Poems*, 1862, gave fulfilment of the rich promise of the earlier *Poems*; the title-poem, or sequence of caudated sonnets, i.e. with two or three extra lines, belongs to the best poetry of its age.

Meredith, who had now become literary adviser to the house of Chapman and Hall, a post he filled for some 30 years, married in 1864 Marie Vulliamy and found happiness. In the same year he published *Emilia* in England, later to be renamed *Sandra Belloni*. Rhoda Fleming, a tragic story and the most simply told of all his novels, followed in 1865. In 1866 he acted as correspondent in Italy for the *Morning Post* during the Austro-Italian War, and the next year published *Vittoria*, his fine sequel to *Sandra Belloni*, fresh with the local colour derived from his Italian sojourn. In 1868 he settled at Flint Cottage, Box Hill, Surrey, his home for the rest of his life. In 1871 came the vigorous and splendid romance *The Adventures of Harry Richmond*; in 1876 *Beauchamp's Career*; and in 1879 that masterpiece of character-study, *The Egoist*—a succession of great novels that consolidated their author's international fame, though they did not yet bring him that wide popularity which is based upon the mass of the novel-devouring public.

Meredith was now accepted by the real critics of literature as one of England's foremost men of letters in an age of great writers. *The Tragic Comedians*, 1880, was a fictional rendering of the story of Ferdinand Lassalle and Helene von Dönniges, the qualified success of which indicates a novelist somewhat ill at ease with history. After *Poems* and *Lyrics of the Joy of Earth*, 1883, including some of the finest of his nature poetry, there came *Diana of the Crossways*,

1885, the novel that caused a sudden widening of the public interest in Meredith's work, largely perhaps because of gossip about its being a romance with a key, and the association of its heroine with Caroline Norton.

In the year of this long-delayed recognition his happy married life ended, for Mrs. Meredith died Sept. 17. Later books were *Ballads and Poems of Tragic Life*, 1887; *A Reading of Earth*, 1888, poems which include the beautiful *A Faith on Trial*; *One of Our Conquerors*, 1891; *Lord Ormont* and his *Aminta*, 1894; and *The Amazing Marriage*, 1895, the last three of his novels, wherein the peculiarities of his style were somewhat accentuated. In 1905 Meredith received the Order of Merit. The 70th and 80th anniversaries of his birth were made occasions for cordial tributes of appreciation and homage. On May 18, 1909, he died at Box Hill, and after cremation his ashes were laid in the graveyard at Dorking. Meredith will assuredly remain articulate as one of England's greatest poetical interpreters of Nature, but his novels, both in style and construction, carry such defects of their qualities as may deny them the enduring classic fame their content deserves. He was by incidence of time one of the greatest Victorians, though intellectually his real kinship lay with the age of Fielding.

Price, 1913; *G. M. (English Men of Letters)*, J. B. Priestley, 1926; *Mr. Meredith*, S. Sassoon, 1948.

**Meredith, OWEN.** Pseudonym of Edward Robert Bulwer Lytton, 1st earl of Lytton (*q.v.*).

**Meredith, WILLIAM.** Welsh footballer. An inside forward for Manchester City and Manchester United, he made 51 appearances for Wales in international matches. In 1895, his first year in international football, Meredith played in three such matches in eight days; he last represented Wales in 1920.

**Merejkowski, DMITRI SERGEIEVITCH** (1865-1941). Russian novelist, poet, and critic. Born at St. Petersburg, Aug. 2, 1865, he came into prominence with *The Causes of Decadence* in *Modern Russian Literature*, 1893, in which

he saw a remedy in the study of the French symbolists. His greatest work is the trilogy *Christ and Anti-Christ*, consisting of *The Death of the Gods*, or *Julian the Apostate*, 1901; *The Forerunner*, or *Leonardo da Vinci*, 1902; and *Peter and Alexis*, 1905. The whole has

been translated into English. Among his other works were plays about Paul I, 1908, and Alexander I, 1913; *Fourteenth of December*, 1920; *Napoleon*, 1928; *Jesus the Unknown*, 1932. He died in Dec., 1941. His wife wrote fiction and *belles lettres* under the name of Zinaida Hippis.

**Merneptah.** Egyptian king of the XIXth dynasty, c. 1225 B.C. The name is also spelled Merneptah and Mineptah. The 13th son and successor of Ramesses II, he was regarded by Alexandrian tradition as the Pharaoh of the Exodus. On a stela found at Thebes, in 1896, recording his Libyan victories in his fifth year, the words "Israel is desolate, its crops are not" contain the only known Egyptian record of that name. Some scholars regard Amenhotep II, and not Merneptah, as the Pharaoh of the Exodus. See Abydos.

**Meres, FRANCIS** (1565-1647) English divine, author, and translator. A graduate of Pembroke College, Cambridge, professor of rhetoric at Oxford, and later rector and schoolmaster at Wing, Rutland, he is chiefly remembered as the author of *Palladis Tamia: Wit's Treasury*, 1598, in which the literature of his period is compared with that of Greece and Rome, and the most important contemporary account is given of Shakespeare's works up to that year.

**Merganser** (Lat. *mergus*, diver; *anser*, goose). Genus of marine diving ducks, including about six

Merganser. Hooded species of marine duck

species distinguished by their extremely narrow beaks, furnished with saw-like teeth. Three species occur regularly in the British

islands. Of these the goosander (*M. merganser*) is the largest and has a glossy, green head and neck, black back, white wings, and ashy grey under-parts. It is common on the W. coast of Scotland and breeds in the Highlands, but visits England and Ireland only in severe weather. Although it spends most of its time at sea, it constructs its nest in hollow trees.

The red-breasted merganser (*M. serrator*) is a handsome bird, distinguished by the crested head and the pale chestnut colour of the lower neck and breast. It is a resident of the Highlands of Scotland and of the Orkneys, Shetlands, Hebrides, and Ireland, and in winter visits the coasts farther S. It is usually found in flocks, and feeds on small fishes, crustaceans, and molluscs. The smew (*M. albellus*) is a rare visitor; as is the hooded merganser (*M. cucullatus*) from N. America.

**Mergenthaler, OTTMAR** (1854-99). A German-born American inventor. Born in Württemberg, Nov. 10, 1854, he became a watchmaker, and in 1872 emigrated to the U.S.A. where he set up in Baltimore as a precision engineer. In 1886 he invented the first practical linotype machine, so revolutionising printing.

**Mergui.** Port and district of Burma, in Tenasserim division. The port is a minor harbour on the narrow coast strip of Tenasserim, with a trade in rice, pearls, and edible birds' nests. The existing town is modern, built on the site of an ancient city. The district contains tin. Rice, sugar-cane, sesamum, and tobacco are grown; tropical fruits are supplied to Rangoon and Moulmein. Pop. dist. 180,827; town, 25,000.

**Mergui Archipelago.** Group of hundreds of small islands off the Tenasserim coast, Burma. Most of the islets are rocky, composed of granite or sandstone. The native Selungs exchange edible birds' nests and bêche de mer for rice.

**Mérida** (anc. *Augusta Emerita*). Town of Spain, an important rly. junction in the prov. of Badajoz. It stands on the river Guadiana, 40 m. by rly E. of Badajoz. It was the capital of Lusitania and has more Roman remains than any other Spanish city, including a fine stone bridge of 60 arches, 2,670 ft. long, built in the time of Augustus or Trajan; the ruins of a three tier aqueduct 85 ft. high; crumbling walls and gates; a triumphal arch, a theatre, an amphitheatre, temples, etc. Pop. 14,633.

Founded in 25 B.C., Mérida became a city of great splendour. It fell into the hands of the Moors A.D. 712. Its archbishopric, dating from Visigothic times, was transferred in 1129 to Santiago, to whose knights it was entrusted on its capture from the Moors in 1228.

**Mérida.** City of Mexico. The capital of the state of Yucatan, it is a well-built city, with wide streets and many open spaces, and is connected by rly. with Progreso 24 m. to the N. on the Gulf of Mexico, and by air with the capital and the U.S.A. The seat of a university, with law, medicine, and other faculties, it has a cathedral dating from 1598, a 16th century Franciscan convent, the bishop's palace, a government palace, and a museum. Cotton, straw hats, cigars, leather, and soap are among the manufactures, and Mérida is the centre of the henequen or sisal industry. The city dates from 1542 and the bishopric from 1561. Pop. 98,636.

**Mérida.** City and state of Venezuela. The city stands on the Chama, 310 m. S.W. of Caracas. It has a cathedral, seat of an archbishop, and university. It was founded by the Spaniards in 1558, partly destroyed by earthquakes in 1812 and in 1894, and rapidly recovered.

Mérida state has an area of 4,400 sq. m., and is occupied largely by the branch of the E. Andes called the Cordillera de Mérida. It was created a state in 1901. Cocoa is cultivated. Pop. 192,994

**Meriden.** Village of Warwickshire, England. It is  $5\frac{1}{2}$  m. W.N.W. of Coventry and is regarded as the centre of England. There are

Meriden, Warwickshire. The cross which was believed to mark the centre of England

remains of a cross erected to mark what was believed to be the exact spot. An obelisk of Cornish granite is a memorial to cyclists who fell in the First Great War. The cost of its erection was subscribed for by nearly 30,000 cyclists from all over Great Britain.

**Meriden.** City of Connecticut, U.S.A., in New Haven co. Situated almost equidistant from Hartford and New Haven, it is served by the New York, New Haven, and Hartford Rly. It contains the Curtis Memorial Library, and among its institutions is the Connecticut School for Boys. The International Silver co. here is widely known as a manufacturer of silver ware. Other metal products are also made. Near by is Hubbard Park, a natural reservation of 900 acres, in which the Hanging Hills, 1,000 ft. high, are said to have inspired Gerhart Hauptmann's *The Sunken Bell*. Formerly part of Wallingford, Meriden was incorporated in 1806, and became a city in 1867. Pop. 39,494.

**Meridian** (Lat. *meridies*, mid-day). In astronomy, the great circle of the heavens passing through zenith of any place and the N. and S. poles of the celestial sphere. A terrestrial meridian is the line of intersection of the earth's surface with a plane passing through the poles. The magnetic meridian at any place on the earth's surface is the direction along which a horizontally suspended compass

Mérida, Mexico. The Governor's palace

needle points when influenced only by the earth's magnetism. See Longitude: Transit Circle.

**Meridian.** City of Mississippi, U.S.A., the co. seat of Lauderdale co. Situated 95 m. E. of Jackson, and served by the Alabama Great Southern and other rlys., it has several educational institutions, and the East Mississippi Hospital for the Insane. The most important manufacturing city in the state, its lumber mills cut 35,000 ft. of hardwood daily, and its stockyards are able to accommodate 5,000 head of cattle. Founded in 1854, Meridian became a city in 1860. Four years later it was occupied by a Federal force, which demolished the rly. tracks and most of the buildings. In 1906 great damage was done by a tornado. Pop. 35,481.

**Merim.** Variant spelling of Mirim (q.v.), the name of a lake in S. America.

**Mérimeé, PROSPER (1803-70).** French author. Born in Paris, Sept. 28, 1803, he was educated for the bar but entered the civil service, and became a senator in 1853. He began his literary career with two clever mystifications, *Le*

*Pro Mérimée*  
(Prosper Mérimée)

Théâtre de Clara Gazul, 1825; and *Guzla*, 1827, which he published as translations respectively of the plays of a Spanish actress and some Illyrian folk-songs. These he followed with an historical novel, *Chronique du Règne de Charles IX.* He is at his best, however, in his shorter tales, some of which are masterpieces. By far the best known of these is *Carmen*, on which Bizet based his opera. He also did some excellent work in history, e.g. *Les Faux Démétrius*, 1852. His *Lettres à Une Inconnue* throw an interesting light upon his enigmatical character. A man of a melancholy, sceptical, and sensitive temper, and endowed with a powerful intellect, he was a subtle and scholarly writer, and one of the greatest masters of imaginative prose in the 19th century. Consult Prosper Mérimée: a Mask and a Face, G. H. Johnstone, 1927.

**Meringue.** Confection of whites of eggs whipped to a froth and powdered sugar in the proportion of ten or twelve eggs to 1 lb. of sugar, and baked till fawn in colour. The result is a light, brittle sub-

Merionethshire. Map of this maritime county of North Wales

stance which may be served with whipped cream. Meringue is often used as a garnish for puddings and pastry. The name is explained as a variant of Marengo, in honour of which victory the confection was invented by Napoleon's cook.

**Merino.** Originally the Spanish name for a breed of sheep with exceptionally fine white wool. It has been bred in many parts of the world. In the textile trade the term now has various meanings: (1) the finest wools, whether from sheep as above or from more modern inter-breedings which have wool of a similar quality; (2) Merino yarn, used for shirtings and hosiery, containing fine wool and cotton in various proportions, commonly 50 p.c. of each; (3) a dress fabric containing merino wool, and woven in a twill weave.

**Merionethshire.** County of N. Wales. Its name is derived from Meirion, a grandson of prince Cunedda (5th century). Its area is 660 sq. m., and it has a coast-line of 38 m. on Cardigan Bay. The county presents a variety of picturesque scenery, with rugged mountains, beautiful valleys, and waterfalls. The highest summits are Aran Mawddwy and Cader Idris, and there are a number of others over 2,000 ft. in height.

Merionethshire arms

The county has many lakes, the largest being Bala and Tal-y-llyn; principal rivers the Dee, Mawddach, and Dovey. The soil is of an inferior quality except in the valleys, and agriculture is backward; sheep and ponies are reared. Slate, limestone, and manganese are quarried, and woollens are manufactured. The county has rly. connexions with London. It returns one member to parliament. Dolgelly is the county town; other towns are Festiniog, Barmouth, Towyn, Corwen, and Bala. Harlech is herein, and another ruined castle is Castell y Bere. Cymmer Abbey is the ruin of an old Cistercian foundation. Corwen was the headquarters from which Owen Glendower attacked Shrewsbury. Pop. 43,201.

**Meristems.** Botanical term. It is applied to tissues of plants in which growth and multiplication of cells is pronounced, in contrast to permanent tissues the elements of which have ceased to grow and are generally no longer capable of division. Promeristems consist of thin walled cells, often hexagonal prisms in shape. They have large nuclei and abundant cytoplasm in which there are usually many small vacuoles. They are especially readily seen in sections of root tips or of the apical cone from within a bud. By their repeated division, mainly in a direction across the organ in which they are found, they add cells to its length. They also initiate by their outgrowth the

origin of leaves and buds from the stem apex and arise in the pericycle of roots to form new root apices for lateral root branches. The youngest promeristem cells are usually nearest the apical cone. Other older meristem cells further away from this show fewer and larger vacuoles and with distance approximate in shape to the permanent tissue elements into which they are destined to change. These considerably vacuolated but not yet mature cells are histogen cells, and together with the promeristems constitute the apical meristems by virtue of their position and are primary meristems since upon their activity the primary development of the plant body is due. Sometimes a small proportion of apical meristem cells retain their meristematic capacity for growth and division after their neighbours have become converted into permanent tissue. There may be left transverse plates of intercalary meristem, e.g. at the bottoms of iris leaves and below the nodes of some mints, or longitudinal strips of primary cambium such as are common in the vascular bundles of dicotyledon stems. Other cambia are secondary since they are not derived directly from apical meristem.

**Merit, ORDER OF.** British order for distinguished service in all callings. It was founded by

Edward VII, June 26, 1902. Its members are divided into two classes, civil and military, and are distinguished by the letters O. M. The badge is a cross pattée formée of red and blue, having

on a blue medallion, surrounded by a laurel wreath, the words *For Merit*, and on the reverse the royal cypher. Crossed swords are added for naval and military members. Appointment to the order is made personally by the sovereign, who can bestow it without ministerial advice. It is limited to 24 members. Membership is normally conferred on subjects of the crown for exceptional services to the British Commonwealth, or to art, literature, or science. Although designed as a special distinction, it confers no precedence and carries no title. Members in 1948 were Sir Charles Sherrington, G. M.

Trevelyan, John Masefield, Ralph Vaughan Williams, Lord Chetwode, Lord Chatfield, Lord Newall, Gilbert Murray, Augustus John, Sir Henry Dale, Sir Giles Scott, Winston Churchill, Lord Portal, Lord Alanbrooke, Lord Cunningham, Lord Halifax, J. C. Smuts, W. L. Mackenzie King, and T. S. Eliot, with Dwight D. Eisenhower as an honorary member. Florence Nightingale was the only woman to receive the honour.

**Merit, ORDER OF.** Decoration awarded in various countries for distinguished service in various callings. The Indian Order of Merit was instituted in 1837 for native officers and soldiers; the ribbon is blue with red edges. The Prussian, later German, order *Pour le Mérite* for military merit was instituted in 1740; the badge was a Maltese cross, having on the upper arm the letter "F," on the others the words "Pour le Mérite"; the higher grade had a wreath of oak leaves added; the ribbon was black with white stripes.

The Order of Merit in Arts and Sciences was instituted by Frederick William IV of Prussia in honour of Frederick II; the badge was a golden Prussian eagle on a white medallion, and the ribbon was white edged with black. The Russian order, instituted in 1792, was remodelled in 1807; the badge was a black cross pattée concave, and the ribbon was dark blue with black stripes. The Spanish military Order of Merit was instituted in 1864. The Order of Merit at Sea, founded in 1866, has the same badge, while the ribbon is blue with white border. There are also the Alphonso XII Order of Merit for Science, Literature, and Art, and the Alphonso XII Civil Order of Merit, both founded by Alphonso XIII in 1902. The Savoy military Order of Merit was founded in 1815, and revised by Victor Emanuel in 1855; Italy also has the civil Order of Merit of Savoy, founded in 1831.

**Meritorious Service Medal.** British decoration awarded to men of the army, navy, and air force. The first award for gallantry for other ranks, it was instituted for army sergeants in 1845 and for marines in 1849. It had the head of Queen Victoria on the obverse, and a laurel wreath, within which was the inscription "For Meritorious Service," on the reverse. The ribbon was deep red for the army and deep blue for the navy. It fell into abeyance about the time of the Crimean War, and was revived

in 1884, when it was extended to all soldiers above the rank of corporal. In 1916 it was thrown

open to the lower ranks of the army, navy, and R.A.F. The present ribbon for the army is crimson with a narrow edging and narrow central stripe of white; for the navy, crimson with three white stripes; and for the R.A.F., a ribbon with narrow white edges, a white central stripe, a band of deep blue between the left edge and the centre, and a crimson band between the centre and right edge.

**Merivale, CHARLES (1808-93).** British historian. Born March 8, 1808, he was educated at Harrow, Haileybury, and St. John's, Cambridge, where he had a distinguished academic career, and was a noted athlete, rowing in the first university boat race in 1829. He became dean of Ely in 1869.

His *History of the Romans under the Empire, 1850-1862*, is his greatest work. The *Fall of the Roman Republic, 1853*, is a popular epitome of a section of it, and *The General History of Rome from the beginning to the fall of the Western Empire, 1875*, is a summary. He died Dec. 27, 1893.

**Merlin.** Type of aero-engine designed by Rolls-Royce, Ltd. It was used extensively in the Second Great War and was in the liquid-cooled 12-cylinder Vee class. The power was progressively increased from the 1,030 h.p. of the Mark I in 1939 to the 2,080 h.p. of the Series 140 (1946). Aircraft, both fighting and civil, fitted with the Merlin included the Hurricane, Spitfire, and Mustang (single-engined), Mosquito (twin-engined), and Halifax, Lancaster, York, and Tudor (four-engined). See *Aero-Engines*, illus., p. 119.

**Merlin** (*Falco columbarius*). Smallest of the British falcons. It is greyish blue on the upper parts, the male being pale yellow spotted with brown on the under parts; and the female brownish above and yellowish white beneath. It is about 11 ins. long, and weighs only about 6 oz. Ranging from Yorkshire to the Shetlands, and found in the wilder parts of Ireland, the merlin lives among the mountains and moors, and nests on the ground among

Meritorious Service Medal (army)

Merlin, British falcon

the heather, but occasionally takes possession of a deserted nest in a tree. It preys upon small birds.

**Merlin** (Welsh, Myrddin). Legendary wizard and prophet, celebrated in Welsh, Breton, and Scottish tradition. Of demon origin, he lived, it was said, in the 5th and 6th centuries at the courts of Vortigern and Arthur. Geoffrey of Monmouth wrote his life, and related his deeds in his *History of the Britons*. The Prophecies of Merlin, dealing with the fortunes of Britain, were popular from the time of Geoffrey to the 17th cent., and his adventures were described in romances by English writers, including Malory.

**Mermaid.** Fabulous creature of the sea or of lakes, with the head, arms, and upper part of the body like a woman, and the lower like a fish. With certain variations the mermaid is found in legendary lore of many nations. Among sailors she is often imagined as sitting on a rock, combing her hair and singing, her appearance being supposed to portend a storm. The corresponding male is called the merman.

The mermaid's wineglass is the name given to an exquisite green seaweed, found in tropical seas. Two other tropical seaweeds are known as the mermaid's fan and the merman's shaving brush. See Manatee; Nixie; Siren.

**Mermaid Tavern.** Tavern formerly in Cheapside, with side entrances in Friday Street and Bread Street, destroyed in the Great Fire, 1666. In this tavern, which dated from before 1529, Sir Walter Raleigh, according to Gifford in his edition of Ben Jonson's works, instituted The Mermaid Club, famous as the supposed meeting-place, about

1603 and onwards, of Shakespeare, Jonson, Beaumont, Fletcher, Carew, and other wits. But there is no contemporary evidence of its existence.

**Merodach-Baladan.** Name of three kings of Babylon, two being comparatively unimportant. The second was a Chaldean chief who, while Sargon II was preoccupied with Samaria, captured Babylon, and reigned 721-710 B.C. Being overthrown he retired to the Sealand; reappearing in 703, he was defeated by Sennacherib.

Merodach-Baladan II, the Hebrew form of Marduk-aplu-iddin, king of Babylon, investing a vassal with land

**Meroë.** Ancient Nubian city at Bagarawiya, near the right Nile bank 28 m. N.E. of Shendi, below Khartum. It gives its name to the so-called island bounded by the Blue Nile and the Atbara. Occupied before history by Neolithic Hamites of the same culture as their northern neighbours, this region lagged behind the advances in civilization made by the metal-working dynastic Egyptians. Hence the Ethiopian stock and culture were strongly affected by negro contact, against which Meroë was for centuries the most southerly outposts. Excavating for the Liverpool institute of archaeology from 1910, Garstang showed that the city was founded on an earlier site after 650 B.C. by Aspelut from Napata. During this "early" period a sun-temple and a temple of Amon were erected, and Egyptian culture was dominant.

After long decadence a "middle" period was inaugurated by Ergamenes about 300 B.C. This was characterised by Hellenistic influence such as royal baths, frescoed

chambers, cremation, and by a non-Egyptian native art, notably a decorated biscuit-ware of exquisite fineness. About 150 B.C. the Ethiopian queens began to be called Candace, and it was during this age that about 200 small steep-angled pyramids were built over burned or unummified remains.

A brief Roman occupation was represented by a bronze head of Roman workmanship, thought to be of Augustus, now in the British Museum. Hereupon followed, 10 B.C., a "late" period of artistic decline, lasting until A.D. 700, when Ethiopia was dominated by the Christian kingdom of Dongola, which endured for four centuries after Coptic Egypt adopted Islam.

**Merom, WATERS OF.** Ancient name for Lake Huleh, an expansion of the Jordan farther N. than the Sea of Galilee. It measures rather more than 4 m. by 3 m. A battle between Joshua and the Canaanites took place near by.

**Merostoma** (Gr. *meros*, part; *stoma*, mouth). Class of arthropoda between Trilobita and Arachnida. The king crab is the only surviving example. A fossil form found in rocks of the Cambrian and Permian age was shaped rather like a scorpion, and the number of remains proves that in the Silurian they were exceedingly numerous. See King Crab.

**Merovingians.** Name given to the family that ruled over France c. 500-c. 750. It is derived from a Frank named Merovech, a king of the Salian Franks. His descendant Clovis was the real founder of the Frankish kingdom, and a succession of Merovingians ruled over Austrasia, Neustria, and the other small Frankish kingdoms. As the last Merovingian kings were feeble rulers, their authority passed to the mayors of the palace. In 751 Pepin, with the consent of pope and people,

Meroë, Nubia. Hall of Columns in the ruined temple of Amon

deposed Childeric III and shut him up in a monastery. He was the last of the Merovingian kings, who were replaced by the Carolingians. See France: History; Franks.

**Merriam, JOHN CAMPBELL** (1869-1945). American palaeontologist. Born at Hopkinton, Iowa, Oct. 20, 1869, he was educated at the university of California and at Munich. He taught palaeontology at his own university, 1894-1920, and thereafter was president of the Carnegie institution at Washington until 38. He died Oct. 30, 1945. His published works include *Cave Exploration*, 1906; *Earth Sciences as the Background of History*, 1920; *The Living Past*, 1930; *Application of Science in Human Affairs*, 1938.

**Merrick.** Mountain in Kircudbrightshire, Scotland, 20 m. N. of Wigtown. Alt. 2,764 ft.

**Merrick, LEONARD** (1864-1939). British novelist. His family name was Miller, which

Leonard Merrick,  
British novelist  
Russell

he changed by deed poll. Born at Hampstead, Feb. 21, 1864, he was educated at Brighton College. In writing, his delicate irony and airy dialogue endeared him to fellow writers, and he was hailed by Barrie as "the novelist's novelist." Many of his stories had Parisian settings and were concerned with literary and theatrical characters. Best known are *The Actor-Manager*, 1898; *Conrad in Quest of his Youth*, 1903; *The House of Lynch*, 1907; *A Chair on the Boulevard*, 1908; *The Position of Peggy Harper*, 1911; *While Paris Laughed*, 1918. A collected edition of his works was issued in 1918, each novel having an introductory appreciation by a distinguished writer. Merrick wrote for the stage, *My Innocent Boy* (with G. R. Sims), 1898; *The Elixir of Youth*; *When the Lamps are Lighted*. He died Aug. 7, 1939.

**Merrie England.** Light opera by Basil Hood with music by Edward German. Notable for its sprightly and melodious music, it introduces Queen Elizabeth, Essex, Raleigh, and Burleigh among Tudor characters. Its most popular ballads include *O Peaceful England* and *The Yeomen of England*. Produced at the Savoy, London, April 2, 1902, it proved

one of the most successful light operas of its time. It has been several times revived, and is frequently performed by amateur companies. A concert version is sometimes performed.

The title was used for a book by Robert Blatchford which, in the form of letters explaining socialism to an imaginary working man, first appeared as a series of articles in *The Clarion*, a weekly founded and edited by Blatchford. These articles were collected and appeared in book form in 1894.

**Merrilies, MEG.** Character in Scott's novel *Guy Mannering*. "A kind o' queen among the gipsies," she was described by Jeffrey as "most akin to the witches of Macbeth, with some traits of the ancient sibyl ingrafted on the coarser stock of a gipsy of the eighteenth century." Her prototype was Jean Gordon, who was ducked to death at Carlisle for being a Jacobite.

**Merrill, STUART** (1863-1916). French-American poet. He was born in Long Island, New York, taken in early infancy to France and educated in Paris, and after a four years' course in law at Columbia university made his home in France. One of the noted writers of French lyric poetry of his time, he was described by a French critic as being in the line of great tradition from Ronsard and Verlaine. His poems, all published in Paris, included *Petites Poèmes d'Automne*, 1895; *Poèmes*, 1897; *Les Quatres Saisons*, 1900; *Une Voix dans la Foule*, *Poèmes*, 1909. His only volume in English was *From the French: Pastels in Prose*, 1890. He died Jan. 31, 1916.

**Merrimac.** American ironclad. Originally launched by the U.S. navy as a frigate, she was sunk by the Federal government, in the Norfolk Yards, on the outbreak of the Civil War, 1861. Refloated by the Confederates, she was renamed the *Virginia*. On March 9, 1862, she encountered the Federal ironclad *Monitor* in Hampton Roads, and after a sharp fight lasting four hours the *Merrimac* was finally silenced and driven off. She was sunk on the evacuation of Norfolk Yards, May 11, 1862.

**Merrimac** OR **MERRIMACK.** River of U.S.A. Rising in the White Mts. in New Hampshire, it flows S. for about 60 m. into Massachusetts, and thence E. for a further 40 m. to the Atlantic Ocean, which it enters near Newburyport. With its longest headstream it has a length of 180 m. and is navigable to Haverhill. Its

swift fall provides waterpower for many cities, especially Lowell, long a great textile centre.

**Merriman, HENRY SETON** (1862-1903). Pseudonym of Hugh Stowell Scott, British novelist. Born at Newcastle-on-Tyne, May 9, 1862, and educated at Loretto, he entered an underwriter's office in London. His first novel, *Young Mistley*, appeared in 1888, and the reception of *The Slave of the Lamp* and *From One Generation to Another*, 1892, induced him to leave the city. Thereafter followed in rapid succession *With Edged Tools*, *The Sowers*, *In Kedar's Tents*, *Roden's Corner*, *The Isle of Unrest*, *Barlasch of the Guard*, and several others. Though his characters tend to type, Seton Merriman had the story-telling gift to a high degree. His novels, which are for the most part of the romantic, historical type, early secure the reader's interest and hold it to the last. He died Nov. 19, 1903.

**Merrivale, HENRY EDWARD DUKE, BARON** (1855-1939). British judge. Son of a granite merchant, he was born in Devon, and as a young man became parliamentary reporter. Called to the bar in 1885, he joined the Western Circuit, and was recorder of Devonport and Plymouth, 1897-1900. He then entered politics, and was Unionist M.P. for Plymouth, 1900-06, and Exeter, 1910-18. Chief secretary for Ireland, 1916-18, he became lord justice of appeal in the latter year, and was president of the Probate, Divorce, and Admiralty div., 1919-33. Raised to the peerage 1925, he died May 20, 1939.

**Merry Andrew.** Term generally applied to a buffoon at a fair or other public gathering, or to anyone behaving like a buffoon. The name has been traced to a 16th century traveller and doctor, Andrew Boorde, who used to address crowds at fairs and other places in a ludicrous manner, but it is probable that the term a Merry Andrew is of earlier date.

**Merry Widow, THE.** Viennese light opera. Written by Franz Lehar, it was adapted for the English stage by Basil Hood, and produced at Daly's Theatre, London, June 8, 1907, running for 778 performances. Lily Elsie, Joseph Coyne, and George Graves took the

Lord Merrivale,  
British judge

leading parts. Its tuneful melodies, especially the waltz and Vilja, made it one of the most popular pieces of its kind, and it was many times revived. Adolf Hitler was reported to have an inordinate liking for the music.

**Merry Wives of Windsor.** THE. Farcical comedy by Shakespeare. Ford, a gentleman of Windsor, is seized with a groundless jealousy of his wife, Mistress Ford, of which she and her friend, Mistress Page, take advantage to bring discomfiture on Sir John Falstaff, who makes love to them both on account of the money he thinks he can obtain from them. The characters include Justice Shallow, Sir Hugh Evans, the Welsh parson, the Host of the Garter Inn, the foolish Slender, and "sweet" Anne Page, and Falstaff's followers, Bardolph, Pistol, and Nym. The Falstaff of this play is less attractive in his roguery than is the Falstaff of the historical plays: less of a wit, more of a fool. The scenes are laid at Windsor.

According to a tradition made current by Rowe in 1709, this play was written about 1598, because Queen Elizabeth, after seeing King Henry the Fourth (*q.v.*), wished to see Falstaff in love. The earliest extant edition is the quarto of 1602. As given in the 1623 folio, the play is almost twice as long as in the quarto. Critical opinion favours the theory of a lost original. Of the 3,018 lines in the usual editions, 2,703 are in prose.

Sources of the plot include the story of Lucius and Camillus in *Il Pecorone* of Ser Giovanni Fiorentino (1, 2), and two tales in *Le tredici Piacevoli Notti* of Straparola, of one of which an English version appeared in Tarleton's *Newses out of Purgatorie*; and *The Fishwife's Tale* of Brainford, in *Kinde Kit* of Kingston's *Westward for Smelts*. The bombast of Marlowe and Peele and Jonson's "humours" are believed to be satirised; and discussion has arisen over the supposed allusion to Sir Thomas Lucy in i, 1. The presentation of the buoyant domestic life of an Elizabethan country town bears distinctive marks of Shakespeare's own experience.

**Mersalyl.** Drug made by the action of mercurial acetate and methyl alcohol on salicylallylamide O-acetic acid and subsequent conversion to the sodium salt. It is used as a diuretic to get rid of excess fluid where a patient is suffering from liver trouble or heart failure, or from obesity due to poor elimination of fluid.

**Mersa Matruh.** Coast town of Egypt. It is 100 m. W. of Alexandria and was a strongpoint in the defence of Egypt during the North African campaigns of the Second Great War. Gen. Wavell concentrated large forces at this strategic centre against Graziani's army in the summer of 1940. When the Italians invaded Egypt on September 13, 1940, it was from Mersa Matruh that the Imperial forces launched their attack against Sidi Barrani on December 11. There were raids by Axis aircraft in June, 1942; Mersa Matruh was evacuated by the British forces on June 29, and the town was occupied by Rommel's troops. Armoured units of the 8th Army recaptured Mersa Matruh with little opposition, Nov. 8, during the advance that drove the Germans and Italians out of Libya.

**Mersea.** Island of Essex. It lies between the estuaries of the Colne and Blackwater, 8 m. S.E. of Colchester. It is nearly 5 m. long and 2 m. wide, and is connected with the mainland by a causeway. It was the scene of Baring Gould's *Mehalah*. West Mersea is a popular pleasure resort. Pop. 2,067.

**Merseburg.** Town of E. Germany, in the *Land* of Saxony-Anhalt. It is on the Salle, 16 m. W. of Leipzig. The cathedral dates from the 11th to the 16th century. The fine castle was originally built in 1480, and reconstructed in the 17th century. The bishopric was abolished in 1561, and its lands were assigned in 1648 to the elector of Saxony. There was in existence a small duchy of Saxe-Merseburg, 1656-1738, the duchy then reverting to Saxony, but in 1815 most of it was given to Prussia. During the First Great War many prisoners of war were interned here; during the Second Great War it was captured by units of the U.S. 1st army, April 15, 1945, suffering considerable damage especially in the harbour region. After Germany's surrender it lay within the Russian zone of occupation.

**Mersey.** English river. Formed by the union of the Goyt and the Etherow, in Derbyshire, and flowing generally W. between Lancashire and Cheshire, it enters the Irish Sea by an estuary 16 m. in length. From the right it receives the Tame, at Stockport, and the Irwell, and on the left its chief

Mersey. Map of the estuary or Liverpool channel which separates the counties of Cheshire and Lancashire

tributaries are the Bollin and the Weaver. Warrington lies on the right bank, and important towns along the estuary are Runcorn, Liverpool, Birkenhead, and Wallasey. At Eastham, on the estuary, is the entrance to the Manchester Ship Canal, and beneath the bed of the river, extending from Birkenhead to Liverpool, is the Mersey Railway Tunnel, opened in 1886, and a road tunnel, known as the Mersey Tunnel (*q.v.*), opened in 1934. The estuary, which varies in breadth from 1 m. to 3 m., is partly obstructed by sandbanks. Powerful dredgers are necessary to keep open the channel for the use of the largest liners. The total length is 70 m., including the estuary.

**Mersey, JOHN CHARLES BIGHAM, 1ST VISCOUNT (1840-1929).** British lawyer. Born Aug. 3, 1840, the son of a Liverpool merchant, he was educated at Liverpool and abroad. Called to the bar in 1870, he became a Q.C. in 1883, and in 1897 was made a judge of the high court. He became president of the probate, divorce, and admiralty division in 1909, but retired in 1910 with a barony, and in 1916 was raised to the rank of viscount. He was the commissioner appointed to inquire into the Titanic disaster in 1912, and into the loss of the Lusitania and Falaba in 1915. He died Sept. 3, 1929, and was succeeded by his son, Charles Clive Bigham (b. Aug. 18, 1872). The 2nd viscount was educated at Eton and Sandhurst, and commissioned in the Grenadier Guards. He became deputy chairman of committees of the house of lords in 1933, and chief Liberal whip there 1944-49.

1st Viscount Mersey,  
British lawyer  
Russell

deputy chairman of committees of the house of lords in 1933, and chief Liberal whip there 1944-49.

**Mersey Docks and Harbour Board.** Body set up in 1857 to control the docks and harbours of the Mersey. It took over those existing at Liverpool and Birkenhead, and has since greatly improved them on both sides of the river. In 1928 an extension was opened. The board consists of 28 members, four nominated, and the others chosen by those who use the ports. It maintains light-houses, lightships, and other aids to navigation, and has an annual revenue of about £5,500,000. The offices overlook St. George's landing stage. *See* Liverpool.

**Merseyside.** Dock areas of Liverpool and Birkenhead on both banks of the Mersey. Controlled by the Mersey Docks and Harbour Board, the docks at Liverpool have nearly 40 m. of quays, and those at Birkenhead about 10. Many attacks were made on Merseyside by German aircraft during the Second Great War, heavy damage being inflicted on five consecutive nights early in May, 1941. Acres of warehouses between Liverpool and Bootle were destroyed, and the pierhead area was devastated.

**Mersey Tunnel.** Tunnel for vehicular traffic under the Mersey. Begun in 1925 and opened in 1934,

it affords rapid communication between Liverpool and Birkenhead and links Lancashire with the Wirral peninsula. The main portion takes four lines of traffic abreast, and the total length is 2½ miles. Important features are the ventilation and lighting arrangements and a system of fire stations, placed at intervals of about 50 yds., with automatic fire alarms to stop the traffic. Its normal capacity is 4,150 vehicles per hour, and in 1947 over 4,000,000 people passed through it. At its deepest point it is 170 ft. below high-water level. The cost of the project was over £7,000,000.

**Mersina OR MERSIN.** Port of Asiatic Turkey. It is on the Mediterranean, in the vilayet of Icel, and is connected by rail with Tarsus and Adana. It exports timber, wool, cotton, and fruit. Population 30,000.

**Merthyr Tydfil.** Co. and mun. bor. and market town of Glamorganshire, Wales. It stands on the Taff, 24 m. N.N.W. of Cardiff and 184 m. from London, and is served by rlys. There is a service of municipal buses. The old parish church has been rebuilt, and there are many other ecclesiastical buildings, all modern; recent also are the town hall, drill hall, free library and general hospital.

Merthyr Tydfil

The grounds of Cyfarthfa Castle are public property, and the castle itself has been converted into a secondary school. Merthyr stands on the S. Wales coalfield, and has up-to-date factories besides its mines. The borough includes Dowlais, Cyfarthfa, Pen-y-darren, and Plymouth.

The village of Merthyr owed its name to a female saint, S. Tydfil, martyred in the 5th century. In 1759 ironworks were opened at Dowlais, and soon afterwards at Cyfarthfa, Plymouth, and elsewhere. As separate industrial villages these places expanded during the 19th century, and in 1905 they were united together in a bor-

Mersey Tunnel. A junction near the Liverpool end. The road to the left leads to the docks; the right to Kingsway, Liverpool, entrance. The tunnel was opened by King George V, 1934

ough. In 1908 Merthyr was made a co. bor. It has been represented in the house of commons since 1832; in 1948 it was made a borough constituency. Market day, Sat. Pop. est. 60,360.

**Merton, WALTER DE (d. 1277).** English prelate. His family was connected with Basingstoke. He was ordained 1235. Sent by Edward I on a mission to Rome, he was in 1261 made chancellor, and in 1274 bishop of Rochester. His chief fame is due to his foundation of Merton College (*q.v.*).

**Merton and Morden.** Urban dist. of Surrey, England. Formed 1911 from two parishes, it is a bor. constituency. It is well served by London Transport, Morden being the southern terminus of the Northern line (underground rly.). There are also rly. stations of the Southern region. The district, now mainly residential, has a long history. Cynewulf, king of Wessex, was murdered here in 784. An Augustinian priory was founded in 1115, near the river Wandle; it was dissolved in 1538. The great coun-

cil of the nation was held at Merton Priory in 1236, when the famous statutes of Merton were passed in reply to the attempt of the king and prelates to force upon the people the rule of canon law for the legitimization of children born before the wedlock of their parents. Crown property during 1538-1610, the priory in 1724 became the centre of a calico-printing factory. Material from the building was used in the construction of Merton Abbey. Merton Place, now no more, was the residence of Nelson and Sir William and Lady Hamilton. The Merton parish church of S. Mary, frequently restored, dates from 1120, and contains notable monuments. The Morden parish church of S. Lawrence was rebuilt in the Gothic style in 1636. A great L.C.C. housing estate, St. Helier, covering 850 acres, was developed here from 1927. Industries include engineering and toy and bank note making. Pop. 77,523.

**Merton College.** One of the colleges of the university of Oxford. It was founded in 1264 by Walter de Merton (q.v.) at Malden, Surrey, not being removed to Oxford until 1274. The buildings in Merton Street are among the oldest in Oxford. The large chapel, once a parish church,

Merton College arms

contains some beautiful work. The library of the 14th century is notable, and the small treasury is the oldest part of the college. Merton includes S. Alban Hall, incorporated with it in 1882, the buildings of which are also very old. There is a small but beautiful garden, enclosed by the city wall, and some new buildings. The college still retains property at Merton, Surrey. Its head is the warden, and its scholars are known as post-masters. Up at Merton were Steele, Lord Halsbury, Bishop Creighton, and Sir Max Beerbohm.

**Meru.** Mountain of Tanganika. It lies W. of Kilima-Njaro, at an alt. of 14,935 ft. On the slopes is Arusha, occupied by the British. March 20, 1916.

**Merv.** Town of Turkmen S.S.R. On the rly. from the Caspian to Central Asia, it is situated in an extensive oasis between the Oxus (Amu-Daria) and N.E. Persia. This is extremely fertile, producing abundant wheat, barley, rice, cotton, and melons. The town is on the river Murghab. The chief industry is agriculture; carpets,

silken stuffs, and silver ware are manufactured. Merv is of strategic importance, as it lies on the road to Persia and Herat. After being successively in Persian, Macedonian, Arab, Seljuk, Mongol, Uzbek, and Turkoman hands, it was surrendered by the latter to Russia in 1883. Since then a new town has sprung up on the opposite side of the river. In the summer of 1918 a Bolshevik force defeated the Allied Transcaspian troops in the district and captured Merv on Aug. 22.

**Méryon, CHARLES** (1821-68). French etcher. Born in Paris, Nov. 24, 1821, he was the son of an English physician and a French dancer. From the naval school at Rest he went to sea. It was not until 1846 that he adopted the artistic profession and settled in Paris. Colour-blindness preventing him from being a painter, he devoted himself to etching. He became a pupil of Bléry, and began work on the series of etchings of Paris scenes which afterwards made him famous. Symptoms of mental disease showed themselves in 1858-59 and Méryon was removed to the asylum at Char-enton. From 1866 he was again confined there, dying Feb. 13, 1868. Méryon produced a great many plates.

lish physician and a French dancer. From the naval school at Rest he went to sea. It was not until 1846 that he adopted the artistic profession and settled in Paris. Colour-blindness preventing him from being a painter, he devoted himself to etching. He became a pupil of Bléry, and began work on the series of etchings of Paris scenes which afterwards made him famous. Symptoms of mental disease showed themselves in 1858-59 and Méryon was removed to the asylum at Char-enton. From 1866 he was again confined there, dying Feb. 13, 1868. Méryon produced a great many plates.

**Mesa** (Span. from Lat. *mensa*, table). In geography, large, tabular, steep-sided blocks of land produced by the dissection of a plateau by the agency of rivers. The term is in common use in the great plateaux of the western states of the U.S.A. Further denudation reduces the mesa in size or detaches a part from the main mass. These smaller, flat-topped hills, known as buttes, are comparable with the tors of S.W. England and the kopjes of S. Africa.

**Mesa** or **LA MESA.** Town of Colombia, S. America, in the dept. of Cundinamarca. Beautifully placed in the midst of plantations, alt. 4,000 ft., it is 30 m. by rly. W. by S. of Bogotá. The surrounding district produces sugar, coffee, cocoa, and cereals, and there is trade in salt and hats.

**Mesa de Herves.** Mountain of Colombia, in the Andes, near Bogotá. A table-topped mass, its slopes are snow-covered all the year round. Its height is 18,350 ft.

**Mesaticephalic** or **MESOCEPHALIC** (Gr., medium-headed). Term usually describing human heads and skulls whose breadth is between three-fourths and four-fifths of their length. They are

Charles Méryon. Pont Notre Dame, 1852. One of this artist's etchings of Paris views

thus intermediate between long-headed (see Dolichocephalic), and round-headed, with a cephalic or cranial index from 75 to 80. Mesoccephalic designates medium skull-capacity (1,350 to 1,450 c.c.). Medium-headed forms are found among the Ainu, Tasmanians, Copts, Chinese, and some N. and S. American Indians. See Man.

Merton College, Oxford. Quadrangle, showing the hall and tower of strength

**Mescal.** Name of a kind of brandy distilled from pulque, which is the fermented sap of the American aloe. See Agave.

**Mescal Button** (*Anhalonium lewinii*). Succulent plant of the family Cactaceae, native of Mexico and Texas. It is interesting chiefly on account of its power to produce visions after the manner of hashish (*q.v.*), though of a different character. The chewing of mescal is an old practice of the Kiowa Indians in their religious ceremonies, and the rite has spread to the other tribes of the southern plains of the U.S.A. Weir Mitchell, Havelock Ellis, and others have recorded their experiences when under its influence.

**Mesdag, HENDRIK WILLEM** (1831-1915). Dutch painter. Born at Groningen, Feb. 23, 1831, he was at first engaged in commerce, but on the advice of Josef Israels took up painting and studied under Alma-Tadema in Brussels. Afterwards he devoted himself to marine painting. He lived at The Hague, but most of his time was spent at Scheveningen and other seaside resorts, where the sea and its ships occupied his brush. His art is sober in colour, but intensely naturalistic. Died July 10, 1915.

**Mesembryanthemum** (Gr. *mesēmbria*, noon; *anthos*, flower). Large genus of plants of the family Ficoideae. Mostly natives of S. Africa, they have succulent leaves and bear pink or white flowers suitable for culture in the rock garden. They thrive best in a light soil and sunny aspect, and are a striking feature of the Scilly Isles. *M. crystallinum* is the well-known ice plant. See Ice-Plant.

**Mesentery.** Fold of peritoneum which attaches the intestine to the posterior abdominal wall.

**Mesh.** Term used generally to describe all screens used as sieves. It has a particular application in powder metallurgy, being defined as the screen number of the finest screen of a specified standard scale, through which all of a powder sample will pass. All metal powders must be carefully sized before mixing before the pressing and sintering processes. See Powder Metallurgy.

**Mesha.** King of Moab about 850 B.C. On the death of Ahab of Israel, he withheld his annual wool tribute (2 Kings 3). He was besieged by Jehoram of Israel in Kir (Kerak), and sacrificed his son to Chemosh. A contemporary inscription records these campaigns from the Moabite standpoint. See Moabite Stone.

**Meshcheryak.** People of Finnish stock in E. Russia. Now numbering about 180,000, they migrated in the 15th century from the Oka basin. The E. branch, near Ufa and Perm, rank in name, customs, and religion as Bashkirs, although broad-faced and blond-haired. The W. branch, near Saratov, is more Russified.

**Meshed, MESHED, OR MASHHAD.** Town of Persia. The capital of the prov. of Khorassan, it is regarded as a holy city by the Shia Mahomedans, because it contains the tomb of the Imam Riza, the son of Ali, and therefore the grandson of the Prophet. The dome, minaret, and interior of the portico of his shrine are covered with gold plate on copper, and with coloured arabesques and inscriptions from the Koran written upon medieval tiling of superb workmanship. Until 1936 no unbeliever was allowed within the precincts, but the place is now open to all. Situated in a fertile plain, Meshed trades in carpets, silks and shawls, and a sword-making industry. It has a court of appeal. It derives much of its prosperity from pilgrimages to the Imam's mausoleum, visited each year by upwards of 200,000 Shiites. Population 176,000.

During the First Great War Meshed was occupied by the British in 1918 to protect the Transcaspien rly., a short distance N. of the town, from Bolshevik attacks. An East Persian cordon field force was constituted, and a motor road built from Duzdarp, Baluchistan, to Meshed and thence to Ashkhabad. The whole enterprise cost nearly £100,000,000. Meshed was abandoned in 1920. In the Second Great War it was a vital staging point on the route by which motor transport carried supplies from India to Russia. The town was occupied by Soviet troops, 1941-46, and was the scene of severe fighting during the Persian revolt after the war.

**Mesitylene** OR SYMMETRICAL TRI-METHYL-BENZENE. Light oil hydrocarbon obtained from coal-tar. It is also prepared by distilling acetone with sulphuric acid, or by dissolving methyl acetylene in sulphuric acid and distilling with water.

**Mesmer, FRIEDRICH ANTON (OR FRANZ)** (1734-1815). German physician, inventor of mesmerism. Born at Iznang, Baden, May 23, 1734, he graduated M.D. in Vienna. Dabbling in astrology and electricity, he invented "animal magnetism" and apparently discovered hypnotism, though it was not yet

so called. In 1766 he published his first work (in Latin) on the Influence of the Planets on the Human Body. Meeting Gassner, who effected cures by manipulation, Mesmer discarded magnets, and in Paris from 1778 he undoubtedly cured many people by self-suggestion; but he used much

F. A. Mesmer,  
German physician

nummery and was denounced as an impostor by the faculty. Nevertheless he had a great success, and scientific investigation of the phenomena connected with his practices led to the rediscovery of hypnotism. He died at Meersburg, March 5, 1815.

**Mesmerism.** Name given to a method of producing a trance or sleep, first practised by the above Franz Mesmer. Early attempts at mesmerism were a combination of trickery and charlatanism, and the later scientific study of the process has become better known under the name of hypnotism. Mesmer, who undoubtedly discovered some of the rudiments of hypnotic processes, believed that an occult force pervaded the universe and was one which, properly controlled, had a great effect on the nervous system of human beings. His consulting-rooms were always dimly lighted, hung with mirrors, and filled with the scent of burning chemicals, Mesmer himself dressing as a magician. The way Mesmer produced his effects was copied by swindlers and tricksters of all kinds, with the result that mesmerism fell into disrepute until the subject began to be scientifically studied towards the end of the 19th century. See Hypnotism; Magic.

**Mesme Process.** In old English law, those writs which were issued in an action between the first and the last process, i.e. between the first writ and the writ of execution. The Debtor's Act, 1869, finally abolished arrest on mesme process, except that a person who owes £50 or more can be arrested, if it be shown that he is about to escape out of the jurisdiction to avoid his liability. *Pron. mean.*

**Mesne Profits** (Lat. *medius*, intermediate). Rents and profits of an estate accruing to an occupier remaining in unlawful possession, e.g. after the expiry of a lease. An action of mesne profits is an action of trespass brought by the true

owner to recover the rent and profits which the trespasser has, or might have, made during his improper occupation. It may be joined with an action for recovery of the estate, or brought after an order of ejectment. A claim for mesne profits is unliquidated, and damages may be given, from which ground rent paid by the tenant should be deducted.

**Mesocephalic.** See Mesaticephalic.

**Mesoderm.** In embryology, the middle germinal layer of an embryo. In all organisms which possess two or more definite tissues arising from the fertilised egg, the embryo forms three separate layers, an outer, inner, and middle, the mesoderm or mesoblast. The cavity which results from the dividing of the mesoderm becomes the body cavity. See Embryology.

**Mesolithic** (Greek, *mesos*, middle, *lithos*, stone). Term used to connote the period in human culture between the end of the Palaeolithic period, which closes with the Pleistocene of the geologists, and the rise of the Neolithic culture when man began to grow his food. The Mesolithic is the age in which man adapted himself to the change from glacial to temperate and forest conditions. The chief Mesolithic cultures of Europe are: Azilian, Tardenoisian, Asturian, Maglemosian, Kitchen Midden, and Campignian.

**Meson.** In physics, a fundamental particle predicted by Yukawa to account for observed beta-ray disintegration effects. Subsequent cloud chamber photographs have revealed the existence of particles with higher penetrating power than electrons and possessing various masses which average about 200 times that of the electron. The charge of a meson is equivalent to that of the electron, but it may be positive or negative. It has a short life. Artificial mesons were first produced in 1948 by the giant cyclotron in the laboratory of California university.

**Mesophyll** (Gr. *mesos*, middle; *phyllon*, leaf). Spongy ground tissue of leaf structure lying between the upper and the lower layers of epidermal cells. It consists of soft-walled cells filled with protoplasm, in which are numerous chlorophyll granules and a more solid nucleus. The upper layers of mesophyll consist of elongated palisade cells packed closely together side by side. The lower layers, or spongy parenchyma, are loosely disposed, so that there are considerable air spaces

between them, communicating with the stomata or breathing pores, permitting respiration. See Cell; Leaf; Stomata.

**Mesopotamia** (Gr. between the rivers). Greek translation of the Semitic name for the district between the Euphrates and the Tigris. In the O.T. (Gen. 24, v. 10) it appears as Aram Naharaim, i.e. Syria of the rivers. Originally the name of the region N.W. of Bagdad, the term Mesopotamia was extended to the whole area known since 1919 as Iraq (*q.v.*).

Current knowledge of ancient Mesopotamian history is due mainly to the spade. Between 1811-28 the English travellers C. J. Rich, Buckingham, Ker Porter, and Mignan, attracted by the Biblical sites, first stirred popular interest in the country. Later came the surveys of Chesney (1835-37) and Felix Jones (1846-50) and the excavations conducted by P. Botta at Khorsabad and Henry Layard at Nineveh Calah (Nimrud) and Babylon in the 1840s. Subsequent excavations by scholars of many nations have uncovered other important sites, including Lagash, Nippur, Agade (Accad), and Ur. Among the most important discoveries have been the cuneiform texts, abundant on all sites, but especially in the great libraries of clay tablets preserved in the palaces of the Assyrian kings. The cuneiform records have furnished us the annals of kings and cities, codes of laws and details of administration, as well as regulations concerning religious observances, and poems and legends such as the Epic of Creation found on both Assyrian and Babylonian sites.

From 1900 to 1916 the German Oriental Society carried on excavations on the site of ancient Asshur, now called Kala Shergat (Qal a Shergat) and made many important discoveries. The most important of these was an Assyrian code of law containing about 100 laws which, however, make it evident that the complete code was much longer. The exact text is inscribed on three tablets belonging to about 1500 B.C. It is a harsher and less humanitarian code than that of Hammurabi (*q.v.*). Masters have much more power over servants, husbands over wives, fathers over children, than in the Babylonian and Biblical codes. The phrase "may do as they like" occurs constantly when the subject is the punishment to be meted out to a servant. In one particular, however, the Assyrian code is more humanitarian, i.e. in the case

of a widow. Mutilation as a punishment is common in the Assyrian law book often for trivial offences. Money fines bulk largely in both codes. Forced labour is a form of punishment in the Assyrian, but not in the Babylonian code.

Mesopotamia is divided into two main regions, the S. part, ancient Babylonia, extending from Hit to the Persian Gulf and itself divided into the upper and lower sections of Akkad, primarily Semitic, and Sumer, primarily Sumerian, and the N. uplands, ancient Assyria, with Nineveh (near Mosul on the Tigris) at its centre.

#### Earliest Civilization

Although traces of Palaeolithic man have been found in Palestine, the earliest occupation of Babylonia appears to have been Neolithic. Explorations on behalf of the British Museum in 1918 at Eridu, Ur, etc., showed that the earliest occupants of S. Babylonia were of the same race as the earliest peoples of Elam, closely connected with those of Anau, 300 m. E. of the Caspian. This Elamitic people of S. Babylonia was dispossessed by Sumerian invaders, probably from a mountainous N. district, who were in occupation of the S. delta certainly in the 4th-3rd millennia B.C. The Sumerians were the inventors of cuneiform writing, and are the first people known to have used the potter's wheel. There was early connexion with Egypt, shown by such finds in both areas as mace-heads, seal-cylinders, etc., and Egypt seems to have owed some elements of its civilization to the Sumerians. After the Sumerians came the Semites from Arabia, who established themselves in Akkad, and these gradually absorbed Sumerian civilization and writing.

About 3000-2500 B.C. Babylonia was divided between numerous city-states, warring with each other, building temples, and carrying out reforms. Certain cities at times exercised overlordship; in c. 2890 B.C. the Sumerian city of Erech dominated the whole land as far as the Mediterranean; a generation later the Semitic Sargon of Akkad became supreme; Sumerian Ur united Sumer and Akkad about 2465.

A second wave of Semites (the Canaanite or Amorite) swept down on Babylonia at the end of the third millennium, and established the first dynasty of Babylon of which the most remarkable figure is the conqueror and law-giver Hammurabi (2123-2081 B.C.), whose code of civil and criminal

law, the earliest known code of laws, has been discovered.

The Hittites of Anatolia made a great raid on Babylonia in the 20th century B.C. Two hundred years later this was followed by the descent of the Kassites (*q.v.*) from the E., who conquered Babylonia and held it for 600 years until c. 1177 B.C., although the S. remained Sumerian for part of this period. These upheavals resulted in an overflow of Palestine into Egypt, when the Hyksos (c. 1800 B.C.) invaded the Nile lands, to be dispossessed by the Egyptian king Aahmes I, in the 16th century. The subsequent campaigns of Thothmes III against the Hittites in N. Syria culminated in the defeat of the Hittite armies at Kadesh by Rameses II, in the 13th century. In the 14th century a third Semitic wave, the Aramaeans, established a kingdom in N. Syria.

#### Assyrians and Persians

After the wars with Babylonia in the 13th century Assyria became the dominant power of E. Mesopotamia, under Tiglath-Pileser I, c. 1100 B.C., but suffered an eclipse for more than 100 years. Then she rose again under Ashurnasir-pal, 884-860 B.C. and Shalmaneser, 860-825 B.C., and for 200 years more she was mistress of an empire which spread even to Egypt. The crash came in 612 B.C., when Cyaxares of the Medes and Nabopolassar of Babylon destroyed Nineveh, and with it the kingdom. Babylon then had a brief revival culminating in the reign of Nebuchadnezzar II, until 539, when it was captured by Cyrus, and Persia became dominant.

The Persian empire, of which Babylonia was one of the chief parts, lasted until the invasion of Alexander the Great, who defeated Darius III in 333 at Issus and 331 at Arbela near Nineveh; his death at Babylon in 323 was followed by wars, but by 312 Seleucus, one of his chief generals, secured the central part of his empire, including Mesopotamia. The Parthian Arsacid dynasty, after revolting from the Seleucids in 249, ultimately defeated them in 129. Rome, about 66 B.C., became involved in wars with Parthia. In A.D. 115 Trajan advanced into Mesopotamia, but was compelled to retreat. The Parthian dynasty came to an end in A.D. 226, and the Sassanids became overlords of Persia and threatened even India at this time. Then followed a long series of wars with Rome; in 363 Julian the Roman emperor defeated the Persians near Ctesiphon, but was forced to retire.

About the 6th century the Turks began to appear in Persia. In 637 the Persians were decisively beaten at Cadesia by the Arabs, who in the next year annexed Mesopotamia. Basra and Kufa were founded in 638, and the Sassanid period ended in 632. Henceforth the Arabs ruled Mesopotamia for 400 years, and under the Abbasids Bagdad absorbed the hegemony.

But the Seljuks (originally from Turkistan) overran the land in the 11th century. Again, after the death of Jenghiz Khan in 1227, another Mongol wave broke in, and with the capture of Bagdad by Hulaku in 1258 came the end of the Abbasid caliphs. It was invaded again, by Tamerlane (or Timur) 1393-94. For a hundred years it was disputed indecisively between Persia and Turkey, under whose suzerainty it passed in 1516, and so remained until the Turkish defeat in the First Great War.

## MESOPOTAMIA CAMPAIGN OF 1914-18

*This general sketch of British fighting on one of the so-called "minor" fronts of the First Great War is supplemented by articles on the various engagements of the campaign, e.g. Bagdad; Kut. See also First Great War*

The Mesopotamian Expeditionary Force left India on Oct. 16-18, 1914, to rendezvous at Bahrein. On Nov. 6, within a week of the entry of Turkey into the war, a force landed and occupied Fao fort and town. The main advance began Nov. 17. Basra fell on Nov. 21, Kurna on Dec. 8.

A critical period followed, while the Turks were concentrating on the Euphrates for a thrust to recapture Basra, but they were routed at Shaiba, April 12-14, 1915. This victory enabled the British to deal with enemy detachments on the Tigris and the Karun. With the capture of Amara, on the Tigris, June 3, the main objects of the expedition were achieved. The British held the delta of the Shatt-el-Arab, and were thus in a position to protect the Anglo-Russian oilfields at Ahwaz, and to safeguard the gulf, and close to Germany her main route to India. But political considerations required the force to be moved on towards Bagdad. The advance of Maj.-Gen. Townshend and his 6th div. added lustre to the Indian army. It included the victory at Kut-el-Amara, Sept. 29, and culminated, Nov. 22-25, in the fighting at Ctesiphon, 18 m. from Bagdad, when the force annihilated a Turkish division. But the division was too thinned to hold the position against Turk-

ish reinforcements, and Townshend was obliged to fall back on Kut. Two Indian divisions moved from France were detailed to reinforce Townshend but had not completed embarkation when news of Townshend's investment arrived. This relieving force under Gen. Aylmer advanced from Ali Gharbi on Jan. 5, 1916; but one of the divisions was virtually immobilised in actions at Sheikh Saad, the Wady, and Umm-el-Henna, Jan. 7, 13, and 21. Transport broke down and troops were thrown into the attack as they arrived.

#### Attempt to Relieve Kut

Up to this time the campaign had been directed by the govt. of India. In Feb. the War office took it over. Townshend reckoned that he had sufficient supplies in Kut to hold out until the end of March. But to reach Kut the British had either to force the strong Turkish position of Umm-el-Henna, between the river and a wide marsh, or work round to the Turkish rear on the right bank of the river. The latter course was adopted. The attack began on March 8, and the next six weeks were spent in repeated attempts to break through Turkish defences. Aylmer was replaced by Gorrington on Mar. 12, and Umm-el-Henna was evacuated by the Turks on the night of April 4-5, falling back on a new position at Sanna-i-Yat, a few

miles in the rear. The British were faced with the same problems as before, and the difficulties were now increased by floods. Three desperate but ineffectual assaults were made by troops floundering in water, their rifles jammed with mud. Further sacrifice was averted by the fall of Kut, with the surrender of 3,000 British and 6,000 Indians starved after an heroic defence of nearly five months. The relieving force had lost nearly 22,000 men.

Gen. Maude succeeded to the command, Aug. 16, and took the field in Dec. in an attempt to open the road to Bagdad. After two months of continuous fighting against a stubborn defence, the British drove the Turks from their elaborate trench system on the right bank of the river, and a crossing was effected on Feb. 23, 1917. Sanna-i-Yat was forced, the river made free for navigation, and the door to Bagdad made open. The Turkish commander, Khalil Bey, ordered a general retirement. The pursuit was hotly pressed. The Turkish rear-guard stood at the Diala, but a Lancashire brigade forced the passage in a gallant action, and the British entered Bagdad on March 11.

#### Securing the Position

But the city was not secured until Turkish points on the Tigris, Euphrates, and Diala were carried. Columns pursued the Turkish army corps on both banks of the Tigris, a third column moved to the Euphrates, and a fourth advanced by the Diala over the Jebel Hamrin range to cut off a Turkish corps which was falling back over the Persian border from attacks by Russian forces. The advance of this column cleared Persia of the Turks, but the retiring Turkish corps was able to extricate itself from the British pursuit and attempted to link itself with the left bank column of the Turkish corps on the Tigris. After a series of hard-fought minor actions it was finally routed in the sanguinary battle of Band-i-Adhaim, April 30.

Meanwhile the British column on the right bank of the Tigris had advanced, during decisive victories at Mushediya, March 14, and Istablat (April 21-23). The latter action gave Maude the Turkish railroad at Samarra and thus secured his hold on Bagdad.

British gains were extended during the winter of 1917-18. On the Euphrates they inflicted two crushing defeats on the Turks at Ramadie (Sept. 29) and Khan

Bagdadi (March 27, 1918), the enemy force on each occasion being almost entirely captured. But meanwhile the defection of Russia had opened to Germany an easier line of penetration to the East by way of the Caucasus, and the British were obliged to counter this move by the establishment of posts in Persia and communications to the Caspian sea. Her attempt to save Baku from the Turks by a small force sent to the assistance of the Russian and Armenian garrison (Aug.-Sept., 1918) failed, but the thin line between Bagdad and the Caspian was thereafter held intact.

#### End of the Campaign

Gen. Maude, who died of cholera in Bagdad, Nov. 18, 1917, was succeeded by Gen. Marshall. During the spring and summer of 1918 the force was mainly engaged in settling and developing the country, but the British military campaign was brought to a brilliant close in the autumn with an advance on Mosul. Kirkuk was re-entered on Oct. 24; Kala Shergat, 50 m. S. of Mosul, was captured Oct. 28; and on the following two days Marshall defeated the Turks a few miles further N. in a decisive battle, destroying or capturing their entire forces. Turkey was granted an armistice on Oct. 30, and Marshall occupied Mosul on Nov. 3, 1918.

There was strong criticism of the details of the campaign. A very small Turkish force, with good interior lines, was able to contain a very considerable British force, and it was argued that the latter should have cut their losses after the fall of Kut, and delivered the counter-stroke nearer the heart of the Turkish system. The Turks depended for munitions on all their fronts on the single rly. line from Constantinople to Aleppo, and if the British had taken Aleppo they could have held the delta of the Shatt-el-Arab with a single division. The British troops N.E. and W. of Bagdad did not materially help Allenby's army in Palestine.

On the other hand, when the British struck at Bagdad they were counting on simultaneous pressure by the Russian army in the North as the upper half of a pincer movement; but the Russian arm was paralysed. The occupation of Bagdad immensely increased British prestige, secured Persian neutrality, weakened the fanatical influences at work in Afghanistan and on the Indian border, and averted a Pan-Islamic conflagra-

tion which might have created a dangerous situation in India. Possibly the chief vindication of the forward policy is that it established British command of communications between Bagdad and the Caspian. *Consult* Official History of the Great War—The Campaign in Mesopotamia, F. J. Moberly, 4 vols., 1923-27; also The Long Road to Bagdad, E. Candler, 1919; War in the Garden of Eden, K. Roosevelt, 1920; My Campaign in Mesopotamia, Maj.-Gen. Sir C. V. F. Townshend, 1920.

**Mesothermal Deposits.** In mining geology, a class of mineral deposits. They are formed from ascending thermal solutions under intermediate temperatures and pressures, the solutions having a genetic connection with igneous rock formation. Deposits are generally found in sedimentary or metamorphic rock near the parent igneous rock, which may or may not be exposed. The temperature of their formation is taken to range from 175° to 300° C. The pressure is generally related to the depth of deposition, which ranges from 4,000 to 12,000 ft. below the original surface.

Important deposits in this group include those of gold (California and Cordilleran region, U.S.A.; Bendigo, Australia); silver-lead (British Columbia; Colorado); silver-lead-zinc (Idaho, U.S.A.); copper (Butte, Montana; Rio Tinto, Spain); and others. The ore minerals consist of sulphides, arsenides, and sulpharsenides of the metals; the predominant gangue minerals are quartz and the carbonates. They occur both in the vein and in the adjacent wall rock. Replacement of one mineral by another is common in the veins; the vein minerals may show banding and occasionally colloform structures. *See* Comb Structure.

**Mesozoic Era.** In geology, one of the main divisions of time. It came between the Palaeozoic and the Cainozoic eras, and is divided into three periods, the Triassic, Jurassic, and Cretaceous. Mesozoic rocks are found in Great Britain, Europe, and N. America, and are chiefly limestones. The era was one of giant reptiles, and during this period mammals and birds came into existence, and cycads, conifers, and ferns were the chief flora.

**Mesquite.** Variant spelling of Mezquit (*q.v.*), American tree.

**Mesrob** or **MESROP**, MASHDOTS (c. 354-441). Inventor of the Armenian alphabet. He was a

prelate of the Armenian Church, active in repressing idolatry and heresy. In 406 he compiled the Armenian alphabet, probably from Greek and other sources, consisting originally of 36 letters, to which two have since been added. He directed the preparation of the first Armenian version of the Scriptures.

**Mess.** Term originally meaning a dish of prepared food, sent to the table (*cf.* a mess of pottage). It is now applied to the quarters in which groups of people take meals together, particularly in the armed forces—officers' mess, sergeants' mess, etc. In general the word covers ante-rooms, etc., attached to the dining quarters, and is used by extension to describe the body of members who use the mess. Originally a mess in this sense was a group of four people who were helped from the same dish, and in London's Inns of Court this number is retained.

**Messenger, André Charles Prosper** (1853–1929). French composer. Born at Montluçon,

André Messenger,  
French composer  
H. Manuel

Dec. 30, 1853, he studied under Saint-Saëns, and became a church organist in Paris, but soon was composing for the stage. His first comic opera, *La Fauvette du Temple*, was produced in 1885. Of many light operas the best-known include *La Basoche*, 1890; *Les P'tites Michus*, 1897; *Véronique*, 1898 (popular in England and the U.S.A.); *Fortunio*, 1907; *L'Amour Masqué*, 1923. He also composed music for an English operetta, *Monsieur Beaucaire*, 1919. His three-act ballet, *Les Deux Pigeons*, 1906, was long in the repertory of the Paris Opera, of which he was artistic director 1907–13. A similar post had been held at Covent Garden, 1901–06. Messenger's music is notable for elegance of texture. He married Hope Temple, composer of ballads. He died Feb. 24, 1929.

**Messageries Maritimes de France.** French steamship line. Originally founded as the Messageries Impériales in 1851, it served Mediterranean ports, but later extended its activities to India, Indo-China, China, Australia, E. Africa, Madagascar, and S. America. In 1921 the Société des Services Contractuels des Messageries Maritimes was formed to

operate the passenger services, but the Compagnie des Messageries Maritimes remained in charge of the whole fleet. Heavy losses were suffered in both Great Wars, more than 60 p.c. of the fleet being destroyed in the Second. By 1947,

however, all pre-war services had been resumed and a cargo service to S. Africa inaugurated. The head office is in Paris.

**Messalina, VALERIA** (ex. A.D. 48). Roman wanton. Wife of the Roman emperor Claudius and

mother of Britannicus, she dominated her weak husband and, with his freedmen Pallas and Narcissus, virtually ruled the empire. Matters came to a crisis when the empress, notorious even in her day for licence, having become enamoured of Gaius Silius, openly married him. Narcissus, fearing for his own position, opened the eyes of Claudius to his wife's character, but only with difficulty did he convince the emperor that the pair were plotting against his (the emperor's) life. Claudius then ordered Messalina to be put to death.

**Messalla Corvinus, MARCUS VALERIUS** (d. c. 1 B.C.). Roman statesman, soldier, and man of letters. He joined the republican party and fought with distinction at the battle of Philippi, 42 B.C. Subsequently pardoned by Octavian, he rendered him valuable services in his struggle to obtain the mastery of the Roman world. Soon after Octavian became the emperor Augustus, Messalla retired into private life. An author of some note, he was a generous patron of letters.

**Messenia.** Country of ancient Greece, in the S.W. of Peloponnesus, bounded N. by Elis and Arcadia, and E. by Laconia. Its inhabitants were Dorians, with a blend of pre-Dorian elements. The history of the country is largely a long series of wars with the neighbouring Spartans, who conquered it towards the middle of the 7th century B.C. A large portion of the inhabitants emigrated, and the remainder were reduced to the condition of helots. In 464 B.C. they revolted, and after holding out for five years were allowed to emigrate

to Naupactus. After the battle of Leuctra had broken the Spartan power in 371, Epaminondas collected the Messenians from their places of exile and re-established them in their country, founding the city of Messene as their capital. With the Roman conquest of Greece in 146, Messenia became part of the province of Achaia.

**Messenia, KALAMATA, OR KORONI, GULF OF.** Inlet of the Mediterranean which indents the S. coast of Morea, Greece. About 25 m. long, it is at the mouth about 35 m. across, and is separated from the Gulf of Laconia on the E. by a peninsula of which Cape Matapan is the termination. The seaport of Kalamata lies at the head.

**Messerschmitt, WILHELM** (b. 1898). German aircraft designer. Educated at Munich, he founded his own manufacturing company at Augsburg in 1923. With the advent to power of the Nazi party, his designing genius was allowed full expression, and in 1937 he was elected honorary professor and a member of the war council. The Me 109 single-seat fighter (*see* Aeroplane illus., p. 132) flew in the Spanish Civil War. In April, 1939, a racing version reached the then record speed of 481 m.p.h.; in 1944–45 the standard Me 109G, with full war load, including three 20-mm. cannon and two machine-guns, could attain 428 m.p.h. and fly in action at nearly 40,000 ft. The engine was a Daimler-Benz D.B. 605. Other outstanding Messerschmitt products were the Me 110, 210, and 410, all twin-engined fighter bombers; the rocket-propelled Me 163, fastest aircraft of the Second Great War (over 550 m.p.h.); and the 262 twin-engined fighter, most successful of German jet-propelled machines.

**Messiah** (Heb. *Mashiach*, one anointed). Title for an expected leader of the Jews, who should deliver the nation from its enemies and secure its permanent triumph and peace. It is equivalent to the Greek word, Christ. The ceremony of anointing was used in O.T. days in the consecration of a man for the office of king, priest, or prophet, who by this ceremony became the representative and agent of Jehovah.

The Messianic idea is implicit in early prophecy, and took definite shape in those of Isaiah and Micah during the period of Assyrian aggression. Its fully developed form dates from about

Messalina,  
Roman empress  
From a coin

the period of the Exile. Prophecies of the period indicate that the Messiah should be at once a prince, prophet, and victorious captain. Whether the description of Deutero-Isaiah of the suffering servant of Jehovah refers primarily to the nation or to an individual is much disputed, but in any case the essential idea of world-salvation through vicarious suffering formed thenceforth an element in the Messianic idea. The remarkable fulfilment of these prophecies in the Person and Work of Jesus was put forth early in the history of Christianity as a convincing proof that He was the promised Messiah; hence the universally accepted title of the Christ.

**Messiah.** Oratorio by Handel. Set to texts from the Bible arranged by Charles Jennens, it was composed Aug. 22-Sept. 14, 1741, and received its first performance on April 13, 1742, in Dublin, for charity. The work has always been held in peculiar affection in England. In three parts, dealing broadly with the prophecy of Our Lord's coming, His passion, and the redemption of the world, it runs through a range of emotions scarcely paralleled in music, allotting to the solo singers (customarily four), the chorus, and the orchestra, the expression of every mood from ecstatic joy to passionate grief. Extra accompaniments have been added by Mozart and others, but now the tendency is to revert as far as possible to Handel's own scoring. See *Hallelujah Chorus*; Handel. Consult *Messiah*, J. Herbage, 1948.

**Messianic Hope, THE.** Term used in Hebrew and Christian theology. It is applied to the expectation, constantly expressed in the O.T., that a king of the house of David would arise to deliver Israel from oppression; and to the anticipation by Christians of the second coming of Jesus Christ, whom they recognize as the true Messiah. See *Messiah*; consult *The Jewish and the Christian Messiah*, V. H. Stanton, 1886; *Messianic Prophecy*, C. A. Briggs, 1886.

**Messidor.** Tenth month in the year of the French Revolutionary calendar. It began on June 19 or 20, its name meaning the month of harvest.

**Messina.** Maritime prov. of N.E. Sicily. It is bounded N. by the Tyrrhenian Sea, and separated from Italy on the E. by the Strait of Messina. The surface is wholly hilly, and is traversed by moun-

tain ranges falling N. and E. to the sea, the only rlys. clinging to the coast. The highest point is Monte Sori, alt. 6,055 ft. Messina is the capital, other important towns being Milazzo, Barcellona, and Caronia, all on the N. coast. The chief products include sulphur, copper, corn, flax, fruit, oil, and wine. Area, 1,254 sq. m.

**Messina** (anc. *Zancle*, *Messana*). City and seaport of Sicily, capital of the prov. of Messina. It stands

Messina City arms

on the Strait of Messina in the N.E. of the prov., 70 m. N. by E. of Syracuse. The harbour is one of the best in Europe. The town is backed by mountains, and from its streets fine views can be obtained of the Calabrian mainland, as the strait is here only about 2 m. wide. The roads are wide and paved with lava. Always subject to seismic disturbance, and devastated by plagues, Messina has yet remained a handsome and prosperous city. It was almost completely destroyed in 1908 by the disastrous earthquake of Dec. 28, with a loss of 77,000 lives. Some façades of churches and palaces were left. The wrecked cathedral had been founded in 1098, and finished by Roger II. Rebuilding had brought the city by 1936 back to a pop. of 195,958.

Messina formerly ranked next to Palermo in Sicilian importance. The normal exports are wine, oil, essences, pumice stone, oranges, lemons, and liquorice. Manufactures have included silk, muslin, linen, chemicals, and coral articles. Fishing is important.

Founded about the 9th century B.C., the city was first named Messene by Anaxilas of Rhegium, who occupied it about 490 B.C. It fell successively to Athens, Carthage, and the Mamertines, and became the cause of the first Punic war, Rome capturing it in 241 B.C. It was taken by the Saracens in 830, and by the Normans in 1062. A century later it passed to the house of Hohenstaufen, and late in the 13th century to Spain, which retained it until 1713. British troops occupied the city for several years before the peace of 1814. In 1848 it was taken by Neapolitan troops. From Messina the German cruisers Goeben and Breslau, escaped into the Dardanelles, Aug. 1914.

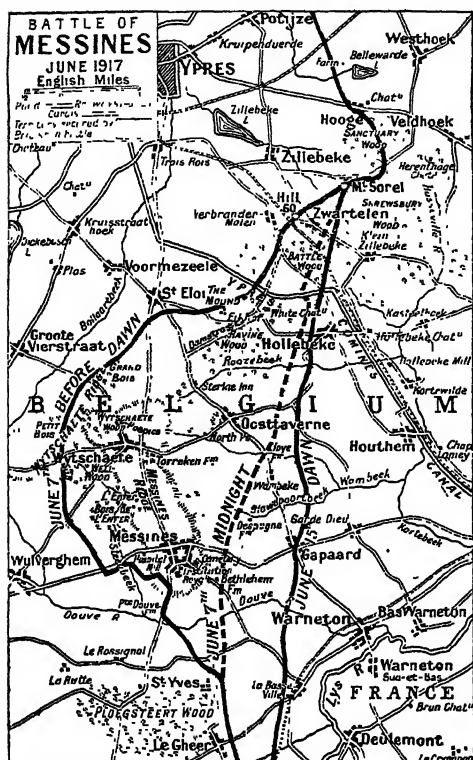

The fall of Messina in the Second Great War marked the end of the

38-day campaign in Sicily. On Aug. 16, 1943, there were simultaneous landings by British forces at Scaloletta, 8 m. S. of the city, and U.S. forces near Milazzo, 8 m. to the W. U.S. troops reached Messina that evening, British units joined them early next morning. The Germans had withdrawn to the mainland. The harbour was wrecked, but though the city had been bombed from the air it suffered no other serious damage.

**Messina, STRAIT OF** (anc. *Fretum Siculum* or *Mamertinum*). Sea passage between Sicily and Italy, connecting the Tyrrhenian and Ionian Seas. About 20 m. in length, its width varies between 2 m. and 15 m. The deep channel and strong current hinder navigation. See *Scylla* and *Charybdis*.

**Messines Ridge.** Rising ground in Belgium, N. of the village of Messines, 6 m. S. of Ypres; a prominent battleground of the western front in the First Great War. The village and ridge were seized by the Germans on Nov. 1, 1914, after a two-day stand by the British cavalry corps. Its ruins thereafter dominated the British positions to the W. until the battle of Messines, June 5-15, 1917. The German positions were extraordinarily strong, their line forming a deep salient in the British front, with total length of 10 m., overlooking the British position at Ypres. Forces engaged in that battle were the British 2nd army (Plumer), with 12 divisions, approx. 200,000 men, and the 4th German army (Sixt von Arnim) of 14½ divisions. The British object was to capture the ridge, with the villages of Messines and Wytschaete at the S. and N. extremities respectively, also the second German defence line (Oosttaverne line) well to the E. of the ridge. As a preparation, deep mining was used by the British to an unprecedented extent. Nineteen mines had been driven and charged with explosive many months before. Sappers had tunnelled deeply in the marshy ground beneath the ridge.

A violent British artillery bombardment began May 28, continuing until June 7, while British planes were also active in bombing German communications. The attack began at 3.10 a.m. of June 7 with the explosion of the mines, which changed the entire landscape, creating huge craters. Infantry with 40 tanks then advanced under machine-gun barrage. New Zealanders captured Messines at 7 a.m.; on their right

Messines. Map indicating ground taken by the British in the battle of June 7-15, 1917

the 3rd Australian div. (Monash) reached its objective in 1 hour 40 mins. Wyttschaete fell next: and by 10 a.m. the German front line had been taken. In the afternoon the attack on the second line began. Oosttaverne fell after half an hour. By 8 p.m. the German trench system N. and S. of that village was in British hands.

Two German counter-attacks next day were easily repulsed, and the British advance continued for some days, aided by German withdrawals from their positions W. of the Lys (see map). British losses in the battle were 25,000. German losses were far greater, and included 7,200 taken prisoner.

The ridge was held by the British until April 12, 1918, when during the second great German offensive of that spring, they were forced to abandon all the gains of 1917; but was retaken Sept. 30, by the 2nd army in its successful advance during the battle of Flanders. A memorial erected on the ridge commemorates 839 New Zealand soldiers whose graves are unknown. See Ypres Battles.

**Message** (Anglo-Fr. *message*, conn. with *maison*, house). In

Born June 12, 1865, he was educated at Aberdeen university and Balliol College, Oxford. Entering the Indian civil service in 1883, he held important posts in the United Provinces, and after acting as secretary to the financial department of the government of India, returned to the United Provinces as lieutenant-gov. in 1912. He resigned on appointment as finance member of the viceroy's executive council in 1918. Meston, a strong Liberal, was influential in shaping the Montagu-Chelmsford reforms. On his retirement in 1919, he was raised to the peerage. He published *Nationhood for India* in 1931. He died Oct. 7, 1943, and was succeeded by his son Dougall (b. 1894), barrister and authority on town and country planning.

**Mestre**. Town of Italy, in the prov. of Venice. It stands on a lagoon, 6 m. by rly. N.W. of Venice, and has a long viaduct over which trains from that city pass. It is an important junction for Vienna, Gorizia, Trieste, and San Giuliano. It has foundries and sawmills. Pop. 11,750.

**Mestrovic**, IVAN (b. 1883). Yugoslav sculptor. Born at Otavice, Dalmatia, Aug. 15, 1883, he

was a shepherd boy who showed a talent for carving. Having been apprenticed to a master mason at Split (Spalato), he later studied at the academy in Vienna. He exhibited there from 1902 and in European capitals from 1907, showing 26 pieces of sculpture at Venice in 1914. After the First Great War he lived at Zagreb, where in 1922 he became rector of the academy. In the forefront of expression of the Slav spirit, his work may be divided into three stylistic periods: early compositions; inspiration derived from archaic Greece, 1907-14; and a phase which showed Byzantine and Cinquecento influences. Although wood was his favourite medium, he used marble, stone, and granite. His chief works include the memorial chapel at Dubrovnik (Ragusa), and a memorial to an unknown soldier at Belgrade. He is represented in European and American galleries. See Art illus. p. 664.

**Mestizo** (Sp. from Lat. *mixtus*, mixed). Half-breed, especially the offspring, and their descendants, of a Spaniard or Portuguese and an American Indian. The feminine is *mestiza*. The term preferred in Brazil is *Mamaluco*; in the central American republics it is *Ladino*. See Gauchos.

**Meston**, JAMES SCORGIE MESTON, 1ST BARON (1865-1943). British administrator.

He is represented in European and American galleries. See Art illus. p. 664.

Ivan Mestrovic, Yugoslav sculptor

**Meta**. River and territory (intendency) of Colombia, central America. The river is the chief tributary of the Orinoco. Rising in the Eastern Cordillera, about 40 m. S. of Bogotá, and flowing N.E., it joins the Orinoco after a course of 650 m. From Calabozo it forms the boundary between Colombia and Venezuela. It contains many islands, and is navigable by small steamers at high water for about a third of its course. Meta intendancy is not yet thoroughly organized politically. The chief town is Villavicencio, situated S.E. of Bogotá. Area, 32,916 sq. m. Pop. 51,674.

**Metabolism** (Gr. *metabole*, a change). Term embracing all the chemical changes which occur in living tissues. It is divided into anabolism, the building up of tissues from simpler substances, and catabolism, the breaking down of tissues into simpler bodies. In the ordinary healthy individual who is not gaining weight, anabolism and catabolism just balance each other, i.e. the intake of food and oxygen employed in constructive processes neutralise the destructive processes which yield the waste products thrown out of the body in the excreta and from the skin and lungs. In the growing child anabolism exceeds catabolism, and in wasting

diseases or old age catabolism is in excess. See Anabolism; Life.

**Metacarpus.** The five bones of the hand, which articulate above with the bones of the wrist and below with the fingers and thumb. They are arranged so as to form a shallow arch with the cavity forwards. At their upper extremities, the metacarpal bones terminate in expanded articular surfaces, and at their lower ends in rounded heads, which articulate with corresponding depressions at the upper end of the phalanges of the fingers. See Anatomy; Carpus.

**Metacentre.** Point of intersection of the vertical through the centre of buoyancy of a floating

Metacentre. Diagram showing the metacentre (M) and centre of buoyancy (H) of a floating body. See text

body with the vertical through the new centre of buoyancy when the body is slightly displaced. If, in the figures, G is the centre of gravity of a floating body, and H the centre of gravity of the displaced water, the two points G and H, if the floating body is in equilibrium, must be above one another. If the body is tilted, then the centre of gravity of the displaced liquid is no longer at H but at some point H'. The point M where the vertical through H' cuts the old vertical through H is the metacentre. If this point is above the centre of gravity of the body, the floating body is in stable equilibrium, the forces acting on it tending to bring it back to its original position.

If, however, M falls below the centre of gravity of the floating body, the equilibrium is unstable. The higher the metacentre, the more stable is the equilibrium. This principle is of great importance in designing ships, which are ballasted so as to keep the centre of gravity well below the metacentre. In complicated structures, e.g. a battleship with heavy gun turrets, the calculations of the positions of the metacentre occupy weeks or months.

**Metadyne.** A special form of direct current generator or dynamo. It is provided with a second set of brushes operating on a different part of the commutator. By varying the method of connexion and the design of the field magnet

windings, it can be made to act as a constant-current D.C. transformer of variable ratio, or a power amplifier to enable weak "signal" currents to cause very large variations (up to 10,000 times the power) in other circuits. A special form is known as an amplidyne. The metadyne has wide application to traction control in place of plain resistance control, giving faster and smoother acceleration, and allowing power to be fed back to the line when a train is slowing.

**Metal** (Gr. *metallon*, mine). Any one of the metallic elements: Brass and many other alloys are metals in the commercial sense. The elements are broadly divided into two main classes, the metals and the non-metals, but there is a group of elements which sometimes appear to be metals and sometimes not; these are known as semi-metals or metalloids (*q.v.*). Philosophers throughout the ages have attempted to give complete and accurate descriptions of the metallic group of natural elements. Perhaps the earliest clear definition was given by the Latin writer, who adopted the name Geber; he said, "Metallum est corpus miscibile, fusibile, et sub malleo ex omni dimensione extendibile." This description covers all the metals, even including mercury, which behaves like any other metal when frozen, although in Gebers' time it was not regarded as a metal.

Blumenbach, at the beginning of the 19th century, said that "in strictness, metals should be arranged among combustible fossils" [with sulphur, graphite, bitumen, and diamond]. "They are distinguished however by the following properties. . . . They are the heaviest objects in nature and the most perfectly opaque of all the fossils; they all have the lustre, from that circumstance called metallic; their fracture is generally uneven; and many of them possess ductility. . . . They are rendered fluid by caloric, i.e. they melt. . . . With one or two exceptions. . . all are soluble in nitric or muriatic or nitro-muriatic acids and are most perfect conductors of electricity." Apart from the inaccuracy of the first statement—metals range from iridium and osmium with specific gravities of more than 22 to lithium, which is little more than half as heavy as water—the description is as complete and true as those suggested by later authors. Only a mathematical physicist can give a more precise definition of a metal; he regards metals as an array of positive ions held to-

gether by the attraction of the intervening valency electrons, a conception of the metallic linkage due to Pauling.

Metals themselves differ widely in properties, an example being the range of temps. over which their melting points are spread, from mercury at  $-38.5^{\circ}\text{C.}$  to rhenium at more than  $3,000^{\circ}\text{C.}$  Broadly they may be divided into noble and base metals, the former being resistant to corrosion and to some extent to erosion. In this group are gold, iridium, osmium, palladium, platinum, rhodium, ruthenium, and silver. Division of the base metals may be made into the light metals, aluminium and magnesium; the common metals, iron, copper, zinc, lead, tin, nickel, chromium, tungsten, manganese, vanadium, cobalt, molybdenum, cadmium, and titanium; the liquid metal, mercury; the alkali metals, calcium, strontium, barium, lithium, sodium, potassium, rubidium, and caesium; the semi-metals, arsenic, antimony, bismuth, silicon, selenium, and tellurium; the radioactive metals, radium, thorium, and uranium; and the rare metals, beryllium, cerium, columbium or niobium, dysprosium, erbium, europium, gadolinium, gallium, germanium, hafnium, indium, lanthanum, neodymium, praseodymium, rhenium, samarium, scandium, tantalum, terbium, thallium, thulium, ytterbium, yttrium, and zirconium. Each of these 66 metals is described separately in this encyclopedia. See also Alloy; Metallurgy.

**Metaldehyde.**  $\text{C}_2\text{H}_4\text{O}_3$ . White crystalline compound used as a solid fuel. It is produced by the polymerisation of acetaldehyde.

**Metallogenetic Epoch.** In mining geology, a period in geological time when conditions were favourable for the deposition of useful minerals. A metallogenetic epoch is often short and transitory, but may be of long duration.

Deposits formed by weathering processes and sedimentation are not confined to particular periods in the earth's history, but it is found that deposits genetically connected with igneous rocks are, like igneous activity, often associated with periods of profound disturbance affiliated with folding and mountain building. For this reason prominent metallogenetic epochs occurred in Palaeozoic, Hercynian and Tertiary times.

**Metallogenetic Province.** Term used in mining geology for an area characterised by a specific type of ore mineralisation. For

instance, the tin-tungsten fields of Malaya, Burma, Siam, S. China, and Indonesia constitute one metallogenetic province; gold, copper, and lead-zinc provinces are found in the U.S.A. and elsewhere. The mineralisation in any one province need not necessarily have been formed during one metallogenetic epoch (*q.v.*), *e.g.* there were two periods of tin mineralisation in the Nigerian province, and three in Australia.

**Metallography** (Gr. *metallon*, mine; *graphein*, to write). That branch of science which relates to the constitution and structure and their relation to the properties, of metals and alloys. Such a definition embraces micrographic and macrographic examination, X-ray diffraction, X-ray and gamma-ray radiography, electron microscopy, electron diffraction, fractography, ultra-violet light crack detection, physical testing, and thermal analysis. All have been used to enable the metallurgist to understand the behaviour of metals and alloys, and so to improve on their properties and methods of production. The metallographer, who is dependent on the metallurgical analyst for the fundamental knowledge of the composition of the metals or alloys under consideration, examines and tests metals at all stages in production, to ensure that the finished article will perform the duty for which it is designed.

Early iron-founders gained a certain amount of knowledge from the examination of the fractures of broken samples of their product.

This method, though crude, and relying entirely on the experience of the men working the metal, is still to some extent in use. For example, during the refining of copper, samples of metal from the bath may be cast and broken to determine the "pitch" of the copper. When failures occur during use, the cause can often be ascertained by looking at the fracture. A natural development of this is macrographic examination. This shows mode of solidification of the metal, growth of crystals, non-uniformity of composition due to segregation, physical defects, non-metallic inclusions, method of manufacture (*e.g.* casting or forging), strain in the metal, etc.

In 1861 Henry C. Sorby of Sheffield initiated the systematic examination of metals under the microscope, and followed this by taking photographs of what he saw. Now no metallurgical laboratory can exist without a metallurgical microscope, which differs slightly from the conventional microscope used by doctors and chemists, since instead of transmitted light, it uses reflected light. As metals are opaque, a carefully polished specimen is examined under light introduced into the tube of the microscope and reflected through a right angle by a prism or thin glass slip through the objective lens, which brings it to a focus on the specimen. The light is then reflected back through the objective, this time past the prism or through the glass slip, and so to the eyepiece. Metallurgical micro-

scopes in normal use give magnifications of from 20 to 2,000 times, the higher magnifications necessitating the use of an oil immersion lens. The resolution can be improved at magnifications up to 7,000 diams. by using ultra-violet light. Photography is essential when such light is used as the eye is not sensitive to it.

The specimen is cut so that the part to be examined is reasonably level. The surface is finely ground on a series of emery papers of decreasing coarseness. The specimen is now ready for polishing, which may be carried out by hand or on a small rotating wheel on a chamois leather or cloth with suitable polishing powders. Some of the work in the latter stages can be reduced by polishing electrolytically, after grinding, by making the sample the anode of an electrolytic cell, with an acid electrolyte, often phosphoric acid.

Under the microscope the surface of the specimen will now appear smooth except where there are cracks, non-metallic inclusions, coloured constituents, blow-holes, or other defects. These should be noted before the next stage of the process, which is etching. Under this process, first the boundaries of the grains appear and then various degrees of shading in the different grains. This is because all the grains are not etched uniformly; small facets are formed and the angle of these facets, which are parallel in each individual grain, varies from grain to grain, depending on the orienta-

**Metallography.** Photomicrograph examples of iron, steel, and some alloys. (1) Grey cast iron, unetched (mag. 600). (2) The same but etched (mag. 600). (3) Mild steel with 0.2 p.c. carbon (mag. 300). (4) Pearlite in a steel, 0.85 p.c. carbon (mag. 800). (5) Alpha-beta brass; 40 p.c. zinc, 60 p.c. copper (mag. 250). (6) Bronze; 85 p.c. copper, 15 p.c. tin (mag. 250). (7) Light alloy aluminium, 12 p.c. silicon (mag. 250). (8) Bearing metal; 80 p.c. tin, 15 p.c. antimony, 4 p.c. copper (mag. 250)

tion of the grain. Thus one grain will reflect most of the light outside the microscope and so will appear dark, while its neighbour may reflect most of it back into the objective lens, thus appearing bright. Also in an alloy the various constituents may etch differently, so that they can be readily distinguished under the microscope (Figs. 1 to 8).

For lower magnifications, a macrosection can be photographed on to a fine-grained photographic emulsion, after which the portions of the photograph which are of interest are enlarged up to magnifications of c. 200 diams.

Microscopic examination is limited to the visible surface of the metal; to understand its internal structure X-rays are used, in two distinct ways. First, castings, forgings, etc., can be examined radiographically to locate inclusions, cracks, and other faults in manufacture. Greater penetration is effected by the use of gamma rays (*g.v.*). But the actual positions of the atoms themselves can be located by means of X-ray crystal analysis or diffraction.

The metallographer gains much of his important information by thermal analysis. Alloys are cooled from above their melting points to room temp., the time and temp. being accurately recorded, so that it can be plotted. If a series of alloys of two metals is treated in this way, an equilibrium or constitution diagram can be drawn,

and from this a great deal of information can be obtained. Electric furnaces and the most accurate pyrometers are used for this work in up-to-date laboratories.

Knowledge of the structure of metals has been greatly extended by the increased application of industrial X-ray technique in crystallography and for analysis and fault detection, and by the advent of the electron microscope. Behaviour of metals under working conditions can be determined by photographing by polarised light models made in transparent plastic while subjected to similar loads. The pattern and formation of the colour fringes in the resulting pictures indicate the magnitude and inclination of the stresses. This technique is known as photoelastic stress analysis. *See* Assaying; Copper; Electron Microscope; Etching (Metallurgy); Macrostructure; Microscope; Microstructure; Polishing; Pyrometer, etc.

**Metalloid** (Gr. *metallon*, mine). Term sometimes used to describe those elements which exhibit some properties of a metal and some of a non-metal. Zinc, thought by Paracelsus to be a "bastard of the metals," is now known to be a metal. The semi-metals are arsenic, antimony, bismuth, selenium, tellurium, silicon. The division is not scientific, and the description metalloid, sometimes used by chemists and metallurgists, is not generally considered desirable.

old. Copper vessels have been found in later Egyptian graves of 8000 B.C. and very well made copper basins and ewers were in use in the Egypt of 5500 B.C.

It is likely that the order of discovery of metals was different in different regions. The metals which occur native—gold, silver, copper, iron—are very irregular in their occurrence. Native copper occurs in appreciable amounts in the Lake Superior district of N. America, in Chile, parts of China, Bolivia, Australia, and in Cornwall, England. Silver is associated with the gold. Iron occurs native as meteorites chiefly in N. and S. America, while there is an occurrence of iron of telluric origin in Greenland. But the discovery of the native metals must have affected the Stone Age culture only slightly and no big change would be felt until the art of extracting metals from their ores, melting and casting them was discovered.

#### Origin of Smelting

It is thought that the original smelting operation was the accidental reduction of a mineral-bearing stone, which happened to be used as part of a ring of stones surrounding a camp fire. A piece of copper carbonate, brown iron ore, or tin stone being heated and reduced in the fire embers would produce a small lump of metal. It would be a relatively simple step to make an open furnace for the express purpose of producing what must have seemed a very desirable material to the man who, until then, had had nothing but stone to work with. Bronze was probably produced accidentally in this way, owing to the close association of copper and tin ores, and this started the great Bronze Age, which is thought to have begun in Europe and Egypt about 2000 B.C. The first simple furnace would be just a fire with a small cavity in the hearth of the fire to receive the molten metal. Such crude furnaces were still in use in Japan at the end of the 19th century and may still be seen in parts of Africa.

Iron was probably used from very early times; owing to its rapid corrosion, however, most of the evidence has been destroyed by the action of the elements. But it is unlikely that the Egyptians could have shaped the stones for the pyramids without the use of iron tools, and it is probable that the Bronze and Iron Ages overlapped. Early iron was not cast, as furnaces which would attain the high temps. needed were not available, but was wrought, by heating

## METALLURGY: WORKING OF METALS

F. D. L. Noakes, B.Sc., Lecturer on Metallurgy, Imperial Coll. of Science, London University

*The history of metallurgy, and some general account of the methods used from time to time in the extraction of metals from their ores, are given here. For specific details, see under the various metals, Copper; Gold; Iron, etc. See also Blast Furnace; Cyanide Process; Ferro-Alloys; Flotation; Mineral Dressing; Powder Metallurgy*

John Percy, professor of metallurgy (Gr. *metallon*, mine, *ergos*, worker) at the royal school of Mines in the middle of the 19th century, described metallurgy as "the art of extracting metals from their ores and adapting them to various processes of manufacture." His definition is true today, although the scope of the metallurgist's activities has widened enormously since that time until today it is almost impossible to name an article during the manufacture of which some metal-containing implement has not been used.

The art of metallurgy has been practised by man from his earliest days. The only source of knowledge of early metallurgy, however,

is the objects and articles brought to light by the excavations of archaeologists. Gold was almost without doubt the first metal to be discovered and used, chiefly as an ornament. It is probable that late Neolithic man discovered metals and so became the first metallurgist. Evidence has been found that indicates the existence of the art at least 10,000 years ago. Probably the oldest surviving product of the metallurgist's art is an old copper pin, now in the British museum, and probably used for the fastening of a goatskin over the shoulders of its owner. This, found in one of the oldest of the Egyptian graves, is probably more than 10,000 years

the ore with a reducing agent and then hammering out the pieces of slag. Chance conditions may allow steels to be produced in this way, and that this did in fact happen is indicated by Homer's mention of the process of tempering and by the existence of the beautiful Damascus blades which were made before the time of Diocletian, c. 300 A.D., of steel whose quality is scarcely equalled even today. There are some indications that iron may have been cast as much as 2,500 years ago.

The Greeks and Romans were great metal workers, using gold, silver, copper, iron, and lead with considerable metallurgical knowledge and a very high degree of manipulative skill. The Greeks developed the ingenious *cire perdue* (lost wax) process for casting their hollow bronze statues. Probably at no time in history have the arts of sculptor and metallurgist been so happily blended. From the beginning of the Christian era until about 1800 chief developments related to improvements in the methods of producing iron and steel and increased scale of operations. Among the great names of the 19th century are Dud Dudley, Huntsman, Darby, Cort, Neilson, Bessemer, Siemens, Thomas and Gilchrist, Bell, Hadfield, and Harvey. More recently, particularly since 1900, rapid advance has been made in the production and use of non-ferrous metals, the discovery and isolation of new metals, the introduction of light alloys, etc.

Contemporary metallurgical industry may be divided into two main branches, mining and extraction metallurgy, and physical metallurgy; each of these is again divided into the non-ferrous and ferrous industries, and all fields involve both plant operation and laboratory work. The various subjects overlap, the extraction metallurgist trying to produce the metal in the form most acceptable to the physical metallurgist, and the latter putting the findings of his research at the disposal of the extraction expert. Nevertheless, although each is dependent on the other, there is, owing to over-specialisation, a tendency for each branch to overlook the findings and desires of the other. In highly industrialised Great Britain, there is a natural tendency to concentrate more on physical metallurgy, dealing with the properties and processing of metals and alloys in the later stages of production, except so far as iron and steel are concerned. This is because she

has few natural ores available, most even of her iron ore being imported. In spite of this, very many of the extraction industries in the Commonwealth and Empire and elsewhere have been developed and are supervised by metallurgists from Great Britain, who have a reputation still to be equalled.

The metallurgist's work starts before the ore has been mined, for, once an ore deposit has been located by the geologist, the metallurgist plans how the ore can most economically be treated for recovery of the metals. Many ores are not of a sufficiently high grade to be smelted direct; or they contain some impurity which must be removed before the ore can be treated. This need for the ore to be treated direct led to the industry known as ore dressing. At one time this consisted almost entirely of crushing the ore to a sufficiently fine grade to make possible the separation of the metallic particles by gravity or the picking out by hand of the richly mineralised portions of the ore as they came up from the mine. Such methods are still used for ore concentration, and various shaking tables, jigs, and strikes have been designed, the principal metal to be extracted in this way being gold. This metal occurs native in ores and, being heavy, is easily separated, the gold that is left after gravity treatment being subsequently extracted by cyanidation. By means of flotation many ores previously considered too poor in quality to be worth handling can now be used.

#### Methods of Extraction

Methods used for extracting the non-ferrous metals depend upon the chemical properties of the metals and upon their mode of occurrence in the ore. Smelting is commonly employed for the extraction of lead, tin, copper, and nickel, although the metal produced very often needs further refining before it can be used industrially. Final refining may be carried out by fire methods, similar to the extraction process, or else by electrolysis. Gold and silver also can be refined electrolytically, although they and the platinum metals can be purified by chemical treatment. Electrolysis is used in the extraction of aluminium and magnesium, and of various of the less known metals such as lithium, calcium, sodium, and potassium; but the methods used are really a combination of thermal and electrolytic processes, the electrolysis being carried out in a molten bath of various salts of

the metal concerned. Distillation is used for certain metals, notably zinc, cadmium, mercury, arsenic, and antimony. Nickel, after a preliminary extraction by smelting to a matte, containing its sulphide in association with that of copper, can be refined electrolytically or by a famous process evolved by Mond, in which the nickel is volatilised as a carbonyl. Vacuum distillation is being developed for the recovery of a number of the rarer metals, such as beryllium, barium, niobium, cerium, germanium, indium, tantalum, and zirconium, previously unobtainable in a pure form.

#### Ferrous Metallurgy

Ferrous metallurgy is concerned entirely with the production of iron and steel and the allied metals manganese, chromium, tungsten, molybdenum, and vanadium. Iron ores are treated, usually without concentration, by direct smelting with suitable fluxes in a blast furnace. These run continuously for months on end, producing thousands of tons of pig iron for each campaign. The pig iron is far too brittle for use as it is and it is made either into cast iron by melting in a cupola or else into steel. Steel can be made in converters by the process of Henry Bessemer, in open hearth furnaces by the processes of Siemens and of Thomas and Gilchrist, or in electric arc furnaces, usually of the Heroult type. By suitable control of composition and heat treatment, steels can be made with widely differing properties, and the other ferrous metals are used for making alloy steels for special purposes. These metals are usually added in the form of their ferro-alloys; they are manufactured either in electric arc furnaces or in special blast furnaces. Wrought iron can be produced direct from the ore.

The metallurgical industry in the U.K. is connected chiefly with the manufacture and the working of metals and alloys. Non-ferrous and iron foundries exist in all parts of the country and certain areas are associated with the production of tubes by extrusion and rolling, sheet and strip by rolling, wire-drawing, rail-making, all forms of casting and forging. Tinplate is produced in S. Wales, where the continuous strip mill is of increasing importance, and all forms of iron and steel are produced in the Midlands and N. of England and in Scotland. Aluminium and magnesium are not only extracted from raw materials, but their alloys have been developed and manufac-

tured widely, in particular in connexion with the aircraft industry. Copper is drawn into wire and cable for the electrical industry and also alloyed with zinc and tin to make brasses and bronzes. Lead and tin alloys are made into bearings, and considerable quantities of gold, silver, and the platinum metals are refined and made into jewelry, scientific instruments, and apparatus, and into coinage at the royal mint. The shipbuilding industry uses nearly every branch of the metallurgical industry, but particularly steel. There are also a number of small specialised industries which involve careful and accurate control, such as the manufacture of springs, bearings, and tools. Many of the last-named are now made from tungsten carbide by one of the many processes used in powder metallurgy. Here the metal is obtained in powder form and compacted into the shape desired, a sintering process producing a homogeneous solid which has never been melted.

All these processes require much control and development. Control is effected chiefly by the industries themselves, which contain individual laboratories for routine testing and metallurgical analysis. Many industrial concerns also run research laboratories, which are chiefly engaged on development of methods of metal treatment. Metallurgical research uses not only the more common forms of mechanical testing, microscopy, and analysis, but also the spectrograph, X-ray diffraction, X-ray radiography, electron microscopy, and absorptiometric and polarographic analysis. Research organizations include the British non-ferrous metals research association, the British iron and steel research association, and the British welding research association. Fundamental metallurgical research is carried out chiefly by the National Physical Laboratory, and by the metallurgy departments of the universities and technical colleges. Two qualifying societies, the Institution of Metallurgists and the Institution of Mining and Metallurgy, issue certificates to students unable to sit for degree examinations.

Bannister, 1930; Introduction to the Metallurgy of Iron and Steel, H. M. Boylston, 1936; Metals, H. C. H. Carpenter and J. M. Robertson, 1939; Outline of Metallurgical Practice, C. K. Hay-

ward, 1940; Physical Structure of Alloys, C. E. Beynon, 1945; Handbook of Non-ferrous Metallurgy, Donald M. Liddell, 1945; Introduction to the Electron Theory of Metals, G. V. Raynor, 1947; Atomic Theory for Students of Metallurgy, W. Hume-Rothery, 1947.

**Metal Powder.** Metal prepared in powder form for certain industrial uses. Many articles needed in industry are of such intricate shape and pattern that to forge or cast them is impracticable. For this and other reasons processes have been developed for manufacturing articles from metal powders, which are pressed into shape and then sintered, so as to become solid without fusion. These powders are usually prepared by direct reduction of the metallic oxides or salts, or by various electrolysis processes, e.g. in the U.S.A. in the manufacture of copper wire for the electrical industries. The metal powder is made by electrolysis in a normal cell, at abnormally high current density. The copper so formed is spongy and, after drying, can be readily broken into small particles, which are then heated without melting and extruded direct into a continuous wire. See Powder Metallurgy.

**Metals, INSTITUTE OF.** Organization founded in 1908 to promote the science and practice of all branches of non-ferrous metallurgy, and to assist discovery and invention likely to be useful to its members and to industry in general. The institute, which is international both in membership and in activities, is governed and administered by a council, representative of the several groups in its membership. Publications include the monthly journal, metallurgical abstracts, and a series of monographs on metallurgical subjects. The h.q. is at 4, Grosvenor Gdns., London, S.W.1.

**Metal Spraying, OR METALLISATION.** Method of protecting metal parts of, e.g. bridges, ships, pylons, from corrosion by air or sea water. Certain metals, e.g. zinc, aluminium, tin, have a greater resistance to corrosion than others. Heated particles of these more resistant metals are forced by means of a compressed air pistol on to the object to be coated. The particles flatten and coalesce on hitting the surface against which they are forced, and form a thin, coherent layer. The metal is introduced into the pistol as a wire or powder, and any metal obtainable in these forms can be sprayed. The coated surface can

be left exposed or painted. Tests on the Forth bridge have shown that repainting is needed much less frequently on parts that have first been thus sprayed.

**Metamorphism** (Gr. transformation). In geology, the alteration of rocks by heat, movement or pressure, and permeating solutions within the earth's crust. The altered rocks are known as metamorphic rock. In the U.S.A. the term metamorphism is sometimes used to include rock weathering. Regional metamorphism is the alteration of rock masses over large areas during mountain building movements. In the upper crustal layers simple folding and compression occur, which promote the development of slates and, locally, phyllites: a phase known as dynamic metamorphism. At greater depth, shearing of the rocks or rock-flow becomes more prevalent, and the movement is accompanied by penetration of heat and solutions derived from still deeper zones in the crust. The combined effect is to cause recrystallisation of the rocks, and platy or elongated minerals (micas, amphiboles, etc.) develop along planes of shearing or bedding. In this way schists are formed. With further introduction of material from below, schists grade into gneisses and may eventually be so far changed as to become granite or granite-like. Stages of progressive metamorphism are termed grades, and are recognized by the formation of certain minerals—chlorite, biotite, garnet, staurolite, kyanite, sillimanite, in order of increasing intensity—in rocks which were originally shales.

Thermal or contact metamorphism is a more restricted form of rock alteration found around, and in contact with, intrusive rock masses of igneous origin. The heat from the igneous rock has caused recrystallisation of the rocks to take place in an aureole around the intrusion. Those rocks which are least altered, on the outer edge of the aureole, show only incipient growth of new minerals which can be seen as spots in rocks which have become slightly hardened by the heat. Closer to the intrusion, where the effect was greater, these spotted rocks grade into very hard, tough rocks known as hornfelses. Metamorphism of lime-rich rocks leads to the development of marbles or of calc-silicate hornfelses. Alteration of basic lava flows and tuffs produces hornblende and garnet bearing rocks (amphibolites). Eco-

nomie ore deposits of copper, lead, zinc, iron, etc. are often associated with thermal metamorphism, especially when the country rock is limestone. See *Geology*; *Rocks*. Consult *Metamorphism*, A. Harker, 1932.

**Metamorphōses** (Gr., Lat., transformations). Name of two Latin works. The first, written in Latin hexameters, by Ovid, contains examples of legends and myths, from the earliest times down to the reign of Augustus, which are connected with changes of shape. The second, by Apuleius of Madaura, better known as the Golden Ass, is in prose, and gives an account of the transformation of a certain Lucius into an ass, his various adventures, and restoration to human shape. See *Ovid*.

**Metamorphosis.** Zoological term which refers to any major change in the form of an animal during its development. Many insects, crustaceans, molluscs, and sea urchins exhibit the phenomenon. An insect such as a butterfly hatches from the egg as a caterpillar which, on becoming fully grown, passes through a quiescent pupal or chrysalis stage to become a typical winged butterfly. Many molluscs have a larval form, free swimming in the sea, which metamorphoses to become an adult crawling on the sea bottom or burrowing in mud. Among the vertebrates the frog provides a familiar example. The change of form from a tadpole to a frog is brought about by a hormone secretion from the thyroid gland

which increases in size until sufficient to initiate the metamorphosis. The change of form in insects is also thought to be controlled by a hormone secretion. See *Insect*; *Larva*.

**Metaphase.** Cytological term for the stage in nuclear division when the chromosomes are arranged at the equator of the nuclear spindle but their longitudinal halves have not yet started to separate to the poles. The chromosomes are usually well spread out across the cell at this stage; hence an end-on view is usually chosen for chromosome counts.

**Metaphor** (Gr. *metaphora*, transference). Figure of speech. A term is used in a connexion where it cannot apply literally, but only by virtue of some analogy. It differs from simile in that no comparison is expressed. To say that a man is as steady as a rock is simile; to speak of the bedrock of his character is metaphor, the two being identified, not compared. Images which are constantly used lose their metaphoric force and often pass into common speech as terminology for mental states and abstract ideas; words like enlighten and revolution (political) began as metaphors. There is a stage at which the metaphor is partially accepted in this class, and here one should beware of mixing metaphors with ludicrous effect, as when politicians talk of ironing out a bottleneck. Hamlet's famous "take arms against a sea of troubles" is clearly understood, yet a mixed metaphor.

a Greek phrase meaning "the things that come after (*meta*) the physics," and was attached to certain compositions of Aristotle more than two centuries after his death (322 B.C.), either because his editor placed them after the writings called "the Physics," or because he considered they should be studied only after the Physics had been mastered. The origin of the name thus gives no information about the nature of the subject so named. Aristotle himself referred to it only as First Philosophy or Theology. The aim of this science, which has the most general of all possible subject-matters, is, he says, the study of Being *qua* Being, or of that which is, in so far as it is. Each "departmental" science may be differentiated, classified, and described by reference to the objects or field of subject-matter special and proper to it, the nature of its appropriate data determining the extent and the character of that science. Thus, spatial magnitudes and shapes together constitute the subject-matter of geometry, the geometer being concerned with no other characteristics of "what is."

Again, those characteristics and modes of behaviour and change of many physical existences on account of which we name them plants or vegetable organisms form the special subject-matter studied by the botanist. In like manner metaphysics has its special and proper domain, for it directly and exclusively treats of that which is most general and most ultimate in all things or realities whatever (namely, that they are, or are beings or existences). As the science of Being as such, its subject-matter is more universal than that of any "departmental" science.

The first task of "First Philosophy" is to elicit the irreducibly different kinds of the real about which there can be discourse and knowledge. Of these modes of being (named substance, quality, magnitude, relation, etc.), the most ultimate is substance; hence the main investigation is concerned with its analysis and its causes. Two quite different questions may be raised about any substance (*i.e.* any concrete individual thing): What are the factors composing it? How did the individual so composed come to exist and to exhibit the nature and behaviour characteristic of it?

In answering, Aristotle employs two very pervasive antitheses, manifest throughout nature; namely, (1) form and matter; (2) potentiality and actuality. In every individual, two composing factors

## METAPHYSICS: THE SCIENCE OF BEING

S. V. Keeling, D Litt., D.-es-L., Reader in Philosophy, London Univ.

*This article is one of a group that includes Logic; Philosophy; Relativity. See also Idealism; Mind; Ontology, etc.; and biographies of the great metaphysicians, e.g. Aristotle; Berkeley; Hegel; Kant; Locke; Plato; Spinoza, and others*

The name metaphysics, like the names of other sciences, is used to designate both a range of inquiries or problems and a body of conclusions which compose, at least tentatively, the sum of knowledge about the field of objects upon which those inquiries bear. In current popular usage the name carries only a vague, indeterminate signification; its scope and its aim are often not distinguished from those of philosophy. But the history of these subjects justifies, and our convenience in their pursuit favours, our distinguishing them. To try to establish a hard and fast division between them would raise endless controversy, but we may begin by regarding the scope of

philosophy as the wider, since it includes problems and doctrines pertaining to ethics and aesthetics, and these are not usually held to fall within metaphysics. Yet they have metaphysical implications, and the treatment of these inevitably leads, in proportion to its exhaustiveness, to a study of questions and principles that are metaphysical.

Provisionally defining metaphysics as the systematic study of the ultimate nature of all that is real, we may best elicit the special character of the science from (1) its earlier history: (2) its modern and contemporary position.

**ARISTOTELIAN METAPHYSICS.** The word metaphysics comes from

are united ; its matter (the stuff, or that of which it is constituted or made) and its form (that unity of structure and quality that is special to it, differentiating it from individuals of all other kinds). Every substance is thus an instance of some determinate form informing or organizing some matter. The two are inseparably united, but distinguishable, in the thing. They are also correlative, for that in the substance which is called its matter is so called only relatively to the form by which it receives further determination. By means of the second antithesis Aristotle passes from the restricted conception of the substance as constituted at one particular moment in its existence, and accounts for the course of its changes, growth, or development throughout its whole history—from an immature or less perfect condition to one mature or more perfect.

#### Aristotle's Four Causes

Both antithetical principles are brought together in his doctrine of the four causes. These are intended to explain at once both constitution and development respecting any substance, by indicating that from which it becomes, the law of its growth, the agency to which its changes are due, and the "mature" or approximately perfect character which the developing individual finally realizes, and after which it merely degenerates. Every natural process reaches a stage in which the form (which at first was only potentially present in the substance, or in the agent working upon it) is fully actualised in the matter within which that process was initiated. All varieties of process (generation and corruption, qualitative alteration, quantitative increase and decrease, locomotion) converge to promote eventually the same result: the production of fresh form in matter previously otherwise formed. The world process is continuous and eternal, and Aristotle's account of its unchanging source culminates in his Theology.

Inquiries of this character, however, originated not with Aristotle, but with the Pythagoreans and Parmenides, some century and a half earlier. Plato, too, though largely occupied with ethical and social problems, found himself also compelled to treat these more ultimate questions on which the rest of his philosophy depends. His theory of ideas (also called universals and forms) is pure metaphysics, even though he never applies that name to it. For it is these ideas or forms in their hierarchical order which

constitute the real in its ultimacy and perfection, and not the particular things in the temporal world apprehended in sense-perception.

MODERN AND CONTEMPORARY METAPHYSICS. Subsequent history of philosophy to our own times reveals an almost unbroken continuity and pertinacity in the study of these ultimate problems. After Plato and Aristotle, the greatest names are Plotinus, Aquinas, Spinoza, and Hegel ; while somewhat less in intrinsic importance if not in influence were Descartes, Malebranche, and Leibniz. Locke, and more so Kant, approached these questions from a new angle. They insisted on the priority of problems concerning the limits of possible knowledge over those about the ultimate character of reality.

Kant considered his discovery of the conditions under which knowledge was possible provided the key to all problems that could reasonably be supposed soluble. So knowledge, and not being, now becomes the primary subject-matter of metaphysics ; and epistemology (or theory of knowledge), not ontology, is conceived to be the metaphysician's proper concern. By eliciting what is implied in the very fact of our having knowledge at all, the range of problems that can legitimately be raised and profitably be treated is determined. The only knowledge possible is that which is of phenomena and their relations (i.e. appearances). Of a reality that transcends them, and of which phenomena are the appearances, our minds are permanently incapable of knowledge. So Kant holds that the attempts of previous metaphysicians to understand things as they are in themselves independently of their appearances to cognizing minds should be abandoned in favour of his philosophy, promising an understanding of phenomena.

#### Empiricism and its Opponents

From this limitation of the range of the knowable, which Hume had adopted as a convenient postulate but Kant declares to be an ineluctable necessity due to the constitution of our minds, derives much that is found in the phenomenalist, positivist, and pragmatic philosophies of the last hundred years, as well as in the anti-metaphysical programme of the contemporary "logical positivism" and "analytical empiricism" whose best known exponent in Great Britain is Bertrand Russell.

In strong reaction against what they regard as arbitrary and rationally unwarranted curtailments

of later empiricism stand such thinkers as F. H. Bradley, J. Ellis McTaggart, and H. F. Hallett. For the two former, the main issue concerns the relation of appearance, in all its forms, to reality. The different conclusion of each depends on criticism of the various characteristics that reality appears as having, from which it is sought to determine what nature and structure the existent really can have. Besides differentiating apparent characters from the ultimate characters of what exists, McTaggart tries also to show *how* the existent, having such an ultimate nature, *can* delusively appear to be so differently characterised.

Hallett, regarding all forms of empirical philosophy as "phenomenology masquerading as metaphysics," defines the latter as "the science of the eternal Real as it is in and to itself," and phenomenology as "the science of the appearances of the Real in and to its own parts." Phenomenology is a form of philosophy natural to the special scientist, and in so far as it is coherent it is justifiable as an approximation to the truth. But it is always subject to more ultimate metaphysical criticism. In particular, Hallett believes, it is the acceptance of time or duration at its face value—as being an ultimate fact or character of the real, instead of the uncriticised empirical datum that it is—which condemns all empirical philosophies to metaphysical inadequacy.

#### UNITY AND PLURALITY.

The character of metaphysics may be further understood by reviewing the solutions that have been proposed to one of its central problems. The whole truth about what exists cannot consist in the single truism that it exists. It should be possible to pass to further truths about its ultimate form, so discovering what kinds of unity render it orderly and coherent, hence amenable to our understandings. Now the limited range of the real to which we have access in perception exhibits at least an apparent plurality. The universe comes to be conceived in consequence as being really a "many," in (a) being qualified by a vast variety of characters ; (b) comprising innumerable distinct existences. Is the universe *really* a "many" in both these respects, independently of the appearances of its parts to particular minds, or is it not ?

That reality is of the same ultimate nature throughout is the answer of monism ; that there are two irreducibly different natures,

one possessed by some, the other by other existences, is the answer of dualism. Examples of the former are the materialism of Hobbes, the spiritualism of Berkeley, and the monadism of Leibniz. Descartes, affirming the ultimacy and the irreducibility of mind and matter, illustrates the dualistic answer.

The solution to the question in the second respect turns upon what dependency and what independency there is respecting the parts of what exists and the whole they together make up. One answer is that there is no dependency whatever, each existing thing or part being autonomous, depending on no other to be what it is. On this view, all relations between terms are extrinsic or external to them, and the world, in consequence, is simply a series or assemblage of particulars, some co-existent, others sequent in time. Such a pluralistic answer was returned by Hume. Another answer runs that what exists comprises (1) innumerable finite existences, each depending upon some other for its being; (2) that which depends upon nothing else, but is independently existent. Spinoza's metaphysic of a single infinite Substance, uncreated and uncaused, of which all particular things are parts or "modes," is an example. It is monistic in respect of existence, but pluralistic in respect of ultimate nature (or essence), since every part or mode is at once both physical and mental; and these natures are not merely apparent, but also ultimate expressions of the real. Conversely Leibnizian monadism is pluralistic in the former respect, and monistic in the latter, since it maintains that reality comprises an infinitely large number of existences each independent of any other. No two, however, have exactly the same nature, but the natures of them all are differentiations of one ultimate "kind," namely, spiritual or conscious activity.

Interpretations tending towards conclusions of each type, monistic and pluralistic, have their particular merits and their special dangers. Unpractised and uncritical thinking usually adheres to an elementary form of dualism, supposing some existences to be ultimately mental (minds or selves) and others to be really physical (our own bodies or non-human bodies). But the easy credibility of this view is compromised when the dualist is required to explain the apparent interaction between our bodies and our minds. So, in pursuing one prob-

lem, fresh problems are found to arise. Similarly, an over-hasty decision upon one problem, taken in isolation from others which, though really connected with it, have yet not been considered along with it, may prejudice our findings upon those others.

**Bibliography.** Plato's Republic, Bks. vi and vii; Elements of Metaphysics, A. E. Taylor, 1903; Plato, A. E. Taylor, 1927; Aeternitas, H. F. Hallett, 1930; Appearance and Reality, F. H. Bradley, 1930; Philosophical Studies, J. E. McTaggart, 1934; Aristotle, W. D. Ross, 1937.

**Metapontum.** Ancient Greek city in Italy. It stood on the Gulf of Taranto at the mouth of the river Basento. Founded by colonists from Achaea about 700 B.C., it was famous as the home of the philosophical school of Pythagoras after its removal from Crotona.

**Metascope.** An infra-red ray device developed by the Allies in the Second Great War to assist or detect troop movements at night. An infra-red source projected a light beam which could be picked up visually only by the metascope. It was used extensively by parachute troops to guide them to the assembly point after landing. The metascope could itself project infra-red rays which, striking an object invisible to normal vision, were reflected back to the instrument. See Infra-red Radiation.

**Metasomatism.** Chemical process operating in rocks and mineral deposits whereby the original mineral composition is changed by the action of circulating solutions. In nature solid minerals are continually being acted upon by solutions. These solutions may be of meteoric origin (see Meteoric Waters), such as rain water, and penetrate to some distance below the surface. Or hot solutions which are of deep-seated origin may ascend and flow along fissures and soak into the adjoining rock. Minerals are attacked to various degrees by these solutions, being decomposed or dissolved. New minerals may be deposited in the open spaces. If the attacking solutions are moving along minute openings, and deposition of new material keeps pace with the solution of the old, then new minerals may grow by replacement and frequently retain the structure of the original rock.

Whole ranges of granite hills have been formed by the metasomatism of sedimentary rocks by "granitising solutions"; quartz, feldspar, and mica growing by replacement of the original clays,

mudstones, quartzites, schist, etc. Metallic ores are often formed by replacement. Massive deposits of lead and zinc sulphides have been put down in place of dolomites and limestones. Tourmaline, mica, chlorite, and quartz may grow by replacement in the wall rock. The development of sericite is a common type of wall rock alteration.

**Metastasio, PIETRO** (1698-1782). Italian poet and dramatist. Born at Assisi, Jan. 13, 1698, he was the son of a Neapolitan druggist whose surname was Trapassi. Pietro was discovered as a brilliant improvisator by a wealthy man who greised his name into the form by which it is known, and in 1718 left him a fortune. This he soon dissipated, and then articulated himself to a lawyer in Naples. In 1721 he wrote a masque, Gardens of the Hesperides. Dido Abandoned, 1724, was more successful. In 1729 he was appointed court poet at Vienna. He had written 28 grand operas besides many shorter pieces when he died April 12, 1782.

**Metatarsus.** That part of the skeleton of the foot which lies in front of the tarsus or instep bones. The metatarsal bones form the front pillar of the longitudinal arch of the foot, the back pillar being formed by the heel. Each bone has a somewhat square base attached to the tarsus, and a rounded head which in walking comes into contact with the ground at the ball of the foot. Each bone forms the basis of attachment for its corresponding toe, the phalanx of the latter articulating with the rounded end of the bones. The metatarsus arches the foot from toe to heel, and from side to side, forming the instep.

**Metatheria.** Zoological term for a sub-class comprising the Marsupials (*q.v.*), or pouched mammals, of which the kangaroo is familiar. These animals bring forth their young in a very small and rudimentary state, the later stages of development taking place in the mother's ventral pouch.

**Metaurus.** River of Umbria, Italy, the modern Metauro. Here Hasdrubal, the Carthaginian general, was defeated in 207 B.C. by the two Roman consuls Gaius Claudius Nero and M. Livius Salinator, while bringing much needed reinforcements to his brother Hannibal (*q.v.*). This was a decisive battle in the second Punic War, the Roman victory extinguishing Hannibal's last hope of overthrowing Rome.

**Metaxas, JOHN** (1871-1941). Greek statesman and soldier. Born in Ithaca, April 12, 1871, he was

John Metaxas,  
Greek statesman

educated at military schools in Greece and Germany. Commissioned in the infantry, he fought in the unsuccessful Thessalian campaign against Turkey in 1897. In 1903 he became professor at the Greek military academy; later joined the general staff, serving with distinction in the Balkan Wars of 1912-13; and in 1915 became chief of staff and King Constantine's closest military adviser. When Venizelos intervened on the Allies' side in the First Great War Metaxas resigned. He also opposed plans to establish Greece in Asia Minor before the destruction of the Ottoman empire. On the fall of Constantine, Metaxas went into exile in Italy, and in 1920 was condemned to death *in absentia* for his alleged surrender of Fort Rupel to Bulgaria in 1916. The sentence was quashed after the restoration late in 1920, and he returned to Greece, though he played no part in the Anatolian war.

After periods of office and exile, Metaxas joined the government in 1935 as minister without portfolio. On the restoration of George II, in 1936 he became premier, declared himself chief of state, and proceeded to establish a totalitarian regime, which aimed at reviving the ancient Spartan traditions of simplicity and physical fitness. His foreign policy was prudent, but while strictly neutral at the outbreak of the Second Great War, he could not organize a Turko-Balkan combination against Axis aggression. When Italy attacked Greece in Oct., 1940, Gen. Metaxas was primarily responsible for military successes in the campaigns in Albania, and was the first Allied general to defeat the Axis in Europe before he died on Jan. 29, 1941.

**Métayer System** (late Lat. *medietas*, moiety, half). System of land tenure. It is derived from a Roman custom by which certain cultivators paid to the *dominus* (landlord) a fixed proportion of the annual crop. The system is still common in Italy, France, Portugal, W. Indies, etc. In France the landlord supplies, not only the land, but also stock, implements, etc.,

while the métayer provides his own and hired labour, and the resulting profits are divided between the two. The system provoked much discussion among political economists in the early 19th century.

**Metazoa**. Zoological term. It is applied to all multicellular animals except for the sponges (parazoa), which probably have an evolutionary origin distinct from the metazoa. The metazoa may be considered as animals possessing a number of cells, each containing a single nucleus, which become specialised for the various functions of life into distinct organs, e.g. the digestive, nervous, or reproductive systems. Even the simplest metazoa possess an internal cavity lined with a special layer of cells, the endoderm. In contrast to the metazoa there are the protozoa (*q.v.*), a group of animals living as individual cells with one or many nuclei, and carrying out all normal living functions.

**Metcalf, JOHN** (1717-1810). A British road-maker. Born at Knaresborough, Yorks, Aug. 15, 1717, when six years old he lost his sight as a consequence of an attack of smallpox, and became known as Blind Jack of Knaresborough. Despite his infirmity, he took up horse-dealing, being an excellent judge of horseflesh entirely by touch. In 1765 he obtained the contract to construct a road between Minskip and Fearnby and later built a bridge at Borough-bridge. The soundness of his work led to his continuous employment as a road-maker for more than 30 years, some 180 miles of turnpike being constructed by him, chiefly in Yorkshire. In road construction and bridge building he was a chief predecessor of Telford and Macadam. He died at Follifoot, near Knaresborough, April 26, 1810.

**Metcalfe, CHARLES THEOPHILUS, BARON** (1785-1846). British administrator. Born in Calcutta, Jan. 30, 1785, he was educated at Eton, and in 1800 was appointed to a writership under the East India co. He occupied various important positions in India, and was provisionally appointed governor-general in 1835. His removal of the restrictions then imposed on the Indian press brought him into some disfavour, however, and in 1838 he retired. Governor of Jamaica from 1839 to 1842, he was appointed governor-general of Canada in 1843, but ill-health compelled his retirement in 1845, when a peerage was conferred on him. He died unmarried Sept. 5, 1846. *Consult* Life, E. Thompson, 1937.

**Metchnikov, ILYA** (1845-1916). Russian-born French biologist. Born at Ivanovka, near Kharkov, May 15, 1845, he studied at Kharkov, Giessen, Göttingen, and Munich universities. In 1870 he was appointed to the chair of zoology and comparative anatomy at Odessa, and in 1882 went to Messina where he carried out bacteriological investigations. A Darwinist, he proved by experiment the existence of general laws of evolution applying to all animal organisms, and his biological research on comparative embryology led to his formulating the important theory of phagocytosis. In 1887 he joined the Pasteur

Ilya Metchnikov,  
French biologist

institute in Paris, of which he later became assistant director, and gained a worldwide reputation by his discoveries. In 1884 he published a memoir on the intracellular digestion of invertebrates. Metchnikov achieved results of the highest importance in bringing bacteriology to the aid of therapeutics; he worked on a theory that man's life is unnaturally shortened by intestinal putrefaction, as a remedy for which he advocated the use of lactic ferments in the diet, especially sour milk. He also investigated many obscure diseases including cancer, and collaborated with Ehrlich in combating syphilis. He was awarded the Nobel prize for medicine in 1908. He died in Paris July 16, 1916. His chief works included *The Comparative Pathology of Inflammation*, 1892; *Immunity from Infectious Diseases*, 1901; *The Nature of Man*, 1903; and *The Prolongation of Life*, 1910. A Life by his wife appeared in English in 1922.

**Metellus**. Name of a plebeian family in ancient Rome, of which the most eminent members were the following. (1) Lucius Caecilius Metellus, consul 251 B.C., who inflicted a severe defeat on the Carthaginians in Sicily in the First Punic War. Subsequently he lost his eyesight in rescuing the Palladium (*q.v.*) from fire in the temple of Vesta. (2) Quintus Caecilius Metellus (d. 115 B.C.), grandson of the above, received the surname of Macedonicus in recognition of his successful campaign in Macedonia against the pretender Andriscus, whom he defeated and captured.

148 B.C. His other military successes were the defeat of the Achaeans in 146, and his campaign against the Celtiberians in Spain. (3) Quintus Caecilius Metellus (d. c. 91 B.C.), nephew of (2), received the surname of Numidicus from having commanded the Roman army against Jugurtha (q.v.). Though successful he was recalled, his legate Marius having intrigued against him. Metellus afterwards became the leader of the aristocratic party at Rome, but owing to the machinations of Marius and Saturninus he was driven into exile. (4) Quintus Caecilius Metellus (d. c. 63 B.C.) was surnamed Pius from his efforts to secure the recall from banishment of his father, Metellus Numidicus. In the civil wars between Marius and Sulla he gained some successes, but in the war in Spain proved no match for Sertorius. (5) Quintus Caecilius Metellus Pius Scipio (d. 46 B.C.) was the son of Scipio Nasica, and adopted son of (4). He was one of the generals in command of the army of Pompey at the battle of Pharsalus in 48 B.C., and after the defeat at Thapsus in 46 committed suicide.

**Metempsychosis** (Gr., transference of the soul). Philosophical term for the transmigration or passage of the souls of men from one body to another after death. As nothing can be created out of nothing, and no substance can suffer annihilation, it is held by this doctrine that when the union of soul and body is dissolved, a new sphere of action is found for the soul in other bodies, of which it becomes in succession the animating principle.

A common phase of animism among savages in many parts of the world, it was developed philosophically by many of the ancient religions. It is a fundamental doctrine of the later Brahmanism, though not in the Vedas. It was held that by successive stages a man might sink into a beast as a punishment for crime, or rise to deity by a life of virtue. Buddhism, while denying the existence of the soul, changed the idea to a belief in the transmission of *karma*, or character formed by works, from one body to another. Thus the Jatakas describe the 550 previous births of Gautama Buddha, as a slave, elephant, frog, tree, etc.

The doctrine of metempsychosis, which is more or less allied to emanation and palingenesis, spread to Greece and was developed by Pythagoras and Plato. It affected the Hebrews, was taught in certain

early Christian sects, formed a tenet of Gnosticism, and was part of the faith of the Druids. Irenaeus uses the word *metempsychosis*. Simonides, in the 7th century, adapted the theory to a satire on women which is translated in Addison's *Spectator*, No. 209.

**Meteor.** Small fragment of cosmic matter, probably in general no larger than a grain of sand, travelling through interplanetary space. Should it penetrate into sufficiently dense layers of the earth's atmosphere, the air in front of the meteor is compressed, giving rise to incandescence. In general, the luminosity appears at heights between 100 and 50 m. above the ground. Although disappearance is most frequent at a height of 50 m., occasionally meteors are still visible at levels below 30 m. The luminous track of a large meteor may persist for half an hour or even longer, and can be studied by radar methods. These "shooting stars" travel through the atmosphere with velocities ranging between 500 and 4,000 m. per minute. The appearance of the larger meteors is sometimes followed by sounds, known as "detonations," probably due to the waves created by the passage of the meteor through the air. From a detailed consideration of the physical processes involved, Lindemann and Dobson showed, in 1922, that the observation of certain characteristics, such as the points of appearance and disappearance, velocity, and brightness, provide a means of estimating the density and therefore the temp. of the air at these great heights. The theory indicated that at about the 35 m. level, the atmosphere is warmer than that close to the ground—a result which in recent years has been confirmed by the more accurate measurements which utilize sound waves from explosions. Only during the 20th century has the term meteor been restricted to shooting stars; previously it was applied to any phenomenon occurring in the atmosphere.

Meteors move in regular orbits, and are regarded hypothetically as fragments which may be the relics of a larger body, but which are in any case dispersed in a huge swarm. Such a swarm may be only a few hundred miles thick, but its length, as is shown by the example of the Leonid meteors, may amount to hundreds of millions of miles. Schiaparelli has demonstrated that the unequal attraction of the sun for the individuals of a

swarm of meteorites moving round it would scatter them along the orbit, and in time produce a more or less complete ring; if this intersects the earth's orbit an annual meteor shower results.

The great display of Leonids on November 12–13, 1833, first drew serious scientific attention to meteors, though the shower had been known for at least a thousand years, being recorded in 902. It was shown that the radiation of the paths was only apparent, and the flights of all the shooting stars were consistent with the theory that they moved in parallel round the sun. The result of the investigations by astronomers was the prediction that a particularly brilliant display would appear about every 33 or 34 years, a result confirmed in 1867.

The shower which radiates from the constellation of Perseus on Aug. 11–13 has been observed since A.D. 830, and has been shown to have an orbit identical with that of Swift's comet of 1862. The history of the Andromedids, which come from Nov. 21 to 27, is as well known as that of the Leonids; the shower of 1872 proved that the swarm was moving along the same orbit as the last comet of Biela which divided in 1846, and has not been seen since 1852.

At present there is no generally accepted theory of meteors. Not every shower can be traced to a comet, nor does every comet give rise to a meteor-shower. Some eighty showers are known, and the following is a list of the chief and their approximate dates:

Name of Shower.	Date.
Quadrantids.	January 2-3.
Lyrids.	April 20-22.
7 Aquarids.	May 1-6.
8 Aquarids.	July 28.
Perselids.	August 11-13.
Orionids.	October 21-23.
Leonids.	November 14-16.
Andromedids.	November 21-27.
Geminids.	December 10-12.

See Comet; Meteorite.

**Meteor.** Name given to a British jet-propelled fighter aeroplane. It was designed by W. G. Carter, and built by the Gloster Aircraft co. The Meteor was the only Allied jet-propelled aircraft to see operational service in the Second Great War, being especially successful against flying bombs. It set up world's speed records in 1945 (606 m.p.h.), and in 1946 (616 m.p.h.). The standard Meteor, fitted with two Rolls-Royce Derwent units each of 3,500 static thrust, and armed with four 20-mm. cannon, was capable of 595 m.p.h. at sea level, could climb to 40,000 ft. in

8 mins., and with extra tanks had a range of 820 m. The wing span, originally 43 ft., was later shortened to 37 ft. 2 ins. See Jet Propulsion of Aircraft.

**Meteor Crater.** A large basin-like depression in Arizona, U.S.A., some 4,000 ft. in diam, and 600 ft. deep. It is surrounded by a rim 150 ft. high above the surrounding plateau. Large masses of rock and fragments of meteoric iron surround the crater, which is considered to have been formed by the explosion of a large meteorite as it struck the earth's surface.

**Meteoric Waters.** Waters occurring in nature of atmospheric (meteoric) origin. They are most abundantly derived from rains, water courses, lakes, and oceans; they soak into the earth along fissures or pore-spaces in the crustal rocks. In part they are in the rocks and in part ascend to the surface again as springs, etc. During the course of their journey through rocks they may become charged with salts, of calcium, sodium, magnesium, potassium, iron, silicon, etc. These may be reprecipitated to form mineral deposits, e.g., certain sulphur, magnesite, serpentine, and hematite ore-bodies. Processes of rock weathering are the result of meteoric water action.

**Meteorite.** Metallic or stony mass of matter reaching the earth from outside the earth's atmo-

interplanetary space as a fact. The two largest known were found in S.W. Africa and in Greenland. The first still lies at Grootfontein, and weighed 60 tons; the other, 36½ tons, was transported by Commander Peary to New York.

The fall of the great meteorite in central Siberia, on the watershed of the Khushmo and Kimohn rivers, on the morning of June 30, 1908, is without parallel in historic times. The flight followed a very sloping trajectory from S.S.W. to N.N.E. through not less than 300 m. of the atmosphere. In view of the great inertia of the meteorite (according to one investigator it weighed 130 tons), the resistance of the air reduced only slightly its cosmic velocity, estimated to be of the order of 50 m. per sec. On impact the explosion threw up incandescent matter to a height of more than 12 m., producing a vertical column of fire which was observed nearly 300 m. away. Near the point of fall the coniferous forest was uprooted and burnt by the hot explosive waves over a radius of between 5 and 10 m. Air waves felled and stripped trees of branches and bark for distances up to 30 m. around. In all about 3,000 sq. m. of forest were blown down. Sensitive barographs at places as far apart as London, Zagreb (Croatia), Batavia, and Washington recorded the air

waves from the explosion. A small earthquake was produced by the impact, oscillations through the ground being registered at several seismological stations, including Jena, 3,000 m. distant. During the two nights following, brilliant sky glows were seen over northern Europe. A remarkable feature

is that for nearly 20 years no expedition sought out the place of the fall of the giant meteorite; it thus escaped the notice of the scientific world until 1930.

The large number of observed falls of meteors bears little relation to the enormous mass of meteoric matter which is reduced to vapour before it reaches the surface of the globe. A conservative estimate of the weight of the annual downfall puts it at not less than 360 tons.

Meteorites consist of iron or stone chiefly, though other elements, all of which are found on the earth, occur. From their helium content it is possible to deduce their age from the time they solidified. Ages of from 100 to 3,000 million years are thus found. It is surmised that they are fragments of larger bodies revolving round the sun, such as asteroids (*q.v.*). Occasional falls of very large meteorites have in relatively recent times produced craters from 60 to 4,000 ft. across. The largest is in Arizona. See Meteor Crater.

**Meteoric Hypothesis.** The theory suggested by Sir Norman Lockyer to account for the formation of planetary and other astronomical systems. The theory assumed that space was originally occupied by large swarms of meteors, collision between the meteors causing coalescence and giving rise to condensation of and accretion to masses of matter to form stars, etc. See The Meteoritic Hypothesis, Sir N. Lockyer, 1890.

**Meteorograph.** An instrument giving automatically a continuous record of atmospheric changes. A meteorograph devised by W. H. Dines for use in upper air investigations weighs only a few ounces and can be carried by comparatively small balloons, inflated with hydrogen, as high as the stratosphere. The registering elements are connected together to produce directly a graph of temp. related to pressure. The records are engraved on a silvered plate the size of a postage stamp and are read on descent by aid of a microscope. The use of meteorographs is becoming somewhat restricted owing to the development of radar. See Meteorology; Radio-sonde.

**Meteorological Office.** Name of the official meteorological service of the U.K. It was formed in 1854 as a department of the board of trade for the discussion of meteorological observations made at sea. In 1867 it was made a separate office, administered by a meteorological committee. Since 1919 it has been a department of the air ministry. It is responsible for meeting the meteorological requirements of the army, the R.A.F., civil aviation, other gov. depts., and the community in general, including groups, i.e. farmers, fishermen, to whom it is of first importance. It is responsible also for the organization of meteorological observations and observations of atmospheric electricity, terrestrial magnetism, and seismology

Meteorite. The Willamette meteorite, a mass of iron found in the Willamette Valley, Oregon, in 1802. It is 10 ft. long, 6 ft. 6 ins. high, and nearly 16 tons in weight. Courtesy of the American Museum of Natural History

sphere. Meteorites have been recorded from early times, e.g. by Livy, Plutarch, and Pliny. A meteor still preserved fell on Nov. 16, 1492, in Ensisheim in Alsace, weighing 260 lb. In 1794 Chladni gave scientific support to the idea that stones fell from outside the earth, but it was not until 1803 that a report by the French physicist Biot, on a fall of several thousand stones, compelled the scientific world to recognize the fall of stones on the earth from

in the U.K., for the collection and publication of meteorological information from all parts of the world, and for research in meteorological and geophysical subjects. Meteorological observations from a wide area, including ships at sea, are received almost continuously day and night at the Central Forecasting office by teleprinter and wireless. Weather charts are prepared and information on the weather situation, with forecasts and warnings, is issued at frequent intervals by teleprinter and wireless broadcasts. The office possesses a large library containing meteorological data from all parts of the world, which is available for public reference on application.

**Meteorological Society, ROYAL.** Society for the promotion of the science of meteorology. Founded in 1850 as the British Meteorological society, incorporated by royal charter in 1866, it

received its present title in 1883. In 1921 the Scottish Meteorological society, founded 1855, was amalgamated with the society. There is also a Canadian branch. Membership is composed of fellows (designated F.R.Met.S.), foreign members, associates, and student associates. Publications include the quarterly journal, *Weather*, the *Phenological Report*, and a bibliography of current meteorological literature; the monthly weather report of the Meteorological Office is available to certain classes of membership.

Among the awards of the society are the Symons memorial medal for distinguished work in connexion with meteorology and the Buchan prize for outstanding contributions to the society's publications. The society's offices are at 49, Cromwell Road, London, S.W.7; a meteorological station is maintained at 62, Camden Square, N.W.1.

## METEOROLOGY: WEATHER SCIENCE

A. J. Drummond, F.R.Met.S., Editor, *Weather*

*An account of the origins and changing methods used both for the observation of actual weather conditions and for the forecasting of future conditions. See cognate articles on e.g. Lightning; Rainfall; Temperature; Weather*

Meteorology (Gr. *metēōros*, lofty; *logos*, discourse), the science of the earth's atmosphere, is concerned primarily with the processes manifested as weather and seeks to give physical explanations of them. In its fullest sense, however, the subject embraces, in addition to the physics of weather and climate, the study of atmospheric optical and electrical phenomena and, more remotely, certain aspects of terrestrial magnetism.

From the earliest recorded times the changes taking place in the state of the atmosphere occupied man's attention and in consequence there arose the weather rules to be found in folklore. Many of these sayings can be traced back to the writings of Aristotle's pupil, Theophrastus, in the 4th century B.C. The appearance of Aristotle's *Meteorologica*, from which the name meteorology is derived, represents a great landmark in human knowledge as it is the first systematic discussion of the atmosphere and its phenomena. The Greeks made meteorological observations, especially of the winds because of their practical use in navigation. The measurement of rainfall, one of the oldest of meteorological measurements, was undertaken in India as early as 400 B.C.

The beginning of a new era in meteorology is marked by the inventions of the thermometer by Galileo in 1607, and the mercurial barometer by Torricelli in 1643. A few years after the latter event, observations on the Puy-de-Dôme showed that the barometric pressure decreases with height, and it was not long before the study of the atmosphere came to be regarded as a physical problem to be approached by the coordination of observations such as those outlined in the scheme for making a record of the weather which Hooke communicated to the Royal Society about 1670. The discovery of Boyle's law, 1662, governing the relation between the volume and the pressure of a gas, was the first step towards the understanding of the dynamics of the atmosphere. In 1700 Dampier compiled his celebrated *Discourse of Winds* in which he described with remarkable fidelity the main characteristics of the trade winds; some few years previously he recognized that typhoons were revolving storms. The Fahrenheit and Centigrade scales of temperature were introduced in the first half of the 18th century and the hair hygrometer of de Saussure and the anemometer of Woltman in the

second half. With the aid of his hygrometer, de Saussure showed that damp air is lighter than dry air at the same temp. and pressure; Dalton followed this by enunciating the laws of pressure of water vapour in the air. The aneroid barometer was invented by Vidie in 1847.

This development of instruments and the resulting observations gave rise to many important discoveries. In the age of the sailing ship the earliest endeavours to explain the circulation of the atmosphere were concentrated upon the causes of the trade-winds. These wind belts were first attributed purely to the distribution of solar radiation over the surface of the earth, but Hadley (in 1739) rightly took into account the effects of the earth's rotation on the enveloping layers of air.

### Study of Storms

The mechanism of storms and the irregular weather changes of temperate latitudes were, however, only slowly understood. The origin and behaviour of cyclones received much attention in this period, to which also belongs the introduction of the synoptic chart as a means of treating meteorological problems; although such weather maps did not come into regular use for delineating and forecasting weather conditions until after the invention of the telegraph, the earliest indications of this method date from the work of Brandes and Redfield (c. 1820).

About 1845 Maury, of the U.S. navy, published wind and ocean current charts for the use of ship masters; these charts led to a reduction in the time of the passage from England to Australia from an average of 124 days to 97 days. The U.S. government were so impressed with such practical advantages of the collection of weather observations that they called an international conference which was held at Brussels in 1853. The study by the French astronomer, Leverrier, at the instigation of Napoleon III, of the severe gale which traversed the Mediterranean in 1854 and subsequently caused much damage to the allied fleets in the Black Sea during the Crimean War, has become a classic. Leverrier collected sufficient material to make it possible to plot a series of primitive weather maps. He then found that the storm had moved along a regular path with a fairly uniform speed, and consequently suggested that if arrangements were made for the

collection, by telegraph, at a central office of weather reports from suitable observing stations, analysis of charts based upon these reports would allow the future path of the storm to be extrapolated and due warning to be given of its approach. A number of meteorological stations were established, and in the middle years of the 19th century there grew up in most countries organizations for the collection and discussion of meteorological information.

In 1858 the French government established a telegraphic weather service with its headquarters in Paris. A corresponding service was brought into operation in Great Britain two years later. The first daily weather report to be published originated in Great Britain, in 1851. A conference of leading meteorologists, representative of many countries, was held at Leipzig in 1872—the forerunner of the regular meetings of the present-day International Meteorological Organization. The I.M.O. initiates any necessary measures for the development or improvement of international meteorology; and upon its activities depends the ability of each country to obtain promptly and accurately from other countries the reports which form the nucleus of the synoptic charts, and on which weather forecasts are based.

#### Meteorological Systems

The state of the weather at a given time and place is generally specified by the values possessed by the meteorological elements, namely, air temp., humidity, pressure, wind, precipitation (rain, snow, etc.), and clouds. The standard practice of representing the weather conditions over any region consists of bringing together observations made simultaneously at a network of stations by plotting them on a map, thus affording a bird's eye view, so to speak, of the geographical distribution of the various prevailing elements.

The period following the introduction of the synoptic chart saw the recognition of definite meteorological systems, such as depressions or "lows" and anticyclones or "highs," which retain their identity perhaps for days at a time and often travel long distances carrying their characteristic distribution of wind and weather with them. In 1860 Buys-Ballot discovered his famous law which states the connexion between the wind and the pressure distribution. Seven years later

Buchan published the first charts of monthly isobars, showing how the pressure over Europe diminishes gradually from S. to N. all the year round, with permanent low pressure near Iceland, and demonstrating the effect of pressure gradient upon wind velocity. Despite the multiplication of observations, however, the chief methods of forecasting which developed were statistical and derived from past experience. Little consideration was given to physical explanations, and few attempts were made to use physical principles, *e.g.* those that govern motion and the relation between heat and motion.

#### Solar Radiation

The earth's atmosphere has been compared to a gigantic heat engine. Solar radiation passes through the atmosphere without much appreciable interference unless a cloud lies in the path of the rays, in which case they would be reflected back towards space. Radiation reaching the surface of the earth, warms it and, in turn, the layer of air close to the ground. The principle heat sources of the atmospheric engine are, therefore, to be found in the tropics and middle latitudes—over the continents in summer and over the warmer sea currents in winter. Now the energy which is retransmitted by the surface of the earth is of a much longer wavelength and cannot easily penetrate the water vapour always present in the atmosphere. In any layer the water vapour will absorb radiation coming up from the earth on the one hand, and from adjacent higher and lower layers, on the other, the intensity of the radiations depending, of course, upon the temps. of the emitting sources. At a certain height a layer would be reached where the loss of heat is greater than the gain, and it is there that the main cold source is to be located. In the cold regions the air will sink and in the heated ones it will rise; between the two regions there will be movement of air horizontally. As the atmosphere as a whole gets neither hotter nor colder, there is a balance between the heat gained and that lost. Also, it is only recently that the part played by water, in the form of clouds, in regulating the temp. at the surface has been appreciated.

At present little is known concerning the vertical distribution of water vapour in the atmosphere. When the complexity of the radiation problem is also

considered, the difficulties the meteorologist faces in attempting to locate the heat and cold sources of the air and improve his understanding of the dependent wind systems are at once apparent. The agents responsible for the exchange of cold polar air masses with the warm tropical air masses are the depressions and the anticyclones, which may be envisaged as huge turbulent eddies, or vortices with vertical axes, developed in westerly and easterly air streams. Since the middle of the 19th century it has been realized that two currents of air, differing markedly in temp. and velocity, may flow adjacently and, as one succeeds the other, produce, at a given place, distinctive sets of weather phenomena. The moving discontinuities, or boundary lines, can extend over hundreds of miles and frequently are conspicuous on a synoptic chart. Norwegian meteorologists first examined the currents scientifically in detail. It was found that normally the currents could be followed from day to day; they differed from each other in direction, speed, temp., etc., and when they met abruptly, *e.g.* when warm air is pushed up over cold air, certain weather characteristics the discontinuities. It is not, therefore, the depressions and anticyclones as such that are important in determining the weather, but rather the interactions between the various air masses involved in the wind systems. The boundary between two air masses is referred to as a frontal surface and the intersection of this surface with the ground as a front. According to this theory, depressions form initially as small waves on a frontal surface, later growing into roughly symmetrical vortices.

#### The Upper Air

Up to the last decade of the 19th century systematic meteorological observations were confined almost solely to those made at ground level. Real knowledge of the temp. of the free air dates only from 1898, when de Bort introduced his sounding balloons carrying self-registering instruments to heights which up to that time had never been attained, and about which no information was then available. The following year de Bort made the discovery that the upward decrease of temp. ( $1^{\circ}$  F. per 300 ft. approx.) ceased at a certain height; above this level the temp. was either uniform or even

increased slightly. This epoch-making revelation of the stratosphere, as the upper layer was later termed, attracted great attention to his measurements. Similar methods were adopted in other countries and an intense investigation of the upper air was inaugurated. In the new era thus opened, W. H. Dines, chiefly by his design of an extremely light and robust meteorograph, played a leading rôle in bringing Great Britain to the forefront of this work. Exploration was not restricted to organized meteorological services, and soundings were made over the oceans and tropical Africa. Moreover, most polar explorers and expeditions included this aspect among their scientific activities.

#### Charting the Stratosphere

Direct measurements made on aircraft of temp. and humidity at regular intervals of height have provided yet another means of systematic observation, and during the Second Great War Spitfires carrying out meteorological flights attained heights of some 8 m., compared with 5 m. or so of the period between the two wars. A radio technique, aimed at securing additional information about the upper atmosphere, was later adopted almost to the exclusion of all others. The radio-sonde, carried upwards by a balloon, automatically transmits, by radio, signals representative of the meteorological elements, temp., pressure, and humidity, to receiving stations on the ground. Continuous soundings to levels of 10 m. or 12 m. are frequently obtained and in the British meteorological service the upper air programme provides for radio-sonde ascents from a number of selected stations four times daily. Radar methods are also used to determine the position of the balloon carrying the transmitter, at any instant, and so give an indication of its path, from which the direction and speed of the upper winds can be deduced. With this technique it is unnecessary to await the recovery of the instrument on descent. A feature of current synoptic analysis is the construction of series of charts for the upper levels of the atmosphere; in Great Britain the practice is to draw isopleths showing the height of the surface of chosen values of pressure, e.g. 700 mb., 500 mb., etc. Thus a three-dimensional representation is obtained of the structure of the atmosphere and of the air mass movements which are taking place.

Research has shown that the tropopause—the sharp surface separating the stratosphere from the underlying region, or troposphere—over England is generally at a height of about 7 m., although occasionally it may be as high as 10 m. and as low as 4½ m. On the average, the base of the stratosphere occurs at a higher level in the tropics (10 m.) than at the poles (6 m.); and as the temp. is lower the greater the altitude at which the transition from troposphere to stratosphere takes place, the coldest-known terrestrial region is 10 m. above the equator, where a temp. of  $-130^{\circ}\text{F}$ . has been registered. At the ground the lowest temp. on record is  $-95^{\circ}\text{F}$ . (Siberia). During the Second Great War it was observed that the conspicuous condensation, or vapour, trails produced in the exhaust of a high-flying aircraft disappeared when the aircraft climbed into the stratosphere. Investigation with a specially designed hygrometer revealed that the air of the stratosphere is invariably extremely dry. Since the presence of even minute proportions of water vapour exerts an influence on temp., this discovery is of the greatest importance. It has been suggested that the source of this dry air is the cold and therefore dry equatorial stratosphere, which would indicate a world-wide circulation of air in these upper regions of the atmosphere. It is not known precisely how far the stratosphere extends upwards, but it appears from the study of the travel of sound waves in the atmosphere, by Whipple and others, that at a height of between 22 m. and 25 m. above sea level the temp. begins to increase again at about the same rate as it decreases in the troposphere; how far the rise continues is not yet certain. Temps. in this upper warm region exceed those found on the ground at the equator, and at a height of 40 m. would seem to be of the order of the boiling point of water.

#### Study of the Troposphere

In the troposphere the general surface temp. is determined chiefly by radiation, and the temp. gradient in the air by turbulence. It is in this region that the formation of cloud and rain takes place. The rate at which temp. there falls off vertically, usually referred to as the lapse rate, is far from being regular; not infrequently the decrease is interrupted by layers, several hundreds or even thousands of feet thick, in which the temp. remains constant, or even

increases with altitude. Such layers are termed inversions and are associated with stable conditions in the atmosphere. The lapse cannot exceed the adiabatic lapse rate ( $5^{\circ}\text{F}$ . per 1,000 ft.), i.e. the rate at which the temp. of a mass of dry air alters when subjected to change of level in consequence of the work done by or upon it in expanding or contracting. Any temporary increase of lapse rate beyond the adiabatic limit (e.g. by the heating of the surface layers faster than those higher up) indicates conditions of great instability, which give rise to powerful convection currents and the development of thunderstorms.

#### New Methods and Instruments

During the Second Great War the meteorologist was provided with many ingenious new instruments and techniques, a number depending upon the close association between meteorology and radio. By observing, at a wide network of sites, the bearings of atmospheric due to lightning flashes distant thunderstorms can now be detected and their movements plotted. Thunderstorms are, however, frequently associated with the cold fronts of depressions; such "static" reports will obviously form valuable supplements to the information at the disposal of the synoptic analyst. At closer ranges, the application of microwave radar principles fulfils several purposes. Wind finding balloons can be tracked with a high degree of accuracy. Cloud types can be identified and warning received of the approach of rainstorms. As the nature of the echo from a collection of water drops depends to a great extent upon the size of the drops, it is possible with a radar beam to investigate the distribution of drop size and concentration of drops in a cloud. Again, the refraction of radio waves by the atmosphere affords a means of studying the humidity gradient upon which the refractive index of the air, at radio frequencies, largely depends.

**Bibliography.** Meteorology, A. E. M. Geddes, 1921; *Manual of Meteorology*, Vols. 1-4, Sir N. Shaw, 1931-36; *Physical and Dynamical Meteorology*, D. Brunt, 1939; *Physics of the Air*, W. J. Humphreys, 1940; *Forecasting Weather*, Sir N. Shaw, 1940; *Introduction to Meteorology*, S. Petersen, 1941; *Meteorology for Aviators*, R. C. Sutcliffe, 1946; and *The Weather Map and Meteorological Glossary*, handbooks issued by the Meteorological Office.

**METEOROLOGICAL STATIONS.** Places where regular observations

of weather are made and recorded. When reports are made to a central office the observations are on a uniform plan according to a set time-table. Stations can be classified according to the character of the observations made. At the most important observatories continuous records are kept of pressure, temp., wind, rainfall, and sunshine, and frequent observation is made of cloud and other elements. A normal climatological station records pressure, temp., wind, cloud, and weather at two or more fixed hours each day, together with the daily rainfall. At auxiliary climatological stations the observations are less complete, being taken only once each day or other than at the recognized times. Telegraphic reporting stations make more detailed observations at 3-hourly intervals for use in the preparation of the synoptic charts for weather forecasting; at airfields observations are made each hour. Agricultural-meteorological stations devote special attention to earth temps. and health-resort stations make observations chiefly for publicity purposes. The bulk, however, of the 5,500 meteorological stations in the British Isles record only rainfall.

The Meteorological Office (*q.v.*) maintains observatories at Kew (Surrey), Eskdalemuir (Dumfries), Aberdeen, and Lerwick (Shetland), and also receives reports from the Royal Observatory, and the observatories at Liverpool, Southport, and Paisley. In addition it receives daily reports from the minor stations. *See Weather.*

**Meter.** Instrument for measuring quantities of electric current, gas, water.

**ELECTRIC METERS.** These can be divided into three general classes: indicating; recording; integrating. Indicating meters, or indicating instruments, show the value in terms of some known unit of power of the quantity being measured at any particular moment by means of a pointer moving over a graduated scale. To this class belong the galvanometer, the voltmeter, and the ammeter (or amperemeter), the power factor indicator, which measures the difference in phase between current and voltage in an A.C. circuit, and the wattmeter which has both current and voltage coils and measures the power in a circuit by multiplying the current by the voltage (by the power factor in an A.C. circuit). The ohmmeter, by dividing volts by amps, gives direct indication of the electrical resistance of a circuit.

Recorders are indicating instruments with the pointer and scale replaced by an inked stylus or pen resting on a chart driven by clock-work so that it traces out a continuous record of the value of the quantity over a period of time.

Integrators, or energy meters, measure the total energy passed in a given time, directly in kWh. or B.o.T., units by integrating power and time, irrespective of how the power varies over the period. Integrators are of three main classes, chemical, clock, and motor.

In most energy meters a small motor (either A.C. or D.C. according to the supply), whose torque is proportional to the power in the circuit, drives an eddy current brake. This consists of an aluminium or copper disk rotating between the poles of a powerful permanent magnet, thus setting up

Meter. Fig. 1. Diagram of meter for recording electricity consumption. For explanation see text

eddy currents in the disk, and giving a braking torque which is proportional to the speed but is without friction. The speed of the motor with such a brake is directly proportional to the power in the circuit, so that the actual number of revolutions made is a measure of the energy passed, and this is ascertained by a simple counting train of gearwheels and dials which can be calibrated directly in kWh.

Fig. 1 is an elementary diagram illustrating the principles of operation in a D.C. meter. A is the armature connected as a voltage coil through the commutator C. B B' are the field magnets, connected as current coils. D is the eddy current brake disk, and E E' the brake magnets. F is a small auxiliary field coil to compensate for friction at light loads, and G is the gear train for counting the revolutions.

Alternating current meters are simpler in construction but more complex in action. The rotating element consists of a single disk in which both driving and braking torques are induced simultaneously, one half of the disk acting as a small induction motor under the action of current and voltage coils, and the other acting as an eddy current brake.

The prepayment meter, frequently used in residential premises, consists of a standard meter unit with an extra gear train connected to a spring-operated switch, which is closed by a loose handle or knob outside the meter. This knob can be temporarily connected to the mechanism by the insertion of a coin, which falls through into a collecting box after the knob has been rotated, and the switch closed. The action of closing the switch also sets up the gearing by a certain amount. The rotation of the meter element gradually unwinds the gearing, and opens the switch after a certain number of revolutions, unless the mechanism has been further set-up by the insertion of another coin. (*See Ammeter; Galvanometer; Ohm's Law; Voltmeter.*)

**GAS METERS.** These include positive displacement and inferential types. For use on consumers' premises a meter must satisfy requirements of Gas Works Clauses Act and Sale of Gas Act, under which it is a statutory obligation to supply gas by meter. Meters in use, which must be accurate within the limits 2 p.c. fast (in favour of supplier) and 3 p.c. slow (in favour of the consumer), are of the dry or bellows type, to the Institution of Gas Engineers specification, and fitted in accordance with B.S. Code of Practice for installation of gas meters.

The dry meter (*see Fig. 2*) consists essentially of a sheet-iron or steel box, 6, divided horizontally by a valve plate, 9, into two main chambers, the upper of which is termed the attic, the lower the body. The body is divided into two compartments by the diaphragm plate, attached to either side of which are the diaphragms of sheepskin, 11. The diaphragms are supported conically by attachment to diaphragm disks, 10, which are in turn supported by hinges, 12, known as flags. Lateral movement of the diaphragms is caused by their inflation and deflation by the gas in its passage through the meter. This lateral motion is communicated by the flags which are attached to flag rods, 3, mounted

vertically, and which, by means of tangential gearing in the attic, convert it into rotary motion to

**Meter.** Fig. 2. Diagrammatic vertical cross-section of dry gas meter showing one bellows. A similar bellows is mounted on the back. Upper diagram is a plan of the attic showing the valves, 13, and gearing mechanism

actuate the recording index and, in addition, work the valves which open and close the admission and outlet ports to the measuring chambers. Gas enters at inlet 1, and leaves at outlet 7. The flag rods pass through gas-tight stuffing boxes 8. The large dial 2 is for testing and the smaller dials or figures record the gas consumption. The direct reading index 4 is superseding the dial type.

**WATER METERS.** These are used to record the quantity of water passing into premises through a supply line; or to register the flow at any particular point in a distribution system. For large flows, a Venturi type of mechanism is used. The water passing through is measured (1) by a pair of pistons working in cylinders of known capacity, into each of which the water enters in turn; the piston movement is transmitted to a graduated dial; (2) by a moving gate or flap in the waterway, connected by linkage to an indicator recording on a chart affixed to a rotating drum; the greater the rate of flow, the wider the gate opens; (3) by the principle of the Venturi tube (*q.v.*): water flowing through the narrowed throat of the tube loses head but gains

velocity; after leaving the Venturi throat it loses velocity but regains head. Thus there is a pressure difference between the upstream side of the tube and the throat equal to the difference of head. Pressure pipes leading from the upstream side of the tube and from the Venturi throat are taken to float chambers, in which floats rise and fall with the columns of water therein and communicate information to the recording apparatus. The latter comprises a rotating drum where time intervals and the rate of flow are registered. Integrating mechanism records the total flow on counter dials.

**Metford, WILLIAM ELLIS** (1824-99). British inventor. Born at Taunton, Oct. 4, 1824, and educated at Sherborne, he was apprenticed to Isambard Brunel and became a railway engineer. In 1856 he went to India in the service of the E. India rly., and saw fighting in the Mutiny. He invented an expanding bullet in 1863 and a rifle for it in 1865, but the bullet was condemned by the St. Petersburg convention of 1869. In 1871 he produced a breech-loader which won the Wimbledon prize. In 1888 his improvements and inventions were incorporated with those of S. P. Lee in the Lee-Metford rifle adopted by the British army. He died at Bristol, Oct. 14, 1890.

**Methane.** Colourless, odourless gas. Found in the free state in nature, its chemical formula is  $\text{CH}_4$ . In its pure form it burns with a pale, non-luminous flame. It is the lowest of the paraffin series of hydrocarbons and is the only one with but a single atom of carbon in the molecule. Also known as marsh gas, firedamp, and methyl hydride, it is given off by decaying vegetable matter in stagnant pools and marshes, and, when ignited, forms the will-o'-the-wisp. Large quantities of firedamp (*q.v.*) are formed in coal measures by the slow decomposition of the coal.

Methane is a constituent of coal gas. Prepared by heating equal parts of dried sodium acetate and soda-lime in a copper flask, and collecting the gas over water, it generally contains hydrogen and ethylene as impurities. To prepare chemically pure methane, methyl iodide is dropped slowly into a flask containing a copper-zinc couple covered with dilute alcohol. The flask is gently heated, and methane is evolved. See Hydrocarbon.

**Methil.** Seaport of Fifeshire, Scotland, forming part of the police borough of Buckhaven and Methil (*q.v.*). On the N. shore of the Firth of Forth, 1 m. S.W. of Leven by rly., Methil has a tidal harbour, with three docks, and exports coal. Pop. 2,559.

## METHODISM: HISTORY AND TEACHING

Rev. Leslie F. Church, Ph.D., Connexional Editor, Methodist Church

*This article deals with a religious movement that originated in 18th century England and became one of the great world-wide branches or denominations of the Protestant faith*

Methodism was originally a term of ridicule applied to religious extremists, but has now been accepted as an honourable description of an important branch of the Christian Church. Methodism was largely responsible for the evangelical revival of religion in 18th century England. In 1729 a small group of Oxford students banded themselves together to study the Bible regularly, to visit prisoners in the Bocardo, the Oxford jail, to care for the poor, and to observe the ordinances of the Church, especially Holy Communion. They were called Bible Moths, the Holy Club, and, because they had agreed to "live by rule," Methodists. The movement was a virile spiritual reaction against the selfish and artificial life of the time. Religion particularly in the form of cold deism, had lost touch with the people. The masses were discontented, hungry, and inarticulate; English political and philosophical

leaders were for the most part ignorant of their existence or indifferent to their needs. Perhaps the influence of Methodism saved England from the excesses of the French Revolution, not by administering an opiate but by quickening the despairing multitudes to new hope and self-respect.

In 1735 John and Charles Wesley went to Georgia with the idea of helping General Oglethorpe in his colonial administration, and of "converting the Indians." They were unsuccessful, and returned deeply concerned about their failure. Three years later, after being influenced by the Moravians, the two brothers experienced a spiritual transformation. They were converted. From cold, scholarly churchmen, they became warm-hearted powerful evangelists. Religious societies, not unlike the little Oxford fellowship, were founded all over the land. Methodism grew with

amazing rapidity. Itinerant preachers, directed by John Wesley, the greatest of them all, ranged the country. Religious apathy was ended by the creation of fellowships (band-meetings and class-meetings) formed by men and women who had a new and intimate sense of the presence of God in their lives.

In 1739 the first preaching-house was built at Bristol. In London Wesley bought the Foundry, an old cannon factory, which he adapted as a chapel. In 1741 Thomas Maxfield was allowed to function as a lay-preacher, and so began what has become one of the most important features of Methodism. Local preachers, as they are now called, today number in the British Isles alone, 27,560.

In 1741 Wesley and his followers declared themselves opposed to the Calvinistic doctrine of "election," maintaining the Arminian doctrine of "free grace for all." This led to a break with George Whitefield, who had long been associated with the Wesleys.

#### The Conference

The first Conference, consisting of six clergymen and four lay-preachers, met in 1744, in London. Conferences have been held each year since, and the Conference has become a vital part of the constitution of the Methodist Church. "It is," says Dr. Fitchett, "a parliament with all the functions of legislation, a cabinet of administration, a court of discipline, and the machinery by which the system of an itinerant ministry is regulated." It is a representative body, democratically elected, and consisting at present of 650 members, 325 of whom are ministers and 325 laymen. Each year a president and vice-president are elected by the members. It has a ministerial session of 450 ministers.

The Methodist societies, consisting of the members of the local classes, are grouped in circuits geographically; the circuits are combined in districts, each similar to a diocese. Superintendent ministers have charge of circuits, and chairmen administer the districts. The individual member is related to Conference through his class, the local leaders' meeting, the circuit quarterly meeting, and the district synod.

Methodism has retained the general organization of the primitive Christian Church. Its constitution is presbyterian rather than episcopal, but its stewards correspond to the "deacons," its

local preachers and exhorters to the "prophets," and its class-leaders to the "teachers" of sub-apostolic times.

In 1747 Methodism spread to Ireland and in 1751 to Scotland. In 1784 Wesley, as a presbyter of the Church of England, claimed the right to ordain Dr. Thomas Coke and Francis Asbury as "superintendents" for the work in N. America. They were subsequently termed "bishops" in the Church, which became known as the Episcopal Methodist Church of U.S.A. Though the Wesleys remained nominally in the Church of England, many pulpits were closed to them. This led to the field-preaching which was, in its early years, the most important side of their evangelistic efforts. By 1784 there were 359 Methodist preaching-houses in England. Today the number of churches under the jurisdiction of the English Conference is 16,459.

If John Wesley by his preaching and statesmanship became the preacher of the Methodist Church, Charles Wesley with an inimitable tenderness sang the theology of the evangelical revival into the hearts and minds of the people. His hymns have had an abiding influence throughout Christendom, and have conveyed the message of "free salvation" more intimately than the words of the preachers.

It was obvious at the death of John Wesley that the Methodists would separate from the Church of England, and indeed he himself had prepared for the event. It has since been felt that a wiser handling of the situation by the contemporary Anglican leaders might have prevented the division. In 1795 a "plan of pacification" established for Methodists the right to administer the sacraments and to hold their services during the statutory hours for public worship.

#### Characteristics of Methodism

Methodism, from the beginning, revealed a genius for social and educational reforms. Its early preachers carried cheap but wholesome literature in their saddlebags, and encouraged the illiterate to read. Some of the strongest opponents of the slave-trade were amongst the Methodists, and in later years they showed enterprise in new forms of home mission work, and in widespread missionary activities overseas. Methodism has always claimed as its motto John Wesley's famous words: "The world is my parish." At the end of the 19th century there began the forward movement which was

designed for the evangelisation of London and the larger towns. A sum of a million guineas was raised by 700,000 Methodist contributors to carry on this work, and to build great central halls to serve as headquarters for religious and social activities.

In 1796 Alexander Kilham founded the Methodist New Connexion. He had criticised the constitution of Wesleyan Methodism as not being sufficiently democratic, and maintained the right of all Methodist preachers to administer the sacraments. In 1815 the Bible Christians, or Bryanites, established themselves as another branch of Methodism; so did in 1827 the Protestant Methodists, in 1835 the Wesleyan Methodist Association, and in 1849 the Wesleyan Reformers. Subsequent fusions brought these smaller bodies together, until in 1907 they were all united as the United Methodist Church.

In 1810 Hugh Bourne and William Clowes founded a society known first as Camp Meeting Methodists, but in 1812 as Primitive Methodists. This and the other sections which had sprung from Wesleyan Methodism differed little in theological outlook. The divisions were caused largely by disagreement on points of administration and procedure.

#### Reunion of all Branches

After long negotiations the Wesleyan Methodists, the Primitive Methodists, and the United Methodists decided to effect a complete union. The Methodist Church Union Act was passed in 1929, and in 1932, by the deed of union, the amalgamation was completed. Though this meant some adjustment in the constitution of each of the three Churches, it maintained the doctrinal standards to which all three had subscribed.

In order to secure uniformity in administering Trusts there is a model deed on which the greater part of Methodist properties are now held.

In Canada all the Methodist sections united to form the Canadian Methodist Church in 1883, and in 1925 this Church joined with the majority of Presbyterians and Congregationalists to form the United Church of Canada.

In Australia, New Zealand, and South Africa there are flourishing Methodist churches with their own conferences and without any sectional distinctions.

Methodism came to America first through Capt. Thomas Webb,

an English officer, Philip Embury, and Barbara Heck, settlers from Ireland who had been exiled from the Palatinate. The first Methodist conference in America was held at Philadelphia in 1773. Today it is estimated that there are 16,049,841 members of Methodist churches in the U.S.A. The approximate world figure of membership is 19,300,000, but the number of adherents is estimated at over 30,000,000.

The doctrinal standards of Methodism are still Wesley's four volumes of sermons, and his *Notes on the New Testament*. Recently new editions with explanatory notes have been prepared. The doctrines specially stressed are Assurance, Conversion, and Holiness or Christian Perfection. Fundamentally the Methodists hold theological beliefs similar to those accepted by the evangelical section of the Church of England.

The training of candidates for the Methodist ministry has been steadily progressive. At present there are in England six theological colleges: Hartley (Manchester), Didsbury (Bristol), Richmond (London), Headingley (Leeds), Handsworth (Birmingham), and Wesley House (Cambridge). There is also a Methodist theological college at Edgehill, Belfast. Most of these are affiliated to the neighbouring university, and their staffs are recognized.

#### Basis of Membership

The basis of membership in the Methodist Church is laid down in the Standing Orders. Members must "sincerely desire to be saved from their sins through faith in the Lord Jesus Christ, and evidence the same in life and conduct," seeking "to have fellowship with Christ Himself and His people by taking up the duties and privileges of the Methodist Church." Their names are enrolled on class-books, and each person is under the pastoral care of a class-leader. They are expected to have received Christian baptism either as infants or adults before they are received into full membership of the Church.

Recently the Methodist Church in Great Britain and Ireland has appointed commissions to report on Methodism in rural areas, and on the state of the Church generally. The activities of its youth, its newly-developed women's fellowship, and other signs, point to a revival of the spiritual enterprise of its earlier years.

**Methuen**, PAUL SANFORD METHUEN, 3RD BARON (1845-1932). British soldier. Born Sept. 1, 1845, he was educated at Eton, and in 1864 was commissioned in the Scots Guards. He served in Ashanti, 1874, and the Egyptian War, 1882; commanded Methuen's Horse in Bechnanaland, 1884-85; and was a divisional commander in the S. African War, 1899-1902. Sent to relieve Kimberley, he was defeated at Magersfontein, Dec. 12, 1899. In March, 1902, he was taken prisoner at Tweebosch. He was c.-in.-c. in S. Africa, 1907-09, governor of Natal, 1909, and governor of Malta, 1915-19. In 1911 he was made a field-marshal, and in 1920 became constable of the Tower of London. He died October 30, 1932. His son, Paul Ayshford Methuen, who succeeded as 4th Baron, was born Sept. 29, 1886, and educated at Eton and New College, Oxford. A distinguished painter and pupil of Sickert, he had several one-man exhibitions. He was a trustee of the National Gallery, and of the Tate Gallery, 1938-45.

**Methuen Treaty.** Treaty concluded Dec. 27, 1703, with Portugal by Sir Paul Methuen, acting on behalf of Great Britain. Its effect was to bring Portugal into the war of the Spanish Succession as a member of the Grand Alliance (q.v.). Portugal was to provide 28,000 troops, Britain agreeing to pay for the maintenance of half of them. The treaty also gave advantage to Portuguese wine in the English market, and corresponding advantage to English wool in the Portuguese markets. From the Methuen Treaty dates the popularity of port wine in England.

**Methuselah.** Son of Enoch and grandfather of Noah (Gen. 5). He is stated in the O.T. to have lived 969 years, the greatest age recorded among the patriarchs, but the

Samaritan text gives it as only 720 years. These figures are considered to be merely traditional.

**Methven.** Parish and village of Perthshire, Scotland. It is 8 m. by rly. W. of Perth. The churchyard contains the tomb of Lord Lynedoch, the General Graham of the Peninsular War. In the battle of Methven, 1306, the English were successful over Bruce. Methven Castle dates partly from 1680. Pop. 1,700.

**Methyl.** Name given to the group of elements represented by the formula  $\text{CH}_3$ . It is not known in the free state, but its derivatives are very numerous. The name was originally applied to ethane ( $\text{C}_2\text{H}_6$ ) until the true constitution of the molecule was recognized. See Carbonates.

**Methyl Alcohol.** Colourless liquid with an odour like that of ordinary alcohol (ethyl alcohol). On ignition it burns with a blue flame, and, like ethyl alcohol, it possesses great solvent powers. In the crude state it is known as wood naphtha or wood spirit, because until recently it was prepared on a large scale by the dry distillation of wood. It is freed from acetic acid, acetone, and other bodies produced at the same time by rectifying in stills similar to those employed in purifying alcohol. Methyl alcohol is also produced as a by-product in the beet-sugar industry. Synthetic methyl alcohol is now made on a large scale from water gas by a catalytic process.

Commercial wood spirit contains from 75 to 90 p.c. of methyl alcohol. This spirit is used as a solvent for making varnishes and french polish, and as a denaturant of methylated spirit. The commercial spirit is purified by distilling with lime and fractional distillation, and chemically pure methyl alcohol may be made from commercial spirit by mixing it with calcium chloride, and heating. When the compound thus formed is heated pure methyl alcohol is obtained. The purified wood spirit is largely used in the manufacture of aniline dyes.

**Methylamine.** Colourless gas with a fish-like odour. It was discovered in 1849 by Wurtz, who prepared it by acting upon methyl isocyanate with caustic potash. It is contained in bone oil, crude wood spirit, and herring brine. Dimethylamine and trimethylamine are also known. These are liquids with a characteristic fishy odour.

**Methylaniline.** Alkyl derivative of aniline. It is manufactured by heating aniline with methyl

alcohol and hydrochloric acid, and is a colourless liquid. It is extensively employed in the dyeing industry and as the raw material for explosives.

**Methylated Spirit.** Alcohol which has been rendered unfit for use as a beverage by denaturising. The object of the process is to allow the sale of alcohol for manufacturing purposes free of the heavy duty charged on alcohol. There are four kinds of methylated spirit: (1) mineralised methylated spirit, consisting of alcohol mixed with one-ninth of its bulk of wood naphtha,  $\frac{1}{2}$  p.c. of crude pyridine, three-eighths of 1 p.c. of petroleum, and a trace of aniline dye; (2) industrial methylated spirit, containing only one-nineteenth of its bulk of wood naphtha; (3) pyridinised industrial methylated spirit, which is the same as (2) but with  $\frac{1}{2}$  p.c. of crude pyridine; and (4) power methylated spirit, consisting of alcohol to which have been added small quantities of petrol, pyridine, wood naphtha, and dyes. Retailers of methylated spirit must have a licence.

**Methylene Blue.** Aniline dye first prepared by Caro in 1876. It is much used in cotton dyeing and calico printing on account of its fastness to light, is of considerable value as a staining material in bacteriological work, and is used as a biliary disinfectant.

**Methyl Methacrylate Plastics.** Class of synthetic materials. Although methyl methacrylate, chemical formula  $\text{CH}_2=\text{C}(\text{CH}_3)\text{COOCH}_3$ , has been known since the mid-19th century, it was not until 1901 that the process of its controlled "build-up" was discussed and examined. Since then, but more particularly from the 1930s the process has become the basis of a number of industries with widely-used products.

Methyl methacrylate in its simple molecular form by the application of heat, ultra-violet light, or certain chemical catalysts can be converted through progressively syrupy stages to the solid stage. This is the so-called polymer, i.e. it is built up from many simple molecules, and the process is referred to as polymerisation (*q.v.*). The methyl methacrylate plastics are thus a series of polymers based on this simple chemical. According to the conditions of preparation the polymer can be made available as a solution in a volatile solvent, as a syrup, as a dough, or as a solid, and at each stage can be worked up as such into end products ranging in variety from a

complete denture to the astral-dome in a bomber aeroplane.

The liquid methyl methacrylate, containing a suitable catalyst (usually benzoyl peroxide) in controlled amount, is poured into a shallow glass tray and subjected to ultra-violet light under such conditions that the molecular build-up takes place gradually. Finally transparent sheets are obtained, having the highly polished surface of the mould. These sheets are thermoplastic, so that they become flexible at 120–140° C., in which condition they can be pressed or pulled into a desired shape, which will be retained when the temperature has returned to normal. There are also possibilities of working these materials at what may be regarded as a half-way stage. Fortunately the polymer is soluble in the liquid monomer, a fact which has been made use of in the production of dentures.

**Methyl Salicylate.** Chief constituent of oil of wintergreen, distilled from the bark of *Betula leuta*. It possesses a characteristic odour, and is a sovereign remedy in the treatment of rheumatism and in the relief of rheumatic pain. Methyl salicylate is made artificially by dissolving salicylic acid in methyl alcohol, then gradually adding sulphuric acid, maintaining at a moderate temperature for 24 hours, and distilling in a current of steam. The product is nearly identical with that prepared from oil of wintergreen.

**Metis** (Gr., wisdom). In Greek mythology, one of the daughters of Oceanus, the first wife of Zeus. She was so wise and prudent that Zeus, fearing she might bring into the world a child destined to become wiser than himself, devoured her when she became pregnant, the result being that Athena was born from the head of Zeus.

**Metol.** Salt of p-methylaminophenol used as a photographic developing agent. It is prepared by boiling together for about an hour p-amidophenol and chloroacetic acid. On cooling p-hydroxyglycine crystallises out, and on melting this at 245° to 247° C. carbonic acid and metol base result as products of decomposition. The average amount of metol required per ounce of developer is 2½ grains. It is a "soft" working developer, and is therefore frequently used in combination with hydroquinone. See Photography.

**Metonic Cycle.** Cycle of 19 solar years, approximately equal in duration to 235 lunar months. It was discovered by Meton, from

whom the name is derived, that the moon passes through the same cycle of changes every 19 years, e.g. an eclipse of the moon in 1950 will recur in 1969. The cycle is used in the determination of ecclesiastical feasts, since Easter Sunday is chosen to follow a full moon, the first moon after the spring equinox. See Golden Number.

**Metonymy.** Figure of speech in which an attribute is used in place of the person to whom it applies. Examples are "the bench" to mean the body of judges who sit on the bench, and "the purple" for an emperor because he wore purple robes.

**Metope** (Gr. *metopē*, space between two beam-ends). Term in architecture applied to the slab or

Metope. Specimen of the Doric type

tablet of stone or marble filling the space between two triglyphs (*q.v.*) of a Doric frieze. In the most ancient buildings the metope was an open space, but in extant classic architecture it is a slab which is either blank or bears a decorative design, sometimes painted, but more often sculptured in high or low relief. See Entablature; Frieze.

**Metre** (Gr. *metron*, measure). Word used in two special connexions: (1) The standard unit of length adopted by the French convention in 1799. (See Metric System.) (2) The arrangement of groups of one or more syllables, measured by stress or by quantity, in definite forms constituting lines and verses, which are the units of metrical compositions. This subordination of rhythm to law constitutes the capital difference between verse and prose. See Poetry; Prosody; Rhythm; Verse.

**Metric System.** Connected system of weights and measures based upon an arbitrary unit, the metre. Any set of measurements involves two considerations, the unit of measurement, and the relation between multiples of the unit. In the British system the unit of length is the foot and that of weight the pound; and the numbers of feet in a yard, furlong, and mile bear no common relation either to one another or to the number of pounds in a stone, cwt.,

or ton, so making calculations and comparisons difficult to carry out quickly. The metric system aims at simplification, the various units are rationally connected, and the scale of numeration is the same for most units. This common scale involves merely the decimal system of notation, the familiar system of counting by tens, where the value represented by a figure depends upon its position to the right or left of the unit's place.

In the metric system we have as names and symbols K=kilo= $10^3$ , H=hecto= $10^2$ , D=deca= $10$ , where kilo, etc., are derived from Greek; and d=deci= $10^{-1}$ , c=centi= $10^{-2}$ , m=milli= $10^{-3}$ , where milli, etc., are derived from Latin, designated by a small letter and used for quantities less than the unit. The quantity 5,432-768 metres can be immediately read as 5 kilometres, 4 hectometres, 3 decametres, 2 metres, 7 decimetres, 6 centimetres, and 8 millimetres. If the quantity is not a length, but a weight, then the only change necessary is the substitution of the word grams for the word metres. The use of the decimal system makes for simplification; 5,432-768 feet is equal to 1 mile 152-768 ft., or 1 mile 50 yards 2-768 ft., and a certain amount of calculation is necessary to discover these equivalents.

#### History of Metric System

The metric system was invented towards the close of the 18th century, a committee of five being appointed in 1790 by the French government to determine the unit of length. In 1793 a commission of twelve considered the units then in use, and in 1798 an international commission representing ten European states reviewed the work accomplished by these bodies. On June 22, 1799, the metric standards were ceremonially deposited in the French archives. An act passed in 1837 made the new system obligatory throughout France. The fundamental unit, the metre, was selected as the ten millionth part of a quadrant of the earth's circumference, i.e. of the distance between the equator and the pole. This was hailed as a natural unit, but later investigations showed that this quadrant varies in length, with the consequence that the metre is defined as the distance between two marks upon a bar stored in the observatory of the international bureau of weights and measures at St. Cloud; it thus became quite arbitrary.

Originally it was intended that units of weight and capacity should

be derived from the metre. Because the mass of the standard kilogram in Paris is not exactly that of 1,000 c.c. of water at standard temperature and pressure, the simple relationship does not quite hold. One litre is the volume of one kilogram of water at maximum density and equals 1000-028 c.c. Other units, such as the are, for square measure, and stere, for cubic measure, are convenient renamings of multiples of the primary units. In superficial and volumetric measures the decimal notation is modified; with areas the multiples change by 100 at a time, e.g. 100 sq. m.=1 sq. Dm. and 100 sq. mm.=1 sq. cm.; or 64-73 sq. Dm.=6,473 sq. m.=0-6473 sq. Hm.; and with volumes the change is by 1,000 at a time, e.g. 1,000 c.c.=1 cu. dm.; or 847-283 c.c.=847,283 cu. mm.=0-847283 cu. dm. The metric system has been extended to currency, for 100 centimes=1 franc and 100 centesimi=1 lira, etc.

The facility with which the metric system can be used has led to its adoption internationally by scientists, and as the national system by most countries, the chief exceptions being the U.K. and British commonwealth, the U.S.A., and Russia. Efforts have been made to secure universal adoption of the system, but without success.

**METRIC ABBREVIATIONS.** K=kilo, H=hecto, D=deca, M=myria (ten thousand), d=deci, c=centi, m=milli; m.=metre, c.c.=cubic centimetre, g.=gram, Kg.=kilogram, l.=litre, Hl.=hectolitre, a.=are, s.=stere, t.=tonne, q.=quintal.

**METRIC EQUIVALENTS.** 1 a.=100 sq. m. 1 sq. Km.=100 Ha. 1 t.=10 q.=100 Kg. 1 s.=1 cu. m.=1,000,000 c.c. 1  $\mu$ =1 micron=0-000001 m. 1  $\mu$ g.=1 microgram=0-000001 g.

**METRIC AND APPROXIMATE ENGLISH EQUIVALENTS.**

1 m.=39-37 inches= $3\frac{1}{4}$  ft.  
1 Kg.=2-2046 lb.  
1 tonne=0-9842 tons.  
1 Km.=0-62138 miles=5 furlongs.  
1 sq. Km.=0-3862 sq. miles=247-17 acres.  
1 Ha.=2-471 acres.  
1 l.=0-2199 gallons= $1\frac{1}{2}$  pints.  
1 g.=15 $\frac{1}{2}$  grains.

**Bibliography.** Outlines of the Evolution of Weights and Measures and the Metric System, W. Hallock and H. T. Wade, 1906; Gram Tables, Molesworth, 5th ed. 1918.

**Métro.** Popular name for the Paris underground electric railway, properly called Métropolitain. Its

14 lines cover 165 $\frac{1}{2}$  km., linking all quarters of the city, with 341 stations. A standard fare is charged regardless of the length of the journey; books of season tickets are obtainable. The trains are designed primarily to accommodate standing passengers, and there is only one class. Construction of the Métro began in 1898; the first train ran on July 19, 1900.

**Metronome.** Instrument for indicating the exact pace of music. Experiments in its construction

Metronome. Form of instrument for measuring musical time

Boosey & Hawkes

date back to the 17th century, or perhaps earlier. About 1812 Winkel, an Amsterdam mechanic, experimented successfully with a pendulum suspended by its centre, having a weight at each end. By sliding one of the weights, all rates of speed are obtainable with quite short rods. This principle was appropriated as his own invention by J. N. Mälzel (1772-1838). Some early metronomes had arbitrary rates of time, but the minute is now adopted as the standard, so that the indication  $\text{♩}=88$  (for example) means that the pace is to be 88 minims to the minute.

**Metropolitan.** Term for the chief bishop of a country or province. In the Greek Church a metropolitan is intermediate between a patriarch and archbishop, but in the R.C. Church is equivalent to an archbishop. In the Anglican communion he is generally the head of an ecclesiastical province, whether archbishop or bishop. Thus the archbishop of Sydney is metropolitan of New South Wales. The metropolitans in England are the archbishops of Canterbury and York. See Archbishop; Bishop; Patriarch; Primate.

**Metropolitan Asylums Board.** Body of men and women which managed certain hospitals and institutions in the county of London. It provided an ambulance service, hospitals for imbeciles, for those suffering from infectious diseases, and for certain classes of sick children. It had also homes and schools for defective children, and managed casual wards and sanatoria for consumptives. The board, established in 1867, came in 1929 under control of the L.C.C. Its offices are County Hall, S.E.1.

### Metropolitan Board of Works.

Body established in 1855 to supervise the drainage, buildings, etc., of London, to which a definite area was then given. The members were elected by the vestries and district boards of the various parishes in the metropolis. In 1888 an inquiry into the working of the board revealed an unsatisfactory state of affairs, and it was replaced by the London County Council (*q.v.*).

**Metropolitan District Railway.** Former name of a section of the London Transport system. Inaugurated in 1863, it was closely associated with the Metropolitan line (opened in 1863), the two combining to form a rough circle serving districts of inner London. Leaving the inner circle at High St., Kensington, a main line went to Ealing and S. Harrow, branch lines serving Richmond and Hounslow. Another branch from S. Kensington ran to Wimbledon. The track was not laid far below ground, but was constructed on the "cut-and-cover" system in cuttings, these being roofed and sometimes built upon. Motive power at first was steam. The inner circle was completed in 1884, and the extension from Ealing to Harrow was opened in 1903. In 1933 the line was amalgamated with other London transport systems.

**Metropolitan Museum of Art.** Museum in New York, one of the most important in the world. It stands in Central Park, opposite 82nd Street, on a site in which there is plenty of room for expansion, and is notable for the number of its special collections. These include the Cesnola collection of Cypriote antiquities, said to be the largest of the kind ever made; and the Riggs collection of armour, illustrating European, Japanese, and Chinese work, and including suits of mail belonging to Philip II of Spain and Henry II and Henry IV of France. The comparatively small but excellent general collection made by Benjamin Altman, and by the terms of his bequest displayed as a whole, is rich in Rembrandts, and includes fine specimens of the work of Hals, Angelico, Botticelli, and Dürer.

J. P. Morgan's principal gift to the museum was perhaps Raphael's

Colonna Madonna, but he enriched almost every department of it, and his donations were of the value of well over £2,000,000. The tapestries from Burgundian and Alsatian looms and the collection of china are some of the most interesting of his contributions. The Morgan collection fills an entire wing. Another wing, the gift of Mr. and Mrs. Robert W. de Forest, is devoted to early American decorative arts. Mention should be made of the costume institute, the print study room, and special collections associated with the names of Theodore Davis, Michael Friedsam, H. O. Have-

Metropolitan Museum of Art, New York City, U.S.A.

meyer, and George Blumenthal. A branch of the museum, in Tryon Park, is the Cloisters, reconstructed with original elements from medieval French monasteries.

The museum is strong in pictures. Rosa Bonheur's *Horse Fair* is one of its chief treasures, and it has some good Van Dycks and Rubenses. Its modern pictures include one or two splendid Meissoniers and Détaillés, a few Whistlers and Sargent's, and a representative collection of contemporary American art. Archaeological galleries contain frescoes from the Pompeian villa at Boscoreale and a bronze-plated Etruscan biga or ceremonial chariot of the 6th century. A gallery of architectural casts includes the Portico of the Erechtheum, and models of Notre Dame and of the Parthenon. Plans in 1947 provided for a new building to house the present contents and also the Whitney museum of American art, making five museums in one.

**Metropolitan Opera House.** Building in New York. It covers the block between 39th and 40th Streets on Broadway. Completed in 1883, it was partly destroyed by fire and restored in 1893. Its ground-plan affords, from many balcony seats, a whole view of expensive boxes, but only a half view of the stage; this contact of the poorer community with the

wealthy was an avowed aim of the founders. The star system, under which patronage was asked only for individual artists, ceased to pay by 1935, when a repertory company was formed, all on yearly contracts. Caruso, Melba, and Arturo Toscanini had been launched into world fame under the earlier system. Ballet is given, and operas in English, French, Italian, German, and Russian. Broadcasts of matinee performances have yielded \$90,000 a year. Bernard Shaw gave his single American lecture from the stage of the Metropolitan Opera House.

**Metropolitan Police.** Name given to the force responsible for policing the metropolitan area of London. This area, which is the London police district, constitutes one of the many "London's," and includes roughly all territory within a 15-m. radius of Charing Cross, excluding the City of London. The area is about 700 sq. m. and its pop. almost 9,000,000. The metropolitan police have jurisdiction over the Thames between Dagenham and Teddington Lock and are employed in H.M. dockyards. The force has an establishment of some 21,000 men and women, the latter numbering about 150 in 1947. It is controlled by a commissioner, with one deputy and three assistant commissioners.

In addition to the usual police work the metropolitan police are responsible for the regulation of traffic and for the issue of licences to vehicles plying for hire. The force is divided into 29 divisions, each under a superintendent. Most of these divisions are represented by letters of the alphabet, *e.g.* A for Whitehall.

At the outbreak of the Second Great War the police war reserve and the special constabulary reserve were mobilised; and the women's auxiliary police corps formed. Owing to the greater calls imposed on the regular police by the German air attacks in the metropolitan area, more duties had to be undertaken by the reservists and specials than had been first anticipated. Shortage of manpower after the war led to the retention of a number of war reservists in the force. *See* Detective; New Scotland Yard; Police.

**METROPOLITAN POLICE COURTS.** The name given to the 13 police courts in London within the metropolitan police area. The City of London has its own court at the Mansion House. They are: Bow Street, Marlborough Street, W., Clerkenwell (King's Cross Road, W.C.),

Old Street, E.C., Lambeth (Renfrew Road, S.E.), Marylebone (Seymour Place), Tower Bridge (Tooley Street, S.E.), Thames (Aylward Street, Stepney), Greenwich and Woolwich, W. London (Southcombe Street, Hammersmith), South-Western (Balham), N. London (Stoke Newington Road, N.), West Ham (West Ham Lane, Stratford, E.).

Bow Street, the chief police court, developed out of the public office to which paid magistrates were appointed in the 18th century. At the end of that century, a number of other courts were established in different parts of London — Westminster, Clerkenwell, Whitechapel, etc., with paid justices. The Thames court was established at Wapping in 1800, to deal with crime on the river.

In 1821 the old court at Shadwell was established, and a new one established at Marylebone; Whitechapel court was removed to Lambeth in 1884; those at Greenwich and Woolwich, S.W. London, N. London, and W. London were established later. That at West Ham has one magistrate and a deputy, who are appointed by the home secretary, under the Municipal Corporations Act, 1882, being outside the county borough of London, but in the police area. At Bow Street are three magistrates, the senior of whom is the chief magistrate for London.

These courts deal with petty crime and drunkenness, and hear all cases in their area in the first instance, those referring to serious crime—murder, wounding, and burglary—being remitted by the magistrates to the criminal sessions at the Central Criminal Court, or London Sessions. The magistrates sit for a short time prior to the opening of cases to give advice. Many famous magistrates have sat at these courts, e.g. Sir John Bridge at Bow Street; W. C. Plowden at Marylebone. Juvenile courts are held in buildings separate from police courts.

**Metropolitan Railway.** Former name of a section of the London Transport system. The first underground passenger rly. in London and the world, its first section, from Bishop's Road, Paddington, to Farringdon Street, was opened in 1863. The company soon extended its system, reaching South Kensington in 1868, and Aldgate in 1876. The inner circle was completed in 1884, with the section between Aldgate and the Mansion House. In 1868 the extension to St. John's Wood was

opened, and this was gradually pushed out into the country. In 1904 the extension to Uxbridge was opened. The electrification of the line, begun in 1905, was completed as to the inner circle by Sept. that year. Electrification of other sections followed.

Jointly with the L.N.E.R. the Metropolitan rly. co. owned the line which serves Middlesex and Buckinghamshire, from Harrow to beyond Aylesbury. The Great Northern and City, a tube line connecting Moorgate in the City with Finsbury Park, belonged to this company. The total mileage owned, partly owned, or worked, was 179 when the company was absorbed by the London Passenger Transport Board in 1933. See London Transport; London Railways. colour map.

**Metropolitan Tabernacle, THE.** Baptist place of worship, Newington Butts, London, S.E. It was opened Sept., 1900, on the site of a similar structure, built in 1860-61, at a cost of £31,000, for C. H. Spurgeon (q.v.) and destroyed by fire, April 20, 1898. The second structure, which cost £44,576 and had accommodation for 6,000, was burnt out on May 10, 1941, during a German air raid. Services continued in underground rooms.

**Metropolitan Water Board.** Municipal body established in 1902 to take over the task of supplying London with water. It began work in 1904, when the first board was elected. It consists of 66 members, chosen for three years by various authorities in the Metropolis. Among these are the London County Council, which elects 14; the 28 metropolitan borough councils, which elect one each; the county councils of Middlesex, Kent, Surrey, Essex, and Hertford, the Thames and Lea conservancies, and others. The board provides water from the Thames, Lea, and wells for nearly 6,500,000 persons in 560 sq. m. in the counties of London, Middlesex, Surrey, Kent, Essex, and Hertford. It has an income of over £7,000,000, and a debt, mainly incurred in buying out old companies, of over £55,000,000. The George VI reservoir at Staines was opened on Nov. 7, 1947. It has a storage capacity of 4,466,000,000 gallons, is 2,037 yds. long, and from 722 to 962 yds. wide. The offices are at New River Head, Rosebery Avenue, London, E.C.1.

**Metsu, GABRIEL** (1630-67). Dutch painter. Born at Leyden, he was a pupil of Gerard Dou, and in 1657 went to Amsterdam, where he died. His work shows the

influence of various painters. At first he worked in the neat and smooth manner of Dou, but about 1655 he came under Rembrandt's influence. Later he reverted to a more minute and finished manner. His pictures are refined studies of domestic life. Examples may be seen in the National Gallery and Wallace Collection, London.

**Metternich, CLEMENS WENZEL** LOTHAR, PRINCE (1773-1859). Austrian statesman. Of a diplomatic family, he was born at Coblenz May 15, 1773, and brought up at the courts of German princes before working with his father at the embassy in Brussels. He married in 1795 a grand-daughter of the great Kaunitz, thus assuring himself of a future at the Viennese court. Envoy to Saxony 1801, he was transferred to Berlin in 1803 and to Paris, at Napoleon's request, in 1806. Then began his long understanding with Talleyrand. War breaking out in 1809, Metternich was imprisoned at first but later exchanged for French diplomats. He was Austrian foreign minister, a post he held for 39 years, for much of which time he was also chancellor.

Prince Metternich, Austrian diplomatist

Because he bottled up the forces of nationalism, Metternich has become the bogymen of the Liberal historians. Indeed he stood for a system that was bound to pass, but while delaying its end he kept the peace of Europe from the congress of Vienna, 1815, to the revolutions of 1848. He was the perfect diplomatist, suave, subtle, versatile in method, but inflexible in purpose, which was to hold together an empire of some dozen subject races.

In 1815 he frustrated the schemes of Russia and Prussia in Germany; refused to force impossible terms on France; and converted the tsar Alexander's Holy Alliance to his own practical ends. Thereafter his policy was the static one of preserving the concert of great powers, policing Europe, supervising the press and the universities, resisting demands for constitutions. If his position was weakened by Canning's liberal tendencies and by troubles in the Near East, the ease with which Metternich suppressed revolutions in 1830 measured his success. He was brought down by the rising

of 1848 in Vienna itself, went for a few years to London and Brussels, and, taking no more part in government, died June 11, 1859. His Memoirs were translated in 1880; and lives in English include those by G. B. Malleison, 1888; A. Cecil, 3rd ed. 1947.

**Mettur Dam.** An irrigation scheme on the Cauvery river, Madras state, India. Completed in 1934, it is 230 ft. high and can impound 93,500 million cu. ft. of water. Canals fed by the dam irrigate some 300,000 acres. Part of the water generates hydro-electric power, the power house having been in operation since 1937.

**Metz.** French city and fortress, capital of Moselle dept. It is 38 m. W. by S. of Saarbrücken, and lies on the river Moselle in

architecture resulted, during the period 1871–1918, when Metz was the capital of German Lorraine. Pop. 70,105.

The Gallic Divodorum (castle of the gods), Metz was the capital of the Mediomatrici tribe, later a Roman and Frankish town, capital of Austrasia from 511, and mentioned as a bishopric first in 535. Capital of Lorraine 843, of the Eastern Franks 870, French 911–923, it became a free city of the Empire in the 13th century. Here Charles IV held the diet of 1356 promulgating the Golden Bull. Henry II of France occupied the town in 1552, and in 1648 France was confirmed in possession. Vauban fortified it; the Allies in 1814–15 besieged it in vain; in 1870, under Bazaine, it capitulated to the Germans.

Occupied again by the Germans during the Second Great War, June 17, 1940, Metz lay within the occupied zone of France under the terms of the armistice of June 21. The recapture of Metz in 1944 was one of the hardest fought battles of the Allied campaign in France.

The U.S. 3rd army, under Patton, was unable to overcome the linked forts W. of the city by direct attack. The moated Fort Driant in particular offered fierce resistance; U.S. infantry forced the moat and stormed its outer defences Oct. 3,

gaining control of part of the fort by the 7th, but were compelled to withdraw after a grim ten days' battle inside the fortress. Maizières-Metz, to the N. of the city, then became the focus of intense fighting. It was captured, reduced to rubble, on Oct. 30. On November 8 a "pincer" drive on Metz began from Maizières-Metz on the N. and across the Nied Française river to the S.E. Fort Driant was bypassed, and Metz was formally declared liberated on Nov. 22.

**Metz, CAMPAIGN OF.** Series of battles between French and Prussian armies in the war of 1870. After the disasters of Aug. 6, the French were obliged to retire. Bazaine was directed to move the French left and centre on Châlons to unite with MacMahon, but himself to pass through Metz to prepare the fortress for a siege. The Germans moved forward on a broad front, the 1st army direct on Metz, the 2nd towards Pont-à-Mousson, the 3rd on Nancy.

Bazaine, having halted E. of Metz on Aug. 13, was ordered to retire on Verdun. His movement through Metz began next morning, but advance guards of the 1st German army had already attacked, forcing the French on the right bank of the Moselle to face them in the battle of Colombey-Nouilly on the slopes E. of Metz. Both sides claimed a victory here, but the French withdrew to continue their retreat. Meanwhile the 2nd German army was crossing the Moselle about Pont-à-Mousson.

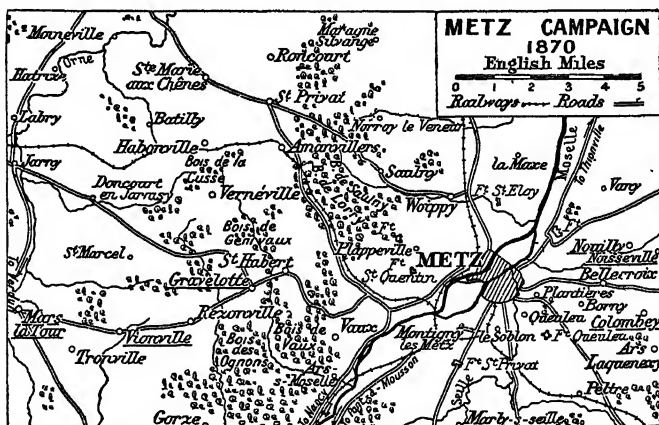

On the 16th, German cavalry from Pont-à-Mousson observed the French moving towards Verdun by the two roads from

Metz. The cathedral of this French fortress city, seen from the south

hilly surroundings, and on rlys. to Paris, Belgium, Luxemburg, and Switzerland. With a number of forts and the military aerodrome of Fresnes, Metz was considered one of France's main military strongholds. It is the trading centre for a fertile agricultural area and wine-growing neighbourhood, and has shoe, preserve, and other factories, including a government tobacco factory. The seat of a bishopric and a court of appeal, it has a permanent theatre, public library, two museums, and many schools.

One of Europe's oldest towns, its inner parts have narrow winding streets leading into the square on which stands the huge cathedral of S. Stephen (13th to 16th centuries), an impressive Gothic pile with a 295-ft. tower, which contains great treasures. S. Martin, S. Segolena, and S. Vincent are other medieval churches; that of Notre Dame, in Renaissance style, dates from 1665 to 1739, and the town church is early 18th century. Good

Metz Campaign. Area of the fighting between the French and the Germans in 1870

Gravelotte to Mars-la-Tour and Doncourt, and the right wing of the 2nd army brought about the battle of Vionville-Mars-la-Tour, in which the French lost nearly 17,000 and the Germans 16,000, after a day of fierce attack and counter-attack. Bazaine thereupon began a retrograde movement towards Metz, reaching early on Aug. 17 a strong position from the Bois de Vaux in the S. to St. Privat and Roncourt in the N.

By the evening of the 17th five German corps of the 2nd army were in line along the Verdun road from N. of Mars-la-Tour to Vernéville, while two corps of the 1st army had also crossed the Moselle and taken up a position on the right S. of Gravelotte. The battle of Gravelotte followed, Aug. 18, the first battle of the war to be fought according to plan. The king of Prussia, with von Moltke, was now with the troops. The Germans won the battle by an extending series of northward marches in échelon of corps until the French right was turned, though the centre and left maintained their ground. Ste. Marie-aux-Chênes, St. Privat (stormed by the Prussian guard, who lost half their number), and Roncourt all fell before nightfall. The numbers engaged in this battle had then scarcely ever been exceeded, for 220,000 Germans attacked 140,000 French in a chosen position. German losses were over 20,500 killed, wounded, and missing, while French casualties numbered only 7,853 killed and wounded, and 4,419 prisoners; but Bazaine had been compelled to fall back into Metz.

The investment of the fortress began next day, the Germans keeping only a number about equal to the French to hold a circumference of 28 m. On Aug. 26 Bazaine pushed back the German outposts to the N.E. in the hope of helping MacMahon's army of Châlons by keeping the Germans E. of the Moselle. On Aug. 31 the day before Sedan fell, he attempted to break out towards Thionville, but had given the Germans too much warning. At the outset, about 4 p.m., the French captured villages to the N.E., but during the night German reinforcements were rushed to the scene. Next day, while the Châlons army was being crushed at Sedan, Bazaine renewed the fight half-heartedly, but withdrew once more to Metz by midday, after engaging about 120,000 men against only 70,000

Germans. One more half-hearted attempt to break out was made on Oct. 7, but three days later a council of war decided to treat for terms of peace. On Oct. 27 the whole of Bazaine's army of the Rhine, 173,000 strong, became prisoners of war, and Metz was handed over to the Germans. See Bazaine; Franco-Prussian War; Moltke.

**Meudon.** Town of France, in the dept. of Seine-et-Oise. It lies 3 m. S.W. of Paris, and 1 m. S. of Sèvres, and is connected with Paris by rly. It has chalk works, and an observatory and magnetic laboratory. Rabelais was priest of the parish, and is commemorated by a monument in the 16th century church. The 17th century château of Meudon was destroyed by the Prussians in 1871. Pop. 20,797.

**Meulebeek.** Town of Belgium, in the prov. of W. Flanders. It lies 8 m. N. of Courtrai, on the Ingelmunster-Thielt rly. The industries include cotton and linen spinning and lace making. Meulebeek was in German occupation throughout the First Great War. Pop. 9,300.

**Meulen, ADAM FRANS VAN DER** (1632-90). Flemish painter. Born in Brussels, Jan. 11, 1632, he was apprenticed to P. Snayers, and in 1665 went to Paris to accept a post in the Gobelins factory. He painted battle scenes of which he acquired a knowledge by accompanying Louis

A. F. van der Meulen.  
Flemish painter  
After Largillière

XIV on campaigns. He died in Paris, Oct. 15, 1690. Characteristic examples of his work are in the galleries of Munich, Versailles, and the Louvre.

**Meunier, CONSTANTIN** (1831-1905). A Belgian sculptor and painter. Born at Etterbeek, Brussels, April 12, 1831, he first appeared at the Brussels Salon in 1851 with a piece of sculpture, *Guirlande*. For a time he abandoned sculpture to paint scenes from the life of the Trappists, and also of peasant life in Spain. He portrays scenes from the life of workers in coal mines, his studio in Louvain being in the heart of the Belgian black country. His chief works include *Grison*, *Le Débardeur*, *Ecce Homo*, *Le Cheval de Mine*, *L'Apothéose du Travail* (with four figures of La Mine, Le Port, L'Industrie, La Moisson), in the Museum of Decorative Arts in

Brussels. He died in Brussels, April 4, 1905.

**Meurthe.** A river of France. Rising in the Vosges, N.E. of Gérardmer, it flows in a N.W. direction into Lorraine. It is joined by the Vezouse near Lunéville, and meets the Moselle near Frouard. The chief towns on its banks are Fraize, St. Dié, Baccarat, Lunéville, and Nancy. Its length is 102 m.

**Meurthe-et-Moselle.** Dept. of France, formed in 1871 after the remaking of the E. frontier of France. Bounded E. by Alsace and Lorraine, it lies contiguous with Belgium and Luxemburg, and with the depts. of Meuse, Vosges, and Moselle. It is generally hilly and well wooded, particularly in the S., where it contains part of the Vosges Mts., but is well cultivated, potatoes, cereals, beets, and the vine being grown. Iron, salt, and building stone are mineral products, and among the varied industries are brewing, timber working, and chemical products, textiles, and glass making. The Meurthe, Moselle, Mortagne, Madon, Sanon, and Chiers are among the rivers; the Canal de la Marne traverses the dept. Nancy is the capital, other towns of note being Toul, Lunéville, Briey, Longwy, Pont-à-Mousson, St. Nicolas, and Baccarat. The dept. was prominent early in the First Great War, as is noted in the articles Longwy, Nancy, etc. Area, 2,036 sq. m. Pop. 528,805.

**Meuse (Dutch, *Maas*).** River of W. Europe. It rises about 16 m. N.E. of Langres, Haute-Marne, flows in a N. direction, for a few miles underground, through the depts. of Vosges, Meuse, and Ardennes, and passes into Belgium at Givet, after a sinuous course from Sedan. At Namur it turns N.E., through a valley between that town and Liège, and enters Dutch territory just S. of Maastricht.

The Meuse or Maas then flows N. and W. until it joins the Waal, a branch of the lower Rhine, near Gorkum, where it becomes the Merwede, and, after passing the marshy tract known as the Biesbosch, enters the North Sea at several points, the chief of its mouths being the Oude Maas, where stands the Hook of Holland, the Haringvliet, and the Grevelingen. Among its tributaries are the Bar, Sambre, Semoy, Lesse, Ourthe, and Roer, and among the towns on its banks are Neufchâteau, Commercy, Verdun, Mézières, Dinant, Namur, Huy, Liège, Maastricht, and Venlo. Navigable up to a point near Verdun, the Meuse

is joined by several canals, notably the Marne-Rhine canal and the Ardennes canal. Its total length is 575 m., 305 m. being in France, 120 m. in Belgium, and 150 m. in the Netherlands. The area of its basin is computed at 12,740 sq. m.

**BATTLES OF THE MEUSE.** Operations in the First Great War took place, Aug. 25-27, 1914, between the French 4th army under Langle de Cary and the German 4th army under the duke of Württemberg. After defeats at Virton-Ardenne, Langle de Cary received orders to establish himself on the left bank of the Meuse and maintain contact with the still retreating 5th army on his left. His front ran from Sassey to Mézières, and here was a 30-m. gap through which the Germans were pouring troops. By Aug. 26 the Germans had bridged the river at Remilly and established a bridgehead S. of Sedan; the French centre was pierced, and they were driven to form a new front along the high ground S. of the river W. of Mézières.

The Germans forced several further crossings, and began a push along the whole Meuse front. A severe check at Noyers drove them to appeal for help to Hausen's 3rd army (not yet identified by the French), which, however, continued to march S.W., threatening the French left. On the 27th Langle de Cary ordered a new attack to drive the Germans back into the Meuse. In the centre he gained ground and the Germans recrossed the river, while on the right the enemy were pushed back towards Olizy. Two corps of the German 3rd army were sent to relieve the badly mauled 4th. Possibly if the French reserves had been put in on Aug. 28, a great victory might have been won. Instead Langle de Cary, in view of Joffre's orders for a retreat, decided to fall back on the Aisne. Casualties on both sides were heavy.

The Meuse figured also in fighting in the Second Great War. On May 11, 1940, German forces crossed N. of the Albert Canal, the waterway forming the main Belgian line of defence in the N. By May 14 they had reached a stretch of the river W. of Liège, and from Namur to Sedan were within reach of the Meuse bridgeheads. The French evacuated Sedan; and a German break through resulted in the turning of the Maginot line. On Aug.

31, 1944, American armoured columns crossed the Meuse at Sedan unopposed, the Germans being in rapid retreat; further crossings followed swiftly. For operations in the Netherlands, see Maas.

**Meuse.** Dept. of France. Contiguous with the depts. of Meurthe-et-Moselle, Vosges, Haute-Marne, Marne, Ardennes, and with Belgium, it is generally hilly, and contains the great forest tracks of the Argonne and the Woëvre. The Meuse flows in a N.N.W. direction through the dept., and other rivers are the Ornain, Aire, Aisne, Chiers, Loison, and Orne. The Canal de la Marne traverses the dept. Cereals, beet, potatoes are grown, and round Bar-le-Duc and Bussy the vine: among industries are quarrying, timber working, and foundries. The capital is Bar-le-Duc, other towns of

Meuse. Sketch map showing dispositions of the opposing armies in the series of battles in August, 1914

mer resort, and has long been engaged in the pilchard fishery. There is a good harbour, and a pier, constructed in 1895. Pop. 1,800.

**Mexborough.** Urban dist. and market town of the W. Riding of Yorkshire, England. It stands on the Don, 5 m. from Rotherham and 11 m. from Sheffield, and has two rly. stns. The chief building is the church of S. John the Baptist, partly Early English. There was a castle here in the Middle Ages. Industries include the making of scissors, bricks, toys, and cardboard; while around are coal mines. Market day, Sat. Pop. 15,856.

**Mexborough, EARL OF.** Irish title borne since 1766 by the family of Savile. The Saviles are a Yorkshire family, and one of them, Sir John Savile, was M.P. for Hedon, 1747-54. In 1753 he was made an Irish baron, and in 1766 earl of Mexborough. John, the 4th earl (1810-99), was M.P. for Gattton before 1832 and afterwards for Pontefract. In 1945 John Raphael Wentworth became the 7th earl. The family estates are in Yorkshire. The earl's eldest son is called Viscount Pollington.

**Mexcala OR MESCALA.** River of Mexico. Rising in the state of Tlaxcala and known as the Atoyac in its upper course, it flows for 435 m. generally W. to the Pacific. In its lower course it takes the name of Rio de las Balsas and separates the states of Michoacan and Guerrero. The swift current furnishes power for textile mills.

## MEXICO: IN ANCIENT & MODERN TIMES

*The reader should consult the articles on the cities, towns, and rivers; rulers, statesmen, and men of letters of Mexico. See Archaeology; Aztec; Maya; also Latin America; North America*

Mexico is a republic of North America, occupying the southern extension of the continent toward Central America. It lies approximately between  $14^{\circ} 33'$  and  $32^{\circ} 43'$  N. lat., and between  $86^{\circ} 48'$  and  $117^{\circ} 8'$  W. long., and has an area of 763,944 sq. m. Mexico is bounded N. by the United States, the Rio Grande del Norte forming the E. part of the N. frontier; on the S.E. it is bounded by British Honduras and Guatemala. It has a coast-line of 1,727 m. on the Atlantic (Gulf of Mexico), and of 4,574 m. on the Pacific side, the length being enhanced on the E. by the peninsula of Yucatan in the S.E., and on the W. by the long, narrow peninsula of Lower California.

About six-sevenths of Mexico consists of a high plateau, continuing that of the S.W. United States, and bordered E., N., and S. by mountains which slope steeply to low coastal plains. The plateau ranges in average elevation from 4,000 ft. in the N. to 8,000 ft. in the S.; the E. bordering mountains (Eastern Sierra Madre) form a broken chain with summits up to 10,000 ft.; the W. (Western Sierra Madre), less broken, have a somewhat greater general elevation; and the S. (Sierra del Sur) range from 7,000 up to more than 11,000 ft.

From the S. part of the plateau itself, a region strongly volcanic, containing craters still active, and subject to earthquakes, a number of peaks rise to much greater heights, e.g. Orizaba (17,400 ft.) and Popocatepetl (17,520 ft.). Elsewhere the surface of the plateau is much broken; it contains several inland drainage basins (*bolson*), notably the Valley of Mexico in the S., including extensive lakes and marshes; and the rivers which escape from it to the sea do so by way of falls and ravines, so that access from the coasts is difficult. The plateau falls S.E. to the low Isthmus of Tehuantepec (170 m. wide), and E. of this the land in-

cludes, on the S. the Chiapas highlands (5,000 to 8,000 ft.), and on the N. the lowland of Tabasco and the Yucatan peninsula.

The largest river on the E. is the Rio Grande del Norte (1,500 m.). The rivers of the plateau are of most service for power where they fall over its edge, but their flow is irregular according to season, and important power establishments have needed the construction of great dams and reservoirs. The streams of the coastal plains are winding and slow; some on the E., like the Pánuco, Papaloapan, Coatzacoalcas, and Grijalva, are used for inland navigation, but their mouths are hampered by bars, or need constant dredging.

The rocks of a greater part of the plateau and the E. Sierra are cretaceous, the W. heights and the S. of the plateau consist mainly of tertiary volcanic rocks. Yucatan consists of sedimentaries of the same period, and the plains have a wide extent of more recent deposits.

The climate is so markedly influenced by elevation that there is a familiar threefold division of the land—(1) the *tierra caliente*, hot land, from the coasts up to about 3,000 ft., with a warm, dry winter and hot, wet summer when temps. especially on the Pacific coast, frequently exceed  $110^{\circ}$  F.; (2) the *tierra templada*, temperate land, from 3,000 to 6,500 ft., free of the excessive summer moisture of the

lower levels and the cold winter winds of the higher; (3) the *tierra fria*, cold land, higher than (2). Hard frost is rare except at very high elevations and the designation cold is only comparative, the average temp. being c.  $60^{\circ}$  F. The chief inland towns are in zones (2) and (3); the capital, Mexico City, for example, is in the highest, being situated at an altitude of 7,500 ft. The dry season, over most of the country, lasts from Oct. to May; the wet from June to Sept. Both coastal slopes, especially the Pacific, receive heavy rainfall; but semi-desert conditions exist in the N. and N.W. parts of the plateau and in Lower California.

The average annual rainfall for the whole republic is 60 ins. Trade winds, from N. E. to S. E., prevail on the Atlantic coast, but may be replaced between Oct. and March by the tempestuous "northers." The prevalent winds on the Pacific coast are N. W. in winter, and S. W. to S. E. in summer. Hurricanes are most frequent from Aug. to Oct.

The low coastal plains, behind the bare sand-bars, carry tropical forest, which merges into subtropical and temperate types as the plateau is ascended. The dry N. has a steppe vegetation if any; farther S. the land is fertile. The porous limestone of Yucatan carries a scrubby natural vegetation. Among larger wild animals the puma, jaguar, bear, and boar are found. Poisonous snakes are common, and there are many harmful insects; the mosquito, breeding in the coastal lagoons and marshes, carries malaria and yellow fever.

Mexico arms

Mexican flag

Mexico. Map of the southern republic of North America, showing the railway connexions with the U.S.A. and the Atlantic and Pacific ports

The pop. in 1940 was returned as 19,653,552 and in 1945 was estimated at 22½ million, of whom c. 10 p.c. were of European (chiefly Spanish) descent; c. 15 p.c. pure Indian, of over 50 tribes and dialects; and 75 p.c. mestizos—of mixed European and Indian descent. Of the 160,000 foreigners, c. 12,700 were British; 12,500 Americans; 7,300 Germans; 5,000 French; 5,000 Italians; and 25,000 Spanish-born Spaniards. The general mortality rate is 21·5 per 1,000. The birth rate is high, but so is infant mortality. There are certain other well-marked "colonies," as the Syrians (Maronite Christians), who form a strong trading class in Yucatan.

The most important food crop is maize, from which is made a staple food, the flat cake called *tortilla*. The country is not, as a rule, self-sufficing in either maize or wheat. The *frijol* and other beans are grown and eaten; oranges, bananas, vines, agaves from which the drinks of the common people, *pulque* and *mezcal*, are distilled, sugar and coffee are cultivated for home consumption and export. Fibre plants are specially important; among these, most of all, the henequen or sisal hemp of Yucatan. Cotton is grown in central Mexico; the *guayule* of the north and other wild plants yield rubber, which is also cultivated. Among vegetable gums, the *chicle* of the S.E. lowlands is the basis of chewing gum. Cattle ranching is important in the N. half of the country.

The mineral wealth of Mexico is immense. Silver, gold, copper, iron, lead, and zinc are the most important metals, and coal and salt are found. The richest mineral region, broadly speaking, is the slope of the Western Sierra Madre. The oil fields produce some seven million tons a year; the chief are in the Gulf coast lands, (a) in the south of Tamaulipas State and northern Vera Cruz, behind the ports of Tampico, Puerto Lobos, and Tuxpan, and (b) in southern Vera Cruz behind the port of Puerto Mexico. Unsettled conditions in the country have from time to time interfered with mining operations and the working of the oil fields. Water power, at Boquilla and elsewhere, has been applied to large scale generation of electricity for lighting, heating, and traction in towns, and power in mines and factories.

Among manufactures, there are a few large metallurgical works, e.g. the iron and steel foundries at

Monterey and in Hidalgo. The largest cotton factories are in and about Orizaba, Puebla, and Mexico City; those for wool at Tlalpanpantla. Jute, silk, leather goods, cigarettes, soap, and glycerine are other important manufactures.

Mining and manufacturing were set on foot mostly by foreign organization and capital, but from 1917 onwards Mexican govts. have sought to limit these interests. Foreign companies working Mexico's oil were expropriated in 1938.

Mexico. One of the rural guards wearing the national hat

The chief Atlantic ports are Tampico (for the northern oil fields) at the mouth of the Panuco, Vera Cruz with a good artificial harbour, Puerto Mexico at the mouth of the Coatzacoalcos on the N. side of the isthmus of Tehuantepec, and Progreso in Yucatan, on an open roadstead, from which sisal hemp is shipped. The chief Pacific ports are Salina Cruz on the S. side of the isthmus of Tehuantepec (connected with Puerto Mexico by a trans-isthmus railway), Acapulco, Manzanillo, and Mazatlan.

The rlys. have not been systematically laid out, but, except in certain parts, the country under normal conditions is fairly well served. They have a route mileage of 7,365 m. The main lines were nationalised in 1937.

Main trunk motor roads extend from the U.S. border to Mexico City and to most of the principal cities. That from Laredo, Texas, to Mexico City, 764 m., was opened

1936. Construction of the Mexican section of the Pan-American Highway (*q.v.*) began in 1942. These motor roads follow U.S. standards of road building and are excellent. Air services to S. and Central America were started in 1930; there are also services from Mexico City to Brownsville, Texas, and thence to New York and other U.S. cities, and 111,846 m. of internal airways. There are fairly complete land telegraph and postal systems.

**CONSTITUTION.** Mexico is a federation of 28 states, each, under the constitution of 1917, free in respect of internal affairs. In addition to the states, there is the federal district (Mexico City and a small area round it), and three territories, two forming Lower California, the third being Quintana Roo. The congress of the federation consists of a chamber of deputies, elected for a term of three years, with one member for every 150,000 inhabitants, and a senate with 58 members, two for each state, and two for the federal district, elected for a term of six years. Members of congress are ineligible for re-election until the period of another term has elapsed. The president is elected by direct vote for a six years' term.

The governors of the states are elected, those of the territories and the head of the federal district are appointed by the president. In each state the legislature and judicial authorities are elected by popular vote. Roman Catholicism is the religion of the great majority of the people. Military service in the army or national guard is compulsory. Elementary education is free, secular, and, in theory, compulsory; but 165 regimental schools were set up to combat illiteracy in the army, and in 1946 there were 69,880 centres for the instruction of illiterate civilian adults. There are eleven universities, of which the national university of Mexico city, founded 1553, with 22,259 students in 1944, is the chief; women are admitted.

**ANCIENT HISTORY.** The material remains of early Mexico reflect a succession of dominant peoples, Maya, Zapotec, Toltec, Aztec, who made themselves and their culture felt in varying degrees from the Anahuac tableland to Honduras.

For many centuries before the Christian era the semi-arid tablelands of middle America were occupied by primitive peoples cultivating maize and producing crude pottery and woven fabrics, the humid lowlands being

inhabited by lowlier hunting and fishing tribes. By the 2nd century B.C. there began to emerge in the Maya lowlands an advanced civilization marked by stone sculpture, rubble architecture, pictography, an elaborate calendar system, and complex religious rituals. The similarity of these arts and institutions to some in the Old World, and the lack of organic links between them and the primitive aboriginal culture, have led competent authorities to postulate the arrival by sea of cultural ideas.

#### Maya Monuments

This early Maya civilization, traced back by an inscribed stone object to 100 B.C., lasted until A.D. 600. From 420 onwards northward-moving colonists established in Yucatan new cultural centres, which also decayed shortly after 600, but about 980 experienced a renaissance. The chief sites of the early Maya empire are Tikal, from which there is a stele dated to A.D. 214, Uaxactun, where the date A.D. 50 was identified in 1916, Copan, from which radiate a series of great causeways that can still be traced in the jungle, Lubaantun, with its megalithic masonry. The later Maya period in Yucatan can be studied at such sites as Chichen Itza or Uxmal. Its influence spread northward into the Oaxaca region, where the dominant people was Zapotec. The chief Zapotec sites, Mitla and Monte Alban, show strong Maya influence, but exhibit their own peculiarities, notably sculptured decoration based on textile patterns.

Meanwhile a series of northern, Nahuatl peoples made their way southwards through Mexico. Foremost of these were the Toltec, who were in the valley of Mexico by the 8th century. Some of them later reached Yucatan and took over the Maya cities, where their characteristic sculpture, in particular their serpent columns, can be seen. The last Nahuatl arrivals were the Aztec, a fierce warrior people who established themselves in Mexico in the 14th century and dominated the Toltec and Maya regions at least as far S. as Guatemala. Their art and culture were inferior to those of Toltec and Maya, though they show a certain effective grimness of their own.

*Consult* The Civilization of Ancient Mexico, L. Spence, 1912; A Study of Maya Art, H. J. Spinden, 1913; Mexican Archaeology, T. A. Joyce, 1914; Maya and Mexican Art, T. A. Joyce, 1927; The Civilization of the Mayas, J. E. Thompson, 1927; History of the

Maya, J. E. Thompson and T. Gann, 1931; The Aztecs of Mexico, G. C. Vaillant, 1944; The Ancient Maya, S. G. Morley, 1947.

**MODERN HISTORY.** During the 14th and 15th centuries the Aztecs established their rule over a great part of Mexico, and allied themselves with the kingdom of Tezcuco (near Mexico City), the culture of which was higher than their own. In the reign of Montezuma II (q.v.) Mexico was invaded by the Spaniards under Cortés (q.v.) and conquered in 1519-21. Their first possession in the New World, it was called New Spain and was administered from Madrid, and settlement was carefully controlled. The religious orders carried Spanish authority N. by means of missions, and by the end of the 18th century it extended far along the Pacific coast. The central provinces were the most peaceful part of Spanish N. America.

Napoleon's conquest of Spain in 1808 led in Mexico, as in Spanish S. America, to revolt, and in 1810 there was a rising, in particular against corrupt European officials. It was suppressed, but discontent remained; and in 1821, Iturbide, a former officer in the Spanish army, and ostensibly the leader of the conservative elements, joined with the rebel leader Guerrero in the Plan of Iguala which proclaimed Mexico an independent monarchy. Iturbide reigned as emperor 1822-23, but was then ousted in favour of a republic. Next year a federal constitution was brought into force. Spain abandoned her claim to Mexico in 1829.

#### Reduction in Area

The country at that time was twice as large as it is now; it included the whole of California, and the area now forming the U.S. states of Texas, Arizona, New Mexico, and part of Colorado. In 1836 Texas declared its independence, and in 1845 was admitted as a state of the U.S.A. Frontier disputes led to war between the U.S.A. and Mexico, 1845-48. The Mexicans were beaten and ceded New Mexico and California for a money payment.

In 1855 the Mexican dictator Santa Anna fell, and a period of civil war followed, until the government's repudiation of foreign debts in 1860 brought foreign intervention, and Spanish, British, and French troops landed in 1861.

Napoleon III had a vision of a Franco-American empire, and after the withdrawal of the British and Spanish armies the French took Mexico City in 1863, and in-

stalled a provisional government which in 1864 elected Maximilian, brother of the Austrian emperor, as emperor. On arrival he made a real effort to introduce settled government, but the activities of Juárez (q.v.) in the N. and General Díaz (q.v.) in the S. made his position impossible. The French troops supporting Maximilian were withdrawn in 1866, and in 1867 he was taken and shot. In 1876 Díaz seized power and ruled as autocratic president until 1910, when he was overthrown. His attempts to regain power failing, he resigned in 1911. Under his rule the finances were rehabilitated, guerrilla warfare was put down, and economic conditions improved.

The period which followed the downfall of Díaz was again one of internal warfare, with one leader and then another gaining a temporary supremacy, until 1920 when, in spite of local revolts, a period of reconstruction began, based on the new constitution promulgated in 1917. This guaranteed the rights of labour common in progressive countries; it also declared ownership of the land to be vested in the people, as a result of which, up to 1941, 65,000,000 acres formerly in large estates had been confiscated and let for rent among 1,606,507 peasants.

Mexico broke off relations with the Axis powers in Dec., 1941, and declared war on them six months later. Mexican aircraft took part in anti-submarine work in both the Pacific and the Atlantic; and a Mexican expeditionary air force served with U.S. forces in the Philippines in 1945.

**Bibliography.** History of the Conquest of Mexico, W. H. Prescott, World's Classics, 2 vols.; Mexico and its Heritage, E. Gruening, 1928; Mexico, S. Chase, 1931; Mexico's Cultural History, P. Kelemen, 1937; History of Mexico, H. B. Parkes, 1939; Mexican Mosaic, R. Gallop, 1939; Mexico, J. B. Trend, 1941; Timeless Mexico, H. Strode, 1944.

**Mexico.** Inland state of the republic of Mexico. Bounded N. by the state of Hidalgo and S. by Guerrero and Morelos, it covers an area of 9,230 sq. m., and encloses the greater part of the federal dist. and city of Mexico, which, however, do not form part of the state. The S.E. and central portions are mountainous, the highest summit being the Popocatepetl volcano, but the N. part is relatively flat. There are a few rivers, the principal being the Lerma, and of the lakes the largest is Texcoco in the E. An important industry is stock-raising, and gold and silver mining

is carried on. Cereals, sugar, coffee, and tobacco are cultivated, and manufactures include cotton and woollen goods, glass, flour, and pottery. The national railroads of Mexico serve the state. Toluca is the capital. Pop. (1940) 1,146,034.

**Mexico** or **MEXICO CITY**. City of N. America and capital since 1824 of the republic of Mexico. It lies within the federal district on the plateau of Anahuac, 7,350 ft. alt., and is well served by rly. and by air services both inside Mexico and with neighbouring countries. It occupies the middle of an elevated valley girt by high mts., and the most prominent features of the landscape are the 17,000 ft. volcanoes Popocatepetl and Ixtaccihuatl with their snow-covered caps.

For those suffering from weakness of lungs or heart, the high altitude may prove harmful, but for those in robust health the climate is healthy. The rainfall is 23 ins.; the mean temp. ranges from 54° F. in Jan. to 65° F. in May. Between Nov. and March is the height of the season for tourists.

The city is the most ancient and one of the largest in N. America with pop. (1940) of 1,468,422. It covers an area of nearly 20 sq. m. Laid out for the most part with rectangular avenues and streets, it boasts in the Paseo de la Reforma one of the widest boulevards in the world's cities, with a length of over 3 m. terminating at the foot of the hill of the Grasshopper, on which stands the castle of Chapultepec, residence of the president, towering high above a superb park, famous for its gigantic trees, gardens, and lake.

From the Plaza de la Constitución (also known as the Zocalo, the Plaza de Armas, and the Plaza Mayor), a square covering nearly 15 acres, proceed the main streets, lined with handsome department stores and shops, skyscrapers, and great hotels. The E. side of the Zocalo is occupied by the national palace, built in 1691, which houses various govt. depts. Over the central door hangs the Liberty bell, rung every Sept. 15 by the president in commemoration of the liberation of Mexico from Spanish rule. On the N. side of the Zocalo lies the cathedral, the largest on the American continent, begun in 1572 and completed in 1667; it stands on the site of an Aztec temple. The national museum near by contains a collection of Aztec and Maya relics. Among modern buildings of note are the general post office, the ministry of communications, and the palace of fine arts theatre. The

stadium for sports and the bull ring are large and well equipped.

In what is now the legislative palace the first printing press on the American continent was established in 1536 and still stands. The first American newspaper, the *Mercurio Volante*, was published from this press in 1693. W. of the Zocalo lies the Alameda, another open space of over 40 acres, consisting of a well wooded park, surrounded by hotels, offices, and shops. The residential sections of the city, laid out in American style, extend out into the country; they are reached by good motor roads and a service of electric tramways.

The old quarters retain many of the characteristics of an ancient Spanish city, but the 20th century tendency has been towards the destruction of older buildings.

The present city was founded by Cortes in 1522 on the site of the Aztec capital of Tenochtitlan, which then stood on a number of islands in Lake Texcoco. The subsoil is, therefore, marshy. This has been overcome by laying down vast interlacing steel rafts, on which the modern edifices are anchored. They are thus little affected by the earthquakes, which, however, though frequent, are rarely severe.

**Mexico**, **FEDERAL DISTRICT OF**. Territory acquired by the federal govt. of Mexico for its specific use from the state of Mexico, which encloses it on three sides; on the S. it is bordered by the state of Morelos. It covers an area of 573 sq. m. The city of Mexico and twelve villages are situated within its limits. Pop. 1,757,530.

**Mexico**, **GULF OF**. Great inland gulf or sea, forming a westward extension of the Atlantic ocean. Almost entirely enclosed by land, it has the U.S.A. on the N., Mexico on the W. and S., the peninsulas of Florida and Yucatan constricting the two entrances. It has a greatest length from E. to W. of 1,150 m., a greatest breadth N. to S. of 680 m., and an area of more than 700,000 sq. m. The two channels, the Strait of Florida on the N. and Yucatan Channel on the S., formed by the island of Cuba, are shallow, but the gulf has a depth of more than 2,000 fathoms at a point between the mouth of the Mississippi and the Yucatan peninsula, and reaches a maximum depth of 2,119 fathoms in about 25° 7' N. and 89° 37' W., while the greater part of its expanse has a depth in excess of 1,650 fathoms.

Several large rivers empty their waters into the gulf, the most im-

portant being the Mississippi, Rio Grande del Norte, Colorado, Sabine, Brazos, and Mobile. Apart from the Bay of Campeche there are no pronounced indentations, and the best harbours are Galveston, New Orleans, Mobile, Pensacola, and Tampa, Vera Cruz, Key West, and Havana. The Gulf Stream passes into the gulf through the Yucatan channel and makes its exit by the Strait of Florida, its pressure giving the gulf a temperature of some 8° in excess of that of the open ocean in the same degree of latitude. See Gulf Stream.

**Meyer**, **FREDERICK BROTHERTON** (1847-1929). English Non-conformist preacher. Born in London, April 8, 1847, he was educated at Brighton and London university. Baptist minister of Victoria Road church, Leicester, in 1874, he was so successful that Melbourne Hall was specially built for him in 1878. Having been from 1888 minister of either Regent's Park chapel or of Christ Church, Westminster Bridge Road, (two periods at each), he retired in 1921. He was twice president of the national federation of Free Churches (1904, 1920), and once of the Baptist Union (1906). Leader of temperance and purity campaigns, he was largely instrumental in 1914 in preventing a boxing match between Jack Johnson, coloured heavyweight, and Billy Wells, British champion. He published Biblical commentaries and *The Bells of Is*, an autobiographical work. He died March 28, 1929.

**Meyer**, **LUKAS** (1846-1902). Boer soldier. A native of the Orange Free State, he afterwards settled in the Transvaal and in 1884 helped to found the republic of Zululand, of which he became president. When this state was united with the Transvaal, he was chosen a member, and later president, of the Volksraad. He held a command in the S. African War of 1899-1902, taking part in the siege of Ladysmith. Meyer died in Brussels, Aug. 8, 1902.

**Meyer**, **MARIE PAUL HYACINTH** (1840-1917). French scholar. Born in Paris, Jan. 17, 1840, he became in 1876 professor of languages and literature of southern Europe in the Collège de France, and in 1882 director of the Paris École des

Chartes. At first Meyer's studies were limited to ancient Provençal literature, but soon extended to all the Romance languages. With Gaston Paris (*q.v.*) he founded the journal *Romania*, devoted to the interests of Romance philology. Died Sept. 8, 1917.

**Meyer, VICTOR** (1848-97). A German chemist, born in Berlin, Sept. 8, 1848. Educated at Berlin and Heidelberg, he became professor of chemistry at Zürich polytechnic, 1872, and succeeded Bunsen in the chair of chemistry at Heidelberg, 1889. He introduced new methods of determining the vapour densities of substances vaporising at high temperatures, and discovered the chemical bodies known as aldoximes and ketoximes. While investigating the impurities in benzol he discovered thiophen and afterwards produced its derivatives. Died Aug. 8, 1897.

**Meyerbeer, JAKOB** (1791-1864). German composer. Born in Berlin, Sept. 5, 1791, the son of a

Jakob Meyerbeer,  
German composer

Jewish banker, his name was Jakob Liebmann Beer. As a child he played the piano in public and then studied with Aht Vogler at Darmstadt.

His powers improved until he became one of the most brilliant pianists of the day, but his mind had already turned to composition. He began with an oratorio, and in 1813 produced his first success, the opera *Almelek*. To develop his talent he spent some years in Italy, and settled in Paris in 1831. His works include the operas, *Robert the Devil*, *The Huguenots*, and *The Prophet*, all effective dramatically but no longer highly valued musically. He died May 2, 1864. *Pron.* Myer-bare.

**Meyerhof, OTTO FRITZ** (b. 1884). A German biologist. Born March 12, 1884, at Hanover, he was educated at Heidelberg and Berlin, lectured at Kiel, 1913-24, and spent 1924-29 at the Kaiser Wilhelm institute of biology. He returned to Heidelberg as professor and director of the Kaiser Wilhelm institute of physiology, but in 1938, as a "non-Aryan," had to leave Nazi Germany. After working in Paris he became in 1940 research professor of bio-chemistry at the university of Pennsylvania. His discoveries concerned the thermic, respiratory, and energy

transformations in the active muscle, and the laws of alcoholic fermentation, culminating in what was called the Pasteur-Meyerhof reaction. He wrote *Psychological Theory of Mental Disturbances*, 1910; *Chemical Activity in the Muscle*, 1930. In 1923 he was awarded, with A. V. Hill, the Nobel prize for medicine, and in 1937 became a foreign member of the Royal Society.

**Meynell, An English hunt.** Its district is in Derbyshire and Staffordshire. Sudbury is about the centre, while Burton-on-Trent, Tutbury, and Uttoxeter are in the area. The hounds belong to the members. The hunt began as a private pack, owned by Hugo C. Meynell Ingram, and named from his residence the Hoar Cross. He hunted the country during 1816-67, and in 1872 the pack ceased to be private property. New kennels were built at Sudbury, and the pack took its present name. *Consult* History of the Meynell Hounds and Country, J. L. Randall, 1901. *Pron.* Mennell.

**Meynell, ALICE CHRISTIANA** (1847-1922). English poet and essayist, born Oct. 11, 1847. Daughter of T. J. Thompson and sister of Lady Butler, the battle painter, she was educated partly in Italy and grew up among literary acquaintance. She married

Wilfrid Meynell in 1877 and engaged with him in what Meredith called "princely journalism." To outward observers her life seemed complete with three interests: a strong R.C. faith, a sensitive, critical study of literature, and her large family. Poems, 1893, made a great success: such pieces as the beautiful sonnet *Renouncement*, *The Shepherdess*, *At Night*, *Christ in the Universe*, have entered many anthologies. Volumes of essays gained her recognition as a firm and independent critic. All her work shows a mind receptive to the spiritual meaning of life, and she was greatly revered by Francis Thompson, Coventry Patmore, and other writers who were her friends. She died Nov. 27, 1922. Last Poems appeared in 1923, and a centenary collection of prose and verse in 1947.

**Meynell, WILFRID** (1852-1948). English writer. A Yorkshireman, he

was born Nov. 17, 1852. From 1870 a Roman Catholic, he married Alice (*v.s.*), daughter of T. J. Thompson, in 1877, and shared with her in such journalistic enterprises as the *Weekly Register*. In *Journals and Journalism*, 1880, he proclaimed an ideal which he consistently

Wilfrid Meynell,  
British author  
*Russell*

followed. His study of Disraeli, 1903, was called an unconventional biography. *Verses and Reverses*, 1912, gives a picture of Meynell himself. In 1943 he was created C.B.E. He died Oct. 20, 1948.

Of the eight children of Wilfrid and Alice Meynell, Viola, who contributes the article on Poetry to this encyclopedia, was a novelist and literary critic. Her books include *Kissing the Rod*, 1937; *Letters of J. M. Barrie*, 1942; *Alice Meynell*, new ed., 1947.

Sir Francis, their youngest child (b. May 12, 1891), publisher, poet, and expert on typography, was knighted in 1946 for services to the board of trade. He founded the *Nonesuch Press* in 1923 and wrote *The Typography of Newspaper Advertising*, 1929.

Sir Francis Meynell,  
British publisher

**Mezen.** A river of N. Russia. It rises in the Komi-Zyrian A.S.S.R., and flows N.W. through Archangel region, R.S.F.S.R., to enter the White Sea by an estuary below the town of Mezen. Its course is some 500 m. The district it drains supports fishermen and breeders of cattle and reindeer.

**Mézières.** Town of France, capital of the dept. of the Ardennes. It stands on both banks of the

Mézières  
arms

Meuse, 47 m. N.E. of Reims, and with Charleville (*q.v.*) on the left bank forms the twin town of Mézières-Charleville. An old fortress, it is also an important rly. centre and has hardware manufactures. It was captured by the Prussians in 1815 and 1871, and in the First Great War the Germans took it in Aug., 1914, and established a headquarters there. An

Mezquit. 1. Branch with foliage and pods. 2. Flower spikes

objective of the Franco-American offensive in the last days of the war, it was reached by the French Nov. 8, 1918, the Germans before they left blowing up mines all over the town, and afterwards bombarding it for 24 hours. Over 700 houses out of 1,000 were destroyed. Pop. approx. 10,000.

**Mezötur.** Town of Hungary. Situated on the Körös, 90 m. by rly. S.E. of Budapest, in the co. of Jász-Nagykun-Szolnok, it is a typical market town of the Alföld, with a municipal area of 160 sq. m.; it trades in wheat, wine, horses, and cattle, and manufactures pottery. Pop. 27,645.

**Mezquit** or **MESQUITE** (*Prosopis*). Genus of trees of the family Leguminosae. Natives of Southern, Central, and Western America, they have sweet twisted pods much used for cattle food. The leaves are twice divided into numerous leaflets. The branches are often armed with spines, and the small green or yellow flowers are clustered in heads or spikes. *P. glandulosa*, in addition to its hard, durable timber, yields a gum like gum-arabic.

**Mezzofanti**, GIUSEPPE GASPARD (1774-1849). Italian cardinal and linguist. The son of a carpenter, he

was born at Bologna, Sept. 17, 1774, and in 1797 was ordained priest and appointed professor of Arabic at Bologna, but he refused the oath to the Cisalpine republic. He became professor of Oriental languages, 1803, and librarian, 1815, of Bologna university; keeper of the Vatican library, 1833; and a cardinal in 1838. He died

March 14, 1849. Mezzofanti easily surpasses all other linguists on record. Acquainted with 114 languages and dialects, he spoke at least half that number fluently, composed verses in many, and had a sound knowledge of the chief literatures. *Consult* Life, C. W. Russell, 1858.

**Mezzo-Soprano.** A woman's voice of medium pitch. It possesses something of the full and sympathetic quality of the contralto, but with extended upward range. Its ordinary compass is about:

while exceptional voices will cover about:

*See* Contralto; Soprano.

**Mezzotint.** A process of engraving. A copper or steel plate is taken and the "ground" made thereon by means of a "cradle" or rocking tool, which raises a burr all over. This, if inked and printed, would give a uniform black. To obtain the picture, the highlights are scraped away by a scraper, and then burnished with a burnisher; the middle lights being treated in the same way, though less drastically, and the darkest shadows left intact. In mezzotint, therefore, the process is from dark to light, this being the opposite to other kinds of engraving.

The invention of mezzotint is ascribed to Ludwig von Siegen, an officer in the forces of William VI, landgrave of Hesse; he was the author of an extant mezzotint portrait of Amelia Elizabeth of Hesse, 1642. He communicated his discovery to Prince Rupert, whom he met at Brussels, and the latter introduced the process into England in 1660, and practised it himself with some success. Evelyn's *Sculptura* (1662) credited Rupert with the actual invention, and for nearly two centuries the error remained uncorrected in Great Britain. During the 17th century, Bloteling and other Dutch engravers in London developed the process, the elder John Smith and Richard Earlom continued to popularise it, and in Great Britain it reached the zenith of perfection towards the end of

the 18th century. On the Continent it never really took root.

In England, the decline of painting during the reign of Anne and George I acted as a discouragement to mezzotint, but the latter became again an art of first-class importance with the rise to fame of Reynolds, Gainsborough, Romney, and other English masters, whose manner lent itself specially to reproduction in this medium. James McArdell, J. R. Smith, Valentine Green, S. W. Reynolds, John Jones, and Charles Turner were among the first mezzotinters of this time. The later introduction of steel-faced plates hastened the abandonment of pure mezzotint for a mixed style of mezzotint and line and stipple engraving. Samuel Cousins was one of the best exponents of the mixed method. *See* Engraving.

**Mho.** Unit of electrical conductance. It is equivalent to the reciprocal ohm, hence the spelling. Thus the conductance of a conductor in mhos will be given by the ratio of the current flowing in amperes divided by the potential difference between the ends of the conductor expressed in volts.

**Mhow.** Military station of Indore, Madhya Bharat, India. It is 13 m. S.W. of Indore town, on a height above the R. Gumber near the Vindhya Range. Pop. 30,000.

**Miall**, EDWARD (1809-81). British politician. Born at Portsmouth, May 8, 1809, he became an Independent minister. In 1840 he gave up his charge to begin a campaign against the establishment of the Church. Next year he founded a weekly newspaper, *The Nonconformist*, which he edited until his death, at Sevenoaks, April 29, 1881. He represented Rochdale in parliament 1852-67, and Bradford, 1868-74. *See* Disestablishment; *consult* Life, A. Miall, 1884.

**Miami** or **GREAT MIAMI.** River of Ohio, U.S.A. Rising by several headstreams in the W. of the state, it flows about 140 m., generally S.S.W. The Little Miami, which follows a parallel course, enters the Ohio 5 m. above Cincinnati.

**Miami.** City of Dade co., Florida, U.S.A., on N. bank of the Miami river. In the centre of fruit-farming country, it is the S. terminus of the Florida E. coast rly. A govt. sub-tropical laboratory is here, and there are sponge fisheries. Miami and its dependent resorts cover 90 sq. m.; approximately 2,000,000 visitors are received during the winter season. Its prosperity varies enormously according to national business conditions:

building permits sank to a value of \$2,500,000 in 1932, but rose to \$25,000,000 four years later. The university of Miami emphasises the study of pan-American relations. Pop. 172,172.

**Miami Beach.** City of Florida, U.S.A., in Dade co. A satellite of the mainland city of Miami, Miami Beach is situated 3 m. E. on an island in Biscayne Bay and is connected with Miami (v.s.) by three causeways. Built on mangrove swampland and sand, it is, like its neighbours, noted for garish hotels, lavish private residences, and recreational facilities. It has a permanent population of 28,012.

Miami Beach was incorporated as a town in 1915 and became a city in 1917. Land values boomed here in 1924-25, when people paid as much as 25,000 dollars for sites that were in fact swamp. Prices collapsed after the hurricane of 1926, which swept away much of the boom development.

**Miaskovsky, NICOLAI YOKOVLEVICH** (b. 1881). Russian composer. Son of a military engineer, he was born at Novogeorgievsk, near Warsaw, April 20, 1881, and adopted a military career. In 1907 he resigned his commission to devote himself to music. At St. Petersburg conservatoire he studied with Rimsky-Korsakov and Liadov. His works include some 25 symphonies, two symphonic poems, *Silence* and *Alastor*, an oratorio, *Kirov* is with *Us*, nine string quartets, and songs. He was influenced by Moussorgsky and Borodin in his attention to popular melody and folksong.

**Mica.** A group of minerals characterised by hexagonal symmetry and a perfect basal cleavage. The micas can be split into thin flakes which are flexible and elastic. Chemically they consist of hydrous silicate of aluminium and potassium, with varying proportions of iron, magnesium, sodium, and lithium; some varieties contain chromium and titanium. The principal micas are muscovite (potash-bearing), biotite (potash-iron), phlogopite (magnesia-rich), lepidolite (lithia-mica) and lepidomelane (iron-rich). Colour varies from white muscovite to black lepidomelane; biotite is brown and lepidolite is frequently purplish. Muscovite and biotite are widespread in acid igneous and metamorphic rocks. Most of the micas are mined in India and the U.S.A. Muscovite and phlogopite are extensively used on account of their low electrical conductivity. They

Mr. Wilkins Micawber, the grandiloquent optimist described in *David Copperfield*. From a drawing by Fred Barnard

have low thermal conductivity and are used in furnace windows and as chimneys for oil or gas lamps. Powdered mica is used as a dusting medium in the building and rubber industries; in paints and wall-papers; as a lubricant and a filter. Powdered biotite is employed as a filler coating or medium in the roofing, rubber, and other trades.

**Micah.** One of the minor prophets. A native of Moresheth, near Gath, and a younger contemporary of Isaiah, he prophesied in the reigns of Jotham, Ahaz, and Hezekiah. Of his prophecies the earlier chapters denounce oppression and drunkenness, and predict the ruin of the nations. Then follow Messianic predictions of restoration and future glory. The closing chapters deal extensively with the controversy between God and His people.

**Mica Schist.** In geology, name given to a metamorphic rock having a schistose or foliated structure, and composed chiefly of mica and quartz, arranged in alternate irregular bands. The rock cleaves easily along the mica bands, the latter usually being the colourless muscovite, or biotite varieties of mica. Garnet, tourmaline, etc., frequently occur in the rock, which is widely scattered, being found in the Scottish Highlands, N. America, as well as in many other parts of Europe.

**Micawber, WILKINS.** Character in Dickens's novel *David Copperfield*, often cited as the arch-type of incorrigible optimist, always grandiloquently confident, even in his moments of shabbiest poverty,

that "something will turn up." For the superficial mannerisms of the character, his airy assumption of gentility, his rotund phrases and prolific letter-writing, and his persistent geniality, the novelist took as model his father John Dickens. Sir Herbert Tree appeared as Micawber (doubling the part with that of Peggotty) in Louis N. Parker's stage version of *David Copperfield*, 1914, and W. C. Fields gave a memorable interpretation of the character in the Hollywood film version, 1935.

**Michael** (Heb., Who is like God?). One of the angels in the books of Daniel and Revelation. In Dan. 12, v. 1, he is described as the great prince which standeth for the people (cf. chap. 10, vv. 13, 21). He is thus the champion of the Israelites against the prince-angels of the Persians and the Greeks. In Rev. 12, v. 7, which speaks of there being war in heaven, he is the victorious leader of the good angels (the Archangel) against the Dragon (the old serpent, he that is called the Devil and Satan) and his angels. See Archangel; Michaelmas.

**Michael.** Name of nine East Roman (Byzantine) emperors, of whom the more notable included: Michael I (d. 845) who became emperor in 811. He was defeated by Leo the Armenian and forced to yield the throne to the usurper in 813, retiring to a monastery. Michael II (d. 829) called the Stammerer, ascended the throne in 820. During his reign the Saracens captured Crete and Sicily. Michael IV (d. 1041), called the Paphlagonian, was raised to the throne by his mistress, the empress Zoë, daughter of Constantine VIII, who is reputed to have poisoned her husband in order to marry him. Michael VIII, Palaeologus (1234-82), was proclaimed joint emperor of Nicaea with John Lascaris in 1260. After he captured Constantinople in 1261, he caused Lascaris to be blinded and dethroned, for which crime he was excommunicated by Arsenius. He attempted to bring about a union of the eastern and western churches. Michael IX (d. 1320), son of Andronicus II, shared the throne with his father, but died before him.

**Michael** (1596-1645). First Romanov tsar of Russia. Son of Feodore Nekitich Romanov, he was born June 21, 1596, and was chosen emperor of Russia by a national assembly in 1613. He left the government mainly in the hands of his ministers. The first ruler of the Romanov dynasty, he died at Moscow, July 23, 1645.

**Michael** (b. 1921). King of Rumania. The son of King Carol II and Princess Helena of Greece, he

Michael,  
King of Rumania

was born at Pelesch, Oct. 25, 1921. When his grandfather, King Ferdinand, died on July 20, 1927, he was declared king, as his father, Prince Carol, was in voluntary exile. In 1930 Carol returned to Rumania and supplanted his son. A coup organized by the fascist Iron Guard brought about on Sept. 6, 1940, Michael's second accession to the throne, the real ruler being Gen. Antonescu (*q.v.*), who in turn was subject to German control.

On Aug. 23, 1944, Michael announced the termination of Antonescu's dictatorship and his acceptance of Russian armistice terms. War was declared on Germany. Next year, Marshal Tolbukhin invested Michael with the Soviet Order of Victory. After the war the king attempted to broaden his government, but the Communists made his position difficult. After visiting London to attend the wedding of Princess Elizabeth in Nov., 1947, he returned to Bukarest and on Dec. 30 abdicated, his engagement to Princess Anne of Bourbon-Parma being unacceptable to the government. Michael with his mother left the country, the royal family being deprived of Rumanian nationality and their property confiscated. Michael married Anne at Athens, 1948.

**Michael** (b. 1942). A British prince. Third and youngest child of George, duke of Kent, and Princess Marina, he was born July 4, 1942, and christened Michael George Charles Franklin, the last name given in honour of President Roosevelt, one of his godfathers.

**Michael** (1558-1601). Voivode (governor) of Wallachia, called the brave. Member of the noble family of the Bassaraba, Michael was banished by the voivode Alexander, but deposed him in 1593. He drove the Turks from Wallachia and having come to an understanding with the emperor Rudolf and with the Turks, succeeded in uniting, under his rule, nearly the whole Ruman people, 1599-1600, assuming in 1600 the title of voivode of Wallachia and Moldavia, and governor of Transylvania. Threatened by a rising of the Transylvanians, under Sigis-

mund Bathory, aided by Poland, he obtained support from the Imperial government, and defeated Bathory, but a few days later, Aug. 19, 1601, was murdered at the instigation of the imperial general Basta.

**Michael Alexandrovitch** (1878-1917?). Russian grand duke. Born in St. Petersburg, Nov. 22, 1878, he was a brother of Nicholas II. His marriage, in Oct., 1911, wasmorganatic, and in the following Jan. an imperial manifesto relieved him of the duties of regent imposed upon him in Aug., 1904, in the event of the death of the emperor before the attaining of his majority by the heir apparent. In the First Great War he commanded a division of Caucasian cavalry in Galicia. At the revolution of March 1917, Nicholas II abdicated in favour of the Grand Duke Michael, who was arrested by the Bolsheviks after their accession to power and exiled to Perm, where he was later assassinated. See Nicholas II; Russia.

**Michaelis, KAREN** (b. 1872). Danish author. Born at Randers, March 20, 1872, of a family named Beck-Brøndum, she married the poet Sophus Michaelis, in 1905, and gave up a musical training for literature. She published novels which were translated into several languages. Her work was marked by considerable power of description and a broad outlook on feminine questions. The publication of *The Dangerous Age*, 1910, established her reputation as a European novelist. Later volumes included *Hjertets Vagabond*, 1930; and *Mor* (Mother). She also wrote a number of books for children, of which *Bibi* (6 vols.) became one of the most popular.

**Michaelmas**. Feast of S. Michael and All Angels, Sept. 29. It was instituted in 487. In England it is a quarter day. In the United Kingdom magistrates are usually appointed at or about Michaelmas. Until 1873 the first term of the legal year was Michaelmas term, Nov. 2-25. The custom of eating goose on Michaelmas Day may have originated in the rural tenant's custom of propitiating his lord with a present of a goose at Michaelmas, when the bird is in fine condition, and also perhaps in the lord's distributing his superfluous geese among his friends.

**Michaelmas Daisy**. Popular name for hardy perennial herb more properly termed aster (*q.v.*).

**Michel, CLÉMENT** LOUISE (1833-1905). French anarchist and author. Born in the Château Vroncourt Haute-Marne, April 20

1833, she went to Paris in 1856. Intensely anti-Napoleonic, she joined the Communists, and fought at the Paris barricades but was taken prisoner, and transported to New Caledonia. After release, under the amnesty of 1880, she returned to Paris. For taking part in an anarchist rioting in 1883 she was sentenced to six years' imprisonment, but was released in 1886, and came to London. In the same year she published the first volume of *Mémoires par Elle-Même* (never completed), and *Les Microbes Humains*. These were followed by *Le Monde Nouveau*, 1888. She returned to Paris in 1895, published her work *La Commune*, 1898, and died at Marseilles, Jan. 9, 1905.

Louise Michel,  
French anarchist

**Michelangelo** (1475-1564). Italian artist. On March 6, 1475, was born at Caprese, to the governor of the place, a boy whom he named Michelangelo. The father returned next year to the ancient home of his family, the Buonarroti, in the village of Settignano, overlooking Florence, and there, his foster-mother a stonemason's wife, the child grew up among the stonecarvers. Mallet, chisel, and marble were the toys of his childhood. Early packed off to school in Florence to rid him of vulgar artistic tastes, the thrashings of father and of schoolmaster could not keep the lad from the society of the art students; so that at thirteen, on April 1, 1488, he was apprenticed by his disgusted father to the painter Ghirlandaio, from whom he soon drew the famous plaint, "This boy knows more than I do."

Catching the eye of Lorenzo "the Magnificent" with his first sculpture, the lad was forthwith given rooms in the palace, where he was treated like a son. Living amongst the most famous of the age, the young fellow was soon a prey to his hopeless passion for the beautiful Luigia de' Medici. It was about this time that one of his fellow-pupils savagely struck and broke his nose. On April 8, 1492, his beloved friend and patron Lorenzo de' Medici died; and Michelangelo's boy-companion, the worthless Piero de' Medici, reigned in his stead. Michelangelo left for Venice. Unable to get work, he wandered to Bologna, where a gentleman, one Aldovrandi, befriended the penniless youth.

Michelangelo had now to leave Bologna owing to the threats of the jealous craftsmen of the town; so in the springtime of 1495 he returned to Florence to find the beautiful Luigia dead and a republic established. Though but twenty, he was made a member of the general council of citizens. Called to Rome by a cardinal who had bought his Sleeping Cupid as an antique, the young sculptor hurried eagerly to ride to the goal of his ambitions in the June of 1496; he was soon at work on the superb group of his *Pietà*. Unfortunately the money difficulties of his father and family kept the young artist poor in order to send them constant relief; nevertheless, when at 26, in the spring of 1501, he again entered Florence,

*Michelangelo's bust of David*

Portrait in the Capitoline Gallery, Rome

he was hailed as the first sculptor of his age. Finding a large discarded block of marble, he wrought out of it his mighty masterpiece the colossal *David*.

Summoned to Rome by Pope Julius II in 1505, the young artist eagerly set forth on his second journey thereto. The great Pope Julius II, an extraordinary man, ordered a magnificent monument to himself. Michelangelo's design being too huge to set in S. Peter's church, the pope decided to have the church rebuilt by Bramante on a vast scale. Tricked by the pope over money, Michelangelo took horse in a rage for Florence. "Forgiven" and recalled by the pope in 1508, he rode into Rome for the third time, his heart set on finishing the great sculptures for the Julian tomb, only to find that Bramante and Raphael and others, playing on the old pope's superstition, had maliciously suggested Michelangelo being set in-

Michelangelo. The Holy Family, an early work, painted in tempera, 1501-5  
Uffizi Gallery, Florence

stead to painting the Sistine chapel. Thus it came about that Michelangelo, shutting himself up in the chapel alone, with the fresco dripping on his upturned face, cramped by the terrible fatigue, put himself to the stupendous task, and, four years afterwards, on Nov. 1, 1512, there was revealed to Rome the masterpiece of painting of the Italian Renaissance.

Pope Julius, feeling the end at hand, now ordered Michelangelo to finish the great Julian tomb. Julius, dying four months afterwards, was succeeded by Pope Leo X, a Medici, who ordered Michelangelo instead to Florence to the erection of his great Medicean tomb in honour of the Pope's two brothers lately dead.

Then came the sack of Rome in 1527. Florence shook off the yoke of the Medici, and, Michelangelo, now 52, flung himself into the war of liberty.

But the fall of the city through treachery saw Alessandro de' Medici enter in triumph and Michelangelo a fugitive. However, the anger of the Medicean pope soon cooled, and Michelangelo was torn this way and that by the jealousies rampant over the completion of the two great tombs. Finishing the masterpiece of the Tomb of Giuliano and Lorenzo de' Medici in 1534, he left Florence for ever.

On his reaching Rome for the fourth time, now on the edge of 60, the new pope, the crafty Paul III, compelled Michelangelo to the painting of the vast *Last Judgment*. It was now in his sixties that he met the second woman

Michelangelo. La Pietà: marble group representing the Madonna tending the body of the dead Christ. Executed in 1499, this is the only work ever signed by Michelangelo, whose name appears on the band crossing the breast of the Madonna

S. Peter's, Rome

who was so greatly to influence his life—Vittoria Colonna, the first woman of the age, the inconsolable widow of the Marquis of Pescara, was at forty-two to arouse a strange platonic passion in him.

In 1545, at 70, Michelangelo completed his much modified design of the huge Julian Tomb. The following year, Pope Paul III made him architect to complete the great church of S. Peter that Bramante had planned for Pope Julius II. On the morrow of his taking up the huge task, his romantic friendship with Vittoria Colonna ended with her death.

Family griefs fell fast, but his devotion to his kin bore rich fruit in his old age. Wealthy, frugal of habit, he poured forth vast designs. Sleeping little, working at night, a candle in his cap, at his sculpture, he lived in lonely communion with his own soul. But his vigorous old body could not resist the severe chill which took him to his armchair, where he died a little before five of the clock in the afternoon of Feb. 18, 1564. Michelangelo, with colossal gifts, uttered his age like the giant he was. He claimed to be a sculptor alone, yet as poet, painter, and architect he reached to vast repute—he signed his immortal paintings in the Sistine chapel as Michelangelo, sculptor. He stands forth rugged, stern, honest, uncompromising, virile, as the mighty seer of the Renaissance, like some ancient Hebrew prophet. Over all he wrought is a tragic gloom, for his stern eyes saw the failure of Italy to reach to the splendid realm of Liberty. Entertaining few friends and shunning the society so dear to Raphael, he wrought his solitary art with his own wondrous hands, scorning the courtier ways of Raphael, arrayed in magnificence, and working amidst his crowd of assistants. Michelangelo was the subject of a dramatic poem by Longfellow (1883). Seven of his sonnets were set to music by Benjamin Britten (1940). See Adam; Art; Farnese Palace; Isaiah; Jesus; Moses.

**Bibliography.** Life with trans. of many of his poems and letters, J. S. Harford, 1857; Life and Works, C. Heath Wilson, 1876; Lives, J. A. Symonds, 1899; A. Condivi, Eng. trans., C. Holroyd, 1911; C. Clement, 1930; Lord Finlayson, 1936; C. de Tolnay, 1946.

**Michelet, Jules (1798–1874).** French historian. Born in Paris, Aug. 21, 1798, he was educated at the Collège Charlemagne, and in 1830 became head of the historical section of the royal archives. At this period appeared the first

volume of his history of France (1837–67) which, with the History of the French Revolution (1847–53), gives him a high place among French historians. An ardent democrat, his lectures were prohibited in 1851, and from that time to his death on Feb. 9, 1874, he lived in retirement.

**Michelson, Albert Abraham (1852–1931).** German-born American physicist. Born at Strelno, Prussia, Dec. 19, 1852, he emigrated to America and in 1873 graduated from the U.S. Navy academy, where he became instructor in physics and chemistry. Re-

signing from the navy in 1881, he was appointed professor of physics at the Case school of applied science, Cleveland, Ohio. In 1892 he became head of the physics department, Chicago university, where his researches enabled him to perfect methods for determining with precision the speed of light.

Michelson measured a metre in terms of the light wavelengths. In 1897 he was appointed a member of the international committee on weights and measures. He received the Nobel prize for physics in 1907; the first American to do so.

In collaboration with Professor Morley, he carried out a number of experiments, for which he is chiefly famous, designed to show the relative motion of matter and ether (see Ether, p. 3155). The negative results of these experiments became one of Einstein's chief starting points in the formulation of his theory of relativity (*q.v.*). Michelson's name is also associated with a type of optical interferometer. He published *Velocity of Light*, 1902; *Light Waves and Their Uses*, 1903; and *Studies in Optics*, 1927. He died May 9, 1931.

Michelangelo. Tomb of Giuliano de' Medici, who is represented as a general of the Church. On the sarcophagus are figures of Day and Night. The monument inspired Swinburne's sonnet, In San Lorenzo Church of S. Lorenzo, Florence

**Michigan.** Lake of the U.S.A. The second largest of the five great lakes of North America. Entirely within the U.S.A., it is 320 m. long, has a mean breadth of 65 m., and covers an area of 22,400 sq. m. It lies 581 ft. above sea level, and its greatest depth is 860 ft. The lake, which has few large indentations apart from Green Bay and Grand Traverse Bay, has low, sandy shores, and navigation is rendered dangerous by heavy winds and the absence of good harbours. Communication with Lake Huron is provided by the Strait of Mackinac and with the Mississippi river by the Chicago Drainage Canal. The only islands are a group in the N., the largest of them being Manitou, 50 m. long, and the chief streams entering the lake are the Manistee, Muskegon, Menominee, and Fox. The trout, salmon, and other fisheries are important. Chicago, Milwaukee, Manistee, and Sheboygan are among the cities on the shores of the lake.

**Michigan.** Northern state of the U.S.A., known as the Peninsula State, from its division by Lake Michigan into two peninsulas. The N. peninsula is traversed by low

mountains, and is rich in minerals; the S. peninsula is hilly in the N. with a prairie expanse towards the S. Thousands of small lakes break the surface, while the Muskegon, Grand, Kalamazoo, and many other rivers supply much water-power for the various industries, but are often unnavigable. Maize, wheat, potatoes, hay, and sugar-beets are extensively cultivated, and iron and copper mined.

The iron ore is chiefly a rich red and brown haematite mostly obtained from the Marquette range in the N. peninsula, and the copper is chiefly drawn from Keweenaw Peninsula on Lake Superior; silver, salt, coal, Portland cement, building-stones, and glass sand are also worked. Rural districts and small towns are prosperous; the development of the Ford Motor co. at Detroit provides one of the most striking developments of modern industry in the U.S. It has 6,984 m. of rly. Michigan was admitted to the Union in 1837. Two senators and 13 representatives are returned to Congress. One of its most prominent senators during and after the Second Great War was A. Vandenberg (*q.v.*). Lansing is the capital, and Detroit the chief city. Area 96,720 sq. m., of which 39,698 sq. m. are inland water. Pop. 5,256,106. *Consult* Michigan, ed. G. N. Fuller, 1939.

**Michigan City.** City of Indiana, U.S.A., in Laporte co. It is on Lake Michigan, 55 m. by rly. E.S.E. of Chicago, and is served by the Lake Erie and Western and other rlys., and by lake steamers. The seat of a protestant Episcopal bishop, it contains the Northern Indiana state prison. It is mainly a summer resort, and its population increases by several thousands in the holiday months. Its main industries are fishing and the manufacture of metal products including bicycles, and of clothing. Michigan city was organized in 1832, incorporated in 1837, and chartered as a city in 1867. Pop. 26,476.

**Michoacan.** Maritime state of Mexico. Bordered S. by the Pacific, and covering an area of 22,874 sq. m., it is generally mountainous, the N. portion belonging to a great plateau, and the S. portion, which slopes away to the sea and the Mescala or Balsas river, consisting of a series of wooded mt. chains and productive valleys. It is watered by the rivers Lerma and Balsas and several smaller streams, and contains a number of large lakes, the principal being the Cuitzéon and Patzcuaro, and part of Chalapa. Cereals, sugar, coffee,

and tobacco are cultivated, and gold, silver, lead, iron, and coal are mined. There are good roads to Mexico City and Guadalajara. The capital is Morelia. Pop. 1,182,003.

**Mickey Mouse.** Film cartoon character. Devised by Walt Disney (*q.v.*) while working on a series of film cartoons about Oswald the Rabbit, Mickey made his début in Steamboat Willie, 1928, the first film cartoon to be synchronized with sound, though Disney had already made two silent Mickey pictures. In 1929 Disney produced his first musical Mickey cartoon, The Opry House. The Chain Gang, 1930, introduced Mickey's dog Pluto. The first Mickey Mouse and Donald Duck (*q.v.*) colour cartoon, The Grand Concert, was produced in 1935. By Dec., 1947, Mickey had been the star of 188 short productions, and appeared in two full-length films: Fantasia, 1941, and Fun and Fancy Free, 1947.

**Mickiewicz, ADAM** (1798-1855). Polish poet. He was born near Novogrodek, Lithuania, Dec. 24, 1798, and educated at the university of Vilna. In 1824 he was arrested as a political suspect, and banished to the interior of Russia. He formed a friendship with Push-

Adam Mickiewicz,  
Polish poet

kin, and wrote a series of beautiful sonnets on the Crimea, which he visited in 1825. He composed several epics, including Dziady, 1823-27, Grażyna, 1827, and Konrad Wallenrod, 1828. Permitted in 1829 to travel abroad, Mickiewicz, after meeting Goethe at Weimar, went to Rome, where he wrote the epic Pan Tadeusz, his finest work, published in 1834 (Eng. trans. 1886).

After further wanderings, Mickiewicz settled in Paris as professor of Slavonic literatures at the Collège de France, 1840-44, but was dismissed for political propaganda in his lectures. In 1848 he helped to organize the Polish legion in Italy. Sent by Napoleon III to Constantinople to form Polish regiments for the Crimean War, he died in that city, Nov. 26, 1855. *See* Works, 8 vols., 1858; *Life*, by M. M. Gardner, 1911. *Pron.* Misk-eyvitch.

**Micmacs** (allies). North American Indian tribe of Algonquian stock. Inhabiting, at the discovery of America, Nova Scotia and ad-

Mickey Mouse. Walt Disney's famous film character

Courtesy of Walt Disney Productions  
jacent regions, three of them were taken to England by Sebastian Cabot in 1497. They were the most primitive, because the most isolated, of the eastern Algonquins (*q.v.*). They number some 3,000.

**Microamp.** A unit of electrical current. It is equal to one-millionth of an ampere.

**Microbar.** Unit of pressure. It is equal to one degree per sq. cm. The normal atmospheric pressure is  $1.013 \times 10^6$  microbars.

**Microclimate.** Term applied to the modifications which are experienced in the general climate owing to the influence of local factors. Climatic variations may be considerable, even over distances of a few hundred yards, and can be caused by differences of soil or grass cover, the effects of vegetation, the emission of smoke from factory chimneys, the presence of land or sea breezes, etc. The climate of a city often differs markedly from that of the surrounding rural districts. Microclimatological investigations have come to the forefront in agriculture, where the actual meteorological conditions to which the growing plants and crops are subjected are recognized as being of vital importance. *See* Climate; Frost; Meteorology.

**Microcline.** A common mineral in the granitic rocks. It is a member of the feldspar group and has the same composition as orthoclase (*q.v.*), potassium aluminium silicate, but shows different crystal form, being triclinic. It occurs as white to pinkish grains and crystals in granites, pegmatites, and feldspathic sandstones. The bright green variety known as amazon stone is used in ornamental work and jewelry. In common with other feldspars microcline has uses in the ceramic industry. *See* Feldspar.

**Microcosm** (Gk. *mikros*, small; *kosmos*, world). Term applied by the mystics of the 17th century to man as the world in little, the spiritual mirror of the macrocosm,

the great world or universe. The movements of the life of the microcosm were supposed to correspond exactly with the movements of the life of the macrocosm. Microcosm is the title of a philosophical work by Lotze (*q.v.*). See Universe.

**Microcosmic Salt.** Hydrogen ammonium sodium phosphate,  $\text{NH}_4\text{NaHPO}_4 \cdot 4\text{H}_2\text{O}$ . Its composition was investigated by Marggraf, and subsequently by Proust. It was made originally from urine, but is now prepared by mixing hot strong solutions of ammonium chloride and sodium phosphate. It is a crystalline body which melts to form a glassy mass of sodium metaphosphate, and is largely used in blow-pipe work for dissolving metallic oxides.

**Microfarad.** The practical unit of electrical capacitance. It is equal to one-millionth of a farad.

**Microfilm Recording.** Photographic process by which documents are copied on to continuous lengths of film up to 100 feet in length and either 16 mm. or 35 mm. in width. Automatic cameras employing electric or pneumatic mechanism are employed, a single movement switching the lights, opening and closing the shutter, and winding on the film ready for the next exposure. For certain classes of work, apparatus has been designed which can be operated by office staff with a minimum of training. The system is increasingly being used for the duplication of books, manuscripts, music, newspaper files, cheques, insurance policies, and business records of all kinds. It has brought about great economy of storage space, *e.g.* the contents of four large ledgers can be copied on to a roll of film contained in a can 4 ins. in diam. and less than 2 ins. deep. During the Second Great War many valuable and historical documents (including parish registers) were copied by this process, and the films sent abroad for safe keeping. The films, which are usually processed by the makers, may be projected for reading in special cabinets, or photographic enlargements may be made from them.

**Microhm.** Electrical term. It is one millionth of an ohm, and is the practical unit of resistance.

**Micrometer** (Gr. *mikros*, small; *metron*, measure). Engineering instrument. In modern engineering practice very fine limits of measurement are necessary in a number of cases, *e.g.* where cylindrical articles are finished to size by grinding. Such measurements are made to the nearest 0.001 in. and

sometimes to the nearest 0.0001 in. An instrument for making such measurements is a micrometer.

A type of micrometer used for measuring external dimensions is illustrated. At one end of the body B is fitted the anvil A, which can be adjusted slightly for zero read-

Micrometer. Diagrams illustrating types used for measuring (top) external and (bottom) internal dimensions. For explanation of lettering, see text

ing. For measurements in inches the screw S has 20 threads per inch, so that one turn of S represents 0.05 in. The head H, which is attached to and moves with the screw, has its edge C equally divided into 50 divisions. Thus a movement of one division on the head represents a longitudinal movement of 0.001 in. of the screw. A vernier V on the nut D enables a movement of one-tenth of one of the divisions on C to be read, so that readings to 0.0001 in. can be taken. In order to avoid upsetting the reading by application of excessive pressure the head is turned by the knurled extension K, which is arranged to slip when a pre-determined light pressure is exceeded.

The length of the scale on D rarely exceeds 1 in. and is frequently less. Any size of gap can be used, however, provided that a standard block of certified length is used for setting the micrometer. In this case the screw is set to zero and A is adjusted to fit the block. For internal measurements the distance PQ is adjusted by a similar micrometer screw and head H. Different lengths of A can be used according to requirements, the zero being checked with an external micrometer.

Another form of micrometer, generally used for checking variations in size, consists essentially of a flexible diaphragm enclosing a quantity of coloured fluid which communicates with a capillary tube. The size of the tube is chosen so that a movement of 0.001 in. of the diaphragm produces a rise of 1 in. in the capillary tube, so that variations as small as 0.0001 in. are easily detected.

**Micron** is a unit of length equal to  $10^{-6}$  metre or  $10^4$  Angstrom units. The wavelengths of the yellow lines of the sodium spectrum are 0.5890 and 0.5896 micron.

**Micronesia** (Gr. *mikros*, small; *nēsos*, island). Collective name of several groups of small islands in the Pacific Ocean. They are situated between the equator and lat.  $20^\circ$  N. and long.  $130^\circ$  to  $180^\circ$  E. The chief are the Ladrone, Caroline, Marshall, Gilbert, and Pelew Archipelagos, all separately described. Politically they were apportioned among Great Britain, the U.S.A., and Germany, but after the First Great War the islands belonging to the latter came under mandate to Japan. For conditions during and after the Second Great War, see entries for each group.

**Micronesian.** Term denoting the inhabitants of the diminutive islands N. of Melanesia in the W. Pacific. First occupied by a Papuan, then by an Indonesian immigration, this group was afterwards affected by other racial and cultural influences, especially Malayan, Japanese, and Samoan. Micronesians are slenderer, shorter, darker, hairier, and longer-headed than the Polynesians. Local forms of dress and equipment, the semi-divine status of the chiefs, and the veneration of stone pillars, sometimes stone-circled, are reminiscent of a megalithic domination.

**Microphone.** An instrument for the conversion of sound energy into electrical energy. The original instruments were termed transmitters, such as in the original Bell system of telephony where an iron diaphragm placed in the field of a magnet caused currents to flow in the coils surrounding the magnet when sound waves vibrated the diaphragm. These electric currents were then conveyed by wires to the receiver, or ear-piece, which was of similar construction. The fluctuations caused variations in the strength of the magnet and these variations vibrated the diaphragm so that it generated sound waves similar to the originals.

This simple transmitter, or microphone, was useful only over short distances as it operated only with its own weak generation of electrical energy.

Professor Hughes began investigations in 1878 in the use of the carbon microphone, which acts fundamentally as a relay for controlling an existing source of electrical energy. The vibrating diaphragm, made of iron alloy, in contact with carbon granules packed into a small cavity, causes

**Key to Diagram**

E. Eyepoint or exit pupil. F Back focal plane of objective. F'. Front focal plane of eyepiece. L-M. Mechanical tube length. PQ. Object and front focal plane. Q'-P'. Eyepiece diaphragm and position of real image. Q''-P''. Enlarged virtual image of object

**Microscope.** Tracing the path of rays through a modern microscope fitted with below stage controls, and for binocular or monocular use

Courtesy of G. Baker

the granules to vary their contact resistance to an electric current passing through them. The circuit comprises a battery, microphone, transmission line, and the ear-piece, the latter being of a magnetic type. Such forms of microphone are still used in Post Office telephones but with great improvements in detail. They are not, however, suitable for the transmission of wide bands of frequencies, such as are needed for converting complex musical sounds into electric currents.

Moving coil microphones can give excellent quality transmission. A very light and freely suspended diaphragm has a coil fitted to its centre; this coil is positioned in a circular gap between the pole-pieces of a powerful permanent magnet. Sound waves vibrating the diaphragm cause the coil to cut the magnetic lines of force in the gap so that currents are generated in the coil and these may be fed to amplifiers for magnification. Other forms of microphones employ very light ribbons of aluminium which act both as a diaphragm and the conductor in which the current is generated, while a further type

employs piezo-electric crystals which generate a voltage across their faces when subject to varying mechanical pressure.

**Microphotography.** The process of photographing books, documents, etc., page by page on small-sized film, in order to provide records or duplicates at low cost and in a compact form. It is sometimes confused with photomicrography (*q.v.*).

**Micropyle.** Small aperture left in the integument of an ovule which facilitates the approximation of the male gamete to the female. In gymnosperms the drying of a drop of liquid secreted for that purpose draws the pollen grain into the micropyle; in angiosperms the pollen tube grows into it.

**Microscope** (Gr. *mikros*, small; *skopein*, to look at). Optical instrument for the ex-

amination and magnification of small objects. In its simplest form, that of a single lens (*q.v.*), it is very ancient, for the phenomenon of magnification by a curved transparent disk of material must have been noticed in the earliest times. But the high-powered compound microscope is a comparatively modern invention.

Early observers found that the single lens gave a coloured and distorted image, and it was not until the invention of the achromatic lens (*q.v.*) by Chester Moor Hall, 1729, and John Dollond, 1752, that any great advance was made in the use of the instrument. The theoretical researches during 1873-81 of Professor E. Abbe, combined with the practical skill of the German glass-maker Dr. Schott, brought about an enormous increase in the powers of the microscope and laid the foundation of modern microscopy. Sir Almroth Wright and J. J. Lister, the father of Lord Lister, also carried out researches that did much to discover the principles of the modern scientific microscope.

The simplest form of microscope consists of a magnifying lens at one end of a tube and another lens at the other end, serving as an eyepiece. All modern microscopes are constructed on this principle, the two simple lenses being replaced by two complicated systems of lenses. The system nearest the object being examined is called the objective, and that nearest the eye, the eyepiece. The objective is the more important part, and may consist of a large number of lenses

**Microscope.** An inclined binocular tube microscope, showing the main components

Courtesy of G. Baker

of varying powers and properties according to the type of microscopic work being undertaken. Its function is to collect the rays of light from the object and bring them to the focal image.

The strain on one eye of examining objects with a microscope is very great, and in 1860 F. H. Wenham designed a binocular microscope with two tubes and two eyepieces, which has considerably lessened the strain of the work. The light rays from the objective are split up by a prism, and the two images combined to give what is known as stereoscopic vision.

With the improvement in the composition of the glass used in microscopes there came a very great improvement in the definition of the image obtained. With the discovery of the way to make lenses out of molten quartz it became possible to construct a microscope which could be used with ultra-violet light and enable objects to be examined that are only one-240,000th of an inch in diameter. Further advancements in microscopy have been made in recent years by the use of polarised light, enabling objects one-sixth of a millionth of an inch in size to be examined; by a system of phase-contrast microscopy whereby extremely transparent objects are rendered clearly visible without staining; and by fluorescence microscopy in which advantage is taken of the properties of certain dyes to shine under the action of ultra-violet light. Recent British work on a reflecting microscope built on the principle of a reflecting telescope shows promise of a resolution far in advance of that which is possible with the ordinary light microscope. The combined use of the microscope and the time lapse cine-camera, where extremely slow growth processes in tissue cultures are speeded up many hundreds of times, holds out possibilities of the study of the ultimate constitution of living matter that may have a revolutionary effect on the progress of mankind. See *Achromatic Lens*; *Electron Microscope*; *Lens*; *Metallography*; *Optics*.

**Microscopical Society.** ROYAL. British learned society, founded in 1839. Its objects are to promote microscopical and biological science by discussion and publication of matters pertaining to the microscope, especially improvements in its construction and application to biological and industrial research. The soc. publishes a quarterly journal. Its h.q. are at B.M.A. House, Tavistock Sq., London, W.C.1.

**Microstructure.** The appearance of a metal or alloy when viewed through a metallurgical microscope. Specimens are usually prepared by careful polishing of a flat surface of the part of the sample which is of particular interest. If this is examined under vertical illumination, a smooth, mirror-like surface is seen. But if the top surface is removed by etching with suitable acids or salts, the structure of the metal crystals themselves can be discerned. The experienced metallurgist can obtain a very good idea of the type of metal, its method of manufacture, and the properties to be expected, in a sample the microstructure of which he has examined. See *Etching*; *Metallurgy*; *Polishing*.

**Microtome** (Gr. *mikros*, small; *tomē*, cutting). Instrument for cutting thin sections of organic tissue, etc., for microscopic examination. The substance to be cut is either frozen in gum, etc., or embedded in paraffin or celloidin, which enables slices of any thickness between 0.01 mm. and 0.005 mm. to be obtained.

The instrument comprises a razor or a knife-edge which may itself move or remain stationary: in the latter case the specimen to be sliced slides over the cutting edge. In the Cambridge rocking microtome, the substance to be cut is embedded in paraffin contained in a tube, which can be advanced towards the cutting edge in accordance with the thickness of the specimen required, the degree of movement of the tube being read off on an arc graduated in thousands of a millimetre.

**Microwaves.** Term used in electricity. It refers to electromagnetic waves of length 30 cm. down to 1 cm. or less, the corresponding frequencies being 1,000 and 30,000 megacycles per sec. respectively. Microwaves may be generated by magnetron and velocity-modulated (klystron) valves.

**Midas.** Legendary king of Phrygia. Having done a favour to Silenus, the companion of the god Bacchus, he was told by the god that whatever he asked of him would be granted. Midas asked that whatever he touched should be turned into gold. Finding that even his food turned to gold before it reached his lips, he asked Bacchus to revoke the gift. By command of the god he bathed in the springs of the river Pactolus, and the baleful power left him; from that time onwards the river was noted for its golden sands. Midas was once chosen to decide in

a contest on the flute and the lyre between Pan and Apollo. Midas having decided in favour of Pan, Apollo changed the king's ears into those of an ass. Midas successfully concealed the deformity from everyone except his barber, who was so oppressed by the secret that, to relieve his feelings, he dug a hole into the ground and whispered into it the words "King Midas has the ears of an ass." From here grew up a reed which, when moved by the wind, divulged the secret to the world. Midas was the name of many kings of Phrygia. *Pron.* My-das.

**Middelburg.** A town of the Netherlands. Capital of the prov. of Zeeland, it stands nearly in the centre of the island of Walcheren, 4 m. by rly. N.N.E. of Flushing. The industries include engineering,

Middelburg, Walcheren. The Oost Kerk, one of the principal churches (pre-war)

and furniture and tobacco making. The town is encircled by a strip of water known as the Vest. The abbey of S. Nicholas, founded in 1106, and once a Premonstratensian house, was used for administrative purposes, until its destruction by German dive-bombing in May, 1940, when much of the rest of the older part of the town was also flattened. Middelburg, like most of Walcheren, is below sea level, and from the breaching of the sea dykes by the R.A.F. in October, 1944, until their closing a year later the tide washed in and out of the houses of the town, which, however, was never abandoned. In the Middle Ages Middelburg was a cloth centre. Pop. 18,389.

**Middelburg.** A town in the Transvaal, S. Africa. It is 95 m. by rly. E. of Pretoria. Near by are extensive coal-mines. It is a growing trading centre with rly. connexion to Pretoria, Johannes-

burg, and Lourenço Marques. Middelburg district is a large area bounded N.W. by the Olifants River. Pop. 7,995. There is another Middelburg, a town in Cape Province, 91 m. from Graaf Reinet.

**Middelharnis.** A village and commune of the Netherlands, in the island of Goeree and Overflakkee, prov. of South Holland. It is the village visible in the distance in Hobbema's famous picture, *The Avenue*, in the National Gallery, London (see Hobbema illus.). Pop. c. 5,000.

**Middle Ages** OR **MEDIEVAL PERIOD.** Name given to the ten or eleven centuries beginning with the 5th of our era, and ending with the 15th—the centuries intervening between what are called ancient and modern times. Definite dates for the beginning and the end of the Middle Ages can only be assigned arbitrarily; those most in favour are the sack of Rome by Alaric the Goth, 410, or the deposition of the last Roman emperor in Italy, Romulus Augustulus, 476, and the capture of Constantinople by the Turks, 1453, or the discovery of America by Columbus, 1492. The essential facts are that early in the fifth century the old Roman civilization of Western Europe was submerged by the barbarian flood of Teutonic invasion; a new civilization gradually emerged in a new Europe; and then the new Europe awoke gradually to fresh intellectual ideas, and suddenly to the existence of a whole new world outside itself.

The Middle Ages again fell into two main periods, roughly known as the Dark Ages and the Age of Chivalry, separated by the epoch of the Norman expansion in the second half of the 11th century and the opening of the prolonged contest between the empire and the papacy. Some writers restrict the term Middle Ages to the Age of Chivalry. See Feudalism; History.

**Middle Class.** Phrase in loose common usage in Great Britain for that section of the community between the nobility and the "working classes." It is sometimes divided into the upper and lower middle classes, but the dividing line is apt to be drawn differently according to the status of the person drawing it. The middle class embraces the majority of the professional, mercantile, and "black-coated" clerical workers, also the decreasing rentier group. It was once claimed as a characteristic of members of the middle class that they

expended more effort than others in keeping up an appearance of gentility and respectability in dress, deportment, speech, morals, and culture; but the distinction between class and class being, especially since the First Great War, fluctuating and nebulous, the numerical strength of the British middle class cannot be estimated. The alternative appellation, *bourgeoisie*, is nowadays generally used in a derogatory sense. See Bourgeois.

**Middle Congo** OR **MOYEN CONGO.** Administrative dist. of the Belgian Congo, Africa. The Inkisi, Kwango, Kasai, and Congo constitute the greater portion of its boundaries; in the S.W. it is crossed by the railway from Kinshasa through Madimba towards Matadi. See Congo, Belgian.

**Middle East.** Popular political and geographical division of the East. This somewhat vague term is used to denote that part of Asia which includes India, Afghanistan, Persia, Iraq, and Arabia. A Middle East Command was established during the Second Great War with H.Q. at Cairo. At one time or another it controlled forces in E. and N. Africa, Palestine, Syria, Persia, Aden, and Transjordan. After the war the command was designated Middle East Forces, which was changed to Middle East Land Forces in Aug., 1946.

**Middle Lamella.** A term used in plant anatomy for the middle layer of a cell wall which is often apparent in sections as by reason of optical or staining properties differing from those of the rest of the wall. It is the persistent though often chemically changed primary wall originally consisting of pectic material which was initiated in the cell plate separating two recently divided nuclei. See Cytology.

**Middleman.** Term used somewhat loosely to denote a wholesaler or other trader who intervenes in the chain of distribution between the producer and the retailer or the manufacturer and the user. Thus, wine may be bought by A from the producer P, sold to an exporter B, sold by him to an importer C, in turn sold by him to a merchant D, who may sell it to a retailer E, who finally sells it to the consumer F. The intervention of such middlemen as A, B, C, D, and E naturally increases the final price; but most of them, such as B, C and E perform a specialised function, and may do so at a lower cost

than would otherwise be incurred. It does not follow that if a manufacturer sells direct to the public and thus eliminates two middlemen, the wholesaler and the retailer, he will thus complete the chain of distribution more cheaply than the specialised wholesaler and retailer would have done. Opportunities for middlemen may be lessened by (a) government regulation of prices and of profit margins (that is, the percentages that may be added to cost at each stage when fixing the selling price) for the manufacturer, the wholesaler, and the retailer; (b) direct selling by manufacturers to retailers or to consumers; (c) government rationing and control of commodities (this may encourage the activity of middlemen in the "black market," i.e., illicit trading). Sometimes brokers and commission agents are included in the term middlemen.

**Middlemarch.** A novel by George Eliot, originally published in eight parts, 1871-72, with the sub-title, *A Study of English Provincial Life*. It is a story mainly of a modern S. Theresa, Dorothea Brooke, who first, from zeal rather than love, marries the stiff, scholarly, middle-aged egoist, Casaubon, and later his cousin and opposite, Will Ladislaw. Other romances are interwoven with hers.

**Middlesbrough.** Co. borough and manufacturing town of the N. Riding of Yorks, England. It

Middlesbrough arms

stands on the S. side of the Tees estuary, and is 3 m. E. of Stockton and 238 m. by rail from London. The chief buildings are those erected for municipal purposes, including the town hall, royal exchange, museum, art gallery, etc. There is also a R.C. cathedral. Middlesbrough is the commercial centre of the coal and ironstone mines of the Cleveland district, and it contains numerous foundries, furnaces, and other works for the production of iron and steel on an enormous scale. Transport facilities by rail, road, and sea are available, and the Tees is spanned by a transporter bridge and a vertical lift bridge, both of unusual design necessitated by the low-lying banks of the river. The docks can accommodate ships of up to 13,000 tons. During the Second Great War Middlesbrough was several times attacked from the air, the raid of

Middlesbrough, Yorkshire. The town hall of this North Riding industrial centre

May 25, 1940, being the first attack on an industrial target in England. In later raids considerable damage was done.

Middlesbrough returns two M.P.s. Pop. est. 140,470.

**Middlesex.** County of England. Wholly inland, its area is 232 sq. m. On the S. the Thames separates it from Surrey, as on the E. the Lea separates it from Essex. Other rivers are the Crane, Colne, and Brent. The surface is fairly level, although there is a range of hills in the N., and the soil is fertile. Brentford is the co. town, but much of the business is done in London. Middlesex is in the London area as represented by the metropolitan police district and that of the central criminal court. Save for a small and decreasing rural area in the W., it is covered with dormitory suburbs, modern factories, and by-pass roads. The boroughs are Acton, Brentford and Chiswick, Ealing, Edmonton, Finchley, Hendon, Hornsey, Southall, Southgate, Tottenham, Twickenham, Wembley, Willesden, Wood Green. From 1950 two county and 26 borough members were returned to parliament. Middlesex is in the diocese of London, except for a small portion in that of Oxford. It contains Hampton Court, Harrow and Mill Hill schools, and Wembley stadium. It is still, as at the time of Domesday, divided into six hundreds.

Middlesex, so named because it was between the E. and the W. Saxons, is one of the older English counties. At the time of Domesday it was largely a forest area, and a little later was held by the citizens of London. In 1888 about 50 sq. m.

was taken away for inclusion in the new county of London. Pop. 1,628,728.

**LITERARY ASSOCIATIONS.** One of the earliest humorous poems in English is the 14th century skit upon knightly tournaments, *The Tournament of Tottenham*. In the Elizabethan drama are two plays with their scenes laid in Edmonton, the anonymous *Merry Devil of Edmonton*, and Dekker's *Witch of Edmonton*. It also figures in Cowper's ballad of John Gilpin. Drayton in *Polyolbion* sings of the fine cornlands where now are London's outer suburbs. Pope laid the scene of *The Rape of the Lock* in Hampton Court. Akenside found inspiration in *Golder's Hill*. Scott describes *Enfield Chase* in *The Fortunes of Nigel*.

Recollections of Enfield inspired a large part of Keats's poem, *I Stood Tiptoe upon a Little Hill*. Hood wrote of the work of a Bedford topiary artist in his poem, *The Two Peacocks*. Cobbett has passages on Middlesex in *Rural Rides*.

Dickens describes Bill Sikes on burglary intent as taking *Oliver Twist* by Isleworth, Hampton, and Shepperton; Thackeray, in memory of his own schooldays there, makes Henry Esmond pass part of his early life at Ealing; while Harrison Ainsworth has much of the county in his *Jack Sheppard*. Matthew Arnold's association with *Laleham* inspired William Watson's poem, *In Laleham Churchyard*. Consult *The Antiquities of M., M. Sharpe, 1911; Victoria History of the co., 2 vols., ed. W. Page, 1911.*

**Middlesex Hospital.** London hospital founded in 1745. Situated in Mortimer Street, London, it has over 700 beds, and a special feature is the cancer department, established in 1792. A cancer wing was opened in 1900, and in connexion with it are research laboratories for investigating the nature and causes of malignant disease. A medical school also has facilities for research.

**Middlesex Regiment.** Unit of the British army. Officially known as the Middlesex Regiment (Duke of Cambridge's Own), it was formed in 1881 by an amalgamation of the 59th Foot, raised in 1755, and the 77th Foot, raised in 1787. The 59th long served as marines, and in India gained the honours Mysore and Seringapatam. Eight honours were won under

Middlesex arms

Middlesex. Map of this English county, one of the home counties north of the Thames

Wellington in the Peninsular campaigns. At Albuera the infantry brigade, of which the 59th formed

Middlesex Regt.  
badge

part, was almost overwhelmed by a superior French force, but their wounded colonel refused to be carried to the rear, and shouted, "Die hard, my men, die hard." After the action the rations for one company were drawn by a drummer in his hat. Since that time the Middlesex Regiment has been known as "Die Hards." In the Crimean War the regiment won three honours and gained four V.C.s at Sevastopol; at Inkerman the 59th suffered such heavy casualties that its strength was reduced to that of a company. The regiment was in the Maori, Zulu, and South African wars.

Forty-six battalions raised for the First Great War earned the honours: Mons, 1914; Ypres, 1915, '17, '18; Albert, 1916, '18; Bazentin; Cambrai, 1917, '18; Hindenburg Line; Suvla; Jerusalem; Mesopotamia. The regiment served at Murmansk in 1919. Of Middlesex battalions which served in the Second Great War, the 1st surrendered to the Japanese at Hong Kong; the 2nd fought in France, 1939-40, and N.W. Europe, 1944-45; 1/7th, in France, 1939-40, Africa, N.W. Europe; 2/7th, in Africa and Italy; 1/8th, in France, 1939-40, N.W. Europe; and 2/8th, in N.W. Europe. The cypher and coronet in the centre of the badge are those of the duke of Cambridge, and the prince of Wales's feathers and motto perpetuate the original badge of the 77th Foot. The regimental depot is at Mill Hill.

**Middleton.** Mun. borough and market town of Lancashire, England. It is 6 m. N. of Manchester by rly. and has silk and cotton factories, bleaching, dyeing, and calico-printing works, iron foundries, chemical, soap and jam-making factories, and a rubber industry. Yet despite its industrial development most of the land is wooded or devoted to agriculture. Water is supplied by Heywood and Middleton water board. Middleton forms with Prestwich and Whitefield a coun-

Middleton  
borough arms

ty constituency of Lancashire. Its charter for a weekly market goes back to 1791; market day is Fri. Population (estimated) 30,000.

**Middleton, EARL OF.** Scottish title borne from 1656 to 1695 by the family of Middleton. John Middleton, of Middleton, Kincardineshire, served Charles I in Scotland during the civil war. He was taken prisoner at Preston and at Worcester, but escaped to France and joined the circle around Charles II. In 1653 he was sent to Scotland to lead a rebellion, but this was a failure. Charles created him an earl in 1656, and after the Restoration made him commander-in-chief. He died at Tangier in June, 1674. Middleton's son Charles, 2nd earl (d. 1719), was a secretary of state under James II. He followed the deposed king to France. The title was taken from him in 1695, but was claimed by the Middletons until the death of John, nominally the third earl, about 1746.

**Middleton, CECIL HENRY** (1887-1945). British gardener and broadcaster. Son of the head gar-

C. H. Middleton,  
British gardener

dener on a Northants estate, he entered the seed trade, afterwards becoming a student at Kew. He was on the horticultural staff of the board of Agriculture, 1914-18, and an instructor in horticulture for Surrey county council. In 1931 he began to broadcast talks on gardening, and from 1934 to 1945 his Sunday series, *In Your Garden*, continued without a break, his unpretentious manner bringing him tremendous popularity. In 1937 he was elected an associate of honour of the Royal Horticultural Society, and he was in demand as adviser and judge at shows. He died Sept. 18, 1945.

**Middleton, THOMAS** (c. 1570-1627). English dramatist. Born in London of a good family, he was a member of Gray's Inn, and wrote some satirical tracts. About 1600 he turned his attention to the stage, composing 15 plays independently, and seven in collaboration with Dekker, Rowley, and others. City chronologer from 1620, he was buried in the churchyard of Newington Butts. His work is marked by coarseness, pointed dialogue, subtle satire, and penetrating wit. Of his comedies

of London manners, *A Trick to Catch the Old One* is the most notable. His best independent

tragedy is *Women Beware Women*. With Rowley he wrote the powerful tragedy of *The Changeling*, and the comedies *The Spanish Gipsy* and *A Fair Quarrel*. His satirical play, *A Game at Chesse*, 1624, was immediately popular, but was suppressed at the request of the Spanish ambassador. *Consult Works*, ed. A. H. Bullen, 1885-86.

**Middleton-in-Teesdale.** A market town of Durham, England. It stands on the Tees, here bordering Yorkshire, 25 m. by rly. W.N.W. of Darlington. There is quarrying and mining for barytes, but the district is largely agricultural and a centre for walkers. Market day, Tues. Pop. 2,000.

**Middletown.** Name of several places in the U.S.A. One is a city of Connecticut, the co. seat of Middlesex co. It is on the Connecticut river, 15 m. S. of Hartford, and served by rly. and steamer from New York. Incorporated in 1651, it became a city in 1784. Between 1750 and 1800 it was Connecticut's wealthiest centre. Products include typewriters and rubber fabrics. Pop. 26,495.

Another Middletown, in Orange co., N.Y., is on the Wallkill river, 65 m. N.W. of New York City. Incorporated 1848, it became a city forty years later, and has developed from an agricultural market town into an industrial centre producing printers' supplies, machine tools, women's wear, and fur and leather goods. Pop. 21,908.

A third Middletown is a city in Butler co., Ohio, on the Miami river, 33 m. N. of Cincinnati. Outstanding products are paper, rust-resisting steel for prefabricated houses, and a chewing tobacco which has reached an annual output of 17 million lb. It was incorporated in 1833. Pop. 31,220.

Middletown was the name used to cover the identity of Muncie, Indiana, by R. S. and H. M. Lynd in their social studies of a typical American city of the Middle West (q.v.), Middletown, 1929, Middletown in Transition, 1937 and 1947.

**Middle Wallop.** R.A.F. aerodrome in Hampshire, England. Situated 5 m. S.W. of Andover, it was one of the stations of No. 11

Thomas Middleton,  
English dramatist  
After J. Thurston

group, Fighter Command, in the Second Great War, and was damaged by German bombers in the Battle of Britain. Later it was a night fighter base and prominent in the air defence of London. Over Wallop and Nether Wallop are other villages in the district. Wallop is the family name of the earls of Portsmouth.

**Middle West.** Accepted name for the N. central section of the U.S.A. It consists of the region extending from the Rocky Mts. to the Alleghenies, N. of the Ohio River and the S. boundaries of Missouri and Kansas. It is chiefly industrial and agricultural. Many of its inhabitants, especially in rural areas, are of German and Scandinavian descent. Before the shock of the Japanese attack on Pearl Harbour they took little interest in foreign policy, and are apt to be suspicious of Wall Street and Washington bureaucracy: they often show a marked independence of party machines, but exert considerable influence on public affairs.

**Middlewich.** Market town and urban dist. of Cheshire, England. It is 6 m. S. of Northwich, near the river Dane, and is served by rly. and the Trent and Mersey canal. The chief building is the old church of S. Michael, a place of refuge for Royalists in the Civil War. Salt is extracted from the brine springs here and chemicals and condensed milk are also made. Middlewich is in the centre of the wiches, or salt towns, hence its name. Market day, Tues. Pop. 5,458.

**Middlings.** A technical term used in flour milling and in metallurgy. In flour milling, it is applied to a mixture of broken up bran or husk, with a small proportion of flour mostly adhering to the bran. It is one of the so-called "offals" of the old process of flour milling, and is used for poultry and pig feeding. A newer meaning refers to a product of the process of flour milling, by roller mills. These first break up the grain of the wheat into a product which apart from the bran may be separated into three grades known as semolina, middlings, and dunst.

In metallurgy, the term refers to a product of the grading or concentration of ores. This grading may divide the ore into two parts only, the one rich in metal and the other worthless; but frequently there are three products, a rich one ready for immediate smelting or other treatment; an intermediate one which will be submitted to a further preliminary treatment; and a third which is worthless, and

is rejected. These are known respectively as heads, middlings, and tailings. See Metallurgy.

**Midge.** Name vaguely applied to many two-winged flies or Diptera (q.v.). They have narrow,

Midhurst, Sussex. Ruins of Cowdray Castle, a Tudor mansion formerly the seat of the earl of Egmont

elongated bodies, slender legs, and usually thread-like antennae often densely plumose in the males. The name refers more particularly to members of the family Chironomidae that are often seen dancing in swarms on summer evenings, especially near water. Midges usually resemble gnats or mosquitoes (q.v.) in general appearance but lack the piercing mouth-parts of those insects. An exception is the group of minute midges belonging to the allied family Ceratopogonidae, which have lancet-like mouth-parts and suck blood. With this habit species of *Culicoides* often cause much annoyance on summer evenings, especially in Scotland. Other flies known as midges are the Cecidomyiidae, or gall-midges, which include the Hessian fly.

**Midhat Pasha** (1822-84). Turkish politician. Born in Constantinople (Istanbul) he entered the Turkish civil service and was governor of Bulgaria, 1862-67. Becoming grand vizier in 1876, he was a prime mover in the deposition of Abdul Aziz. He drew up the draft constitution of the Ottoman Empire, but was banished in 1877. Allowed to return next year, he was nominated governor of Syria. Sentence of death passed upon him in 1881, on a charge of murdering Abdul Aziz, was commuted to banishment through the representation of the British government. He died in Arabia, May 8, 1884.

**Midhurst.** Market town of Sussex, England. It stands on the Rother, 12 m. by rly. N. of Chichester. The church, dedicated

to S. Mary Magdalene and S. Denis, is Perpendicular. There was a castle here, the seat of the Bohuns, in the Middle Ages. There is a 17th cent. grammar school and the Spread Eagle hotel dates in part

from the 15th cent. About 4 m. N. is the King Edward VII sanatorium for consumptives, opened in 1905. Near the town, which is surrounded by some of the most lovely scenery in Sussex, are the ruins of Cowdray Castle, now the property of Viscount Cowdray. Midhurst was a borough in the Middle Ages, but lost its rights and was long governed by a bailiff elected in the manorial court. It was separately represented in parliament from 1300 to 1885, and had its markets and fairs. Market day, Thurs. Pop. 3,000.

**Midi.** District of France. Without any defined area, it is generally regarded as the region between the Bay of Biscay and the Mediterranean. Toulouse is its capital. It was originally the Middle Land between France and Spain.

**Midi, AIGUILLE DU.** Mt. in France. A peak of the Mont Blanc chain, S.E. of Chamonix, its alt. is 12,600 ft. See Mont Blanc.

**Midi, CANAL DU.** Canal of S. France. It runs from Toulouse to La Nouvelle, near Narbonne, on the Étang de Thau. Known also as the canal du Languedoc, it connects with the canalised Garonne, and thus unites the Mediterranean with the Atlantic. Built during 1666-81 by Paul Riquet, it is still an important waterway for the trade of the S.W. depts. In its 148 m. there are 100 locks, and the chief towns served are Toulouse, Villefranche, Castelnau-d'Aud, Carcassonne, and Narbonne.

**Midi, PIC DU.** Mt. of the Pyrenees, in S. France, entitled in full Pic du Midi d'Ossau. It is nearly due S. of Pau and almost on the Spanish frontier. The Grand Pic has an alt. of 9,465 ft. and the Petit Pic of 9,135 ft. Just below the summit is an observatory where in 1931 the solar corona was first photographed in full sunlight.

Midhat Pasha, Turkish statesman

**Midian.** An ancient region of Arabia. The territory of the Midianites, a tribe descended, according to Genesis, from Midian, a son of Abraham by the Arabian, Keturah, it extended along the E. coast of the Gulf of Akabah. The Midianites, who were partly nomadic and traded by caravan with Egypt and Syria, also inhabited Sinai and the S. borders of Palestine. To merchants from Midian Joseph was sold by his brethren. Moses married a daughter of Jethro, probably a priest of Baal-Peor, the national god. The Midianites were frequently in league with the Moabites against the Hebrews, but were overthrown by Gideon (Judges 7).

**Midland.** Town in Simcoe co., Ontario, Canada, on Georgian Bay, 89 m. N. by W. of Toronto, on the C.P.R. and C.N.R. It has four large grain elevators, and its industries concern timber, silk and woollen mills, foundries and machine shops, and shipbuilding yards. Pop. 6,800.

**Midland Bank.** English banking company. Founded in 1836 as the Birmingham and Midland Bank, it was amalgamated with the Central Bank of London in 1891. In 1898 its title was changed to London City and Midland Bank. The City Bank was then taken over, and there followed a series of amalgamations with organizations in provincial cities. In 1908 the North and South Wales Bank, in 1914 the Metropolitan Bank, were taken over. In 1917 the share capital of the Belfast Banking Co.

was bought, in 1920 that of the Clydesdale Bank, in 1924 that of the North of Scotland Bank. Technically, however, the affiliated banks remained separate concerns.

When in 1918 the London City and Midland and the London Joint Stock Banks combined to form the London Joint City and Midland, the former had a paid-up capital of £5,189,000. Its headquarters were at 5, Threadneedle Street, E.C.2. The name was changed to Midland Bank Ltd. in 1923. By 1948 there were over 2,000 branches in England and Wales, with 16,000 agents in all parts of the world. The head office is in Poultry, London, E.C.2.

**Midland Canal** (*Mittellandkanal*). German system of inland waterways for ships up to 1,000 tons, linking the rivers Rhine and Elbe. Conceived in the mid-19th century, its building began in 1905 and most of it was completed before the Second Great War. It includes the Rhine-Herne, Dortmund-Ems, and other canals; it reaches the Elbe near Magdeburg. Dams, sluices, and power stations were included in the huge project, which was to link Berlin and Hamburg, and thereby the Baltic and North Sea, with the Ruhr. The system was severely damaged in the Second Great War, but was soon reconstructed.

**Midlands.** Term used for the counties in the middle of England. The limits of the Midlands cannot be exactly defined, but they lie approximately between Yorkshire and the Thames, and between

East Anglia and the Welsh border counties. The Midland judicial circuit includes Lincs, Derbyshire, Leicestershire, Rutland, Northants, Warwickshire, and Worcestershire. The terms E., N., and S. Midlands are also used.

**Middleton** or **MIDDLETON.** A market town and urban dist. of co. Cork, Eire. It stands on the Owencurra, which enters Cork harbour just below the town, 13 m. E. of Cork, with a station on the Eire state rlys. There is a grammar school founded in 1709, and a Cistercian abbey once stood here. The site of the place is the property of the earl of Middleton. Market day, Sat. Pop. 2,711.

**Middleton, St. John Brodric, 1st Earl of** (1856-1942). British politician.

1st Earl of Middleton, servative M.P. British politician for West Surrey in 1880.

Made financial secretary to the War office in 1886, he was under-secretary for foreign affairs in 1898: and secretary for war in 1900. In 1903 he was transferred to the secretaryship for India, going out of office in 1905. In 1907 he succeeded to the peerage. He was a leading figure among the Unionists in discussions on the settlement of Ireland, and was elected a senator of the I.F.S. in 1921. Created K.P. in 1915 and earl in 1920, he died Feb. 13, 1942. He was succeeded by his eldest son, George (b. Feb. 21, 1888).

**Midlothian** or **EDINBURGHSHIRE.** County of Scotland. It has a coastline of 12 m. on the Firth of Forth, its other boundaries being, from N.W. to N.E., the cos. of W. Lothian, Lanark, Peebles, Selkirk, Roxburgh, Berwick, and E. Lothian. Its area is 366 sq. m. including the island of Crumond. The area is hilly, save on the coast; herein are the Pentland and Moorfoot Hills, with several peaks over 1,500 ft. high, as well as Arthur's Seat and other heights around Edinburgh (q.v.). The chief rivers are the Esk, Water of Leith, Almond, and Gala. Edinburgh is the capital. In the co. are Leith, now part of Edinburgh, Dalkeith, Musselburgh, Midcalder, and Penicuik, as well as such picturesque spots

Midlothian (Edinburghshire). Map of the Scottish county south of the Firth of Forth, rich in historic and antiquarian associations

as Roslin, Hawthornden, and Newbattle. Oats, barley, turnips, etc., are grown; horses, cattle, sheep, and pigs are reared. The county also produces coal, building stone, limestone, and oil from shales. Market gardening is carried on near Edinburgh.

Midlothian arms

Outside the city the chief manufacture is paper. The county is served by rlys. and the Union Canal. It joins with Peeblesshire, to send two members to Parliament.

As the district around Edinburgh, Midlothian is rich in antiquarian and historic remains. Before the Norman Conquest the county was part of Northumbria. There are ruined castles at Borthwick, Crichton, and Craigmillar; Rullion Green, Carberry Hill, and Pinkie are battlefields. Pop. est. 563,000.

**Midnapur.** Dist. and town of India, in the Burdwan division, W. Bengal. The dist. lies in the S.W. of W. Bengal, of which it is the granary. The E. portion is alluvial plain and densely populated; the W. is jungle and sparsely peopled. The chief crop is rice. The town is an important rly. junction on the Kasai river, 60 m. W. of Calcutta, to which it is joined by a navigable canal. District area, 5,274 sq. m. Pop. dist. 3,190,647; town 43,171.

**Midnight Sun.** Appearance of the sun above the horizon at midnight. It may be witnessed at any point on the Arctic circle on the N. summer solstice, June 21, and on the Antarctic circle on the S. summer solstice, Dec. 21. Within these circles the length of time the sun is in the sky without setting gradually increases, being 72 days in lat. 70°, and 138 days in lat. 80°, whilst the sun does not set for six months at the poles. Tourists visit the N. of Norway to see the phenomenon.

The Antarctic has long spells of sunshine in summer. During Scott's 2nd expedition the burn on the sun card at Cape Evans (77½° S. 166½° E.) was frequently unbroken for 24 hrs.; between Dec. 9 and 12, 1911, there was a continuous record of 66½ hrs. of sunshine.

The phenomenon of the midnight sun is due to the inclination of the earth's axis, at 66½° to the plane of its orbit round the sun. Since the direction of the axis in space is the same at all times, at

one point (the summer solstice) the entire arctic circle is illuminated, the Antarctic being in total darkness. Six months later the position is reversed.

**Midrash.** An ancient Hebrew commentary on the O.T., consisting of a vast number of comments by various authors, mixed with tales and folklore. The term is also applied to the edifying tales in the O.T. illustrating religious truths, such as the books of Ruth and Jonah. It was the storehouse from which the Rabbis drew most of their teaching. See Mishna.

**Midshipman.** In the British navy, a junior officer between the ranks of naval cadet and sub-lieutenant.

The name is derived from the fact that the quarters of the "young gentlemen" qualifying for commissions were situated amidships on the lower deck. A midshipman begins his training as a cadet at a shore training college. If a Dartmouth entry, he commences at the college when 13½; this system is due to end in 1950. Under a scheme started in 1948, cadets may begin training at 16, or, if special or direct entry, 17-18. After passing the courses in the prescribed training college the student becomes a midshipman and goes to sea.

In addition to pursuing his studies under a naval instructor,

the midshipman, or "snotty," takes part in the daily routine of the ship, passing the word of command to the crew, seeing that orders are carried out, taking charge of boats, etc. Midshipmen mess in the gun-room. Their distinguishing badge is a white tab on the collar of their jacket, and for side arms they carry a dirk.

**Midshipman Easy.** Central character of the novel by Capt. F. Marryat, described under its full title Mr. Midshipman Easy.

**Midsomer Norton.** Part of the urban dist. of Norton-Radstock, Somerset, England. It is 12 m. S.S.W. of Bath, on the rly. and the little river Somer. The chief building is the Perpendicular church of S. John the Baptist, rebuilt in the 19th century. The small Somerset coalfield is near by.

**Midsommer Day.** June 24, popularly the middle day of summer. Astronomically the period of the summer solstice (about June 21) is the beginning of summer. Midsommer Day is the feast of the Nativity of S. John the Baptist and is an English quarter day. In some English towns and villages, stools decorated with flowers stuck in clay were placed by the house-doors or at cross-roads on this day, a custom possibly derived from the Roman festival in honour of the deities of the crossroads. The term "midsummer madness" may refer to the wild festivities of Midsummer Eve, or to the supposed effect of the midsummer moon. "Midsummer Man" is the plant orpine (*Sedum telephium*) used by girls on Midsummer Eve as a test of their lovers' fidelity.

**Midsummer Night's Dream,** A. Fairy comedy by Shakespeare, containing some of his most de-

Midnight Sun. Photograph with eight exposures at intervals of 45 minutes, showing that the sun during this period is not setting. See text

lightful flights of fancy. The scene is laid partly in Athens, but mostly in a so-called "wood near Athens," which is in many ways as English a wood as could be conceived, just as the artisans who assemble there to rehearse a play for the nuptials of Theseus, duke of Athens, are robustly English, even in their names — Nick Bottom, Peter Quince, Francis Flute, Tom Snout, etc. The wood is peopled by the fairies of English tradition, including Oberon, their king, and Titania, their queen, also the mischievous Puck or Robin Goodfellow. The artisans, as well as two young couples crossed in love who have fled for various reasons to the wood, become involved in the quarrel of Oberon and Titania and the pranks of Puck, and the comedy is rich; Bottom for example, is given an ass's head and Titania, under a spell, falls in love with him. Even after the dénouement and the rectification of all errors further comedy is provided by the artisans' performance of the story of Pyramus and Thisbe. But the fairies hold the stage to the last.

Written 1594, and first published in quarto form 1600, the play has 878 lines in blank verse and 731 pentametric rhymes. There have been many notable modern presentations in London, including those of Tree (His Majesty's, 1900 and 1911), Granville-Barker (Savoy Theatre, 1914), Gielgud (Haymarket, 1945), and several at the Open Air Theatre at Regent's Park.

The play has always attracted leading actors. Bottom, for example, has been memorably played by Samuel Phelps, Tree, Oscar Asche, Arthur Bourchier, Nigel Playfair, Ralph Richardson, Robert Atkins, Donald Wolfit, Francis L. Sullivan, Leslie Banks; Titania by Lady Tree, Gwen Ffrangcon-Davies, Jean Forbes-Robertson, Fay Compton, Peggy Ashcroft; Oberon by Mme. Vestris, Julia Neilson, Denis Neilson-Terry, Phyllis Neilson-Terry, Gladys Cooper, Jean Forbes-Robertson, Nicholas Hannen, John Gielgud, Robert Helpmann. The play has long been popular with amateurs, especially for open-air performance, also in schools, the play serving as an admirable introduction to Shakespeare. A film version directed in America by Reinhardt, 1934, was chiefly notable for the casting of James Cagney, famous in gangster parts, as Bottom. Mendelssohn's in-

cidental music, which includes the familiar Wedding March, was first performed in Berlin, 1843.

**Midway Islands.** Group of islands belonging to the U.S.A. in N. Pacific. About 1,150 m. N.W. of Honolulu, the two larger islands, Sand and East, have a combined area of just under 1,200 acres and are unproductive, being little more than sand dunes. Discovered in 1859, they were formally declared a U.S. possession in 1867, being placed under the control of the navy department in 1936. They provided facilities for trans-Pacific air services and contained a seaplane base. Pop. (1938) 118.

Attacked by Japanese naval and air units on Dec. 8, 1941, the garrison, U.S. marines, offered successful resistance to this and later raids. On June 4-6, 1942, a U.S. fleet defeated a Japanese force, equipped for the invasion of the Hawaiian Is., in the vicinity of Midway. This decisive victory, following closely on the battle of the Coral Sea (*q.v.*), marked the end of the Japanese advance in the Pacific.

**Midwife.** Woman who assists women during childbirth. She comes under the Midwives Acts 1902, 1926, and 1936. With a few exceptions, any man or woman not a certified midwife or registered nurse who for purposes of remuneration attends as a nurse on a woman in childbirth, or as a maternity nurse within ten days after, is liable to a fine.

The central midwives board is a body set up in 1902 to control the training, examination, and registration of midwives in England and Wales. The offices are 73, Great Peter St., London, S.W. 1. No woman can now be certified unless she has followed a prescribed course of study and passed certain examinations, and the board can remove the name of a midwife from the roll for misconduct. See Birth; Obstetrics; Pregnancy.

**Mieres.** Town of Spain, in the prov. of Oviedo. It stands on the river Nalon, 12 m. by rly. S. of Oviedo. The centre of the Asturian mining industry, it has iron-foundries, steel and zinc works, blast furnaces, and chemical works. An extensive trade is carried on in timber, cider, fruit, and cattle. Sulphur, copper, and cinnabar are mined. Pop. 52,373.

**Mierevelt, MICHEL JANSZ VAN** (1567-1651). Dutch painter. Born at Delft, May 1, 1567, he studied there under Willemsz and Augustyns, and at Utrecht under An-

tonio Blokland, 1579-83, and became court painter to the prince of Orange. He was famed for his numerous portraits, executed with a skill and attention to detail which compensate for a certain coldness in treatment. Among his portraits are those of Grotius, Gustavus Adolphus of Sweden, Huygens, Coligny, the duke of Buckingham, and William the Silent, and he left also some still life and genre paintings. Examples are to be seen in the Ryks museum, Amsterdam, the Louvre, The Hague, Dresden, Berlin, and one in the National Gallery, London. He died at Delft, July 27, 1651.

M. van Miervelt,  
Dutch painter  
After Van Dyck

**Mieris, FRANS VAN, THE ELDER** (1635-1681). Dutch painter. Born at Leyden, April 16, 1635, he was a pupil of Gerard Douw, and became a member of the Leyden Guild, 1658. He painted scenes of better class Dutch life. He died at Leyden, March 12, 1681. His sons Jan and Willem

Frans van Mieris,  
Dutch painter

were painters of repute as well as also his grandson Frans.

**Miers, SIR HENRY ALEXANDER** (1858-1942). British scientist. He was born at Rio de Janeiro, May 25, 1858, and educated at Eton and Trinity College, Oxford, and was assistant at the British Museum, 1882-95. Instructor in crystallography at the central technical college, S. Kensington, 1886-95, he was Waynflete professor of mineralogy, Oxford, 1895-1908, and principal of London university, 1908-15. From 1915 to 1926 he was professor of crystallography and vice-chancellor of Manchester university. He was elected a trustee of the British museum in 1926 and held various official positions in connexion with the control of museums. On the formation of the

Sir Henry A. Miers,  
British scientist  
Russell

Gemmological Association of Great Britain in 1932 he was elected its first president. His publications included *The Soil in Relation to Health* (with R. Crosskey), 1893, and *Mineralogy*, 1902. A knight from 1912, he died Dec. 10, 1942.

**Migmatite** (Gr. *migma*, mixture). In geology a type of rock occurring in regions of intense metamorphism where the normal country rock is intimately mixed with granitic material which may have been injected or may have soaked into the host rock. Migmatites, first described from Finland, also occur in Sutherland.

**Mignet**, FRANÇOIS AUGUSTE MARIE (1796-1884). French historian. Born at Aix-en-Provence,

François Mignet,  
French historian

May 8, 1796, he studied at Avignon and Aix, and became a lawyer. He made a name, however, by his historical work. His *History of the French Revolution*, 1824, is still standard, while his studies on the history of the 16th and 17th centuries—

Antonio Perez and Philip II, 1845; Charles V and his Abdication, 1854; and Mary Stuart, 1851—are marked by the same accuracy and clearness. He also wrote upon the history and institutions of France in the Middle Ages. He died March 24, 1884, in Paris.

**Mignonette** (*Reseda odorata*). Perennial herb of the family Resedaceae. Its native country is unknown; but, introduced to British gardens from Egypt in 1752, it has become one of the most popular of plants owing to its fragrant flowers. The stem branches from its base, and the plant becomes a rather diffuse clump, bearing alternate lance-shaped leaves which may be simple or three-lobed. The flowers are borne in dense pyramidal racemes at the ends of the shoots. The calyx is in six parts, and the cream-coloured petals are divided into slender segments. The most conspicuous feature is supplied by the numerous red stamens. Usually grown as an annual, it succeeds in almost any garden soil; best results are obtained on rich, heavy soil, to which old mortar has been added. Seed should be sown very thinly. *R. lutea*, the wild mignonette, is found in Britain in Limestone districts.

Mignonette.  
Foliage and flower

**Migraine.** Severe headache, often one-sided, associated with nausea or vomiting. It is usually accompanied or ushered in by disturbance of any of the five senses, such as flashes of light before the eyes or sound sensations. Initially

migraine probably arises from allergy. In patients who are badly adjusted to the strains and stresses of life it tends to become an escape mechanism. Migraine also always argues the presence of infected sinuses, and the primary cause is often a blocked nasal passage. The liver of the sufferer from migraine nearly always functions badly, failing in one of its main tasks, that of detoxication, and so allowing poisonous material to find its way into the blood stream. Treatment consists in the disinfecting of the sinuses and in easing the work of the liver by removing from the diet milk, fats, pork, chocolate, and rich cheese.

**Migration** (Lat. *migrare*, to move). Term for the movement, usually the mass movement, of living creatures from one place of residence to another.

**HUMAN MIGRATION.** This is discussed under Emigration; Immigration (*qq.v.*).

**ANIMAL MIGRATION.** Many animals spend parts of their lives in one place and parts in another. It is very common to find that the change-over from one habitat to the other takes place at a time when the seasons are changing in an important respect. This seasonal change of habitat, involving almost or quite all the individuals of a recognizable population nearly simultaneously, is migration in its strict sense, though the word does duty for other things, *e.g.* the slow or sudden irreversible movement of populations into exploitable, but not hitherto exploited, areas, and the helpless drifting of weak things in currents set up in the water or the air.

Birds make more of a show of their migrations than most other animals, and for that reason bird migration occurs first to most people when they think of animal migration. Birds, however, have by no means a monopoly of

Migration. A dense flock of starlings migrating from Hickling Broad, Norfolk. Seasonal mass migration is common to several other species of birds

seasonal migration. Fish, worms, newts, monkeys, whales, butterflies (and nomadic man) all migrate to some degree in this sense.

The two great problems of migration are: what it is that starts so many individuals off on their journeys at almost the same time; how they find their way. To neither of these questions can the biologist give anything like a satisfactory answer, but it can be said that migration, and the timing of migration, are related sensibly to two of the great activities, two of the great needs, of animals: reproduction and the search for food. In mammals and in birds the mechanism which controls the timing of reproduction is partially understood. It depends upon a most complicated interaction of a number of endocrine glands of which one of the most important, playing probably the master controlling part, is the pituitary gland (*g.v.*) lying at the base of the brain. There is no doubt that this gland—in particular its anterior part—produces substances (hormones) which initiate and maintain the activities of the gonads that lead to reproduction.

#### Stimulus of Light

Considerable evidence shows that in certain forms, *e.g.* the ferret, light stimulates the pituitary and starts the reproductive process. Most animals which migrate to breed move towards the poles in the summer of the hemisphere in which they live. This means that they move to a region of longer day—for instance, a goose feeding in winter in Somerset may move to Finland to breed, where it will find nearly twenty-four hours of daylight. As well as the direct stimulus of light falling on the eyes it seems that the added hours of bodily activity increase the activity of the pituitary, at least in birds. (This principle has its practical application in commercial egg-production, where artificial illumination of hen-houses increases production of eggs.)

As regards food supply, animals eat either plants or other animals which have eaten plants. Therefore the food supply of animals depends upon the condition of the plants of any area. In the autumn of each hemisphere the long polar night begins to set in towards the poles and spreads, in the northern hemisphere southwards and in the southern hemisphere northwards. As it spreads vegetation dies, and in the extreme case of the far north and the far south is obliterated temporarily by snow and ice.

Animals, therefore, which, for the reasons given above, breed well in the long days near the pole, eating the short-lived vegetation of the summer, or eating other animals feeding upon this in their turn, have to move away from the poles for their winter food.

The why of seasonal migration is thus reasonably explained, but not the how. The only hint is that light does seem to play a considerably more important part in initiating, and perhaps even in directing, migration than does temperature. Of the mechanism by which animals find their way to regions suitable for breeding or for feeding, biologists are in almost complete ignorance. Very little indeed is known about how any animal finds its way about, over long or short distances. The problem presented by the dog or the cat or the pigeon which finds its way home from distant places has scarcely yielded at all to the most elaborate investigation. So far as migration is concerned, it has been suggested that there may be some mechanism in the inner ear which acquaints the animal with the direction of the rotation of the earth, but there is little or no evidence to support this. It does appear that some people are more aware of the points of the compass than others, and there are people who seem to feel some uneasiness if they believe themselves to have lost their orientation, but these are vague indications of little or no scientific value. Vision appears to play a considerable part in an animal's finding its way, and fog is a disturbing factor in migration. Homing pigeons usually refuse to fly in fog; but it has been found that pigeons released from aircraft which subsequently sank at sea found their way home in fog; when confronted with the absolute necessity of flying or drowning, they flew home.

The size and complexity of the problem of migration can be indicated from considering a few examples. In insects there are large movements involving great numbers of individuals among the locusts (*g.v.*) and, less well-known but equally remarkable, among the beetles, the dragonflies, and the butterflies. The American monarch butterfly, for instance, is found in summer in Alaska, in winter in Mexico, where it hibernates more or less completely, and in the same location year after year. The difficulty of understanding this is increased by the fact that, so short is the life-cycle

of this animal, one or two generations have passed in the interval between the departure of the species in the spring from Mexico and its return in the following autumn. How the butterflies find their way back to the same trees that their grandparents used is quite unknown. A similar problem is posed by the behaviour of the eels (*g.v.*) which breed at sea, in the south Atlantic, and appear to return to the streams and ponds of Europe and of America respectively inhabited by their forefathers. The salmon, too, return to the river in which they passed their youth after a considerable period as young and adult fish at sea. In these rivers they spawn, and the cycle is repeated.

#### Spasmodic Migrations

The enormous and spectacular movements of such mammals as the marten and the grey squirrel in the New World, or of the lemming in Scandinavia, are probably to be regarded rather as one-way pressure movements in response to hunger than as migration. They are essentially spasmodic, and not rhythmical. Hunger in this context includes the desire for water, and for salt, both of which may run short if a population grows suddenly.

Animals are not static. They are not only selected by their environment. They can, and do, also select surroundings that suit them. When their demands change seasonally or rhythmically, the exercise of this choice requires seasonal or rhythmical movement. When circumstances, or the density of their populations, change spasmodically, spasmodic movements follow. But knowledge of how these movements are directed is for the future. *Consult* Migration of Fishes, A. Meek, 1916; Bird Watching, J. Fisher, 1941.

Paul G. 'Espinasse

**Miguel, MARIA EVARIST (1802-66).** Portuguese prince. He was born at Lisbon Oct. 26, 1802, the

Dom Miguel,  
Portuguese prince

third son of John VI of Portugal. On the death of John VI in 1826, Miguel's brother, Dom Pedro, already emperor of Brazil, abdicated his rights in favour of his younger

daughter, Donna Maria, on condition that she married Miguel, but this she refused to do. Dom

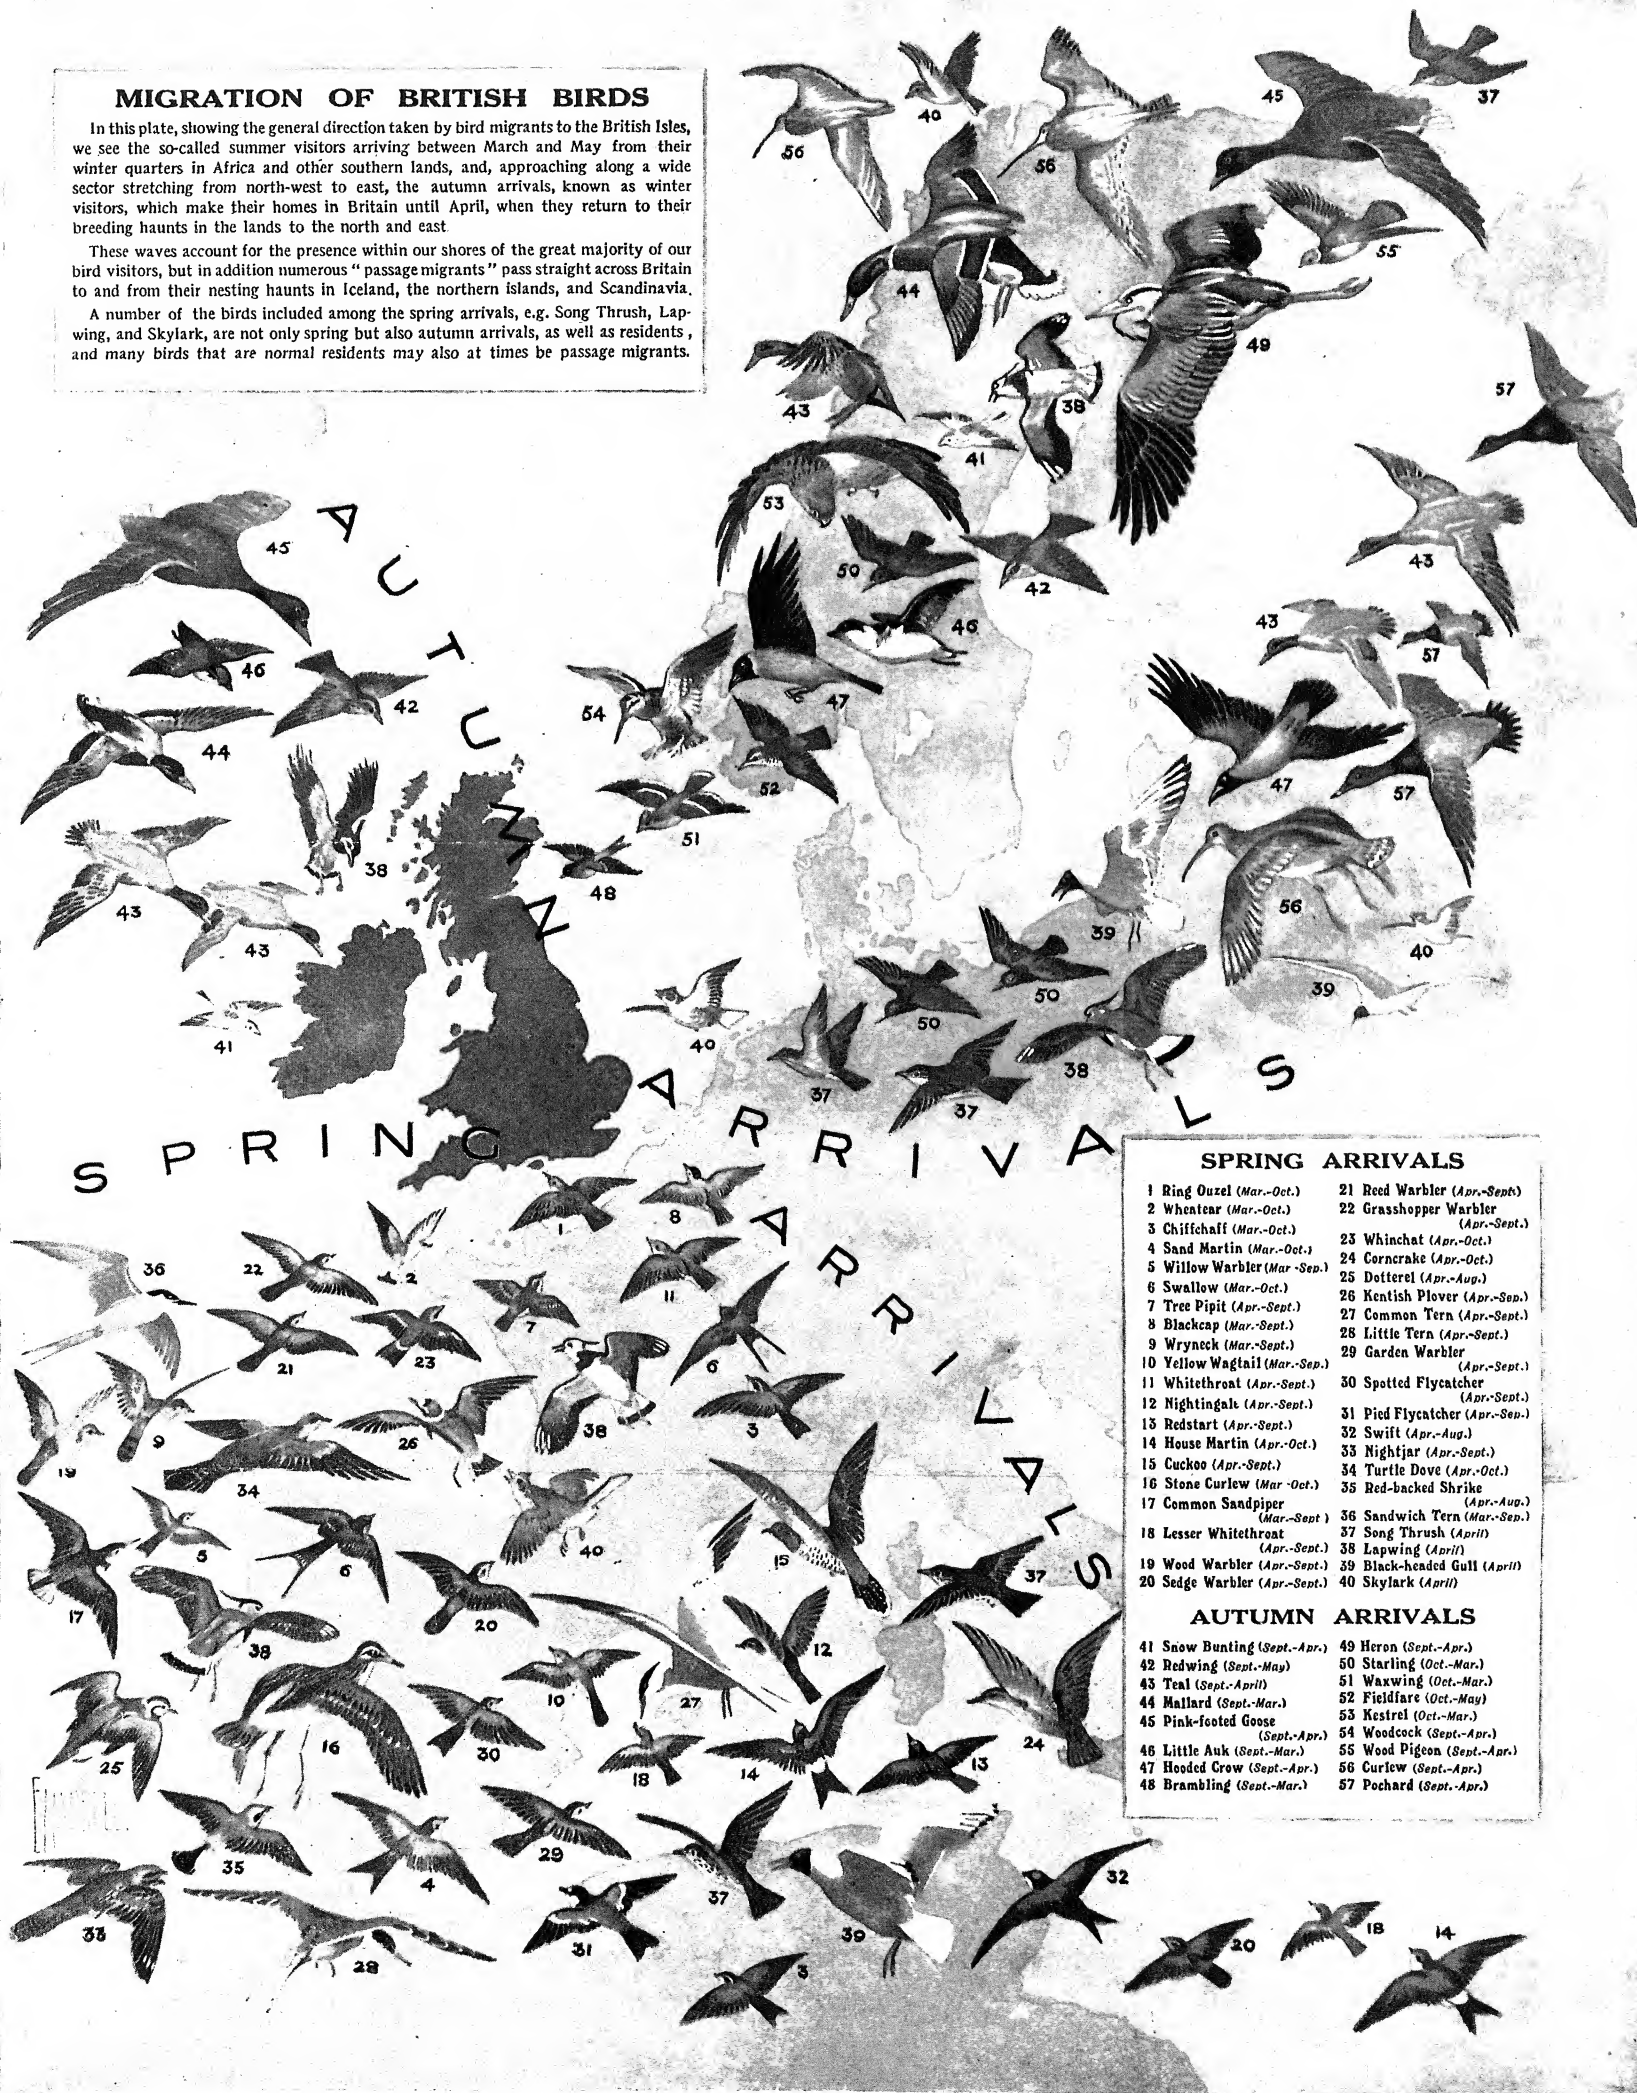

## MIGRATION OF BRITISH BIRDS

In this plate, showing the general direction taken by bird migrants to the British Isles, we see the so-called summer visitors arriving between March and May from their winter quarters in Africa and other southern lands, and, approaching along a wide sector stretching from north-west to east, the autumn arrivals, known as winter visitors, which make their homes in Britain until April, when they return to their breeding haunts in the lands to the north and east.

These waves account for the presence within our shores of the great majority of our bird visitors, but in addition numerous "passage migrants" pass straight across Britain to and from their nesting haunts in Iceland, the northern islands, and Scandinavia.

A number of the birds included among the spring arrivals, e.g. Song Thrush, Lapwing, and Skylark, are not only spring but also autumn arrivals, as well as residents, and many birds that are normal residents may also at times be passage migrants.

### SPRING ARRIVALS

- |                                    |                                     |
|------------------------------------|-------------------------------------|
| 1 Ring Ouzel (Mar.-Oct.)           | 21 Reed Warbler (Apr.-Sept.)        |
| 2 Whentear (Mar.-Oct.)             | 22 Grasshopper Warbler (Apr.-Sept.) |
| 3 Chiffchaff (Mar.-Oct.)           | 23 Whinchat (Apr.-Oct.)             |
| 4 Sand Martin (Mar.-Oct.)          | 24 Corncrake (Apr.-Oct.)            |
| 5 Willow Warbler (Mar.-Sept.)      | 25 Dottedterel (Apr.-Aug.)          |
| 6 Swallow (Mar.-Oct.)              | 26 Kentish Plover (Apr.-Sept.)      |
| 7 Tree Pipit (Apr.-Sept.)          | 27 Common Tern (Apr.-Sept.)         |
| 8 Blackcap (Mar.-Sept.)            | 28 Little Tern (Apr.-Sept.)         |
| 9 Wryneck (Mar.-Sept.)             | 29 Garden Warbler (Apr.-Sept.)      |
| 10 Yellow Wagtail (Mar.-Sept.)     | 30 Spotted Flycatcher (Apr.-Sept.)  |
| 11 Whitethroat (Apr.-Sept.)        | 31 Pied Flycatcher (Apr.-Sept.)     |
| 12 Nightingale (Apr.-Sept.)        | 32 Swift (Apr.-Aug.)                |
| 13 Redstart (Apr.-Sept.)           | 33 Nightjar (Apr.-Sept.)            |
| 14 House Martin (Apr.-Oct.)        | 34 Turtle Dove (Apr.-Oct.)          |
| 15 Cuckoo (Apr.-Sept.)             | 35 Red-backed Shrike (Apr.-Aug.)    |
| 16 Stone Curlew (Mar.-Oct.)        | 36 Sandwich Tern (Mar.-Sept.)       |
| 17 Common Sandpiper (Mar.-Sept.)   | 37 Song Thrush (April)              |
| 18 Lesser Whitethroat (Apr.-Sept.) | 38 Lapwing (April)                  |
| 19 Wood Warbler (Apr.-Sept.)       | 39 Black-headed Gull (April)        |
| 20 Sedge Warbler (Apr.-Sept.)      | 40 Skylark (April)                  |

### AUTUMN ARRIVALS

- |                                   |                             |
|-----------------------------------|-----------------------------|
| 41 Snow Bunting (Sept.-Apr.)      | 49 Heron (Sept.-Apr.)       |
| 42 Redwing (Sept.-May)            | 50 Starling (Oct.-Mar.)     |
| 43 Teal (Sept.-April)             | 51 Waxwing (Oct.-Mar.)      |
| 44 Mallard (Sept.-Mar.)           | 52 Fieldfare (Oct.-May)     |
| 45 Pink-footed Goose (Sept.-Apr.) | 53 Kestrel (Oct.-Mar.)      |
| 46 Little Auk (Sept.-Mar.)        | 54 Woodcock (Sept.-Apr.)    |
| 47 Hooded Crow (Sept.-Apr.)       | 55 Wood Pigeon (Sept.-Apr.) |
| 48 Brambling (Sept.-Mar.)         | 56 Curlew (Sept.-Apr.)      |
|                                   | 57 Pochard (Sept.-Apr.)     |

Miguel was proclaimed king June 30, 1828, but was compelled to leave Portugal by the convention of Evora Monte, May 26, 1834. He found refuge in Rome. He married in 1851 Princess Adelaide of Löwenstein-Wertheim-Rosenberg, and he died Nov. 14, 1866.

**Mihailoff, IVAN.** A Bulgarian revolutionary. As leader of the Macedonian revolutionary organization I.M.R.O., he was forced to flee the country in 1934, and in 1935 was sentenced to death in absentia for his part in the murder of seven councillors in Krupnik in 1933. He returned to Bulgaria under an amnesty, May 23, 1941.

**Mihailovitch** OR **MIKHAİLOVITCH, DRAZA** (1893-1946). Yugoslav soldier. Born in the village

Draza Mihailovitch, Yugoslav soldier, as he was in 1941 (left) and at his trial at Belgrade, June, 1946 (right)

of Shumadiza, he fought in the Balkan War of 1912-13 and in the First Great War, serving in Salonica and being decorated for bravery. When the Germans overran Yugoslavia in 1941, Gen. Mihailovitch took to the mountains, and there raised the Chetniks (*q.v.*), guerrilla bands which caused so much trouble to the Germans that they offered a reward for his capture. The Allies supplied him with money and equipment, and in Jan., 1942, he was appointed minister of war in the exiled Yugoslav government. His intense Serbian nationalism, however, alienated a great number of his supporters, and caused frequent clashes with the partisans under Tito, who accused him of having signed an agreement with the Germans and of using his Chetniks for his own political ends. In May, 1944, Allied support was withdrawn from him. After the defeat of Germany, Mihailovitch took refuge in the mountains, but was captured, Mar. 13, 1946, brought to trial in June, condemned to death as a collaborator July 15, and shot, July 17, 1946.

**Mikado** (Jap., exalted gateway). Title used by Europeans, but seldom by the Japanese, for the emperor of Japan. His own subjects called him *tenshi* (son of

heaven) or *tennō* (heavenly king). Japanese history claimed divinity for the mikados through their descent in the direct line from Jimmu, a descendant of the sun goddess, who ascended the throne in 660 B.C.; but the reigns of the monarchs before A.D. 712 were largely mythical. Seven of the mikados were women. On Dec. 31, 1945, the emperor Hirohito (*q.v.*), 124th of his line, issued an imperial rescript expressly repudiating his divinity; and on Mar. 6, 1946, a new constitution was drafted in which the position of the emperor as a constitutional monarch was defined, the phrase "sacred and inviolable" being eliminated. See Japan.

**Mikado, THE, OR THE TOWN OF TITIPU.** Comic opera by Gilbert, with music by Sullivan. It was produced at the Savoy Theatre, London, March 14, 1885, where it ran for 672 performances, and is still in the repertoire of the D'Oyly Carte company and a favourite among amateur operatic societies. The setting is mock-Japanese, the characters including the Mikado himself, Ko-Ko, the Lord High Executioner, and Pooh-Bah, Lord High Everything Else. Famous songs include Three Little Maids from School, A Wandering Minstrel, Tit-willow, The Flowers that Bloom in the Spring, and the Mikado's Song which includes the phrase, "to let the punishment fit the crime." For a time the play was withdrawn as a courtesy to visiting Japanese royalty. A screen version, 1939, marked the first filming of a Gilbert and Sullivan opera.

**Mikania.** Large genus of twining perennials of the family Compositae, natives chiefly of tropical America. They have opposite heart-shaped or oval leaves, and flower-heads consisting invariably of four florets only. One species, known as climbing hemp-weed (*M.*

*scandens*), occurs in the U.S.A. and Canada. The S. American *M. guaco*, with blue flowers, is believed to be the species to which chiefly the name of guaco is applied by the natives, who consider it an antidote for poisoning by snake-bite. The name commemorates Joseph G. Mikán (1743-1814), professor of botany at Prague.

**Mikir.** A primitive tribe of Tibeto-Burman stock. They are mostly in the Sibsagar, Nowgong and Khasi and Jaintia hills districts, Assam. Numbering some 100,000, all are animist, except a few hundred Hinduised and some Christian converts. Unwarlike peasantry, occupying pile-houses, they exhibit both Naga and Kuki Chin relationships.

**Mikolajczyk, STANISLAW** (b. 1901). Polish statesman. Son of an emigrant farm labourer, he was born at Gelsenkirchen, Germany, but returned as a child with his family to Poland. He was wounded in the Russo-Polish war of 1920, and later entered politics, becoming in 1937 president of the Peasant party, for which he sat in parliament 1930-35. He took part in the defence of Warsaw against the Germans, 1939, and fled to Hungary, where he was interned. Escaping to France he became the deputy president. When the Polish govt. left France in 1940 he came with it to London. Prime minister after Sikorski's death in 1943, he worked hard for Russo-Polish understanding, visiting Moscow twice before dissociating himself from the anti-Russian London govt. He returned to Warsaw, 1945, to become vice-premier in the new govt., but found himself out of sympathy and by 1947 was in opposition. His party being subjected to persecution, he escaped to England to join his wife who had remained there, was banished for life, declared a traitor, and deprived of his nationality by the Polish parliament.

**Mikulov.** Town of Czechoslovakia. In Moravia, it stands at the foot of the Polau Mts., 52 m. S. of Brno. The chief building is a castle, long the residence of the family of Dietrichstein. It has also churches, synagogues, and a monument to Joseph II. Near is the holyhill, on which are a church and many chapels. The industries are vine-growing and cloth-making. In July, 1866, the preliminary treaty between the Prussians and the Austrians was signed here. Nikolsberg is the old German name of this place, which was annexed by the Nazis in 1938.

Mikania. Foliage and flower spray of the climbing hemp-weed

**Milan.** Former duchy of Italy. The title duke of Milan was first granted by the Emperor Wenceslaus to Gian Galeazzo Visconti (*q.v.*) in 1385. Under him the territory of the duchy embraced Pisa, Bologna, Perugia, and Spoleto. On the death of his son Filippo Maria, 1447, a republic was proclaimed, but in 1450 Francesco Sforza seized power, and for eighty years, with intervals, the Sforzas held the duchy. The most famous of the Sforzas was Lodovico il Moro, who invited Charles VIII of France to enter Italy, ostensibly for the purpose of waging war against Naples. In 1500 Lodovico was deposed by the French who held the city for twelve years, Lodovico being taken prisoner to France. His son Massimiliano, restored in 1512, handed the duchy to the French three years later.

The victory of Charles V of Spain at Bicocca near Milan ousted the French from the city, and Lodovico's son Francesco was installed. On his death, in 1535, the city and the duchy were given by Charles V to Philip, afterwards Philip II of Spain. The duchy of Milan thus became an appanage of the Spanish crown. In 1714, however, it was handed over to the Aus-

trians, and Austrian it remained until Napoleon's invasion in 1796, when it became first the Cisalpine Republic and later part of Napoleon's kingdom of Italy, 1805-14, reverting once more to Austria after Napoleon's fall. It passed to the newly proclaimed kingdom of Italy in 1859.

**Milan** (It. Milano). Province of Italy, in Lombardy. It is the prov. with the largest number of towns (245), and, fourth largest prov. of Lombardy, is the most densely populated (1948 est. 2,410,000). Area 1,056 sq. m. It comprises the largest part of the plain of Lombardy, and lies between the rivers Ticino on the W., Adda on the E., and Po on the S., while on the N. it is separated by hills from the adjoining provs. of Como and Varese. The seat of great industries (textiles, iron, rubber, tools and machinery, chemicals, etc.), the prov. of Milan represents an important factor in the economic life of Italy.

**Milan** (It. Milano). City of N. Italy, capital of the prov. of Milan, in Lombardy. The ancient Mediolanum, Milan derives its importance from its geographical situation, for it stands almost at the centre of the great plain of the Po

valley, E.N.E. of Turin. On Milan converge the great rly. lines and roads that cross N. Italy and connect the Danubian countries with the Rhône basin of France, and Switzerland and Germany with the Mediterranean ports of Genoa and Venice and with the S. of Italy. The three rivers of the prov., Po, Ticino, and Adda, feed several canals, in particular the Naviglio Grande, which partly encircles the city and divides it into two unequal parts. In the centre of the town the canal has been covered.

Milan is the chief financial centre and the richest commercial and industrial city of Italy. The climate is typically continental, very hot in summer and very cold in winter, with abundant snowfalls between Dec. and Feb. The city underwent great expansion during the early 1930s, but its ancient monuments, many of them very fine, were preserved. The most famous is the magnificent cathedral, or duomo, dedicated to the Virgin, which fortunately suffered only minor damage during the Second Great War. It stands in the very centre of the city, and, begun by order of Gian Galeazzo Visconti in 1386, it was conse-

Milan. West front of the cathedral, a superb example of Gothic architecture, seen from the Piazza del Duomo

Milan. Left, entrance to the Galleria Vittorio Emanuele, from the Piazza del Duomo. Right, view of the city, looking north from the roof of the cathedral

erated in 1577 and actually completed by order of Napoleon, 1805-15. This superb specimen of "decorated Gothic" architecture is the work of a series of ancient architects: the name of its first designer is unknown, but the books of the chapter include the names of Andrea degli Organi of Modena, Guglielmo di Marco, Simone da Osenigo, the German John of Fernach, and the French Jean Mignot of Paris. Faced with white marble, it is one of the most sumptuous churches in the world, with five naves, covering an area of 14,000 sq. yds., and accommodating 40,000 persons. In a splendid crypt is the tomb of S. Charles Borromeo. S. Ambrogio, founded by S. Ambrose in the 4th century, and containing his tomb, suffered badly in 1943; a Roman basilica, it was virtually rebuilt in the 12th century and later restored. Its lofty brick campanile, c. 800, is one of the earliest in Italy. Here the Lombard kings and later Roman emperors were crowned with the famous iron crown preserved at Monza (*q.v.*). The abbey church of S. Maria delle Grazie (1463) was severely damaged by air raids, 1943, though the dome remained intact. The cloister was almost entirely demolished. Leonardo da Vinci's celebrated painting, *The Last Supper*, on one wall of the refectory, remained in satisfactory condition, although the wall opposite it and the roof collapsed.

There are many other old churches, museums, picture galleries, hospitals, an academy, library, observatory, monuments, and scientific, musical, artistic, educational, and philanthropic institutions, most of which escaped uninjured, but some of which were severely, some lightly damaged. Prominent among the many fine palaces is the Palazzo della Ragione, in the centre of the

medieval city, built of brick, 1223-38. Near it is the beautiful Loggia degli Osii, 1316, in black and white marble. The beautiful Brera palace, 1651, was severely damaged, though the collection of paintings, one of the finest in Italy, together with the library of 300,000 rare volumes and 60,000 coins, had been put in safety. The Castle of the Sforza was also severely damaged.

The massive walls enclosing the inner city were destroyed long ago, and their site is occupied by promenades. The outer circle of walls, built by the Spaniards in the 16th century, is almost intact. On the N.W. side the line is broken by the handsome park; to the N.E. within the walls are the public gardens, reputed the

most beautiful in Italy, with their old trees, ponds, statues, and royal villa. Between them and the Piazza del Duomo, adorned with a handsome equestrian statue of King Victor Emmanuel II, runs the Corso, named after that king. Out of the Piazza del Duomo opened the famous Galleria Vittorio Emanuele, a great glass-roofed arcade, with a cupola 160 ft. high, which was virtually wrecked by air attack.

Milan is the centre of the Italian silk trade; other important industries include the manufacture of tires, motor-cars, machinery, aircraft, locomotives, instruments, metal bridges and roofing, dynamos, and electric fans, bicycles, electric cables and accessories, textiles, and furniture. The city

Milan. Plan of the central districts of this great commercial and industrial city of N. Italy

is also Italy's most important publishing centre, and a seat of culture and of music. Here is the world famous Scala opera house (1778), and the ancient Ambrosiana library. Pop. 1,264,389.

Milan was the seat of government of the Western emperors from Maximian, A.D. 286, until its sack by the Huns in 452. Taken by the Goths in 493, it became Theodoric's capital, but was nearly destroyed by the Goths as a reprisal for a revolt in 539. Rebuilt in the 12th century, Milan was one of the greatest of the city-republics which fought against Frederick Barbarossa. Subsequently it became the capital of a duchy ruled by the families of Visconti and Sforza. From 1805 to 1814 it was the capital of the kingdom of Italy created by Napoleon. Reoccupied by the Austrians after Napoleon's defeat, Milan and all Lombardy were freed after the battle of Solferino by King Victor Emmanuel II and his temporary ally Napoleon III; by the treaty of Villafranca, July 11, 1859, the Austrian emperor resigned all claim to the prov., which, with the city, became merged in the kingdom of Italy.

During the Second Great War Milan was attacked by the Allies from the air a number of times, the worst raids occurring Aug. 13-16, 1943, after which the city burned for a week. Indications of some of the damage suffered by famous buildings are given above; only five of the 27 churches scheduled as protected monuments escaped injury. After the Italo-Allied armistice of Sept., 1943, unrest among the people of Milan caused the Germans to proclaim a state of emergency there, seize 1,750 hostages, mount machine-guns, and bring in tanks to prevent a rising. Partisans liberated the city from German and fascist troops, April 25-27, 1945, before the arrival of the Allies. The bodies of Mussolini and his mistress Clara Petacci, executed at Dongo, Lake Como, April 28, were brought to Milan and hung head downwards in the Piazza Loreto. See Italy; Sforza; Visconti.

**Milan Obrenovitch** (1854-1901). King of Serbia. He was born at Jassy, Aug. 22, 1854, and became prince of Serbia on the assassination of his cousin in 1868. In 1882 he made his principality an independent kingdom. His adherence to Austria having alienated his subjects, he abdicated in 1889 in favour of his son Alexander and settled in Paris, where

he remained until 1894. In that year he returned to Serbia and became adviser to his son, and a power behind the throne. He was given command of the army in 1898 and put the service on a sound footing. Milan's quarrel with Alexander over the latter's marriage, 1900, led to his resignation. He was banished from Serbia and retired to Vienna, where he died Feb. 11, 1901.

**Milazzo.** Seaport of Sicily, in the prov. of Messina. The ancient Mylae, it stands on the N.E. coast, 22 m. by rly. W. of Messina. It has a commodious harbour, and its chief exports are tunny, sulphur, oil, wine, fruit, and cattle. The castle, built by Charles V and restored in the 17th century, is now a prison. In the vicinity are sulphur springs. Mylae was an outpost of Zancle in the 7th cent. B.C., and in its bay the Romans won their first naval victory over the Carthaginians in 260 B.C. Here Garibaldi defeated the Neapolitans on July 20, 1860. On Aug. 15, 1943, units of the U.S. 7th army captured Milazzo from the Germans, who had been evacuating their forces from the port to the Italian mainland. Pop. 16,000.

**Milch, ERHARD** (b. 1892). German air force officer. Born in 1892 at Königsberg, he was educated at the university there and at the Danzig technical high school. Commissioned in the army in 1912, he transferred to the flying corps in 1915 in which he served as a pilot until 1918. He became an airline pilot in 1920 and by 1926 was a leader of civil aviation. An early supporter of Nazism, he was made secretary of state for air by Hitler in 1933 and was responsible for building up the Luftwaffe contrary to the terms of the Versailles Treaty. In 1938 he was appointed chief of the air staff and chairman of the Lufthansa. He was inspector-general of the Luftwaffe, 1939-44, acting as official deputy to Marshal Goering. Arrested by the Allies in June, 1945, he was placed on trial as a war criminal at Nuremberg in Jan., 1947. The principal charges against him were participation in the slave-labour programme and the initiation of the freezing tests carried out on concentration camp inmates by the Luftwaffe. He was found guilty and sentenced to life imprisonment on April 17, 1947.

**Mildenhall.** Market town of Suffolk. It stands on the Lark, 12 m. from Bury St. Edmunds and 76 m. from London, with a rly. station. The chief building is S.

Andrew's church, mainly Perpendicular, a noble erection famous especially for its tower, chancel, and roof. There is a market cross of the 15th, and a manor house of the 17th century. It is an agricultural centre, milling being an industry. Roman remains have been found near by. In 1942 a farmer ploughing a field at West Row, near Mildenhall, unearthed a valuable collection of third century Roman silverware. Many of the articles, which were in an excellent state of preservation, are now in the British Museum. An R.A.F. station at Mildenhall was opened in 1934. It was a bomber station in the Second Great War. Market day, Fri. Pop. 3,235.

**Mildew.** Popular term of such loose application that it has little descriptive value, including as it does such diverse fungi as moulds, rusts, cluster-cups, and powdery mildews. Properly used, it should be restricted to the last named, the external blights of the order Erysiphaceae, whose mycelial threads form a cobweb-like patch on the surface of leaves and shoots, whilst their suckers attack the superficial cells. Well-known examples that may be cited are the vine mildew (*Plasmopara viticola*), pea mildew (*E. polygoni*), hop mildew (*Sphaerotheca humuli*), and rose mildew (*S. pannosa*). The last named, from its frequent occurrence on garden roses, is the most familiar.

The mealy appearance of the white patches on the leaves and stems of the rose is due to the presence of multitudes of microscopic summer spores (*conidia*), which are dispersed by the wind, insects, etc., and infect other roses. In the autumn the same patches will be found to be studded by larger black dots (*perithecia*), which remain until the spring, when the integument breaks up and releases the contained spores which, on dispersal by the wind, infect the new shoots and unfolding leaves. The abstraction of nutriment from the leaf-cells produces starvation and withering of the plant. Flowers of sulphur dusted on the patches, or the same boiled in water with an equal weight of quicklime and the clear liquor sprayed, stops the attack. See Fungus; Phycomycoetes; Spore.

**Mild Steel.** A generic term applied to all steels of low carbon content. No sharp division can be made between mild steels and medium carbon steels, but as a rule a steel is called mild if the carbon content does not exceed 0.3 p.c.

Similarly a high carbon steel is one containing more than 0.6 p.c. The lowest carbon steels are used for wire and rails for electrical conductors, while the steels ranging from 0.07 to 0.15 p.c. carbon are the most widely produced of all. These are made into the form of rod and wire for many uses, such as nails, rivets, and ferro-concrete bars. Both these steels are usually made with some residual oxygen left in the steel; during cooling this reacts with carbon giving carbon monoxide gas bubbles which increase the volume of the ingot and reduces the pipe. Ordinary mild steels, containing 0.15 to 0.25 p.c. of carbon, may be used for deep forging, case-hardening, or for sections for joists, channels, and angles. See Metallurgy; Steel.

**Mildura.** Town in Victoria, Australia. It is 351 m. N.W. of Melbourne and is mainly known as the centre of the irrigation scheme on the Murray river, on which the state spent £3,000,000 in dealing with 150,000 acres. Mildura has fruit packing and preserving factories. Pop. est. 7,000.

**Mile.** Measure of distance. As first used by the Romans it was approximately 1,617 yards. The British statute mile is 1,760 yards, and was legalised in 1593. The mile has varied considerably; the old Scottish mile was 1,984 yards; the Irish 2,240 yards; the old London mile 1,666 yards, etc. The old English mile consisted of ten furlongs; and a mile equalling a little over  $1\frac{1}{2}$  present-day miles was extensively used in the N. of England and in Wales till the 16th century. The nautical mile, equal to 1 minute of latitude, is 6,082.66 ft. The Admiralty mile is 6,080 ft. See Weights and Measures.

**Mile End.** A district of E. London. Once a hamlet of Stepney parish, it now forms the central and N.E. parts of Stepney bor. Through it runs the Mile End Road, probably the broadest thoroughfare in London, connecting Whitechapel Road and Bow Road. Part of the district between Commercial Road East and Mile End Road is known as Mile End Old Town. Notable buildings include Trinity Hospital, 1695, almshouses for master mariners and mates and their wives or widows; the Vintners' almshouses, 1676, rebuilt 1802, but almost entirely destroyed during the Second Great War; the People's Palace, opened 1887, destroyed by fire, 1931, but rebuilt, 1936; and Queen Mary College of the Uni-

versity of London; the Great Assembly Hall, associated with the work of F. N. Charrington; the Old Town Workhouse, and S. Benet's church rendered derelict by war damage. In the Jews' Burial Ground, closed 1858, are the graves of Lord Beaconsfield's grandfather, Benjamin D'Israeli, and Baron Nathan Rothschild. Captain Cook, the navigator, lived in the Mile End Road. At Mile End Green, now Stepney Green, Wat Tyler assembled his followers for the attack on London. Mile End is said to have been named from the fact that it begins a mile from the old city wall at Aldgate.

**Miles, EUSTACE HAMILTON** (b. 1868). British athlete and food reformer. Born at Hampstead,

Eustace Miles,  
British food reformer

Sept. 22, 1868, he was educated at Marlborough and King's College, Cambridge. He won the amateur championships at tennis, rackets, and squash in America in 1900, and was amateur tennis champion of England, 1898-1903, 1905-06, and 1909-10. The world championship at rackets fell to him in 1902, and that at tennis in 1898-1903 and 1905. A vegetarian, Miles wrote on health and food reform, and founded restaurants and food manufacturing companies to further his theories. He wrote also on history, philology, and sport.

**Milesian.** Legendary name of an early Irish race. It is a latinised form of Miled, perhaps an equivalent of a Celtic gulam, or warrior. Tall, fair-haired, blue-eyed Goidelic Celts, the Milesians mingled with and subdued the earlier population. One tribe, the Scots, whose name was given in Latin annals to the whole people, migrated to northern Albion (Scotland).

**Miles Platting.** A suburb of Manchester, England. It comprises the eccles. dists. of S. John and S. Luke, and has a rly. station  $1\frac{1}{2}$  m. N.E. of Victoria, Manchester. Pop. 14,000.

**Milestone** (Lat. *lapis miliaris*). Post of stone, metal, or wood set up to mark distances along roads. Inscribed pillars at equal distances of 1,000 *passus*—equivalent to 1,617 English yds.—marked distances on roads emerging from the gates of Rome. Augustus built in the forum at Rome a bronze-gilt pillar, *aureum miliarium*, or golden

milestone, upon which were inscribed the names and distances of the chief towns on roads leading out of the 37 gates. Under Julius Caesar milestones marked distances along all the roads of the empire.

When the Romans cut their great military ways across Britain, distances were marked by cylindrical shafts 6 ft. high. One set up in the 4th century is on the road between Carlisle and Corbridge-on-Tyne, and is the oldest standing milestone in Britain. Another set up at Castleford c. A.D. 50, is now in a museum at York. Roman milestones invariably bore details of the construction of the roads they marked, and usually the name of the ruling emperor. In the museum at Chesters, Northumberland, are imperial milestones recording roads built from the time of Severus Alexander to that of Constantine. After the withdrawal of the Romans, milestones ceased in Britain until after the Norman conquest. There is a Norman example on Castleton Ridge, near Hutton-le-Hole, Yorks.

Medieval milestones in Britain were not set up by any established authority, but generally by private persons either for publicity or out of philanthropy. Measurements were always to local standard, and the mile varied from county to county. In 1593 the mile was standardised throughout the kingdom at its present length of eight furlongs, and most roads were milestone-stoned, though on a local and voluntary basis.

In 1698 it became obligatory upon the turnpike trustees to mark with a stone every mile of road upon which they levied tolls. This responsibility was transferred to

Milestone, Clapham Common, London

local authorities and parishes in 1773. Many milestones in Sussex were of wood, and in Lancashire of iron. Holes in some milestones on lonely moorland roads were drilled by high

Roman  
milestone

waymen to enable them to watch for victims. When stage coach services began in England, the operators were obliged to base their fares by distance according to milestones, and this obligation was inherited by the railways. By the General Highways Act of 1835, local authorities ceased to be responsible for milestones. By Defence Regulation of July 19, 1940, local authorities were required to remove all milestones for the duration of the Second Great War, as their presence might have assisted German parachute troops and enemy agents. Most were restored after the war.

**Milestones.** Play by Arnold Bennett and Edward Knoblock, first produced at the Royalty Theatre, London, March 5, 1912, with Dennis Eadie in the chief part of John Rhead. It presents an English middle-class family at three periods of emotional domestic crisis involving three generations, in the years 1861, 1885, and 1912. The picture of social changes through fifty years and the accuracy of its period detail are as characteristic of the play as its observation of the more fundamental changes which increasing age may work upon individual characters. The play has been revived three times in the West End as well as remaining popular with repertory and amateur companies; and has gained in piquancy by the fact that the 1912 scene, originally contemporary, has itself become increasingly "period."

**Miletus.** Ancient city of Asia Minor. Standing on the Gulf of Latmos, near the mouth of the

Maeander, it was the chief town of the Ionian colonies of Greece. A great commercial city, it was famous for its woollen goods, traded with the whole Mediterranean coast, and established many colonies in the Propontis and Euxine, as well as Naucratis in Egypt. Taken by Croesus, and in 557 B.C. by the Persians, it headed the great Ionian revolt against Persia, but was destroyed on its suppression in 494 B.C. Captured by Alexander, it passed to the kingdom of Pergamum, and to Rome. The birthplace of Thales and other Greek writers, it is poorly represented by the modern Palatia.

**Milford** or **MILFORD HAVEN.** Seaport and urban dist. of Pembrokeshire, Wales. It stands on the N. side of Milford Haven, 9 m. S.S.W. of Haverfordwest, and has a rly. station. Milford owes its origin to R. F. Greville, who in 1790 planned a port here as a centre for the trade with Ireland. Soon afterwards the government established a dockyard here, but in 1814 this was transferred to a spot on the S. side of the haven, which was named Pembroke Dock. Milford has good dock accommodation and is a yachting centre. Earthworks and other antiquities abound in the neighbourhood. Pop. est. 12,000.

**Milford.** Town of New Haven co., Connecticut, U.S.A. Situated at the mouth of the Housatonic R., on the Wepawaug R., and Long Island Sound, 9 m. S.W. of New Haven, it is served by rly. A township, retaining the historic New England form of town government, it has produced oysters,

clams, and other shellfish since the 17th century. Manufactures include electric motors, automobile and boat equipment, rivets and other small metal products, and synthetic rubber products. It was settled as a "church-state" community in 1639 and incorporated as a town in 1640. Pop. 16,439.

**Milford,** SIR HUMPHREY SUMNER (b. 1877). British publisher. Born Feb. 8, 1877, he was educated at Winchester and New College, Oxford, and in 1900 joined the Clarendon Press. In 1913 he became publisher to Oxford university, a post he held until his retirement in 1945. During 1919-21 he was president of the Publishers' Association of Great Britain and Ireland. In 1936 he was knighted. Sir Humphrey was joint editor of the Oxford Book of Regency Verse; originated the Oxford Dictionary of Quotations; and edited the works of Borrow, Clough, Cowper, and Leigh Hunt.

**Milford Haven.** Opening of the Atlantic Ocean. On the coast of Pembrokeshire, it is regarded as the finest natural harbour in England and Wales. It extends inland for 17 m., being from one to two miles broad. Milford is on the N. side, and on an inlet on the S. is the royal dockyard of Pembroke Dock. The estuary of the E. and W. Cleddy rivers, the haven has the Welsh name of Aberdaugleddau. Its position and safety made it in the Middle Ages the chief harbour for intercourse with Ireland. Fortified by Elizabeth and in more modern fashion in the 19th century, it was a flying boat base in the Second Great War.

Milford Haven, Pembrokeshire. Map of the natural harbour in South Wales, showing the position upon it of the towns of Pembroke Dock and Milford Haven

**Milford Haven, 1st MARQUESS OF.** British politician. Louis Alexander (1854-1921), son of

1st Marquess of  
Milford Haven  
Russell

Prince Alexander of Hesse, was born at Graz, May 24, 1854, became a naturalised British subject on entering the navy in 1868, and married a grand-daughter of Queen Victoria. Changing his German name of Battenberg to the English equivalent, Mountbatten, in 1917, he was created marquess of Milford Haven. He was director of naval intelligence 1902-05, and commanded the Atlantic fleet 1908-12. Then he became first sea lord, retiring in view of the anti-German feeling against him soon after the outbreak of the First Great War in 1914. He died Sept. 11, 1921. A Life by M. Kerr appeared in 1934.

His grandson, David Michael Mountbatten, 3rd marquess (b. May 12, 1919), succeeded to the title in 1938, was educated at Dartmouth, and served in the Second Great War.

**Milford-on-Sea.** A town of Hants, England. A small seaside resort on the coast between Christchurch Bay and the Solent, it is 3 m. S.W. of Lymington and 4 m. N. of the Needles. Of unusual design are the 13th century tower and steeple of All Saints' church. Hurst Castle, 2½ m. to S.E., was erected by Henry VIII to guard the entrance to the Solent at the end of a bar of shingle similar to Chesil Bank. Charles I was confined here on his journey from the Isle of Wight to the scaffold at Whitehall in January, 1649.

**Milford Sound.** Fiord in the S.W. of South Island, New Zealand. It is in Lake co., 217 m. N. of Bluff by sea, and is reached overland from Lake Te Anau. Mitre Peak and Tutoko rise sheer from the water, the former to a height of 5,560 ft., the latter to 9,042 ft. The sound forms part of a national reserve, comprising also the neighbouring fjords and covering more than 2,000,000 acres of magnificent scenery. The Sutherland waterfall, 1,904 ft. in height, and Lake Ada are its chief attractions.

**Milhaud, DARIUS** (b. 1892). French composer. Born at Provence, Sept. 4, 1892, he studied at the Paris conservatoire, and after the First Great War was a member of the group known as Les Six. He displayed remarkable gifts both as

satirist and as tragedian. His incidental music to Greek drama reached a climax in his "orchestration of stage noises" in the music to the Chœphori of Aeschylus. In *Le Boeuf sur le Toit*, 1919, he exploited the humorous possibilities of the Brazilian tango, and parodied musical comedy conventions in the ballet *Le Train Bleu*, 1924. Many of his humorous works created sensations, e.g. the setting of a florist's catalogue for voice and chamber orchestra. His later works included a number of string quartets, songs, sonatas, and the *Cortège Funèbre*.

Darius Milhaud,  
French composer

**Military Academy, ROYAL.** Title of the military training college maintained at Sandhurst by the British War Office for the instruction of cadets before they are commissioned in the Army. Until 1939 the title was borne by the training institution at Woolwich, which trained cadets for commissions in the Royal Artillery and Royal Engineers. Since 1946 cadets for all branches of the army have been trained at Sandhurst. The corresponding R.A.F. college is at Cranwell and that of the Royal Navy at Dartmouth. See Commission; Sandhurst.

**Military Band.** Combination of wind and percussion instruments used for military purposes, though the term is also generally applied to any similar civilian combination.

In Great Britain there is no fixed standard, but a large military band may contain 2 piccolos and 2 flutes in E flat or D flat, 4 hautboys, 2 E flat clarinets, 8 1st, 6 2nd and 4 3rd B flat clarinets, 1 alto clarinet in E flat, 4 saxophones in E flat and B flat, 4 bassoons, 1 double bassoon, 6 1st and 4 2nd cornets in B flat, 2 trumpets in E flat or B flat, 4 horns in E flat or F, 2 flügelhorns in B flat, 2 baritones in B flat, 2 euphoniums in B flat or C, 2 or 3 tenor trombones in B flat, 1 bass trombone, 5 bombardons in E flat and B flat, 2 string basses, kettle drums, side drums, bass drum, cymbals, triangles, bells, glockenspiel, etc.

**Military Cross.** British military decoration for gallantry. Instituted on Dec. 31, 1914, as a reward for officers of the rank of captain and below and for warrant officers. It can be awarded to officers and warrant officers of the

R.A.F. for gallant services on the ground, as distinct from flying. It also can be awarded to naval officers attached to military formations. Warrant officers awarded the M.C. are eligible for a gratuity of £20 on promotion to a commission, on transfer to the reserve, or on discharge without pension. If discharged with pension, they are eligible for an additional sixpence a day. The decoration is a silver cross bearing the royal cypher in the centre and the imperial crown at the end of each limb. It is suspended from a white ribbon with a central stripe of purple and is worn immediately after the D.S.O. Over 40,000 Military Crosses were awarded in the First Great War and 11,000 in the Second Great War. (See Medals colour plate.)

Belgium has a Military Cross which was instituted in 1885 and is awarded to officers who have served 25 years in the army. The Greek Military Cross was instituted by Venizelos in 1917 to reward gallantry in the field by Greek Nationalist troops, but is now more or less complimentary. The Czechoslovak Military Cross for gallantry was instituted in 1939.

**Military Engineering, THE SCHOOL OF.** A British military training centre, official headquarters of tuition in engineering for the army. The school is at Ripon, Yorks, with a wing at Chatham, Kent. There officers and men of the Royal Engineers (*q.v.*) undergo courses of instruction up to two years. The syllabus includes courses in fortification, surveying, building construction, general science, and the maintenance of refrigerating, mechanical, and electrical equipment. Special courses are given in field engineering, bridging, and in preparing officers for university engineering examinations. The school's head is a general officer known as commandant.

#### **Military Knights of Windsor.**

Body of retired military officers, forming part of the order of the Garter (*q.v.*). When Edward III instituted the order in 1349 with 26 companions, he included in the foundation an equal number of canons and of veteran knights. The latter, known as Poor Knights, because wounds or other misfortune made them unable to support themselves suitably, he endowed with an annual income and allotted quarters in Windsor Castle. Elizabeth reduced their number to 13 and re-endowed them.

In the reign of Charles I five more knights were added on a

lower foundation. In 1919 an Act of Parliament was passed, decreeing that no further appointments should be made to the lower foundation, which will be absorbed, so that in future the knights will again number 13. One of them is governor of the rest, and he is given the rank of major-general if he does not already hold it. Appointments are made by the sovereign, and the knights are under the orders of the governor of Windsor Castle. They have residences in the castle and a small annual stipend. They are the oldest military brotherhood in existence, and the only military body in England entitled to wear the national badge of St. George.

**Military Law.** The code of law to which a person becomes subject on joining the British army. It is contained in the Army Act, the king's regulations, royal warrants, army orders, and army council instructions. There are similar codes for the Royal Navy and Royal Air Force in the Naval Discipline Act and Air Force Act.

**Military Medal.** British military award for gallantry. Instituted in March, 1916, it may be conferred on warrant officers, n.c.o.s, and men of the army; non-commissioned ranks of the women's auxiliary services; and upon warrant and non-commissioned personnel of the R.A.F. for gallantry on non-flying duties. The medal, of silver, has on the obverse the royal effigy and on the reverse the inscription For Bravery in the Field, surrounded by a wreath and surmounted by the royal cipher and crown. It is suspended from a dark blue ribbon having three white and two crimson stripes. Some 60,000 Military Medals were awarded in the First Great War and approximately 11,000 in the Second Great War. (See Medals colour plate).

The French award a military medal for gallantry by native troops in the colonial army. It is distinct from the Médaille Militaire (*q.v.*). The Belgian Military Medal was instituted in 1902 for n.c.o.s and men of the army.

**Military Police.** Corps of the army detailed to enforce discipline and bearing, to maintain law and order among soldiers, and to perform also many of the same functions as do the civil police among the civil population. From the reign of Henry VIII there had been attached to the British army a civilian corps called Provost Marshals (*q.v.*), who were responsible for controlling the numerous camp followers. Gradually their

work became more and more associated with the troops, until eventually military police duties were undertaken by pickets, which were composed of ordinary soldiers detailed from their units and temporarily invested with police authority for a specified period of duty, usually 24 hours. This practice still exists in the form of regimental police, whose authority is confined to the particular camp, barracks, or regimental limits of their unit, and is restricted to ensuring that men walking out are correctly dressed and of good behaviour. The provost marshals became administrative officers responsible for the general supervision of soldiers' conduct.

In 1855 a corps of military foot police was established as the executive troops of the provost marshal and empowered to arrest any soldier not provided with a pass; to maintain order in garrison towns; to control military traffic both on the highway and on army lines of communication; to guard certain military installations; to prevent pilfering of military stores; and, in conjunction with the intelligence service, to apprehend spies. In 1877 a corps of military mounted police was established, and in 1926 the two corps were amalgamated.

As far as possible the enforcement by the Corps of Military Police of discipline and bearing of men off duty is done by example and checking. To that end a high standard of conduct, smartness, and integrity has become a corps tradition. Military police are recruited from men specially selected from other units, and they become n.c.o.s on probation.

At the outbreak of the Second Great War the Corps of Military Police had a strength of 3,500, but the mechanisation of the army necessitated a considerable reorganization. In 1940 three new branches were formed; C.M.P. (S.I.B.), special investigation branch, the "C.I.D." of the army; C.M.P. (T.C.), the traffic control companies; and the C.M.P. (V.P.) police for guarding vulnerable points. During the N. Africa campaigns traffic control companies were with the forward troops to mark tracks and direct armour and other traffic through the minefield gaps. Beach provost companies were formed for the N. African landings in 1942, and went ashore with the assault troops at Anzio and Salerno. All branches of the corps took part in the Normandy invasion in 1944 and

accompanied the army in every operation leading to the final German surrender. The corps was then charged with enforcing the regulations of the military government imposed in the occupied territories. At the end of the war the corps had a strength of 35,000 and had suffered heavy casualties. In 1946 a special army order announced that in recognition of their service the corps had been authorised by the king to use the prefix Royal.

Members of the corps wear red cap covers (hence their nickname "red caps") and a black armband with the letters M.P. The Royal Navy and the Royal Air Force maintain their own corps of police.

**Military School of Music, ROYAL.** For the activities of this school for military bandsmen see under Kneller Hall.

**Military Service Acts.** Acts passed by the British government rendering British subjects liable to service in the armed forces. The first military service act was passed by the Asquith government in the First Great War, became effective on Feb. 10, 1916, and provided for the conscription of all single men aged between 18 and 40. Exemptions were made in favour of conscientious objectors, ministers of religion, and persons engaged in work of national importance. In June, a second act rendered all males between 18 and 41, except those exempted by the first act, liable for military service. The second act also retained in the army time-expired soldiers. On April 15, 1918, the heavy British casualties resulting from the German offensive led to a third act, raising the age of liability for service to 50. None of these acts applied to Ireland, and all lapsed with the signing of the peace treaty in 1919.

In March, 1919, a fourth act came into force to ensure drafts for the army of occupation in Germany. It gave the government power to extend until April 30, 1920, the compulsory service of any man already in the armed forces at the end of the war.

In 1939 a British Military Training Act rendered all men of 20 liable to serve in the army for six months followed by three and a half years in the Territorial Army. This act was replaced by the National Service, Armed Forces, Act of Sept. 1, 1939. It provided that every male British subject in Britain between 18 and 41 should, from time to time by proclamation, become liable for service in the

armed forces. Provision was made, however, for the exemption of persons engaged in a variety of occupations considered essential to the war effort. On Dec. 18, 1941, the National Service (No 2) Act was passed. This raised the age for compulsory military service for men from 41 to 51, while unmarried women between 18 and 31 became liable to serve in the uniformed auxiliary services of the crown.

Under a plan announced in June, 1946, men called up during 1947 served for two years, those during 1948 for progressively shorter periods down to 18 months for Dec. recruits. A new National Service Act, June, 1947 (effective 1949), reduced full-time service to one year, followed by 60 days' part-time training, in an auxiliary service, spread over six years; but before it came into effect an amending Act, Nov., 1947, made full-time service 18 months, followed by 60 days' part-time training spread over four years.

**Militello.** Town of Sicily, in the prov. of Catania. It is 18 m. S.W. of Catania, with which it is connected by rly., and carries on a trade in oil, wine, and silk. The town was destroyed by earthquake, 1693.

**Militia** (Lat. *miles*, soldier). Civilians enrolled as an auxiliary military force and periodically embodied for instruction and drill. On the Continent, the name is frequently given to the second line troops of a national army, and personnel of the militia consists of reservists who have completed military training as conscripts. In Great Britain, the militia as it existed until 1908 was a constitutional force raised under the sanction of parliament for home defence and enlisted locally by cities or counties. It could be sent out of the country only if the men volunteered, and then only with the consent of parliament. In few instances had its personnel served in the regular army.

Historically, the British militia dated from Anglo-Saxon times, when all landholders were obliged to bear arms as a quit or body rent for the land they occupied. This was expanded by Alfred the Great into the *fyrd* (*q.v.*). With the development of feudalism, which raised its armies from the fiefs (*q.v.*), the *fyrd* ceased to be important. When the conflict between crown and barons reached a head early in the 13th century, the *fyrd*, or militia, provided the bulk of the royal troops. As the country became more settled, however, the militia again fell into decay.

Following the threat of the Spanish Armada, a special home defence force was raised on a county basis by the lords lieutenant, the expense of arming and equipping the troops being defrayed by the counties, while the officers were commissioned on a property qualification. The troops were mainly volunteers, but when the strength fell below establishment the deficiency was made up by ballot. In 1604 James I revived the *fyrd* as a force of 160,000 men called the trained bands. During the Civil War, the trained bands generally sided with parliament, and a number of them became officer-producing units for the Commonwealth army.

#### 17th-20th centuries

After the restoration, a new militia was established, but except in London was abolished 1662. In 1688 an act authorised the raising of the militia for one year, and for some time afterwards it was sanctioned annually, as is the regular army today. This militia was called out during the Jacobite rebellions of 1715 and 1745. Its embodiment in 1745 showed it to be thoroughly inefficient, and in 1757 a new militia act made householders liable for service, men between 18 and 45 being chosen by ballot to serve for a period of three years. The force received an annual training and in its first year raised 30,000 men. Men drawn for service could buy a substitute for £10, and many householders formed militia clubs which, on insurance principles, purchased a substitute for any member drawn for the militia. Until 1802 only Protestants were liable for militia service or accepted as substitutes.

During 1759-62, 1778-83, 1792-1802, 1803-1816, and 1854-56, the militia regiments, embodied to form the home garrisons in the absence of the regular army overseas, reached a high degree of efficiency, and every inducement was offered to the men to enlist individually in the regular army, the War office at one time offering militiamen a bounty of £40 to transfer.

In 1867 one-fourth of each battalion of militia was invited to accept the same liability to foreign service as the army reserve, in consideration of an annual bounty of 20s.; these volunteers were known as militia reservists. The militia did good service during the S. African War of 1899-1902, but their voluntary offer to go abroad was on condition that the men should serve under their own officers like a regular unit. Five years later,

1907, R. B. Haldane brought the militia into his scheme for an expeditionary force, by abolishing all units as militia and reviving most of them as special reserve battalions, whose function in war was to furnish drafts for the regular battalions. In 1914-17 virtually all reinforcements for the 1st and 2nd battalions at the front, both officers and men, were furnished by the 3rd (old militia) battalions, then called the special reserve.

After the First Great War the title of militia was revived, but it remained a mere name in the army list, and was eventually merged into the Territorial Army. In 1939 the name was again revived and given to the conscript force called up under the compulsory military service Act of April of that year. With the introduction of general conscription at the beginning of the Second Great War, the term was again dropped, and thereafter the only militia units existing in the British Commonwealth were those of Australia, Malta, Bermuda, and the Channel Islands, all of which were on a voluntary basis.

Under the fascist regime, Italy had an active militia which was, in effect, the private army of the ruling political faction. A similar organization, the *Schutzstaffeln* (S.S.), was maintained in Germany to support the Nazi party.

In the U.S.A. there is a form of militia called the National Guard, established in 1933 on a federal basis to incorporate the various state guard units. Enlistment is voluntary, but in emergency the president may order the National Guard into the active service army. During the Second Great War 19 National Guard divs. served overseas with the U.S. armed forces. In peacetime the National Guard has an authorised strength of 250,000 men and may be called out to maintain order in the event of civil disturbance. See Army, British; Territorial Army.

**Milk** (A.S. *meolc*, milk). The fluid secreted in the mammary glands of all female mammals immediately after parturition, to provide nourishment for their young. The composition of milk, which is a mixture of fats, carbohydrates, proteins, and mineral matter dissolved or suspended in water, varies widely. The total solids content is highest in the milk of the porpoise and the whale (55 p.c. including 45 p.c. fat), lowest in that of the mare and the mule (9 p.c. including 1.2 p.c. fat).

The milk of the cow has, since the middle of the 19th century,

become of great importance in the diet of the peoples of the British Commonwealth, the U.S.A. and the countries of N.W. Europe. In total solids content, cows' milk is similar to human milk, but, as the accompanying table shows, the proportion of the various solids differs considerably. Moreover, composition varies from one individual to another, and from one breed of cow to another.

	HUMAN	COW
	Per cent	Per cent
Water	87.55	87.3
Fat	4.0	3.7
Sugar (lactose)	7.0	4.75
Caseinogen	0.5	3.1
Other proteins	0.75	0.4
Ash	0.2	0.75
	100.00	100.00

For the feeding of infants, cows' milk can be humanised by the addition of lactose, cream, and water, to reduce the proportion of proteins and increase the proportion of milk sugar while maintaining the same percentage of total solids. Most children, however, can take unmodified cows' milk from an early age.

The fat in milk is an imperfect emulsion. If milk is left standing the fat globules clump together and gradually rise to the surface of the milk. This is known as creaming. The milk sugar, albumen, and globulin, and part of the ash are in solution, and the caseinogen in colloidal suspension. The proteins, casein and albumen, contain all the amino acids known to be essential to life in young animals; the butter fat differs from vegetable fats in that it contains a higher percentage of volatile and unsaturated fatty acids, which are believed to be more digestible than the saturated fatty acids. In addition milk contains the fat soluble vitamins A, D, and E, and the water soluble vitamins, B<sub>1</sub>, B<sub>2</sub>, and C. It is a perfect food for the young. For the adolescent and the adult its inclusion in reasonable proportions forms a valuable addition to the diet.

By selective breeding the dairy cow has become a highly efficient milk producing machine. Individual cows have produced more than 3,000 galls. of milk in a lactation (approx. 12 months). The average annual quantity per cow sold off farms in Great Britain in 1939 was 550 galls. Owing to shortage of imported feeding stuffs, it fell during the Second Great War to approximately 500 gallons, but by 1948 had returned to nearly the pre-war figure.

The British herds which give good milk production are the Ayrshire, Dairy Shorthorn, Friesian, Guernsey, and Jersey; the first three give the greatest yields of milk, the Channel Is. breeds produce milk of the highest butter fat content. Red Polls in East Anglia, Welsh Blacks in Wales, South Devons in Devon enjoy popularity.

**MILK CONSUMPTION.** Milk consumption in Great Britain in 1939 was estimated to be 0.4 pints a head per day. The national milk scheme of 1941, which provided free or cheap milk to pregnant and nursing mothers and to children under 16, and the milk in schools scheme which provides free milk in school to all children under 16 attending school, have increased average consumption to 0.6 pints a head per day. Production between 1939 and 1947 increased by only 16 p.c.; so priority claims under the two schemes could be met only by restricting general adult consumption and reducing the quantity made into manufactured dairy products. Sales off farms in Great Britain in 1938-1939 were 1,253 million galls., of which 855 million galls. were consumed liquid, 398 million galls. were made into dairy produce. In 1945-46 total sales were 1,405 million galls., of which 1,258 million galls. were consumed liquid, 147 million galls. were made into dairy products. In Canada 0.85 pints of milk a head is consumed per day, in Scandinavia over one pint a day.

During the 20th century increasing attention has been given by local authorities, milk producers, and distributors to the hygienic production and handling of milk. Bovine tuberculosis may be transmitted through milk as also may human diseases like typhoid fever, diphtheria, etc. These pathogenic dangers can be eliminated by pasteurisation (*q.v.*).

The elimination of infected cows and the gradual increase in the number of tubercle free herds received official encouragement in 1923 under the Milk Special Designations Order, when tuberculin tested milk (including certified milk) received recognition, and its sale at a special price to cover the milk producer's extra expenses was permitted. By 1948 nearly 17 p.c. of the milk produced in Great Britain was tuberculin tested. A tuberculin tested herd may, however, include cows suffering from abortion or mastitis, so that the milk it gives is free from only one of the three bovine diseases which may be transmitted by milk.

**MILK PRESERVING.** Milk in excess of needs produced during the summer can be preserved for subsequent use either by concentration and storage in hermetically sealed cans or by drying. Unsweetened condensed milk, normally concentrated 2½ times to include 31 p.c. of total solids, is preserved by sterilisation. The high sugar concentration of sweetened condensed milk, which contains 31 p.c. of milk solids plus 40 to 42 p.c. of added cane sugar, prevents the growth of bacteria.

Milk can be dried by:

- Roller Drying**, in which the milk, finely sprayed on to steam heated revolving rollers, is scraped off after less than one revolution of the roller as "milk paper," and subsequently ground to powder. This form of dried milk, which keeps well, is the type used as national dried milk and in most of the proprietary infant foods.
- Spray Drying**, in which milk, usually concentrated to about 40 p.c. solids by evaporation in vacuum, is sprayed into a large enclosed chamber through which heated air is rapidly moving. The droplets of milk rapidly lose their moisture to the hot air and fall as a fine powder to the bottom of the chamber, from which the powder is removed mechanically. This powder is almost 100 p.c. soluble and, when reconstituted, very closely resembles pasteurised milk, with the exception that the cream will not rise owing to the fine division of the fat globules effected when spraying into the drying chamber. This type of dried milk was used extensively during the Second Great War in feeding troops operating under difficult conditions. Separated milk, dried by the spray process, is much used in the manufacture of ice cream and in the chocolate and sugar confectionery industries.

**E. Capstick, M.Sc.**

**Milk.** River of Canada and the U.S.A. Rising in the Rocky Mts. of Montana, near the Alberta boundary, it flows E. through Alberta for about 200 m. and then for a further 300 m. through Montana to the Missouri.

**Milk Bar.** Bar for the sale of milk and milk drinks for consumption on the premises; including "milk shakes" with various fruit and other flavours, malted milk and proprietary milk drinks, ice-

cream, tea, coffee, and cocoa. Cakes, sandwiches, and other light refreshments are also available.

The first milk bars were opened in Australia in the early 1930s, and in 1935 an Australian, Hugh D. MacIntosh, came to England and opened the first British milk bar in Fleet Street, London, Aug., 1935. The idea won immediate popularity, and, with encouragement from the Milk Marketing Board, milk bars spread throughout the country. In 1947 there were some 700 registered with the Milk Bars Association in Great Britain. This association lays down certain standards for the equipment and storage plant of milk bars, which are compelled to store their milk in refrigerated containers below 42° Fahr. The sale of milk and milk drinks in the U.S.A. takes place at similar bars installed in drug stores.

**Milking.** The process of extracting milk from the cow or goat. It is usually done by hand, but machine milking has become widely used, as this saves labour. The udder of the cow consists of four separate sections or quarters, two fore, and two hind, each quarter having a teat of its own. Milk flow is controlled by a hormone oxytocin, and some stimulus given just prior to milking may increase the yield. Hand milking is carried out by grasping the teats part of the way round and pressing them against the palms by the finger tips. The pressure should be horizontal, commencing at the top of the teat, and worked downwards. A quick rhythmic action is best, with movement coming from the wrists and not the elbows. The fore quarters are milked first, then the hind, but it is necessary to milk the fore quarters again, and often individual quarters separately, to ensure efficient stripping. Milk left in the udder reduces yield. In addition, the strippings are richest in fat and other food nutrients.

Machine milking combines an action of pressure, release, and suction. Hand stripping after machine milking, though common, can be avoided with some cows, by applying slight downward pressure to the base of the teat cups and at the same time massaging the udder. Whatever the milking practice, cleanliness, quietness, and careful handling of the animals are essential. See Dairy Farming.

**Milk Marketing Board.** Organization of milk producers in England and Wales, set up Oct., 1933, on the instance of the National Farmers' Union, to administer a national marketing scheme

for milk. The board has statutory powers under the Agricultural Marketing Acts of 1931 and 1933, and no non-member is permitted to sell milk. It came into existence on the vote of over 96 p.c. of the milk producers in the country. An entirely self-governing body, it has power to vote itself out of existence at any time.

Of the 17 members of the board, twelve are the elected representatives of the regions into which the country is divided for the purposes of the marketing scheme, three are nationally elected, and two are co-opted. Regional committees advise on the board. The board operates a pooling scheme to ensure a satisfactory price to milk producers, collects all monies from over 9,000 dairymen each month, and pays out to nearly 160,000 producers, and with a fleet of over 6,000 road vehicles collects all milk from farms and delivers it to its first destination. It has introduced various schemes for grading supplies, with premiums for the higher grades. The provision of free milk in schools and of free or cheap milk to mothers and children was developed from experiments carried out by the board before the Second Great War.

The board established cattle breeding centres, and set up a number of creameries which provide information on the costs of processing and the manufacture of dairy products.

**Milk Sugar.** Variety of sugar found in milk. It is recovered from whey obtained in the manufacture of cheese. Milk sugar appears as sweet, rather gritty crystals, partly soluble in water, and is used in pharmacy. It is not so sweet as cane sugar, and chemically is better known under its alternative name of lactose (q.v.).

**Milkwort** (*Polygala vulgaris*) OR ROGATION FLOWER. Perennial herb of the family Polygalaceae.

Milkwort. Flowering stems of this meadow herb

A native of Europe (including Britain), N. Asia, and N. Africa, it has short, wiry stems and somewhat leathery, oblong leaves. Its flowers are white, pink, blue, or purple. It grows among grass in meadows and on heaths, and cows eating it

were formerly supposed to yield more milk than ordinarily.

**Milky Way.** This luminous band of stars stretching across the sky is more correctly called the Galaxy (q.v.).

**Mill** (Lat. *molere*, to grind). Originally a machine used for grinding. To mill means to reduce something, corn, for instance, to very small particles. It is also used for the process of giving a raised edge to coins. From its use for a machine the word has come to be used also for the building in which the machinery is, e.g. a flour-mill, and other buildings containing machinery, e.g. a cotton mill.

**MILL, JAMES** (1773-1836). British utilitarian philosopher, historian, and economist. Born near Mont-

James Mill, British philosopher

rose, Forfarshire, April 6, 1773, after studying at Edinburgh he came to London, and embarked upon a literary career. His *History of India*, published 1817-18, led to appointments in the examiners' office of the E. India Company.

In philosophy, he is one of the chief representatives of associational psychology. In his *Analysis of the Phenomena of the Human Mind* he reduces all psychological reality to one fact—sensation, and all its laws to one—the law of inseparable association, the factors of which are liveliness of impression, repetition, and interest. In politics, Mill was regarded as the founder of philosophical radicalism. He died at Kensington, June 23, 1836. See *Life*, A. Bain, 1882.

**MILL, JOHN STUART** (1806-73). British philosopher and economist. The son of James Mill, he was born in London, May

20, 1806. His education, begun by his father, was completed in France. An extraordinarily precocious child, at 14 he had acquired a knowledge of a great variety of subjects, including classical literature, logic, in addition to political economy, history, and mathematics.

An acute mental crisis, induced by an exclusively intellectual education, was surmounted with the

J. S. Mill

help of a study of Wordsworth from 1820-58 he was employed in the East India Office, and retired on a pension when the company came to an end. From 1865-68 he was M.P. for Westminster, in 1866 Lord Rector of the university of St. Andrews. He died at Avignon, May 8, 1873. The influence of Mrs. John Taylor, whom he met in 1830 and married in 1851, greatly affected his views, and tended to modify and humanise his doctrinaire Benthamism.

From an early age Mill was engaged in literary work, writing books and contributing to reviews. His *System of Logic*, 1843, is an elaborate exposition of the theory and methods of induction. The basis of induction is not belief in the uniformity of the laws of nature, but the laws of causality, resting on the fact that we see a succession of phenomena always occurring in the same order. His metaphysical standpoint is set forth in his *Examination of Sir William Hamilton's Philosophy*, 1865. He is strongly opposed to all forms of intuition, while he admits the reality of the external world and of mind, as based upon the principles of association. Matter is a permanent possibility of sensation, and mind a series of feelings with a background of possibilities of feeling. In Ethics, he is an altruistic utilitarian. Happiness is the highest of all aims, not a selfish happiness, but a happiness identical with that of mankind in general. Happiness itself differs not only in quantity, but also in quality: there are higher and lower kinds of it, the former chiefly intellectual. Moral judgements and feelings are the result of association.

For many years Mill was an enthusiastic admirer of Comte's system of positive philosophy. When a young man he had founded a utilitarian society. His *Principles of Political Economy*, 1848, the object of which was to systematise and complete the theories of Adam Smith and Ricardo, is still considered indispensable for the study of the subject. He was the first to give a full description of the phenomena which determine current value, and also to see that exchange is not a primitive and necessary phenomenon, but only relative to a certain mode of appropriation. Hence value is not a natural and necessary quality of wealth. It is a relative term; there is no such thing as a general rise or a general fall of values. The temporary or market value of a thing depends on the demand and supply. The demand varies with the value, and the value always so adjusts itself

that the demand is equal to the supply. In politics, Mill, at least in his later years, belonged to the advanced radical party. His essay *On Liberty*, 1859, represents his mature political views. He was a warm defender of the rights of the working classes and an enthusiastic advocate of women's suffrage. See *Liberalism*; *Utilitarianism*.

**Bibliography.** Autobiography, 1908; *Lives*, A. Bain, 1882; W. L. Courtney, 1889; J. S. M., a Study of his Philosophy, C. Douglas, 1895; *The English Utilitarians*, L. Stephen, 1900.

**Millais, Sir John Everett** (1829-96). British painter. Born at Southampton, June 8, 1829, he

*J. E. Millais*

*Self-portrait, Uffizi Gallery, Florence*

came of a Jersey family, and was taken thither at an early age. Some drawings executed when he was seven were exhibited at the Academy in the winter of 1898. In 1833, on the recommendation of Sir M. A. Shee, he was sent to Sass's drawing school in Bloomsbury, and later to the R.A. schools. When ten he received a silver medal from the Society of Arts, and he took his first prize at the schools a year later. Shortly after 1848, with Holman Hunt and Rossetti, he started the Pre-Raphaelite Brotherhood.

Millais' first important picture, painted on the lines laid down by the P.R.B., was the *Banquet Scene from Keats' Isabella* and the *Pot of Basil*, exhibited in 1849, followed in 1850 by *Christ in the House of His Parents*, better known as *The Carpenter's Shop*. In 1921 a successful appeal was made to the nation to acquire the latter, then in the Tate Gallery, to prevent its being sold to the Melbourne Gallery, Victoria, Australia, the price being

10,000 guineas. Many similar pictures followed, notably *The Huguenot*, *The Proscribed Royalist*, *The Order of Release*, etc., but gradually Millais was escaping from the rigid lines laid down by his companions in the P.R.B. and developing definite characteristics of his own. Perhaps his two most important pictures executed under Pre-Raphaelite influence were *Autumn Leaves*, 1856, and *The Blind Girl*, one of his greatest works. Later he stayed with Ruskin in the N. of England and in Scotland. Sir Isumbras at the Ford, exhibited in 1857, marked a departure in style which evoked a protest from Ruskin. Its successors, *The Vale of Rest* and *Apple Blossoms*, clearly showed the emancipation of Millais from his early mannerisms.

In the sixties Millais was largely concerned with book illustration. From the time that he became an R.A. in 1863, there was a great demand for his portraits, considerable desire to obtain his landscapes, especially those painted in Scotland, and an ever increasingly enthusiastic public for his sentimental paintings, such as *The North-West Passage*, *The Princes in the Tower*, *The Yeoman of the Guard*, and *The Princess Elizabeth*. Among his finest portraits must be mentioned those of the Marquess of Hartington, Lord Tennyson, Cardinal Newman, Sir James Paget, Gladstone, Du Maurier, and Mrs. Jopling.

Millais in 1855 married the lady who had been Mrs. Ruskin, but who had obtained a decree of nullity of her first marriage. He was created a baronet in 1885, succeeded Lord Leighton, as P.R.A., Jan., 1896, and died of cancer of the throat Aug. 13, 1896. He was buried in St. Paul's Cathedral, and a statue by Brock was erected in the grounds of the Tate Gallery.

Millais was a buoyant, popular personality, strong, manly, and genial. It is by his Pre-Raphaelite pictures and his portraits that he will best be remembered. His pictorial work in black and white can hardly be paralleled. Its charm and dignity were remarkable. He cannot be regarded as an inspired painter, and in his landscapes showed himself unacquainted with the subtleties of atmospheric effect or momentary illumination. He was, however, a man of patience and quickness of vision, and he spared no toil to arrive at his own pictorial expression. See *Pre-Raphaelites*. *Prov.* Millay.

**Bibliography.** *Life and Letters*, J. G. Millais, 1899; *Lives*, J. E. Reid, 1909; Arthur Fish, 1923; *The Order of Release*, Sir W. James, 1948.

**Millar, GERTIE** (b. 1879). British actress. Born at Bradford, Yorks, Feb. 21, 1879, she first appeared on the stage in a Manchester pantomime, and toured the provinces in musical comedy. She made her London debut in *The Toreador*, at the Gaiety Theatre, 1901, playing there in musical comedies until 1907. Her successes included *A Waltz Dream*, 1908; *Our Miss Gibbs*, 1909; *A Quaker Girl*, 1910; *Gipsy Love*, 1912. She married (1) Lionel Monckton (q.v.); (2) 2nd earl of Dudley (d. 1931); and retired from the stage shortly after the First Great War.

**Millard, EVELYN** (b. 1869). British actress. Born at Kensington, Sept. 18, 1869, she studied at the R.C.M. and made her first appearance on the stage in *The Dancing Girl*, 1891. Having played leads with Alexander, Tree, and Waller, she went into management at the Garrick and other theatres during 1908-10. Plays in which she is remembered include *The Importance of Being Earnest*, *The Prisoner of Zenda*, *Monsieur Beaucaire*. One of her last appearances was as Calpurnia in *Julius Caesar* at the Shakespeare tercentenary performance, 1916.

**Millau.** Town of France, in the dept. of Aveyron. It lies on the right bank of the Tarn at the S.W. end of the Cévennes, 74 m. by rly. N. of Béziers. The church of Notre Dame is in a mixture of

1892, she was educated at Vassar College, and published a first volume, *Renaissance and other Poems*, in 1917. A lyric poet of distinction, who could strike the tragic note effectively, she won the Pulitzer prize for poetry in 1922. She published her collected sonnets in 1941, and her lyrics in 1943.

**Millbank.** District of S.W. London, now in the city of Westminster. The name applies strictly

**Millbank.** Plan of the old London penitentiary. *a.* chapel and governor's house. *b. c.* Bastions. *d.* Entrance. *e.* External walls

to the thoroughfare on the left bank of the Thames between Great College Street and Vauxhall Bridge Road. On the river bank, originally built to act as one side of the mill-race serving the mill of the abbot of Westminster, are the Victoria Tower Gardens. The chief buildings are the headquarters of the ecclesiastical commission and the crown agents for the colonies; Imperial Chemical House and Thames House; Millbank barracks; Tate Gallery; Millbank Hospital (h.q. of the R.A.M.C.).

What was first known as Millbank Penitentiary was the outcome of an Act of 1778, providing for penitentiary houses in accordance with certain ideas set afoot by Howard and other prison reformers. It was modelled by Smirke on the lines described in Bentham's *Panopticon*, or the *Inspection House*, 1778. Built in 1812-22, at a cost of more than £500,000, on ground bought in 1799 from the marquess of Salisbury, it resembled a wheel, the axle of which comprised the chapel and governor's house.

From this radiated six bastions, each with five sides and terminating externally in towers.

The external walls, forming an irregular octagon enclosed upwards of 16 acres, and were once surrounded by a moat. The buildings were of three storeys, were connected by covered ways with the chapel, and the dark passages, staircases and tortuous windings of the interior proved bewildering even to old warders. Every convict sentenced to transportation was first sent here and was solitarily confined. The system represented by the penitentiary was condemned in 1843, and the place, made a military prison in 1870, was closed Nov. 6, 1890, and pulled down in 1893. *Consult* Memorials of Millbank, A. G. F. Griffiths, 1875.

**Millboard.** Material made from waste paper, rags, rope, and similar scrap. These are pulped and hydraulically pressed into sheets varying from  $\frac{1}{8}$  to  $\frac{1}{2}$  inch thick and up to 12 ft. by 6 ft. in size. Millboard is used for railway carriage panelling and partitions, and for book binding, etc.

**Millennium** (Lat. *millē*, a thousand; *annus*, a year). Period of 1,000 years. The term is used specifically of the ancient idea of a kingdom of Christ upon earth. Whereas many of the later Jews, basing the idea on a literal interpretation of O.T. prophecies, looked forward to the earthly millennium as the final goal, the Christian idea, based upon Rev. 20, was of a prelude to the blessedness of heaven.

Much discussion has taken place as to the meaning of the words of S. John, who foresaw Satan being bound and the martyrs dwelling with Christ for 1,000 years, at the end of which period Satan, loosed again, was to make his last assault upon the saints before being cast into the lake of fire. The doctrine of the millennium, also known as chiliasm (Gr. *chilioi*, a thousand), was condemned because of the excesses to which it gave rise; but it still exists in various forms and it formed part of the creed of several Evangelical divines. *See* Adventists; Anabaptists; Antichrist; Fifth Monarchy Men.

**Millepora.** Name given to a family of hydrocorallines which occur in the warmer seas. They form large chalky masses, covered with tiny pores through which the polyps protrude. These small pores are arranged in a circle around a larger central one, from which protrudes a polyp provided

**Millau, France.** General view of the town looking toward Causse Noir, a height of the Cévennes

Romanesque and Renaissance, and there is a notable square with arcades dating from the 12th-15th centuries. During the 16th and 17th centuries Millau was a Calvinist centre; its fortifications were destroyed by Richelieu in 1620. The chief industry is the manufacture of kid gloves. Population, 17,678.

**Millay, EDNA ST. VINCENT** (b. 1892). American poet. Born at Rockland Maine, Feb. 22,

with a mouth and specialised to act as the feeding member of the group. The smaller pores are occupied by polyps of longer body, whose function is to catch the prey and pass it to the mouth of the feeding polyp. Below the surface of the "coral" are numerous canals, which connect the different polyps into one compound organism. See Coral.

**Miller, ALICE DUER** (1874-1942). A New Yorker, educated at Barnard College, she married Henry Miller in 1899, and was a prominent figure socially. Her publications included *The Modern Obstacle*, 1903; *The Charm School*, 1919 (dramatised with Robert Milton, and produced at the Comedy Theatre, London); *The Beauty and the Bolshevik*, 1920; *Forsaking All Others*, 1930; *The Rising Star*, 1935. A set of nostalgic short poems, *The White Cliffs*, aroused sentiment in Great Britain and U.S.A., at the time of the threatened German invasion in 1940. A film version appeared in 1944. The author died Aug. 23, 1942, and a *Life* by her husband appeared in 1945.

**Miller, HUGH** (1802-56). Scottish geologist and writer. Born at Cromarty, Oct. 10, 1802, he was

Hugh Miller,  
Scottish geologist

apprenticed as a mason and quarryman. In 1834 he became accountant in a bank at Cromarty, and next year published *Scenes and Legends of the North of Scotland*.

In 1839 a letter published in Edinburgh on the Auchterarder case (see Free Church of Scotland) brought him into prominence with the Evangelical party in Scotland, who appointed him editor of the journal they established to advocate their policy. It was known as *The Witness*, the first issue appearing on Jan. 15, 1840, and it appeared bi-weekly. Miller was the editor, and later also its owner until his death. Temporarily insane through overwork, he shot himself, Dec. 23, 1856.

In addition to being one of the recognized leaders of the Free Church of Scotland, founded 1843, Miller was widely known as an advocate of education, franchise, and other reforms. But his reputation rests on his popular works on geology: *The Old Red Sandstone*, 1841, and *Footprints of the Creator*, 1847.

**Miller, JOAQUIN** (1841-1913). American poet, whose real name was Cincinnatus Heine Miller.

Joaquin Miller,  
American poet

He was born in Indiana, Nov. 10, 1841. He served as a volunteer in Walker's Nicaragua expedition, and in 1863 became a practising barrister, and in 1870 a county court judge in Oregon. Later he did a good deal of work as a journalist. He died Feb. 17, 1913. He is best known by his *Songs of the Sierras*, 1871, and by his melodrama of Mormonism, *The Danites*, 1880. Consult *Life*, M. S. Peterson, 1937.

**Miller, JOE** (1684-1738). An English comedian. An entirely illiterate man, who is said to

have married because he wanted someone at hand to read his parts to him, he made his first appearance at Drury Lane, Nov. 28, 1709, as Teague in Sir Robert Howard's comedy *The Committee*, and subsequently won success as a low comedian in many comedies by Steele, Congreve, Farquhar, and Vanbrugh. He died Aug. 16, 1738. The year after his death, John Mottley, the dramatist, brought out a collection of jocular anecdotes, *Joe Miller's Jests*; or *The Wit's Vade Mecum*, which he unwarrantably fathered upon him.

Joe Miller,  
English comedian

**Miller, PHILIP** (1691-1771). A British botanist. He was born near Greenwich, and in 1722 was appointed curator of the physic garden at Chelsea, holding his post until 1739. He died at Chelsea, Dec. 18, 1771. Miller's great work, *The Gardener's Dictionary*, first appeared in 1724.

**Miller, WILLIAM** (1796-1882). Scottish engraver. He was born at Edinburgh, May 28, 1796. He is best remembered for his engravings after Turner, which Ruskin valued highly. He also engraved Turner's work in the *England and Wales* series, and illustrated in engraving Rogers's poems and Scott's works. He died at Millerfield, Jan. 20, 1882.

**Millerand, ALEXANDRE** (1859-1943). A French president. A barrister, born in Paris on Feb. 10,

1859, he was elected deputy for Paris in 1885 as a Radical-Socialist, and in 1887 was made a member of the budget committee. He gave special attention to social questions, fiscal reform, and the championing of workmen's syndicates. He became leader of the Socialists, but his acceptance of office as minister of Commerce in Waldeck-Rousseau's government of 1899 led to his expulsion from the party in 1904. In 1909 Briand

made him minister of public works, and in 1912 he became, for a year, Poincaré's minister of War. He was recalled on the outbreak of the First Great War, but in 1915 he again resigned, and remained out of office until appointed commissioner-general for Alsace-Lorraine in 1918. He succeeded Clemenceau as premier, Jan., 1920, becoming also foreign secretary. When President Deschanel resigned the following September, Millerand was elected in his place: but in May, 1924, Herriot, whose *Cartel des Gauches* had secured a majority at the elections in May, refused to form a government under his presidency. Millerand formed an alternative cabinet, but the chamber refused to recognize it: he thereupon resigned the presidency and virtually forsook public life. He died April 6, 1943.

Alex. Millerand,  
French statesman  
Henri Manuel

**Miller Effect.** Term in electronics. It refers to the energy fed back from the anode to the grid circuit of a thermionic valve, through the internal capacitance between these electrodes.

**Miller Indices.** Term referring to the method of defining a set of parallel planes in a crystal which are being used in reflecting incident X-rays.

**Millerite** or **NICKEL PYRITES**, or **CAPILLARY PYRITES**. Mineral consisting of nickel sulphide (NiS) with traces of cobalt, copper, and iron. It crystallises in the hexagonal system, but usually occurs as fine hair-like crystals with a brassy-yellow metallic appearance. It forms nodules in clay-ironstone and in veins with other nickel and cobalt minerals as in Cornwall, Saxony, and Ontario.

**Miller's Thumb.** Popular name for the small freshwater fish, *Cottus gobio*. It is better known under the name bullhead (*q.v.*).

**Millet.** A general term for a number of botanically diverse grasses grown for both grain and forage and constituting important sources of human food in China, India, S. Russia, the Balkans, and Africa. Foxtail millet or Italian millet (*Setaria italica*), broom corn or proso millet (*Panicum miliaceum*), barnyard or Japanese millet (*Echinochloa frumentacea*), pearl millet (*Pennisetum glaucum*) and finger millet (*Eleusine coracana*) are all grown extensively. Like the sorghums, the millets are Old World plants, but were introduced into the U.S.A., where their popularity as forage plants has, however, declined since the introduction of Sudan grass. Considerable heat is necessary for the growth of millets, which are very susceptible to damage by frost. See Sorghum.

**Millet, JEAN FRANÇOIS** (1814-75). A French painter. Born at Gruchy, near Cherbourg, Oct. 4, 1814, the son of peasants, he received early instruction from Mouchel and Langlois. He went to Paris with a scholarship, 1836, and entered Delaroche's studio, where Diaz and Rousseau were also students. He began by painting nudes and imitations of Watteau, e.g. *L'Amour Vainqueur*. For a time he painted signs at Cherbourg, returning to Paris in 1842. Milk Woman was accepted by the Salon in 1844, but *Oedipus Unbound* provoked hostility. By 1849 Millet had sufficient independence to settle at Barbizon and paint pictures of peasant life, for the naturalistic, dignified, and sympathetic treatment of which he has few equals. Some of his pictures have become, through reproduction,

J.F. Millet  
Self-portrait in crayon, 1846-47

world-famous. The Sowers was exhibited in 1851; *The Gleaners*, 1857; *The Angelus*, and *Death and the Woodcutter*, 1859; *The Man with the Hoe*, 1863. He was commissioned in 1873 to decorate the Pantheon with the Four Seasons, but only charcoal studies were produced. He died Jan. 20, 1875. See *Angelus*; consult *Lives*, A. Sensier, Eng. trans. H. de Kay, 1881; J. C. Ady, 1910; P. Gsell, 1928. *Pron.* Meelay.

**MILL HILL.** Dist. of the Middlesex bor. of Hendon. Mainly residential, it lies about 8 m. N.W. of London, and is served by rly., an arterial road, and London Transport. The old village, at an elevation of 400 ft., commands delightful views. Here are Mill Hill school (v.i.); the London univ. observatory (see illus. p. 6168); the National Institute for Medical Research, opened 1950; the parish church of S. Paul 1829-36; S.

Joseph's missionary college of the Sacred Heart; two convents; the Linen and Woollen Drapers' cottage homes; and the barracks, h.q. of the Middlesex Regiment. S. Vincent's convent was once known as Littleberries House, said to have been built by Charles II. and to have had Nell Gwynn as occupant. On the site of Mill Hill school were the gardens of Peter Collinson (1694-1768), naturalist and antiquary. Wm. Wilberforce lived at Highwood. Pop. 17,146.

**Mill Hill School.** English public school. Founded in 1807 as a school for the sons of non-conformists, its constitution was remodelled in 1869. It has a fine range of buildings, standing in grounds of 70 acres, at Mill Hill, Middlesex, accommodation being provided for about 400 boys. The school is divided into upper, middle, and lower, and there are classical and modern sides. Although mainly supported by nonconformists, it has no sectarian tests. There are scholarships to the universities and to the school itself. A gate of honour commemorates 200 old boys killed in the First Great War.

**Millibar.** Thousandth part of a bar, the meteorological unit of atmospheric pressure on the C.G.S. system. The older practice of speaking of atmospheric pressure as equal to so many inches, or millimetres, is open to objection, for these are units of length, not of pressure. A bar (a million dynes to the sq. cm.) is equal to the pressure of a column of mercury 750.1 millimetres, or 29.53 inches, high at 0° C. in lat. 45°. The millibar has been used by the British meteorological office since May, 1914. See *Meteorology*.

**Millième.** An Egyptian copper coin. It is the tenth part of a piastre, or the one-thousandth of an Egyptian pound. The  $\frac{1}{2}$  piastre is called 5 millièmes. See *Piastre*.

**Millikan, ROBERT ANDREWS** (b. 1868). American physicist. Born at Morrison, Illinois, March 22, 1868, he was educated at Columbia and German universities and became assistant in physics at Chicago in 1896. By 1910 he was professor, and in 1921 chairman of the executive of the California Institute of Technology and director of its Norman Bridge laboratory. There, as at Chicago, his studies and writings placed him in the front rank of living physicists, his work on electrons being recognized by the Nobel prize, 1923. Millikan established the common identity of electrons, measured the charge of an electron by means

Jean François Millet. *The Wood Sawyers*, a notable example of his work  
By courtesy of the Victoria and Albert Museum

of the oil-drop experiment (*q.v.*), and did valuable work on photoelectric effects. Among his books are *Science and Life*, 1923; *Evolution in Science and Religion*, 1927; *Time, Matter, and Values*, 1932; *Cosmic Rays*, 1939; *Electrons, Protons, Photons, Neutrons, and Cosmic Rays*, rev. ed. 1946.

**Millin**, SARAH GERTRUDE. Contemporary South African writer, native of Cape Province. She published her first novel, *The Dark River*, in 1920, and a series of dramatic studies mostly against an African background: *Mary Glenn*, 1925; *An Artist in the Family*, 1927; *The Coming of the Lord*, 1928; *Three Men Die*, 1934; *What Hath a Man?*, 1938. She published a war diary in 3 vols., 1944-46, and a series of plays based on the life of Gen. Smuts. *The Night is Long*, 1941, was autobiographical.

**Milling**. Method of machining to obtain a desired size or shape on the surface of a work-piece by removing layers of material with a rotating multi-toothed cutter. Usually the work-piece is mounted on the machine table and moved past the cutter. The latter is known as a mill and in its simplest form is made from a cylinder of cutting steel by machining and grinding a series of cutting edges or teeth longitudinally on its circumference. These teeth may be straight or helical, and may extend radially down the end faces of the cylinder so that they will cut at the sides as well as the circumference. Usually the cut is wide and deep, although the actual cuttings are relatively thin. There are two methods of milling: (a) up-cut, in which the mill teeth tend to push the work-piece away as they rotate, and (b) down-cut, in which the teeth tend to draw the work-piece closer in as they rotate.

Milling is the name given to serrations stamped on the edges of more valuable coins, preventing the fraud which can be perpetrated by skimming metal from the edges of unmillied coins whilst leaving them apparently untouched. For milling, *i.e.* grinding grain, see *Flour Mill*.

**Millipede**. Group of arthropods, which, with the centipedes, form the zoological class Myriapoda (many-footed). They have long, rounded and segmented bodies, with a hard chitinous covering, and usually two pairs of legs on each segment. Their legs are certainly numerous, but do not justify the name "thousand-footed." They differ from the centipedes in being vegetarian, and they lack the poison

Millport, Buteshire. View of the town and southern shore of Great Cumbrae Island

claws. Great Britain has several species, which may be found lurking under stones in the daytime and rolling themselves into a coil when disturbed. They can do harm to crops especially if they become numerous, when they are best checked by dressings of lime and soot. See *Myriapoda*.

**Millom**. Town and rural dist. of Cumberland, England. Millom stands on the W. side of the

Millom arms

estuary of the Duddon, 9 m. from Barrow-in-Furness, with a rly. station. The chief building is the church of Holy Trinity, partly Norman, with some very interesting features. Millom grew up around a castle built here about 1100; this was long the residence of the Huddlestons family, and in the Middle Ages its lords had the power of sentencing their dependents to death. It was besieged during the Civil War, and is now a ruin. Millom owes its modern growth to the development of the Furness coal and iron field. Iron ore is mined here, and there are large furnaces and ironworks. Pop. 7,500.

**Mill on the Floss**, THE. Novel by George Eliot (*q.v.*), published in 1860. Her third work of fiction and second long novel, it is a companion work to the earlier *Adam Bede*, as a close and detailed picture of English provincial life. Its prime interest is as a study of a brother and sister, preserving some of the most charming recollections of childhood to be found in English literature, and, further, it contains a series of masterly portraits of the other members of the Tulliver family.

**Millport**. Police burgh and watering-place of Buteshire, Scotland. It stands on the S. side of the island of Great Cumbrae, in the

Millport arms

Firth of Clyde, 24 miles from Greenock. The chief building is the episcopal cathedral. Here is a marine biological station, and for visitors there are golf links, boating, and bathing. Millport has a regular steamboat service with the ports on the Clyde. The opening of the sea on which it stands is called Millport Bay. Pop. 2,083.

**Mills**, BERTRAM WAGSTAFF (1873-1938). British showman. The son of a coach-builder, Mills was born in London, Aug. 11, 1873, and acquired a familiarity with horses when he entered his father's business at the age of 15. During the First Great War he served as a captain in the R.A.S.C., and in 1921 founded the circus which bore his name. For the first eight years he limited himself to an annual production at Olympia, which ran for five weeks during the Christmas season; but in 1929 he started the Bertram Mills tented show, which toured Great Britain from April to Oct. each year. The equipment

Bertram Mills, British showman

and animals filled four special trains and 75 lorries. The Olympia show employed 4,000 people, and the cost of production was from £15,000 to £20,000 weekly.

Bertram Mills was a member of the L.C.C. from 1928 to 1938. He was at one time a well-known breeder and judge of hackney harness horses, and used always to enter his "Old Times" stage-coach for the coaching marathon from Hyde Park to the Richmond horse show. He died April 16, 1938, and the Bertram Mills circus passed to his two sons.

**Mills**, JOHN (b. 1908). British actor, born Feb. 22, 1908, in Suffolk. He started in the chorus at the London Hippodrome, 1929, and long appeared in revues and musical comedies, though his Cockney soldier in *Red Night*,

1936, showed his acting abilities. In *Men in Shadow*, 1942, and *Duet for Two Hands*, 1945, he had stronger parts in plays written by his wife, Mary Hayley Bell. In films from 1932, Mills achieved celebrity in *Tudor Rose*, *In Which We Serve*, *The Way to the Stars*, etc.; and from 1945 he was playing leads in *Waterloo Road*, *Great Expectations*, *Scott of the Antarctic*, *Mr. Polly*, *Rocking Horse Winner*, *Morning Departure*, etc.

John Mills,  
British actor

**Mills Grenade.** Standard hand grenade of the British army. *See Grenade.*

**Mill Springs, BATTLE OF.** Federal victory in the American Civil War, Jan. 18, 1862. The Confederate lines defending the South from invasion by the Federals were, at Mill Springs, a village some 10 m. W. of Somerset, Kentucky, held by General J. B. Crittenden. With the opening of the 1862 campaign Gen. George H. Thomas advanced towards this place with a force of 4,000 men. Crittenden hastened to meet him, and launched an attack which developed into a fierce fight. The Confederate forces, despite their valour, were driven back and routed with heavy loss. It is sometimes called the battle of Fishing Creek. A national cemetery was afterwards set up here, over 700 bodies being interred therein. *See American Civil War.*

**Millstone.** Wheel or circular mass of rock used for grinding grain. The best rocks for the purpose are the burr stones of France, being hard and porous. They are found in the Tertiary of the Paris basin, and large millstones are usually built up. The German

millstones are a basaltic lava found near Cologne. Sandstones and grits are used for millstones, the characteristics of which should be open or cellular structure, toughness and hardness, as the coarse granular sandstone found in New York and other parts of the U.S.A. Millstones are being gradually superseded by steel rollers in the manufacture of flour. *See Milling.*

**Millstone Grit.** Name given to a group of coarse sandstones and fine siliceous conglomerates occurring above the carboniferous limestone and below the coal measures of N. England. Sandstones of similar age but separated from the N. England deposits are also known by the same name. English Millstone Grit was laid down as a great delta extending from the Solway Firth S. to Liverpool and thence curving E. across England through Lincolnshire to the North Sea. The river responsible flowed S. and had tributaries draining from the Scottish Highlands and Scandinavia. The rock is used for building purposes and to make grindstones.

**Millwall.** District of London. It is in the Isle of Dogs, forms the S.W. part of the met. bor. of Poplar, and has Limehouse Reach on the W., Cubitt Town E., the West India Docks N., and Millwall Docks S. The last named have an area of 234 acres, 35½ acres of which are covered with water. The entrance lock in Limehouse Reach is 450 ft. long, 80 ft. wide, and 28 ft. deep at high-water spring tides. Opened 1864, Millwall Docks were linked with West India Docks in 1929 as part of the Port of London Authority scheme, and thereby linked with Blackwall Reach. There are large silos, granaries, and warehouses for storing sugar. Trade is done principally with the Baltic and N. Europe and the Americas. Much damage was done by German bombs in 1940. The name Millwall is derived from seven windmills, which stood on the wall built here to keep the Thames from overflowing at high tide.

**Milman, HENRY HART** (1791-1868). British historian. He was born in London, Nov. 10, 1791, and educated at Eton and at Brasenose, Oxford. He won the Newdigate prize, became fellow of Brasenose, and was ordained in 1816. During 1821-30 he was professor of poetry at Oxford. In 1835 he

was appointed canon of Westminster and rector of S. Margaret's, and in 1849 he became dean of S. Paul's, a position which he held until his death near Ascot, Sept. 24, 1868.

H. H. Milman,  
British historian

His *History of the Jews*, 1829, gave offence by his treatment of Jewish history from the secular point of view. He wrote *History of Christianity under the Empire*, 1840, but his great work was *History of Latin Christianity*, 1854-56. He edited what was long accepted as the standard edition of Gibbon's *Decline and Fall of the Roman Empire*, and also wrote a *Life of Gibbon*, 1839.

**Milne, GEORGE FRANCIS MILNE**, 1st BARON (1866-1948). British soldier. He was born Nov. 5, 1866, entered the Royal Artillery in 1885, and after serving in the Sudan in 1898, fought in the S. African War. During the First Great War he commanded the British contingent in Salonica in 1916, was responsible for defensive operations against the Bulgarians, and in 1918 for the offensive which ended in their capitulation. After commanding the army of the Black Sea, he retired in 1920. He became lieut.-gen. in 1917, was knighted in 1918, and was promoted field marshal in 1928. From 1926 he was chief of the imperial general staff, until in 1933 he was raised to the peerage and made governor of the Tower of London, resigning in 1938. From 1929 to 1946 he held the highly honoured position of master gunner, S. James's Park. He died March 23, 1948.

**Milne, ALAN ALEXANDER** (b. 1882). British author and playwright. Born Jan. 18, 1882, he was educated at Westminster and Trinity College, Cambridge, and began his career as journalist in London in 1903. Assistant editor of *Punch*, 1906-14, he collected his contributions into such light-hearted volumes as *The Day's End*, 1910; *Once a Week*, 1914; and *If I May*, 1920. The appearance in 1924 of *When We Were Very Young*, a book of children's verses, of which the central figure, Christopher Robin, was his son, set Milne among the most popular writers of his day. This was followed by *Winnie-the-Pooh*, 1926; *Now We Are Six*, 1927; *The House at Pooh Corner*, 1928. Later

Millstone as used in the Middle East for grinding corn by hand. This form is of great antiquity

publications included *Four Days' Wonder*, 1933, and his autobiography, *It's Too Late Now*, 1939.

A. A. Milne,  
British writer

Milne's rather sentimental comedies did well in the theatre, particularly *Mr. Pim Passes By*, 1919; *The Romantic Age*, 1920; *The Dover Road*, 1922; *The*

*Fourth Wall* (a crime play), 1928; *Michael and Mary*, 1929; *Other People's Lives*, 1932. *Toad of Toad Hall* was an adaptation of K. Grahame's *The Wind in the Willows*, and *Miss Elizabeth Bennet of Jane Austen's Pride and Prejudice*.

**Milne, SR** (ARCHIBALD) **BERKELEY** (1855-1938). British sailor. Born June 2, 1855, son of Admiral of the Fleet Sir Alexander Milne, Bt., he was educated at Wellington and entered the Royal Navy in 1869. After service in the Transkei, Zulu, and Egyptian wars, he was appointed to the royal yacht *Osborne*. Second-in-command, *Atlantic Fleet*, 1905-06; commander of the 2nd division, *Home Fleet*, 1908-10, he commanded in the Mediterranean from 1912 to the outbreak of the First Great War. He was criticised for allowing the escape of the German cruisers *Breslau* and *Goeben* into Turkish waters, but the Admiralty exonerated him, and he was given the *Nore* command. In 1921 Milne published *The Flight of the Goeben and Breslau*. He was promoted admiral in 1911, retired 1919, and died July 5, 1938, leaving no heir to the baronetcy.

**Milne, EDWARD ARTHUR** (b. 1896). British scientist. He was born at Hull, Feb. 14, 1896, and educated there and at Trinity, Cambridge. He was lecturer in astrophysics at Cambridge, 1922-25; Beyer professor of applied mathematics at Manchester, 1924-28; Rouse Ball professor of mathematics at Wadham College, Oxford, from 1928. Milne served on the ordnance board at the ministry of Supply, 1939-44, and was president of the Royal Astronomical Society, 1943-45. Elected F.R.S. in 1926, he was awarded the society's royal medal in 1941. He published *Analysis of Stellar Structure*, 1930; *Relativity, Gravitation, and World Structure*, 1935; *Rational Electrodynamics*, 1933. Milne evolved a new cosmology based on a finite time scale of his own devising.

**Milne, JOHN** (1850-1913). British seismologist. Born at Liverpool and educated at the Royal School of Mines, he worked for some years as a mining engineer. Appointed 1875 professor of geology and mining in the Imperial Engineering College at Tokyo, a post he held for twenty years, he established the seismic survey of Japan. Milne was one of the pioneers of the systematic study of earthquakes, and as secretary of the seismological committee of the British Association was chiefly responsible for setting up seismological stations all over the world. He invented various forms of seismographs, and wrote two standard works, *Earthquakes and other Earth Movements*, 1883; *Seismology*, 1898. He died July 31, 1913.

**Milner, ALFRED MILNER, 1ST VISCOUNT** (1854-1925). British administrator and statesman. Born

*Milner*

Russell

of English parents at Bonn, March 23, 1854, he was educated in Germany, at King's College, London, and Balliol College, Oxford, where he had an exceptionally brilliant career, ending with a fellowship at New College. He became a barrister and journalist.

His public career really began with the post of private secretary to G. J. Goschen. This led to his appointment as under-secretary for finance in Egypt, 1889-92, and chairman of the board of inland revenue, 1892-97. He was created K.C.B. in 1895, and in 1897 was sent as governor of the Cape, conducting negotiations with Kruger before the South African War. He remained at his post during the struggle, took part in the peace negotiations, and afterwards was governor of the Transvaal and Orange River colonies until 1905.

Conscious possibly of the hostility his imperialism had aroused among Liberals, Milner, who had been made a baron in 1901 and a viscount in 1902, remained in retirement for some years, although he emerged to denounce the budget of 1909. In 1916 his former opponent, Lloyd George, chose him as one of the small war cabinet, and the two worked together closely in planning the final victory of the Allies. After the armistice Milner was appointed secretary for War

He was colonial secretary, 1919-21, when he headed a mission to Egypt. He died May 13, 1925. Although possessed of high administrative gifts, a certain reserve, sometimes called hardness, prevented Milner from ever becoming a popular figure. He was accused of being a bureaucrat, and opposed to progress of all kinds. His writings include *England in Egypt*, 1892; *Credo*, 1925. The *Milner Papers*, 1897-1905, were edited by C. Headlam, 1931-33. See *Egypt*; *South Africa*.

**Milngavie**, Town of Dumbar-tonshire, Scotland. It stands on Allander Water, 6 m. N.N.W. of Glasgow by rly. The industries include paper making. Pop. est. 6,900. *Pron.* Mulg-eye.

**Milnrow**. Urban dist. of Lancashire, England. It is 2 m. by rly. S.E. of Rochdale. John Collier, known as Tim Bobbin, the dialect poet, was a schoolmaster here. Pop. 8,134.

**Milo or Melos**. Island of Greece, the most south-westerly of the Cyclades (*q.v.*). It is 14 m. in length by 8 m. wide, having an area of 60 sq. m. Of volcanic origin, it rises in Mt. St. Elias to 2,540 ft. A long inlet opening on the N.W. affords one of the best natural harbours in the Levant. The soil is fertile, yielding cereals; sulphur, gypsum, etc., are found. Plaka, the capital, stands on the N.E. shore of the inlet. Port Milo is situated near the site of ancient Melos. Here were found the statue of Poseidon, now in the Athens Museum, the Asclepius, in the British Museum, the *Venus de Milo*, in the Louvre, Paris, and other works of ancient art. In the prehistoric settlements at Phylakopi, much early pottery and some paintings were excavated. Milo was colonised successively by the Phoenicians and Dorians, and fell to the Athenians in 416 B.C. The Turks took possession of the island in 1537. Pop. 5,000. *Pron.* Meelo.

**Milo**. Famous athlete of ancient times, belonging to Crotona, S. Italy. He gained many victories at the Olympic and other games, and is said on one occasion to have carried a heifer on his shoulders through the stadium at Olympia, and eaten it in one day. In 511 B.C. he was general of the army which defeated the Sybarites. It is said that in his old age, while endeavouring to rend a split

Milngavie arms

trunk, his hand was trapped, and, being unable to get away, he fell a victim to wolves. *Pron.* Mylo.

**Milo**, TITUS ANNIUS (d. 48 B.C.). Roman politician. A member of the aristocratic party, he was largely responsible, as tribune of the plebs, for securing the return of Cicero from exile, 57 B.C. This brought him into conflict with Clodius. Both were in the habit of going about Rome attended by bands of armed gladiators, and the two bands meeting on one occasion on the Appian Way, Clodius was killed, 52 B.C. Arraigned for the murder, Milo was defended by Cicero, but a tumult arose, Cicero was intimidated and did not deliver his speech, and Milo was condemned and went into exile. Milo afterwards led a band of insurgents in S. Italy and was slain near Thurii.

**Milosh Obrenovitch** (1780-1860). Prince of Serbia. Of peasant birth, he was employed in the

Milosh Obrenovitch,  
Serbian prince

cattle trade by his half-brother, Milan Obrenovitch, who was already known as a patriot. Milosh, whose real name was Theodorovitch, took his brother's surname, became voivode in 1807, and distinguished himself in the rising against the Turks headed by Karageorge (*q.v.*). In 1813 the Turkish campaign to re-establish order drove the latter to take refuge in Austria, but Milosh remained in Serbia, made his peace, and was appointed voivode of Rudnik. In 1815 he raised his standard against the Turks, drove or bought them out of the country, and two years later was elected prince of Serbia, under the suzerainty of Turkey. The next twenty years were spent in developing and establishing order in the country. But in 1839 Russia, who had viewed with disapproval Milosh's independent spirit and friendliness with Great Britain, fomented an agitation which forced him to abdicate, and he lived in retirement until 1858, when, on the expulsion of Alexander Karageorge, he was again given the throne. He died Sept. 24, 1860. See Belgrade.

**Milreis** or **MILREAS** (Port. *milreis*, a thousand reis). Obsolete Portuguese gold coin nominally worth 4s. 5d. It has been superseded by the escudo (*q.v.*). The

Milreis. Obverse and reverse of obsolete Portuguese gold coin;  $\frac{1}{2}$  actual size

Brazilian milreis was a gold coin, replaced in 1942 by the cruzeiro (in 1946, 18-96 cruzeiros to the \$).

**Miltiades**. Athenian soldier (d. c. 488 B.C.). He succeeded his brother Stesagoras as tyrant of the Thracian Chersonese. When Darius I of Persia made his expedition into Scythia, and his return was overdue, Miltiades and other Greeks, who had been left behind to guard the bridge over the Danube, recommended that the bridge should be destroyed, but their counsel was overruled. The truth of this story, related in Herodotus, has been called in question. Miltiades subsequently incurred the hostility of Darius by his conquest of Lemnos and Imbros, which were subject to Persia, and when Darius determined upon war with Greece, Miltiades sought refuge in Athens.

He was chosen one of the ten generals, and when, before the battle of Marathon, opinions were divided as to the advisability of immediate attack, the bold policy of Miltiades carried the day. Under his charge the Greeks gained their memorable victory, 490 B.C. (See Marathon.) Entrusted subsequently with a force of 70 ships to carry on the war against the Persians, Miltiades attacked the island of Paros but failed, and was wounded. Indicted for deceiving the people, he was condemned to pay a fine of 50 talents (about £12,000), and, being unable to pay, was thrown into prison, where he died. He was the father of Cimon (*q.v.*). *Pron.* Mil-ty-adeez.

**Milton**. Town of Massachusetts, U.S.A., in Norfolk co. On the Neponset river, 7 m. S. of Boston, it is served by the New York, New Haven and Hartford rly. A residential suburb of Boston, it includes the villages of Lower Mills, Mattapan, and East Milton, in the Blue Hills, on whose summit 635 ft., is an observatory. Voss House, built in 1773 is preserved.

Musical instruments, artificial limbs, drugs, and chocolate are manufactured. Settled in 1636, it was incorporated as a separate township in 1662. Pop. 18,708.

**Milton**, JOHN (1608-74). English poet and writer. He was born in Bread Street, London, Dec. 9, 1608. His father, a scrivener, was Puritan in sympathy, but a lover of literature and music, and the child enjoyed all the advantages of a cultivated home. Educated at S. Paul's and Christ's College, Cambridge, on leaving the university he retired to his father's country house at Horton, Bucks. There he spent 1632-38 in arduous study, and wrote among other things the exquisite companion idylls, *L'Allegro* and *Il Penseroso*, 1633; the masque *Comus*, 1634; and *Lycidas*, 1637, an elegy on the death of his college friend, Edward King, which apart from its beauty is important because in it he first openly proclaimed adherence to the Puritan cause.

In May, 1638, he set out for the Continent, intending to spend at least three years abroad. But at Naples news reached him of civil commotion at home, and thinking it "base to be travelling for amusement" while his "fellow-citizens were fighting for liberty," he abandoned his projected tour in Greece and returned to England, Aug., 1639, to find the country on the verge of civil war. He was already meditating a great epic poem, but, laying this aside, devoted himself for 20 years almost entirely to politics and prose. His *Doctrine and Discipline of Divorce* appeared in 1643-45; *Tractate on Education* in 1644, the same year as his splendid vindication of the liberty of the press, *Areopagitica*. Immediately after the execution of Charles I he published *Tenure of Kings and Magistrates*, which established his position as the most eloquent apologist of the new regime, and he was appointed Latin secretary to the committee for foreign affairs. He continued to render assistance to the government by his *Eikonoklastes*, 1649; *Defensio pro Populo Anglicano*, 1651; and *Defensio Secunda*, 1654.

In 1652 his eyes, always weak, failed entirely and he became totally blind. Meanwhile his domestic life had been unfortunate. In 1643 he had married Mary Powell, daughter of an Oxfordshire royalist, but the union was unhappy. His wife died in 1653, and in 1656 he married Catherine Woodcock (d. 1658). Then the disaster of the Restoration drove him into

Miltiades,  
Athenian soldier

obscurity and left him an impoverished man. In his loneliness and sorrow he now turned to the poetic work which he had planned so many years before. *Paradise Lost*, "the epic of a lost cause," was published in 1667; *Paradise Regained* and *Samson Agonistes* in 1671. The principal prose works of these last years were a *History of Britain*, 1670; and a treatise *Of True Religion*, 1673. In 1663 he took as his third wife Elizabeth Minshull, whose affectionate care was some compensation for the undutiful conduct of the three daughters of his first marriage. Milton died in his house in Artillery Walk, Bunhill Fields, London, Nov. 8, 1674, and was buried in S. Giles's, Cripplegate. His widow survived him until 1727.

Milton has been described as "not only the highest, but the completest type of Puritanism," but while this may be true in respect of his personal character, as a poet he far transcended the limitations of his sect, for with the Puritan's zeal for righteousness he combined the scholar's love of knowledge and the artist's devotion to beauty. He was indeed a child of the Renaissance; his genius was inspired and enriched by its classic culture; and in form

*Joannes Miltonis* (John Milton)

After W. Easthorpe

But while Milton's art and learning connect him with the Renaissance they are turned by him to the service of a Puritan philosophy of life; as notably in *Paradise Lost*, which, technically the finest example of the classic epic in modern European literature, has as its avowed purpose "to justify the ways of God to men." His supremacy among

**Bibliography.** *Poetical Works*, ed., D. Masson, new ed., 1890; *Lives and Studies* by D. Masson, 1859-80; M. Pattison, 1879; S. A. Brooke, 1879; R. Garnett, 1890; W. Raleigh, 1894; E. M. W. Tillyard, 1930; H. Belloc, 1935; M., Man and Thinker, D. Saurat, new ed. 1944; M. and the English Mind, F. E. Hutchinson, 1947.

**Milton Abbey.** A mansion and church in Dorset, England. About 7 m. S.W. of Blandford, it occupies the site of a 10th century Benedictine abbey and of the ancient town of Milton or Middleton. In 1752 the property was bought by Joseph Damer, later earl of Dorchester, who destroyed the town, transferring the inhabitants to the present Milton Abbas, pulled down the monastic buildings, except the abbey church and the monks' refectory, a large hall with a roof of Irish oak, and built the existing mansion in 1771 on the site of the abbey, from designs by Sir W. Chambers. The old town had a grammar school, at which Masterman Hardy, Nelson's captain, was a scholar.

The abbey church is a superb 12th-14th century structure, with Perpendicular tower, flying buttresses, and many beautiful windows. It has a 15th century altar screen, an oak tabernacle, and some ancient paintings and fine sculptures. Milton Abbey is the Middleton Abbey of Thomas Hardy's *The Woodlanders*. On an eminence near by is the little Norman chapel of S. Catherine, now restored as a place of worship.

**Milvian Bridge, BATTLE OF THE.** Fought Oct. 27, A.D. 312, at the bridge of that name, sometimes called the Mulvian Bridge, across the Tiber, between the forces of Constantine and those of Maxentius. Some time before the battle Constantine, it is said, had a vision, in which he saw in the sky the cross of Christianity, with the inscription: By this conquer. There is no reliable evidence as to the date when Constantine resolved to adopt a liberal policy towards Christianity, but it is certain that in the battle his soldiery fought with the Christian monogram as their badge. The battle resulted in the complete defeat of Maxentius, who himself was drowned in the Tiber. Constantine thus became master of the Western empire, and was able to promulgate in his dominions the policy of toleration towards Christianity.

**Milwaukee.** City and port of entry of Wisconsin, U.S.A., the co. seat of Milwaukee co. The largest city of the state, it stands on the W. shore of Lake Michigan, 85 m. N. of Chicago, and is served by the Chicago and North-Western and

Milton Abbey, Dorsetshire. The abbey church, restored in 1865, and the mansion erected on the site of the old monastic buildings

By courtesy of Country Life

his work belongs to the great Renaissance tradition; for Comus is a masque of the kind which Italian influences had made popular in the aristocratic circles of the time; *Lyidas*, a pastoral elegy in the manner of Theocritus and Bion; *Paradise Lost*, an epic fashioned closely on the models of Greek and Latin antiquity; *Samson Agonistes*, a tragedy of the severe Attic type.

English poets is beyond dispute; in intellect, imagination, and creative and constructive power he is without a rival; he is our greatest master of sublimity and the "grand style"; and if his Puritanism often makes him harsh and narrow, in loftiness of moral spirit he is still unsurpassed. See Chalfont St. Giles; English Language and Literature; *Paradise Lost*.

W. H. Hudson

other rlys. The river Milwaukee and its tributaries, the Menominee and Kinnickinnie, which intersect the city, are navigable by large cargo and passenger ships, while an additional means of transport is afforded by the Great Lakes. The harbour is protected by breakwaters, its wharves extend for more than 20 m., and there is ample warehouse accommodation. Milwaukee ranks twelfth in population among U.S. cities and ninth in value of manufactured goods. Leading manufactures are metal goods, canned meat, and beer. In 1937, the city was debarred from further competition in health statistics among American cities, having received national awards regularly for 20 years. Early settlers were German emigrants from the 1848 European revolutions. A socialist mayor served continuously, 1916-40. Victor Berger, first socialist congressman, was sent to Washington in 1910, sentenced to prison under the espionage act during the First Great War, but regained his seat in 1922. Both Roman Catholic and Communist minorities have been active; these held the balance of power in 1946 in Milwaukee and combined to expel Robert La Follette, a famous liberal, from the U.S. senate by a vote of 9,000. Milwaukee, originally an Indian town, was visited c. 1760 by Alexander Henry. In 1838 it was incorporated, and chartered as a city in 1846. Pop. 578,249.

**Mimamsa** (Skt., investigation). Indian philosophical system of the Vedas (q.v.). It is divided into the Purva-Mimamsa and the Karma-Mimamsa, and the foundation of the doctrine is attributed to the teacher Jaimini. The text consists of about 2,600 *sutras*, or short concise axioms, arranged under various heads and chapters, the whole forming a criticism and interpretation of Veda doctrine, and touching many metaphysical and moral problems.

**Mime** or **Mimus**. Old form of dramatic play in vogue among the Greeks and Romans. It was a farcical, frequently coarse and indecent representation of incidents of real life, given as a popular entertainment at particular festivals. The Latin mime was described by Scaliger as a poem imitating any action to stir up laughter: the Greek form was in prose. The Greek mime originated in Sicily, its inventor being Sophron of Syracuse (c. 440 B.C.), who wrote in the Doric dialect. The Roman mimes were first put into literary shape by Laberius (105-43 B.C.) He was

forced by Julius Caesar to appear on the stage in one of his own characters, thereby losing his equestrian rank.

The ballet (q.v.) uses silent miming in combination with classical dancing. Modern themes, demanding less poetic and more rigorous and expressive form, make greater use of mime. See illus. Union Pacific, p. 890.

Milwaukee, Wisconsin. The Civic Centre of the American City

**Mimicry**. Term in zoology. Its meaning is the assumption of the characters of one animal (the model) by another individual or group of animals (the mimic). The majority of examples of the phenomenon occur among insects. The resemblance of one animal to another must be distinguished from the likeness of an animal to its surroundings, usually referred to as protective colouring. (See Colour: in Animals, p. 2446.)

The first scientific account of mimicry was given by Bates in 1862, in connexion with a group of butterflies of the Amazon valley, known as the Heliconinae, which are strikingly marked by yellow and black wings. This warning or sematic colouring has been copied by other butterflies of that region. Bates concluded that the models had offensive odours or tastes and were avoided by birds, lizards, and monkeys, whereas the mimic is frequently edible. This is often called Batesian mimicry, by which an edible, scarce, or feeble species adopts the appearance of a distasteful, abundant, or well-protected species. Other examples are the likeness of certain clear-winged moths to wasps and a cuckoo's egg to those of its foster parents.

Another type of mimicry is described by Müller (Müllerian

mimicry). He suggested that while young birds were gaining by experience a knowledge of distasteful objects, some individuals had to be sacrificed. If spread over two similar species, the experience could be obtained at a lower cost to each species. An example may be taken from the butterflies of the family of Heliconinae, of the genera *Ituna* and *Thyridia*, which are distasteful and have a common warning colouring. In this type of mimicry there is no deceit but a simplification of the lesson to be learnt by the potential predator.

Model and mimic must have the same geographical range; model must always be more numerous than mimic, otherwise the latter becomes a danger; and mimic and model must behave similarly in the presence of a predator. Tropical forests produce more examples of mimicry than other environments, because of their favourable conditions for insect life and the sharp fluctuations of light and shade.

The evolution of these mimicry patterns is a complex genetic problem, especially where it is obvious that some of the most elaborate mimetic adaptations are controlled by the action of a single gene. While this gene must have arisen spontaneously by mutation, it is fallacious to consider that the exact resemblance that it controlled did so too. A gene does not necessarily exercise the same effect on its first appearance in an animal as it does subsequently. Slow and apparently continuous modification of the mimic probably occurs by recombination and mutation of the whole gene complex, under the guidance of natural selection, whereby the most successful of the mimics survive.

A classic example in which the genetic situation has been elucidated is the polymorphic swallow-tailed butterfly *Papilio polytes*, which is widely distributed in the Orient. There are three female forms: *cyrus* resembles the non-mimetic male, *polytes* is an excellent mimic of *P. aristolochiae*, and *romulus* is very similar to *P. hector*. Where both models occur, e.g. in Ceylon, all three female forms are found; where *P. hector* is absent, e.g. in Hong Kong, so is *romulus*. A single sex-controlled dominant factor converts *cyrus* into *polytes* and another similar factor converts *polytes* into *romulus*, provided always that the first factor is present. See Darwinism; Genetics; Insect. Consult Mimicry, G. D. H. Carpenter and E. B. Ford, 1933.

E. R. Trueman

**Mimir.** In Norse mythology, guardian of the fountain of wisdom in the lower world. Odin purchased a draught from the fountain with one of his eyes, and thus was enabled to spread wisdom among men. Mimir was a hostage given by the Aesir to the Vanir, who beheaded him; but Odin uttered spells over the head that it might still advise him.

**Mimnermus** (fl. c. 620 B.C.). Greek lyric poet. A native of Smyrna, he was the first to use elegiac verse regularly for the themes of love and lament. Fragments only of his work survive.

**Mimosa.** Large genus of herbs, shrubs, and trees of the family Leguminosae, chiefly natives of America.

The leaves are twice divided into small leaflets, and are often sensitive, folding up at a touch, or under atmospheric changes. The small yellow flowers are closely packed in round heads or cylindrical spikes. The mimosas are frequently confused with the Australian wattles (*Acacia*), but no species of *Mimosa* is a native of Australia.

**Mimulus.** Genus of annual and perennial herbs of the family Scrophulariaceae. The musk (*g.v.*) is the best-known species. They are natives of America, Asia, E. Africa, and Australia, and were introduced into Britain in 1826. See Monkey-flower.

**Min.** Egyptian deity. Perhaps introduced from Punt, he was the god of fields and the desert routes, especially worshipped at Coptos and at Akhmim, whose Greek name Panopolis is due to his identification with Pan. Petrie's Coptos excavations, 1894, revealed three limestone colossi of the god, the oldest Egyptian statuary. In the

XIXth dynasty Min was absorbed by Ammon, and portrayed as a tightly swathed man with the double plume, his right arm holding a flail.

**Min.** Name of two rivers in China. One is a tributary on the left bank of the Yang-tse, which it joins near Suifu. It rises in the N. of Szechuan prov. at an elevation of 13,000 ft., and is navigable for 200 m. The other river is in Fukien prov. Including the longest of its three headstreams, it is 350 m. in length. Foochow is situated on it. Owing to the bar at the mouth, large ships can only enter the river at high tide. See China; Foochow.

**Mina.** Ancient Greek weight and money of account, varying in Asia Minor and different parts of Greece. Though not coined, the money of account equalled one-sixtieth of a talent and was worth between £3 and £4.

**Mina OR MYNAH** (*Gracula religiosa*). Passerine bird of Southern India, sometimes called the grackle or grakle.

About the size of the English black-bird, glossy black in colour, with purple, violet, and green iridescence, it has a white patch on the quill feathers of the wings, a curved orange bill, yellow legs, and behind the eye a naked, fleshy yellow excrescence which joins the top of the head. There is also a bare patch below the eye. Minas are described as fruit-eaters, but are very familiar from their habit of visiting verandahs for the purpose of feeding upon the insects that shelter there. They are easily tamed, and in addition to their natural whistling capabilities can be taught to pronounce words quite distinctly.

**Minaret.** Term used for a slender tower of moderate height, with one or more balconies, from which Mahomedan priests summon the people to prayer at certain hours. See Mahomedan Architecture.

**Minas.** Town of Uruguay, capital of the dept. formerly called Minas, but now renamed Lavalleja. It is 70 m. direct and about 80 m. by rly. N.N.E. of Montevideo. In the vicinity are marble and granite quarries. Founded in 1784, it has a pop. of 9,000.

**Minas Geraes.** Inland state of S.E. Brazil. It is bounded N. by Bahia and S. by Rio de Janeiro. The second most populous and fifth largest state of Brazil, it is

watered by the São Francisco, the Parahyba, their tributaries, and many other rivers. Mainly a forested plateau, with an alt. of 2,000 ft., it is traversed by the Sierra do Mantiqueira and the Sierra do Espinhaço, and contains Mt. Itatiaia. Manganese, gold, diamonds, and other precious stones, coal and iron are found, but not extensively worked. The chief industries are stock-raising and agriculture. The principal products are coffee beans, sugar, tobacco, cotton, rice, potatoes, cheese, and butter. Ouro Preto was the capital until 1897, when it was supplanted by Belo Horizonte. Area 221,951 sq. m. Pop. 7,556,000 including several thousand Botocudo Indians.

**Minbu.** Dist. and river port of Burma, on the Irawadi. The dist. lies between the Irawadi and the Arakan Mts. Rice and oil seeds are the chief crops. The port is on the right bank, almost opposite Magwe in the lower section of the river, where there is no rly. Dist., area 3,302 sq. m.; pop., 302,373. Town pop. 6,700.

**Minch.** Name for parts of the channel E. of the Outer Hebrides, Scotland. It consists of the Minch and the Little Minch. In the N. the Minch varies from 20 to 45 m. in width; the Little Minch, W. of Skye, being from 15 to 20 m. wide. The channel is a rift valley.

#### Minchinhampton.

Town of Gloucestershire, England. It is 4 m. S.E. of Stroud, and 12 m. S. of Gloucester. It is now chiefly residential, though one mill remains as a relic of the formerly prosperous cloth industry. The chief church is Holy Trinity, dating in part from the 13th century. From Minchinhampton Common, 660 ft. high, a fine view of the Cotswolds is obtained.

There are two golf courses. Population (estimated) 3,500.

**Mincing Lane.** London thoroughfare. Between Rood Lane and Mark Lane, it connects Great Tower Street with Fenchurch Street, E.C. Before it was half demolished by German bombs in 1940-41, it was a centre of the tea and rubber trades. Here was the hall of the Clothworkers' Company

Mimosa. Flowers and leaves of this American shrub

Mimulus. Leaves and flowers of musk, *Mimulus moschatum*

Minaret or tower of Mahomedan mosque

(*q.v.*), the garden of which, containing the tower of the old church of All Hallows Staining, was formed from the churchyard of that building. The body of the church was demolished in 1870, when its monuments were removed to S. Olave's, Hart Street. The lane is named after houses which belonged to the *mynchens*, or nuns, of S. Helen's.

**Mincio.** River of N. Italy. Issuing from the S. end of Lake Garda, it flows S. and S.E., joining the Po 10 m. S.E. of Mantua, up to which it is navigable, after a course of 116 m. Near its banks several battles were fought: Castiglione, 1796; Solferino, 1859; and Custoza, 1848 and 1866.

**Mind.** In general, the opposite of matter, more particularly, the thinking part of man, the cognitive faculty which is mainly concerned with intellectual processes. In this sense it is contrasted with soul (*q.v.*), which is mainly concerned with the various forms of feeling, volition, and emotion. The word *nous* (mind), as used by the Greek philosopher Anaxagoras in the sense of the arranging principle of the world, involved the idea of consciousness and design. The same idea appears to some extent in the monads of Leibniz. According to the modern definition, mind is a collective term, denoting the sum-total of all mental processes, which are themselves only different functions of the nervous system, especially of the brain.

In regard to the relation between mind and body (matter), there are three principal hypotheses. Dualism (*q.v.*) regards the mind as a substance existing side by side with, and independently of, the body. Its supporters argue that the essential characteristics of matter are extension, change, and movement in space, and it has never been shown how mental phenomena, the characteristics of which are unity and identity, can be produced from movement and change.

Materialism (*q.v.*) regards mental phenomena as mere bodily functions, like the digestion of food. But it is difficult to see how thought (consciousness) can be reduced merely to this, for the movements which take place in the body remain unconscious, whereas men themselves are conscious of their thoughts. The most we can say is that thought is no doubt connected with certain functional movements of the brain which are necessary to it under present conditions; but, though connected with these functions, it

is yet distinct from them. The materialist, however, argues that it is difficult to conceive a satisfactory positive notion of an intellectual substance, not merely regarding it as the negative of body. Idealism (*q.v.*) sees in bodies and external phenomena only the manifestations of intellectual beings; mind is the reality, all else is derived from it, or is appearance.

The object of mental philosophy is to arrive at a unitary conception of the aggregate of mental phenomena; but whereas the individualistic theory assumes a plurality of independent intellectual parts, by the cooperation of which a unity of the intellectual life of the world is produced, universalism regards this unity as prior in time, and the different intellectual phenomena as manifestations of a universal world spirit.

**Mindanao.** Second in importance and size of the Philippine Islands. Irregularly shaped, with a long peninsula stretching out to the W., its main portion measures about 300 m. from N. to S., and 150 m. from E. to W., while it has an area of 36,537 sq. m. It is almost cut into two parts by the bays of Iligan on the N., and Illana on the S. of the peninsula, and its shores are indented by other bays.

The surface is in general very mountainous, the loftiest summits being the active volcanoes of Apo, 10,312 ft., and Malindang, 8,562 ft. Most of the rivers are small, but the Agusan and the Rio Grande de Mindanao traverse the greater part of the island. Lakes are numerous. The climate is hot, and the rainfall heavy, the annual fall often exceeding 100 ins. The island is subject to earthquakes, a disastrous visitation in 1897 causing much damage, including the destruction of the town of Zamboanga, since rebuilt. Hemp and copra are the chief products. Timber is largely obtained, minerals are worked to some extent, and cattle rearing is carried on. The inhabitants, who number 560,000, are mostly of Malay stock, about one-third being Christians, and the majority of the remainder Mahomedans.

Japanese forces began the conquest of the Philippines in Dec., 1941, and attacked Mindanao on Dec. 20, making landings at Davao. In March, 1942, there were further landings at Zamboanga, the small garrison withdrawing into the interior of the island. Davao and the airfields on Mindanao were attacked by U.S. aircraft in 1944; but the island, heavily prepared by the Japanese for defence against

attack, was bypassed when U.S. landings were made on Leyte in October. On March 3, 1945, U.S. troops landed on Mindanao and advanced towards Zamboanga, meeting with little opposition. Davao was recaptured on May 5, and by the end of the month the remaining Japanese troops were contained in a small area in the centre of the island, where they continued to resist until Japan surrendered in August.

**Mindel.** In geology, the second of the four major glacial phases recognized in the Alps. These phases, Gunz, Mindel, Riss, and Würm, are separated by interglacial periods, when the glaciers retreated to approximately their present position.

**Minden.** Town of W. Germany, a district capital of N. Rhine-Westphalia. It is on the river

Minden arms

Weser, in hilly country some 40 m. W. of Hanover, on the Berlin-Cologne rly, and the great Midland canal. Originally a Roman settlement, seat of a bishopric from the time of Charlemagne until 1634, it founded, with Münster and Osnabrück, the Westphalian league of cities. It came under the rule of Prussia in 1848. It was the scene of a famous victory of British and allied Hanoverian and Brunswick forces over the French in 1759. (See Minden, Battle of.)

The town had a remarkable early Gothic cathedral (13th cent., with portions dating from 1065), S. Mary's (1022-36), S. Martin's (11th and 12th cent.), very severely damaged in the Second Great War. The Gothic town hall (13th) was gutted, the arcade alone surviving. Minden's industry produced chemicals, machinery, cigars, textiles, furniture, meat, and preserves; boat building, iron founding, and inland shipping were other trades flourishing. The town was cleared April 5, 1945, by the British 6th airborne div.; after Germany's surrender it lay in the British zone of occupation. Pop. (1950) 37,050.

**Minden, BATTLE OF.** Fought between the British, with their Hanoverian allies, and the French, Aug. 1, 1759. Under Ferdinand of Brunswick, a British and Hanoverian army was operating in N. Germany. Defeated at Bergen in April, it fell back before the French, who occupied Minden in July. To retire farther would have been to leave Hanover to the

mercy of the French, so Ferdinand decided to fight.

The French army, 60,000 strong, commanded by Contades, occupied a strong position to the S. of Minden, the Weser protecting one flank, and a morass the other. The British and their German allies had 52,000 men, and the engagement began when 7,000 of them were sent to cut the enemy's communications with Kassel. The French met this threat by ordering a general attack, which was anticipated by Ferdinand, who moved more troops into the threatened position, while six English, followed by three Hanoverian, battalions advanced to the attack.

In two lines they marched steadily across the plain, swept by a cross-fire from both flanks, until they were charged by the French cavalry, which they routed with a most destructive fire at close quarters. The battle was won, and the French army fell back to Minden. Lord George Sackville refused to advance with his cavalry, thus enabling the French to retreat in fairly good order. The French lost 7,000, and many guns and colours. The allies lost

2,600, half being British, of whom about 10,000 were on the field. The six Minden regiments are 12th, Suffolk; 20th, Lancashire Fusiliers; 23rd, Royal Welch Fusiliers; 25th, King's Own Scottish Borderers; 37th, Hampshire; and 51st, Yorkshire Light Infantry.

**Mindoro.** One of the Philippine Islands, ranking seventh in size. Situated S. of Luzon, from which it is separated by Verde Island Passage, 7 m. broad, it is 100 m. long by 60 m. broad, and covers an area of 3,579 sq. m., excluding several small dependent islands. Its surface is mountainous, rising in Mt. Halcon to about 8,850 ft., and extensively wooded. Calapan is the capital.

Mindoro was occupied by Japanese forces in March, 1942. While operations were in progress on Leyte, U.S. troops landed on Mindoro, Dec. 15, 1944. Meeting little opposition they advanced inland and Japanese resistance ended.

**Mindszenty, József** (b. 1891). Hungarian cardinal, central figure of a political trial arousing world-wide interest in 1949. *See* Hungary in N.V.

## MINE: SEA AND LAND WEAPON OF WAR

David Le Roi, specialist in Military and Naval Mechanics

*Here is a description of the principal types of sea and land mine used up to the end of the Second Great War, together with an account of methods used to detect them and render them inoffensive.*

*See also* Booby Trap

A mine is an offensive or defensive weapon consisting of a charge of high explosive in a metal or other container and detonated by a fuse actuated by impact, pressure, electric impulse, magnetism, or sound waves. Mines are of two main types: naval and military; the former is used either defensively or offensively, while the latter is essentially a defensive or delaying weapon.

**NAVAL MINES.** These were first used in 1573 at the siege of La Rochelle, and consisted of small barrels of gunpowder fitted with a burning fuse and allowed to drift with the tide against the investing ships. Similar mines were used by Gustavus Adolphus in 1630, when they were set adrift in rivers to be carried by the current against German-held bridges. These early mines were generally ineffective, as were the moored type used by the Americans in 1777 to protect certain of their ports during the war of Independence. Mechanically-operated mines were used by the Russians in the Black Sea operations of the Crimean war, but achieved very little success.

In 1839, Pasley invented an electrically-operated mine, and by the middle of the century such mines had been adopted by most maritime nations. Called controlled or observation mines, they were suspended some feet below the surface of the water and were used mainly for defending harbours. Fired electrically from the shore, they were detonated by the closing of a switch. This type of mine destroyed nine warships in the U.S. Civil War and took heavy toll of shipping in the Franco-Prussian war (1870), the Russo-Turkish war (1878), and the Spanish-American war (1898).

Controlled and observed minefields defending British naval bases reached a high degree of efficiency in the First and Second Great Wars. The shore station controlling this type of minefield is equipped with a chart of the minefield superimposed on a glass screen: each mine is in electrical contact with the screen, and when a hostile ship moves in the vicinity its course is registered by a spot of light crossing the screen. When the light passes the first barrier of mines, a

firing key is pressed and one or more mines in the neighbourhood of the ship are exploded. The control system is such that an enemy ship passing over the minefield is almost certain of destruction, even in darkness or fog. A breakdown in the controlled minefield at Scapa Flow permitted a German submarine to enter and sink the battleship Royal Oak, Oct. 14, 1939.

In 1900, the British navy began large-scale development of contact mines. The early types were fired on impact by means of a mercurial contact-maker and a primary battery, but proved uncertain in action. Like all hollow, submerged vessels, the mine chamber was excessively damp, causing rapid discharge of the battery, while the mercury of the contact maker oxidised and failed to function. In the Russo-Japanese war of 1904-5, contact mines sank a number of warships, but they were liable to rapid deterioration owing to the action of sea-water. In 1915 the British navy designed a new mine which eliminated previous defects. To prevent the damp atmosphere of the mine chamber from exhausting the battery, the activating liquid for the latter was contained in sealed glass tubes placed in lead horns projecting outside the mine chamber. Although numerous improvements were later made in their destructive power, contact mines used by belligerents in the Second Great War were based on the same principles as those introduced by the British in 1915.

There are various sizes and shapes of naval contact mine, the most common consisting of a barrel-shaped buoy 3 ft. in diam. and weighing 650 lb. (Fig. 1.) One half of the interior is occupied by the air chamber which keeps the mine buoyant, the other is filled with 500 lb. of T.N.T. From the top of the mine casing project the half dozen lead horns enclosing the glass tubes containing the activating liquid for the detonating battery. Immediately one of the tubes is broken by the impact of a ship, the chemical pours down upon the battery, which then explodes the mine. Sometimes the mine's radius of action is extended by having attached to one of its horns an 80-ft. rope, called a snag-line (Fig. 1.), which is supported on the surface of the water by cork floats. When a ship fouls the cable the mine is fired. Others have thin wire antennae attached to the horns which fire the mine electrically when they come into contact with a ship's hull.

Attached to the base of the contact mine is a sinker, which holds the mooring cable wound on a reel.

When the mine is dropped from a laying vessel, a plummet falls from the sinker and automatically

Mine. Fig. 1. Buoyant or moored mine: (upper diagram) resting in wheeled launching trolley which also acts as sinker and mooring device; (lower diagram) attached to a sinker, on sea bed, and floating below water level, with snagline on surface

*Courtesy of Discovery*

releases the mooring cable, which pays out and allows the mine to rise. Immediately the plummet touches the sea bed, the cable is locked on its reel, and the weight of the sinker drags the mine down to the required depth. Moored mines can be laid to any depth down to 100 fathoms (600 ft.) in tidal waters, and to considerably greater depths where the waters are tideless. Deep-laid mines are used against submarines, shallow-laid mines against surface craft.

Transporting and laying mines is a specialised branch of naval work and is done from vessels designed for the purpose. At the outbreak of the Second Great War the Royal Navy had in commission one large minelayer of 7,000 tons and some 20 smaller layers averaging 800 tons each. As hostilities proceeded, the fleet was greatly expanded by new construction and conversions. Every class of naval or merchant vessel from a battleship to a trawler can be, and has been, used for minelaying. The average naval minelayer releases 300 mines on one voyage.

Mines are stowed in the layer resting on their sinkers, which have wheels on their bases and run on rails laid fore and aft of the ship's

deck. The mines are trundled along the rails until they reach the mine traps, a series of ports cut in the vessel's stern. There they are held by "dogs" until the traps are opened, when they run down the curved ends of the rails into the sea. Submarines are frequently used as minelayers, the largest stowing about 50 in the bow and stern torpedo tubes; submarines can release mines while submerged. In 1917 the Allies closed the Heligoland Bight with 16,000 mines laid by a flotilla of submarines. In the Second Great War, submarines laid mines off Axis-occupied ports in Europe and N. Africa. Large numbers of sea-mines were also laid from aircraft, though the number that can be carried by an aeroplane is small.

During the First Great War, over 250,000 moored contact mines were laid by the various belligerents and caused more losses at sea than any other weapon except the torpedo. Some 172,000 were laid by the Allies in the English Channel, the North Sea, and the Baltic. On the other hand, the British blockade prevented the Germans from laying more than 43,000 mines, 50 p.c. of which were removed by Allied sweepers.

In the First Great War the risk of ships being sunk by moored contact mines was considerably reduced by equipping them with a self-protecting device consisting of a cable stretching from the bow to paravanes on either side. The paravanes were shaped somewhat like an elongated pear, and were set with a steering mechanism which kept the cable well spread away from the ship. As the cable came in contact with the mine's mooring wire, the danger ahead was indicated, and the ship could avoid it by altering course.

Minelfields were swept by vessels equipped with Oropesa sweeps, so called after the name of the trawler in which they were first tried during the First Great War. The Oropesa sweep consists of a kite and kite wire, a sweeping wire, an otter, and a float. The kite and the otter both comprise a square

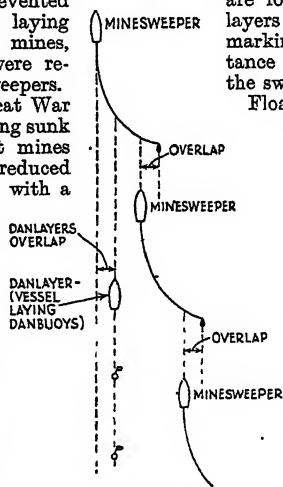

metal frame with transverse inclined planing surfaces. Kite and otter are attached by cable to the sweeper in such a way that the kite surfaces are horizontal and those of the otter vertical. The sweep wire, fitted with cutting edges or small explosive charges for severing mine moorings, is towed by the kite wire. The kite takes the sweep down to the required depth and keeps the in-board end of the sweep in the track of the minesweeper. The otter is supported at the desired depth by the Oropesa float, and is so slung that it sheers well away from the minesweeping vessel and gives spread to the sweep wire. When the sweep wire cuts the mine's mooring cable, the mine floats to the surface, where it is sunk by rifle fire.

Each sweeper pays out 600 yds. of sweep wire and sweeps a lane 250 yds. wide according to the tide. Sweepers work in flotillas and maintain a staggered formation, so that the following vessels steam well inside the swept lane of the preceding sweeper. The sweepers

are followed by dan-buoy layers which drop a line of marking buoys some distance within the edge of the swept channel (Fig. 2).

Floating mines are some-

what similar to the moored type, except that they are unanchored and drift with tides and currents. They are used for attacking ships sheltering in a harbour by allowing the tide to drift them in, or are dropped in the wake of a ship or squadron by a ship that is being chased. The floating mine is slightly heavier than the water it displaces and therefore sinks slowly. On passing the pre-arranged depth, a hydrostatic valve switches on elec-

Mine. Fig. 2. Sweeping moored mines. The vessels, equipped with Oropesa sweeps, steam in echelon, so that the swept lanes overlap. The limits of the swept areas are marked by vessels placing dan-buoys well within the limits

*Courtesy of Discovery*

trical power which drives a propeller on the bottom of the mine and causes it to rise until at a certain depth the power is automatically switched off and the mine begins to sink again.

By the Hague Convention, floating mines should become inactive one hour after they have been set adrift. International law also

Left, magnetic mine. When a steel ship passes over the mine it attracts upwards the small balanced magnet B until the opposite end is forced down and closes an electric circuit at C. A weak current is induced and, strengthened by the relay D, fires the detonator E, which ignites the explosive charge F. The mine remains harmless until the

seal A has dissolved. Right, acoustic mine. Sound waves, A, generated by a ship's propeller are picked up by the hydrophone B, and vibrate the trembler C, and the electro-magnet D, supplied by battery H. When sound waves reach a specific intensity, the trembler contacts E, closing the circuit which fires detonator F, so igniting charge G.

Mine. Fig. 3. Sectional diagrams of the magnetic and acoustic types

requires that moored mines coming adrift must automatically be rendered harmless; this is usually done by means of a switch which floods the mine and causes it to sink immediately its mooring cable snaps. The Hague Convention further provides that moored mine-fields may be laid only to protect harbours, bottle-up an opposing fleet, or confine shipping to narrow unmined channels where they can be most conveniently handled for contraband control. Moreover, the position of all permanent mine-fields must be announced by the laying power, and patrols must be maintained to prevent shipping of neutral countries from moving into mined areas.

It was because of the comparative ease with which a moored minefield could be swept by an enemy enjoying naval superiority that the Germans developed the static, or ground, sea mine in the Second Great War. A ground mine is one which rests on the sea bed and remains inactive until it is detonated by the pressure, acoustic or magnetic influence of a passing ship. Size for size and charge for charge, a ground mine is much more destructive in effect than a moored or a floating mine. Not only is the velocity of detonation very great, but the explosion gives rise to an enormous pressure impulse, which reaches the surface of the water in the form of a huge bubble of gas travelling at the speed of sound. Secondary pulses from the expansion and contraction of the bubble contribute to the destructive effect. This pressure

impulse is greater when the mine is laid on a hard sea bed than when on soft sand; the latter absorbing some of the explosion.

The first ground mine used in the Second Great War was the magnetic mine (Fig. 3) dropped from a German aircraft off Shoe-buryness in Oct., 1939. The mine consisted of a metal cylinder fitted with 700 lb. of T.N.T., and with a magnetic detonator actuated by the permanent magnetism induced in a ship's hull by the hammering that takes place during its construction. The detonating mechanism consisted of a magnetised dip-needle enclosed in a sealed container. The seal dissolved shortly after the mine was laid and the needle was wound by a helical spring until it lay horizontal, with one end free and the other suspended over an electrical contact. When a ship passed over the mine, the free end of the balanced magnetised needle was attracted upwards until the opposite end was forced down to complete the electric circuit which fired the explosive charge. In order to prevent the explosion of one magnetic mine detonating others in the vicinity, a pendulum mechanism broke a circuit when the mine received a shock. Owing to the comparatively short distance which must exist between ship and mine for the latter to be fired, magnetic mines were always laid in fairways and other shallow water.

Ships were given individual protection against magnetic mines by the device called degaussing (*g.v.*), while the mines themselves were

swept by a variety of means. The most efficient magnetic-mine sweeper consisted of a degaussed vessel towing two 500-yd. lengths of self-buoyant electric cable. Periodically, a current of 2,700 amps. was passed through an electrode at each end of the cable, thus creating a magnetic field which fired the mines over a wide area. For sweeping narrow channels in very shallow water, the towed skid was used, consisting of a raft carrying a large solenoid and towed by a degaussed motor boat. Current supplied from the towing vessel passed through the solenoid and induced a magnetic field which exploded the mines. Some success in sweeping these mines was achieved with Wellington bombers equipped with a ring of copper extending under the wings and from nose to tail. A heavy electric current passing through the ring created a magnetic field capable of setting off the mines provided the aircraft flew sufficiently low.

In 1940 the British introduced an improved type of magnetic mine which was extremely difficult to sweep. Fitted with a period-delay mechanism, it had to be swept over at least 12 times before it was detonated by the sweepers' strong magnetic field; on the other hand, it was immediately fired by the weaker field of an ordinary ship.

Acoustic mines (Fig. 3) were used by both sides in the Second Great War. When the sound waves from a ship's propeller reached the mine-casing, vibrations were set up

on the casing which were transmitted to a contact arm inside the mine and in "tremble" contact with the case. The vibrations caused the contact arm to oscillate and close an electric circuit which operated a relay to detonate the fuse and fire the charge. German acoustic mines were swept by vessels carrying an electrically-driven hammer in a steel box fitted some distance beyond the bows. The intense noise thus produced detonated acoustic mines some distance ahead of the ship. The British acoustic mine was virtually unsweepable as it incorporated a supersonic detector which could distinguish between the vibrations of a propeller and of a hammer.

One of the German defensive measures against the Allied landings in Normandy, June, 1944, was

Mine. Fig. 4. Pressure unit of a German acoustic mine (naval). Pressure created by water displaced during the passage of a ship compresses the air-filled rubber bag A, which forces air into the chamber B. As the air returns through the air leak, the metal diaphragm is lifted upwards, closing the contact switch and causing an electric impulse to flow through the firing circuit to detonate the charge

*Courtesy of Discovery*

the pressure mine (Fig. 4). This consisted of a large version of the anti-tank mine (v.i.) filled with some 500 lb. of T.N.T. and surmounted by a rubber bag filled with air. When a ship passed over the mine, the water pressure between ship and bag was increased, so causing the air inside the bag to be forced downwards into an air chamber; as the air returned through an air leak it lifted up a thin metal diaphragm, which pressed against an electrode and, completing an electric circuit, fired the charge. The pressure mine had been invented, but not used, by the British Admiralty some years previously, so that it was comparatively simple to institute protective measures. As the pressure exerted by a ship depends on its speed, vessels were relatively safe if they moved slowly over pressure-mine areas. As these mines were laid in very shallow water, they were removed by divers.

Throughout the Second Great War, Britain laid 263,088 mines, of which 56,300 were laid by aircraft of all types, including 47,250 by Bomber Command. Resultant casualties to the enemy were 1,047 warships and merchant vessels sunk and 541 damaged; 251 German sweepers were lost while clearing British mines, and a force of 30,000 officers and men was continuously employed mine-sweeping in the Baltic and off ports in occupied Europe. Britain used 1,533 vessels for sweeping German mines and lost 263 sunk; the total minesweeping personnel was 57,000. For some years after the war, flotillas of British sweepers were engaged in clearing the navy's defensive minefields; German minefields were cleared by German sweepers and crews commanded by British officers.

Of the 2,426 British merchant ships lost during the war, 296, totalling 816,255 out of 11,352,933 tons, were sunk by mines.

**MILITARY MINES.** Until the large scale use of the tank in the latter stages of the First Great War the military mine was a tunnel driven towards the enemy's defences in order to lay an explosive charge. Such offensive operations had been practised from very early times, and reached a high development in the First Great War; notably at Messines Ridge on June 7, 1917, when a series of mines containing a total of 450 tons of explosives was exploded simultaneously over a front of 7 m.

With mechanisation and consequent mobility, there were few opportunities for using tunnelled mines, and the military mine came to mean the defensive and delaying weapon rapidly developed in the Second Great War. All the belligerent armies used vast numbers of these mines, which were divided into two main types, anti-personnel and anti-tank. The anti-personnel, or jumping, mine consisted of a cast-iron, open-topped container having fixed to its inner base a ballistite cartridge. Resting on the cartridge was a second container filled with some hundreds of small steel balls surrounding a central core of explosive. Projecting from the top of the inner container were two or more antennae of thin but rigid metal connected to a firing pin in contact with the ballistite cartridge. The mine was buried in the ground so that only the antennae protruded.

Pressure of a man stepping on the antennae fired the ballistite cartridge, which discharged the

outer container some six feet above the ground. As the container left the inner casing, a trip actuated a fuse which in turn detonated the core of explosive and scattered the

Mine. Fig. 5. British Mark V anti-tank mine. Pressure of a vehicle passing over the top plate A forces down the firing pin B, which, cutting the shear wire C, fires the detonator D, so firing the charge E. E is the bottom of the case containing the charge, and G the safety pin which is inserted in the hole on top of the firing pin, so rendering the mine safe for transport; D is the housing for anti-lifting device

steel balls over a radius of some 200 yards. When time permitted and the ground was suitable, the mines were joined by trip wires attached to the antennae and lightly covered with earth; when a trip wire was disturbed a number of mines detonated simultaneously. The only effective method of breaching an anti-personnel minefield was to drive a tank through it, as the mines were ineffective against armour plating.

The principal anti-tank mines of the Second Great War were the British Mark V (Fig. 5) and the German Teller (Fig. 6). The Mark

Mine. Fig. 6. German Teller anti-tank mine. Pressure of a vehicle passing over the top plate A forces down the firing pin B, which explodes the detonator D, so igniting the charge C. C is the bottom, or base plate; F, anti-lifting device housings; G, lifting handle

V consisted of a lower, circular case of metal 8 ins. in diam. and filled with 8 lb. of explosive charge. Set in the centre of the explosive was a detonator connected to a firing pin fixed to the top of the case. Resting on the firing pin was a circular lid which acted as a pressure plate. The total height of the mine was 5 ins. The Teller mine, which worked on a similar principle, contained 11 lb. of H.E. and was 12 ins. in diam. and 3 ins. high. Anti-tank mines were buried just below the surface of the ground, and the pressure of any

vehicle, even a motor-cycle, passing over the pressure plate forced the firing pin down and exploded the charge. In normal ground the explosion made a crater up to 5 ft. in diam. and would blow off the track of a tank.

For the mining of roads, box mines were used, the most efficient being the German Hoelst. It comprised a long narrow box, 4 ft. long, 18 ins. wide, and 18 ins. deep. The lid acted as a pressure plate and forced down one or more firing pins which detonated a charge of 15 lb. of T.N.T. The mines were buried just below road level and verges in echelon, so that four or five effectively covered approaching traffic. Road mines were designed not only to destroy or disable the vehicle detonating them, but also to crater the road sufficiently to prevent its use by following traffic.

When used on open ground anti-tank and anti-personnel mines were normally laid in checkerwise rows, with an interval of five yards between mines and five yards between rows. An anti-tank minefield a mile wide and 500 yards deep contained 35,000 mines. Where a minefield was laid to defend a position and not merely to cover a retreat, it was protected by a screen of artillery and machine-guns to prevent enemy clearance parties from breaching it.

Various devices were used for the detection of mines, the most successful being the Polish sonic detector and the Russian magnetic ring. The Polish detector, which was the standard detector of the Allied armies, consists of a 6 ft. bamboo pole, having at one end a flat fibre plate fitted with two magnets. The magnets are connected by a cable through the pole to an oscillator carried by the operator, who wears headphones connected to the oscillator. When it is switched on, the oscillator emits a note of constant pitch, which alters immediately the magnets pass over buried metal. The spot on the ground was then marked by a white metal cage, and the mine lifted and disarmed by hand. The Russian detector was similar in action, except that the presence of the buried mine was revealed by the deflection of a needle across the dial of a galvanometer set in the handle of the pole.

So successful were these detectors that the Germans tried to render mines undetectable by encasing the explosive in a non-conductive material such as wood or plastic. The most efficient of these mines was the Schoe anti-

personnel mine. It was eventually defeated by using dogs trained to "point" at ground recently disturbed by the burying of mines. Over 3,000 mine-detecting dogs served with the British army.

Searching for mines with detectors and clearing them by hand was at best a slow process and exposed personnel to fire from covering troops. In 1942, the flail tank, first used at Alamein, was introduced. This was a Sherman tank having in front a roller driven from the engine. Attached to the roller were a number of lengths of chain which beat upon the ground and exploded the mines as the vehicle moved forward.

For the protection of certain permanent vulnerable points, such as railheads, the electro-pneumatic mine was introduced. The mine was buried beneath the ground and had attached to it a length of rubber tubing lightly covered with earth. Pressure on the tubing created a flow of air which depressed a diaphragm on top of the mine, so closing an electrical circuit which fired the charge.

Mines had little application to aerial warfare, and the so-called land mines dropped on the ground by aircraft were merely large time-bombs released by parachute. Efforts were made to develop aerial minefields consisting of containers of explosives suspended from balloons and released in the path of attacking bombers. Although fitted with time switches to explode them after the raiders had passed, they proved an erratic weapon and liable to drift with the wind on to the course of defending aircraft.

**Minehead.** Urban dist. and market town of Somerset. It stands on the S. side of the Bristol Channel, 25 m. N.W. from Taunton, and 188 m. by rly. from London. S. Michael's church is a fine 14th century building, with a beautiful rood loft and other features of interest. The older part of the town is built on the side of North Hill, a bold eminence which protects the lower and newer part. At Quay Town, near the harbour, there are some old houses. Minehead is a popular watering place, from which Ex-

moor, Lynton, and other beauty spots in Somerset and Devon can easily be reached. It was a flourishing port in the Middle Ages, and for a short time was a corporate town. From 1558 to 1832 it sent

Minehead, Somerset. Promenade and sands looking west Frith

two members to Parliament, and it had fairs and markets. Market day, third Mon. Pop. 7,430.

**Minenwerfer** (Ger., mine-thrower). German bomb-projector used in the First Great War, nick-named "Minnie" by British troops. The spherical bomb weighed 200 lb. and was fitted with a rod which fitted into the barrel of the projector, the missile being fired by a large ballistite cartridge. The *minenwerfer* was eventually replaced by the heavy mortar. See *Mortar*.

**Mineo** (anc. *Menaenum*). Town of Sicily, in the prov. of Catania. Situated on a hill, 21 m. by rly. S.W. of Catania, it was founded by the Sicel leader Ducetius in the middle of the 5th century B.C. Near Lacus Palicorum was the temple of the Palici, revered as the holiest place in Sicily.

**Mineral Dressing.** A term covering the operations by which mineral ores, mineralised liquors, coal, oil, etc., are treated to remove worthless or undesired fractions and brought up to an acceptable standard for further treatment, shipment to customers, or direct use. Usually these operations involve little or no alteration of the physical constitution of the valuable portion of the crude material, and are carried out close to the source, to minimise transport of gangue or tailings, as the barren part of the mined ore is termed. Besides removing gangue, mineral engineers may be asked to separate a number of high-grade products from a given ore-body or to remove an element which would interfere with smelting.

The mined ore is crushed to the point where its constituent minerals are adequately broken apart

Then the liberated fragments or minute particles (according to the grain of the crystalline interlock comprising the ore-rock) are separated into (a) concentrates (the various desired minerals in their naturally occurring form but purified from associated minerals to a predetermined grade); (b) middlings (impure concentrates but worth further treatment); (c) tailings (valueless ore-rock which is discarded).

**LIBERATION.** All that is needed in grading industrial rock required *e.g.* for use as road metal, railroad ballast, foundry limestone, is to crush and screen it into grades or sizes, measurable by reference to two rings, one large enough to allow the screened material to pass through it (undersize or *minus*), one too small for it to pass through (oversize or *plus*). Grading gives place to screening when the width of the pieces to be graded is less than about 2 ins. Industrial powders are controlled down to sizes less than one micron ( $\frac{1}{2540}$  mm.). For many industrial purposes the size of the particle determines its reaction rate, or its physical behaviour in the paint, cement, plastic, pulverised coal, cosmetic, aggregate, catalyst, abrasive, etc., in which it is to be incorporated; and an important specialised technology is concerned with such measurement down to macro-molecular sizes only discernible with an electron microscope.

In liberation in the ore-dressing sense, rock may be delivered to the dressing plant (mill, concentrator) dry; slimy with barren clay-stuffs; inert or corrosive; clean-run or diluted with country-rock which should be removed before expensive crushing is begun; and at sizes varying from several feet (12 cu. ft. go to the ton in most ores) to dust fine enough to be dangerous to health. Primary and secondary crushing is typically done dry, using fixed-path machines which in from one to seven stages bring the material to the size of coarse gravel. At the same time, slime may be removed and the rock cleaned by washing, so that when the crushed ore is displayed on belt conveyors as it travels from machine to machine unwanted timber, "tramp iron," unexploded dynamite, country rock, etc., can be picked out. This hand-picking is an important stage in the "beneficiation" of raw coal.

During crushing many millions of tons of barren rock are discarded by heavy-media separation. This is a process using a high-density fluid formed by mixing

finely ground mineral matter (barytes, ferro-silicon, galena, mill scale are some of those used) with water in such a way as to maintain a stable pool at the desired density in a tank, floating rock being withdrawn from above and sinking rock from below. The fluid density determines the splitting point and is adjusted so as to discard all rocks too light (and therefore too low in their content of the desired mineral) to be worth treating. With coal, which is lighter than its attendant shale, the opposite gravitational considerations apply.

Fixed-path crushing machines have steel faces which alternately approach, and recede from, one another and which seize and smash the stream of rock falling between them. Primary crushers bring the ore down to c. 4-in. ring. The oldest, the Blake jaw crusher, has a fixed vertical face against which a swing jaw is pressed by eccentrically actuated toggles, giving nut-cracker action. In the gyratory primary crusher, a conical steel cone gyrates inside a heavy fixed ring of steel, crushing any rock nipped between the two faces as it rolls round its fixed circle. Secondary fixed-path crushers take the ore down to  $\frac{1}{2}$  in. or  $\frac{1}{4}$  in. by dry methods. Modified gyratory crushers, rolls (a horizontal mangle), hammer mills (swinging weights revolving in a cage together with flying rock) are typical. Somewhere about the  $\frac{1}{4}$  in. size fixed-path dry crushing ceases to be economical. Finishing by wet-grinding in tumbling mills is therefore usual. These are horizontal cylinders charged with heavy rods, steel balls, or pebbles through which the pieces of ore pass and are repeatedly struck by the flying crushing bodies set in motion as the mill turns on its axis.

**SIZING, SORTING.** When the ore has been liberated at sizes down to fine shingle, if there is some difference between the densities of particles of concentrate and gangue, separation by gravity methods follows. Screens are used to "police" the crushing circuit so that as soon as a particle is small enough to pass through a screen of "liberating" mesh-opening it is removed to the concentrating section of the plant. The oversize is returned to an appropriate crusher for further comminution. Such devices lose efficiency rapidly below 20-mesh (dry) or 65-mesh (wet), at which points sorting by size is abandoned in favour of classification by settling rate through a fluid.

**GRAVITY SEPARATION.** Some minerals—notably cassiterite, the chief ore of tin—can be separated on a commercial scale only by gravity methods. Others occur coarse enough for density difference between the valuable portion and gangue of sized or sorted feeds to be exploited in suitable appliances. These minerals include diamond gravels, gold, silver, and native copper, platinum sands, tungsten, ilmenite, fluor spar, barytes, galena, blende, various iron ores, and coal. Jigging is applicable down to somewhere between 20 and 50-mesh; sluicing and treatment on shaking tables to about 200-mesh; "vanning" and "budding" below that. In jigging, sized feed runs to a series of open boxes closed beneath by a retaining grid through which water can be violently pulsed and withdrawn. Equal-sorted sands are fed into horizontal streams of water. The small heavy particles burrow down while the bigger light ones are swept by the water over a discharge weir, helped by the jerky movements of the tables.

Most of the world's engineering metal is today concentrated by flotation (*q.v.*). The history of this method begins with Herodotus, who records that Amazonian maidens fished in ponds with goose-quills sticky with tar, which brought up specks of gold. The currently used process is based on the patents of Picard and Sulman, who in 1905 connected accurate control with the use of very small quantities of chemicals to produce a selective effect on the surfaces of the desired particles of ore, and on them alone. The steps in flotation are designed to develop a water-hating film on the desired mineral while leaving all the others wet. Once the ore-pulp has been brought to this state air is bubbled through it and the desired particles climb into the rising bubbles, and ride to the top of the flotation tanks or "cells," where they form a froth gleaming with its heavy load of concentrate. This concentrate is then skimmed off, and dried ready for shipping.

**OTHER PROCESSES.** The minute quantities of gold in its ores (perhaps only an ounce in several tons) are extracted by the Cyanide Process (*q.v.*). Other hydro-metalurgical techniques include the leaching of copper and the treatment of bauxite with hot caustic solvents to obtain aluminium. Sometimes ferro-magnetic properties are exploited to separate non-magnetic from magnetic particles

as they pass through a powerful field. At the Hermann Goering ironworks non-magnetic limonite was kilned in a reducing atmosphere to produce a surface of magnetic oxide, thus permitting a low-grade bog-iron ore to be brought up to metallurgical grade. Another process is the electrostatic separation of good from bad conducting particles in a high-voltage field. Radio-active minerals can be caused to signal their presence to Geiger-Muller detectors, which relay the message into electronic

controls and cause deflecting mechanisms to remove such pieces of ore from a passing stream.

Coal-cleaning uses jigging, sluicing (the Rheolaveur process), sink-float or heavy-media separation, and tabling for its upgrading from the contaminating material mined from narrow seams by mechanical devices which in the dark workings cannot be made to discriminate between true coal and dust-coated shales. *Consult Handbook of Mineral Dressing, A. Taggart, 1946; and the Mining Magazine.*

carbonates, and silicates. These range in complexity from simple salts such as sodium chloride (halite, NaCl) to the complex molecules of many silicates, such as orthoclase (potassium aluminium silicate,  $\text{KAlSi}_3\text{O}_8$ ), the micas, chlorites, amphiboles, and tourmaline. Another very important group of minerals is the oxides, which include iron oxides (haematite, limonite), tin oxides (cassiterite), and silicon oxide (quartz). Many metallic ore-minerals are sulphides, for instance galena (lead sulphide), sphalerite (zinc sulphide); and many copper ore-minerals are complex sulphides and sulph-arsenides.

Minerals therefore fall into groups composed of native elements, oxides, sulphides, sulphosalts, oxygen salts such as the carbonates, silicates, chromates, salts of organic acids, and hydrocarbon compounds (natural oils):

An important chemical property of minerals is the phenomena of isomorphism and isomorphous substitution. Certain minerals have analogous chemical composition, e.g. the carbonates, calcite ( $\text{CaCO}_3$ ), magnesite ( $\text{MgCO}_3$ ), and siderite ( $\text{FeCO}_3$ ); these minerals possess similar crystalline form, and may form intermediate compounds, e.g. dolomite ( $\text{CaCO}_3\cdot\text{MgCO}_3$ ). Such a group of minerals is called an isomorphous series. Far more common is isomorphous substitution, where minor amounts of an element partially replace an essential constituent by virtue of a similarity of atomic size; an example of this is the small cadmium content of many sphalerites (zinc sulphide).

Although a chemical analysis is desirable, many minerals, especially the ore-minerals, can be determined by qualitative blow-pipe tests. The necessary equipment can be carried in the field and the various reactions, such as heating on a charcoal block, with and without fluxes, are often diagnostic. Another useful technique is spectrographic examination. This method is very rapid for qualitative determination and has the advantage of indicating the major constituents and also elements which are present only as traces. Unfortunately, certain elements such as fluorine and sulphur do not give a positive reaction, and others often prove difficult. For large amounts of any particular constituent, quantitative spectrography is not so accurate as chemical analysis: spectrography, however, is the best analytical technique for trace elements.

## MINERALOGY: SCIENCE OF MINERALS

J. S. Webb, Ph.D., Lecturer in Mining Geology, Imp. Coll. of Science

*A general article explaining how minerals are studied and classified.*

*Fuller descriptions of particular aspects of the subject will be found under, e.g., Crystallography; Isomorphism; Metallography; Mohs Scale; and under the various minerals*

The earth's crust and certain extra-terrestrial bodies known as meteorites are composed chiefly of different kinds of minerals, these being substances which individually have a definite or a restricted range of chemical composition and atomic structure, and, given favourable conditions, assume a characteristic crystalline form. The study, description, and classification of minerals constitute the science of mineralogy, which is, therefore, a branch of natural history, and incorporates the application of several other sciences—e.g. chemistry, physics, crystallography, geology and petrology, geography, and economic geology.

A mineral must be distinguished from a rock (*q.v.*) which is a mineral aggregate, such as coal, limestone, granite, slate. A pure natural oil and native quicksilver, however, are minerals as they possess a definite chemical composition and atomic structure. Exceptionally, the constituents of a mineral may occur in an uncrystalline or amorphous state (e.g. certain ochres), and the material is then classed as a mineral; on the other hand, natural glass, obsidian, is a rock because it contains the constituents of several mineral species, although these have not yet crystallised out.

Minerals have been of interest to man since the Stone and Bronze ages, but it was not until the end of the 18th century that the systematic study of minerals was put on a scientific basis, by Romé de l'Isle and R. J. Haüy. The precise study of crystalline form was made possible by Wollaston's invention, 1809, of the goniometer for measuring the angles between crystal faces, and many major inconsis-

tencies were cleared up by Mitscherlich's exposition of isomorphism in minerals, 1820. The vast amount of systematic descriptive mineralogy was classified by J. D. Dana and C. Hintze, whose texts remain standard works.

Mineralogy is not only a classificatory science, but has immense philosophical, social, and economic value. The occurrence and distribution of minerals containing useful metals have a fundamental bearing on ways of life and international relations; the presence of uranium-bearing minerals may be mentioned as a striking, though relatively minor, consideration in this connexion. Furthermore, the evidence of mineral occurrences and interpretations of their origin have had an important effect on the trend of theories concerning the natural history of the earth.

It is important to distinguish between those characteristics of a mineral species which are (a) essential and diagnostic, such as chemical composition and atomic structure, which determine the crystalline form, optical, electrical, and crystallo-physical (cleavage, etc.) properties, and specific gravity; and (b) those features which are not essential or necessarily consistent, such as colour, lustre, hardness, form and structure of aggregates, and occurrence.

Although chemical composition is a fundamental characteristic of a mineral species, the atomic structure, or the way in which the constituent atoms are arranged, is of equal importance. A few native elements occur as minerals, e.g. native iron, gold, copper, silver, bismuth, arsenic, but many minerals are salts of various acids, and include sulphates, phosphates,

**Mineralogy.** 1. Marcasite, showing internal radial structure. 2. Hopper-shaped crystals of salt. 3. Haematite, with nodular exterior and crystalline internal structure. 4. Dendritic pyrolusite. 5. Olivine crystal. 6. Pyrite. 7. Octahedral crystals of magnetite in schist. 8. Crystals of fluorspar. 9. Quartz crystals.

*From specimens in the Science Museum and in the Museum of Practical Geology*

Much useful information has been gained by the synthesis of minerals in the laboratory and, in recent years, by investigating the behaviour of simple chemical systems under high temperature-pressure conditions.

The nature of the atoms constituting a mineral determines its chemical composition, but the way in which these atoms are grouped together (the atomic structure) is the fundamental physical property determining many diagnostic features, such as cleavage and crystal form. The atoms of a mineral are arranged on a definite geometrical pattern in space and are held rigidly together by bonds of force. Any particular mineral can be visualised as being made up of a series of identical bricks, each composed of a certain number of atoms arranged in a similar specific manner. This brick is the smallest unit of the whole pattern or atomic structure which, when repeated in three dimensions, builds up the crystal lattice, and it is known as the unit cell. The unit cells are simple geometrical forms such as cubes, face-centred cubes, hexagonal prisms. There will be a series

of planes through any crystal lattice which will cut similar atoms at regular intervals, thus accounting for certain planar properties of crystals such as the regular crystal faces and twin planes.

Many minerals when struck break along sets of parallel planes. This phenomenon is known as cleavage and is also intimately connected with the bonding forces in the crystal lattice. The specific gravity of a mineral is a function of the atomic weight of the constituent atoms, and the closeness of their packing in the lattice. The phenomenon of polymorphism is directly dependent on the lattice. For example, andalusite, sillimanite, and kyanite have identical chemical composition, but the very

different properties of these three minerals are the result of different atomic structure. Isomorphism occurs because certain minerals of analogous composition have similar atomic structures and therefore similar properties. Isomorphous replacement occurs when one element replaces another without undue distortion of the lattice on account of a similarity in atomic size of the elements involved.

A crystal lattice can diffract X-rays. With special apparatus it is possible to take a photograph of the diffracted rays which have impinged on a mineral. The plate is seen to consist of a characteristic grouping of lines or spots, and can often be used to determine the structure of the mineral. X-ray analysis is one of the most useful specialised techniques in determinative mineralogy.

The hardness of a mineral is often a diagnostic property and can be easily estimated by comparison with a set of standard minerals.

### Optical Properties

The optical properties of transparent minerals is of first rate importance to the mineralogist, who, with the aid of a petrological

microscope, can determine such properties as refractive index, birefringence, and dispersion. These features are intimately related to the symmetry of the crystal lattice structure, and the property of a large group of minerals, of splitting up a ray of light into two refracted rays (double refraction). Minerals which possess this property are termed anisotropic; those which do not are isotropic. The anisotropic minerals are further subdivided according to the way the two refracted rays behave.

An important optical property of a mineral is its refractive indices: isotropic (cubic) minerals have only one value for the refractive index; uniaxial minerals have two (hexagonal and tetragonal symmetry), and biaxial minerals have three (orthorhombic, monoclinic, and triclinic symmetry). The refractive indices can be measured by comparison with liquids of known refractive index, using the immersion method or directly by other methods.

These optical properties are determined by microscopic examination of crushed grains or in thin section under ordinary or polarized light transmitted through the mineral. The mineral must, therefore, be non-opaque; but many minerals, especially ore-minerals, are opaque. These may be studied microscopically by using a metallographical microscope.

### Mineral Occurrence

Minerals can be classified according to the type of rock in which they occur. The characteristic minerals of true igneous rocks are quartz, feldspar, feldspathoid, mica, olivine, pyroxene, amphibole, and iron ores. The nature of the mineral assemblage determines the igneous rock-type, *e.g.* lime feldspar, pyroxene, and/or amphibole signifies a basic rock; the presence of quartz, soda, or potash feldspar with mica indicates an acid rock. The minerals characteristic of the late stages of consolidation include the ore-minerals found in veins, for instance tin-ores, with acid rocks. Rocks formed by accumulations of organic material give rise to limestones, siliceous deposits, phosphates, and coals. Metamorphic rocks, formed from pre-existing rocks, often include new minerals, *e.g.* andalusite, kyanite, staurolite, may be formed in metamorphosed slates; mica, chlorite, garnet, in schists and gneisses.

logy, A. N. Winchell, 3rd ed., 1933; Dana's Manual of Mineralogy, C. S. Hurlbut, 15th ed., 1941; Dana's System of Mineralogy, C. Palache, H. Berman, and C. Frondel, 7th ed., Vol. 1, 1944; Rutley's Elements of Mineralogy, H. H. Read, 1948.

**Mineral Waters.** Term applied to water containing saline ingredients and often carbon dioxide gas. It mostly refers to natural waters which are used in the treatment of disease, either internally or in the form of baths. Some waters, such as Apollinaris and Perrier, are only slightly impregnated with saline matter, and are on that account especially adapted for use as table waters. Comparatively free from iron, they can be mixed with whisky without discoloration. The term is also applied to aerated waters.

There are many well-known mineral waters containing sodium sulphate (Glauber's salt) and magnesium sulphate (Epsom salt) in sufficient quantity to make them useful saline aperients. This class of water has been successfully prepared artificially in Great Britain.

A number of natural mineral waters contain iron salts and are known as chalybeate. Examples are Flitwick, Beds; Harrogate; Llandrindod; Bussang (France); Spa (Belgium); Tunbridge Wells. Barium occurs in Llangammarch water; bromine and iodine in water at Woodhall, Lincs; lithium in Baden-Baden water. Other waters, e.g. at Bath, are radioactive and give off argon, helium, niton, krypton, and xenon gases. The water at Bath is an example of thermal mineral water, the temperature being 88°-120° F. Droitwich water contains about 2,712 grains of sodium chloride (common salt) per pint, and is used at a temperature of from 98° to 101° F. for muscular rheumatism and sciatica. Sulphur dioxide and benzoic acid may legally be added as preservatives. See Aerated Waters; Spa.

**Minerva** (Lat., from the same root as *mens*, mind). In classical mythology, the Italian goddess whom the Romans identified with

the Greek Athena. One of the chief Roman deities, she was worshipped in the temple on the Capitol. She was the goddess of wisdom and the patroness of all arts and crafts. After her identification with Athena she became the goddess of war, and spoils were often dedicated to her. A festival was held in her honour at Rome from March 19 to 23. See Athena.

**Minervino Murge.** Walled town of Italy, in the prov. of Bari. It is 28 m. by rly. S.S.W. of Barletta, and produces fruit, vegetables, and olive oil. There are quarries near by.

**Mines, ROYAL SCHOOL OF.** London teaching institution, founded as the Government School of Mines and of Science applied to the Arts after the Great Exhibition of 1851. By 1863 the more general courses were omitted in favour of mining, metallurgy, and geology, and the name was changed. The original buildings were in Jernyn Street, but by

1880 all departments had been transferred to premises at S. Kensington now known as the Huxley Building. When the Imperial College of Science (*q.v.*) was established as a school of the university of London in 1907, the R.S.M. became one of the three supporting colleges. In 1913 its new building in Prince Consort Road was completed and occupied. The school grants associateships in mining metallurgy, mining geology, and oil technology; since 1925 the examinations for them have become also the final examinations for B.Sc. degrees at London in those subjects.

**Minesweeper.** Vessel designed or adapted for the removal of sea mines. In the First Great War, the Royal Navy successfully used trawlers for minesweeping, supplemented in due course by a small flotilla of obsolete torpedo gunboats, whose higher speed gave them some advantage over the trawlers. By the date of the armistice, Nov. 11, 1918, flotillas formed to deal with mines comprised 110 naval vessels, mostly built during the war; 52 hired

paddle steamers; 412 fishing trawlers; 142 drifters; and 10 shallow-draught craft of special design. In four and a half years of war 214 British minesweepers were lost. Other warships sunk by mines numbered 46, plus 225 auxiliaries.

Vessels used for minesweeping during the Second Great War included those of the British Algerine design, approaching 1,000 tons displacement, with a speed of 16.5 knots; the smaller Bangor type, laid down at the outbreak of war, under 700 tons with a speed of 16 knots; and the type built in the U.S.A. under Lease-Lend displacing nearly 900 tons with a speed of 17.5 knots. All these were rated as fleet minesweepers. For inshore work there were wooden motor minesweepers, British types of which numbered two, of 250 and 360 tons respectively: both had a maximum speed of 10 knots. They were especially useful in dealing with magnetic mines. Corresponding craft of U.S. design and construction displaced a trifle over 200 tons, with a speed of 13 knots. Typical trawlers of Admiralty design used for minesweeping were of 560 tons, with a speed of 12 knots. These vessels departed considerably from the hull form used in the fishing trawler, and were in effect a minor form of warship. In clearing the Thames estuary of magnetic mines, wooden motor launches specially equipped did excellent work.

**Minette.** In geology, name of an igneous rock of the lamprophyre group (*q.v.*). It is rich in biotite mica, orthoclase feldspar, and calcite. The term is also used in an entirely different sense for the iron ores of Jurassic age occurring in Lorraine, etc. See Iron.

**Mineworkers, NATIONAL UNION OF.** British trade union of coal mine workers. The first national miners' organization in the U.K. was the Miners' Association of Great Britain and Ireland, membership c. 100,000, which lasted 1841-48. In 1888 the Miners' Federation of Great Britain, membership 36,000, was established by miners' associations of Yorks, Lancs, and Cheshire, the Midlands, Fife, and S. Wales. The National Union, representing Durham and Northumberland, came in only in 1908, making federation membership c. 600,000. With the admission of workers other than coal face workers, membership rose by 1920 to c. 900,000. The name Mineworkers' Federation of

Minerva. Antique statue in the Vatican Palace, Rome

Great Britain was adopted in 1934, and from Jan. 1, 1945, the district unions affiliated to the federation amalgamated into one union, the National Union of Mineworkers.

Important events in the history of the federation were the strike of July-Nov., 1893, against a reduction of wages, which failed, but secured virtual recognition of a minimum wage; the strike of 1912 to secure a national minimum of 5s. a day for a man, and 2s. for a boy, which ended with an Act for setting up district minima; participation in the Sankey commission, 1919, which recommended nationalisation of the mines; the strike of 1921, the settlement of which did not provide the national wage demanded, but made wages a first charge on the industry; the dispute of May-Oct., 1926, which involved the General Strike (*q.v.*).

Nationalisation of the mines in 1947, though fulfilling the miners' wishes, disappointed them in that they had less say in management than they had hoped for. The local disputes that followed had, however, no backing from the union. *See* Coal; Mining; Sankey.

**Minex.** A general purpose coal-mining explosive. It contains as explosive ingredients 8 to 11 p.c. nitroglycerine and 61 to 64 p.c. ammonium nitrate. If sodium chloride (12.5 to 14.5 p.c.) is added it functions so as to lower the temperature of explosion and to increase safety in the presence of firedamp and coal dust.

**Minghetti, MARCO** (1818-86). Italian statesman. Born at Bologna, Sept. 8, 1818, he was educated at the

Marco Minghetti,  
Italian statesman

university there. In 1846 he started a newspaper, *Il Felsineo*, which brought him such reputation that in 1848 Pius IX made him minister of public works. Espousing the cause of Italian unity, he joined the army of Charles Albert, distinguishing himself at the battle of Custoza, 1848. A friend of Cavour, he became secretary-general to the ministry of foreign affairs 1859, and from 1863 to 1864 was prime minister. Ambassador to London, 1868, and to Vienna, 1870-73, he was again prime minister from 1873 to 1876. Died at Rome, Dec. 10, 1886.

**Minho** or **Miño** (anc. *Minius*). River of N.W. Spain and N. Portugal. Rising in the N. highlands of

the prov. of Lugo, it flows through it and S.W. through Orense. It then divides Pontevedra from Intre Doura Minho in Portugal, falling into the Atlantic Ocean, S. of Guardia and N. of Caminha, after a course of 173 m. The area of its drainage basin is est. at 157,000 sq. m. It is navigable by small vessels for 25 m., to Salvatierra in Galicia. Its estuary is wide, but is impeded by a sand bar. The Sil is its chief tributary.

**Miniature.** Although the word miniature has come to connote size, i.e. portraits small enough to be held in the hand, it was derived from *minium*, the Latin word for the red lead used in illuminated MSS. for the delineation of illustrations in small size. These were doubtless at times cut out and framed separately.

Probably the French miniatures attributed to Clouet were actually cut out from MSS. Certainly at first miniatures were painted on vellum, parchment, or chicken skin, stretched upon cardboard, usually on a portion of a playing card. Thence the idea was adopted of painting actually upon cardboard and, in the 17th century, on ivory. Miniatures have also been painted on copper or silver, slate, lapis lazuli, and marble.

The greatest exponents of the art have been Englishmen, but it received ready acceptance on the Continent, and some of the best painters in the 18th century were Frenchmen or Swedes. Some of the finest miniatures were executed by Holbein (1497-1543). Following him came Nicholas Hilliard (1537-1619) and his followers and the two Olivers, Isaac (d. 1617) and Peter (d. 1647). Their works are marked by extreme attention to detail, simple technique, a striking absence of shadows, the presence, as a rule, of a bright blue background, and a masterly skill in representing costume and coiffure. Colour schemes improved as time went on, Peter Oliver using in many instances a rose-coloured curtain, or some such drapery. The Olivers were followed by Hoskins (d. 1665), a man of greater ability, who, not entirely neglecting the blue background, introduced glowing colour schemes, and painted miniatures greater in importance than his predecessors had done.

He was succeeded by Samuel Cooper (1609-72), who excelled all who had gone before, and whose work in dignity, breadth, and ability has never been equalled. The constantly repeated Walpole phrase to the effect that

a miniature by Cooper is like a life-sized Van Dyck seen through the small end of a telescope is by no means lacking in truth. Cooper's small portraits are perfect reproductions of character, painted with marvellous truth, keen insight, and striking ability. They are life-like representations, subtle delineations of complex character. His brother Alexander (d. 1660), who worked in Sweden, Denmark, and Holland, was not so great. Lawrence Crosse (d. 1724) was a marvellous painter of lace, and an interesting group of men, who should receive attention, were members of the Lens family (18th century), half a dozen of whom were able miniature painters.

#### Working on Ivory

The second great period of English miniature painting is that of the 18th century. The introduction of ivory had given fresh possibilities to the art, and revealed the chance of brilliant execution, luminous quality, and all the charm that the new material, coupled with facility of brushwork, could originate. At the head of the school stands Richard Cosway (1740-1821), a man who had no equal although many imitators, an exquisite colourist, possessed of just the right ability to flatter, coupled with the skill of representing in a few easy strokes the superficialities of the faces he had to represent.

More serious in his intention, and also more solid in his execution, was George Engleheart (1752-1829), a man of prodigious industry and extraordinary accomplishment. Of quite another sort was John Smart (1741-1811), a profound student of the human face, a draughtsman of exquisite ability and rigid perfection, but a lover of quieter and more Quakerlike colour schemes.

At another angle stand the two Plimers, notably Andrew (1763-1837), remarkable for their brilliant portraits, somewhat monotonous, and often meretricious, but vivid, palpitating, attractive. Those of lesser importance were Meyer (1735-89), Ozias Humphry (1742-1810), Shelley (d. 1808), Edridge (1769-1821), Wood (1768-1809), Scouler (d. 1810), and Grimaldi (1751-1830); and around them were the numerous miniature painters of the 18th century, whose work crowded the Royal Academy of the day. Among these were many such as Hill (c. 1770-91), Bogle (c. 1769-1803), Vaslet (*fl.* 1775), who at times could paint a minia-

ture with such extraordinary skill that the object became a *tour de force*; but these occasional portraits were like meteors, flashing across the artistic sky, and their usual productions were on a far lower level, although almost invariably artistic productions.

The 19th century saw the degeneration of miniature painting, although the works of Newton (1785-1869), Ross (1794-1860), Thorburn (d. 1885), and others are worthy of attention, but costume and coiffure were not favourable, and the period could not be termed an artistic one. In France miniature painting has had great exponents, although one of the greatest French miniature painters, Hall (1739-93), was a Swede rather than a Frenchman. French miniature art, however, attained its zenith when Isabey (1767-1855) and Augustin (1759-1832) were working. In enamel no one has ever equalled Petitot (1607-91), while Prieur (d. 1677) comes very close to him.

A number of skilful miniature painters have kept the art alive in the 20th century. The best-known are Marjorie Forbes, Bertha Fowle, May B. Lee, S. A. Lindsey, Ephraim Strellett, Norah H. Taylor, and Alyn Williams. *Consult History of Miniature Art*, J. L. Propert, 1887; *Handbook of Portrait Miniatures*, 1897; *Chats on Old Miniatures*, Foster, 1908.

**Minicoy.** One of the Laccadive Islands, Indian Ocean. It is an isolated coral atoll between the main Laccadive and the Andaman islands, and is joined with the S. group of the Laccadives to the administrative district of Malabar.

**Minim.** Smallest practical unit of liquid measurement in apothecaries' or wine measure. It is equal to one drop. There are 60 minims to one fluid drachm, 480 to a fluid ounce, and 9,600 to one pint. The minim is denoted by the symbol m.

**Minim.** Musical note consisting of an open oval head with a stem, *p*. Its time-value is one half of a semibreve (*o*) or two crotchets (*q*). It is sometimes a pulse note, especially in Church music, and its symbol in the time signature is 2. Thus  $\frac{3}{2}$  means three minims in a bar. See Time.

**Minimum Wage.** Term used to denote the sum below which the wage paid to an employee must not fall. Such a minimum

wage may be the idea of a social investigator and writer, or a condition of an agreement between a trade union and a body of employers. It may even be laid down by a wage-fixing committee established by statute, and thus be legally enforceable. It is then termed the statutory minimum wage. The idea of the minimum wage developed during the second half of the nineteenth century, partly through the growth of trade unionism and partly through the growth of the public conscience. So long ago as 1891 the British parliament passed a "fair wages" resolution, requiring government departments to see that fair wages were paid for all work done under government contracts. A much stronger resolution was passed in 1909, and a fair wages committee was appointed to devise means to carry it out. The principle of the fair wages resolution, at first applied only to government contracts, has since been widely incorporated in in-

dustrial legislation, including that relating to sugar, transport, cinematograph films, etc. In 1909 the Trade Boards Act was passed. This empowered the minister of Labour to constitute trade boards, whose main duty is to fix minimum rates of wages in industries where "no adequate machinery exists for the effective regulation of wages throughout the trade." This power was considerably extended in 1918. Trade boards now exist for more than 50 trades.

Agreements between employers' associations and trade unions normally provide for minimum rates of wages on a time basis even where piece rates are usually paid, and sometimes provide also for a guaranteed minimum weekly wage. In 1924 parliament adopted a resolution approving the principle of a universal minimum wage. The I.L.O. in 1928 adopted a convention recommending throughout the world the creation of minimum wage-fixing machinery in under-paid trades. See Sweated Labour.

## MINING: THEORY AND PRACTICE

E. J. Pryor, A.R.S.M., M.Inst.M.M., Lecturer in Mineral Dressing, Royal School of Mines, London

*Methods of choosing mining sites and of the establishing of mines, are here described. A special section of this article is devoted to coal mining. See also Geology; Metallurgy; Mineral Dressing, etc., and under minerals, Coal; Copper; Diamond; Gold, etc.*

Improved technique in geological exploration, including the use of electrical, magnetic, and mechanical methods to probe deep into the solid rock, have eliminated much guesswork from mine prospecting. Mining is always concerned with a wasting asset, and the better it is carried through in a given case the more worthless in a particular material will be the area exploited when mining ceases there. Most minefields in Great Britain have been known from ancient times, and the history of some still actively at work goes back into pre-Christian times.

It has been suggested that the Napoleonic soldier had some 50 lb. of metal behind his fighting effort, the fighter of the First Great War a few tons, and the fighter in the Second over 50 tons. Similar increase in demand has grown in civilian life. To meet it, engineers have learned how to control tremendous rock pressures, so that some mines work to a depth of two miles, or reach far under the sea. Water, which usually defeated earlier miners at fairly shallow depth, is either sealed back or handled by giant pumping systems. In place of slave labour, electricity, compressed air, gelig-

nite, and the internal combustion engine, combined with the precise skill of delicately applied chemical engineering processes, are used to break huge tonnages of rock and strip them of their useful metals.

The products of mining include engineering and precious metals, industrial and precious gems, fluorspar, barytes, sulphur, cement rock, the raw materials of some plastics, dyes and pharmaceuticals, oil and brine from deep bores, and even magnesium from sea-water. Ancillary mining processes may be important: a firm in western Canada, threatened with litigation over its sulphureous smelter fume, took to importing phosphate ore and, by chemical treatment involving the conversion of its smelter gas to sulphuric acid, produced a phosphate manure urgently needed by the agricultural community.

In the politico-economic field the mining and subsequent movement of precious metals and gemstones, notably gold, has been a vital factor in international trade. In industry a rôle no less significant has long been played by coal, and more recently, by oil.

The location, development, and exploitation of an ore deposit is

carried through in a series of well-defined stages. Economically exploitable minerals are limited, broadly speaking, to well-defined geological zones. One of the best methods of obtaining an accurate picture of the general geology of a region is by air photographic survey, which is comparatively swift and cheap, and yields invaluable topographic information and indication of geological bedding, faulting, and folding, by the skilled use of which it is possible to decide on the most likely places for examination on the ground. Magnetometric records of the variation in concentration of Maxwellian lines of force, which alter in response to the stratification and mineralisation of the upper layers of the earth's crust, can also be made from the air. Such surveys have been made by low-flying helicopter off the coast of the U.S.A. to locate potential oilfields under the sea. In addition to intensive search for mineralised outcrops by direct observation and the use of pick and pan, scientific geophysical techniques are used to chart deeply buried rock formations. In one such method a rectangular grid is roughly surveyed over a chosen area, and a special kind of radio set is carried over the grid, where it measures at a series of stations the reception of a signal from a small high-frequency dynamo at an external point. The distortions of the signal thus recorded indicate corresponding changes in the rock strata, and build up a three-dimensional picture extending in suitable cases some hundreds of feet in depth. In another method a small explosive charge is fired and the time taken for the seismic disturbance to travel to a number of selected points yields information with regard to the rocks which have transmitted its waves. In yet a third method a delicate torsion balance is used to weigh the earth's crust from point to point. Thus the existence of a large deposit of, say, ironstone, among lighter country rock is detected by its distorting effect on the local gravitational field.

Observation, combined with the use of any geophysical method suited to the terrain, having been used to its effective limit, physical entry to the deposit for the purpose of securing ore-samples becomes necessary. This may be achieved by sinking prospecting shafts which follow the ore, or by probing with diamond drills. In oil-well work, drilling has been pushed to depths

exceeding two miles. It is feasible to reach to considerable distances at any slope with the smaller tool used for hard-rock prospecting, but as the hole costs money to make and can rarely be utilised afterwards, long-range work is kept to a minimum, and when done is as

body consisted of large and rotund masses of mineralised rock. The shape of the ore-body was accurately mapped before mining started, and a system devised suited to the job, and justified by the value in the ore which the drilling had proved to exist.

Mining. Fig. 1. Isometric projection of ore bodies at Horne Mine, Noranda, Quebec  
By courtesy of the I.M.M.

far as possible vertical. An alloy-steel tube armed with diamond on its cutting edge is pressed into the rock, and rotated so as to cut a cylinder of the material through which it travels. These "cores" show the geological nature, direction, and mineralisation of the strata, and the drill-holes are accurately surveyed by the use of small cameras which take photographs of a plumbline and a compass at a given depth and thus allow the operator to correct any drift of his drill-hole. An example of the use of drilling was in the development of the Noranda mine (Fig. 1) in Quebec. Here the ore

More usually a lode or (Australian) reef is to be mined. This is characteristically a fairly narrow stratum of valuable ore traversing, vertically or steeply, enclosing walls of country rock, usually barren or too poor in value to be worth mining. Where the lode is of plutonic origin, or has resulted from deposition in a fissure of molten rock or by natural transporting agencies such as superheated underground gases or liquids, the outcrop may reach the surface and there betray its presence to the searching prospector. Characteristically the uppermost zone will be leached by the

penetration of rain and flood-water so that its minerals may be either altered or washed down and redeposited in the zone of secondary enrichment below, in which the mineralogical character of the values is frequently complex. Below the secondary zone comes the true original lodestuff, unimproved by any mineral transported from the surface. This continues till the mine "bottoms out" or "faults out" through cosmic movements which have cut off the mineralising streams from the original fissure or weakness-plane.

Of a different type are the banket (Du., a kind of pastry with almond paste enclosed in it) reefs of the Witwatersrand. These were originally bedded deposits, laid down in conformity with the alluvial stratification of remote geological times, though the manner in which their gold was introduced remains conjectural. In these reefs large quartz pebbles are embedded in a quartzite matrix in the manner of the almond paste in banket—hence their name. Such deposits are far more predictable in their behaviour and, though subject to strata-displacements by faulting, show less local variation of value than a lode.

#### Types of Shaft

When sufficient work has been done, either by drilling or entry through shafts and adits (horizontal tunnels above the drainage level), to justify a costly scheme of development, entry for miners, timber, and machines must be provided and travelling ways to enable them to reach the working faces, or stopes. These ways, in the case of a steep lode, are usually shafts; they may be vertical, so as to cross the lode at a pre-determined depth, or incline, when they are usually sunk parallel to the slope of the lode and a short distance beneath it, on its foot wall side. At least two shafts are necessary as not only must there be secondary access in case of need (fire could destroy a shaft), but one of the shafts is required as the downcast, providing fresh air to the working places, while the other, the upcast, draws the foul and dust-laden air out, with the assistance of mine fans. The two shafts are inter-connected by planned ventilation "districts."

Mining engineers make considered arrangements for the control of the mine air at all stages. As the mine deepens, the temperature rises so that in the deepest mines, such as those of Wit-

watersrand, working conditions would be intolerable were care not taken. Dry and refrigerated air is pumped down in seriously hot mines, while the expansion of compressed air from the working tools and the evaporation of water from sprays, used to wet down dangerous dust, also help to cool the atmosphere. As it is important to avoid saturation of this hot air with water-vapour, psychrometric surveys are systematically made and a definite minimum approach of wet-bulb to dry-bulb thermometer readings maintained by the ventilation engineers. The amount of ore-dust floating in the air is measured by sampling and kept below a figure dangerous to the miners' lungs by dilution with fresh air, the use of electrostatic precipitators.

#### Cross-cuts and Levels

The development roads are called cross-cuts when they take the shortest horizontal path from the country rock to the lode, levels when they run along, or parallel to, the lode. Such tunnels slope slightly downwards to allow mine water to drain toward the gathering points from which the multi-stage centrifugal mine pumps lift it to the surface. This same slope downward aids the loaded trams or trucks (of ore) or tubs (of coal) on their way to the underground loading stations. In driving the tunnels compressed-air percussive drills, working at about 80-lb. pressure, are used. In a tunnel or "drift" they are heavy tools, mounted on stretcher bars. A "round" of holes is drilled during each working shift, to a pattern which has been evolved after testing. It is so arranged that when the resulting holes are charged with blasting gelignite and fired in the proper sequence, a "cut" is first blasted out centrally, followed by "easers" and "trimmers," the last of which carry forward the drift at its proper cross section and perhaps drop the severed rock into an easy position for gathering. After a delay during which water is finely sprayed on to the blasted rock to wet down dust, and the foul air is withdrawn by ducted fans, the "muckers" clear the broken rock into trucks and remove it. This work is often mechanised by the use of a compact power-shovel mounted on a truck which gathers the rock in front of it and loads it into empty trucks behind, compressed air providing motive power.

A series of these development drives is made at intervals down

the lode (say 100 ft. apart). The ore thus opened above and below is next blocked out by "raises" or "winzes"—small internal shafts at regular intervals which cut the valuable ore body into 100 ft. squares. Samples are now cut by chipping an even groove across the exposed sides of the lode at regular intervals of, say, 5 ft., and the results are marked on an assay plan. This allows the consulting engineers to classify the blocks of ore into proved, probable, or non-profitable ore, and to plan accordingly. In Great Britain and elsewhere, public interests are protected by bodies such as the Inst. of Mining and Metallurgy, which lays down conditions that must be satisfied before they certify the known ore reserves of a given property.

By this time the final pattern of exploitation is taking shape. Roads and rlys. are being built, surface works including houses and an ore-treatment plant are going up, the general unwritten rule being that only unavoidable development expenditure shall be done until several years of proved ore reserves have been completely blocked out.

#### Examination of Ores

A certain amount of ore has been shipped to mineral dressing laboratories for thorough testing and the working out of an extraction process. This is needed because the percentage of valuable mineral in ore as mined is usually small—perhaps one to two p.c. in a copper ore, or as little as one part in a million in a gold ore. Some of the elements used in nuclear physics have no recognized minimum percentage to justify extraction. In the laboratory the extraction metallurgist uses X-rays, spectrography, microscopy, and a variety of physical and chemical tests to identify the minerals comprising the ore-complex, and to work out a suitable means of concentrating them. This is perhaps followed by a "pilot-plant" test in which some tons of mine ore are subjected to the proposed treatment, partly to ensure that no complications have been overlooked and partly to ascertain process costs and to train personnel. The plant in its final form will include equipment for mineral dressing.

Development is succeeded by exploitation. The manner in which the rock is removed, and the method of supporting the working place thus opened, depend on the shape and extent of the ore body. The problem set is one of structural engineering. As ore is taken,

A. Drilling blast-holes for shattering limestone in advance of the power shovel. B. Stripping overburden. C. Tractor-drawn scraper removing boulder clay overburden in excess of the capacity of the power shovel, and depositing it in the

dales, thus levelling the hill-and-dale formed by the power shovel. D. Cavities in the Lincolnshire limestone filled with boulder clay. E. Rock-navvy loading into wagons running on tracks laid along the top of the bared ironstone

**Mining. Fig. 2.** Diagram illustrating the development of an open-pit mine

*Drawn by Dr. W. David Evans, by courtesy of the I.M.M.*

the unsupported ceiling transfers its weight to the untouched surrounding walls which must now take the weight of an arched dome of valueless country rock. At great depths and with large stopes pressure may also cause the floor to heave, or rise, and if the pressure is not relieved the rock sustaining it bursts, perhaps with tragic and certainly with economically undesirable results. Where preliminary work has shown the shape of the ore body, a suitable extraction scheme obviates such an occurrence.

In "top slicing," layer after layer of ore is dropped downward through the main ore body while the roof of the work is allowed to cave down on to a timber mat as ore is withdrawn from below. In "shrinkage" stoping, block after block is severed and only enough ore is removed to equate the natural expansion due to breakage-voids, so that the severed ore provides its own support until the workers are safely away, after which it is run out from below. This method can be used only with steep lodes between firm walls. Various methods of achieving the same effect—temporary safety followed by reasonably clean extraction—are described in mining textbooks as overhand, underhand, breast, and rill stoping. In another technique massive deposits are tackled from below and work is progressively carried up, the space thus created being perhaps filled with waste from the surface.

An intermediate type of operation is "glory-hole" mining in which the workings are open to the sky, but the severed rock is funnelled down to a receiving shaft underground and then withdrawn by level to a shaft in the untouched country rock beyond the disturbed working zone. The diamond "blue ground" mine at Kimberley started in this way; but as the diggings deepened the problem of maintaining a safe slope on the side walls became insuperable, and work then went underground.

Open-pit mining accounts for most of the tin production from alluvial workings in Malaya and Nigeria. Where the size of the deposit warrants large-scale operation, bucket dredges are used. These consist of a continuous chain of buckets supported in a framework on a double pontoon which can be manoeuvred in its "pad-dock," or pond of water, by means of winches working head ropes and side ropes in conjunction with anchorages on land. The dredge excavates a series of swinging arcs or straight cuts forward, lifting the overburden and running it astern so as to carry its pond forward with it. When the pay-gravel is reached, it is washed into jigs or over sluices which trap the cassiterite and reject the gravel. Smaller deposits are worked by means of gravel-pumps, ground sluices, or, where conditions permit, with draglines or power shovels. A substantial percentage of the world's tin has been won

by individuals using only a pick, a shovel, and a calabash or pan.

Some of the largest mines in the world are working huge low-grade deposits of copper disseminated through porphyritic gangue. At Morenci, New Mexico, 53,000 tons of low-grade copper-ore are blasted daily; more than 100,000 tons of rock are treated daily at Bingham, Utah.

A typical open-pit mine is developed as a series of benches (Fig. 2), the uppermost ones working into the overburden and removing it, while succeeding benches handle pay-ore. The bench is drilled at intervals, and periodically blasted. Power shovels then load the severed rock into ore-trucks, either on rails or motor-powered, and take it to the crushing and concentrating plant.

**COAL MINING.** By 1800 the importance of coal to iron was fully realized in Great Britain, and the annual output of British coal, chiefly from Tyneside, had risen to 10,000,000 tons, all shallow-mined coal, the problem of dealing with underground water still proving difficult although Newcomen's first steam engine had gone into action in Staffs in 1712. Gunpowder was applied to shaft-sinking in 1770 and, following Pickard's invention of crank motion in 1780, Watt's double-acting engine (1782) and his rotary engine (1784) came into being. These gave improved efficiency and allowed shaft-winding to be mechanised, thus greatly facilitating the raising of the coal to the surface. In 1789 serfdom

was abolished in the Scottish mines. Coal gas was adapted to commercial lighting in 1798. In 1815, Davy invented the safety lamp, which substantially reduced accidents in "gassy" mines.

The 1830s saw the beginning of mining trade unions. The mechanical fan was invented and used to reduce explosions from firedamp, and cage winding was introduced. Wire rope came in in 1841, underground compressed air in 1850, and the first mines inspectors were appointed in 1850 under a new Act. The coal cutting machine was invented in 1866 and electric power was taken down the mine in 1882. Mechanisation of work in mines, indeed, owes much to British pioneer work, and comparison between the British 71 p.c. mechanisation in 1938 and that of the U.S.A. with its much higher output per man-shift ignores the fact that in Great Britain a hundred years of exploitation have exhausted the thicker seams, so that by the 1940s most British coal came from beds which Americans would hesitate to develop. In the legislative field, British landmarks were the Truck Act of 1896, the raising of the age limit to 13 in 1900 for underground employment, and the Eight Hours Act of 1908. The Coal Nationalisation Act of 1946 led to the vesting of the British industry under the national coal board on Jan. 1, 1947.

#### Working a Coal Deposit

Coal deposits are usually fairly flat, and to work them two main underground attacks are used. In one, "pillar and bord" or "room and pillar," the seam is blocked out by drives into rectangles. The coal from the drives is raised and the pillars sustain the working roof. They are then "robbed" to a safe limit, the increasing weight of rock above helping in their severance. With this method the cost of timber support is low, but coal may be left behind. A more usual method is "longwall" mining. "Retreating longwall" is used when drives from the shaft go to the farthest boundary to be worked, and the coal is then extracted along a continuous long wall close to which the miners are protected by pit-props which can be "robbed out," as the working face advances, leaving the roof to settle on to any waste filling packed back into it. "Advancing longwall" works outward from a pillar of untouched coal which is always left round the shaft to protect it from subsidence, which

might upset the smooth running of the shaft gear or endanger life. The coal is cut and loaded mechanically wherever width of seam allows and is transported either by continuous conveyor systems, rope haulage pulling the tubs, actuated by pit ponies (in obsolescent cases), or by electric, compressed-air, or Diesel locos. At the shaft coal is raised in tubs or dumped into "skips," i.e. boxes holding some tons of material and so arranged that at the pithead they automatically turn upside down and discharge their load down to surface hoppers.

Open-cast coal mines were developed in Great Britain during the Second Great War. The extent of the coal deposit is estimated by means of drills, and calorific value of the coal is found by sampling a few shallow pits. Access roads are put in and the agricultural top soil is stripped off and stacked. The overburden is removed by scrapers and bulldozers, perhaps aided by power shovels and draglines. The exposed coal seam is then picked up by excavating machines, loaded into lorries, and dispatched. When the seam has been exhausted the site is restored, its drainage is relaid, and the topsoil is reinstated. In the U.S.A. huge stripping shovels, unsuited to conditions in Britain, handle open-cast coal very cheaply. Open-cast coal is more liable to spontaneous combustion than the denser and less porous fuel from deep mines, and precautions must be taken in its storage.

Intermediate between underground collieries and open-cast coal mines are the drift mines which exploit shallow seams. Access to these is usually gained by a short incline, up and down which "rakes" of tubs are drawn.

Coal is no longer mined only by hand. Cutting machines, mechanical loaders, etc., do not discriminate between it and the shales and clays from floor, roof, and parting seams. Coal is fairly light (density 1.3 to 1.5) while the associated impurities including massive pyrite are heavier. With coal coarser than "slack" sizes—say down to between  $\frac{1}{2}$ " and  $\frac{1}{4}$ "—it is easy to use this difference in weight to separate the light from the heavy matter in jigs or special sluices, or in heavy-liquid suspensions. Below such sizes the problem of draining away the water used in such separating processes becomes increasingly difficult. Fine sizes retain over 20 p.c. of their weight of moisture even after centrifugal

drying, and this would add seriously to both the transport cost and to the user's difficulty in his combustion of washed "fines." Such small sizes are sometimes shaken dry over cloth-topped tables through which stratifying currents of air are blown to remove high-ash impurities without introducing moisture. Consult *Underground Practice in Mining*, B. Beringer, 1928; *Mining Engineers' Handbook*, R. Peele, 3rd ed. 1942.

**Mining and Metallurgy**, Institution of. British institution, founded 1892, and incorporated by royal charter in 1915. It devotes attention to both the practical side of mining and research work. At the monthly meetings from Oct. to May technical papers are read, and afterwards published in *Transactions*. The institution also issues to members a monthly bulletin. Its offices are at 225, City Road, E.C.1.

**Minion**. In printing, a type one size larger than nonpareil and one size smaller than brevier. Also known as 7-point, it runs to about 10 lines to an inch in depth. In French it is called *mignonne*; in Italian, *mignone*; in Spanish, *miñona*; in German and Dutch, *colonel*. The type called emerald in Britain, and in size between nonpareil and minion, is known in the U.S.A. as *minionette*.

**Minister**. Latin word meaning originally a servant. It is now used chiefly in two senses: (1) Members of the government are called ministers and collectively the ministry, because they are in theory the king's servants. The head of the government is the prime, or first, minister, and in the 20th century Great Britain adopted the custom, in existence in France, Canada, Australia, and other countries, of making the word the official title of the heads of certain departments, e.g. the minister of Health. A minister without portfolio was the designation of a member of the government who had no departmental duties. During both Great Wars such ministers were appointed to assist the prime minister. Ministers without portfolio were also appointed to do special duties at other times. Similar in usage is the term minister of state, used during the Second Great War to designate members of the government serving at strategic points overseas, e.g. N. Africa. Later a minister of state (Hector McNeil) was appointed to assist the secretary of state for Foreign Affairs, who was expected to be out

of London at various important conferences after the end of the war. The term minister is also used for representatives of their country in foreign capitals where the status of ambassador has not been accorded, e.g. the British minister at Sofia. (2) Men ordained for service in the churches of the Nonconformist bodies are known usually as ministers, or ministers of religion. The Church of England prefers the form clergyman. See Clergy; Prime Minister.

**Ministry** (Lat. *minister*, servant). Word used in two main senses: in religion for the whole body of clergymen or ministers of a religious body and their work, e.g. the ministry of the Church of England; and in politics for the body of ministers of the crown, both cabinet ministers and those outside the cabinet. In 1948 the ministries of the crown (as distinct from secretariats of state) were the following: Agriculture and Fisheries, Civil Aviation, Defence, Education, Food, Fuel and Power, Health, Labour and National Service, National Insurance, Pensions, Supply, Town and Country Planning, Transport, and Works. In this sense the word was used in the 18th century by Swift, Wilkes, and

and it has recently been followed in Great Britain, where almost all the new departments of state are known as ministries. The board of Education, for example, was renamed the ministry of Education in 1945. In France the word is also used for the building in which the ministry is housed. For separate ministries, see Health, etc.

**Minium** OR RED LEAD. The name given to a scarlet crystalline compound of lead. It is chiefly lead orthoplumbate,  $2\text{PbO} \cdot \text{PbO}_2$ , and is made by heating massicot in a reverberatory furnace. Minium when itself heated changes to violet and then black, but becomes scarlet again on cooling. Ignited, it is converted into lead monoxide. It is used in the preparation of flint glass and as a paint. See Lead; Miniature.

**Mink.** Name given to three closely related species of carnivorous mammals, also called vison, belonging to the weasel (*Mustela*) genus. They resemble polecats in general form, and have soft glossy fur and a bushy tail. In colour they range from yellowish to chocolate brown, and the chin is white. They are always found near water, and feed mainly on frogs and freshwater mussels, but also catch birds and small mammals. All have a particularly penetrating and disgusting odour.

The European mink is found in Poland, Finland, and in most parts of Russia; the Siberian species occurs in the districts E. of the Yenesei river; and the American

mink is widely distributed in N. America. The fur is highly valued, especially that of Alaskan specimens, and incessant trapping has made the animals scarce.

**Minneapolis.** City of Minnesota, U.S.A., the co. seat of Hennepin co. The largest city of the state, it stands on the Mississippi river at the Falls of St. Anthony, adjacent to St. Paul, and is served by the Chicago, Milwaukee and St. Paul, and other rlys. The city is pleasantly situated in a lake district which attracts many visitors. Among its buildings are two cathedrals, the university of Minnesota, and the Minneapolis

Mink. Specimen of the European species, *Putorius lutreola*

school of fine arts. The Institute of Arts has subscriptions of over \$5,000,000. The Minnehaha Park covers nearly 3,800 acres, and contains the falls familiarised by Longfellow's Hiawatha.

National pre-eminence in the wheat and flour trade began in 1880, and since 1900 one mill alone has had a capacity of 14,000 barrels of flour daily. Power for its factories is provided by the Falls of St. Anthony. A system of dams and locks, begun in 1915, have greatly increased the supply. The site of Minneapolis was visited in 1680 by Father Hennepin, who gave the Falls of St. Anthony their

others, and this use has spread from Gt. Britain to all the self-governing parts of the Empire, and to many foreign countries.

Later the word was used in another, although cognate, sense. When the various parts of the Empire obtained responsible government they, being without the historic names such as exchequer, treasury, etc., began to call their departments of state ministries. This use prevails in Canada, Australia, and elsewhere. A similar use has prevailed in France since the establishment of the Republic.

Minneapolis, Minnesota. View of the business district. On the left is the Medical Arts building, next to it the Foshay obelisk, and on the extreme right the Northwestern Bell Telephone building. Above, left, a view showing the complicated network of bridges over the Mississippi

name. Settlement began about 1847, and in 1856 Minneapolis was incorporated as a town. It became a city 11 years later, and in 1872 St. Anthony, first settled in 1837, was incorporated with it. Pop. 492,370.

**Minnesinger** (Ger. *minne*, love). German lyric poets who flourished for about 200 years from the middle of the 12th century. The earliest minnesinger developed the native lyric, associated with dancing, but about 1200 the influence of the Provençal troubadours modified the art. Like them, mainly of knightly or noble birth, the minnesinger formed a school of artificial and courtly lyric, with complicated metrical forms, but they differed from the troubadours in their more reverent, semi-religious treatment of love. Many were poets of nature, and some were political and social satirists. They composed the musical accompaniment to their own songs. Most of them were Swabians, or S. Germans. Among the most notable minnesinger—nearly 200 poets are recorded as belonging to the period—are Heinrich von Veldeke, Heinrich von Morungen, Wolfram von Eschenbach, Heinrich von Ofterdingen, Walther von der Vogelweide, Hartmann von Aue, and Neidhart von Reuenthal. The minnesinger were succeeded by the meistersinger (*q.v.*). There have been several collections of the works of the minnesinger in German; especially notable is one in five volumes by F. H. von der Hagen, 1838–56. *See* Troubadour.

**Minnesota.** River of Minnesota, U.S.A. Issuing from Big Stone Lake, on the South Dakota border, it flows for 450 m. first S.E. to Mankato and then N.E. to the Mississippi river, at Minneapolis, below St. Anthony's Falls. At high tide small vessels may ascend it for 295 m., and for steamers it is navigable for 45 m.

**Minnesota.** A northern state of U.S.A. lying to the W. of Lake Superior. The surface, mainly undulating, is marked by some 11,000 large and small lakes, including Red Lake (345 sq. m.) and Lake Itasca, from which the Mississippi river takes its rise. Other rivers include the Minnesota, Red, and St. Croix, all navigable, and utilised to supply water-power. Chiefly an agricultural state, Minnesota yields great quantities of maize, corn, and oats; the world's largest flour mills are at Minneapolis. Dairying and meat-packing are important industries, and mineral

wealth is considerable, red haematite, granite, and limestone being worked. St. Paul, the capital, and Minneapolis, the largest city, are the chief centres. The Mesabi iron range is the world's greatest iron ore district, and with the Vermilion and Cuyuna iron ranges lies in the forested heights W. of Lake Superior. Wealth from these areas reached its peak after the First Great War, and special taxation of the mining companies, fixed locally, resulted in the erection of many fine schools. The chief educational institution is the university of Minnesota at Minneapolis. The state is chiefly populated by those of foreign extraction. The small farmers and industrial workers united to form the Farmer-Labour party, which captured all but two of the state offices, and the entire Minnesota delegation to congress in 1936. This movement subsided with the approach of America's entry into the Second Great War.

Minnesota was admitted to the Union in 1858. Its area is 84,068 sq. m. Pop. 2,792,300.

**Minnow** (*Leuciscus phoxinus*). Small fresh-water fish, common in the rivers of Great Britain and of most parts of Europe. It belongs to the same genus as the roach and dace, and is distinguished from them by the broken line which runs along each side of the body. It varies in length from three to six inches, and is largely used as bait in angling for larger species.

**Minoan.** Name given to the pre-Hellenic civilization of Crete, also called (together with that of Mycenae) Aegean. *See* Aegean Civilization; Crete.

**Minor.** In law, a person under 21 years of age. In English law the term infant is used in this sense. In Scotland a child is a pupil up to 14 (boy) or 12 (girl), then a minor up to 21. *See* Infant.

**Minor** (Lat., smaller). In music, a term applied to those intervals of the 2nd, 3rd, 6th, and 7th which are less by a semitone than the corresponding major intervals. As commonly used in connexion with scales and keys, both major and minor in their signification are obviously absurd; they are merely brief and convenient ways of referring to the scale or key with the larger or smaller 3rd and 6th which dif-

ferentiate the one from the other, and replace the older expression, "In the key of C with the greater (or lesser) third."

**Minorca** (Sp. *Menorca*). Second largest of the Balearic Isles in the Mediterranean, belonging to Spain. So called from its being smaller than Majorca, the largest island in the group, it is 25 m. to the N.E. of the latter. It is 35 m. in length, with an average width of 10 m. and an area of about 290 sq. m. The coast is indented and rocky, and the surface hilly; the highest point, near the centre, rises to 1,206 ft. Cereals, wine, oil, oranges, lemons, figs, almonds, and flax are grown; iron, copper, lead, slate, marble, alabaster, etc., mined. Cattle and horses are reared. A good road, built by the British when they were in occupation in the 18th cent., runs from Ciudadela to Port Mahon. The island is rich in stalactite caves, megalithic remains and ancient towers (talayotes), and other sepulchral monuments. Minorca, which had been in government hands since the beginning of the Spanish Civil War, surrendered to Gen. Franco on Feb. 9, 1939, the act of capitulation being signed on board the

Minnow. Small fresh-water fish common in British rivers

British cruiser Devonshire, which provided the only neutral place available for the negotiations. The Devonshire evacuated a number of Republicans, and while leaving the port was unsuccessfully attacked by Italian aircraft operating from the Nationalist base on Majorca. Pop. 45,700. *See* Balearic Isles.

**Minorca Fowl.** Breed of domestic poultry supposed to have originated in the island whose name they bear. In reality they appear to be merely a red-faced variety of the white-faced Black Spanish breed, from which they differ also in the shorter and stouter body, shorter shanks, and larger combs. Though champion layers of large eggs, they cannot be prevailed upon to sit. *See* Fowl, colour plate.

**Minories, THE.** London thoroughfare. It runs S. from Aldgate High Street to Tower Hill, E.C., and derived its name from the abbey of the Minoreesses of S. Mary of the order of S. Clare. On the abbey site was built the old parish church of Holy Trinity, rebuilt in 1706, and dismantled in 1899, when the parish was united with

that of S. Botolph, Aldgate. In a vault S. of the altar in 1851 was discovered, in tannin, the head, since preserved at S. Botolph's, supposed to be that of Edmund de la Pole, duke of Suffolk, executed 1513, or of the father of Lady Jane Grey, Henry Grey, duke of Suffolk, executed 1554. Between the 16th and 18th centuries a centre of the gunsmith trade, the Minorities became a Jewish quarter. The thoroughfare figures in Defoe's *Journal of the Plague* and in Dickens's novel, *Domby and Son*. *Pron.* Minnoriz.

**Minor Interval.** In music, an interval containing one semitone less than a major interval of the same degree. Thus, C-E, a major 3rd, contains 4 semitones, while C-E flat, minor 3rd, contains 3 semitones. The minor triad is the sounding together of a note, its minor 3rd, and its perfect 5th, e.g. C-E flat-G.

**Minorites.** Name adopted by the early Franciscan friars as an indication that they wished to be regarded as less than the other religious orders. The female branch of the order, founded by S. Clare about 1212, adopted the name of Minorettes. They are now commonly known as Poor Clares, but the old name still survives in the Minorities, London, where they had a convent. *See* Franciscans; Poor Clares.

**Minorities.** A political and ethnological term much used after the First Great War. It generally describes numerically inferior sections of the people embraced by one community, usually a state, and their specific legal claims. Though long existing, this problem was raised to the level of international legislation by the assertion of the right of self-determination for each distinct people, proclaimed during the First Great War, and by a number of articles in the Paris peace treaties. Thus were established certain rights for minorities, racial, linguistic, or religious. The League of Nations, entrusted with the supervision of these obligations, as well as a number of others undertaken in special treaties, e.g. between Germany and Poland, Austria and Czechoslovakia, Sweden and Finland, Greece and Turkey, Greece and Bulgaria, etc., had a special commission of its Council to deal with this problem.

In fact, with the exception of Portugal, Norway, and possibly Holland, all European countries had and have minorities; they

exceed 10 p.c. of the total population in France (Alsations of German language, Basques, Bretons, Flemings, Italians), Greece (Macedonians, Bulgars, Jews, Turks), Yugoslavia (Hungarians, Germans, Macedonians, Albanians, Turks), Poland in 1939 (Ukrainians, Germans, Jews, Ruthenians), Rumania (Hungarians, Germans, Jews, Ukrainians, Bulgars, Poles), Spain (Catalans, Basques, French, Gipsies). Czechoslovakia and Hungary solved their minorities problem summarily after the Second Great War by expulsion, as, also, to some extent, did Yugoslavia and Poland.

Historically, the struggle for minority rights started in the early 19th cent. with such conflicts as those of the Macedonians against the three states embracing them, the Finns, Poles, and Balts against Russia, and the Slavonic peoples in the Hapsburg monarchy against Austrian or Hungarian domination. From the linguistic point of view Great Britain has a minority with special claims in the Welsh movement.

A congress of nationalities, first established at Geneva in 1925 and representing about 30 different groups from several European nations, endeavoured to develop and assimilate the minority rights so far granted. The dictatorships used the minorities as means of irredentist agitation, e.g. Italians in Nice, Corsica, and Savoy, and Germans in Sudetenland, Danzig, and Memel, while oppressing the minorities within their own borders. The United Nations charter, while not expressly mentioning them, contains provisions evidently meant for the reinforcement of minority rights.

**Minor Planets.** A group of planetary bodies numbering over 2,000, the orbits of which lie between those of the planets Mars

and Jupiter, for the most part nearer to Mars. *See* Asteroids.

**Minos.** In Greek legend, king and lawgiver of Crete. He was the son of Zeus by Europa, brother of Rhadamanthus, and father of Deucalion, Ariadne, and Phaedra. His wife was Pasiphaë, daughter of Helios, who brought forth the Minotaur, which was slain by Theseus. When Daedalus fled from Crete, Minos pursued him to Sicily, where he was killed by Cocalus.

The foregoing, which is the version of the legend in the ordinary accounts, represents Minos as a monster of cruelty. Other accounts represent him as an able monarch, who made Crete a great maritime power, cleared the seas of pirates, and by wise legislation promoted the welfare of his subjects. After death Minos was made one of the judges of the dead in Hades. Recent archaeological discoveries throw remarkable light on the legend. The labyrinth, i.e. house of the double axe, which, like the bull, was the object of a cult at Cnossus, is probably the great palace there, with its intricate passages. A wall-painting of the Minoan age represents a bull tossing boys and girls. Both Athens and Sicily came under Minoan influence. *See* Aegean Civilization; Daedalus; Theseus. *Pron.* Mynoss.

**Minot, GEORGE RICHARDS** (b. 1885). American physician. Born Dec. 2, 1885, at Boston, Mass., he graduated at Harvard in 1908, and worked at the Massachusetts general hospital, 1915-23. In 1928 he was made professor of medicine at Harvard and director of its medical laboratory. There, with W. P. Murphy and G. H. Whipple, Minot found and developed the liver treatment for pernicious anaemia. It brought them the Nobel prize for medicine in 1934 and to Minot a year earlier the Moxon medal of the R.C.P., London. From 1926, when these experiments first became known, innumerable cases of pernicious anaemia were successfully treated with raw liver and compounds. Minot published *On Blood and its Disorders, and Dietary Deficiency*.

**Minotaur.** In Greek mythology, a monster with the head of a bull and the body of a man. It was the offspring of Pasiphaë, wife of Minos, king of Crete, and a bull sent to Minos from Poseidon the sea-god. The monster was kept in a labyrinth constructed by Daedalus (q.v.), and a yearly tribute of seven youths and seven maidens from Athens was given it to devour. Theseus however, came

Minotaur. Sculpture representing Theseus slaying the Minotaur, by G. Ramey  
Louvre, Paris

with one contingent of youths and maidens, and with the help of Ariadne slew the monster and found his way through the labyrinth. See Ariadne; Theseus.

**Minsk.** Capital city of White Russia S.S.R., and the headquarters of a region named after it. Minsk stands on the Svisloch, a tributary of the Beresina, and is a junction for rlys. from Poland to the R.S.F.S.R. and from Lithuania to Ukraine. It is about 300 m. N.E. of Warsaw and 270 m. N.N.W. of Kiev. There is a university, and normally a trade in flax, hemp, corn, timber, and leather. With recorded history from the 11th century, Minsk has been held by Lithuanians, Poles, Tartars, and Swedes; was destroyed by Napoleon in 1812; fought over by Bolsheviks and Poles in 1920; and seized by German troops, June 30, 1941, to be liberated by units of the White Russian Front, July 3, 1944. Pop., pre-war, 238,772.

**Minster** (Lat. *monasterium*, monastery). Term originally applied to a church to which a monastic fraternity was attached, as at Sherborne, Wimborne, and Beverley minsters. Now it is more loosely used for the principal church or the cathedral of a city, e.g. York Minster. The corresponding German term Münster is employed for cathedrals in the Protestant cities of Switzerland and the Rhineland. See Cathedral.

**Minster** OR **MINSTER-IN-SHEPPEY.** Village of Kent, England. It is on the island of Sheppey, 3½ m. S.E. of Sheerness, with which it is connected by a light rly. S. Mary's church, part Saxon, is a fine building. Of a convent here in the Middle Ages there are some few remains. Oysters are cultivated, and Minster is visited by pleasure seekers. Pop. 3,782.

**Minster** OR **MINSTER-IN-THANET.** Village of Kent, England. It is 4 m. W. of Ramsgate, with a rly. station. S. Mary's church has beautiful Norman and E.E. work, the nave, tower, and miserere stalls being notable. About 700 a monastery was founded here, and later another was dedicated to SS. Peter and Paul. Both were destroyed by the Danes, and the present church is the successor of the one belonging to the older monastery. Population 3,198.

**Minster Lovell.** Parish of Oxfordshire, England, on the river Windrush, between Witney and Akeman Street. The ruined moated manor house is said to

have been built by William, 11th Baron Lovel, and there is a legend that his descendant, Francis, 13th baron and 1st Viscount Lovel, a Yorkist, died of starvation in a secret chamber while hiding after

Minstrels' Gallery in the nave of Exeter Cathedral, an example of 15th century work

the battle of Stoke in 1487. A skeleton, believed to be his, was found in a walled-up room in 1708. The manor house was bought in 1946 by the duke of Norfolk. The 15th century Perpendicular church was once a cell to the French abbey of Ivry. It contains interesting monuments and brasses and was restored about 1865.

**Minstrel** (old Fr. *menestrel*, one who ministers). Singer or performer on a musical instrument, or both, in the Middle Ages. Corresponding with the Anglo-Saxon scop or gleeman, of whom Widsith (*q.v.*) was a type, the minstrel proper, or jongleur, came to England at the Norman conquest. Minstrels were at first executants rather than poets, though they might be both. Frequently a company of minstrels attended on a troubadour to render his work. Their popularity may be gauged from the frequency with which they were depicted in manuscripts, and by the minstrels' gallery (*v.i.*).

Minstrels were largely the retainers of noble families, and those unattached were welcome guests at the houses of the rich wherever they wandered. The decline of chivalry, the spread of printing, and probably also the rise of the drama, combined to bring about the decline of the minstrel, and he drifted into one of the wandering classes treated as vagabonds and beggars in the time of Elizabeth. In the remote parts of the country the minstrel lingered on for some time, and Scott in *The Lay of the Last Minstrel* shows his minstrel singing of Border chivalry as late as the reign of William III. Consult English Wayfaring Life in the

Middle Ages, J. J. Jusserand, Eng. trans., 1891; History of English Poetry, Courthope, 1895-1910.

**Minstrels' Gallery.** In the medieval mansion, a gallery or balcony (*q.v.*) projecting into the hall (*q.v.*), for the use of the professional minstrels attached to the household. Underneath was usually a passage, screened off, and communicating with the kitchen and buttery. The gallery was a common feature of Plantagenet and Tudor halls, and good examples remain at Oxford and Cambridge.

**Mint** (*Mentha*). Genus of perennial herbs of the family Labiatae, widely distributed outside the tropics. They have creeping rootstocks, square stems and branches, pungent aromatic leaves, and purplish flowers in whorls. Ten species are recognized as natives of Great Britain, of which the most important are peppermint (*M. piperita*), yielding the essential oil of the same name (*q.v.*); pennyroyal (*M. pulegium*); spearmint or lamb-mint (*M. spicata*), grown in gardens for making mint-sauce, and yielding oil of spearmint. Menthol is obtained from *M. arvensis*. A supply of green leaves may be obtained through the winter by maintaining the plants in a temp. of 60°F.

Mint. Flowers and leaves of water mint

**Mint** (Lat. *moneta*). Government office where money is coined. The British mint dates from Anglo-Saxon times, when mints were scattered all over the country. Gradually their number was reduced, until early in the 18th century all coins for the three kingdoms were minted in London. The present building of the Mint on Tower Hill was erected in 1810. From 1851, when complete control was taken over by the government, to 1870 the master of the mint was a permanent officer, discharging his duties in person. By the coin-

Mint. Processes of coining silver in the Royal Mint. 1. Crane carrying a glowing crucible of molten metal to the mould. 2. Pouring molten silver into the bar moulds. 3. Silver-coinage bars being weighed after leaving the mould. 4. Punching machine which produces plain metal disks. 5. Coin-press operator: at this machine disks are turned into coins. 6. Finished coins passing along an endless belt, closely scrutinised by examiners

age Act of 1870, the mastership of the mint was vested in the office of chancellor of the exchequer, without emolument, all duties to be performed by a permanent head of the department under the title of deputy master. Earlier Sir Isaac Newton was master of the mint, and made much money by contracting for the supply of coins. There are branches in Australia at Melbourne and Perth.

The method of manufacturing gold and silver coin at the Royal Mint, London, is approximately as follows: The refined metal is melted in plumbago crucibles and poured into iron moulds. The bars thus formed are passed between cast-iron or steel rollers until they are of the requisite thickness, being kept soft by annealing. The weight of the flattened bars called "fillets" is tested on disks punched out of each fillet by the "tryer," who decides whether they are within the "remedy," i.e. the small margin within which coins in minting are permitted to vary from the standard weight.

After the trial disks have been passed the fillet is put through the

cutting machine, in which two steel cylinders, driven by an eccentric, punch out from the fillet disks known as blanks and force them into two holes in the bed of the machine, the fillet being pushed along automatically until all the blanks are cut out. The metal left over, known as scissel, is remelted. The blanks are then marked, i.e. the edges are thickened so as to form a rim, and the diameter reduced by being placed between a revolving steel plate and a fixed block. Formerly the edges were marked with an inscription. After being annealed, the blanks are washed in water and dried in sawdust, the oxide of copper deposited on the silver blanks being then removed with hot dilute sulphuric acid.

The blanks then go through the coining press, a modified form of the original Uhlhorn lever press. Each is placed on a fixed engraved die and subjected to pressure from another engraved die, being held meanwhile in a collar which produces the crenated (milled) or engraved edge—a precaution against clipping or filing. The

blanks, having received the necessary impressions from the dies and collar, are now coins. After being rung the finished coins are weighed on the automatic balance, a modification of that designed in 1843 by William Cotton, deputy governor of the Bank of England. Any too light or too heavy are remelted. Sample coins are collected in a pyx or box, and annually weighed and assayed by the Goldsmiths' Company—the test being known as the trial of the pyx. The crown alone has, through parliament, the prerogative of coinage. *See* Coinage; Numismatics.

**Minto, GILBERT ELLIOT, 1ST EARL OF (1751-1814).** British administrator. The eldest son of a baronet of Minto, Roxburghshire, he was born in Edinburgh, April 23, 1751, and educated at Fontainebleau, Edinburgh, and Oxford. He was called to the bar at Lincoln's Inn, 1774, and in

1st Earl of Minto, British administrator

Minton Ware. Vase, about 1860, from the Herbert Allen Collection  
Victoria and Albert Museum

1776 was returned to parliament for Morpeth. During 1777-84 he represented Roxburghshire. At first a Whig, he joined the opposition in 1782. He helped Burke in framing the case against Warren Hastings and Sir Elijah Impey. In 1790 he was returned M.P. for Helston, and was viceroy of Corsica, 1794-96, and governor of India, 1807-13. Created earl of Minto and Viscount Melgund in 1813, he died at Stevenage, June 21, 1814, and was buried in Westminster Abbey. *Consular Life and Letters*, 3 vols., 1874, edited by his great-niece, the countess of Minto.

**Minto**, GILBERT JOHN ELLIOT-MURRAY-KYNNYMOND, 4TH EARL OF (1847-1914). British administrator. Born July 9, 1847, son of the third earl, whom he succeeded in 1891, he was educated at Eton and Cambridge, and joined the Scots Guards in 1867, retiring in 1870.

He served with the Turkish army, 1877, and with the British in the Afghan War, 1879, was private secretary to Lord Roberts at Cape Colony in 1881, and was a volunteer in the Egyptian campaign, 1882. Military secretary to Lord Lansdowne, the governor-general of Canada, 1883-85, he was chief of the staff to the government forces in the rebellion of 1885. Minto was governor-general of Canada, 1898-1904, and during 1905-10 viceroy of India, where his contribution to history was made in the Morley-Minto reforms. He died March 4, 1914, and was succeeded in the peerage by his son,

Victor, Viscount Melgund (b. Feb. 12, 1891). A memoir by John Buchan appeared in 1924.

**Minton Ware**. Soft and hard paste porcelain were made at Stoke-upon-Trent. The Mintons were making semi-transparent china in 1790. In 1825 they reverted to a white-bodied earthenware, with printed design and a new borax glaze. After further experiments they produced both soft and hard paste porcelain, artistic in design and decoration. Parian ware was also made. The Mintons also introduced encaustic tiles in various styles, majolica, Palissy ware, and admirable della Robbia plaques and panels, all remarkable for the excellence of body, design, colouring, and the permanence of the non-poisonous glazes. *See* Pottery.

**Minucius Felix**, MARCUS. A Latin writer and Christian apologist. A lawyer, he practised in the Roman courts. His only known work is the *Octavius*, a dialogue between a Christian and a pagan, at the end of which the pagan announces himself converted. The Christianity expounded by Minucius is of broad type; apparently he wrote to influence the educated of his time, to whom he presents Christianity rather as a system of philosophy than as a religion. The author's nationality and the date of the *Octavius* are uncertain.

**Minuet** (Fr. *menuet*). Dance for two persons in three-four time. It originated in Poitou, and was developed from the courante (*q.v.*), being more ceremonious and stately than that dance. It was introduced into Paris in 1650, shortly became the most important dance of the court, and has ever since been regarded as the highest form of dancing. There were four variations upon the original dance, the one most used being *Le Menuet de la Cour*. As a musical composition the minuet occurs in suites of Bach and Handel, and in symphonies of Haydn and Mozart where it is the forerunner of the scherzo. *See* Dancing.

**Minuscule**. Term applied to the letters of the small cursive writing which the monks of the 7th-9th centuries developed out of the

previous uncial characters, which are larger and like modern capitals. From the minuscule script were evolved the modern small or lower case letters, called minuscules. *See* information under each letter of the alphabet.

**Minusinsk**. Town of Siberia. In Krasnoyarsk territory, R.S.F.S.R., it is 165 m. S.S.W. of Krasnoyarsk, on the Yenesei R. Terminus of a branch rly. from the Trans-Siberian main line, it is served by steamer. There are tallow boileries and tanneries, and trade in corn, cattle, and gold washings. The Minusinsk basin is a rich coal-yielding area.

**Minute**. In the measurement of time, the sixtieth part of an hour. Minute is also the term for the sixtieth part of a degree of a circle, *i.e.* a minute of an arc, and in architecture the sixtieth part of the diameter of the shaft of a classic column. The minute of arc and the minute of time both contain 60 seconds, and the usual abbreviation for the word is the mark '. *See* Degree; Hour; Time.

**Minute-Men**. Popular name given during the American War of Independence to the militia men who pledged themselves to take the field at a minute's notice. A

Minute-Men. Stone erected at Lexington, Mass., marking the line occupied by the minute-men at the first engagement in the War of Independence. It is inscribed with the words of their commanding officer, Captain J. Parker

bronze statue, The Minute Man, by a Concord sculptor, Daniel French, representing a farmer still at the plough, but grasping a flint-lock musket, stands at one end of the North Bridge at Concord, Mass., which was the first place on which the British marched. *See* Concord, Battle of; Lexington, Battle of.

**Minutes**. Business term for a summary of the proceedings of the meetings of a company, committee, or other body of persons acting in a joint capacity. The record is put down in a minute book by the secretary, and the custom is that

at every meeting the minutes of the last meeting are read before other business is proceeded with. If accepted as a correct account, the minutes are then signed and passed, and a continuous record of the transactions of the company or society is kept. By the Companies Acts, limited companies must keep minutes of their general meetings and of those of their board of directors. In the U.K. a Treasury minute is the name given to an official memorandum issued from the Treasury.

**Minya.** A province in Upper Egypt. With an area of 782 sq. m. and pop. 928,259, it takes its name from a town on the left bank of the Nile, 140 m. S. of Cairo. This town has 51,026 inhabitants. There are several variant spellings of the name.

**Minyans.** Primitive seafaring race of the Mycenaean age of Greece. They were established at Orchomenos, in the marshy basin of the Copais, and farther north at Iolcus, under Mt. Pelicon, whence Jason sailed for the Black Sea in quest of the Golden Fleece.

**Miocene** (Gr. *meiōn*, less; *kainos*, recent). In geology, the period between the Oligocene and Pliocene systems of the Cainozoic or Tertiary era. It probably occurred between 15 and 35 million years ago. There are no deposits of this age in Great Britain, but elsewhere in Europe and America they are important, particularly in Switzerland, where the Molasse deposits were derived from the erosion of the Alps as they were being uplifted and thrust northwards. The Miocene was a period of great earth movements; then came the major folding of the present-day European and Asiatic mountain ranges—Alps, Caucasus, Carpathians, Balkan and Dalmatian Mts., Himalayas. These movements being felt in England were recorded by the folding of the Wealden dome and the London and Hampshire basins. On the W. coast of America the Miocene was a period of intense volcanic activity.

The temperate climes were undoubtedly much warmer than at present, striking evidence being the formation of Miocene coal deposits in Greenland. The mastodon, dinotherium, rhinoceros, etc., were among the larger animals of the plains, and also an early ancestor of the horse, the three-toed protohippus, and hippotherium. The lower Miocene beds of Kenya have yielded fossil remains of primates, including the jaw (found in 1946) of the species *Proconsul*

which in some respects resembles a human jaw more closely than that of a modern ape, and may indicate that the common ancestor of man and the apes is to be found in Africa. See Horse; Pliocene.

**Mjøsen** or **Mjösen.** Largest lake of Norway. It is situated about 38 m. N. of Oslo, and extends about 60 m. in a N. direction. Its width varies from 2 m. to 10 m., and its maximum depth is 1,480 ft. The Lougen river flows into it, and it discharges into the Glommen by the Wormen. It contains a fertile island, 10 m. round.

**Miquel, JOHANNES VON** (1829–1901). German statesman. Of French descent, he was born at Neuenhaus, Hanover, Feb. 19, 1829, and studied law at Göttingen and Heidelberg. He was

J. von Miquel,  
German statesman

elected to the Hanover diet in 1864. He was on the governing body of the Diskontogesellschaft in Berlin, 1870–73, was a leading member of the National Liberal Party in the Prussian chamber of deputies, 1867–82, and entered the Reichstag in 1887. From 1890 to 1901 he was Prussian minister of finance, chosen by William II. In 1897 he was raised to the nobility and made vice-president of the Prussian ministry. Opposed by Bülow, he resigned office, and died at Frankfurt Sept. 8, 1901. *Prom. Mee-keel.*

**Miquelon, GREAT AND LITTLE.** Islands off the S. coast of Newfoundland, forming, with the St. Pierre group, an overseas territory of the French Union. The is. are connected by a strip of sand, 5½ m. long, and have an area of 83 sq. m. (with the St. Pierre group, 93 sq. m.). Barren and rocky, they support a declining cod-fishing industry. St. Pierre is the capital. Between 1713 and 1816 they were four times appropriated to England and as often restored to France. Adm. Muselier of the Free French landed on Dec. 24, 1941, dismissed the governor, a Vichy partisan, and announced the adherence of the group to the cause of Free France. Pop. 550.

**Mira.** In astronomy, the name given to the first known variable star. Discovered by David Fabricius, 1596, who announced it as a new star, it fluctuates in brightness from the second to the ninth magnitude during a period of about 332 days. Neither the maximum and

minimum brightness nor the period are constant, and the causes for the changes are unknown. Spectroscopic examination has established that the change is a physical one confined to the star itself and probably not due to the regular eclipse of a dark companion. The star is also known under the name Omicron Ceti. See Stars.

**Mirabeau, ANDRÉ BONIFACE LOUIS RIQUETI, VICOMTE DE** (1754–92). French politician. A

brother of the great Mirabeau (v.i.), he was born at Bignon, Nov. 30, 1754, and became an officer of dragoons. He served in the American War of Independence, became colonel of the regiment of Touraine, 1788, and was deputy for the noblesse of Limoges to the states-general in 1789. He was a vehement opponent of reform and of his brother's policy, and from his figure and hard-drinking habits was popularly known as Mirabeau-Tonneau (i.e. barrel). After his attempt to suppress an insurrection in his regiment at Perpignan, 1790, he was arrested, but on release joined the émigrés in the Rhineland. He died at Freiburg-im-Breisgau, Sept. 15, 1792.

**Mirabeau, GABRIEL HONORÉ RIQUETI, COMTE DE** (1749–91). French statesman. He was born March 9, 1749, at Bignon, either in Provence or near Nemours. In a stormy youth he distinguished himself as a reckless rebel against social and moral conventions. Ugly and pock-marked, he yet exercised irresistible fascination. Though married, he ran off with Mme. de Monnier, to Switzerland and Holland, where he worked as a literary hack. He was imprisoned in 1777 at Vincennes, where he wrote the licentious Letters to Sophie. When the Revolution broke out he was rejected by the nobility of Provence but returned by the people for both Aix and Marseilles. An aristocrat by birth, he sprang at once into the leadership of the third estate when the states-

Vicomte de Mirabeau,  
French politician

Comte de Mirabeau,  
French statesman  
After Couderc in  
Versailles Museum

general met on May 5. Under his leadership the third estate refused to allow itself to be adjourned. But there were few who could grasp the ideal for which Mirabeau was striving—a strong constitutional government, free alike from the incubus of aristocratic privileges as well as from the anarchy of uneducated democracy.

His efforts failed to break down the prejudices of the monarchists and to open the eyes of formal constitutionalists to the real situation, and caused him to lose popularity with what was rapidly becoming the party of reckless revolution. He could not win the confidence of the king and queen, who under his guidance might have directed reforms by which alone the revolution could have been averted. Of tremendous energy and practical skill, Mirabeau disputed with Danton the title of the greatest orator of his day, though secretaries wrote many of his speeches. But the strain of the gigantic task which almost unaided he had taken upon his own shoulders, was too great; and on April 2, 1791, he died. See French Revolution; National Assembly. *Pron.* Meerabo.

*Bibliography.* Works, 10 vols., 1819-22; Souvenir sur M., E. Dumont, Eng. trans. The Great Frenchman and the Little Genevese, E. R. Seymour, 1904; Lives, P. F. Willert, 1898; L. Barthou, 1919; H. de Jouvenel, 1930; P. Nezelof, 1937; The Prisoner of Vincennes, E. R. Buckley, 1930.

**Mirabeau, VICTOR RIQUETI, MARQUIS DE (1715-89).** French economist. Of Provençal descent, he was born at Pertuis, Vaucluse, Oct. 5, 1715, and served in his youth as an officer in the army. From about 1743 he devoted his attention to economic

Marquis de Mirabeau,  
French economist

questioning, being a follower of Quesnay (*q.v.*), and notable among the so-called physiocratic school of economists. Among his publications were his popular *L'Ami des Hommes*, 1750-60; *Théorie de l'Impôt*, 1760, for which he suffered a short term of imprisonment; *Les Économiques*, 1769-72; and *La Science*, 1774. A man of extravagant tastes and fiery passions, the marquis was notorious for quarrels with his wife, Marie de Vassan, and with

his son Gabriel Honoré (*v.s.*). He died at Argenteuil, July 13, 1789.

**Mirabilis** or **MARVEL** OF PERU. Genus of perennial plants of the family Nyctaginaceae, natives of tropical America. The flowers are

Mirabilis. Foliage and flowers of this tropical American plant

yellow and red, sweet scented, and bloom from May till Oct. Readily raised from seed, and often treated as half-hardy annuals, they flourish best in light soil.

**Miracle** (Lat. *miraculum*, a marvel). Event transcending the known laws of nature. It is convenient to use the term, in a narrower sense, for all those actions of God which do not conform to the order of nature as it is known by scientific observation, experiment, and induction. Whether there is, or is not, such action, is a question of evidence; but here we are concerned only with defining a conception as exactly as language will allow.

A miracle is a supernatural act of God in this narrower sense of the term. God may be thought of as acting supernaturally, either in the soul of man, or in the world around. Although the word miracle is sometimes applied to such an inward experience as conversion, it is convenient to confine the term to an outward event. The miracle has been described by conservative theologians as an act of God contrary to the order of nature, a violation of natural laws, and an interference with natural forces.

But more theologians have been careful to explain that a miracle need not be contrary to the natural order, although inexplicable by that order in so far as we have knowledge of it. Some have maintained that it may be an occasional manifestation in that natural order of a vaster and greater order, which as a whole is at present inaccessible to our senses or our reason. The negative aspect of a miracle is that it is

inexplicable by our present knowledge of nature; and the positive aspect is that, owing to its close connexion with God's self-revelation in inspired persons, it is to be regarded as God's act, not contrary to, and yet not conformable with, that wider activity of God which theism recognizes in the whole order of nature.

Only a deistic conception of God's relation to nature, which places God not only above but even outside nature as a closed system, can exclude the possibility of miracle. A theistic conception which represents God as no less immanent than transcendent, no less in and through than above and beyond nature, may distinguish two modes of divine activity, and may describe them, in developing an analogy between God and man, as habitual and original. Just as a man may in most of the affairs of life and business follow a routine, and yet, when the occasion demands it, may show a fresh activity to meet a new emergency, so may God be conceived as acting generally in the fixed order of nature, but exceptionally departing from that order, not to disturb it, or destroy it, but to meet demands of His wisdom and goodness that it could not fully satisfy.

The analogy may take us a step farther. If a man is fulfilling a purpose for himself or others that falls beyond and above the ordinary occupations of his life, it may be necessary for him more frequently to depart from his usual habits. If God is fulfilling a purpose of self-revelation in truth and grace for the redemption of man from sin and its consequences in this world, it may be in like manner necessary that He should act in ways that do not conform to His ordinary working in nature. We should with reason suspect an alleged miracle that had no connexion with, and served no recognizable purpose of, God.

Further, as in putting right something in his own affairs or those of others which has gone seriously wrong, a man may be forced to act very differently from the way in which he would have acted otherwise, so sin with its consequences may be regarded as so serious a disturbance in God's world that very drastic measures for its removal may be necessary. A revelation of God which was intended to convey to man a more adequate knowledge of God than the world can supply, and a redemption of man which aimed at delivering man from sin as nature could not,

might altogether reasonably be expected to reach beyond nature's bounds in the means it used, and to draw more directly from the unexhausted resources of God. As belonging then to the divine revelation and human redemption in Christ, miracles become both intelligible and credible. Their possibility is certain, their necessity probable, and we can approach the question of their actuality without any hostile bias.

Against Hume's contention that a miracle *per se* is so incredible that we must regard all evidence in favour of miracles as untrustworthy, we may set the considerations which have just been offered. His bold assertion "it is contrary to experience that a miracle should be true," is an irrelevant truism, if what he means is experience generally, as the very conception of miracle assumes that miracle is not an ordinary event, and it is a reckless begging of the question if he means *all* experience without any exception, since even Mill admits that there is "a certain amount of positive evidence in favour of miracles." His demand that the testimony should "be of such a kind that its falsehood would be more miraculous than the fact which it endeavours to establish," may be met by insisting that it is less improbable that miracles should occur than that the Christian religion should rest on the shifting sand of credulous superstition, and that the Gospel records should be a tissue of falsehood.

#### O.T. and N.T. Miracles

About the miracles recorded in the O.T. Christian faith is not first of all, or most of all, concerned. If the miracles of Jesus are not adequately attested, the evidence in the O.T. will still less bear close scrutiny. If the miracles of Jesus are intelligible and credible, the O.T. records can be examined without any prejudice. Harnack in his book *What is Christianity?* seeks against an extreme scepticism to defend the trustworthiness of the Gospels by admitting the healing ministry of Jesus, and accounting for the cures regarded as miraculous by the mysterious power which one personality can exercise over others in certain abnormal nervous conditions, what Matthew Arnold called moral therapeutics.

As modern medical science fully acknowledges, faith in the healer is in such nervous disorders a real cause of cure. A medical writer, Dr. R. J. Ryle, however, showed in an article in the *Hibbert Journal*,

on *The Neurotic Theory of the Miracles of Healing* (vol. v, p. 585), that very many even of the healing miracles cannot be regarded as falling into the class of diseases capable of such treatment. The nature miracles remain unexplained.

Harnack further justifies his rejection of miracles by insisting on the credulity of the age in respect of such extraordinary occurrences, and the absence of the modern scientific conception of the uniformity of nature. Apart from the records of miracles, the Gospels give the impression of writings in which truth of fact as well as truth of thought and life is valued, and in which the intention to record only what is true is honestly carried out. If the evangelists had been as credulous as is suggested, we should have had not only a greater number of miracles, but the records would have been of an extravagant character, not marked by the reserve and sobriety which we do find. See *Incarnation*; *Jesus*; *Resurrection*. Consult *Miracles in the N.T.*, J. M. Thompson, 1911; *The Miracles of Jesus*, E. O. Davies, 1913; *Miracle Stories of the Bible*, A. Richardson, 1943; *Miracles*, C. S. Lewis, 1947.

**Miracle Play.** Type of medieval religious drama, often drawn from the legends of the saints. It cannot be strictly distinguished from the mystery play. The Latin comedies of Hroswitha (*q.v.*), based on legends of the saints, afford an early example. Miracle plays were from the first less associated with worship than the mysteries, and were usually acted—at first in Latin—by young clerics, boys, and even girls, on the eve of the saint's day. The earliest dramatic performance on record in England was a play of S. Katherine, written for his pupils by Geffrei, a Norman schoolmaster at Dunstable, about 1100. They were frequently acted in London about 1170. There are but scanty remains of English plays of this type, which appears to have been much less popular than the mystery. The Christmas play of S. George, still acted by boys in English villages, is a degenerate survival. The Cornish Life of S. Meriasek is of Breton origin.

Many French miracle plays are extant. Thirteenth century examples are Ruteboeuf's *Theophilus*, and the S. Nicholas of Jean Bodel of Arras. There is a collection of 40 miracles of the Virgin of the 14th century. These early plays are far more concise and dramatic than the unwieldy mystery plays of the 15th century, but resemble

them in the introduction of comic relief. There are also German and Italian miracle plays. The Persian religious drama of Hasan and Hosain, still often performed, presents close analogies to the miracle play. See *Drama*; *Morality*; *Mystery Play*. Consult *English Dramatic Literature*, vol. i, A. W. Ward, 1875; *English Miracle Plays*, a collection edited by A. W. Pollard, 1890; *English Religious Drama*, K. L. Bates, 1893; *The Medieval Stage*, E. K. Chambers, 2 vols., 1903; *English Miracle Plays*, E. H. Moore, 1907.

**Mirage.** Optical illusion produced by the refraction of light. It occurs when successive layers of air have different densities as a result of temperature differences. The most perfect images are seen in hot, sandy deserts and on the sea. In the former, lakes often appear to be mirrored in the sand, while on the sea inverted images of ships are sometimes seen, though no ship be in sight on the ocean.

The phenomenon is explained by the fact that a ray of light is bent when it passes from one medium into another. If, therefore, a ray passes through a series of layers differing continuously in density the path of the ray becomes a curve. The air is normally of greater density over the surface of the earth than at an altitude, and when to this permanent variation there are added temporary local variations caused by the ascent of heated air, abnormalities of visibility arise. Over a heated desert, for example, the hot air near the surface expands, its density decreases, and the refractive index of the lowest layer of air becomes small. The ordinary state of affairs is therefore reversed, but at some point above the surface normal conditions reassert themselves and the density and the refractive power decrease again. Any object viewed across such a heated area is thus seen by two sets of light rays, and an inverted and usually distorted image is visible, apparently floating on the sand. Mirages may be seen over tarred road surfaces on hot, windless days.

In polar regions another type of mirage is observed. Ships, icebergs, etc., appear to be suspended upside down in the clouds. Here the illusion is produced by a large gradient of refractive index, which is, in turn, caused by a warm layer of air resting on a colder one. Upper rays reaching the eye appear, therefore, to come from a ship inverted in the clouds. See *Light*; *Looming*; *Optics*.

**Miraj.** Town of Bombay, India. Two former states, Miraj senior and Miraj junior, are now merged in Bombay state. The former covered 368 sq. m., and had a pop. of 108,547; the latter had an area of 194 sq. m., and pop. 46,295. The town lies near the Krishna on the rly. from Poona to Belgaum, and is the junction of the line to Kolhapur. Pop. 27,000

**Miramichi.** River of New Brunswick, Canada. It rises near the centre of the prov., and flows N.E. to its outlet in Miramichi Bay, Gulf of St. Lawrence. Its chief tributaries are Little South West Miramichi, North West Miramichi, and Cain. All the streams are noted for their salmon fisheries. Length, 225 m., of which 55 m. are navigable, and 15 m. tidal.

**Miramichi Bay.** Indentation on the coast of New Brunswick, Canada. It is one of the largest arms of the Gulf of St. Lawrence, and receives the waters of the Miramichi river. Beaubair, Fox, Passage, and Neguac are long narrow islands which form an almost perfect barrier in a curve across the mouth of the bay.

**Miranda.** Maritime state in N. Venezuela, fronting the Caribbean Sea. It is mountainous in the N., but other parts are extremely fertile, containing some of the best coffee-growing districts in the republic. The capital is Los Teques. Area, 3,068 sq. m. Pop. 227, 604.

**Miranda.** Character in Shakespeare's comedy *The Tempest* (q.v.). Daughter of Prospero, the exiled duke of Milan, she lives with him on his island. In the play, at the age of sixteen, she becomes the instrument of Prospero's reconciliation with his old enemies. She is one of Shakespeare's most charming heroines.

**Miranda.** FRANCISCO ANTONIO GABRIEL DE (1750-1816). Venezuelan patriot. Born at Caracas, March 28, 1750, he took part in the U.S. War of Independence, 1778. He later entered the French Republican army, and fought against Prussia, 1792-93. During the Terror he fled

F. A. G. de Miranda  
Venezuelan patriot  
From a bust

to England, where he tried to gain support for his project for freeing Venezuela from the Spanish yoke, 1797-1804. After an ineffectual attempt to organize a rising in 1806, he landed again in South

America in 1810, was everywhere successful, and the following year Venezuela declared her independence. He was made dictator, but the following year serious dissensions arose; Miranda was defeated, handed over to the Spaniards, and, after five years in prison in Cadiz, died July 14, 1816.

**Mirandola.** City of Italy, in the prov. of Modena. It is 20 m. by rly. N.N.E. of Modena. The cathedral and communal palace date from the 16th century. The ruined castle of the Pico family, owners of Mirandola from the 14th century to the 18th, the churches of S. Francis and Jesus (slightly damaged in the Second Great War), and various antiquated buildings give it a picturesque appearance. Trade is carried on in rice and silk.

**Mirandola,** GIOVANNI PICO DELLA (1463-94). Italian philosopher. He was born Feb. 24, 1463,

Pico della Mirandola,  
Italian philosopher

at Mirandola, near Modena, and was considered one of the chief orators and poets of the time when only ten years old. He was the author of 900 theses *De omni re scibili* (Concerning everything that can be known), some of which were condemned as heretical. Mirandola retired to Florence, where he died Nov. 17, 1494. See *The Renaissance: Studies in Art and Poetry*, W. Pater, 1910.

**Mirbeau,** OCTAVE HENRI MARIE (1850-1917). French writer and dramatist. He was born, Feb. 16, 1850, at Trevières, and early adopted socialist and anti-clerical views. His *Lettres de la Chaumière*, 1886, gained him fame which was turned to notoriety by his *La Calvaire*, 1887, and *Sebastien Roch*, 1890, the latter work attacking the Jesuits. As a dramatist he is best known for two plays: *Les Mauvais Bergers*, 1897, which deals with social problems; and *Les Affaires sont les Affaires*, of which an English adaptation was made in 1905. Died Feb. 16, 1917.

**Mircea** (d. 1418). Prince of Wallachia, 1387-1418. Son of Radu II, he succeeded his brother as voivode and did homage to the king of Poland, 1389, and to the Turks in 1391. Notwithstanding this he was banished by the latter, and allying himself to Sigismund of Hungary in 1395, was defeated with him by the Turkish army of Bayazid I at Nicopolis, 1396. A

supporter of Musa in his struggle for the Turkish crown after the capture of Bayazid I by Timur in 1402, Mircea regained his power in Wallachia, but thereafter continued to pay tribute to Turkey.

**Mirdites.** Tribe of N. Albania. They number perhaps 25,000 and inhabit the mountainous region to the S.E. of Scutari (Shkoder), with their chief centre at Oroshi. Their territory is called Mirdita. Of the several tribes of N. Albania they are politically and numerically the chief. Backward in culture and in religion Roman Catholic, they have always opposed Turkish and other attempts to absorb them. They have hereditary chiefs known as capidans, descended from the house of John Marco. In 1868, when Prenk, son and successor of Bib Doda, the late reigning chief, was captured by the Turks and held as a hostage, the Mirdites refused to supply men to the Turkish army. The Turks after some time released Prenk, who as the result of his double-dealing with them involved his tribesmen in conflict with Turkey. The latter dispatched two punitive expeditions which ravaged their territory. Prenk was captured by the Turks in 1880 and banished. Another chief belonging to the ruling family was chosen, but his unpopular rule brought about anarchy. Prenk ultimately returned, but was assassinated in 1919. See *Albania*.

**Mirfield.** Urban dist. of the W. Riding, Yorks, England. It stands on the Calder, 5 m. N.E. of Huddersfield, and is served by two rly. lines and a canal. The chief building, S. Mary's church, dates from 1825 but embodies the tower of a 13th century church.

**Mirfield arms**

An industrial centre, Mirfield has manufactures of woollen and cotton goods, and malting is an industry. Water is supplied by the Huddersfield corporation, gas and electricity locally. Mirfield is noted in Domesday. Market day, Fri. Pop. 11,800.

**Mirfield Community.** Anglican religious order for priests, known as the Community of the Resurrection. Founded in 1892 at the Pusey House, by Dr. Gore, the community removed to Radley in 1893, and in 1898 to Mirfield (v.s.). Its members are occupied in mission preaching, holding retreats, training candidates for Holy Orders, and literary work. Buildings have been erected for a theological college, the course

occupying five or six years and including a degree in arts at Leeds university, where the society maintains a hostel. The charge is low, and repayment may be spread over six years after ordination. Half the cost of training is borne by the society. In 1903 a branch house was opened at Johannesburg. A branch priory has been established in London since 1914.

**Miri.** Seaport of Sarawak, British N. Borneo. Standing on the coast, in the Baram district, 30 m. N.W. of Claudetown, it is the centre of an important oilfield and exports petroleum. Miri was captured by the Japanese in Dec., 1941, the oilfields being put out of production before the British garrison withdrew. The town was retaken by the Allies on June 25, 1945.

**Mirim** OR **MERIM.** Lake of E. Uruguay and S. Brazil. It discharges its surplus water into the Lagoa dos Patos, on the Atlantic, and is separated from that ocean by salt lagoons. About 120 m. long, it varies in width from 5 to 25 m.

**Mirror.** Object with a smooth or polished reflecting surface for producing images of other objects, or for reflecting light and heat. Mirrors of polished bronze were used by the Egyptians, Greeks, and Romans. Praxiteles (328 B.C.) suggested polished silver plates as the best reflecting surface. Silver, steel, and aluminium have been employed for this purpose. Glass was first used in Venice about 1300, first as a protective sheet to burnished silver plates, and then backed with mercury. A sheet of tinfoil was placed on the glass, and over this a coating of quicksilver, which formed an adhesive amalgam, protected by a coat of paint and varnish.

The method introduced by Liebig in 1830 is to precipitate on glass an ammoniacal solution of silver salt, to which tartaric acid and sugar candy are added, and finish off with a coat of paint and varnish. Mirrors were first manufactured in England in 1673, and were small. About the time of Queen Anne they were made of heavy plate glass with bevelled edges. The surface of mirrors may be plane, convex, concave (as in pyrometers), or parabolic. Mirrors made of transparent plastic materials have the advantage of being far less fragile than glass ones. See *Celt*; *Japan*; *Optics*; *Telescope*.

**Mirza.** Persian title. After the name, it denotes a prince; before the name, it is the usual title for officials and scholars. The Vision of Mirza is one of Addison's best-known Spectator essays.

**Mirzapur.** District and town of India, in the Uttar union, in the Benares division. The district lies mostly S. of the Ganges, and includes part of the Son valley and part of the N. face of the Deccan plateau. Rice, wheat, and millet are the chief crops. The town is situated on the Ganges, about midway between Allahabad and Benares, is a grain and cotton market, and manufactures shellac. Lace and woollen carpets are also made. There are fine bathing ghats. Only a quarter of the total area is cultivated. Dist., area 4,322 sq. m.; pop. 899,929. Town, pop. 70,944.

**Misanthrope, LÆ.** A five-act comedy by Molière, produced at the Palais-Royal, Paris, June 4, 1666. Its slender plot concerns the unsuccessful suit of the misanthropic Alceste for the hand of the worldly minded but not wholly unlovable Célimène. While reflecting the essential barbarism of the court life of the period, it touches deep veins of human interest, and is usually regarded as Molière's greatest work, though not the most popular of his comedies. Alceste was acted by Molière; Célimène by his wife. *Le Misanthrope* provided the groundwork for Wycherley's *The Plain Dealer*, 1674.

**Misappropriation.** In English law, wrongful conversion to their own use, by trustees or other persons, of property entrusted to their care. This is punishable under the Larceny Acts.

**Miscarriage.** Expulsion of the foetus or immature offspring from the uterus before the end of the 28th week of pregnancy. After that date the term "premature labour" is employed if the delivery occurs before the full time. Terms in use are abortion, for expulsion of the foetus before quickening has occurred at 4½ months of pregnancy, and miscarriage for expulsion after that date; but for legal purposes this distinction is not recognized. See *Abortion*.

**Mischabel.** Mountain mass of the Pennine Alps (*g.v.*) in the canton of Valais, Switzerland. It lies between Monte Rosa and Visp, and two of its peaks, the Dom and the Taeschhorn, rise to 14,941 ft. and 14,758 ft. respectively. The Mischabel Joch is a pass between the latter mountain and Alphubel, leading from Zermatt to Fée at an alt. of 12,650 ft.

**Misdemeanour.** In English law, a crime punishable on indictment which is not a felony. There is no distinction of principle, because a felony is not necessarily more serious in itself than a mis-

demeanour. Thus, larceny is a felony, while perjury is only a misdemeanour. A conviction for a misdemeanour never involved forfeiture of land or goods, as a conviction for felony did.

**Miseno** (anc. Misenum Promontorium). Volcanic peninsula of Italy in the prov. of Naples, forming the W. side of the Gulf of Pozzuoli, about 10 m. W. of Naples. It terminates in Cape Miseno and contains the village so named, which stands near the site of the ancient Misenum. Porto di Miseno, the fine natural harbour on the N., and that called Mare Morto on the N.E., were formed about 30 B.C. into a great naval station for the Roman fleet. Remains of moles, a theatre, and baths, etc., exist. Misenum was destroyed by the Saracens in 890.

**Misérables, LÆS.** Novel by Victor Hugo. Published 1862, it was designed as a novel with a purpose, presenting a series of moving scenes from the life of the poor, with a number of striking characters and many digressions. A film version (1935), with Fredric March as the convict Jean Valjean and Charles Laughton as the police officer Javert, was popular, as was a radio version, with Henry Ainley as Valjean, broadcast serially by the B.B.C., 1939.

**Miserere.** The Latin title and the first word of Psalm 51 (Eng. *Have Mercy*), one of the seven penitential psalms (in the Vulgate, Ps. 50). In the C. of E. it is said kneeling during the Litany.

**Miserere, MISERICORD, OR PATIENCE.** In ecclesiastical architecture, a hinged seat of a stall in church, which can be lifted and leant against the back of the stall. On its under side is a bracket which provides a higher rest for the occupant of the stall. This feature was introduced for the benefit of aged ecclesiastics who might be fatigued by long standing. The under-bracket is often finely carved, as in the misereres of Henry VII's chapel, Westminster Abbey. See *illus.* p. 5770.

**Misericordia, OR BROTHERS OF MERCY.** Guild or brotherhood of laymen, founded at Florence in 1244 for the purpose of providing decent burial for the poor. The brothers undertook the entire cost and arrangements of the funerals, acting themselves as bearers. They rendered valuable services during the Black Death in 1348-49; and they adopted a kind of monastic garb with a hood covering all the face except the eyes, lest they should be recognized and rewarded.

Miserere in Henry VII's Chapel, Westminster Abbey. The carving depicts the Judgement of Solomon; the left group represents the women contending over the live child; on the right is seen the mother of the dead child substituting her baby for the living one; in the centre is Solomon on his throne delivering judgement. See p. 5789

**Mishmi.** Aboriginal hill-tribe in the N.E. corner of the Brahmaputra valley, Assam. Numbering a few hundreds, they may represent an ancient offshoot from the Miao of S. China, and are remarkable for their peculiar religion and customs.

**Mishna** (Heb. teaching). Jewish code embodying the oral law. A collection of rabbinical teaching and interpretations of the Mosaic law, the Mishna was compiled and edited in its present form by Rabbi Jehudah el Nasi, c. A.D. 200. Commentaries on the Mishna and the Mosaic law were embodied in a supplementary work called the Gemara, the two forming together the Talmud (*q.v.*). The Mishna was first printed in 1492 and has been published in most modern languages spoken by Jews.

**Misiones.** Territory in the N.E. of Argentina, stretching N.E. between Paraguay and Brazil. It is watered by the Paraná and the Uruguay with their tributaries. The Paraná flows along the Paraguayan frontier, the Uruguay dividing the territory from Brazil. Mainly hilly and forest-covered, Misiones grows maté, timber, tobacco, sugar, cereals, and fruits, and cattle are reared. In the 17th century the Jesuits founded many mission settlements in this region, which were mainly peopled by converted Indians. The chief town is Posadas on the Paraná. Area 11,749 sq. m.

Las Misiones is also the name of a dept. of Paraguay.

**Miskolcz.** Town of Hungary. It is situated on the Sajo on the edge of the Carpathian foothills, 116 m. by rly. N.E. of Budapest. The Calvinist church of S. Stephen dates from the 13th century, and there are R.C., Orthodox, and Lutheran churches. There is a considerable trade in wheat, wine,

and cattle. Flour-milling, pottery, and porcelain manufactures, and shoe-making are the main industries. Pop. 109,433.

Turned into a strong point by Germans and Hungarians during the Second Great War, Miskolcz was captured after fierce fighting by the 2nd Ukrainian army, Dec. 3, 1944, in the course of the Russian advance on Budapest.

**Mispickel.** Obsolete name for the mineral now generally known as arsenopyrite (*q.v.*).

**Misprision** (old Fr. *mes*, badly; late Lat. *prensio*, taking). Term originally meaning a mistake, in English law neglect of duty. The two chief kinds of misprision are misprision of treason and of felony. These offences are committed by knowing of treason or felony and concealing the same. If there is more than mere knowledge, *i.e.* if there is assent to the treason, the

assessor is guilty of substantive treason; and if there is assent to the felony, he is liable as an accessory before or after the fact. In addition to misprision of treason and felony, certain offences in the nature of contempts and high misdemeanours rank as misprisings. If a secretary of state or other high executive officer is guilty of maladministration, as Strafford was, the articles of impeachment describe his offences as high crimes, misdemeanours, and misprisings. The term is also used to describe certain offences which rank as contempt of court, *e.g.* advising a witness not to give evidence.

**Misrata.** Coastal city in Tripolitania, N. Africa. It consists of a large oasis, about 10 m. by 4 m., with 5,000 gardens, and is situated on the coastal caravan route to Homs and Tripoli. It was occupied by the Italians on July 8, 1912.

**Misrepresentation.** In English law, a false statement of fact, *i.e.* not of opinion. A transaction, such as a sale induced by a misrepresentation of a material fact, is voidable, *i.e.* can be repudiated by the party deceived, if he repudiates it as soon as he discovers the falsity of the statement, and if it is possible to put the parties in the same position as before. No action will lie for damages for misrepresentation unless the statement was either made fraudulently, knowing its falsity, or was a warranty.

**Missal** or **MASS-BOOK.** Office book of the R.C. Church. It contains the service for Mass throughout the year. Revised and printed under Pius V, when the council of Trent, 1570, ordered its use in all churches that could not claim uses of their own of 200 years' standing, it was again revised in 1604 and 1634. Of the nine service books used by the Church of England

Mishmi. Left, a chieftain of the tribe; right, girl wearing bamboo plugs to distend the lobes of the ears

before the Reformation, that known as the missal was in four parts: the antiphony or gradual, containing parts to be sung by the choir at high mass; the lectionary, or book of the epistles; the evangelistarium, or book of the Gospels; and the sacramentary, containing the prayers. The first mention

Missel Thrush, a common song-bird of the British hedgerows

of a missal is found in the 8th century. A plenary missal for use of priests appeared in the 11th or 12th century. There are various missals for different rites or uses, Ambrosian, Sarum, Hereford, Lincoln, York, Bangor, etc. See Prayer Book.

**Missel Thrush** or **MISTLE THRUSH** (*Turdus viscivorus*). Common British song-bird. Nearly related to the song thrush, but distinguished from it by its larger size, greyer colour, more prominent spots on the under parts, and the greyish white tips to the lateral

tail feathers, it is the largest of the British song-birds and is widely distributed, though in the N. of Scotland it is rather rare. Its song is most notable in the winter, especially in wet weather, giving it its local name of stormcock. It nests in trees in the early spring, and two or even three broods are reared in the season. It feeds on worms, grubs, snails, insects, and the berries of many plants, particularly the mistletoe, whence its name. See Eggs, colour plate.

**Missenden**, GREAT AND LITTLE.

Two parishes and villages of Bucks, England. They lie 9 m. S.E. of Aylesbury, having rly. connexion with London. Missenden Abbey, at Great Missenden, dates in part from the 14th century, and contains a Norman font. Little Missenden centres upon an Elizabethan manor house.

the medieval missionary. In this missionary work Englishmen early played a leading part: Willibrord, the first of note, went to the Netherlands c. 690; a little later Boniface of Crediton, in Devon, won the name Apostle of Germany.

(ii) 1100-1350: THE CRUSADES. The Crusades represent the answer of Christendom to that power which had caused the first setback to Christianity's missionary progress, Islam. It was the friars who came to see what a truly Christian campaign against the infidel should be. The two great orders, Franciscans and Dominicans, officially recognized their missionary duty in the same year, 1221. The greater glory belongs to the Franciscans. S. Francis himself preached before the sultan of Egypt in 1219. Raymond Lull died a martyr's death in Tunis, 1315. John of Montecorvino, first missionary from the church of the W. to E. Asia, 1294, established his cathedral in Peking. These heroic missions were on too small a scale for lasting effects.

(iii) 1500-1700: ROMAN CATHOLIC REVIVAL. With the Spaniard, Christianity reached S. America and the Philippines, joining them permanently to Christendom. With Portuguese trade, Christianity touched Africa S. of the Sahara; it was replanted around the Indian coast; for the first time it reached Burma, Malaya, the E. Indies, Indo-China, and Japan; it came, for the third time, and to stay, to China. Greatest among the pioneers was S. Francis Xavier, who died on the threshold of China's closed door in 1552. That door was opened at last by the learning of other Jesuit missionaries, most notably Matteo Ricci, who won the respect of Chinese officials and emperor.

Non-Roman Christianity was for the most part still inactive. John Eliot, a Cambridge Puritan, went to N. America in 1631, and began work among the Red Indians. The (Anglican) Society for Promoting Christian Knowledge, and the Society for the Propagation of the Gospel in Foreign Parts, were founded in 1698 and 1701 respectively; the (Presbyterian) Society in Scotland for Propagating Christian Knowledge in 1709. The first and third of these were founded primarily to meet home needs, but all made some beginnings at foreign missionary work. The German Protestant, Ziegenbalg, 1705, under Danish patronage, founded a mission at Tranquebar. The Moravians in 1732 began

## MISSIONS: EXPANSION OF CHRISTIANITY

John Foster, D.D.

*Here is a general account of missionary efforts made by the churches since the foundation of Christianity. See also articles on the Christian denominations, e.g. Baptists; Church of England; Congregationalism; Methodism, etc.; and on Carey; Chalmers; Livingstone; Francis Xavier, and other missionaries*

Christianity has from the outset been a missionary religion. From Christ Himself is the commission to go "into all the world and make disciples of all the nations." Christianity began within Judaism. The Acts of the Apostles contains the account of the opening of the door to the Gentiles, first to the Samaritans, regarded as half-Jews in race and in religion; then to the Ethiopian eunuch and the Roman centurion, both probably adherents of the synagogue; finally at Antioch, where they "spoke unto the Greeks also." It was from Antioch that the mission to the Gentiles fully began. S. Paul, Apostle of the Gentiles, did most to save Christianity from settling down as a sect within Judaism and to bring it to its fulfilment as a world religion.

Missionary expansion in the early centuries was helped by Roman communications, Greek language, and not least by the widespread dispersion of the Jews, whose influence provided in many a city a nucleus of monotheistic religion awaiting the Christian missionary. Before the year 200 Tertullian could speak of "places

of the Britons, unreached by the Romans, but subject to the law of Christ." About the same time, an eastern writer, Bardaisan, claimed that there were Christians in Bactria. Before 300 there is evidence of missions as far E. as India. Nowhere in the E., however, was Christianity to become anything more than a minority religion. By 313 in the West, under the Emperor Constantine, it was becoming the state religion of the Roman empire. Later missionary progress may be divided into four periods.

(i) 500-1100: THE DARK AGES. The church survived the Western Roman empire, and began to convert the barbarians who had destroyed it; the Franks (496), the Anglo-Saxons (597), Germany (from the 8th century), Scandinavia and the Magyars of Hungary (11th century). About the same time as these last victories of Latin Christianity, the Greek Church entered Russia. An adventurous mission from the church in Persia brought Christianity to China by 635, where it remained precariously till about 900. East and west, the monk was

missionary work in the W. Indies and Greenland. Methodists from England were at work among slaves in the W. Indies by 1786.

(iv) FROM 1792: MODERN MISSIONARY MOVEMENT. 1792 is the year usually taken to mark the missionary awakening. In that year William Carey was instrumental in forming the Baptist missionary society. In the next fifty years there followed all the main societies not only of the

aspiration. In China there are 14 universities and university colleges established by Protestant missions and 5 by R.C. One-fifth of all China's undergraduates, and one-tenth of high-school children, belong to Christian institutions. In India such schools and colleges have been even more numerous (e.g. Protestant colleges numbered about 40), owing to government grant-in-aid, a system which began in 1854 and lasted till the coming

of Indian self-government in 1947. In Africa many colonial governments have preferred to work through missions, and something like 70 p.c. of education has been under Christian influences, with medical and social work receiving subsidies also.

The Christian significance of medical missions is that they provide a demonstration of the Gospel. They have also in

many lands created the new professions of doctor and nurse, and given Christian ideals to influence their standards. Christian leper homes supplied the largest field for experiments which have led to the hopeful treatment of leprosy; and, again in many lands, Christians have been responsible for attacks on illiteracy.

#### A World Religion

Above all, the churches established by missions have in most cases taken root in the local soil and begun to produce their own leaders, until the church has become not only more widespread, but also more evenly spread, than at any other time. Though Christianity's strength of resources is still in western lands, it is not a western but, demonstrably, a world religion. The pope, in announcing the appointment of 32 new cardinals in 1946, said, "We have willed that the greatest possible number of races and peoples should be represented, as a true reflection of the universality of the Church." The same thing can be seen when 320 bishops of the Anglican communion gather at Lambeth from the four corners of the globe; or when there is a meeting of the council of Reformed and Presbyterian churches, the Methodist ecumenical conference, the Baptist world alliance, the international Congregational council, or the Lutheran world con-

vention. Some of these bodies used to think of themselves as national churches; others repudiated all state connexion and were content to be small sects saved out of the world. All have grown to world-wide proportions. Moreover, chiefly through their missionary work, they have been brought into cooperation. The Edinburgh missionary conference of 1910 marked the beginning of the international missionary council, chief agent of non-Roman missionary cooperation. Further conferences were held at Jerusalem 1923, Tambaram (Madras), 1938, and Whitby (Toronto), 1947. From 1910 onwards, too, there began that still wider mutual consultation, the ecumenical movement, which resulted in 1948 in the world council of churches, including every main tradition except the Roman Catholic.

Latourette, 7 vols., 1947; The Planting of Christianity in Africa, C. P. Groves, 1948; also International Review of Missions, quarterly 1912 onwards.

**Mississippi.** River of the U.S.A. It rises in Little Elk Lake, but Lake Itasca, Minnesota, 1,680 ft. alt., is generally regarded as its source. In its earlier course, marked by rapids and beautiful falls, it winds through a swampy country and forms many lakes. At Minneapolis, the head of its navigation for large ships, are the Falls of St. Anthony, where the river makes a descent of 80 ft. in half a mile. Nearly 80 m. below St. Paul it expands into the large and picturesque Pepin Lake, on the Wisconsin border, and from this point separates the states of Minnesota, Iowa, Missouri, Arkansas, and Louisiana on the W., and Wisconsin, Illinois, Kentucky, Tennessee, and Mississippi on the E.

Rapids with a fall of 21 ft. are met with at Rock Island; ship canals have been constructed. The Mississippi enters the Gulf of Mexico through many "bayous," the chief being the Atchafalaya and the Lafourche. Its length is about 2,460 m., but with its longest tributary, the Missouri, it is often accounted the longest river in the world; omitting the delta "passes" and old meanders, it may be shorter than the Amazon. At its junction

#### MISSIONARY SOCIETIES FORMED 1700-1840

British	American
1701 Society for the Propagation of the Gospel	1810 American Board
1792 Baptist	1814 Baptist
1795 London Missionary Society	1816 Bible Society
1796 Edinburgh and Glasgow Societies	1819 Methodist Episcopal
1799 Church Missionary Society	1835 Episcopal
1799 Religious Tract Society	1835 Dutch Reformed
1804 British and Foreign Bible Society	1837 Presbyterian
1809 Bible Society of Scotland	1838 Lutheran
1813 Methodist	
1825 Church of Scotland	<i>Continental</i>
1840 Irish Presbyterian	1797 Netherlands
1840 Welsh Presbyterian	1815 Basel
	1821 Danish

	1824 Berlin
	1828 Rhenish
	1836 Leipzig
	1838 North German

British Isles, but of the mainland of Europe, and of the New World.

In the same period, missionary zeal among Roman Catholics revived, and the Christian church became a universal church, not only because it was commissioned to go into all the world, but because it actually went. There are Christians today in virtually every land.

The scale of contemporary missionary work is illustrated by facts and figures such as these: Protestant missionaries have translated the Bible, wholly or in part, into 1,120 languages. Nominal Christians in Africa S. of the Sahara have been estimated as 7 p.c. of the population, in India about 2 p.c., in Asia (apart from the Philippines) 1 p.c.

The influence of Christians is out of all proportion to their numbers. In many lands they hold leading positions in education, medicine, and social service; not a few have been leaders of national and international significance. With some more primitive peoples Christianity has succeeded to the position of the community religion, and as such has begun to do for them what the church in the Middle Ages did for our forefathers. In more complex civilizations Christianity has often contributed to the combating of social evils, and to the starting of new movements of idealism and

with the Missouri its breadth is 5,000 ft., and below New Orleans 2,475 ft. It receives many large tributaries, the more important being the Minnesota, Des Moines, Missouri, Arkansas, and Red from the W., and the Wisconsin, Illinois, Ohio, and Big Black from the E. Among important towns on its banks are Minneapolis, St. Paul, Dubuque, Moline, Rock Island, Burlington, Quincy, St. Louis, Memphis, Vicksburg, New Orleans.

The waters of the Mississippi have a gradual swell, which begins in Feb. and continues till June. They occasionally overflow the embankments and inundate the entire lower valley. The area originally subject to inundation was nearly 30,000 sq. m., but it has been largely reduced by a system of embankments (levees). The construction of these levees was begun early in the 18th century, and in 1916 the system, on which more than \$27,000,000 has been expended, comprised about 1,500 m. About 95 m. below New Orleans the river divides into several outlets, the principal being the S.W. Pass, the S. Pass, and the N. Pass. By means of jetties, known as Eads jetties after the designer, the navigability of the lower river has been considerably improved. These jetties, extending E. and W. of the S. Pass and measuring  $4\frac{1}{2}$  m., have enabled a channel of 30 ft. to be obtained, thus greatly adding to the importance of New Orleans as a port.

#### Flood Damage and Control

In April, 1927, a terrible disaster was caused by floods on the Mississippi and its tributaries, including the Arkansas. These rivers overflowed their banks to a depth of ten, and sometimes 20 feet, and covered over 1,000,000 acres of the most productive land in the United States. For three months the river was 100 miles wide at Greenville. New Orleans was only saved by blasting great gaps in the Poydras embankment. Relief measures were organized by Herbert Hoover, who estimated the loss at \$80,000,000. About 600,000 persons were rendered homeless or dependent on charity. In June, 1936, the Flood Control Act established a definite flood control policy which provided for federal participation in the construction of economically justified projects in cooperation with states or other local interests. For the improvement of the river system, which comprises some 15,000 miles of inland waterways and enables steamers to travel from the Gulf of

Mississippi. Map showing the river basin. Inset, the delta on the Gulf of Mexico

Mexico to the Great Lakes, an expenditure of over \$280,000,000 was made in 1937, the construction of 14 flood-control reservoirs in the Muskingum Valley, Ohio, being among the many improvements undertaken. Levees (q.v.) have been built from Rock Island, Illinois, to near Head of Passes, Louisiana, 484 m. above to 1,070 m. below Cairo. The Fort Peck dam and reservoir have improved navigation on the river and contribute to the control of flood water.

The river was first visited by a European in the 16th century, but nothing was known of it until 1673, when two Jesuits, Louis Joliet and Jacques Marquette, sailed down it as far as the mouth of the Arkansas. La Salle, in 1681-82, went down as far as the river mouth. At that time it flowed through soil claimed by France, and Frenchmen made a number of settlements on its banks. After the treaty of 1763 its course was the joint property of Great Britain and France. Spain secured the rights previously held by France, while the U.S.A., by the treaty of 1783, obtained the British ones; there was trouble between these two countries about the navigation, but this was ended when Louisiana was purchased by the U.S.A. in 1803. In the 19th century the U.S.A. conducted a thorough survey of the river and its tributaries. See Bluff; Louisiana; River. Consult Discovery of the Mississippi, J. G. Shea, 1903; The Opening of the Mississippi, F. A. Ogg, 1904.

**Mississippi.** A state of the U.S.A. A south central state, it has a coast-line of 85 m. on that part of the Gulf of Mexico known as Mississippi Sound. Its area is 46,716 sq. m., of which 296 are water. The surface rarely exceeds 800 ft. in height, and falls away S. and W. to the rich alluvial lands of the Mississippi and Yazoo valleys. These are known as the bottom lands, and of them there are 7,000 sq. m. in the delta of the Yazoo. The chief rivers are the Mississippi, which bounds it on the W., Pearl, Tombigbee, Yazoo, and Pascagoula. The state includes a number of islands.

A great amount of cotton is grown, and much maize. Other cereals are cultivated, and cattle, sheep, and pigs are reared; the sugar-cane is grown, and much land is under fruit. Important petroleum sources were discovered in 1941. By 1948 these had become the state's most important source of wealth apart from cotton. Jackson is the capital. Of the population of 2,183,796 almost half are negroes. Generally negroes are debarred from voting by educational and other tests. In 1946 a crippled ex-service man invited negroes to vote in the primaries for the first time and won a congressional seat.

As part of Louisiana, Mississippi was first settled by French colonists, who made their homes in a land hitherto inhabited solely by Indian tribes. It passed to England in 1763, but in 1783 was formally ceded to Spain, that country

having taken possession of it in 1781. A dispute soon arose about the boundary between the U.S.A. and the soil of Spain, the result being a treaty by which the future state was included in the U.S.A. The Spaniards vacated it in 1798, when it was made a territory.

In 1817 Mississippi was admitted to the Union as a state. A constitution was drawn up in that year, but the existing one dates from 1890. The state legislature consists of a senate and a house of representatives, both elected for four years. The state sends two senators and eight representatives to Congress.

**Mississippian.** In geology, a group of limestone rocks well developed in the Mississippi Basin, U.S.A. Of Lower Carboniferous age, they roughly correspond to the Carboniferous Limestones of the U.K. See Carboniferous System.

**Mississippi Scheme.** Financial enterprise devised with the object of restoring the shaken credit of France. In 1715, when Philip of Orleans became regent, the finances of France were in an appalling condition; national bankruptcy was almost inevitable. It was then that John Law persuaded Orleans to approve his scheme and started a bank in France.

With this for a basis, Law acquired the sole right to trade in the vast region around the Mississippi which he called Louisiana, and in 1717 he founded a company for this purpose. Having turned his bank into a national institution with the guarantee of the state behind its notes, Law planned a much bigger concern. Two other trading companies were amalgamated with his, and under him a new *Compagnie des Indes* dominated practically the whole of France's foreign trade. With the issuing of new capital for its activities the gamble began. The shares rose rapidly in value, while the company purchased the right to manage the mint and to farm much of the national revenue. Finally the national debt was taken over, the lenders receiving shares in the company to which the government paid interest at 3 p.c. New shares were issued at a large premium, and in 1719 were selling at forty times their face value.

Armed with absolute power, Law took strong measures to avert a collapse, but his edicts, fixing the price of the shares, and in other ways striving to perpetuate an artificial state of affairs, failed miserably of their purpose. By July, 1720, the bubble had burst.

The government took back the national debt, but speculators had suffered huge losses. See Law, John.

**Mississippi Sound.** Channel between the coast of Alabama and Mississippi states, U.S.A., and several narrow islands which cut it off from the Gulf of Mexico. About 70 m. long, with a mean breadth of 8 m., it extends from Lake Borgne to Mobile Bay, and is navigable by coasting vessels.

**Missive** (Lat. *missus*, sent). In Scots law, a letter exchanged between two parties, in which the one specifies and the other accepts the terms and conditions of an offer of purchase or sale, or other mutual transaction. A missive constitutes a legal contract.

**Missolonghi, MESOLONGHI, OR MESOLONGION.** Town of Greece. Situated on a swampy plain N. of the Gulf of Patras, and about 20 m. N.W. of Patras, it is the capital of the dept. of Aetolia and Acarnania. It has a trade in currants,

Missolonghi, Greece. Byron's statue, erected in 1881 over the mound in which his heart was buried

valonia, and local products. The town was formerly of some military importance, being besieged unsuccessfully by the Turks in 1821-22 and in 1825-26 during the Greek War of Independence. Byron died here on April 19, 1824. Pop. 9,270.

**Missoula.** City of Montana, U.S.A., the co. seat of Missoula co. It stands on the Missoula river, 125 m. W.N.W. of Helena, and is served by the Northern Pacific and the Chicago, Milwaukee and Puget Sound rlys. It contains the state university. The Northern Pacific Rly. has workshops here, and lumber milling is carried on. Missoula was founded in 1864 and received a city charter in 1887. At Jumbo Mountain, E. of the

town, an extensive series of horizontal markings represents shore lines of the former glacial lake Missoula. The town still has a frontier atmosphere; as late as 1935 redskins camped near by. Pop. 18,449.

**Missouri.** River of the U.S.A. The longest tributary of the Mississippi river, it is formed by the junction of the Madison, Jefferson, and Gallatin rivers, which have their sources in the Rocky Mountains and unite at Gallatin City in Montana. Thence it flows N. and N.E. through a mountainous district, and traverses a deep cañon called the Gates of the Rocky Mountains, the river here being compressed to 450 ft. for about 6 m. At Great Falls it makes a descent of 350 ft. in about 16 m., passing over a series of cataracts of much grandeur, the highest of which has a vertical drop of 90 ft. Below Fort Benton it turns E., passes through N. and S. Dakota in a S.E. direction, forms the boundary between Iowa and Missouri on the E. and Kansas and Nebraska on the W., and finally takes an E. course across Missouri to join the Mississippi 20 m. above St. Louis.

Measured from the source of the Jefferson its length is 2,950 m., while from Gallatin City to the Mississippi it is 2,700 m. Near the Grand Falls its breadth is 1,500 ft., at Sioux City 2,500 ft., and at its entrance to the Mississippi about 3,000 ft. It has several large tributaries, the principal being the Milk and Yellowstone in Montana, the James and White in South Dakota, the Nebraska or Platte in Nebraska, and the Kansas in Kansas. It drains a basin with an area of nearly 600,000 sq. m., and is navigable during part of the year to Great Falls, but in the low water season only to its confluence with the Yellowstone, its largest affluent. On its banks are many important towns, including Omaha, Atchison, Leavenworth, Kansas City, and Jefferson City. Its waters are turbid, which gives rise to its name, meaning mud river. Fort Peck dam and reservoir in Montana were completed in 1940. The dam was part of a scheme for improving navigation on the river, for controlling floods, and providing hydro-electric power. It is 250 ft. high, with a volume of 128,000,000 cu. yds. The reservoir has an area of 383 sq. m. and holds 6,326,000 million gallons.

**Missouri.** Central state of the U.S.A. Its area is 69,420 sq. m., of which nearly 700 are covered with

water. It is bisected by the Missouri river, which also forms the upper part of the W. boundary; the Mississippi marks the E. frontier. S. of the Missouri the surface is relieved by the forest-clothed Ozark Mts., the N. portion consisting of prairie and bottom lands, wooded only in part. An agricultural state, it yields rich crops of maize, wheat, oats, potatoes, cotton, tobacco, and flax. Stock-raising is carried on.

Missouri is the largest zinc-and lead-producing state of the Union, has more than 14,000 sq. m. of coalfields in operation, and a considerable output of iron ore and other minerals. Slaughtering and meat-packing, flour-milling, and boot and shoe making are among the many valuable industries. There are a state and other universities, besides numerous colleges, and, in addition to the rivers, transport facilities include 6,882 miles of steam and 263 miles of electric railways. Two liberal newspapers, the St. Louis Post-Dispatch and the Kansas City Star, have national influence.

The state capital is Jefferson City, but Missouri contains three larger cities, St. Louis, Kansas City, and St. Joseph. Other cities are Joplin, Springfield, Sedalia, Hannibal, Webb City, and Carthage. The pop. is 3,784,664, only a small proportion being negroes, with many of German descent.

Missouri was part of Louisiana, and as such was settled by the French. In 1762 it was transferred to Spain, and in 1803 the large district of which the future state formed part was sold to the U.S.A. In 1812 Missouri was made a territory, and in 1821 was admitted to the Union as a state. It is a border state, and gave 118,000 troops to the S. army and 116,000 to the N. army in the Civil War. It is governed by a general assembly which consists of a senate, elected for four years, and a house of representatives, elected for two. The franchise requires a short residential qualification. Politically, it preserves a balance between Republican elements representing the urban well-to-do and Democratic ones, representing small-town interests and those of the workers in the cities. It sends two senators and 16 representatives to Congress. *Consult* History of Missouri, P. S. Ruder, 1927.

**Missouri Compromise.** Arrangement made in 1820 by which the territory of Missouri was ad-

mitted as a state of the American Union. The state constitution submitted by Missouri recognized slavery, a fact which aroused a vehement agitation against it in the Northern states, and caused a two-years' deadlock in congress, the senate

supporting and the house of representatives opposing the application. Ultimately an agreement was attained by which slavery was prohibited in the whole of the Louisiana Purchase N. of lat. 36° 30', except that part of it forming the territory of Missouri, nearly all of which lay to the N. of that line. The repeal of this arrangement in 1854 led to the formation of the Republican party and precipitated the Civil War. Missouri was admitted to the Union Aug. 10, 1821.

**Mist.** Cloud of minute particles of water at ground level. Meteorologically the distinction between mist and fog is one of degree, the latter term being applied when visibility is less than 1 km. and mist when it is greater than this but less than 2 km. After a clear, cold night, mist frequently fills the valleys; in rainy weather mist enshrouds the hill tops, though none may be present in the valleys.

**Mistake.** In English law, an error of fact which entitles the party who has paid money under the mistake to recover it, or a party who has entered into a transaction to have it set aside. A mistake of law cannot be pleaded, nor will anyone be allowed to say that he was mistaken as to the meaning of the words in a contract. Where there has been a mutual mistake in the drawing up of a contract or conveyance, so that it expresses something which the parties had not really agreed, the court has jurisdiction to rectify the document so as to cause it to express the real intention of the parties.

**Mistassini.** Lake in the extreme N. of Quebec, Canada, drained by the Rupert river. Small islands divide it down the centre into practically two sheets of water. Length 100 m., breadth 15 to 20 m., depth 300 to 400 ft.

**Mister.** English masculine title of respect, abbreviated in writing to Mr. A variant of master, it is

Misti. View of the Peruvian volcano, showing the city of Arequipa in the foreground

used as a prefix in speaking in a ceremonious way of anyone, and sometimes in addressing a man in speech or writing. In its present sense it has been used since the 15th century or thereabouts, when it supplanted master. It is also used as a prefix to certain titles of office, e.g. Mr. Speaker. The feminine is mistress (q.v.). The French equivalent is monsieur, the German is herr, and the Spanish señor.

**Misti,** EL. Volcanic mt. of Peru in the prov. of Arequipa. It is situated a few miles N.E. of the city of Arequipa. Alt. 20,000 ft.

**Mistinguett.** French actress. She was born Jeanne Bourgeois, and made her first stage appearance at a Paris music-hall, appearing at the Gaîté Rochecouart from 1899 to 1907, where she enjoyed a sensational success as

Mistinguett, French actress

singer and dancer. After several seasons in revue at the Moulin Rouge (of which she was for many years part-proprietor) and the Bouffes-Parisiens, she was partnered by Maurice Chevalier (q.v.) at the Casino de Paris, and the Folies-Bergères in the years before and after the First Great War. The songs she introduced were immensely popular in Paris during the 1920s. She first appeared in London at the Casino Theatre, 1947. Her autobiography was translated into English under the title Mistinguett and her Confessions, 1938.

**Mistletoe** (*Viscum album*). An evergreen semi-parasitic shrub of the family Loranthaceae. Native of Europe and North Asia, its stems vary in length from a foot to four ft., and are yellowish-green in colour. The leathery leaves are of the same colour, and are oval-lance-shaped, mostly in pairs. The

small green flowers are unisexual, and consist of four sepals, with four stamens, or an ovary with simple stigma. The berries are white, a third of an inch in diameter, with a single seed invested by glutinous pulp. The berries are eaten by birds, and these seeds become attached to the branches of trees by their agency. On germination the embryo pierces the bark and penetrates to the wood. It draws most of its food from

Mistletoe. Sprays of leaves and berries

the tree, but manufactures carbohydrates in its leaves. Its host plants are very numerous, the chief being black poplar and apple in England and the plains of France; but in Dauphiné and the Rhine valley it is most abundant on Scots pine. American mistletoe, of which there are several species, forms a distinct genus.

The mistletoe is prominent in European folk-lore as a magical plant credited with many virtues, from giving the power to see ghosts to healing diseases. See Balder; Druid; Golden Bough.

**Mistral.** Piercingly cold, dry wind experienced chiefly in winter along the Rhône valley and the coasts of the Lion gulf. A depression over the Mediterranean, accompanied by anti-clockwise circulation of the air, brings down heavy cold air from the central plateau of France as a N.W. wind, and causes a hot sirocco to blow from the African coasts northward. The mistral, characterised by clear skies and bright sunshine, can develop into a wind of great violence, and in the Rhône valley velocities of 90 m.p.h. have been recorded. See Bora; Sirocco.

**Mistral, FRÉDÉRIC** (1830-1914). Provençal poet. He was born Sept. 8, 1830, at Maillane, Bouches-du-

Frédéric Mistral, Provençal poet

Rhône. His rustic epic, *Mirèio*, 1859, gave wide recognition to the movement for reviving Provençal language and literature. It was followed by other notable

works in the Provençal language; *Calendau*, partly legendary, partly allegorical, 1867; and *Lis Isolo d'Or* (The Golden Isles), a collection of his shortest poems, 1875. Later works

were *Nerto*, a light romantic tale in verse, 1884; *Lou Pouèmo dóu Rouse*, an epic of the Rhône, 1897; and *Moun espelido*, 1906, translated into English as *Memoirs of Mistral*, C. E. Maud, 1907. In 1904 Mistral received half of the Nobel prize for literature, and devoted it to the purchase of a palace in Arles in which to house the Félibrean Museum. He died March 25, 1914. Consult Mistral, C. A. Downer, 1901; Bibliographie Mistralienne, E. Lefèvre, 1903.

**Mistral, GABRIELA** (b. 1889). Chilean poet and educationist. Liciña Godoy-y-Alcayaga was born

April 7, 1889, and became a teacher. Director of the Magallanes elementary school, in southern Chile, she was later appointed to the consular service, representing her country at Madrid, Lisbon, Rio de Janeiro, Petropolis (Brazil), and Los Angeles. She was professor of history of Spanish civilization at Barnard College, New York, 1931, and secretary of the international institute for intellectual cooperation (League of Nations) before the Second Great War.

Her literary reputation was first established abroad with *Desolación*, 1922, a collection of prose and verse, though much of her early work such as *La Voz de Elqui*, 1908, was widely read in S. America. Her other collections included *Lecturas para Mujeres*, 1923; *Nubes Blancas*, 1923, and *Tala*, 1938. She was awarded the Nobel prize for literature in 1945. Much of her poetry shows traits of affinity with Buddhist thought.

**Mistress.** English title of respect, the feminine of master, or mister. In English, in the form missis, abbreviated to Mrs., it is the customary way of addressing untitled married women. The French equivalent is madame, the German frau, and the Spanish señora. It is also used for any woman in a position of authority, e.g. the mistress of a household, or the mistress at a school. Another use is for a woman who, not being his wife, lives in sexual relationship with a man.

In Great Britain the mistress of the robes is an official of the queen's household, the post being held by a peeress of high rank. See Royal Household.

**Mistretta** (anc. Amestratus, Amastra, and Mytistratum). Town of Sicily. It stands on the Regitano 11 m. by road S. of San Stefano di Camastra on the coast rly. and 61 m. E.S.E. of Palermo. Situated at an alt. of 3,228 ft., it is on the only high road across the Monti Nebrodi to Nicosia. Pop. 14,000.

**Misurata.** Town of Tripolitania, N. Africa. On the coastal route to Homs and Tripoli, it is situated on a bay some 110 m. E. of the latter. Built around a large oasis, it produces dates and is a fruit-growing centre. During the First Great War it was the capital of the ephemeral republic of Tripolitania, under the Arab bandit Ramadan Scetuni. The town was occupied on Jan. 18, 1943, by troops of the British 8th army during the final advance that resulted in the expulsion of the Axis from N. Africa. Pop. 45,000.

**Mitau.** German name for the Latvian town of Jelgava (q.v.).

**Mitcham.** Borough of Surrey, England. It is 10 m. S. of London, with rly. and London Transport services. It gives its name to a bor. constituency. On the Wandle, it has three eccles. districts, the churches being Christ Church, S. Mark, and SS. Peter and Paul. Mitcham Common, 480 acres, was one of the earliest homes of golf in England, and the village green has long been famous for cricketers. The industries include light engineering and the making of fireworks, chocolate, paints, edible fats, but the growing of lavender and other herbs for scents has practically died out. The charter fair held annually in time of peace has been in existence from ancient times; it was held on the old green for the last time in 1923. Pop. 65,000.

**Mitchel, JOHN** (1815-75). Irish nationalist and journalist. Born in co. Londonderry, Nov. 3, 1815,

John Mitchel, Irish nationalist

the son of a Presbyterian minister and educated at Trinity College, Dublin, he was prosecuted in 1843 for writing seditious articles in *The United Irishman*, and was sentenced to transportation for 14 years. Escaping from Van Diemen's Land, he made his way in

1853 to America, where he became a prominent advocate of slaveholding and the Southern cause. In 1875, while still in America, he was elected member for Tipperary. His right to take his seat was denied on the ground of his conviction for treason felony, but the electors returned him a second time. Mitchell returned from America to contest the point, but died at Dromalane, March 20.

**Mitchell.** Peak of the Black Mts., in N. Carolina, U.S.A. Known also as Mitchell's Peak and Black Dome, it is 6,711 ft. in alt., the highest summit of the U.S.A. east of the Rocky Mts. See Appalachians.

**Mitchell.** Type of American bomber, also employed by the R.A.F. in the Second Great War. Designed by the North American co., and known to the U.S. army as the B-25, it was named after Gen. William Mitchell (1879-1936), a protagonist of the bomber in modern warfare. As a heavily armed high-speed medium bomber, the Mitchell was successfully used in every theatre of war. It had two 1,700 h.p. Wright Cyclone engines, affording a maximum speed of 275 m.p.h., with full bomb load of 3,000 lb. The crew numbered five. See *Aeroplane illus.* p. 131.

**Mitchell, ABE** (1887-1947). English golfer, born at East Grinstead. He reached the semi-final of the amateur championship in 1910, and played for England against Scotland in 1910-11-12. Having been runner-up in the amateur championship of 1912, he turned professional, and won the gold medal at the Daily Mail and the News of the World tournaments in 1919. He played for Great Britain against the U.S.A. in Ryder Cup matches, 1921, 1929, 1931, 1933. He died June 11, 1947.

**Mitchell, CHARLES** (1861-1918). British boxer. Born in Birmingham, he defeated Bob Cunningham in a knuckle fight there early in 1878. In 1882 he won the middleweight and heavyweight championships of England, and soon visited America, where he gained several notable victories but was defeated by John L. Sullivan. He again fought the latter, at Chantilly in 1888, with bare knuckles, the contest resulting in a draw after 39 rounds. Mitchell challenged Jim Corbett, American world champion, but was defeated after three rounds, at Jacksonville, 1894. He died April 2, 1918.

**Mitchell, JOHN THOMAS WHITEHEAD** (1828-95). British business

man. Born at Rochdale, Oct. 18, 1828, he began to work in a cotton mill as a child of 10, and, having obtained some education in his leisure, joined the Rochdale Pioneers cooperative society. He started the Rochdale system of profit-sharing, and became a director of the Cooperative Wholesale Society in 1869 and its chairman in 1874. Mitchell, who was almost entirely responsible for the development of the enterprise, died March 16, 1895. *Consult Life*, P. Redfern, 1923.

**Mitchell, SIR PETER CHALMERS** (1864-1945). A British zoologist.

Born at Dunfermline, Nov. 23,

Sir Peter Chalmers Mitchell, British zoologist

1864, and educated at Aberdeen, Oxford, Berlin, and Leipzig, he was university demonstrator of comparative anatomy at Oxford before becoming secretary of the Zoological Society in 1903, and F.R.S., 1906. Under his direction many improvements were made in the London Zoological Gardens. Knighted in 1929, he resigned five years later and was succeeded by Julian Huxley. His writings include *The Childhood of Animals*, 1912; *Materialism and Vitalism in Biology*, 1930; *My Fill of Days*, 1937; *My House in Malaya*, 1938. He died July 2, 1945.

**Mitchell, REGINALD JOHN** (1895-1937). British aircraft designer. Born at Stoke-upon-Trent, he served his engineering apprenticeship and in 1916 joined the Supermarine Aviation Works (Vickers), becoming chief engineer and designer in 1920. In 1927 he became a director of the company and was awarded the silver medal of the Royal Aeronautical Society for his winning seaplane in the Schneider trophy contest. For his work on the S6B, which won the trophy outright for Great Britain in 1931, he was created C.B.E. Mitchell also designed the military flying boats Southampton, Scapa, and Stranraer, and the amphibious Seagull and Walrus. His Spitfire (q.v.) fighter, based on experience with Schneider trophy machines, first flew in 1936, going into service with the R.A.F. in 1938. Mitchell died June 11, 1937, the world's greatest aircraft designer. In a film, *The First of the Few*, 1942, Leslie Howard portrayed Mitchell.

**Mitchell, SILAS WEIR** (1829-1914). American neurologist and author. Born in Philadelphia, Feb.

S. Weir Mitchell, American neurologist

15, 1829, and educated at Jefferson medical college there, he inaugurated the Weir-Mitchell treatment for neurasthenia, hysteria, etc., substituting massage, rest, and isolation for the exercise previously advocated. His treatment became famous, and he was president of the Association of American Physicians, 1887, and of the American Neurological Association, 1908-09. Among his scientific books are *Injuries to Nerves and their Consequences*, 1864; *Rest in the Treatment of Disease*, 1875; *Clinical Lessons on Nervous Diseases*, 1895. Weir Mitchell was a prolific writer of children's books, among which is *The Wonderful Stories of Fuz-buz, the Fly, and Mother Grabem, the Spider*, 1867; and novels, e.g. *Roland Blake*, 1884; *John Sherwood, Ironmaster*, 1911. He died Jan. 4, 1914. See *Weir Mitchell Treatment*.

**Mitchison, NAOMI MARGARET** (b. 1897). A Scottish novelist. Daughter of J. S. Haldane (q.v.), she was born in Edinburgh, Nov. 1, 1897, and went to the Dragon School, Oxford. She wrote vivid novels and stories dealing with the ancient world or mythological themes, like *Cloud Cuckoo Land*, 1925; *The Corn King and the Spring Queen*, 1931; *The Delicate Fire*, 1933. A more urgent note was sounded in *The Moral Basis of Politics*, 1938; *The Blood of the Martyrs*, 1939.

**Mite.** Small creature belonging to the class Arachnida and order Acarina. Most mites are very

Itch mite, highly magnified

small, and some resemble miniature spiders. They have no "waist," the thorax and abdomen being fused together, and the latter entirely unsegmented. Many are parasitic and do considerable damage, some being the cause or vehicle of serious disease. Thus the diseases known as itch and mange (q.v.) are caused by mites that attack the skin. Another species, commonly known as

Mite. Left, specimens of *Rhizoglyphus echinopus*, mites which live between the scales of bulbs. Right, Big Bud mites, *Eriophyes ribis*, which infest currant buds. All highly magnified

the harvest bug, bores, during its larval stage, into the human skin, causing great irritation. A red mite is a parasitic pest of poultry and cage birds. Another mite, commonly known as the red spider, invades hop gardens and does much damage in greenhouses by sucking the juices of plants. A wormlike mite of the genus *Demodex* inhabits the sebaceous follicles of the human skin. Others infest cheese, flour, etc. See Insect.

**Mitford, MARY RUSSELL** (1787-1855). British novelist and dramatist. She was born at Alresford, Hants, Dec. 16, 1787, the daughter of a doctor, whose extravagances kept her poor all her life. Her tragedies, *Julian*, 1823; *The Foscari*,

Mary Russell Mitford

1826; *Rienzi*, 1828; and *Charles I*, 1834, met with tolerable success, though none is now acted. Her fame rests more surely on sketches of country life and character, contributed in the first instance to *The Lady's Magazine*, 1824-32, and republished as *Our Village*. In 1852 appeared *Recollections of Literary Life*. Mary Mitford died at Swallowfield, near Reading, Jan. 10, 1855. Consult *Life and Letters*, ed. A. G. L'Estrange, 1870.

William Mitford, British historian

**Mitford, WILLIAM** (1744-1827). British historian. Born Feb. 10, 1744, at Beaulieu, Hants, he was educated at Queen's College, Oxford.

In 1761 he inherited his father's estate at Exbury, and devoted himself to the study of Greek. At the suggestion of Gibbon, a fellow officer in the Hampshire militia, he wrote a *History of Greece*, 1784-1810, which, though painstaking and accurate so far as it goes, is vitiated by the author's dislike of democratic institutions. Between 1785 and 1818 Mitford represented Newport, Cornwall, Beeralston, and New Romney in parliament. He died at Exbury, Feb. 10, 1827.

**Mitho** or **MYTHO**. Town and river port of Cochin-China, French Indo-China. It is 23 m. from the sea on the chief distributary of the Mekong delta, and is the terminus of a rly. through Saigon to the coast of Vietnam.

**Mithradates VI** or **MITHRIDATES** (131-63 B.C.). King of Pontus. On the murder of his father, Mithradates V, 120 B.C., he became king, and on reaching man's estate extended his conquests to the Crimea and parts of Armenia. Ordered by the Romans

to give up Cappadocia, which he had annexed, he defeated all efforts to oust him, and eventually overran the whole of the Roman province of Asia. No fewer than 80,000 Roman citizens resident in various towns of the province were put to death by his orders. In 87 B.C. Sulla arrived in Greece, into which Mithradates had thrown an army, and signally defeated the king at Chaeronea and Orchomenos in 86, while another Roman army under Fimbria defeated him in Asia, and he concluded peace.

Fighting was renewed again in 83 and 82 B.C., but was not of long

duration. The third Mithradatic War began in 74, and lasted till 63. Lucillus, the Roman general in command, was at first successful, driving Mithradates from Pontus and defeating also his brother-in-law, Tigranes, king of Armenia, with whom Mithradates had taken refuge. He penetrated too far, however, into Mesopotamian Armenia, and was compelled to return. In the meantime Mithradates recovered the greater portion of Pontus, and the military efforts of eight years were brought to nought. The war was finally brought to an end by Pompey, whose army drove Mithradates into the Crimea, where, at his request, a Gallic attendant put an end to his life.

**Mithras**, or **MITHRA**. Ancient Aryan god of the common ancestors of Persians and Indians. In early Zoroastrianism, he had sunk to the position of an angel of light, attendant of Ormuzd (Ahura-Mazda), but he increased in importance in the Achaemenian period and later, being looked upon as the sun god and the protector of man. His worship developed into a major religion, Mithraism, which reached Rome c. 68 B.C. Widespread in the Roman army, it was a serious rival of Christianity. Its places of worship, with central altar-piece representing Mithras slaying a bull, have been found on many Roman sites. Its rites included baptism and various stages of initiation. Mithraism was suppressed c. 378.

**Mitla** or **MICTLAN** (Place of the dead). Village of Mexico. It is situated 30 m. E. of Oaxaca in the dist. of Tlaxiotala. Within a mountain-girt valley are five groups of ancient buildings. Rectangular in shape, massive and built of dressed stone, each group is arranged as a quadrangle with a paved inner court; the exterior walls have neither door nor window, and the inner walls are pierced by doorways with single stone slab lintels. In 1495 the Aztecs captured the place, which was probably built by early Mayan priests. See Mexico.

**Mitosis**. In biology, process of nuclear division. It involves the longitudinal splitting of each constituent chromosome into two equal parts and the separation of these parts for the production of two new nuclei equivalent in every way to the original.

**Mitrailleuse** (Fr. *mitraille*, grape shot). French name for the machine-gun in general. The original Montigny mitrailleuse was

Mithradates VI, King of Pontus  
From a coin

taken up by the French in 1869 and introduced in the army for the Franco-Prussian War, 1870-71. See Machine-Gun.

**Mitral Valve.** Valve which lies between the left auricle and the left ventricle of the heart. It is so called from the likeness to a bishop's mitre of two flaps which form it. When the heart muscle is in systole, *i.e.* contracting, the valve opens and blood passes from auricle into ventricle. When the heart muscle is in diastole, *i.e.* relaxing, the valve closes and prevents the back flow of blood from ventricle into auricle. With local inflammation, associated with acute rheumatism, this valve may become narrowed and incompetent, the blood finding its way backwards during diastole. This condition, known as mitral-stenosis, tends to be progressive, and is serious. See Heart.

**Mitre.** Head-dress of bishops and certain abbots of the Western Church, and occasionally of other ecclesiastics. The Jewish high priests wore a tall form of head-dress, called *mitra* in the Septuagint, but it is denied that the mitre was an adaptation of this. In its early forms, the mitre, which came into use about the 10th century, was low and simple. In the 14th century it increased to a foot or more in height. In the Church of England mitres fell into gradual disuse after the Reformation, disappearing in the 18th century, but were revived by some Anglican bishops after 1885. The English

right angle, of two similar blocks or mouldings, the meeting ends being equally bevelled. In some

Mitre. Thick inside key for mitre joint. Above, assembled. Lower, in sections

ancient Greek structures, the mitre was not carried straight through the entire joint, but was deflected, thus making the joining half mitre and half butt-joint. With double blocks the mitring was generally done on the inner blocks, the outer forming a butt-joint. See Joinery.

**Mitre, BARTOLOMÉ (1821-1906).** Argentine soldier, president, and man of letters. Born at Buenos

Bartolomé Mitre, Argentine statesman

Aires, June 26, 1821, he began his public life as journalist in 1838 at Montevideo. Leaving Uruguay for Bolivia, he became chief of the staff to the president, on whose fall he was exiled and went to Peru, thence to Chile, where he became noted as a journalist, and for attacks on the government was again exiled.

In 1852 Mitre returned to Argentina, and having taken part in the successful revolt against Rosas when Buenos Aires became an independent province, he was successively commander-in-chief of its army, minister of war, and minister of government and foreign relations. In 1862 he was elected president of the confederation for six years. Against Paraguay, 1865-70, he commanded Argentine, Brazilian, and Uruguayan troops. Founder of *La Nacion (q.v.)*, he was author of *Historia de Belgrano y de la Independencia Argentina*, 1859, and *Historia de San Martin y de la Emancipación Sud-Americana*, 1889-90. Never successful again as a presidential candidate, he died Jan. 18, 1906.

**Mitsubishi (Jap., three diamonds).** Japanese industrial trust, so called from the device on the flag of the steamship company which was its earliest enterprise.

Under the direction of Iwasaki, the trust came to the fore in the second half of the 19th century, when the law against the operation of ocean-going ships was repealed. In 1874 the government granted the Mitsubishi Steamship Co. a subsidy and transferred to its ownership some 60 ships bought abroad by the government for the Formosa expedition. In 1885 the line was amalgamated with the Union Transport Co. to form the Nippon Yusen Kaisha (Japanese Mail Steamship Co.). In 1946, when the trust was dissolved by order of the Americans, the Mitsubishi interests included banking, shipbuilding (with dockyards at Nagasaki), manufacturing (including motors and aircraft), real estate, and insurance, and the total capital of the 38 corporations was 2,767 million yen.

**Mitsui.** Oldest of the *Zaibatsu* or great industrial trusts of Japan. It was founded in 1632 in Yedo (Tokyo), where the Mitsui family carried on business as *hake-ya*—agents who realized for the feudal overlords the tributes paid to them in kind, and managed their financial affairs, on a commission basis. The Mitsui trust embraced 91 corporations with an aggregate capital of 3,880 million yen; its activities included banking, international trade, manufacturing, mining, heavy industry, and paper and flour mills. It was liquidated in 1946 by order of the U.S. authorities.

**Mittelland Kanal.** Name of a German waterway described under Midland Canal.

**Mitylene or MYTILENE.** Island in the Aegean Sea, anciently called Lesbos. Lying S. of the Gulf of Adramyti (Edremid) and Asiatic Turkey, it covers 675 sq. m. It is mountainous, with two excellent harbours, the soil is fertile, and corn, olives, and vines are extensively cultivated. About 1100 B.C. it was occupied by Aeolian immigrants, and five centuries later, under its "tyrant" Pittacus, it became the centre of the civilization of the Aeolians of Asia Minor. Greek lyrical poetry arose in Lesbos, the birthplace of Alcaeus, Terpander, Sappho, and Erinna. Its most important towns were Mitylene and Methymna.

Mitylene was successively in the hands of Persians, Athenians, Mithradates, and the Romans. After the defeat of the Persians, it joined the Athenian naval league, but, having revolted, its territory was distributed among Athenian settlers. In the time of Alexander

Mitre. 1. Gothic. 2. Roman, with bands detached; two forms used in R.C. Church. 3. Anglican mitre By courtesy of Burns, Oates and Washbourne, and A. R. Mowbray & Co., Ltd.

form is smaller than that worn by bishops of the R.C. Church. The mitre of bishops of the Greek Church is a dome-shaped crown. See Tiara.

**Mitre.** In building and joinery, the line formed by the intersection or juncture, generally at a

it suffered severely from the Macedonians, and later from the Romans, as a punishment for having supported Mithradates. It was rebuilt by Pompey, soon recovered much of its prosperity, and was especially favoured by Tiberias and Nerva. In the 14th century the East Roman emperor, John Palaeologus, bestowed it upon a Genoese nobleman, by whose descendants it was held until its conquest by the Turks in 1462. In 1913 it was restored to Greece. In the Second Great War German troops occupied Mitylene without opposition on May 5, 1941, holding it until Sept., 1944. Pop. of island, 177,214; town, 27,870. *Pron.* Mitti-leeni.

**Mivart**, St. GEORGE JACKSON (1827-1900). British scientist. He was born Nov. 30, 1827, and educated at Harrow, afterwards studying at King's College, London. After joining the R.C. Church he was called to the bar, but devoted himself to science and in 1862 became lecturer on anatomy at St. Mary's Hospital. In 1869 he was made F.R.S., and he was secretary of the Linnean Society, 1874-80. For three years he was a professor at Louvain. Writings on zoology brought him into touch with Darwin and Huxley. He did not wholly accept the Darwinian theory of evolution, yet certain articles led to his excommunication. He died April 1, 1900. Among his writings may be mentioned: *On the Genesis of Species*, 1871; *Man and Apes*, 1873; *The Cat*, 1881; *Nature and Thought*, 1882; *The Origin of Human Reason*, 1889; *Birds*, 1892.

**Mix**, Tom (1881-1940). American film actor. Born of mixed stock (including Celtic and Cherokee Indian), on a ranch at El Paso, Tex., Jan. 6, 1881, he was educated at Virginia military academy, and served as an army surgeon in the Spanish-

Tom Mix,  
American film actor

War. He was the star of many early "Western" pictures, in which he was always an adventurous cowboy, with his marvellously trained horse Tony. His first talking film, *Destry Rides Again*, was in 1932, but after appearing in *Rough Riding Romeo* he gave up the screen for the circus. He was killed in a car accident in Arizona, Oct. 12, 1940.

Mitylene, Aegean Sea. The town of Mitylene, on the east coast of the island, seen from the roadstead

**Mixtec**. American Indian tribe in Oaxaca, Guerrero, and Puebla, Mexico. They number some 150,000. Still progressive, they are descended from a pre-Spanish people who stood outside the Aztec confederacy. Their advanced culture and industrial art embodied both Mexican and Mayan characteristics. *See* Maya; Mexico.

**Mixture**. In chemistry, a term used to imply that the ingredients of a composition retain their individual properties. Sulphur and iron filings may be mixed together without chemical combination taking place, and the two ingredients can be separated by appropriate means. If, however, heat is applied to the mixture, the iron and sulphur combine chemically, and a new substance, iron sulphide, is formed, which possesses the characteristics of neither ingredient. The term mixture in pharmacy is applied to liquid medicines which either contain insoluble substances in suspension, or are composed of two or more liquids, with or without other matters in solution.

**Miyajima**. Sacred island of Japan in Hiroshima Bay, an arm of the Inland Sea. The island, also called Itsukushima, is counted as one of the three most celebrated sights in Japan, on account of its scenery and temples; it is 5 m. by 2½ m., and culminates in Misen, 1,800 ft. Miyajima town, pop. 4,000, on the N.W. coast, is connected by steam ferry with Miyajima station in Honshu, on the main line between Kobe and Shimonoeki. The temples were known in the 9th century, restored in the 12th century, and destroyed by fire and rebuilt several times since. About 40,000 pilgrims visit the island annually in normal times.

**Miyazu**. Town of Japan, in Honshu. Situated on Miyazu Bay, an arm of Wakasa Bay, on the N. coast, almost due N. of Osaka, it is a small port with trade in beans from the N.E. provs. of China. The neighbouring pine groves of Amano-hashidate are one of the famous sights of Japan. Pop. 10,000.

**Mizar**. Double star. Called alternatively Zeta Ursae Majoris, it

is composed of a star of the second magnitude with a fourth-magnitude companion 14 seconds of arc away. The components revolve round each other in 20 days 14 hours. They cannot be separated except in a telescope.

**Mizpah** or **Mizpeh** (Heb., a watch-tower). Ancient name of several high-lying places in Palestine. (1) The place, unidentified, where Jacob and Laban formed a compact (Gen. 31). (2) A region at the foot of Mt. Hermon (Josh. 11), probably near the Druse village of Mutelle. (3) Mizpeh of Gilead, the home of Jephthah. (4) A town fortified by Asa, and chosen as his residence by Gedaliah, governor of Jerusalem, after its capture, 586 B.C. It has been identified with Nebi Samwil, a mt. 2,935 ft. in alt., 4 m. N.W. of Jerusalem. It owes its present name (prophet Samuel) to a Muslim tradition which makes it the burial-place of Samuel (cf. 1 Sam. 7), and its mosque, formerly a Crusaders' church, contains a cenotaph revered as his tomb. The mt. was stormed by British troops in the First Great War, Nov. 21, 1917.

**Mizzen Mast**. In three-masted ships, the after mast. When there are four masts, all large, the after one is still called the mizzen, but if this last is small the masts are styled foremast, main mast, mizzen, and jigger.

**Mnemonics** (Gr. *mneumonikē*, art of memory). The art of improving the memory, especially by artificial aids and methods. Nearly all such methods depend upon the association of ideas, and they are chiefly based upon the principles of localisation and analogy. The former, topology, associates what is to be learnt with the picture of a building or place well known to the learner; the latter establishes an analogy between things or words and some familiar object.

Technical verses perhaps quite meaningless (like the Barbara, Celarent of the logicians), and the substitution for numbers of letters of the alphabet ( $1 = a, 2 = n$ ), which are made up into words and phrases, form another kind of aid. The art of memory is of very

ancient date, and was regularly cultivated in the Greco-Roman schools. The Greek poet Simonides, 6th century B.C., employed the topological method. In the Middle Ages Raymond Lully's Great Art was similarly arranged.

Attention is now directed rather to the psychological side of the question as likely to suggest means for the improvement of the memory. Purely mechanical systems are prejudicial to more scientific methods, although they may be usefully applied to lists of names and dates, and even to the learning of foreign words, by inserting an intermediate link in the shape of a word or words, recalling by association the two extremes. See Memory Training. *Pron. neomnionics.*

**Mnemosynē.** In Greek mythology, daughter of Uranus, and the personification of memory. By Zeus she was mother of the Muses.

**Moa.** Native name for the *Dinornis*, a genus of extinct flightless birds, which formerly inhabited New Zealand. About 20 species have been identified from their remains, the largest standing nearly 12 ft. high, the smallest being about the size of a turkey. They had apparently disappeared when European colonists arrived in New Zealand, but the state of

preservation of the eggs, feathers, and bones, which are found in abundance in Holocene deposits, suggests that the birds had not long been exterminated. They were unable to fly, but their long and powerful legs indicate that they could run with great speed. They had rounded, loosely constructed feathers, and their eggs were pale green.

**Moa.** Reconstruction of extinct wingless bird of New Zealand

**Moab.** Territory occupied in ancient times by the Moabites. It is an elevated tableland E. of the Dead Sea and lower Jordan valley, extending eastward to the Arabian desert. The river Arnon and other rivers flow westward through deep valleys. See Dead Sea; Palestine.

**Moabites.** An ancient Semitic people, closely related to the Hebrews. According to Gen. 19, they were descended from Moab, incestuously begotten by Lot. They were frequently at war with Israel and Judah, and were conquered by David. Ruth was a Moabitess. Solomon took Moabite wives, and introduced the worship of their national god Chemosh (*q.v.*) into Jerusalem. The Moabites recovered their independence, and Mesha, who set up the Moabite stone, won victories over Israel. Moab disappeared after the Babylonian conquest. See Palestine.

**Moabite Stone.** Black basalt slab from Dibon, Moab; discovered by Klein in 1868. International competition led to its

Moabite Stone. Ancient record of Moab's battles with Israel, dating from c. 850 B.C.

being shattered by its Beduin custodians. It was recovered for the Louvre, Paris, and its reconstruction was aided by paper squeezes secured by Clermont-Ganneau, covering 34 lines of primitive Hebrew script in the Moabite dialect of about 850 B.C. This inscription narrates Israel's conflict with Mesha.

**Moat.** Large trench round a fortified place for defensive purposes. The term is derived from the French *motte*, meaning an embankment and, in Norman-French, the ditch formed by the excavation necessary for providing the soil for such an embankment. Medieval castles were frequently provided with two moats, often filled with water, an inner one encircling the keep and an outer the precincts. By means of a moat the height of a battlement was considerably increased. See Bodiam Castle; Castle; Keep.

**Moawiya.** Caliph of Damascus 661-680, and founder of the Umayyad dynasty. Governor of Syria, he revolted against the caliph Ali, and after the murder of the latter

was proclaimed his successor. The dynasty lasted until 750.

**Mobile.** Bay and river of Alabama, U.S.A. The bay is formed by the Alabama and Tombigbee, which, after receiving the drainage of most of the state of Alabama, unite to flow S. to the Gulf of Mexico through an extensive delta of gum and cypress swamps. The Mobile is the W. and the Tensaw the E. of the five main distributaries which reach Mobile Bay, itself a part of the delta. Mobile river is 38 m. long; the bay is 27 m. long and 8 m. wide and less than 70 ft. deep. Mobile City is at the mouth of the river in the N.W. of the bay.

**Mobile.** City and seaport of Alabama, U.S.A., the co. seat of Mobile co. It is 135 m. E.N.E. of New Orleans, and is served by rlys. Its prominent buildings include the city hall, Battle House, and city and U.S. marine hospitals. The seat of a bishop, it has a fine Gothic cathedral and several educational institutions. Cotton, timber, resin, flour, cereals, coal, cotton-seed oil, and provisions are exported, and coffee, tropical fruits, asphalt, sisal grass, and potash imported.

Industries include saw-milling, shipbuilding, and the manufacture of cotton, veneers, and machine-shop products. There are important fisheries. Large harbour and dock improvements have been undertaken, and the port is visited by steamers from Europe, New York, Cuba, and South America. The original city was founded in 1702 by the French, the present city, farther S., being built nine years later. In 1704 the governor instituted the annual Mardi Gras festival which ends on Shrove Tuesday. Mobile was the capital of the French colony of Louisiana; was British, 1763-80; and Spanish, 1780-1813. It received a city charter in 1819, and was rechartered in 1887. Pop. 78,720.

**Mobilisation** (Lat. *mobilis*, movable). Process of bringing a navy, army, or air force to operational strength for war. In modern usage, the term includes organization of industry and industrial manpower to maintain and supply the fighting services; putting into operation civil defence measures; establishing economic and monetary controls; taking over by the government of sea, land, and air transport; and commandeering goods and services essential to military operations.

British mobilisation for the First Great War was carried out by

proclamation, the first day of mobilisation for the navy being Aug. 4, and for the army Aug. 5. Having retained reservists and ships called up previously for manoeuvres, the navy was in fact ready for active service by Aug. 3. The army completed its calling up of reservists and the issue of equipment from store by Aug. 10, and the British Expeditionary Force was ready to leave for France two days later.

General mobilisation of the Royal Navy for the Second Great War was ordered at 4.38 p.m. on Aug. 29, 1939, and completed on Aug. 31. Naval forces in home waters had been in a state of instant readiness for war since June 15, when reservists had been called up and the reserve fleet fully manned for exercises; on Aug. 23 the Admiralty had assumed control of all movements of merchant shipping. The general mobilisation of the army was ordered on Sept. 1; advance parties moved to France on Sept. 4; and one corps began to disembark on Sept. 10. Mobilisation of the R.A.F. was authorised on Sept. 1, and by Sept. 3 all stations were on a war footing. Civil defence services were mobilised and the black-out imposed on Sept. 1. There were no specific dates for the Axis powers' mobilisation, as they had been on a war basis, industrially and militarily, for at least 12 months.

At the time of the Munich Crisis (*q.v.*) the A.A. and coastal defence units of the Territorial army, the Observer Corps, and defensive units of the Auxiliary Air Force were called up on Sept. 26, and released Oct. 5, 1938. Mobilisation of the fleet took place Sept. 28, and was relaxed by stages.

In 1859, France required 37 days to mobilise 130,000 men and transport them to Italy; Prussia took 17 days to mobilise 400,000 and transport them to the French frontier in 1870; and in 1899 Great Britain occupied 13 days mobilising and embarking 40,000 men for South Africa.

**Moccasins**, or **MOCASSIN**. Shoe worn by the N. American Indians.

Moccasins. Pattern and made-up moccasin of one piece

Moccasins are made of soft deer skin, sometimes with raw hide soles added, but materials vary slightly in different parts of the country. The uppers are often embroidered with beadwork or decorated with porcupine quills, etc. See Boot and Shoe, colour plate.

**Moccasin** (*Natrix*). Name given to harmless snakes found in N.

America and also in the Old World. They are usually called water snakes, and should not be confused with the poisonous water moccasin (*Ancistrodon*).

**Mocha** or **МОКHA**.

Port in the Yemen, S.W. Arabia. About 60 m. N.N.W. of Cape Bab-el-Mandeb, it was formerly the centre of an immense trade in coffee, but a great part of its business has been transferred to Hodeida, farther up the coast of the Red Sea.

Mocking Bird. Cuban specimen of this N. American bird

heroic elements in them. Boileau's *Le Lutrin* was imitated and far surpassed by Pope in *The Rape of the Lock*, one of the wittiest examples of the mock heroic in English. See Poetry.

**Mocking Bird** (*Mimus polyglottus*).

Common bird of N. America, nearly related to the thrush, which it much resembles

in appearance. It gains its name from the facility with which it imitates the notes of other birds. It is found in the U.S.A. and the W. Indies, and is characterised by long tail, short wings, and whiteness of the underpart of the body. The wings and

tail are black, marked with white, and the bird, including tail, measures a little less than a foot. See Bird; Catbird.

**Mock Suns and Moons**. Optical phenomena often seen in conjunction with halos of the sun and moon. They are known meteorologically as parhelia and paraselenae respectively. Coloured or white images of the sun and moon appear on, or just outside, the ordinary halo ring, generally at the same elevation as the luminary. The images are due to the reflection and refraction of rays of light by ice crystals formed in the upper atmosphere. See Halo.

**Mòd** (Gael. from Old Norse, meeting or "moot"). Annual Gaelic festival. Meetings are held by An Comunn Gàidhealach, a society of Scottish Highlanders founded in 1891 to preserve and encourage the Gaelic language, music, etc., of Scotland. Competitions in singing, playing, etc., are held. The movement has spread so that local mòds are arranged independently. *Pron.* mode.

**Modder**. River of S. Africa. Rising near Dewetsdorp, about 40 m. S.E. of Bloemfontein, it flows N. and then W. through the Orange Free State, and entering Bechuanaland, discharges, after a course of 186 m., into the Vaal, near where the rly. crosses the latter on the way from Cape Town to Bulawayo.

The battle of Modder River on Nov. 28, 1899, was the third action of the S. African War fought by Lord Methuen in his attempt to relieve Kimberley. The British were surprised by a Boer contingent under de la Rey, and the advance held up until the Boer flank was turned by Gen. Pole-Carew. Methuen was badly wounded. The

Mock Sun. Pictorial diagram showing halos round the sun and mock suns at their intersections

**Mock Heroic Poetry**. Verse written in burlesque of the heroic in action or character. It deals with the general, parody being concerned with the particular. The earliest example is that of *The Battle of the Frogs and Mice*, at one time supposed to be by Homer, but probably rather intended as a burlesque of his *Iliad*. Chaucer's *Story of Sir Thopas*, in *The Canterbury Tales*, was written in mockery of the romances of the time. Beaumont and Fletcher in *The Knight of the Burning Pestle* dealt in stage mock heroes with the old romances, to which Cervantes at the same time was giving a death blow in *Don Quixote*. Butler's *Hudibras*, Dryden's *Macflecknoe*, and Pope's *Dunciad* are satires in mock heroic form. *The Rehearsal*, by Buckingham and others, and *The Critic*, by Sheridan, depend for their fun on the mock

Boer casualties were about 150, the British losses being nearly 400. *See* South African War.

**Mode.** Musical term of varied meaning. The Greek modes, and the modes of the Middle Ages which remained in use until about the middle of the 17th century, were concerned with the order of the tones and semitones in the octave scale, i.e. with the mode or manner of their arrangement.

The modes chiefly in use may be remembered in a rough and ready way by thinking of the white keys only of the pianoforte. The Ionian mode began on C, and was thus identical with our modern major scale; the Dorian on D; the Phrygian on E; the Lydian on F, the Mixolydian on G; the Aeolian on A, like the present descending melodic minor scale; and the Locrian—little used and hardly recognized by authorities—on B. Each of these normal or authentic modes had a plagal scale related to it, running from dominant to dominant of the authentic scale. Thus the Ionian mode was:

with dominant at G. The plagal form, called Hypoionian, was:

with dominant at E. *See* Gregorian Chant.

**Modelling.** Fashioning an article in some plastic substance, either in the round or in relief. Potter's clay in a fairly liquid state is the principal material used. During the progress of the work the moisture is preserved by sprinkling with water, and at night by wrapping the model in a wet sheet, or in a bag that will prevent the air affecting it. In figure sculpture in the round, various supports for the model are required. For a bust, a single upright, with a crossbar to carry the shoulders, will suffice. For the full figure, an iron upright, the height of the figure, is the mainstay of other supports for the limbs; this is fixed in a circular plinth, constructed to revolve on a wooden boss, so that the model can be turned round without the sculptor shifting his ground. Most of the work is done with the fingers. *See* Bronze Statuary; Plaster Cast; *consult* Modelling and Sculpture, A. Toft, 1905.

**Model Parliament.** Name given to the parliament summoned by Edward I in Nov., 1295. It consisted of the magnates, two knights

from every shire, and two burgesses from every considerable borough, and also representatives of the lower clergy. It was given its name because it was the model on which later parliaments were called, being representative of the nobles, clergy, and commons.

**Modena.** Duchy of Italy. It dates from 1452, when the city and the district around it, which since 1288 had been in the possession of the Este family, was made a duchy for Borso d'Este. During the Napoleonic wars the duchy became part of the Cisalpine republic. In 1814 it was given to Ferdinand, a member of the Hapsburg family, who had married Maria Beatrice, the heiress of the house of Este, and he and his son reigned until the latter was driven out in 1859. *See* Este.

**Modena.** Prov. of N. Italy, in Emilia. It stretches N.E. from the Tuscan Apennines to the Po valley. It is mountainous in the S.W., but in the fertile tracts it produces wheat, wine, and hemp. Goats and sheep are reared. Area, 1,003 sq. m. Pop. 373,000.

**Modena.** City of Italy, the capital of the prov. of Modena. It stands in a low and fertile plain, be-

library containing 140,000 vols. and several thousand MSS.; a town hall, dating in part from 1194; and museums and art galleries. There are several fine open spaces and recreation grounds. The manufactures include silks, woollens, linens, hats, and leather and iron ware, and there is trade in cattle, cereals, wine, fruit, and liqueurs. Pop., pre-war, 96,337.

A Roman colony from 183 B.C., Modena, then called Mutina, was besieged by Mark Antony in 43 B.C. Sacked by the Huns under Attila in 452, it was afterwards taken by the Lombards. In the 11th century it was the property of the marchioness of Tuscany, afterwards being for a short time a free city. It was acquired by the Este family in 1288, and was the capital of the duchy ruled by them until the foundation of the kingdom of Italy. The British 8th army took Modena from the Germans on April 24, 1945.

**Moderation.** Term used in the Presbyterian Church to denote the act of moderating, i.e. calling a minister. When a congregation meets with the local presbytery, under the presidency of the moderator, for the purpose of signing the

call to a minister-elect, the meeting is said to be a moderation. If the presbytery is satisfied that the congregation are unanimous, and that there is nothing against the personal character of the minister-elect, it grants a moderation to the people of that congregation to proceed with the call. *See* Presbyterianism.

### Moderator

(Lat. *moderari*, to

control). Name given to various academic and ecclesiastical officials. At Oxford university moderators are the examiners at the first public examination for degrees, commonly called moderations, abbreviated to mods. At Cambridge they are university officers who superintend the examinations for the mathematical tripos. At Dublin they are the candidates for the degree of B.A. who take first and second place in honours, and are called senior and junior moderators respectively.

The word is applied especially to the presiding officers at meetings

Modena, Italy. Crypt beneath the cathedral chancel, containing the tomb of S. Gemignano, the patron saint of the city

tween the Secchia and the Panaro, tributaries of the Po, and is 23 m. by rly. N.W. of Bologna, on the Aemilian Way. The splendid Romanesque cathedral, begun in 1099, has a lofty campanile and many curious carvings and statues. Other churches include S. Agostino with its memorials of the Este family. S. Pietro, S. Vincenzo, and others were damaged by air raids on May 13, 1944, and other occasions. The ducal palace (also hit), built early in the 17th century, is now used for public purposes. Among other buildings are the university, founded in 1683; a

and courts of the Presbyterian Church. Interim moderators are appointed by the local presbytery to fill a temporary vacancy in a church pending the appointment of a new minister. Moderators of local presbyteries hold office for a year, as also does the moderator of the General Assembly. In Scotland the Established Church, the United Free Church, and the Free Church each has its own moderator. Nine moderators were appointed in the Congregational Church of England and Wales from 1919, each appointed to a particular province; but they carry no authority over individual churches, their function consisting rather in influence, persuasion, and advice. See Presbyterianism; Church of Scotland; Congregationalism.

**Modernism.** Name given to a tendency of thought which came into prominence in the R.C. Church at the start of the 20th century and was condemned by Pius X in 1907. Modernism was made up of several elements; some were old and all were German. In religious philosophy modernists owed much to Kant and Schleiermacher; they were inclined to think that whether or not an historical event took place and was in that sense "true," it did not matter; what mattered was the practical consequences that came from believing it to be true. The "historical Jesus" might never have existed; the "Jesus of faith" was alone important, i.e. the experience of believing in Him. This idea was made fashionable by the popularity of pragmatism.

Since history could be bypassed in this way, modernists tended to take over the methods and spirit of German higher criticism of the Bible. This put all the emphasis on the "internal evidence" of books of the Bible, in which it was ready to find alleged contradictions and discrepancies. With such emphasis, almost inevitably criticism is controlled not by what the critic finds in his texts, but by what he brings to them as the assumptions of his arguments; and so Harnack, the greatest of all and a scholar, excluded many things simply because he believed that miracles could not happen, and naturally explained away any passage that reported them as having happened.

Similar criticism was performed by modernists on the history of dogma. They thought there could be in theology or religion no unchangeably true proposition, truth being rather in what a thing means

in the experience of a believer. This is what is meant by the claim of the modernists that Christian teaching was being brought by them into accord with the spirit of the age. (It follows that non-Christian religions, though perhaps incomplete, are just as "true" as the Christian; for what matters is the experience of their believers. Much, then, was made of comparative religion.)

From the R.C. Church, in which prominent modernists like Loisy and Tyrrell were excommunicated, the movement went deep into sections of the Church of England. The Modern Churchman represents what it there stood for. But now in the Church of England modernism is being repudiated and the philosophy behind it discredited; while its historical and critical methods are being rejected by greater accuracy and sounder scholarship.

**Bibliography.** Modernism: a Record and a Review, A. L. Lilley, 1908; Liberalism, Modernism, and Tradition, O. C. Quick, 1922; Father Tyrrell and the Modernist Movement, J. L. May, 1932; The Modernist Movement in the Roman Church, A. R. Vidler, 1934.

**Modern Painters.** Treatise on art by John Ruskin, published 1843-60. The work was begun as a defence of Turner's later manner, and gradually developed into a treatise on the principles of art, a rhapsody on the glories of nature, a panegyric on Tintoretto and the Florentine masters, and eventually a vehicle for conveying the author's views generally. The title was suggested by the publishers, Smith, Elder & Co., the author's own title having been Turner and the Ancients.

**Modern School.** Term used to denote a secondary school, i.e. for pupils aged 11 to 16, having a curriculum less academic than that of the traditional grammar school. Such schools were advocated in the report of the Hadow committee. Before the Education Act of 1944 most modern schools were administered under the regulations for elementary schools. In some areas they were called central schools; in others, selective central schools. A few had at least one group of pupils following an academic course in preparation for a certificate examination; but in most the curriculum was broader, and involved various types of arts and crafts, and group educational activities. See Secondary School.

**Modica.** Town of Sicily, in the prov. of Syracuse. It stands in the

Valdi Noto, 33 m. direct and 57 m. by rly. S.W. of Syracuse. The site of the Sicel city Motyka, it has remains of megalithic buildings. It is a centre for the trade in wine, oil, cattle, and fruit. Pop. 56,000.

**Modification.** A metallurgical phenomenon. It is of great value in the manufacture of light alloy components for aircraft. Aluminium alloys readily with silicon, and a group of alloys contains between 11 and 13 p.c. of the latter. If these alloys are cast normally, the metal has a coarse structure which makes it weak and liable to crack under shock. But if about 0.05 p.c. of sodium or of sodium fluoride be added to the molten alloy, the structure is found to be modified in the solid to a much finer grain, which makes the casting stronger and tougher. This alloy has application in cylinder blocks, crank-cases, and other parts of Diesel and internal combustion engines.

**Modigliani, AMEDEO** (1884-1920). Italian painter. Of Jewish origin, he was born in Leghorn, July 12, 1884, and studied at Florence Academy and in Rome. In 1906 he settled in Paris, where in Montmartre he was influenced by negro sculpture. A drunkard and drug addict, he lived in penury, but his personality attracted such painters and writers as Derain, Utrillo, Vlaminck, and Coteau. As a painter he did not exhibit until 1909, and he died Jan. 25, 1920. Sensitively observed, his portraits were notable for elongated proportions, restrained colour, and energetic grace. He is represented in Moscow, Detroit, London, and Zürich.

**Modjeska, HELENA** (1844-1909). Polish actress. Born at Cracow, Oct. 12, 1844, the daughter of a musician, she married an impresario, G. S. Modrzejewski, in 1861, and after playing some years on tour, made her début at Cracow in 1865. In 1868 she married

Helena Modjeska,  
Polish actress

Count Bozenta Chlapowski, with whom she went to America in 1876. She had already become famous in her rendering of Shakespearean heroines, and in 1877 she appeared at San Francisco, acting in English. In Great Britain she made successes as Mary Stuart, Lady Macbeth, and La Dame aux Camélias. She died at Bay City, Calif., April 9, 1909.

**Mödling.** Town of Austria. It is 8 m. S.S.W. of Vienna, at the entrance of the picturesque Brühl valley, and is a popular resort of the Viennese. It has the 15th century church of S. Othmar, and an agricultural school. Metal goods, boots and shoes are manufactured. Pop. 18,000. See Liechtenstein.

**Modoc.** American Indian tribe, known also as the Maklaks. Their home was in Oregon, and after the settlement of white men in that area there were sanguinary struggles between the two races. In 1852, and again in 1872-73, many of the Indians were killed. The few survivors live on the Klamath reservation in Oregon.

**Modulation.** In music, a change of key, or the passing from one scale of tonality to another. Thus, the following passes from key F to key C:

The same little piece afterwards touches the keys of D minor and G minor. When the modulations are to such related keys, they are called natural modulations; when a plunge is suddenly made to a more distant key, such as from F to B, the modulation is called extraneous. Chromatic modulation is when the change is effected by chromatic chords. Enharmonic modulation includes a chromatic or extraneous change, together with a substitution of notes, such as the key of B instead of C flat. (See Key.)

In radio, modulation refers to the method in which the signals representing sound waves are added to the high-frequency carrier wave. In amplitude modulation the wave form of the signal is reproduced as variations in the peak strength of the carrier wave. In frequency modulation (*q.v.*) it is the frequency itself of the carrier wave which varies with the signal (see Radio). Phase modulation has also been used in radio transmission, and sound signals have been conveyed by modulating either the duration or the position on a time scale of high-frequency radar pulses.

**Module.** Literally, a little measure. In architecture it is a unit of measurement used for determining the proportions of the various parts of a building; the unit varying according to the style of architecture. This system was

used by Vitruvius. The word is also used in hydraulics for measuring the flow of water. In prefabricated construction the module is the measurement on which the sizes of the structural units are based; *e.g.* a module of 4 ft. is a convenient width for wall, floor, and roof units, and a unit of 8 ft. (2 modules) suits the usual floor-to-ceiling height. In planning, a grid of module squares is invariably drawn to scale.

**Modulus.** Term used in mathematics and physics. In mathematics it is usually a constant multiplier or coefficient involved in a given function of a variable. In physics it is a constant which gives the ratio between the amount of physical effect and the force causing this effect, *e.g.* Young's modulus of elasticity. A modulus is the constant factor for converting from one system of units to another.

**Modus Vivendi** (Lat., way of living). Term applied to an informal agreement between the pope and a government for the regulation of R.C. ecclesiastical affairs in any country. This is a substitute for a concordat.

**Möen.** Island of Denmark. It lies in the Baltic, between Zealand and Falster. It has an irregular outline, and its picturesque limestone cliffs rise to 500 ft. Farming and fishing are the industries. Stege, a seaport on the N.W. coast, is the chief town. Area, 81 sq. m.

**Moeran, ERNEST JOHN** (b. 1894). British composer. Born at Heston, Middlesex, Dec. 31, 1894, he was educated at Uppingham and the R.C.M., studying composition under John Ireland. Moeran's family came from Ireland and he resided much in that country, his work being inspired by its folk idiom as well as a strong lyrical feeling. His 1st rhapsody was performed under Harty at Manchester in 1924. His larger works are a symphony in G minor, 1938; violin concerto, 1942; and cello concerto, 1945, written for and performed by his wife, Peers Coetmore.

**Moerdijk Bridges.** Two bridges across the Hollands Diep in the Netherlands. The rly. bridge, nearly a mile long, was constructed 1868-71; the road bridge,  $\frac{1}{2}$  m. long, 1933-37. They take their name from the village of

Moerdijk, which lies  $7\frac{1}{2}$  m. S.S.E. of Dordrecht on the S. side of this wide, sluggish channel (one of the outlets into which the Maas and the Waal drain) which separates the prov. of S. Holland from N. Brabant; they form the sole direct means of communication between the N. and the S. of the Netherlands. German parachutists seized them on May 10, 1940, and four days later German armour poured over them into "Fortress Holland," outflanking the water defences to the E.

When the Allies advanced into the Netherlands in 1944, the Germans blew up three spans of the rly. bridge and severely damaged the road bridge so that although Moerdijk village was liberated Nov. 8 by the 1st Polish armoured div., the Allied advance stopped there. After Germany's surrender and the liberation of the whole of the Netherlands, a temporary bridge carrying a single rly. track, and incorporating part of the (temporary) Waterloo bridge from London, was built and opened to traffic Sept., 1946, pending the rebuilding of permanent bridges.

**Moeris, LAKE.** Ancient name for a sheet of water in central Egypt, in the Fayum district. It formerly covered a considerable area. The portion still remaining is 34 m. long by 6 m. broad, and is known as the Birket-el-Kerun. Its embankment and partial reclamation were the work of Amenemhat III. On its banks was the celebrated Labyrinth described by Herodotus. See Labyrinth; Medinet-el-Fayum; consult The Fayum and Lake Moeris, Sir R. H. Brown, 1892.

**Moesia.** Prov. of the Roman empire. It roughly corresponded to the parts of Serbia and Bulgaria N. of the Balkan range. A Celtic land, it was conquered by the Romans 29-15 B.C., and by the invitation of the Emperor Valens was settled in A.D. 375 by Visi-Goths, who were thenceforth called Moeso-Goths. See Goths.

**Moeuvres.** Village of France, in the dept. of Pas-de-Calais. It is immediately E. of Boulton Wood and is memorable for two heroic episodes in the First Great War. Here in Nov., 1917, a company of the 13th Essex, surrounded by German forces, fought to the last man. It was also the scene of a stand by Corporal D. F. Hunter, V.C., and six men of the 1/5 batt. H.L.I. (52nd div.), in Sept., 1918. This party not only maintained their position but

E. J. Moeran,  
British composer

inflicted casualties on the enemy, and when Moeuvres was retaken by the British, regained their unit without loss.

**Moffat.** Police burgh and watering-place of Dumfriesshire, Scotland. It stands on the Annan, 63 m. S. by W. of Edinburgh, with a rly. station. It is a spa having mineral springs used by invalids since about 1750. These and beautiful scenery around attract many

Moffat Arms

visitors; the town, in fact, owes its origin to this spa. It has industrial activities. Pop. 2,006.

**Moffat, ROBERT** (1795-1883). Scottish missionary. Born at Ormiston, E. Lothian, Dec. 21, 1795, he worked as a gardener. Soon he offered his services to the London Missionary Society and in 1816 went out to S. Africa. He stayed in that country until 1870, travelling about and in different to danger, introducing Christianity and civilization to the natives. He translated the Bible into the language of the Bechuana, and wrote *Missionary Labours and Scenes in S. Africa*, 1842. In 1819 he married Mary Smith (1795-1870), who was also devoted to the work, and their daughter became the wife of David Livingstone. Moffat died at Leigh, Kent, Aug. 9, 1883.

Robert Moffat

**Moffatt, JAMES** (1870-1944). Scottish divine. Born in Glasgow, July 4, 1870, he was educated at the academy and university there. Ordained in 1896, he delivered the Jowett lectures in 1907, and during 1911-15 was Yates professor of Greek and N.T. exegesis

James Moffatt, Scottish divine

at Mansfield College, Oxford. From 1927 to 1939 he was professor of church history in the United Theological Seminary, N.Y. Moffatt is best known as a translator of the Bible; he revised his earlier version of the N.T. in 1924, and made a similar version of the O.T. His work was criticised

Moffat, Dumfriesshire. General view of the town from the west

for its colloquialisms and use of the Scottish vernacular. An Introduction to the Literature of the N.T. has become a standard book. Moffatt died June 27, 1944.

**Mofussil.** Anglo-Indian term meaning the provinces. It is applied to the country stations and districts, or the rural parts of a district, as distinct respectively from the presidency or the chief station. It comes from Arabic *mu-fassal* (separate, particular, hence provincial).

**Mogadishu** (Ital. Mogadiscio). Seaport of Italian Somaliland. Situated 270 m. N.E. of the mouth of Juba river, it is connected by a short rly. with Afgoi in the interior, and was the administrative centre of the Somali territories under Italian rule. Developed into a naval and military base by the Italians, it was strongly garrisoned when Italy entered the Second Great War. Bombed from the air on several occasions during 1940, and bombarded by light forces of the Royal Navy, Nov. 17, it was captured by British Imperial troops on Feb. 25, 1941, and became an important supply base for the subsequent conquest of Italian E. Africa; it also remained the centre for British administration of (Italian) Somaliland, developing on some scale the manufacture of soap, margarine, buttons, bricks, boot polish, pottery, glass, beer, and tinned foods.

Mogadishu was the scene, Jan. 13, 1948, of serious rioting, resulting in 67 casualties, 52 of them Italian, between members of the Somali Youth league, demanding an independent Somaliland, and Italian colonists, disturbances coinciding with the presence of the four-power commission considering the disposal of former

Italian colonies. Pop. 55,000, of whom 8,000 are Italian. See East Africa Campaign; Italy; Somaliland.

**Mogador** OR ES SUEIRA. Seaport of Morocco. It is 130 m. from Marrakesh. With a good harbour, it does a considerable trade, exporting the produce of the land. It was founded in 1760, and its

Mogador, Morocco. City water tower and aqueduct

chief building is the citadel. Pop. 32,000.

**Mogilev.** A town of White Russia S.S.R. It is on the Dnieper, about 100 m. E. of Minsk, and is built on both banks of the river. It has rly. connexion with Moscow, and its industries include smelting, leather, and tobacco manufactures. It trades in corn, sugar, and fish from the south. In the 15th century, the Polish kings claimed it; it surrendered to Russia in 1654, but was taken by the Swedes at the beginning of the 18th century. It was annexed by Russia in 1772. Mogilev was for long famous for its two cathedrals, one for the Roman Catholics, and the other, built in 1780 by Catherine II of Russia and Joseph II of Austria. During the Napoleonic invasion Bagration's forces were defeated near here in 1812. The Germans occupied Mogilev early in July, 1941, the Russians recaptured it, June 28, 1944. Pop. 99,440.

**Mogilev-Podolski.** Town of the Ukrainian S.S.R. about 200 m. N.W. of Odessa. It is situated on the left bank of the Dniester,

and was founded about 1690; it developed rapidly, and was annexed from the Poles by Russia in 1795. The town is near the former frontier of Bessarabia, and until the Second Great War traded in cereals, flax, timber, and dried fruits. It was captured by German and Rumanian forces early in July, 1941, and recaptured by the Russians, March 20, 1944.

**Mogul** (Arab. *mughal*, Mongol). Name applied to the empire founded c. 1526, by Babar (*q.v.*), the Mahomedan conqueror of India. Under his grandson Akbar (1542-1605) the empire was greatly extended. On the death of Aurungzebe (1707) it fell to pieces, and in 1858 it finally ceased to exist. See Akbar; Babar; India.

**Mohacs.** Town of Hungary. It is situated on the right bank of the Danube, 40 m. E. of Pecs, and is a rly. junction and a steamer station with some trade in coal. It has manufactures of silk, timber, and bricks. Pop. 17,228.

Mohacs is best known as the scene of two battles. The first, Aug. 29, 1526, was the defeat of Louis II (*q.v.*) of Hungary by Soliman the Magnificent, when of the whole Hungarian force of 25,000 men, 24,000 fell on the field, including Louis himself. This defeat left the road open to Buda, which was entered and sacked by the Turks, Sept. 12. The second battle, Aug. 12, 1687, saw the defeat of the Turks by the Austrian army of Charles of Lorraine, and was one of the decisive battles in the campaign which eventually drove the Turks out of Christian Europe. Mohacs was captured from German and Hungarian troops by units of the Russians, Nov. 29, 1944. Pron. Mo-hatch.

**Mohair** (Arab. *mukhayyar*, choice, select). Fleece of the Angora goat. Mohair has been imported from Turkey since the 17th century at least, when it was used for making camlets for cloaks. Gimp, fancy buttons, and button-holes were made of mohair twist, hair for the purpose being brought over in the form of spun yarn. Mohair spinning has been carried on in Bradford, Yorkshire, on a large scale since 1848. The better qualities are taken for dress goods, and others are made into plushes, braids, astrakhans, and heavy cloths. Turkey mohair normally commands the best prices, but there are at the Cape three times as many Angora goats as in Asia Minor. Cape kids from the young of the South African goats is the finest procurable hair. Angora

goat ranching has extended much in the western U.S.A., and the manufacture of mohair goods has largely increased in America. See Angora; Wool.

**Mohammed.** Name, a variant of Mahomet, of six sultans of Turkey. The two most important (II and V) are separately noticed.

Mohammed I reigned 1413-21. By constant warfare he recovered territories lost by his father, Bayazid, who had been overwhelmed by the forces of Timur. This sultan appears to have been a man of culture. The reign of Mohammed III, 1595-1603, was mainly taken up in fighting against Austria, but before its end he was involved in a war with Persia, and had to contend with an insurrection in Constantinople. Mohammed IV reigned during 1648-87. This was the period when the Kuprili family was directing the affairs of Turkey, and during the reign war was carried on with Austria and Poland.

Mohammed VI became sultan in 1918. Born Jan. 12, 1861, he was the son of sultan Abdul Medjid, and the brother of Mohammed V, whom he succeeded July 3, 1918. He was deposed Nov., 1922 and died at San Remo, May 15, 1926.

**Mohammed II** (1430-81). Sultan of Turkey, known as Mohammed the Conqueror (El Fātyh). Son of Murad II, he was born at Adrianople, and succeeded his father in 1451. In 1453, at the head of over 150,000 men and a fleet of 400 vessels, he captured Constantinople from the Greek emperor, Constantine Palaeologus, after a siege of 53 days. Making Constantinople his capital, he embarked on a long series of wars. He subdued Serbia in 1459, in spite of his memorable defeat at Belgrade by Hunyadi, 1456, made himself master of the Morea, 1460, of Trebizond, 1461, of Lesbos, 1462, and of Wallachia and Bosnia, 1463. In 1472 he overcame the Persian forces in Cappadocia, and took Caffa in the Crimea from the Genoese in 1475. In 1478 he forced Venice to sign peace and surrender Skutari in Albania, and in 1480 he attacked the Neapolitans and captured Otranto. Shortly afterwards he died at Gebze, and was succeeded by Bayazid II. See Turkey: History.

Mohammed V.  
Sultan of Turkey

**Mohammed V** OR MEHMET RESHAD (1844-1918). Sultan of Turkey. Born November 3, 1844, younger brother of Sultan Abdul Hamid II (*q.v.*) he lived in dull and isolated obscurity most of his life. A student and deeply religious, he only emerged into prominence on the deposition of Abdul Hamid on April 27, 1909, on which day he was proclaimed his successor. He succeeded to a heritage of misgovernment, and throughout his reign was a mere figurehead, the real power being in the hands of the Young Turk party, headed by Enver Pasha, Talaat Bey, and others. The Italian and Balkan wars and the increasing influence of Germany in Turkish affairs were troubles with which he had to contend. He is believed to have been by no means willing to side with Germany in the First Great War, and for a while did what he could to avoid a rupture with the Allies, but was overruled. He died July 3, 1918, and was succeeded by his brother, Mohammed VI. See Turkey.

**Mohammed Riza Shah Pahlavi** (b. 1919). Persian ruler. Son of Riza Shah Pahlavi, he was born Oct. 27, 1919, and in 1939 married Fawzieh, the sister of King Farouk of Egypt, divorcing her 1948. He succeeded to the throne on his father's abdication, Sept. 16, 1941.

Mohammed Riza,  
Persian ruler

**Mohammed Zahir Shah** (b. 1914). King of Afghanistan. Born in Kabul, he was educated in

Mohammed Zahir,  
King of Afghanistan

France and at the Infantry Officers' College in Kabul. He married his cousin Umairah in 1931. In 1932 minister of war and of education, he ascended the throne on the assassination of his father, Mohammed Nadir Shah, Nov. 8, 1933.

**Mohammerah.** This Persian seaport is more frequently known as Khorramshahr (*q.v.*).

**Moharram** OR MUHARRAM (Arab., sacred). First month of the Mahomedan year; also a religious celebration during that month. The celebration is observed by Shiites as a time of mourning and

fasting to commemorate the martyrdom of Hasan and Hussein, grandsons of Mahomet. A miracle play is performed on the anniversary of the death of Hussein. In India the Moharrem ceremonies are observed by both Sunnites and Shiites, and also by Hindus, especially Marathas, as a festival of rejoicing rather than of mourning.

**Mohawks** (Narraganset, man-eaters). North American Indian tribe of Iroquoian stock. Formerly one of the Six Nations, their location between the St. Lawrence and the Catskills led to early trade relations with the Dutch (1614), who exchanged firearms for pelts. They ultimately migrated to Canada, and in 1916 they exceeded 5,000.

**Mohawks on Mohocks.** London fraternity of dissolute young men of fashion in the early 18th century, the name being adopted from the Mohawk tribe. They were the successors of the so-called "scourers," and their favourite exploits were beating the watch, slitting noses, and rolling women in barrels down Snow Hill. The Tories endeavoured to saddle the Whigs with the Mohawks' delinquencies; in his *Journal* to Stella Dean Swift says: "They are all Whigs." A royal proclamation was issued against them, March 18, 1712.

**Mohenjodaro.** Ancient city in the Indus valley (Sind) whose excavation has revealed a civilization of c. 3300-2700 B.C., contemporary with and related to that of early Sumeria. See India.

**Mohicans.** Name popularly applied to a N. American Indian tribe, officially called Mahicans. An allied tribe are called Mohegans (wolf). Of Algonquian stock, the Mahicans moved from the Hudson valley into Pennsylvania, the Mohegans northward into New England. Both tribes are extinct. They lived in communal bark-houses, and their villages were frequently stockaded. The men wore feather mantles, and the women wampum (*q.v.*).

**Mohl, Hugo von** (1805-1872). German botanist. Born at Stuttgart on April 8, 1805, he was educated at Tübingen and Munich and became professor of botany at Tübingen in 1832, holding the position for 40 years. His researches into histology led him to suggest the word protoplasm and to describe the behaviour of protoplasm in cell-division. He was the true founder of the cell theory. His important *Die Vegetabilische Zelle* appeared in 1851, being translated into English in 1852. He died April 1, 1872.

**Mohmands.** Tribesmen inhabiting the country north of the Kabul river south of Bajaur on the N.W. frontier of Pakistan. The Durand line which divided India from Afghanistan passed through the country of the Mohmands, who received special assurances that they should not suffer from the separation from Afghanistan. That did not prevent the Mohmands from giving considerable trouble four years later (1897), when a general outbreak on the frontier made them fear annexation. They joined with their neighbours the Afridis and Swatis in attacks on administered territory. In this campaign Winston Churchill, as the correspondent of the *Daily Telegraph* and *Pioneer* (India), won his journalistic spurs (The Malakand Campaign). The tale of expeditions against the Mohmands goes back, however, to East India Company days, for the first took place in 1851-52; others were in 1854, 1864, 1879, and 1880. The Mohmand's economic existence is precarious, as the crops grown are dependent on adequate rainfall, which is not always to be depended on. The population of Mohmand tribes on the Pakistan side of the Durand line is about 100,000, of whom 30,000 are fighting men. Area about 1,100 sq. miles.

**Möhne Dam.** Structure on the Möhne river, Westphalia, Germany. Constructed to supply water to German industry in the Ruhr, and to canals and hydro-electric generator stations, the dam was about 850 yds. long, measured 140 ft. alike in thickness and height, and was built of solid concrete. It retained 140,000,000 tons of water. On May 17, 1943, it was attacked and breached by R.A.F. bombers carrying special mines. The Eder dam was also breached the same night (the third dam attacked, the Sorpe, was not); the released waters swamped vast areas of land, and flooded factories, railways, power stations, and towns, Kassel being inundated. The destruction of the dams was part of the plan to paralyse the heavy industries of the Ruhr by air attack. See Air Photography, illus. p. 209.

Moidore. Obverse and reverse of the Portuguese coin,  $\frac{1}{2}$  actual size

**Mohs Scale.** Mineralogical scale determining hardness by comparison with a standard set of minerals. It is as follows:

Hardness	Standard Mineral
1	Talc
2	Gypsum
3	Calcite
4	Fluorite
5	Apatite
6	Orthoclase
7	Quartz
8	Topaz
9	Corundum
10	Diamond

As an example, galena (hardness 2.5) scratches gypsum (hardness 2) but is scratched by calcite (hardness 3). The difference in hardness between any two minerals of the Mohs Scale is not claimed to be in any way constant. The scale was first introduced in 1820 by a German mineralogist, Friedrich Mohs (1773-1839).

**Mohun, Baron.** Irish title borne from 1628 to 1712 by the family of Mohun. John Mohun (c. 1592-1640) was the first holder, but the best known is Charles Mohun, the 4th (c. 1675-1712). A son of the 3rd baron, he soon became known for his riotous conduct. In 1692 he helped

4th Baron Mohun, Irish peer After Kneller

a friend, Richard Hill, in an attempt to carry off the actress, Mrs. Bracegirdle, this leading to a scuffle between him and William Mountfort, the actor, in which the latter was killed. Mohun was tried by his peers and acquitted, pleading that he killed his man in fair fight, and in 1699 he was similarly relieved from a charge of murder. On Nov. 15, 1712, he fought a duel in Hyde Park with the 4th duke of Hamilton and both were killed, an incident immortalised in Thackeray's Henry Esmond. The barony thereupon became extinct.

**Moi.** Annamese collective name for aboriginal hill-tribes in French Indo-China. Estimated at 600,000, they display some ethnic admixture on the fringes of their upland habitat, but are essentially long-headed, level-eyed Indonesians, with a primitive social organization and animistic beliefs based on spirit-worship and witchcraft. See Asia; Kha.

**Moidore** (Port. *moeda d'ouro*, money of gold). Obsolete Portuguese gold coin. Valued at 4,800 reis, or a little over a guinea nominally, it was not minted after 1732. The coin was also known as the

lisbonine, and was in use in many countries of W. Europe.

**Moine Series.** A group of rocks named after A' Mhoine in Sutherland and covering most of Scotland N. of the Great Glen, as well as parts of Inverness, Perth, and Argyll to the S. of it. The rocks are probably Pre-Cambrian in age, and may be equivalent to the Torridonian sandstones of the N.W. coast. The Moines are dominantly metamorphosed sediments, once sandstones and shales, but now granulites and schists. Their origin is obscure, but they may be altered beds of volcanic ashes. The relationship of the Moines to other Pre-Cambrian rocks in Scotland and the age of their metamorphism are still matters of considerable controversy. See Geology; Rocks; Pre-Cambrian.

**Moine Thrust.** In geology, a great thrust fault which runs nearly parallel to the N.W. coast of Scotland from Loch Erriboll to Sleat in Skye, and probably thence to the Sound of Iona and to Islay. The thrust zone was formed during the Caledonian mountain building movements of post-Silurian age. It carries metamorphosed rocks of the Moine series (*q.v.*) W.N.W. over Cambrian, Torridonian, and Lewisian rocks. The thrust dips gently E.S.E., and the movements on it were locally at least 10 miles. It was the first great thrust zone to be recognized and described in detail. See Fault; Geology.

**Moir, DAVID MACBETH** (1798-1851). Scottish humorist. He was born at Musselburgh, Jan. 5,

David Moir,  
Scottish humorist

1798, and spent his life there engaged in medical practice. Over the signature Delta he contributed much verse to Blackwood's Magazine. He is remembered chiefly by his Autobiography of Mansie Wauch, a picture of humble Scottish life. Moir died July 6, 1851.

**Moirai.** In classical mythology, Greek name for the Fates, goddesses who presided over the destiny of man. The Latin name for them was Parcae. See Fates.

**Moiré** (Fr., watered). Term applied to fabrics bearing an irregular wavy or jagged figure produced in cloth finishing. This watered effect is the same that is seen when two layers of light cloth

are superimposed. The permanent watered or moiré effect is obtained by the use of water and pressure. The cloth is laid in layers, and an impression of the back of one layer is made on the face of the next. Silk fabrics so treated are generally named moirés, worsted fabrics moreens, and cotton fabrics moirettes. The perfection of the result is judged by the size of the figures.

**Moiseiwitsch, BENNO** (b. 1890). Russian-born British pianist. Born of Jewish stock at Odessa, Russia,

B. Moiseiwitsch,  
Russian-born  
British pianist

Feb. 22, 1890, he studied at the Imperial School of Music there (where he won the Rubenstein prize at the age of 9) and later under Leschetitzky in Vienna. Coming to England, he made his début as a concert pianist at Queen's Hall in 1909, and was an immediate success. An executant of great power and brilliant interpretative ability, especially associated with the works of his friend Rachmaninov, he made repeated world tours and became a naturalized British subject in 1937.

**Moissac.** Town of France, in the dept. of Tarn-et-Garonne. It lies on the right bank of the Tarn, 17 m. by rly. W.N.W. of Montauban on the important Canal Latéral, and is a centre of local agricultural and wine trade. The S. portal of the ancient church of S. Pierre is a remarkable example of 12th century Gothic sculpture. The adjoining cloister, built c. 1100, is also part of the remains of a famous abbey, founded in the 7th century, affiliated to the order of Cluny in the 11th, and suppressed during the Revolution. Pop. 8,700.

**Moissan, HENRI** (1852-1907). French chemist. He was born in Paris, Sept. 28, 1852, and in 1889 was professor of mineral chemistry, at the school of pharmacy. In 1900 appointed professor of chemistry at the Sorbonne, he was awarded the Nobel prize for chemistry in 1906. He died in Paris, Feb. 20, 1907.

Moissan is famous for his work on fluorine and the production

Henri Moissan,  
French chemist

of artificial diamonds by the sudden cooling of a molten iron mass containing dissolved carbon. This latter discovery caused a great sensation at the time, but the diamonds produced by this method have never been commercially successful. Moissan was also responsible for an improved method of acetylene production.

**Moivre, ABRAHAM DE** (1667-1754). Anglo-French mathematician. Born May 26, 1667, at Vitry in Champagne, he came to England, 1688, and remained there for the rest of his life. He became a personal friend of Sir Isaac Newton, to whom he owed much of his mathematical training. De Moivre was made a fellow of the Royal Society in 1697. His chief title to fame is a theorem in trigonometry which opened up a large branch of mathematics, and which still bears his name. His book *The Doctrine of Chances*, first published in 1718, was for long a classic. He died Nov. 27, 1754, in London. See Trigonometry.

**Mojaisk.** Town of R.S.F.S.R. in Moscow region. It is about 65 m. S.W. of Moscow, at the confluence of the Petrovka and Moskova rivers. Of strategical importance, it was founded in the 13th century; Ivan the Terrible built a fortress here in 1541.

In the Second Great War it was one of the key-towns to the Russian capital. Having captured it in 1941, the Germans converted Mojaisk into a bastion with three general lines of defence. With the recapture of the town by the Russians, Jan. 19, 1942, the German threat to Moscow was virtually ended.

**Moji.** Seaport and town of Japan, in Kyushu. It is in the N.E. of the island on the Strait of Shimonoseki, at the entrance to the Inland Sea. The chief export is coal; others of minor importance are cotton thread, refined sugar, cement, and timber. Ginned cotton, raw sugar, petroleum, and bean cake are imported. The port became important in 1887, when it was made the terminus of the Kyushu rly. Its pop. has increased from 3,000 in 1889 to 121,611; its growth was greatly stimulated by the increase of traffic due to the war operations of 1894-95, 1900, and 1904-05, and by increased trade in the 1920s.

**Mojos.** Spanish name for a South American Indian tribe of Arawakan speech, between the Beni and Guapore rivers, Bolivia. Numbering about 30,000, they devote more attention than the

neighbouring Chiquitos to hunting and fishing, and have partly abandoned bows and arrows for the lasso. Best of Amazonian boatmen, their dug-outs are prepared with the aid of fire. They use lip-pendant ornaments of quartz or resin-filled canes. *Pron. Mohos. See American Indians.*

**Mokume** (Jap., wood grain). Name given to an art metal product made by soldering together, one upon the other, thin sheets of gold and silver, and of certain copper alloys which have been "pickled" to give them various prominent colours. Conical holes are drilled into the surface of the soldered mass through the sheets, and grooves are cut in the surface to various depths. The mass is then hammered out until the holes or grooves have disappeared, the final product being a variegated surface suggesting a slab of finely grained and polished wood.

**Mola**, Emilio (1887-1937). Spanish soldier. He was born in Cuba. In 1926 he became chief of the colonial forces in Morocco, being appointed director-general of the Spanish police five years later. In 1935 he returned to his former post in Morocco, but was dismissed in 1936 by a Left government. He was in virtual exile until the outbreak of the Civil War when he led the insurgent troops into Spain from Morocco with Gen. Franco. He was second-in-command to Franco and was killed in an aeroplane accident on June 3, 1937. *See Spanish Civil War.*

**Mola di Bari** (anc. *Turres Julianae*). Harbour of Italy, in the prov. of Bari. It stands on the Adriatic, 12 m. by rly. S.E. of Bari. Cattle, grain, wine, and oil are exported. Pop. 14,000.

**Molasse**. In geology, name given to a group of coarse sand and gravel deposits occurring N. of the Alps in Switzerland. They were derived by erosion from the rising mountain chain as it was uplifted, and are mostly of fresh water origin, but some marine deposits also occur in them. They are of Oligocene and Miocene age.

**Molasses**. The thick mother liquor remaining after the removal of all the crystallisable sugar at the refinery. In countries such as Jamaica, where rum is an important item in production, its disposal presents no difficulty, but elsewhere the problem is more complex for, though on fermentation and distillation it yields alcohol, this is not generally economical. Generally molasses contains about 50 p.c. sugars and

by special chemical treatments a further yield of pure sugar can be obtained. In the U.S.A. molasses is the name for treacle.

**Molay**, Jacques Bernard de (c. 1243-1314). A French grand master of the order of the Templars. Born at Molay, in the Juras, he entered the Templars at Beaune about 1265 and early distinguished himself in Palestine. Elected grand master in 1298, he retired with the Templars to Cyprus in 1299 until summoned to France by Pope Clement V in 1306. On Oct. 13, 1307, he was arrested with all the members of his order in France by order of Philip the Fair. Put to the torture, he confessed the truth of certain serious allegations against the Templars, and spent several years in prison before being brought up for sentence. He then recanted his confession, and with a colleague, Gaufrid de Charney, was condemned as a heretic and burnt at the stake, March 18, 1314. His death marked the end of the military orders which gave so much temporal power to the papacy. *See Knights Templar.*

**Mold**. Urban dist. and market town of Flintshire, Wales; also the county town. It is 13 m. W. by S. of Chester, stands on the Alyn, and is served by rly. The chief buildings are S. Mary's church, the county buildings, town hall, and library. The town had a castle in the Middle Ages, and earlier there was a Roman camp here on a hill, now called Bailey Hill. Market days, Wed. and Sat. Pop. 6,200.

**Moldau**. River of Czecho-Slovakia, also called Vltava (*q.v.*).

**Moldavia**. Soviet Socialist republic. It was established on Aug. 2, 1940, by a union of part of Moldavia A.S.S.R. (formerly included in Ukraine S.S.R.), and the Bessarabian territories returned to Russia by Rumania on June 28. It is bounded on the W. by the Prut, the dividing line between it and Rumania, E. and N. by Ukraine, S. by the Black Sea. With area 13,200 sq. m., it has 12 regions, and Kishinev is the capital.

Moldavia has a mild climate, fertile soil, and is predominantly agricultural, the crops being wheat, maize, sugar beet, fruit, and tobacco. It was noted from tsarist times for orchards and vineyards.

It has woodworking, machinery, clothing, and tanning industries; but considerable lignite, gypsum, and phosphorite deposits are unexploited. Principal communications are by road and along some 400 m. of waterway on the Dniester, which provides power for electricity generating stations. In the Second Great War Moldavia was invaded and occupied by German and Rumanian troops. The Bessarabian regions were incorporated with Rumania, but were returned to Russia when Soviet armies liberated the republic in March, 1944. Pop. 2,200,000.

**Moldavia**, or **Moldova**. Historically, a district of Rumania. It is of elongated shape. Wallachia, Transylvania, and the Bukovina bound it on the W. and Bessarabia on the E. The Carpathians on the W. are its most striking natural feature, and its rivers, the chief of which is the Sereth, descend from them in high terraces to the river Prut. Jassy is the capital, and other large towns are Botosani and Bacau. Moldavia covers about 14,700 sq. m. and supports a pop. over 2,000,000.

In the 13th and 14th centuries Moldavia, which takes its name from the Moldava, a tributary of the Sereth, was independent; and under Alexander the Wise and Stephen the Great it flourished in the 15th century, the latter prince defeating a powerful combination of Poles, Magyars, and Turks at Rahova in 1457. Conquered by the

Mold arms

Mold, Flintshire. Ruins of the medieval castle

Turks in 1611, it was farmed out by them to the Greek Phanariote princes, who had a certain measure of independence. Partly through the efforts of Russia, Moldavia and Wallachia were liberated from the Turkish yoke in the 19th century.

Their union under the name of Rumania was proclaimed at Jassy and Bukarest, Dec. 23, 1861, but they had been virtually united two years before under Col. Cuza, later styled Alexander I, who had been elected hospodar or prince of Moldavia and Wallachia. In the First Great War the Rumanians, sup-

ported by the Russians, successfully defended Moldavia in 1916-17 against the Austro-Germans. Much of the country was devastated by the contending Soviet and Axis armies in the Second Great War. In its final drive to clear the province of German troops, the Red Army secured a bridgehead W. of the Prut in April 1944, but bitter fighting ensued before Jassy surrendered to Malinovsky's 2nd Ukrainian army in Aug. Frontier adjustments fixed the Prut as the E. boundary of Moldavia and made this prov. the most easterly of Rumania.

**Molde.** Seaport of Norway, in Møre co., 20 m. N.W. of Aandalsnes at the entrance to Romsdals Fjord. It has a good harbour and trades in timber, tar, and fish. During the Second Great War King Haakon VII with the Norwegian royal family and ministers embarked here for Great Britain, June 10, 1940. The Germans bombed the town and caused considerable damage.

**Mole.** Pigmented spot on the skin, usually raised, and covered with hair. Removal involves surgical or electrical treatment. Some moles tend to malignant change in later life.

**Mole.** Name given to a large, widely distributed family of insectivorous mammals (*Talpidae*).

Mole. Specimen of the common European variety

The European mole (*Talpa europaea*), common in Great Britain, is about 6 ins. in length and covered with velvety greyish-black fur. The hairs are set vertically in the skin, a distinct advantage to a burrowing animal, as they will lie in any direction; the body is rounded, and the fore limbs are short and provided with singularly long and strong claws. The forward position and the paddle-like action of these limbs make them powerful digging instruments. The nose is pointed, the eyes very small, and the external ears absent. A curious skeletal feature of this animal is the breastbone, which is keeled somewhat like that of a bird, and extended so far forward and upward as to involve the collar bones. The muscular development of the mole is remarkable for so small an animal.

The mole spends practically all its life underground, burrowing not far below the surface in search of the worms and grubs on which it feeds. The small heaps on the lawn are not the homes of the animal, but simply the mould cast out in the course of burrowing, whence its popular name, mould-warp, earth caster. The hill or nursery of a mole is much larger, and usually constructed in an open field, but always near to a water supply. It consists of a central chamber a few inches below the surface, often surrounded by several galleries and tunnels. The nest chamber is lined with grass and leaves, and is apparently used only once. One litter is produced in the year, usually numbering three or four young ones, born in May or June.

Feeding entirely on worms, grubs, and insects, the mole is harmless and useful to the agriculturist. But it does a certain amount of damage in burrowing among newly-sown seed, and mole casts are both unsightly and inconvenient in fields and gardens, with the result that in most districts the mole is relentlessly trapped. See Mole Shrew.

**Mole** (Lat. *moles*, mass). Jetty projecting from the land into water and serving as a pier, or as a pier and breakwater combined. It follows that the top surface must be formed to accommodate traffic, and that at least for a portion of its length boats may moor or berth alongside for loading or discharging cargoes.

The terms mole and pier are sometimes used indiscriminately, but strictly speaking the former is of solid construction. The construction of moles follows that of certain types of breakwaters.

A harbour may be formed by constructing two moles, the outer ends of which approach each other, leaving a sufficient opening for the safe passage of vessels in and out; in other cases a single mole may serve the purpose. Moles are sometimes constructed with the storm side at a high level and the lee side at a lower level, so as to provide shelter and berthing accommodation for vessels free from the effect of breakers. See Breakwater; Harbour.

**Mole.** River of England. It rises in Balcombe forest, N. Sussex, and flows 30 m. through Surrey to the Thames near Molesey. It flows through the Dorking Gap in the N. Downs between Dorking and Leatherhead, near which in dry seasons the water disappears in holes called the Swallows.

**Molé, Louis MATHIEU, COMTE** (1781-1855). French statesman. Born in Paris, Jan. 24, 1781, his

youth was spent with his mother in exile, his father having lost his life in the Terror. He returned to France during the Empire and in 1806 became master of requests to Napoleon. In 1809 he was made a count, and four years later minister of justice. On the restoration, Louis XVIII accepted his allegiance and confirmed his title, appointing him minister of marine in 1815. With the accession of Louis Philippe he became minister of foreign affairs, but finding his hands tied by Talleyrand, he resigned. In 1836 he became premier, but, quarrelling with Guizot and in open hostility to Thiers, he was unable to make headway against the opposition, and resigned in 1839. He died Nov. 23, 1855.

**Molé, MATHIEU** (1584-1656). A French politician. A son of Edouard Molé, a lawyer who had helped Henry IV to secure the throne, he was educated at Orleans and became a lawyer. Prominent in public affairs during the time of Richelieu, in 1641 he was made president of the parlement in Paris. He was its spokesman when the members withstood Anne of Austria and Mazarin, and his conduct in Aug., 1648, in defying an angry mob, proved him a man of courage. He acted as a peacemaker during the Fronde, and died Jan. 3, 1656. Molé left some Memoirs which were published 1855-57.

**Mole Cricket** (*Gryllotalpa gryllotalpa*). Orthopterous (straight-winged) insect, common in Central and S. Europe, less frequently found in Great Britain. It is a member of the cricket tribe, lives underground, and preys upon worms, insects, and vegetation. It resembles the mole in habits, and its broad, modified fore limbs form excellent digging implements. The insect is nearly 2 ins. long, yellowish-brown in colour, and covered with fine, downy hair. It is known to take occasional flights by night. See Cricket.

**Molecular Weight.** Ratio of the weight of a molecule of any substance to the weight of the hydrogen atom. A gram-molecule is the mass of a substance in grams which is numerically equal to the molecular weight.

Comte Molé, French statesman

**Molecule** (Lat. *moles*, a mass). Smallest particle of any substance which can exist independently and still retain its distinctive chemical properties. In the kinetic theory of gases as evolved during the first half of the 19th century, the molecules are pictured as perfectly elastic, spherical bodies, small in size compared with the spaces between them, moving rapidly in all directions and frequently colliding. The average speed of their motion corresponds to temperature, their

Mole Rat. Specimen of the South European rodent resembling a mole

impact on the walls of a container to pressure. At  $0^{\circ}\text{C}$  and  $760^{\circ}\text{Hg}$  pressure, one c.c. of any gas contains some  $2.6868 \times 10^{18}$  molecules; their average speed varies from about  $\frac{1}{4}$  mile (xenon) to over  $1\frac{1}{2}$  mile (hydrogen) per second; the average distance travelled between collisions (mean free path) is a few millionths of a cm., from 100 to 900 times the effective diameter of an individual molecule.

Each molecule of any given substance is made up of individual atoms of chemical elements combined in a fixed proportion. The molecular weight is the sum of the separate weights of the constituent atoms. For gases, liquids, and solids in liquid solution, the molecular weight can be found experimentally and the exact number of atoms in each molecule deduced. Thus ammonia has one atom of nitrogen and three of hydrogen ( $\text{NH}_3$ ); hydrogen peroxide, two atoms of hydrogen and two of oxygen ( $\text{H}_2\text{O}_2$ ); cane sugar, 12 atoms of carbon, 22 of hydrogen and 11 of oxygen ( $\text{C}_{12}\text{H}_{22}\text{O}_{11}$ ). The ability of carbon atoms to join together in long chains and ring systems leads to the large and complicated molecules of organic chemistry (see *Plastics*).

The chemical behaviour and physical properties of a substance are closely related to its molecular structure, including not only the number and kind of different atoms present but also their exact arrangement in space. For crystalline solids the distinction between separate molecules largely disappears; the atomic nuclei are

arranged in a fixed geometrical pattern (the crystal lattice), and in a sense each crystal becomes one large molecule. See *Brownian Movements*; *Chemistry*; *Crystallography*; *Gas*; *Valency*.

**Molenbeek S. Jean.** Town of Belgium, in the prov. of Brabant. A suburb and commune of Brussels, it lies to the W. of the capital, on a branch of the river Senne. The Canal de Charleroi has an important dock here, and there are industries in textiles, soap, rly. materials, metal works, etc.

**Mole Rat** (*Spalax*). Genus of rodents, related to the rats, but resembling moles in general appearance. They are well adapted to a subterranean life, with small eyes and ears. They are blind, their eyes being beneath the skin. They burrow underground, seeking the roots and bulbs on which they feed. The typical species (*S. typhlus*) is found throughout S.E. Europe, Asia Minor, Persia, and Lower Egypt.

**Mole St. Nicolas.** Harbour of Haiti, near the N.W. point of the island. It stands on a deep bay enclosed by a peninsula of the same name, overlooking the Windward Passage between San Domingo and Cuba. N. of the town is Cape St. Nicolas.

**Molesey** or **MOULSEY.** Name of two parishes, East and West, in Surrey, England, forming part of the Esher urban district. They stand on the right bank of the Thames, 2 m. W. of Kingston, with a rly. station known as Hampton Court. A regatta is held yearly. Near here the Mole enters the Thames, hence the name. Pop. 14,000.

**Mole Shrew** or **SHORT-TAILED SHREW.** Insectivorous mammal, related to the true moles, and

Mole Shrew. The small insectivorous mammal found in N. America and Japan

found in N.E. America. In appearance it closely resembles the common mole, but is much smaller. It burrows beneath the surface of the soil, and feeds upon small worms, mice, and insects. See *Shrew*.

**Moleskin.** Term applied to the velvety fur of the mole and to a cloth resembling it. The best real

moleskins are dark blue, and come from the Cambridgeshire Fens. The cloth is a strong, soft cotton fustian, used for labourers' clothes, gun-cases, etc. The surface is shaved before dyeing. See *Fur*.

**Molesworth, MARY LOUISA** (1839-1921). A British author. She was born in Holland in May, 1839, the daughter of Charles Augustus Stewart. Writing stories from childhood, she developed a genius for writing for the young. Many of her books were written under the pen-name of Ennis Graham. In 1861 she married Richard Molesworth (d. 1900), a nephew of the 7th Viscount Molesworth. Her story, *Lover and Husband*, appeared in 1869, and notable in a long list of its successors are *Carrots*, 1876; *The Cuckoo Clock*, 1877; *The Adventures of Herr Baby*, 1881; *The Laurel Walk*, 1898; *The Story of a Year*, 1910. She died July 21, 1921.

**Molesworth, SIR WILLIAM** (1810-55). A British politician. Born in London, May 23, 1810, he succeeded to his father's baronetcy in 1823, and in 1832 was elected M.P. for East Cornwall. In 1835 he founded The London Review and incorporated it with The Westminster Review, assisted by J. S. Mill as editor. A staunch Radical, he represented Leeds, 1837-41, and Southwark, 1845-55. In 1853 he entered Aberdeen's cabinet as first commissioner of works, in which capacity he forwarded the building of Westminster Bridge. He had always been keenly interested in colonial matters, and much was hoped from his appointment as colonial secretary in July, 1855, but he died Oct. 22 in that year.

**Molfetta.** Harbour of Italy, in the prov. of Bari. It is on the Adriatic 16 m. by rly. N.W. of Bari, has shipbuilding yards, and trades in wine, oil, almonds, and nitre. Its Romanesque cathedral, now the church of S. Corato, dates from the 13th century. Pop. 46,000.

Sir W. Molesworth, British politician After Sir J. W. Gordon

## MOLIÈRE: CREATOR OF MODERN COMEDY

A. A. Tilley, M.A., Author of *From Montaigne to Molière*

*This Encyclopedia contains articles on Molière's plays. See Comedy; France: Literature; and articles on Corneille, Racine, and other great names in French Literature*

Jean Baptiste Poquelin, called Molière, the creator and the greatest master of modern comedy, was born in Paris in Jan., 1622, a son of Jean Poquelin, an upholsterer, who was employed by the court and was apparently in affluent circumstances. His mother was Marie Cressé, and he was educated at the fashionable college of Clermont, where he studied the works of Aristotle. He was destined for his father's business, but at the age of twenty-one, having conceived a strong passion for the stage, he founded with some friends a theatrical company, *L'illustre Théâtre*, which played unsuccessfully at Paris for two years. They then tried their fortunes in the provinces, and after five years of struggle and hardship achieved a considerable dramatic reputation. In 1658 they returned to Paris, and two years later were definitely established in the theatre of the Palais Royal.

In 1659 Molière made his début in social comedy with *Les Précieuses Ridicules*, and in 1662 he produced his first great comedy, *L'École des Femmes*. In the same year he married Armande Béjart, a girl of twenty. She was a coquette and the marriage was unhappy. Molière's principal plays besides the two already mentioned are *Le Tartuffe*, 1664; *Don Juan*, 1665; *Le Misanthrope*, 1666; *Amphitryon*, 1668; *L'Avare*, 1668; *Le Bourgeois gentilhomme*, 1670; *Les Femmes savantes*, 1672; and *Le Malade imaginaire*, 1673. Slighter, but of excellent quality, are *L'École des Maris*, 1661; *Le Mariage forcé*, 1664; *L'Amour médecin*, 1665; *Le Médecin malgré lui*, 1666; *Le Sicilien*, 1667; and the remarkable *Critique de l'École des Femmes*, 1663, which is of capital importance for the understanding of Molière's conception of his art.

Molière was a first-rate actor of comedy, his acting, like Garrick's, being distinguished for vivacity of expression and gesture. He was also an admirable theatrical manager, devoted to the interests of the company, and sparing no pains in the rehearsal of his pieces. As a writer of comedy, he is unrivalled in his mastery of the whole gamut of laughter, from the most delicate humour to the broadest farce. Though in many of his plays, from *Le Tartuffe* onwards, there is a latent element of tragedy, it is the comic aspect of life that inspires

his imagination and gives the dominating colour to his work. We laugh at *Tartuffe* even while we fear him; we laugh at *Alceste* even while we pity him. In the one Molière shows us the ridiculous side of a criminal, in the other the ridiculous side of a lovable man of virtue.

But he aspires to correct men as well as amuse them, so he ridicules their vices and follies, especially those which threaten the social fabric or its true basis, the family. In the name of common-sense and truth, he wars against hypocrisy and superstition, against atheism and libertinism, against avarice, egoism, and vanity, against *précieuses*, prudens, poetasters, bores, pedants, professional humbugs, smug provincials, and smirking courtiers. Misled by the titles of some of his plays, e.g. *Le Misanthrope*, *L'Avare*, *Le Malade imaginaire*, some critics have accused him of creating abstract types rather than individuals. But his great characters, *Tartuffe*, *Don Juan*, *Alceste*, *Célimène*, *Harpagon*, have the breadth, the complexity, the individuality of real life. As for his minor characters, he creates them at a single stroke. They are alive the moment they appear on the stage.

A special word is due to his female servants. Honest, loyal, and outspoken, the very embodiments of common-sense, they stand for Molière's hatred of affectation and intellectual arrogance; they are the representatives, so to speak, of

Molière, from the bust by J. A. Houdon  
*Comédie Française, Paris*

his comic muse. Further, his characters are true to nature. There are no super-men and, except in his broader farces, no caricatures. Just as in real life, they are judged differently by different readers and different ages; there can be no better proof of their absolute fidelity. Some of his plays, e.g. *Don Juan*, *L'Avare*, *Le Bourgeois gentilhomme*, in their looseness of construction bear witness to the hurry in which they were written, but when Molière had time at his disposal he could build up his drama with a master's hand. If his dénouements are often weak and mechanical, it is because he cares even more for life than for art. His feeling for dramatic effect, for movement and action, is unrivalled. Even when there is little or no external action, as in *Le Misanthrope*, the dramatic interest never flags, and the action, though chiefly internal, is developed in a strictly logical sequence.

Molière's language, though mostly admirable, is occasionally, under the pressure of time, involved or careless. This has proved a stumbling block to some critics, but its dramatic qualities make it a joy to actors. His versification at its best is easy, spirited, and vigorous. *L'Étourdi*, 1653, his earliest comedy, is brilliantly written throughout, and in the vers libres of *Amphitryon* he shows the highest skill of the versifier's art. Molière died in Paris, Feb. 17, 1673, and was buried in the cemetery behind the church of St. Joseph.

*Bibliography.* Works, 13 vols., ed. E. Despois and P. Mesnard, 1873-93, Eng. trans. C. H. Wall, 1901, and A. R. Waller, 1907; Lives, L. Moland, 1867; H. M. Trollope, 1905; E. Rigal, 2 vols., 1908; A. A. Tilley, 1921; J. Palmer, 1930.

From a portrait of  
Lefrunc's school

J. B. P. Molière.

**Molina, LUIS** (1536-1600). A Spanish theologian. He was born at Cuenca, and became a Jesuit. He was for 20 years professor of theology at Evora. In his later years he was professor of moral theology at Madrid, where he died Oct. 12, 1600. His chief literary work, the Agreement of Freewill with the Gifts of Grace, 1588, in which he seeks to harmonise the freedom of the will with divine predestination, led to a long dispute between the Molinists and adherents of S. Thomas Aquinas.

**Molinos, MIGUEL DE** (1628-96). Spanish mystic. He was born at Muniesa, Aragon, in June, 1628, became a priest, and in 1665 went to Rome. Here he published a book called *The Spiritual Guide*, 1675, which taught an extreme form of quietism, for which he was condemned in 1687 by the Inquisition to imprisonment for life. He died Dec. 28, 1696.

**Mollison, JAMES ALLAN** (b. 1905). British airman. Born in Scotland, Apr. 19, 1905, Mollison was commissioned in the R.A.F.

at the age of 18. He transferred to the reserve after five years, and joined C. E. Kingsford-Smith (*q.v.*) as an air mail pilot in Australia. Mollison first became famous in 1931 with a record solo flight to England of 8 days 19½ hrs. The following year, he flew from England to Cape Town in 4 days 17 hrs. (this was also the first west-coast flight to the Cape), and made in a light aeroplane the first solo east to west crossings of the North (Aug., 1932) and South (Feb., 1933) Atlantic. With Amy Johnson (*q.v.*), to whom he was married 1932-38, he again flew the Atlantic in Aug., 1933 (the first direct flight from Great Britain to the U.S.A.), and also led the field in the first stages of the 1934 MacRobertson race to Australia (England to India in 22 hrs.). Mollison's next record flight, Oct., 1936, was New York-Newfoundland-London (coast to coast, 9 hrs. 20 mins.). In the Second Great War Mollison became a ferry pilot with Air Transport Auxiliary, and received the M.B.E. in 1946.

tends to face backwards; the shell is often internal or absent, *e.g.* the sea-hare and the sea-slug. (c) Pulmonata (Euthyneura). In this order the gills are absent and the mantle cavity acts as a lung. Most of the land and fresh-water snails are pulmonates.

**Class 4. SCAPHOPODA.** This is a small class whose members have a straight tubular shell. An example is Dentalium, the elephant tusk shell.

**Class 5. LAMELLIBRANCHIA** (Pelecypoda, or the Bivalves). Mollusca possessing a shell of two valves, one on each side of the body, which is normally compressed laterally. They are bilaterally symmetrical and have no definite head. The class includes mussels, cockles, oysters, and the clams.

**Class 6. CEPHALOPODA.** The main part of the foot is situated around the mouth and is divided into a number of sucker-bearing arms. The shell is in some absent or rudimentary, in others well developed. Examples include the cuttlefish, the octopus, and the nautilus. Important fossil groups, the Ammonites and the Belemnites, are found in the Palaeozoic and especially in the Mesozoic rocks.

Apart from the characteristic shell, most molluscs can be distinguished (*see illus.*) by their possession of a soft body which to varying extents is enveloped in a fold of tissue known as the mantle. Between this and the body there is the mantle cavity, in which are situated the respiratory organs named ctenidia (Greek, comb) or gills. In the bivalves the mantle consists of a thin layer of tissue with epithelial cells on either side and it may be prolonged at the posterior end to form a pair of tubular organs, the siphons through which water and food material are taken in and passed out. These siphons are especially noticeable in those molluscs which burrow deeply in sand or mud, *e.g.* cockles, Tellina, and Mya, whereas no tubular siphon is to be found in mussels, oysters, or scallops, all of which occur either attached to rocks, in shallow mud, or free-swimming.

The molluscan shell is secreted by the cells on the outside of the mantle and by the epithelium situated on the outside of the visceral mass. The shell consists of two main parts, the periostracum, or outermost layer of conchiolin, a horny substance allied to chitin, and a series of inner layers laid down later and composed mainly of crystalline calcium carbonate.

## MOLLUSCA: A GROUP OF INVERTEBRATES

E. R. Trueman B.Sc.

*A description of the characteristics and classification of the group of living creatures called molluscs. More detailed descriptions of particular species are given under Bivalves; Cephalopoda; Gastropoda; Oyster; Slug; Snail, etc.*

The phylum Mollusca (Lat. *molluscus*, softish) constitutes one of the major groups of the invertebrate animals, and contains the snails, slugs, whelks, mussels, squids, and cuttlefish, comprising approx. 60,000 living species.

The molluscs are essentially bilaterally symmetrical animals with unsegmented bodies. They possess a thickened muscular foot which is used for locomotion and is situated ventrally. Dorsally there is a visceral dome or hump normally covered by a shell which is one of the main characteristics of the phylum. Another structure occurring commonly in the molluscs is the radula, a rasp- or file-like organ situated in the mouth. It is moved to and fro producing a scraping action, so removing food material from, for example, the face of a rock.

The earliest molluscs undoubtedly occurred in the sea and some are found as fossils in the Cambrian rocks. During the Devonian period they began to inhabit fresh water, and in the Carboniferous the land. At the present time both gastropods and bivalves occur in fresh water, whereas only gastropods have become adapted for life on land.

The following is an outline classification of the Mollusca:

**Class 1. SOLENOGASTRES.** These are highly primitive molluscs (*e.g.* Neomenia) having a worm-like body and no shell. They possess a heart enclosed within a pericardium and a nervous system which is bilaterally symmetrical.

**Class 2. PLACOPHORA.** This class comprises the Chitons; its members have a broad flat foot and a calcareous shell of eight plates.

**Class 3. GASTROPODA.** This is the largest class, and shows typically an asymmetrical condition owing to the atrophy or disappearance of the organs of the original left side. Gastropoda usually possess a shell coiled in a helicoid or corkscrew spiral, a thickened muscular foot, a head bearing paired tentacles and eyes, and a mouth with a well-developed radula. The class may be divided into three orders:

(a) Prosobranchia (Streptoneura). The nervous system shows a typical figure of eight owing to the twisting or torsion of the visceral hump, *e.g.* the limpet and the whelk. (b) Opisthobranchia (Euthyneura). Owing to detorsion the opening of the mantle cavity

These inner layers are generally formed of at least two layers in which there may be considerable differences in the exact arrangement of the crystals. The periostracum, which is thin, is secreted by the epithelial cells situated along the edge of the mantle and covers the shell and gives protection to it from erosion.

The crystalline calcium carbonate of the inner layers is in the form of either calcite or aragonite. Most shells possess only one of these crystalline forms although a few have both types present in separate layers, e.g. the scallop. Whereas it is known that the shell is formed from the secretion of calcium carbonate by the epithelial cells of the mantle, the precise manner of deposition of these varying crystalline structures and the conditions which determine the presence of calcite or aragonite have not been ascertained.

In the gastropods respiration is typically carried out by a pair of gill-like structures, the ctenidia. In the primitive condition these were paired structures, one on the right and one on the left side, within the mantle cavity, but in the majority that of the right side is alone retained. By the anti-clockwise twisting or torsion of the visceral hump this ctenidium becomes situated on the left front side of the animal. Some of the gastropods have developed secondary external "gills" often arranged in a circle around the anus, e.g. *Doris*, the sea slug. The land snails and many of those pulmonates which occur in fresh water have no ctenidium and respire through the wall of the mantle cavity which, apart from a small opening to the exterior, is completely enclosed and functions as a pulmonary air-filled sac or lung. The cephalopods also respire by means of ctenidia within the mantle cavity.

The bivalves possess a pair of ctenidia inside the mantle and on either side of the foot; each one is composed of two plates or laminae, and upon the exact form of these the classification of the group is generally based. Respiration is by a flow of water over these gills and also over the inner surface of the mantle. The main function of the ctenidia in the bivalves is, however, concerned with feeding, for they are ciliated and cause a flow of water in a definite direction from the inhalant siphon. These gills divide the mantle cavity into inhalant and exhalant chambers, the former being ventral and some-

times anterior. The water is thus strained through a sieve of tissue between these chambers, leaving particles of food suspended on the gill. This food, together with some mucus that is secreted, is passed to the mouth by ciliary action where it is sorted out by the thickened lips or labial palps. Research has confirmed that feeding in the bivalves is purely quantitative, the selective mechanism being one in which the smaller masses only are passed to the mouth irrespective of their food value. This method of feeding is called filter feeding.

Gastropods generally obtain their food by scraping with the radula but some are filter feeders. The cephalopods have a pair of horny jaws, rather like the beak of a parrot, which are situated at the mouth.

Some molluscs are carnivorous, e.g. the whelk, some herbivorous, e.g. the limpet, some omnivorous. *Teredo*, or ship worm, is one of the few animals able to digest wood directly. It bores into the woodwork of ships and piers by a rotating movement of its shell, forming a tube through the wood.

#### The Digestive System

Digestion in the mollusca is both extracellular and intracellular. In the gastropods salivary glands and a large liver (hepato-pancreas) are always present. The bivalves show an interesting modification associated with filter feeding. They possess a crystalline style in the stomach or anterior part of the intestine which rotates by the action of cilia. The free end of the style projects into the stomach and is constantly worn away by friction, releasing into the stomach amylase for the digestion of the carbohydrates; the fats and proteins are digested intracellularly. This is a very effective mechanism whereby a continuous flow of enzyme is produced to digest food which is being provided in a steady stream owing to the method of feeding.

The blood of molluscs is generally colourless but the pigments haemocyanin and haemoglobin are

found in certain forms, the latter in the common fresh water snail *Planorbis*. The molluscan heart consists of one or two auricles and a ventricle and is enclosed within the pericardium, a specialised part

Mollusca. Hypothetical section of a primitive mollusc

of the coelom, which communicates with the cavity of the kidneys.

The nervous system consists primitively of a number of paired ganglia and their connexions. This condition may be seen in the more primitive members of the phylum, e.g. the Chiton. The gastropods usually have a pair of cerebral ganglia, closely united and situated over the gullet, giving off connectives both to each pedal ganglion and to each pleural ganglion. The connectives between this last pair of ganglia and the parietal ganglia are usually in a twisted figure of eight condition resulting from the anti-clockwise torsion of the visceral hump. In the more highly developed families a secondary symmetry occurs, owing to a detorsion or to the shortening of connectives. The twisted or streptoneurous condition is found in the limpet and the whelk, the euthyneurous in terrestrial snails and slugs.

In the cephalopods the nervous system is much more highly organized than in the gastropods or the bivalves. The ganglia of the central nervous system are closely aggregated around the oesophagus into a structure which may be called the brain. There also occur in this class very thick nerve fibres developed to produce a high speed of conduction of nervous impulses. In the vertebrate animals this is carried out by the development of a large number of thin nerve fibres.

Among the sense organs of the molluscs are: (a) statocysts, organs of balance; (b) osphradia, chemoreceptors whose function would appear to be to test the condition of the water which enters the mantle cavity; (c) eyes, very well developed in the cuttlefish and in certain bivalves, e.g. in *Pecten*, the scallop.

Reproduction in molluscs is sexual, and the sexes are usually separate. Copulation takes place in the cephalopods and in certain gastropods which have a penis. Development from the egg is typically through a veliger larva, which is free-swimming. The molluscs are used by man as food. Many species are edible, though only few, e.g. oysters, mussels, cockles, whelks, winkles, and certain land snails, are eaten in quantity. The shell of molluscs is of considerable economic value: e.g. from the shells of certain bivalves mother-of-pearl is produced. Some oysters also produce pearls (q.v.).

**Bibliography.** Molluscs, A. H. Cooke, 1895; Mollusca, P. Pelseneer, 1906; Guide to the Mollusca exhibited in the Zoological Department of the British Museum, 1923; British Snails, A. R. Ellis, 1926

**Molluscum Contagiosum.** A disease of the skin, in which small, white tumours caused by a filter-passing virus appear on the surface of various parts of the body, the face and eyelids being often involved. The disease is contagious, and the growths, if left alone, persist for a long time, but ultimately tend to disappear spontaneously. Treatment consists in incising the tumour, squeezing out the contents, and disinfecting the walls of the containing sac.

**Mollwitz.** Village of Silesia. It is 7 m. from Brieg, and is famous for the battle fought here, April 10, 1741, between the Austrians and the Prussians. Frederick the Great had seized Silesia, and early in 1741 the Austrians equipped an army to recover it. Under Neipperg this marched from Neisse towards Brieg, thus cutting off the Prussians from their base. The scattered forces of the latter were concentrated with some difficulty, and the two armies came into touch near Mollwitz. After a few days spent in getting into position the battle began on April 10. The Austrian horsemen attacked, and the Prussian cavalry was routed, and Frederick himself took flight. However, the trained Prussian infantry presented a far tougher front, and the Austrian infantry suffered greatly.

**Molly Maguires.** Name of an Irish secret society formed in 1843 in co. Monaghan for the purpose of intimidating landlords. The name was afterwards applied to an American-Irish secret society which flourished in the mining districts of Pennsylvania, U.S.A., 1854-77. In 1875 the Molly Maguires engineered a general strike in that region, and many crimes were traced to them. So serious did the situation become that a strong effort was put forth to crush the society. A Pinkerton (q.v.) detective succeeded in becoming a member of the organization, and on his information the leaders were arrested, convicted, and sentenced to death. The society then soon disappeared. Sir A. Conan Doyle based his story *The Valley of Fear* on the murders.

**Moloch.** Canaanite fire-god, the Semitic word meaning king. This Septuagint spelling represents the Hebrew Molech, whose worship, notably under Ahaz and Manasseh, involved child-sacrifice and pyre-burning (2 Kings 23). These were sacrifices to Jahveh, and the rites survived among the Jews until a late period, as is proved by references to them by Ezekiel and Jeremiah. The burning of living children in a brazen, calf-headed Moloch-image is a medieval fable.

**Moloch Horridus.** Australian lizard of the family Agamidae, also called spiny lizard, and spiny or thorny devil. The upper parts are liberally armed with horny spines, the head and depressed body are about 4½ ins. in length, and the tail about 3½ ins. Its form is much like that of a toad with a tail added; and when alarmed it increases the resemblance by puffing out its body, and making its spines more effective for protective purposes. Its broad blotches of light and dark colour harmonise with the soil and can be varied like those of the chameleon, but to a much less extent. It is perfectly harmless, its spines being purely defensive. Its food consists of insects, chiefly ants. See Lizard colour plate.

**Molokai.** One of the Hawaiian Islands, Pacific Ocean. Its mountains, scored by ravines and forest clad, rise to 3,000 ft. The leper settlement, the scene of the labours of Father Damien (q.v.), is in the middle of the N. coast. The people live mainly on a narrow fertile strip along the S. coast. Area, 261 sq. m. Pop. 5,340.

**Molopo.** Former tributary of the Orange river, S. Africa. It emerges from a swallow hole in the

limestone of Marico dist., near Mafeking, and flows W., forming the N. boundary of Bechuanaland. As it crosses the Kalahari desert it becomes a dry watercourse, bordered by trees, which ultimately joins the Orange river.

**Molotov,** VYACHESLAV MIKHAILOVICH (b. 1890). Russian politician. Molotov (originally

V. M. Molotov,  
Russian politician

named Scriabin) was educated at the St. Petersburg Polytechnic and organized revolutionary student groups. In 1917 he became a member of the Petrograd Soviet executive committee, and was appointed secretary of the central committee of the Communists of the U.S.S.R. in 1921. Molotov became chairman of the council of people's commissars in 1930 and was nominated foreign commissar in 1939, succeeding Litvinov. In that year he signed the Russo-German non-aggression pact which precipitated the Second Great War. In 1940 he visited Berlin to confer with the Nazi leaders. In 1941 he resigned his chairmanship of the council, but retained the post of foreign commissar and assumed the vice-premiership.

In July, 1941, he was appointed vice-chairman of the defence committee, and in May, 1942, signed the twenty-year Russo-British mutual assistance pact. He took part in all the important war conferences and was the leader of the Russian delegation at San Francisco in April, 1945, being present also at Potsdam in July. Molotov was one of the council of foreign ministers which met in London in Sept., 1945; in Moscow in the following December; in Paris, April-May, 1946; and in London, Nov.-Dec., 1947. His uncompromising attitude led to frequent clashes with the delegates of the western powers. He ceased to be foreign minister 1949, but remained vice-premier.

During the Russo-Finnish War of 1939-40 his name was used for two weapons—the Molotov cocktail and the Molotov bread basket. The former was a bottle containing a liquid which burst into flames on coming into contact with the air. It was used principally against tanks. The bread basket was a container fitted with a parachute that was released from an aero-

plane and opened on reaching a prearranged height above the ground, releasing a shower of incendiary bombs. This device was first used by the Russians.

**Molsheim.** Town of Alsace, France. It stands at the foot of the Vosges, on the river Breusch, and is a rly. junction. The buildings include a modern town hall and several churches, including a fine Roman Catholic one. Until 1702 there was a noted Jesuit college here. There are some manufactures, while the vine is grown in the neighbourhood.

**Molteno, SIR JOHN CHARLES** (1814-86). South African statesman. Born in London, June 5, 1814, he went to S. Africa in 1831, and engaged in business and farming at the Cape and at Nelspoort. He took part in the Kaffir War of 1846, and sat for Beaufort in the first Cape parliament, 1854. An active advocate of responsible government for the Cape Colony, he was appointed the first premier when it was conceded in 1872. He visited England in connexion with Lord Carnarvon's conference on S. African affairs, 1876, and stood for the unification of S. Africa, but strong differences of opinion led to Molteno's dismissal in Feb., 1878, and for a time he retired from public life. In 1880 he was returned for Victoria West, and resumed the office of colonial secretary, but in 1882 he finally retired, being rewarded with the K.C.M.G. He died Sept. 1, 1886.

**Moltke, HELMUTH KARL BERNHARD VON** (1800-91). German soldier. The founder of the modern system of military command by devolution was born of noble family at Parchim, Mecklenburg, Oct. 26, 1800. His youth was spent in Denmark, but in 1822 he entered the Prussian service. With his duties he combined the study of history, and wrote on the European events of the time. In 1835 he accepted an offer of employment by the sultan of Turkey, and served in the Balkans and Syria.

He rejoined the German army in 1840, and in 1845 published his history of the Russo-Turkish war of 1828-29, a military classic. In 1845 he married an Englishwoman, Mary Burt. After holding senior staff appointments at Coblenz,

1846, and Magdeburg, 1848, he was chosen in 1855 as adjutant to Prince Frederick William (afterwards the emperor Frederick), and with him visited France, Russia, and England.

In 1858 Moltke became chief of the general staff of the Prussian army. He based his plans for possible wars on military history. When war came against Denmark in 1864, his plan to capture the Danish army in the first battle was imperfectly carried out by Wrangel, the commander in the field; but within a short time the Danes had been driven on to the island of Alsens and to surrender.

The following year Moltke outlined the tactics suited to the new breech-loading rifle, which proved so successful in the Seven Weeks' War against Austria, 1866, and the Franco-Prussian War of 1870-71. In both wars Moltke remained at the headquarters of the king, who was c.-in.-c. of the army, the command in the field being delegated to three army commanders.

In 1870 Moltke was created a count, and in 1871 he was elected to the Reichstag. He remained in office until 1883, supervising the histories of his campaigns, and died in Berlin, Aug. 24, 1891. See Franco-Prussian War; Seven Weeks' War.

**Moltke, HELMUTH JOHANNES LUDWIG VON** (1848-1916). German soldier. Nephew of the great von Moltke, he was born at Gersdorff, Mecklenburg-Schwerin, May 23, 1848. He served through the Franco-Prussian War, and was for a time a lecturer in the Military Academy, Berlin. In 1891 he was appointed A.D.C. to William II, and in 1906 became general of infantry and chief of the general staff, thus being the real generalissimo of the German army when the First Great War broke out. Owing to the failure to capture Paris, he was superseded by Falkenhayn in Oct., 1914. He died on June 18, 1916.

**Molton, SOUTH.** Mun. borough and market town of Devonshire. It stands on the Mole, 12 m. S.E. of Barnstaple and 197 m. by rly. from London. The chief buildings are the fine Perpendicular church of S. Mary Magdalene, the guildhall, and the market house. The town is an agricultural centre, and its industries include the manufacture of sheets and cosmetics. It had fairs in the Middle Ages, and was given a corporation in 1590. It was then and later a centre of the woollen manufacture, while at one time lace was made

here. At one period it sent two members to parliament. Market days, Thurs. and Sat. Pop. 2,831. North Molton is a parish and village, 3 m. to the N.E.

**Moluccas OR SPICE ISLANDS.** Islands of Indonesia. They are Gilolo or Halmahera, Ternate, Tidore, Bachian, Buru, Ceram, Amboyna, and the Banda Islands. The islands coversome 20,000 sq. m. in area, 40,000 sq. m. if adjacent islands are included; est. pop. 893,400. In general they are volcanic; and there are active cones on Ternate, Gilolo, and Banda.

Ternate consists of a peak, 6,000 ft. above sea level, and has the residence of the sultan. Ceram exports sago, Amboyna cloves, and the Banda Islands nutmegs.

The Spice Islands were known by repute long before European ships reached the East Indies, and their native and unique products were articles of trade greatly desired during the Middle Ages, when seasoning was required to make winter meat palatable. Two Portuguese, Serrano and D'Abren, located them in 1512, and they were Portuguese from 1521 until the natives expelled the traders in 1583; in 1613 the Dutch acquired them, and have held them since that date. The early Dutch policy was marked by great secrecy; to maintain the monopoly in the supply of cloves, the tree was exterminated in all the islands except Amboyna. The monopoly has been abandoned, and both cloves and nutmegs are grown elsewhere in Indonesia and Malaya.

On Jan. 30, 1942, Japanese aircraft bombed Amboyna, the second largest naval and air base in the Netherlands E. Indies, and Japanese troops made a landing, which was strongly opposed by the garrison; but all organised resistance had been overcome by Feb. 7. Halmahera was also seized by the Japanese.

Both Halmahera and Amboyna were attacked repeatedly by Allied aircraft during 1943 and 1944. On Sept. 14, 1944, U.S. troops landed on Morotai, and they were in control of the island by the 17th, the Japanese garrison having fled to the hills. It became an important base for Allied bombers in operations against the Japanese-occupied Philippines and E. Indies. No further major operations were undertaken in the Moluccas, Japanese forces there surrendering at Morotai, Sept. 9, 1945. The Moluccas were recognized by the Netherlands govt as part of the new state of E. Indonesia Dec. 1946. See Indonesia.

Count von Moltke,  
German soldier

**Molybdenite.** Chief ore mineral of molybdenum (*v.i.*), molybdenum sulphide, containing up to 60 p.c. of the metal. It generally occurs as soft lead-grey scaly masses. Molybdenite is found in deposits associated with granitic rocks, *e.g.* in granites, granite pegmatites, in siliceous veins formed at a late stage in granite consolidation, and in associated contact-metamorphic deposits.

**Molybdenum** (Gr. *molybdoe*, lead). One of the metallic elements, chemical symbol, Mo; atomic number, 42; atomic weight, 95.95; density, 10.0 gm per c.c.; melting-point about 2,622° C. Silver white in colour, with a strong metallic lustre, it is prepared by heating the chloride or the trioxide to redness in a current of hydrogen.

Molybdenum occurs in nature in various forms, of which two are of commercial importance: the sulphide, MoS<sub>2</sub>, known as molybdenite, which somewhat resembles graphite, being a soft, lead-grey mineral with a metallic lustre; and the yellow lead molybdate, PbMoO<sub>4</sub>, wulfenite. Among the rarer minerals is molybdenum ochre, MoO<sub>3</sub>. Of the world's production, approx. 20,000 tons annually, 90 per cent. comes from the U.S.A. The chief centre is Climax, in Colorado. Smaller producers are in New Mexico, Norway, and French Morocco, while quite a large amount of molybdenite is produced as a by-product from various copper mines. The ore is treated by roasting, which causes the volatilisation of the trioxide, MoO<sub>3</sub>, which is condensed in crystal form. The oxide is subsequently reduced with hydrogen to a grey metal powder, which may be pressed into bars, sintered, swaged, and drawn into wire or rolled into sheet. This process does not involve melting the metal, which is difficult due to its high melting point; but a process is in the experimental stage for producing ductile molybdenum by melting in an arc furnace under an atmosphere of hydrogen.

Molybdenum sulphide appears to have been first recognized in 1778 by C. Scheele; and was first isolated by the Danish chemist P. J. Hjelm in 1782. It is quite malleable and softer than steel. Normally unaffected by air, it oxidises rapidly at temperatures above 600° C., but it may be forged and welded at red heat in a protective atmosphere. In the electrical industry, where it

Mombasa, Kenya Colony. Landing place for small steamers and native craft

is nicknamed "Molly," it has a variety of uses, its good conductivity being an asset. In radio valves molybdenum wire is used for winding the controlling grids, and it acts as the support for filaments in incandescent lamps. Molybdenum is used for crucibles and for furnace windings, but for such uses it must be protected from the air either by hydrogen or by a suitable refractory. Its chief use is in the alloy steel industry, where it is sometimes used alone but more commonly in association with nickel and chromium. Here it increases strength at high temperatures and reduces the tendency for temper brittleness. Additions are usually of the order of 0.3 to 1 per cent. and they are made in the form of ferro-molybdenum. The addition of about 0.5 per cent. to cast irons increases their strength. Various non-ferrous alloys are made, such as one containing 60 per cent. of molybdenum, with tungsten, platinum and cupro-nickel, used for tipping fountain pen nibs. Certain molybdates are used in dyeing, to give a blue colour to glazes and pottery and for colouring rubber and leather. See Metallurgy; Steel; Thermionic Valve.

**Mombasa.** Seaport of Kenya. Built mainly on a coral island (3 m. long by 2 wide, 5½ sq. m. in area) and

connected with the mainland by rly., Mombasa is the principal port on the E. Africa coast. The Old Harbour, on the N.E. of the island, is mainly used by small steamers and native craft (dhows); Kilindini harbour, used by larger ships, is at the S.W. end. A new slipway was opened in 1931, taking ships up to 2,300 tons. Road connexion with the mainland on the N. side of the island was effected in 1931 by the opening of the Nyali Bridge, which is built on pontoons. Fort Jesus, erected by the Portuguese during 1593-95, was the scene of the Arab siege, 1696-97, and is now a prison. Much of the earlier history of the E. coast centres upon Mombasa. Pop. 102,500.

**Moment.** Term used in mechanics. The moment of a force about a point, or axis, measures the tendency of the force to produce rotation about that point, or axis. The exact measure of this moment is given by the product of the force into the perpendicular distance of the point, or axis, from the line of action of the force. If there are two or more forces, the algebraic sum of their separate moments is the same as the moment of their resultant about the point.

**MOMENT OF INERTIA.** If the rotation of a body about an axis is to be altered, a moment (or torque, as it is often termed) must be applied about the axis. The acceleration produced by a given torque depends not only on the actual mass of the body but on its distribution with respect to the axis of rotation. If  $m$  is the mass of a small body located at a distance  $r$  from the axis of rotation, its moment of inertia is given by  $I = mr^2$ . For an extended body the total moment of inertia will be given by summing up for all the individual particles, thus:  $I_{\text{total}} = \Sigma mr^2$ . A table of typical moments of inertia for differently shaped bodies about particular axes is given here:

Body (of mass $m$ )	Axis	Moment of Inertia
Thin ring of radius $r$	Through centre perpendicular to plane of ring	$mr^2$
" " " " "	Along any diameter	$\frac{1}{2}mr^2$
Thin disc of radius $r$	Through centre perpendicular to plane of disc	$\frac{1}{2}mr^2$
" " " " "	Along any diameter	$\frac{1}{4}mr^2$
Uniform thin rod of length $2l$	Perpendicular to rod at centre	$\frac{1}{12}ml^2$
Sphere of radius $r$	Along any diameter	$\frac{2}{5}mr^2$

**MOMENTS AND CENTROID.** In plane geometry the moment of a figure about any given line is found by dividing the figure into  $n$  small elements, multiplying the area of each element  $a$  by its perpendicular distance  $d$  from the line, and calculating the limiting value of  $\Sigma ad$  as  $n$  approaches infinity. The second moment is  $\Sigma ad^2$ , the third  $\Sigma ad^3$ , etc. The centroid is the point whose distance from the line multiplied by the total area of the figure is always equal to the moment of the figure. Similar definitions hold for three-dimensional figures.

**MOMENT OF A MAGNET.** This is measured by the product of a magnet's pole strength and the distance between the poles.

**Momentum.** In dynamics, the product of the mass of a moving body and its linear velocity. The term was used by Galileo and Newton, and by the latter's third law of motion the momentum of a body or a system of bodies cannot be changed by the actions of forces between their various parts. This is the principle of the conservation of momentum. The angular momentum of a body is a term used in connexion with rotating bodies, and is the product of the moment of inertia of the body about the axis of rotation and its angular velocity. See Dynamics.

**Mommsen, THEODOR** (1817-1903). A German historian and scholar. He was born at Garding in Slesvig, Nov. 30, 1817, the son of a pastor, and educated at Kiel university. Specialising in the study of antiquities, he spent three years in Italy studying inscriptions. The results of his work brought him wide recognition, and in 1848 he was appointed professor of civil law at Leipzig. This post he lost in 1850 in consequence of expressions of sympathy with the revolutionary party.

Taking refuge in Switzerland, Mommsen was appointed pro-

fessor of Roman law at Zürich. Returning to Germany in 1854, he became prof. of ancient history at Berlin in 1858. In the meantime he had been at work on his Roman History, which appeared during 1854-56. With his professorship was bound up the task of editing the Corpus Inscriptionum, which he had been asked to undertake by the Berlin Academy. He also engaged in an immense amount of other labours, notably a work on Roman coinage, and two others dealing with Roman law. In 1884 appeared his Roman Provinces, the most valuable of all his contributions towards the elucidation of ancient history. During 1873-82 he was a member of the Prussian parliament. He died Nov. 1, 1903. There is a good English translation by W. P. Dickson of the Roman History and the Roman Provinces.

**Momus.** In Greek mythology the god of jest and mockery. His sarcasm and criticisms became so hurtful to the other gods that he was expelled from heaven. He was the son of Night.

**Mona.** Name by which the island of Anglesey (*q.v.*) was known to the Romans. The name was also applied, perhaps in error, to the Isle of Man.

**Monaco.** Principality of S. Europe. Except for the short coast-line on the Mediterranean Sea, this small state of 8 sq. m. is entirely bounded by the French dept. of Alpes-Maritimes. Coal and wine are imported in exchange for olive oil, oranges, citrons, and perfumes. The revenue is mainly derived from the gaming tables of Monte Carlo. There are three towns, Monaco, Monte Carlo, and La Condamine. The first contains

Theodor Mommsen.  
German historian

the new Roman-Byzantine cathedral, seat of an R.C. bishop, and the palace of the prince. It is also the seat of the international hydrographic bureau. Pop. 19,242.

The family of Grimaldi secured Monaco in 968, and when in 1715 the male line failed it passed to a daughter and her husband. It was French, 1793-1815, and for a few months in 1859-60 was in the hands of the Sardinians. Since 1861 it has been under the protection of France. A constitution of 1911 provides for government by a prince and council. Louis II (1870-1949), prince from 1922, was succeeded by his grandson, Rainier III (b. 1923). See Monte Carlo.

**Mona Complex.** Two groups of Pre-Cambrian (*q.v.*) rocks found in Anglesey and on the N.W. side of the Lleyn Peninsula, Wales. Various members of the complex are intensely folded and highly metamorphosed, but they have been subdivided by Edward Greenly into a lower group of gneisses and an overlying group of sediments and volcanic rocks.

**Monad** (Gr. *monas*, a unit). Term in various systems of philosophy; also in biology and physics. According to Leibniz (*q.v.*), the founder of the system known as monadology or monadism, every compound can be resolved into elements which he calls monads. These are simple, incorporeal, unextended, intelligent, substantial unities. They are not physical points, like the atoms of Epicurus, but metaphysical points, real forces, not purely passive, like the corporeal elements of Descartes. All that exists results from the association of these monads with a principal monad, whereby is produced a gradation of species, ascending from raw matter to the

Monaco arms

Monaco, South Europe. General view from the town of Monaco, looking east; showing the town of La Condamine, part of Monte Carlo Harbour, and, left, the palace of the Prince of Monaco

vegetable, the animal, the intelligent conscious being, and finally to God, the ultimate reason of things. In ancient philosophy monad signified unity as opposed to duality, and also the number one, to which the Pythagoreans appear to have attributed creative force.

**Monagas.** State of N. E. Venezuela. It is S. of Sucre, N. of the Orinoco, and W. of the Gulf of Paria and Delta Amacuro; the E. boundary is the Manamo, the most westerly distributary of the Orinoco delta. The W. section of the state is hilly, the E. low-lying. It is well watered, fertile, and contains several lakes. The capital is Maturin. Area, 11,155 sq. m. Pop. 122,901.

**Monaghan.** County of Eire, in the prov. of Ulster. The surface is undulating, with hills S. and E., and in parts boggy. The chief rivers are the Blackwater, flowing along the N.E. boundary, and the Finn, and there are many small lakes. Oats, flax, and potatoes are grown; cattle, sheep, pigs, and poultry are reared. Coal, limestone, and gypsum are mined on a small scale. The Eire state rlys. and the Ulster Canal serve the county. Monaghan is the county town; other places are Clones, Carrickmacross, Castleblayney, and Ballybay. Until the reign of Elizabeth the co. was owned by the MacMahon family; later it was made a shire. Chief antiquities are a Gaelic round tower and the fort at Clones. Three members are elected to the Dáil. Area, 498½ sq. m. Pop. 57,959.

**Monaghan.** Urban dist. and market town of co. Monaghan, Eire; also the county town. It is on the Eire state rlys. and Ulster Canal, 52 m. N.W. of Dublin. The chief buildings are the modern R.C. cathedral, the court house, and others used for public purposes. There are a convent, a college for priests, and three state hospitals. Embroidery and bacon curing are the occupations. Monaghan grew up round a monastery, and was made a corporate town in the 18th century. In the vicinity is Rossmore Park. Market day, Mon. Pop. 4,873.

**Mona Lisa.** Name given to a half-length portrait by Leonardo da Vinci now in the Louvre, Paris. The subject was a Florentine lady, Lisa di Anton Maria di Noldo Gherardini, who married Francesco di Bartolommeo del Giocondo in 1495. From her married name the picture is often known as La Gioconda. It is painted in tempera on a panel measuring 2 ft. 6½ ins. by 1 ft. 9

ins., and was probably executed 1503-06. The artist himself held the portrait to be unfinished. It is believed to have been purchased by Francis I of France for 4,000 gold florins. In 1911 it was stolen from the Louvre, but was discovered in Florence and restored to its place in 1913. See Leonardo da Vinci illus.

**Mona Monkey.** Species of guenon monkey (*Cercopithecus*) found in W. Africa. It is recog-

Mona Monkey. Specimen of the West African species of guenon

nized by its iron-grey body with a vivid chestnut stripe from the middle of the back to the root of the tail, and white chest and throat. The face is purple, the side whiskers yellow. See Guenon.

**Monarch** (Gr. *monos*, alone; *archein*, to rule). Name for a ruler whose authority is undivided. It originated with the Greeks, who classified states according to their method of government. The word monarchy was used throughout the Middle Ages, and later for the great states in which a single ruler had supreme power, e.g. the Hapsburg monarchy and the French monarchy, and continually appears in treatises on government, e.g. Dante's *De Monarchia*. Today monarch is merely a synonym for an emperor or king who rules by hereditary right as opposed to a president or elected head. Monarchy is absolute when there is no legal check on the power of the ruler, limited when his power is shared by other persons, such as nobles or an elected body, whether they derive their power from custom or from a constitution. See Divine Right; Government; King; Sovereignty; State.

**Monarchianism.** Name given to a heresy propounded in the 2nd and 3rd centuries by certain Christians, who, under cover of upholding the monarchy, or original oneness and sole government of God, opposed the orthodox doctrine of the Trinity, on the ground that it involved tritheism. This heresy, which was denounced by Justin Martyr (c. 100-165), appears to have been introduced to Christianity by Alexandrian Jews and Gnostics. The heresy was usually presented in one of three forms. The Adoptionist view was that Christ was not essentially and originally divine, but became the Son of God by adoption of the Father; the Dynamistic view was that Christ was a mere man, on whom God the Father conferred divine powers; and the Modalistic view held Christ to be the Father Himself incarnate. See Adoptionism; Sabellianism; Trinity.

**Monash, Sir John** (1865-1931). Australian soldier and engineer. Born at Melbourne of Jewish parents, June 27, 1865, he graduated at the university and became a civil engineer; a pioneer of reinforced concrete in Australia, he was appointed president of the Victorian engineering institute. He entered the army in 1887. When the First Great War began he was made chief censor, but soon went to Gallipoli in command of the 4th Australian brigade, with which he saw heavy fighting. Proceeding to France, he led the 3rd Australian division with distinction at Messines in 1917. On June 1, 1918, he succeeded Sir William Birdwood as commander of the Australian corps, and was created K.C.B. after the operations of Aug. 8. At the armistice he became director-general of demobilisation in his country, but left the army in 1920 to manage the Morwell Brown coalfield scheme. During 1924-26 he was president of the Australian Association for the Advancement of Science. He died Oct. 8, 1931.

Sir John Monash, Australian soldier Bassano, Ltd.

**Monasterboice.** A village of co. Louth, Eire. It is 5 m. N.W. of Drogheda, and is famous for remains of archaeological interest. These include two churches, a round tower 110 ft. high, and three fine crosses.

**Monastery** (Gr. *monastērion*). House for monks. The term seems at first to have been applied to all religious houses of retirement, whether for men or women; but in course of time, while monks and nuns were housed in abbeys and priories, the former under abbots and priors, and the latter under abbesses and prioresses, it became the custom to call the houses for nuns nunneries or convents, and those for monks monasteries. See Abbey; Convent; Karakoram; Priory.

**Monastery, THE.** Eleventh of the Waverley novels, published in March, 1820, and the only one to which Scott added a sequel (*The Abbot*). A romance of the monastery of St. Mary's of Kennaquhair (Melrose Abbey), it deals with the family history of the Avenels (the lawless Border baron, Julian; his gentle niece, Lady Alice, and her daughter, Mary) and the Glendinnings (the widowed Elspeth, who shelters Lady Alice and her daughter, and her sons, Edward and Halbert, rivals for the hand of Mary). Euphuism is burlesqued in the character of the fugitive Elizabethan courtier, Sir Piercie Shafton, and the introduction of the supernatural White Lady, guardian spirit of the Avenels, is regarded as a weakness.

**Monasticism** (Gr. *monastikos*, living alone). System under which persons live who have abandoned the world for a life of religious seclusion. It is more ancient than Christianity, and perhaps is prehistoric. The problem of conformity to the world had become acute, even before the formation of a state Church under Constantine, in 325. Thenceforward a steadily increasing stream of Christians went out to hermit life in the Egyptian deserts. They fled not only from the world, but from a Church which had admitted the world to its bosom. Many of these hermits gradually formed communities under systematic rules, of which S. Basil's is the best known.

Meanwhile the monastic ideal spread to Western Europe, where it found a legislative genius in S. Benedict (d. 542), whose rule either superseded or modified all others. Both Church and State, from different points of view, agreed in ratifying the indelibility of monastic vows. From the "Three Substantials" of poverty, chastity, and obedience not even emperor or pope could grant dispensations. These, under the Benedictine rule, were reinforced by other prescriptions—frequent prayer, manual labour, abstinence from flesh-food, and strict claustration within monastic precincts. The rules of the

regular canons were rather less strict than those of the Benedictines in the matter of food and claustration.

Throughout the Dark Ages the monks did indirectly work of great value as missionaries, sacrificing their ideal of seclusion to the necessities of their fellow-men. School teaching, except to the boys who were being trained for monks, was, however, no part of the monastic ideal at ordinary times and places; the universities owed scarcely anything to the monasteries in their inception; and even the nunnery schools of the later Middle Ages grew up in spite of ecclesiastical prohibitions, and mainly under the pressure of financial causes. The direct services of the monks to medicine and art have been exaggerated. While monasticism was perhaps the greatest social force of the Middle Ages, it cannot be really understood except in reference to its environment; and medieval civilization was still very rudimentary in important particulars.

The 11th and 12th centuries saw a considerable revival of learning and civilization in Europe; and the monastic system was found to need a good deal of reform. Between 1020 and 1120 eight new and stricter orders were founded; of these the most important were the Carthusian, Praemonstratensian, and Cistercian. The last aimed simply at a restoration of the exact Benedictine rule, which had everywhere been relaxed. It owed most of its success to S. Bernard (d. 1152), but, by the end of the century, even this reform had spent most of its force. Then came the great revivals associated with the names of S. Francis (d. 1226)

and S. Dominic (d. 1221). The Franciscans and Dominicans, with the Austin friars and Carmelites, were called Mendicants, as opposed to the older Possessionates or owners of property.

In all orders the *individual* was forbidden to possess property; but whereas, in the older orders, the *corporate* endowments were considerable, the four orders of friars repudiated in theory even corporate possessions. This, however, soon broke down in practice; but, to the very end, the friar differed from the monk in depending to a considerable extent upon alms. The Franciscan revival was certainly the greatest religious movement between the Apostles and the Reformation, and contributed greatly to the advancement of learning. From about 1230 onwards, the friars became for a century the most active and successful of university teachers.

This was the last of the great reforms of the Middle Ages, though much was done at different places to avert decay. The more intimate monastic records, which have only lately been systematically published and studied, show a gradual abandonment, not only in practice, but even in theory, of many of S. Benedict's most important prescriptions. Manual labour was practically dead three centuries before the dissolution in England; the prohibition of flesh-food was whittled away, even with papal sanction; and the rule of claustration was so habitually broken that its re-enactment by Henry VIII has sometimes been spoken of as a piece of intolerable tyranny. For the actual methods of that monarch there is little to be said, but the necessity of the dissolution can be inferred from monastic records themselves, and from the complaints of the most orthodox churchmen. It was not that the monks of 1536 were so much more relaxed than their forefathers for many generations past, but society had begun to outgrow the need for monasticism as a great world institution—a growth which, it must be said, owed much to the civilizing influence of monasticism itself in the past.

Its subsequent history only emphasises the lesson of English history. In France, some of Richelieu's greatest difficulties were with the reform of the monks; and the Revolution swept them away as a state institution, a story which has been repeated in nearly every other European country. That the ideal in itself is healthy is proved by its vitality under voluntarist conditions, and even under

the more definite discouragement of persecution. But no sketch of monasticism can be complete which does not do justice to the unselfish, beneficent work of the individual monk, and to the unanimity with which the modern world has decided against all exceptional privileges for these communities.

Knowles, 1940.

**Monastir, BITOLIA, OR BITOLJ.** Town of Yugoslavia. 130 m. N.W. of Salonica, with which it is joined by rail, it was the capital

The Bulgarians took the town in Dec., 1915, during the First Great War; but after the capture of Florina, Sept. 18, 1916, by the Allies, French, Russian, and Serbian troops advanced towards it. The Serbians seized the commanding height of Kaymakchalan on Sept. 30 and pushed on towards the Teherna bend, which they crossed between Oct. 9-17. Meanwhile the French and Russians unsuccessfully assaulted the Kenali line. The Serbs drove the Bulgarians from the Chuks heights on Nov. 10 and took Tepavci, Nov. 13-14, outflanking the Kenali position. The Bulgarians withdrew to the Bistritza; and the Serbs, advancing in the mountains, outflanked Monastir itself. The Bulgarians hastily evacuated the town, which was occupied by the French, Nov. 19.

Monastir, Yugoslavia. General view of the Serbian town, the scene of much fighting in the Balkan War of 1912 and important in both Great Wars

of a vilayet of the same name while Macedonia was under Turkish rule, and was of importance both militarily and commercially. It was a Turkish depot, had manufactures of leather and carpets, and exported grain. Pop. 33,024.

During the course of the Balkan war of 1912 the main Serbian army, after its victory over the Turks at Kumanovo, Oct. 23-24, advanced towards Monastir. The Turks took up a strong position N. of the town on a front of 16 m., which the Serbs attacked on Nov. 15, making a successful assault on the Turkish left wing the next day. A Turkish counter-attack was repulsed on Nov. 17, and a general attack by the Serbs on Nov. 18 drove in the centre of the Turks, who broke and fled, the victors entering Monastir. By the treaty of Bukarest, 1913, it was allotted to Serbia.

In the Second Great War the Germans captured Monastir on April 10, 1941, and by their occupation of this strategic point brought overwhelming forces to bear upon the Greek army fighting the Italians in Albania. It was liberated by the Yugoslav patriot forces on Nov. 6, 1944.

**Monazite.** Mineral of complex composition. It is essentially cerium phosphate but containing also variable amounts of the "rare-earth" elements, thorium, and the radio-active element mesothorium. Monazite is the principal source of cerium, lanthanum, neodymium, praseodymium, and thorium, which have uses in the manufacture of lighter flints (cerium), gas mantles (thorium), in atomic energy investigations (thorium), and cerium salts have application in medicine, ceramics, tanning, dyeing, and optical

glasses. Monazite is a greenish-yellow to brown mineral occurring in residual deposits formed by the weathering of granitic rocks. Commercial deposits are found in India at Travancore, in Brazil, Indonesia, and the U.S.A.; unworked deposits occur in Australia, Nigeria, Nyasaland, and Norway.

**Monboddo, JAMES BURNETT, LORD (1714-99).** Scottish lawyer. He was born at Monboddo, Kincardineshire, and educated at Aberdeen and Edinburgh. He rapidly acquired distinction at the bar, and in 1767 became a lord of session. Far in

Lord Monboddo, Scottish lawyer

advance of his age, he studied the origins of mankind from a new standpoint, and enunciated his views boldly in *The Origin and Progress of Language*, 1773, and *Ancient Metaphysics*, 1779-99. Lord Monboddo died May 26, 1799. He is best remembered from frequent allusions to his theories made in Boswell's *Life of Johnson*.

**Moncalieri.** Town of Italy, in the prov. of Turin. It stands on the river Po, 5 m. by rly. S. of the city of Turin. On a height above the town is a royal palace dating from 1470, rebuilt in the 17th century, and containing a fine series of pictures illustrating the history of the house of Savoy.

**Mönch** (Ger., Monk). Mt. peak of Switzerland, in the Bernese Oberland. It rises between the

Mönch, Switzerland. The snow-clad peak in the Bernese Oberland seen from Interlaken

Eiger and the Jungfrau, has an alt. of 13,468 ft., and is covered with snow and icefields. The first ascent was accomplished by Porges in 1857. See Eiger.

**Monchique.** Town of Portugal, in the dist. of Faro and the prov. of Algarve. It is 12 m. by road N. of Villa Nova de Portimão and 13 m. S. of the station on the Lisbon rly. Beautifully situated on a spur of the Serra de Monchique, alt. 1,476 ft., it is a noted health resort. There is a trade in wine, olive oil, oranges, etc. At Caldas de Monchique, 5 m. to the S., are hot sulphur springs used for skin diseases. Pop. 8,000.

**Monchiquite.** Fine-grained igneous rock of the lamprophyre (*q.v.*) group, named after the Serra de Monchique (*v.s.*). It consists chiefly of olive and purplish augite.

**Monck, CHARLES STANLEY MONCK, 4TH VISCOUNT (1819-94).** British administrator. Born at

4th Viscount Monck, British administrator

Templemore, Tipperary, Oct. 10, 1819, the eldest son of the 3rd viscount, he was educated at Trinity College, Dublin, and became a barrister. In 1849 he succeeded to the Irish title, and in 1852 became M.P. for Portsmouth, being a lord of the treasury, 1855-58. In 1861 he became governor of Upper and Lower Canada, and in 1867-68 was the first governor-general of the new dominion. He was made a baron in 1866. He died Nov. 29, 1894, his elder son succeeding to the peerage.

**Monckton, LIONEL (1862-1924).** British composer. Educated at Charterhouse, he became one of the most popular of musical-comedy composers, and collaborated with Ivan Caryll in a series of light-hearted musical pieces at the Gaiety, *e.g.* The Shop Girl, 1894; The Circus Girl, 1896; The Orchid, 1903; The Girls of Gottenberg, 1907; Our Miss Gibbs, 1909. His greatest successes, however, were The Arcadians (with Howard Talbot) at the Shaftesbury, 1909, and The Quaker Girl, at the Adelphi, 1910. He died Feb. 15, 1924. He married the actress Gertie Millar (*q.v.*).

**Monckton, SIR WALTER TURNER (b. 1891).** British lawyer. He was born at Plaxtol, Kent, Jan. 17, 1891, and educated at Harrow and at Balliol, Oxford.

Sir Walter Monckton, British lawyer

of the council. During the Second Great War he was director-general of the ministry of Information, going to Cairo in 1941 as head of the propaganda and information services. Monckton was attorney-general, May-July, 1945, and the U.K. delegate to the Allied reparation commission at Moscow. He was created K.C.V.O. in 1937, and K.C.M.G., 1945.

**Moncton.** City and port of entry of New Brunswick, Canada. It stands on the Petitcodiac river, 90 m. from St. John and 650 from Montreal. It is a divisional point of the national railway system, which has workshops here. There is a good harbour, and the town has manufactures of machinery, lumber mills, etc. Pop. 22,763.

**Mond, LUDWIG (1839-1909).** Anglo-German chemist. Born at Cassel, Germany, March 7, 1839, and educated at Marburg and Heidelberg universities, he came to England in 1862 to introduce a process for the recovery of sulphur from alkali waste. In 1873, in partnership with Sir John Brunner, he erected works near Northwich for the manufacture of soda by the Solvay or ammonia process. Mond also discovered a method of recovering nickel from low-grade ores. In 1896 he founded the Davy-Faraday Research Laboratory in connexion with the Royal Institution, London. He became a naturalised British subject in 1867, and died in London Dec. 11, 1909. His son, Alfred Mond, became Lord Melchett (*q.v.*). See Brunner, Sir John; Soda.

Ludwig Mond, German-born chemist Elliott & Fry

**Monday.** Second day of the week. The word comes from A.S. Monandaeg (moon's day) and corresponds to the Lat. *Dies Lunae*, cf. Fr. *lundi*. The name Black Monday was originally given to Easter Monday, April 14, 1360, from the darkness and cold

experienced by Edward III of England when lying with his host before Paris. In the north of England the day before Shrove Tuesday is called Collop Monday, from the collops then eaten. The expressions "Cobbler's Monday" and "Saint Monday" in the sense of a holiday are, perhaps, attributable to the old story of the cobblers who, knowing only that their patron saint's day fell on a Monday, made sure of not missing it by keeping every Monday a holiday. Plough Monday is the Monday after Epiphany, when formerly the ploughmen went round with collecting boxes.

**Mondego.** River of Portugal. It rises in the Serra de Estrella, and flows first N.E. and then S.W. past Coimbra to the Atlantic Ocean at Figueira da Foz. Length 130 m. Mondego Bay was the spot at which Wellington (then Wellesley) landed on Aug. 5, 1808.

**Mondofedo.** City of Spain, in the prov. of Lugo. It stands on the river Masma, 12 m. S. of the coast of the Bay of Biscay and 28 m. N. of Lugo. A bishopric from the 12th century, its cathedral dates only from the 17th. Its Franciscan monastery is now used as a public school and theatre. Captured from the Moors in 858, it was taken by the French in 1809. Pop. 11,500.

Mondofedo arms

**Mondovi** (anc. *Mons Vici*). City of Italy, in the prov. of Cuneo. Situated on the N. slopes of the Ligurian Alps, near the river Ellero, 17 m. by rly. E. of Cuneo, it consists of an upper town, alt. 1,835 ft., and a lower town, alt. 1,282 ft. It has a 16th century citadel, a cathedral, and bishop's palace. The church of S. Maria Maggiore and the chapel of S. Rocco were damaged in the Second Great War. Industries include tanning and the manufacture of textiles, pottery, paper, majolica, and machinery. Mondovi was the seat of the Mons Regalis printing press, established in 1472. Here, on April 21, 1796, the French gained a victory over the Sardinians. Pop. 19,600.

**Mondrian, PIETER CORNELIS (1872-1944).** A Dutch painter. Born March 7, 1872, at Amersfoort, he studied at Amsterdam academy of fine arts, and began to paint landscapes which emphasised mass and eliminated detail. In Paris, influenced by the Cubists, he became so ascetic that he found curves too emotional, and concentrated on horizontal and verti

cal lines, convinced that the right angle was the purest "expression of the two opposing forces which constitute life." A pioneer of abstractionism, he went in 1940 to the U.S.A., and there died, Feb. 1, 1944.

**Monel Metal.** Important alloy of copper and nickel. It varies slightly in composition, as it is often made directly from ores containing both nickel and copper; a typical composition would be 68 p.c. nickel, 20 p.c. copper, 2 p.c. iron. Such an alloy would have an ultimate tensile strength of about 37 tons per sq. in. with an elongation of 40 p.c. Malleable in the cold, with high resistance to corrosion, while it retains its strength at high temperatures, the alloy is used for turbine blades, valve parts, etc.

**Monet, CLAUDE OSCAR** (1840-1926). French painter, born in Paris, Nov. 14, 1840. He received his first instruction from Boudin, whom he met in 1855, and in 1862 he entered Gleyre's studio. In 1863 he came into contact with Manet's work, and was

Claude O. Monet.  
French painter

greatly influenced by his new method of painting in bright colours laid on in separate tones. He adopted the method, incorporating with it the results of his own scientific study of light, and was joined by Pissarro, Sisley, Renoir, etc., the group becoming known as the Impressionists. Monet was the real founder of Impressionism.

Among his first pictures were *Déjeuner dans un intérieur*, 1868; and figure pictures, *Camille*, 1866; and *La Japonaise*. He went to live by the Seine, at Argenteuil, Vétheuil, and Giverny, and painted the river in all its moods, and in 1871 he visited England to study the Thames, of which, however, his chief pictures were painted during a later visit, 1901-04. He devoted himself to portraying the sea and rocks on the Mediterranean coast, 1884, and at Belle-Île, 1886. His fame rests chiefly on his three series of pictures of one subject under varying effects of light and atmosphere, e.g. *The Haystacks*, 1890-91. His stated view that the principal "person" in any picture was light represented a revolutionary attitude to painting, and

was widely quoted by admirers of the Impressionists. In his old age he painted studies of his beautiful garden at Giverny, with its famous lily pond. He died Dec. 5, 1926. See illus. under Impressionism. Consult Claude Monet, X. Latham, 1931; C.M. and his Garden, S. Gwynn, 1934.

**Moneta, ERNESTO TEODORO** (1833-1918). Italian publicist. Born at Milan, Sept. 20, 1833, he served with Garibaldi, and was in the Italian army, 1861-67. He edited *La Libera Parola*, 1860-61, and was director of *Il Secolo*, 1867-96. In later life he devoted

Ernesto T. Moneta.  
Italian publicist

himself to the propagation of peace, and presided at the Milan international congress of 1906. In 1907 he was awarded the Nobel peace prize, but he was a warm supporter of Italy's participation in the First Great War. He died Feb. 10, 1918.

**Money** (Lat. *moneta*, mint). Name for whatever is commonly used within a community as a medium of exchange. The introduction of money marked a big social advance on the older method of exchange by barter. In the past money has taken the form of furs, skins, salt, shells, and various metals in their rough form. Coins were a development from the use of metals. The use of paper (notes) and of cheques drawn on banks came with the growth of credit.

At the present time coins and notes (cash) form that section of money used for most retail purchasing, for casual expenditure, and for payment of wages. For larger transactions, cheques are commonly used; and these, though usually covered by money due to the drawer by his bank, may be covered by an overdraft or a loan to him from his bank made against suitable security. Since they serve for the purchase of goods and services, bank loans and overdrafts must be regarded as money. Most economists exclude from that term, however, such bank deposits as are in the nature of permanent or semi-permanent savings, preferring to consider these as investment.

The amount of money is never static; it can be increased or decreased at will, as, indeed, it must be if the constant fluctuations in the volume of trade

being conducted from moment to moment are to be adequately served. Good trade prospects lead to increased employment, the encouragement of overtime, and the offer of higher wages for increased output, all of which mean larger demands for cash upon the banks from employers, to meet which the banks draw more cash from the accounts they keep with the Bank of England, so that the total of notes and coins in circulation rises. Good prospects also affect credit money, consisting of bank deposits and overdrafts, for employers need not only more men, but also more machinery and raw materials, more goods in process of manufacture, and larger factories and shops. They therefore arrange for bank loans and overdrafts, and the cheques they issue against these, when paid in to the accounts of those to whom they are given, go to swell the total of bank deposits, so that both the elements in credit money rise at the same time. The reverse process is equally automatic when trade prospects deteriorate.

Artificially created changes in the volume of money, particularly credit money, can also be used to stimulate or restrict trading activity. The Bank of England can, by operations through the London money market, increase or decrease the total of the balances it holds belonging to the commercial banks, and by this action it either encourages them to lend more freely or decreases their power to sustain the volume of loans and overdrafts actually current. Adjustment of the weight of taxation, not according to the size of the current national budget, but according to the outlook for trade, serves similar purposes; thus if, when trade is poor, taxation be reduced even below budget needs, the extra money left in the hands of taxpayers, being spent on goods and services, acts as a stimulus to trade; while extra taxation imposed during times of prosperity has little adverse effect.

Money as a measure of value is neither static nor absolute, but rather relative. A yard of cloth is at all times 36 ins., but a pound's worth of that material may consist of 36 ins. at one time, 30 ins. at another. Such a variation, in either direction, may take place within a relatively short time so that, e.g. goods which cost 16s. 8d. in one year may cost £1 the next. This can be described either as a general depreciation in the purchasing power of money or as a

general rise in the level of prices. Widespread change in prices is due to changes in availability of goods and services and/or the amount of money available and being spent. Particular rises in price occur through scarcity of particular articles, particular falls through plenty. But whether the change is general or particular, the usefulness of money as a measure of relative value, between different commodities, between commodities and services, and between one period and another, remains.

The price of goods and services must not, however, be confused with the price of money. The price of an article is the amount of money which at a particular moment will pay for it; the price of £100 is the amount of money which is generally paid for the use of £100 for a period of one year, i.e. the current rate of interest charged for money on loan; and there is no necessary equilibrium between this and prices in general. In fact, other things being equal, the price of money is likely to be low when prices of commodities are high, for the volume of money available for lending may force interest rates down, while, from the same cause, prices are forced up. Where output of goods can be expanded, cheap money is likely to stimulate expansion, for to borrow is profitable; while where the volume of goods and services can be maintained at a level equal to demand, cheap money is likely to reduce the general level of prices because it tends to lower production costs.

In the U.K. the interest rate charged by the Bank of England and the rate fixed for current borrowing by the Treasury are the chief factors determining the general level of interest rates. It has become the aim of government financial policy so to adjust both the volume of money and its price that the national economic machine shall be maintained at maximum output, i.e. that demand shall at all times be sufficient to support full employment of both man-power and technical capacity. To attain the highest possible standard of living it is necessary that, by every means of technical equipment and skill, the output of every man is at the maximum. From savings comes capital, in the form of machinery, factories, transport, etc. So far as the saver is concerned, his savings represent deferred purchasing power, but, collected and accumulated through the financial channels maintained

for the purpose, they are used to provide the capital goods without which industrial output would be very narrowly limited. Such investment would, however, be impossible without the money put by by a multitude of individuals as a future claim on production. Money is thus seen to constitute a vital factor in economic development. See Barter; Bill of Exchange; Cheque; Exchange, etc.

**Money.** SIR LEO GEORGE CHIOZZA (1870-1944). British economist and politician. Born at Genoa, June 13, 1870, of mixed Italian and English parentage, he settled in England, and in 1903 assumed the surname of Money. He was a Liberal M.P. for North Paddington, 1906-10, and for East Northants, 1910-18; later he joined the Labour party, but did not secure election. He was knighted for his services as parliamentary private secretary to Lloyd George, then minister of Munitions, 1915; from 1916 to 1918 he was parliamentary secretary to the ministries of Pensions and of Shipping, and chairman of the National Maritime Board, 1917-18. He died Sept. 25, 1944. His books include *Riches and Poverty*, 1905; *The Nation's Wealth*, 1914; *The Triumph of Nationalisation*, 1920; *Can War Be Averted?*, 1931; *Product Money*, 1933; and several books of verse. He edited the economic, financial, industrial, engineering, and sociological sections of the 1929 edition of the *Encyclopaedia Britannica*.

**Money Bill.** Any proposal put before parliament which involves the expenditure of public money. The rules and procedure for the passage of such measures into law differ from those of ordinary bills thus: (1) They must be introduced by a minister of the crown; no private member can introduce one. The reason for this is that ministers are responsible for finding the necessary money, and their arrangements would be upset if they had to find sums which were no part of their plans. (2) They can only originate in the house of commons. By resolutions of 1678 and 1860 the commons established the sole right of introducing and altering money bills, and this was strengthened by the Parliament Act of 1911. (3) By the Parliament Act the house of lords was deprived of the right of rejecting money bills, its only remaining power over them. Disputes as to whether a certain measure is or is not a money bill are now avoided by a defining clause in the Parlia-

ment Act which leaves the decision in the hands of the Speaker. See Parliament Act.

**Moneylender.** One who lends money, but especially one who does so for a livelihood. In the U.K., as in other countries, special legislation has been found necessary for the protection of the public against moneylenders. By the Moneylenders Act of 1900 a moneylender is defined as a person whose business is that of lending money, or "who advertises or announces himself or holds himself out in any way as carrying on that business." Pawnbrokers, bankers, insurance companies, friendly societies, building societies, loan societies, and persons or corporations who lend money merely incidentally for business purposes are excepted.

Every moneylender must annually obtain a certificate from the local police court. He also requires an annual licence from the Customs and Excise, but this is granted automatically on production of his certificate and payment of £15. A moneylender can carry on business only in the name and address authorised in his certificate. Contracts for the payment of money lent by him are unenforceable unless the terms are set out in a writing signed by the borrower, which shows what rate of interest is being charged. A copy must be given to the borrower within 7 days. The court will always re-open a transaction between moneylender and borrower if they consider the interest is excessive and the transaction is harsh and unconscionable. Interest in excess of 48 p.c. per annum is presumed to be excessive unless the contrary is proved. No charge may be made for costs or expenses. Nor may a moneylender send an advertising circular to anyone except on a written request. He may advertise in a newspaper or periodical or by poster at his address, but the advertisement must contain only his name and the address where he carries on business with any telegraphic address and telephone number, any former address, a statement that he lends money with or without security, the highest and lowest sums he lends, and the date when his business was established. He must not employ canvassers. A moneylender cannot sue for money due to him on a loan unless he begins his action within 12 months of his right to sue, according to any written acknowledgement or part payment by the debtor.

**Money Market.** General term for the whole financial organization concerned with the provision and employment of money available for use for short periods only. In London there is no particular building or exchange devoted to such operations, but the offices of the institutions and firms concerned are for the most part centred around Lombard Street, Threadneedle Street, Bishopsgate, and other adjoining streets within the City area. Nor, strictly speaking, is the money bought and sold—it is rather borrowed and lent, and the prices quoted are rates of interest charged for its use. In one important section, however, the dealings concern the purchase and sale of bills and therein the instrument involved passes from seller to buyer at a discount. Thus, loan rates may, for example, be given as Day to Day  $\frac{1}{2}$  to  $\frac{3}{4}$ , meaning that money loaned on a day-to-day basis could be borrowed at from 10s. to 15s. per cent per annum, while the fine trade discount rate for 3 months being quoted at 1 to 1 $\frac{1}{2}$ , would indicate that such a bill could be purchased at a discount of from £1 to 30s. per cent per annum.

#### Banks and Discount Houses

The pivot of the market is the Bank of England, exercising a controlling function as agent of the Treasury, and the principal institutions with short-term money to lend or invest in this market are the British banks and those Empire and foreign banks having London offices. To a lesser but important extent, the discount houses supplement the funds of the banks, and many hundreds of millions of pounds are constantly available to borrowers. The chief of these are the British government, the largest English city authorities, the stock exchange, and the discount houses themselves. The latter have, and use, substantial funds of their own, but so large are their operations that they also re-borrow heavily on the bills they have discounted for traders and others needing immediate cash in exchange. These bills arise from both home and foreign trade, and an important source of the latter is a specialised, subsidiary section of the market comprised of the acceptance houses or merchant bankers. Constantly linking buyers and sellers are the body of other specialists called bill brokers, whose function it is to negotiate the dealings between the lending banks and the discount houses. Although both foreign

money (from overseas banks) and foreign bills had, even by 1946, commenced once more to flow to the London money market, the discount houses' operations were still, as throughout the latter years of the Second Great War, concerned largely with short-term government bonds, as a result of which they contributed to the maintenance of cheap borrowing by the state.

**Money Order.** Document issued at certain post offices to enable a person to send money to someone else. When the money is paid in, the names of the payer and of the payee are taken down, and are sent to the particular office at which the order is made payable; without this advice the money will not be paid. Money orders are thus different from postal orders, which can be transferred like cash. The highest amount for which a money order is issued in the U.K. is £40, and the charge varies from 4d. to 1s. Money orders can be sent by telegraph, and can, like cheques, be crossed for greater security.

**Moneywort** OR CREEPING JENNY (*Lysimachia nummularia*). Perennial creeping herb of the family Primulaceae, native of Europe. Its prostrate stems creep to a length of about two ft., and bear roundish heart-shaped leaves in pairs, and cup-shaped, solitary yellow flowers. A species often confused with it is the yellow pimpernel (*L. nemorum*), with shorter stems, yellow green larger leaves, and smaller flowers.

**Monfalcone.** Town of Italy. It is 10 m. S.W. of Gorizia and 16 m. N.W. of Trieste, near the Adriatic, is noted for its mineral waters, and was prominent during the First Great War, being taken from the Austrians and then lost by the Italians. It passed to Italy under the peace treaty, July 16, 1920. During the Second Great War, New Zealanders advancing on Trieste made their first contact with Yugoslav partisans of Tito's forces here, May 1, 1945. Pop. 10,000. See Caporetto, Battle of; Gorizia; Italy.

**Monforte de Lemos.** Town of Spain, in the prov. of Lugo. It stands on the river Cabe, and is a junction on the rly. from Leon, 148 m. to the E., to Corunna and Vigo. It has ruins of a medieval castle, a Benedictine monastery,

now utilised as a hospital, a fine Renaissance church, and a Jesuit college. Chocolate and linen are manufactured, and there is trade in timber and cattle. Pop. 16,000.

**Monge, GASPARD** (1746-1818). French mathematician. He was born at Beaune, May 10, 1746, and educated at Lyons, where at the age of 16 he became teacher of physics. In 1768 he was appointed professor of mathematics and in 1771, of physics at the military school of engineering at Mezières. In 1783 he moved to Paris, and became examiner of naval pupils. Here he wrote his *Traité Élémentaire de la Statique*, 1786. He was minister of marine 1792-93.

After a visit to Italy in 1796 to receive the Napoleonic plunder of antiquities and *objets d'art*, he accompanied Bonaparte to Egypt and Syria. In 1805 he was made a senator and Comte de Pelouse, but lost both dignities on the Restoration. He died July 28, 1818.

**Monghyr.** Dist. and town of India, in the Bhagalpur div. of the state of Bihar. The dist. is a low-lying alluvial tract drained by the Ganges. Nearly half the cultivated area yields two crops annually.

Rice, maize, and tobacco are the most important. The town is an important trading centre on the right bank of the Ganges, here crossed by the rly., and opposite the entry of the Burh Gandak river, and contains an up-to-date printing press and cigarette factory, which works the increasing supplies of locally grown tobacco. From the 12th to the 18th century it was a Mahomedan stronghold. Area, 3,975 sq. m. Pop., dist. 2,504,544, town, 63,114.

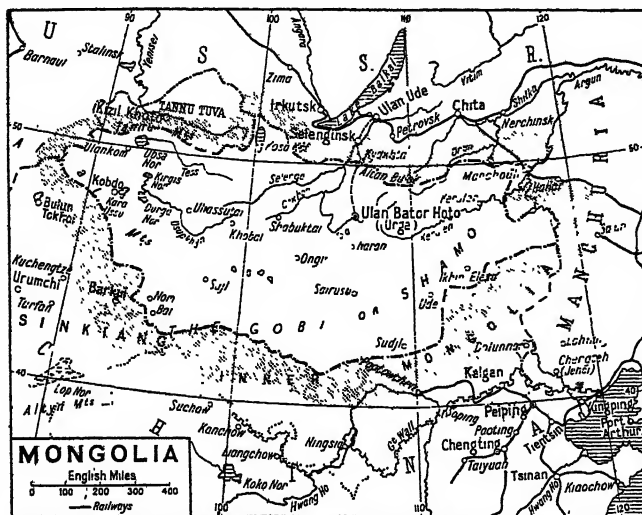

**Mongol.** Name denoting a racial stock in Mongolia, with offshoots in the Manchurian Amur province and in Chinese Turkistan. Estimated at 1,800,000, they form, with the Turkic and Tungus stocks the round-headed Altaian branch of the straight-haired yellow race. The coarse, black hair is scanty except on the scalp. The character-

Gaspard Monge, French mathematician

Moneywort. Flowering stems of this creeping herb

Mongolia. Map of this vast outlying district north of China, bounded by that country, Siberia, and Manchuria

istic Mongolian fold of skin over the inner angle of the eyelids, and the lifted outer angle, produce the well-known slant-eyed effect.

Sturdy, flat-faced, with prominent cheek-bones, they comprise W. Mongols or Kalmucks, and E. Mongols, including the six inner leagues, the Chakhar, and the outer Khalkas. The Buryat are much Siberianised. Nomad tent-dwelling hunters and herdsmen, essentially shamanist, their vigour has been sapped by lamaism; in Afghan Turkistan the Aimak and Hazara are muslimised. Cradled in the upper Amur basin, they shared in the political confederacies which dominated Central Asia for centuries and, under Jenghiz Khan and his successors, extended the 13th century empire of Tartary from the Dnieper to the Pacific. Under Kublai Khan a Mongol dynasty, 1280-1368, was imposed upon China. Their Altaic language is written in syllabic signs resembling knots on the left of a vertical stem, based upon Uiguric, and introduced in 1240.

In various forms—Mongolian, Mongoloid—the term also designates the whole yellow race, one of the three primary divisions of mankind. In this sense it embraces numerous stocks marked by much racial admixture, and climatic and linguistic differentiation. Thus the northern Mongols include, with the Altaians, the Koreans and Japanese, the Finno-Ugrians, the Palaesioasiatic or E. Siberians, and more remotely the Eskimos and American Indians. The southern Mongols comprise the Tibetan, Chinese,

and Indo-Chinese peoples, and more remotely the Malays. See Asia; Ethnology; Kalmuck.

**Mongolia.** Outlying district N. of China, bounded to the N. by Siberia, S.W. by Sinkiang, S.E. by China, and E. by Manchuria. Surrounding the Gobi desert, 3,000 ft. above the sea, it forms an intermediate region between the Tibetan plateau and the Arctic lowland of Siberia. In winter the cold is intense; in the summer the slight rains produce pasture and fodder shrubs for the sheep, goats, horses, and camels of the nomadic inhabitants, Mongols or Kalmucks. The chief rivers are the Irtysh, Selenga, and Orkhon, of which the last two are navigable. Area about 1,875,000 sq. m. Pop. about 750,000 Mongols and 100,000 others, mostly Russians and Chinese. The Lamaic religion is a powerful force, and 30 p.c. of the male pop. are Lamas.

An indefinite boundary divides Mongolia into the Chinese prov. of Inner Mongolia and the independent Outer Mongolian People's Republic. Outer Mongolian autonomy dates from the end of 1911, and various agreements of 1912-15 secured the region from colonisation by the Russians or Chinese. These agreements were denounced by China in 1919. In 1924 Outer Mongolia adopted its present Soviet constitution, codified in 1946, but did not join the Soviet Union. The

parliament, called the Great Huruldan, is elected by universal suffrage granted at the age of 18; it appoints the 30 members of the executive or Little Huruldan. Most of the trade is handled by the Soviet-backed Mongol Central Cooperative Society, and is in livestock and animal products. There are some gold mines. The chief town, Urga, was renamed in 1924 Ulan Bator Hoto, or town of the red heroes; its pop. is about 100,000, and it has an airport and a radio station.

The unit of Mongolian currency is the tukhrik, nominally equal to one-half U.S. gold dollar, and divided into 100 mongo. Communications are mainly by caravan, though a rly. is under construction from Urga to Chita in Siberia.

China formally recognized the independence of the Mongolian republic (Jan. 5, 1946) following a plebiscite held on Oct. 30, 1945. On Feb. 27, 1946, Outer Mongolia signed a treaty of friendship and mutual aid with the Soviet Union. Pop. (1932) 540,000, including 90,000 Russians and 5,000 Chinese. **Mongolism.** Form of mental deficiency with physical characteristics (round head, oblique eyes, flat nose, squat figure) resembling those of the Mongolian race. See Idiocy.

**Mongoose** (*Herpestes griseus*). Small carnivorous mammal of the family Viverridae, which includes

Mongoose. Specimen of *Herpestes urva*, a species which lives on crabs and shell-fish

the civet-cats, and is restricted to the Old World. More closely allied to the ichneumon, the Indian mongoose is a smaller animal with greyish fur and long, bushy tail. It is famous for the prowess it displays in destroying snakes, even the deadly cobra failing to use its natural defence against an enemy so agile. See Civet.

**Monica** (332-387). Saint and mother of S. Augustine of Hippo. Born of pious parents in good circumstances, she was married at an early age to Patricius, who became converted through her good example. She had two sons, one of whom, famous as S. Augustine (q.v.), always attributed his conversion to her prayers.

**Monier-Williams, Sir MONIER** (1819-99). British Orientalist. He was born in Bombay, Nov. 12, 1819, came to England when a child, and was educated at King's College, London, and Balliol College, Oxford. He was successively professor of Oriental languages at the East India College and of Sanskrit at Oxford, where the Indian Institute was founded mainly at his instigation. Knighted in 1886, he died April 11, 1899. His most important works are *Hinduism*, 1877; *Buddhism*, 1890; *Brahmanism*, 1891; *Sanskrit-English Dictionary*, 1899.

**Monifeth.** A police burgh of Angus, Scotland. It stands on the N. side of the Firth of Tay, 6 m. E. of Dundee, and has a rly. station. Rugs and carpets are woven, and machinery is manufactured. The place has the amenities of a seaside resort and two golf courses. Pop. 3,300.

**Monism** (Gr. *monos*, alone, single). Theory which refers all the phenomena of the universe to a single principle, whatever this principle may be. Thus materialists, pantheists, idealists, hylozoists, are all monists. Monism is thus opposed to duality and plurality. While forced to acknowledge the existence of contraries (body and soul, mind and matter) it attempts to remove them by explaining them as modifications of a single fundamental principle. Thus, mind and matter and their phenomena are manifestations of some one substance which is neither. The term is also applied to that view of the world which, denying anything transcendent (beyond the material universe), regards the world as a connected whole varying in accordance with fixed laws inherent in itself, to which even man is subject. See Theism.

**Monitor** (Lat., one who warns). Term applied to a senior pupil in a school selected to supervise junior pupils in the absence of a teacher. The feminine form is *monitress*. In zoology a genus of lizards peculiar to the Old World has received the name of monitor from a notion that they give warning by hissing of the approach of a crocodile. A special type of small warship, carrying one or two powerful guns and having a shallow draught is known as a monitor. Fire brigades sometimes use a device known as a monitor to control the nozzle of a hose when the pressure of water is such that it cannot be directed by one man. From

the outset of the Second Great War men and women were employed by most belligerent countries to listen systematically to radio broadcasts put out by their enemies and by neutral countries; in Great Britain these people were called monitors, and their work was known as monitoring.

**Monitor** (*Varanus*). Genus of large lizards of the family Varanidae. Including about 30 species, they are found in Africa, S. Asia, Australasia, and Oceania. Distinguished from other lizards by their long forked tongue which retracts into a basal sheath, as in the snakes, they are long in the body, have no dorsal crest, are thickly covered with small scales, and some attain a length of over 8 ft. In colour they range from blackish to greenish brown and grey. Most live in burrows near water, and are carnivorous, eating birds, small mammals, eggs, and frogs. Monitors swim well with the aid of their long and powerful tails, used also as a weapon of defence. They are eaten by the natives in parts of India, and their eggs are highly esteemed as food in Burma. See Lizard colour plate.

**Monitor.** Armoured vessel of slow speed, light draught, and low freeboard, designed to operate in shallow waters. Her sides are heavily "blistered," i.e. have great out-curving bulges upon them for resisting torpedo attack.

Monitors carry only one or two large guns and offer a small target. The first was built by John Ericsson and used in the American Civil War. By 1914 the British navy possessed only a few monitors, but they were used in the First Great War off the Belgian coast. Soon these vessels were capable of mounting an 18-in. gun. British monitors in the Second Great War were in action in Libya and in the D-day bombardment of the French coast. The Russians employed monitors in the defence of Stalingrad and on the Danube. See American Civil War; Ericsson, John; Hampton Roads; Merrimac; Royal Navy.

**Moniz, ANTONIO EGAS** (b. 1874). Portuguese physiologist. A professor of Lisbon univ., he invented, 1927, cerebral angiography, a method of diagnosing and locating brain tumours. The first man to perform the operation of prefrontal leucotomy, Nov. 12, 1935,

he shared the Nobel prize for medicine, 1949, being the first Portuguese so honoured. Also a diplomatist, Moniz was Port. envoy to Spain, became foreign minister 1918, and headed the Port. delegation to the peace conference 1919.

**Monk** (Lat. *monachus*, from Gr. *monos*, alone). Solitary person, and specifically a male member of a monastic community. Originally the word was applied to hermits who passed their lives in solitude in desert places. Later these solitaries were collected in villages or lauras, where they dwelt apart, but met for divine worship and were under the control of an abbot. From this developed the practice of living in community in a coenobium or monastery—but the old name was maintained.

Until the 13th century the name monk was in general use for a member of a religious order, but the rise of the friars introduced a new type of religious life, and the term became restricted to members of the older orders of enclosed monks as distinguished from the wandering friars. Strictly speaking, it is now applied only to Benedictines and the various ancient orders which have sprung

**Monitor.** The British monitor, H.M.S. Roberts, completed in October, 1941

from them, or were modelled on the Benedictine Rule, e.g. Cistercians, Augustinians, and Carthusians. See Asceticism; Basilian Monks; Benedictine; Black Friar; Carmelites; Carthusians; Cluniac; Hermit; Monasticism.

**Monk, GENERAL GEORGE.** This English soldier and politician, prime mover in the Restoration of Charles II, was rewarded with the title of duke of Albemarle, and is described under that heading.

**Monkey.** Popular name for all mammals of the Order Primates, sub-order Pithecoidea, with the exception of man and the anthropoid apes. Monkeys generally are distinguished from man and apes by their smaller size and the shape of the molar teeth, while individual groups have tails, naked callosities on the buttocks, and cheek pouches. The narrow, laterally compressed breastbone invariably

Monkey Flower. Foliage and flowers of the N. American herb

distinguishes the skeleton. It is usual to divide the monkeys into two great families, the Catarrhini of the Old World and the Platyrrhini of the New. The main points of distinction are that the nostrils of all the American species are separated by a broad septum and more laterally situated than in those of the Old World; that they have four more teeth; and that none has the cheek pouches and the callosities on the buttocks that many of the latter possess. Many have prehensile tails, which is not the case with any of the species belonging to the Old World. The New World monkeys are, however, much less agile on the whole than the Old World monkeys, neither are they as intelligent.

Monkeys occur throughout Asia, Africa, and the hotter parts of the American continent. In Europe they still linger on the Rock of Gibraltar, but were formerly much more widely distributed, the fossil remains of one species of macaque occurring in Essex. Nearly all monkeys are arboreal in habit, and most are very agile in their movements. They are usually found in small companies under the leadership of old males. They may be regarded as omnivorous, fruit, nuts, and leaves constituting their chief diet; but insects and small birds are eaten, while few monkeys can resist the temptation of robbing a bird's nest of its eggs. With the exception of a few of the larger species, monkeys are timid and inoffensive in disposition.

Economically they are of small importance, though the skins of certain species are used as fur, and in some districts the bodies are eaten by natives. They often do damage to orchards and growing crops. As pets, monkeys have long been popular on account of their semi-human ways and amusing antics; but their delicacy of constitution usually makes their life

in captivity short. *See* Animal; Ape; Baboon; Capuchin; Colobus; Douroucouli; Diana Monkey; Howling Monkey; Marmoset; Primates.

**Monkey Flower** (*Mimulus lewisii*). Perennial riverside herb of the family Scrophulariaceae. Native of N. America, it has oval-oblong, coarsely toothed leaves, and large yellow tubular flowers with widely extended mouth. Some varieties are richly spotted, or blotched with crimson, maroon, or purple. *M. moschatus*, a much smaller, more delicate plant, is the familiar musk of window-gardens.

**Monkey Glands.** The popular name for the transplanted sexual glands of animals used in W. F. Voronov's experiments in rejuvenation. *See* Voronov.

**Monkey Pot** (*Lecythis ollaria*). Large tree of the family Lecythidaceae, native of tropical America. It has alternate, leathery leaves, and large six-petaled flowers. The fruit is a hard, woody capsule with a distinct lid, and of sufficient size to be used as a water-vessel by the natives. When the large, bitter, hard-shelled seeds are ripe, the lid falls off to allow their escape. *L. zabucajo* supplies the Sapucaya nuts, which

are larger than, and superior to, Brazil nuts. The bark of *L. ollaria* consists of many thin layers of a papery material, which the Indians separate and use for cigarette wrappers.

**Monkey Puzzle Tree.** Popular name for the Chile pine (*Araucaria imbricata*). A native of Chile, it was introduced into Great Britain in 1796. It needs a rich soil. *See* Chile Pine.

**Monkey Trial.** Popular name given to a certain legal action heard at Dayton, Tennessee, July 1925, when J. T. Scopes, a teacher of biology at the local high school, was prosecuted for teaching the theory of evolution to a boy of 14. The state legislature had just passed a law forbidding teachers in any state educational establishment to teach "any theory that denies the story of the Divine creation of man as taught in the Bible." Scopes was deliberately challenging this law. The case attracted widespread attention as a direct conflict between religion and science, the latter being popularly accepted

as supporting the theory that man is descended from monkeys. Enormous publicity, much of it in gross taste, was given by the newspapers, and Dayton, now nicknamed "Monkeyville," was crowded for the period of the trial. W. J. Bryan (*q.v.*) appeared for the prosecution, being opposed by Clarence Darrow, a well-known agnostic; and a feature of the trial was Darrow's merciless questioning of Bryan as to the latter's own fundamentalist religious beliefs, conducted throughout an afternoon so hot that the court was held out of doors. The judge eventually stopped this examination and expunged it from the record. As no scientific evidence was forthcoming Scopes was found guilty and fined. As a tragic climax, Bryan died on July 26, less than a week after his appearance on the witness stand. The defence later brought the case before the state supreme legislature

which again found for the prosecution and forestalled a further appeal by freeing Scopes on a technical point.

**Mon-Khmer.** A sub-family of agglutinative languages spoken in S.E. Asia. It forms with the Munda sub-family the Austroasiatic family. The Mon occupied the Irawadi valley

Monkey Pot, leaves and fruit. Inset, seed, which has a hard shell

before the Burmese immigration; the Khmer are a mixed Indonesian people in Cambodia. In India the seven languages of Mon-Khmer are spoken by probably half a million people. Related dialects, spoken by unenumerated aboriginal tribes in Indo-China, are remnants of the speech dominant in Further India before the Tibeto-Chinese advent. *See* Austric; Talaing.

**Monkhouse, ALLAN NOBLE** (1858-1936). British writer. Born at Barnard Castle, May 7, 1858, he was privately educated, and from 1902 to 1932 was with the Manchester Guardian, first as dramatic critic and finally as literary editor. He associated himself with the repertory theatre movement in Manchester and elsewhere. He died Jan. 10, 1936. An exquisite stylist, he is remembered for novels and sketches of Manchester life and for war plays, notably *The Conquering Hero*, 1924.

**Monkhouse, WILLIAM COSMO** (1840-1901). British poet and critic. Born in London, March 18,

1840, and educated at S. Paul's school, he entered the Board of trade in 1857, and eventually became an assistant secretary. He died July 2, 1901. Monkhouse wrote a novel, *A Question of Honour*, 1868, but his best work was probably done as an art critic. He wrote a *Life of Turner*, 1879; *The Italian Pre-Raphaelites*, 1887; *In the National Gallery*, 1895; *British Contemporary Artists*, 1899. His verses included *The Christ upon the Hill*, a ballad. Two other volumes are *A Dream of Idleness*, 1865; *Corn and Poppies*, 1890.

**Monkland Canal.** A disused waterway of Scotland. It runs from Port Dundas on the Forth and Clyde Canal to Coatbridge. It is included in the Forth and Clyde navigation, and its length is 13 m. Begun in 1761, it was finished in 1790, to carry the coal of the Lanarkshire coalfield. In 1846 it was acquired by the Forth and Clyde Canal, and in 1867 the united system passed into the hands of the Caledonian rly. (later L.M.S.). Monkland is the name of two large parishes in Lanarkshire, New and Old. Both are on the N. Calder, in a coal mining area.

**Monkshood** (*Aconitum napellus*). Perennial herb of the family Ranunculaceae. A native of Europe and Asia, it has a black, spindle-shaped rootstock, and the alternate leaves are cut into sharply toothed lobes. The large, hood-shaped, dark-blue flowers are clustered round the upper part of the stem. The whole plant is virulently poisonous, and from its root is obtained the drug aconitine. See *Aconite*.

**Monkswell, ROBERT PORRETT COLLIER, BARON** (1817-1886). British law officer. Born at Plymouth, June 21, 1817, and educated there and at Trinity College, Cambridge, he was called to the bar in 1843 and was Liberal M.P. for Plymouth 1852-1871 and Q.C. from 1854. Solicitor-general 1863-66, he was appointed attorney-gen. 1868, and a member of the new judicial committee of the privy council 1871, having qualified by sitting for a few days as judge in the court of common pleas. He was made a peer in 1885, and died Nov. 3, 1886.

**Monkwearmouth.** District of Sunderland, Durham, England. Formerly a village, it stands on the N. side of the Wear, with a rly. station. A bridge over the river connects it with Sunderland. Historically it is noteworthy because in the 7th century Benedict Biscop founded a Benedictine monastery here. The parish church of S. Peter stands on the site, and

contains a porch and other remains of the monastic church. Monkwearmouth began to be an industrial centre about 1775, when shipbuilding started. Other industries are ironworks and coal mines.

**Monmouth.** City, borough, and the county town of Monmouthshire, England. It stands at the

Monmouth arms

junction of the Monnow and the Wye, 19 m. S.W. of Hereford, with rly. stations. It is almost surrounded by hills. Troy, on the other side of the Monnow, is part of the borough. The chief buildings are the modern church of S. Mary, the old church of S. Thomas Becket, and the shire hall. There is a grammar school founded in the 17th cent., and the town has statues of Henry V, who was born in the castle here, and of C. S. Rolls, the aviator, whose family was long connected with it. Little remains of the castle, but Monnow bridge is still protected by a gateway. The city is the seat of a bishop, and gives its name to a co. constituency.

Monmouth was fortified by the Saxons, and continued to be a border fortress as long as the Welsh were hostile to the English. It became a borough in the 13th century, and was first represented in parliament in the 16th. It was long famous for the caps made here, mentioned by Shakespeare (Henry V). The fair in Whit-week goes back nearly 400 years. Market days, Mon. and Fri. Pop. 4,731.

**Monmouth, JAMES SCOTT, DUKE OF** (1649-85). English prince. The son of Charles II by Lucy Waltershe was born at Rotterdam, April 9, 1649, during his father's exile. The king provided for him, although some doubted the paternity, and after the Restoration had him at court. In 1663 he was made duke of Monmouth, and in the same

James Scott, Duke of Monmouth

year was provided for by a marriage to Anne Scott, wealthy countess of Buccleuch, being created duke of Buccleuch. He saw service with the fleet against France in 1678, and against the Covenanters, 1679.

When the question of the succession to the throne became urgent, Monmouth was taken up by Shaftesbury and those who desired to exclude James, duke of York. Public feeling ran high, and at one time Monmouth was in banishment, at another he was hailed as the coming king. In 1683, just after the Rye House plot, in which he was concerned, the duke took refuge in Holland, where he was when Charles died and James became king. In Holland Monmouth met Argyll and other malcontents, and an expedition to England was arranged. The duke landed at Lyme Regis and was greeted as King Monmouth in the

western counties. With a rabble of half-armed and untrained men he attacked the royal troops at Sedgemoor, July 6, 1685, but this last battle to be fought in England was his disaster. He fled to the New Forest, but was taken at Ringwood and beheaded in London, July 15. Monmouth left two sons: James, earl of Dalkeith, the ancestor of the dukes of Buccleuch; and Henry, earl of Deloraine. Apart from charm and a striking appearance, the duke had little to recommend him. See *Sedgemoor*; consult James, Duke of Monmouth, E. D'Oyley, 1938.

British Museum

Apart from charm and a striking appearance, the duke had little to recommend him. See *Sedgemoor*; consult James, Duke of Monmouth, E. D'Oyley, 1938.

**Monmouthshire.** One of the English counties, although for some legal purposes it is considered with

Monmouthshire  
county seal

Wales. In the west of England, it is bordered by Wales proper and has a coastline on the Severn estuary of 21 m. The surface is generally hilly, especially in the N. and N.W., where several summits exceed 1,500 ft., the highest being the Sugar Loaf (1,955 ft.). Along the coast it is protected by earthworks.

The chief rivers are the Wye, Usk, Ebbw, Rhymney, and Monnow. Monmouth is the co. town, other boroughs being Newport and Abergavenny. Tredegar, Abertillery, Abersychan, Ebbw Vale, Abercarn, Bedwellty, Blaenavon, Llantarnam, Panteg, Pontypool, Risca, Rhymney, and Chepstow are other places. The chief industry is coal mining, the S. Wales coalfield stretching into the county. Coal is found in the valleys in the W., where populous towns have sprung up. Wheat, rye, and other crops are grown, but much land is given up to sheep. Orchards are plentiful. The county also contains magnificent scenery. It is served by rlys. and canals. Six members are returned to parliament. The co. is in the Oxford circuit and Monmouth diocese.

Originally part of the Welsh kingdom of Gwent, Monmouthshire remained in Wales until made a shire in 1536. It had been conquered by King Harold, and herein the Normans built castles which for long were maintained to protect England from the inroads of the Welsh. The most notable were perhaps those of Chepstow, Raglan, Caldicot, Abergavenny, Penhow, Monmouth, and Skenfrith. The county contains Tintern and Caerleon. Area, 546 sq. m. Pop. 434,958.

In literary matters the co. claims Geoffrey of Monmouth and William Thomas, Welsh poet. Jeremy Taylor was imprisoned in Chepstow Castle. The Wye and Tintern Abbey inspired famous lines by Wordsworth. W. H. Davies was born at Newport and uses place-names of this co. in his verse.

**Monmouthshire Regiment.** Territorial regiment of the British army. Formed in 1860, it served with the S. Wales Borderers in the S. African War and helped to take Johannesburg. When the Territorial Force was established in

1907, its three battalions became the Territorial ones of the S. Wales Borderers. One of the first T.A. units to land in France in 1914, it served with the 29th div. throughout the First Great War. Between 1915 and 1918 eleven battalions were raised. Two service battalions were with the 21st army group in France, Holland, and Germany in the Second Great War.

**Monnier, PHILIPPE** (1864–1911). Swiss novelist, the son of Marc Monnier (1829–85), playwright and translator. A native of Geneva, born Nov. 2, 1864, he wrote in French, and took a place with Edouard Rod, Isabelle Kaiser, and other Swiss writers accepted in French literature. His chief books are *The Quattrocento*, 1901; *Causeries Genevoises*, 1902; *Venice in the 18th Century*, 1907. He died July 21, 1911.

**Monobel.** Coal mining explosive. It is 80 p.c. ammonium nitrate sensitised with 10 p.c. nitroglycerine absorbed on 10 p.c. wood meal.

**Monoceros** OR THE UNICORN. Large constellation lying in the celestial equator E. of Orion. It is without any conspicuous stars, but is noted for its multiple stars, star clusters, and nebulae.

**Monochlamydeous** (Gr. *monos*, alone, single; *chlamys*, cloak). Term applied to plants whose flowers have a single envelope or calyx. See Flower.

**Monochord** (Gr. *monos*, single; *chordē*, string). Musical instrument with a single vibrating string. Usually it is regarded as a device for measuring or comparing frequencies. The fundamental frequency ( $n$ ) of a stretched wire passing over two "bridges" distance  $l$  apart is given by

$$n = \frac{1}{2l} \sqrt{\frac{T}{m}},$$

where  $T$  is the tension of the wire and  $m$  its mass per unit length.

**Monochrome** (Gr. *chrōma*, colour). In art, a picture executed in different tints of one colour, the tints representing light and shade. Thus a sepia (*q.v.*) drawing is a monochrome, but the term is not confined to any one medium.

**Monocline** (Gr. *klinein*, to incline). In geology, term used for a change in inclination or dip of the strata of rocks, which afterwards continue in their general original direction. Such sudden changes in rock strata occur in the Rocky Mts. on a large scale. See Anticline; Geology; Rocks; Syncline.

Monmouthshire. Map of the English county on the border of South Wales

**Monocotyledon** (Gr. *monos*, single; *cotyledon*, cup-shaped cavity). One of the two well-marked divisions of the Angiosperms, or flowering plants, the other being dicotyledon (*g.v.*).

**Monoculture.** Term for a system of agriculture in which the land in a given area is devoted to one crop continuously. The cultivation of rice in the Nile delta and the rubber plantations of the Far East are examples in the Old World; but monoculture has been far commoner on the virgin soil of the New; e.g. cotton in south-east U.S.A.; wheat in the middle west of Canada and the U.S.A.; sugar and coffee in Brazil. Exhaustion of the soil, overproduction, or a change in demand brings ruin and even starvation to cultivators. There is a slow but steady move away from monoculture, particularly in the cotton area of the U.S.A. To avoid the dangers of monoculture the E. Africa ground nut growing scheme started by the British govt. in 1947 included development of a suitable rotation of crops.

**Monoecious.** Botanical term. It is applied to plants, e.g. *Fucus spiralis*, which form in one individual both male and female gametes. It is also loosely applied to flowering plants, e.g. hazel, which form both stamen and carpels neither of which are really sexual though they contain gametophytic structures.

**Monogenism** (Gr. *monos*, single; *genos*, kind). Theory attributing to all mankind descent from one original stock, and specifically from a single pair. Its alternative, polygenism, accounts for the physical diversity of the human race by postulating for man a plural origin. See Man.

**Monogram** (Gr. *monos*, single; *gramma*, letter). Term usually applied to a combination of two or more letters into a single cipher, used as a kind of heraldic device in lieu of crest or arms on seals, carriages, etc.; by artists and craftsmen

Monogram combining letters ALNM

for authenticating their work, e.g. pictures and pottery; in commerce as trade-marks; and, generally, for various similar purposes. A familiar example is the sacred monogram embroidered on ecclesiastical vestments. See Labarum.

**Monograph** (Gr. *monos*, single; *graphein*, to write). Book or pam-

Monocotyledon. Diagrammatic representation of the difference between seedlings of (1) Monocotyledon, and (2) Dicotyledon. 1. Germinated seed of maize, S, with single cotyledon, C. 2. Seedling of bean, with two cotyledons (C C). The first true leaves, L, are seen above the cotyledons

phlet, giving an account or description of some single thing or connected series of things.

**Monolith** (Gr. *monos*, single; *lithos*, stone). Stone block, usually monumental and of large dimensions. It may be an unhewn menhir; the capstone or support of a megalithic monument; a hehn obelisk; a sarcophagus; a sculptured temple; or a colossal statue. Two statues of Rameses II at Thebes weighed 900 tons each. There are roof-beams 40 ft. long at Thebes; 170-ton lintels in Peru; a partly quarried block, 68 ft. long, of 1,100 tons at Baalbek. Huge monolithic sarcophagi in Egypt, and sculptured deities in India and Easter Island are extant. See Assyria; Carnac; Inca.

**Monomania** (Gr. *mania*, madness). Insanity with regard to one subject or group of subjects. See Mental Disorder.

**Monongahela.** River of the U.S.A. Rising in Marion co., W. Virginia, it flows N.E. to its junction with the Cheat and thence N. to unite with the Allegheny at Pittsburg in forming the Ohio. About 230 m. long, its main channel is navigable throughout.

**Monophysites** (Gr. *monos*, single; *physis*, nature). Followers of a heresy which gave rise to a schism in the Eastern Churches after the Council of Chalcedon in 451, and spread widely in Egypt and Asia Minor. It taught that the divine and human natures were so intimately united in the one Christ that He is partly divine and partly human, yet that the two natures became actually one. This heresy was developed by Dioscorus, patriarch of Alexandria, and its condemnation by the Orthodox Church was rejected by the Coptic Church, which has ever since held an isolated position.

It now exists only in name, the actual teaching of the Coptic Church and other Jacobite bodies being apparently orthodox. See Jacobite Church.

**Monoplane.** In aeronautics, name given to an aeroplane with only one main supporting surface. It is more efficient in lifting power for each square foot of surface than the biplane (*g.v.*), and is aerodynamically more suited for high speeds with all the strengthening members and bracing usually inside the structure. Although the wing area must necessarily be much greater to carry a given load than in machines with more than one wing, one of the most successful pioneer aircraft was the monoplane of Blériot, who crossed the English Channel in 1909, and following a period, lasting throughout the First Great War and for some time after, when the biplane was pre-eminent, monoplanes almost monopolised the field of aeroplane design. The success of the Supermarine-Napier monoplane in the Schneider trophy contest in 1927, and Lindbergh's transatlantic flight in a monoplane in the same year, established the supremacy of the monoplane. See Aeroplane; Biplane.

**Monoploid.** Cytological term. It is applicable primarily to a complete set of chromosomes in which there is not more than one of a kind, and hence to the nuclei containing such a set and so to organs and organisms having such nuclei.

**Monopoli.** Seaport of Italy, in the prov. of Bari. It stands on the Adriatic, 8 m. by rly. S.E. of Polignano, and 26 m. S.E. of Bari. It has a castle, built by Charles V in 1552, and a cathedral. Oil, wine, flour, fruit, etc., are exported, and woollen and cotton goods manufactured. Pop. est. 23,000.

**Monopoly** (Gr. *monos*, single; *pōlein*, to sell). The sole right or power to trade in a particular commodity or a specified area. In medieval times the Crown sold monopolistic trading rights to the burgesses of various cities. Later, particularly in Tudor and Stuart times, the grant by the Crown of monopolies in necessities to reward favourites caused much bitterness. Ultimately, by an Act of 1639, they were forbidden, and survived only in the grant of such royal charters as those of the East India company and the Bank of England (*g.v.*), and letters-patent granted to inventors.

Monopolies are commonly divided into (a) natural monopolies,

forms of trading in which competition would be unnatural; (b) legal monopolies, those which are legally established as a means of advancing the public good (for example, patents, copyright—to encourage invention and authorship—registered trade-marks and designs, professional registration such as that of medical practitioners, dental surgeons, solicitors, barristers, and patent-agents, national undertakings established by parliament, such as the B.B.C., the Electricity Commission, the National Coal Board, etc.); (c) artificial monopolies, i.e., those brought about by the amalgamation of competitive businesses and the emergence of a single bulk supplier instead, e.g. in the U.K. The term state monopoly is used to denote a trade or industry reserved to itself by a government either as an instrument of taxation or because it is believed that the commodity or service can be provided more cheaply in that way or is too important to leave in private hands (e.g., the manufacture of matches, tobacco, and cigarettes in many European countries, the operation of posts, telegraphs, and telephones in the U.K.). The variety of state monopolies and legal monopolies has greatly increased through nationalisation and the establishment of *ad hoc* industrial and trading bodies.

In economics, the so-called law of monopoly price states that a monopolist seeks to fix the selling price at the level which will maximise his net profit.

In the U.K. the Monopolies and Restrictive Practices Act, 1948, set up in 1949 a commission to investigate allegations of monopolistic practices referred to it by the board of trade. See Trust.

**Monorail.** System of transport in which a single rail is used to support the weight of a carriage or truck. A monorail system may have certain lighter guiding rails, which are, however, not absolutely essential to the system, the whole weight of the carriages being borne on one rail. It was early realized that a single rail offered the advantages of cheapness, concentration of weight, high speed, and possibly low cost of upkeep, but the system did not prove a commercial success generally. In 1882 a single rail on A-shaped supports was constructed in Algeria, and in 1886 a line between Listowel and Ballybunion was constructed in Ireland, the engine possessing duplex boilers, one on each side of the rail. A

similar rail has been successfully operated by electricity at the Ria mines in France. This A-shaped system of supporting the rail is known as the Lartigue system, after its inventor.

In the Langen system the carriages are suspended from an overhead rail, and such a line, built between Barmen and Elberfeld, proved successful. The system was worked by electricity.

In the most important development of the monorail system a gyroscope provides the balancing force. In 1907 Louis Brennan (*q.v.*) exhibited such a system before the Royal Society. A car was supported on a single track laid on the ground, and kept in equilibrium by a gyroscope, with flywheels moving at a speed of 7,500 revolutions per minute. A carriage containing 40 passengers was successfully operated in 1909, the gyroscopic wheels revolving in a vacuum at 3,000 revolutions per min. Richard Scherl, in Germany, also carried out, in 1910, a series of experiments with the gyroscopic system, but none of the systems went beyond the experimental stage. See Gyroscope; Railways.

**Monotectic.** Type of equilibrium found in the constitution diagrams of certain binary alloys. In effect the system consists of a normal eutectic, in which the amount of one phase present is very small. Certain alloys in the central portion of the diagram exhibit a unique phenomenon; as the molten alloy is cooled, at a certain temperature, not easily determined, the liquid divides into two liquid phases of different compositions. When a certain temperature is reached, the compositions change, until the eutectic can be deposited. There are thus present at one time three phases, two liquids and one solid, so that the system is invariant and the diagram has a horizontal line at that point. Monotectics are generally formed between two metals of very different melting points and the eutectic occurs very near the melting point of the lower melting metal. As an example the system copper-lead may be cited. See Alloy; Constitution Diagram; Eutectic; Metallography.

**Monotheism** (Gr. *monos*, single; *theos*, god). System of religious thought and practice which admits only one God. It is thus opposed to polytheism, which admits and worships many gods, and to henotheism, which wor-

ships only one God, but admits that others may exist. All theories of a dualistic origin of the universe, involving the essential evil of matter, are equally inconsistent with belief in one God. Whether monotheism is the oldest form of religion is uncertain. The very early worship of the sun and other natural objects may have originated in a vague belief in one supreme power, which was manifested in various ways, but the evidence tends in the other direction. The earliest cosmogonies known are dualistic, and indicate a struggle between the powers of good and evil. In all nations, except possibly the Hebrew, polytheism was at one time or another the prevailing religion; and even the O.T. Hebrews show a constant tendency to fall into it. See Deism; Theism.

**Monotheletes** (Gr. *monos*, single; *thelētēs*, a person who wills). Followers of a heresy which arose in the Eastern Churches as the result of an attempt to harmonise orthodox and monophysite doctrines. It taught that, while in the Person of Christ there existed two natures, the divine and the human, yet those two natures did not possess separate divine and human wills, but only one will, partly divine and partly human. The heresy appears to have originated with Severus (d. 535), a deposed patriarch of Antioch. It was finally condemned by the Council of Constantinople in 680, and the decision was accepted by the Church of England at the Council of Hatfield which was held soon afterwards.

**Monotremata** (Gr. *monos*, single; *trema*, hole). Name given by zoologists to the Prototheria, the lowest surviving sub-class of mammals, found in Australasia. They include the duck-mole and the two spiny ant-eaters. These mammals have a single opening (cloaca) containing the anus and urino-genital aperture, whence the name, and are oviparous. See Mammal.

**Monotype.** Machine used by printers for setting up words from MS. into single letters of movable type—hence its name. It was invented about 1887 by Talbot Lanston, an American lawyer; in 1897 it was introduced into England, and The Times adopted it in 1909. Its product is akin to that of the hand compositor, each letter cast in a line being a distinct and separate unit, and not an integral part of a solid line like the product of the Linotype

and the Intertype. From both of these the Monotype differs, not only in mechanism, but in principle, inasmuch that alterations can be effected by hand without the recasting of an entire line, and the type itself can be readily accommodated to fit round illustrations if desired.

Two distinct operations are involved and two distinct machines are employed: (1) a keyboard, like a typewriter, for perforating a roll of paper somewhat on the principle of a pianola; and (2) a machine casting the single letters

the air released through the perforations, cause the case containing the dies or matrices (each corresponding to every key of the keyboard) to be moved into such a position that the matrix of any particular letter is held for the fraction of a second over a mould into which is injected molten metal, an alloy of lead, antimony, and tin. The single letter of type thus cast is automatically ejected from the mould, the succeeding matrices of the word being brought by the actions above described to the mould, one after another with lightning rapidity,

**Monotype.** The upper picture shows a keyboard machine for preparing a perforated paper reel, which is afterwards placed in position in the casting machine, lower picture; then, by means of compressed air passing through the perforations, the mechanism automatically casts the type, assembles it in words, and properly spaces it

tells the operator what space is required to justify his line, this calculation having been automatically accomplished by the scale, and the depression of the requisite key completes the line, i.e. the last perforation (actually a double one) after the bell rings will eventually mathematically adjust a line by distributing spaces equally between the words

until the whole line, evenly spaced, is completed and pushed into the galley or tray in which the lines are assembled. The spacing between the words is done by means of wedges, their positions automatically controlled by the justifying or spacing perforations in the paper spool.

Matrix-cases for almost any type face and size are available, all of which are interchangeable on the casting machine. The normal matrix-case contains 225 characters and space matrices, arranged in 15 rows of 15. One monotype keyboard operator and caster attendant can do the work of five or six hand compositors. The entire body text, i.e. excluding headings and outlines, of this Encyclopedia was set by the monotype process. See Compositor; Forme; Intertype; Linotype; Newspaper; Printing.

F. W. CULLOW

**Monreale.** City of Sicily, in the prov. of Palermo. It stands on the slopes of Monte Caputo, 5 m. by tram and rly. S.W. of Palermo. It grew up round a monastery whose church, founded in 1174 by William II, was made in 1182 the metropolitan cathedral of Sicily. There is trade in wheat, olive oil, and fruit. See illus. p. 5815.

**Monro, HAROLD** (1872-1932). British poet. Born at Brussels, he became well known as the founder of the Poetry Bookshop in Great Russell Street, Bloomsbury, after the First Great War. A member of the Georgian group, he founded

of type and spaces, and automatically assembling them into words and lines.

The initial stage is effected by the operator manipulating a keyboard, the finger keys embracing all the characters of the alphabet, together with all the possible widths of spaces necessary to finish off all the lines evenly in a column or page to the same width, i.e. to justify the lines. The depression of a key perforates a hole in a reel of paper, each hole, or sometimes two, representing a space or a letter. As the allotted width of line is nearing completion, a bell automatically warns the operator, and a small drum, covered with figures and termed the justifying scale, rotates to a position controlled by the mechanism. A glance at this drum

so that the line ends evenly.

The paper reel slowly revolves in the process of perforation and rewinds itself until the operator has finished his MS. The perforated reel is then detached and fitted into the casting mechanism, which begins to produce the type at the end of the copy and works back to the beginning. The reel is passed over a chamber or cylinder containing compressed air, along the face of which is a row of about 30 tiny portholes leading to an equal number of miniature pipes.

As the reel travels over the cylinder the perforations pass over the portholes one by one, allowing the compressed air momentarily to escape and pass down the pipes to actuate stops. These, by bobbing up and down under the pressure of

the Poetry Review, 1912; and Poetry and Drama, 1913. His volumes of verse included Strange Meetings, 1917; Real Property, 1922; and The Earth for Sale, 1928. His anthology, Twentieth Century Poetry, 1929, was popular and made known the work of many writers previously neglected, *e.g.* Anna Wickham. He died March 17, 1932, and his Collected Poems, edited by A. Monro, appeared the following year.

**Monroe.** City of Louisiana, U.S.A. On the Ouachita river, 73 m. W. of Vicksburg, it is served by the Vicksburg, Shreveport, and Pacific and other rlys. It is the head of steamboat navigation on the river. The chief industry is the production of industrial carbon. It has 6-ft. dykes as flood protection. Settled in 1785, and originally called Fort Miro, it was renamed after President James Monroe (*q.v.*) in 1819, was incorporated in 1820, and became a city in 1871. Pop. 28,309.

**Monroe.** City of Michigan, U.S.A., the co. seat of Monroe co. On the river Raisin, 34 m. S. by W. of Detroit, it is served by the Lake Shore and Michigan Southern and other rlys. Situated near Lake Erie, it is a summer resort. It has flour and paper mills, agricultural implement factories, and canneries, and trades in cereals and fruit. Settled in 1783, Monroe was incorporated in 1827, and became a city in 1836. A monument dedicated to "massacre victims" commemorates an incident of the war of 1812 when redskins attacked to the British forces slew U.S. soldiers. Pop. 18,478.

Monreale, Sicily. Façade of 12th century cathedral

**Monroe, JAMES** (1758-1831). American statesman. He was born in Virginia, April 28, 1758. He fought in the War of Independence, and in 1782, owing largely to the influence of his friend, Thomas Jefferson, he entered the

legislature of Virginia. In the congress of the confederation he specially interested himself in

James Monroe, American statesman

questions affecting the future of the west. He objected to the revised constitution of 1787, ranging himself with the Anti-Federalists, but later entered the senate in 1790, where he joined the party hostile to Washington.

In 1794 Monroe went to France as minister, but was recalled two years later. From 1799 to 1802 he was governor of Virginia, after which he went to France and Spain to endeavour to bring about the purchase of Louisiana and Florida, accomplishing only the former purpose. During 1803-07 he was minister to Britain. Then in 1811 Monroe became again governor of Virginia, and in 1812 secretary of state, being also secretary of war during the latter part of the war with Britain. In 1816 he was elected president against Rufus King, and he filled the office for two terms, or eight years. His rule is best known for his enunciation, in 1823, of the Monroe Doctrine (*v.i.*); it was a period of great material prosperity and little internal strife. He died at New York, July 4, 1831. *See* Life, D. C. Gilman, 1909.

**Monroe Doctrine.** Principle of international policy held by the U.S.A., the root idea of which is America for the Americans. The

doctrine was first formulated in a message to Congress by President Monroe in 1823, the two essential points being the following: (1) "The American Continents . . . are henceforth not to be considered as subjects for future colonisation by any European power." (2) "We should consider any attempt on

their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety." The doctrine was reaffirmed by Polk in 1845 and 1848, while the protests of the U.S.A. against the interfer-

ence of the French in Mexico in 1866, and against the claims of Great Britain in the Venezuela boundary dispute in 1895, were based upon it. The doctrine does not seek to prevent European powers from enforcing just claims under international law, and Great Britain on the whole has supported the doctrine, making as it does for the security of Canada and other British territory on the American continent. *See* International Law.

**Monrovia.** Capital of the republic of Liberia, W. Africa. It is on the sea-coast, and is a port of entry with a trade in palm nuts and dye woods. Pop. 10,000.

**Mons** (Flemish, *Bergen*). Town of Belgium, capital of the prov. of Hainault. It stands on the river

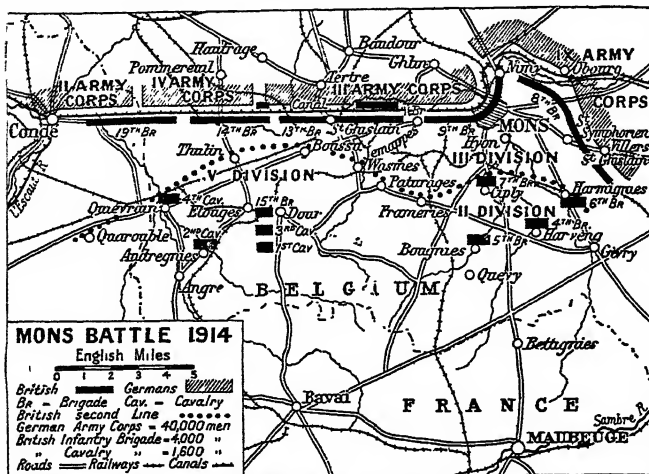

Mons, Belgium. The 15th century Town Hall

Trouille, 38 m. by rly. S.W. of Brussels, occupying a hill (whence its name) in the important coal-mining district known as the Borinage. A rly. centre of note, it is the terminus of the busy Mons-Condé Canal. Apart from its importance as an administrative centre, Mons is a centre of the local trade and has various industries, *e.g.* textiles, lace, oils, soap, and sugar, and is a military centre with large barracks. There is a school of mining. The Gothic church of S. Waudru, begun about the middle of the 15th century, has a fine interior with 16th century stained glass. The town hall, begun in 1458, is on the Grande Place, and has an ornate façade.

Mons arms

Mons. Map showing the general disposition of the opposing armies and the British first and second lines

Mons, believed to have been originally a Roman fortress, grew in the 8th century round a monastery founded by S. Waudru, or Waltrudis, a daughter of one of the counts of Hainault. It was in the possession of these counts, and of Spain, France, and Austria successively. It has stood many sieges, having been captured by Louis of Orange in 1572; by Louis XIV, 1691 and 1701; by Prince Eugène, 1709; by Saxe, 1746; and by Dumouriez, 1792. It was the capital of the French dept. of Jemappes from 1794 to 1814, after which it became part of the Netherlands. Its fortifications were finally demolished in 1862. Round the town was fought the famous battle of Aug., 1914, and it formed an important military centre for the Germans during their occupation of Belgium. It was recaptured by Canadian troops, Nov. 11, 1918. In the Second Great War it was occupied by the Germans after their breakthrough at Sedan in May, 1940. Mons was liberated on Sept. 4, 1944, by troops of the British 2nd army during their rapid advance into Belgium. Pop. 26,417.

**MONS, BATTLE OF.** Early encounter of the First Great War, memorable as the first large-scale engagement of the British Expeditionary Force with the German army. It occurred on Aug. 23, 1914, but was not fought to a finish as the British withdrew. The battle clearly demonstrated not only the German superiority in heavy artillery, but also the fine quality of the British troops.

By Aug. 22 the British, 65,000 strong, had reached a front run-

ning from E. of Mons to Condé. The French command planned that they should attack along with the French 5th army on their right and French territorial troops on their left, and if possible envelop the right of Kluck's 1st army. But that evening he learned that at least three German corps were marching against the British in a wide turning movement. The advanced position taken up by Sir J. French, British c.-in-c. (see map), was chosen for attack rather than defence, but in case a defensive battle had to be fought, he proposed to fall back on a line a little farther to the S. During the night there were German penetrations between the British right and French left, and the French 5th army were attacked with such violence and superiority of force that their position was untenable. The French troops who should have prolonged the British left had not arrived.

At daybreak of Aug. 23, German artillery began to shell the exposed loop on the canal N.E. of Mons. German infantry advanced at 8 a.m., and developed a turning movement against the British right. Soon after midday the British withdrew from the canal loop, blowing up the bridges over the canal. The Germans, attacking in force at other points along the canal between Mons and Condé, suffered heavily. So vigorous was the rapid fire of British rifles that the Germans reported they had been opposed by masses of machine-guns. But the British flanks were seriously threatened, and at 5 p.m. Joffre, French c.-in-c., informed Sir J. French that at least four

German corps (160,000 men) were attacking or turning his front and that the French 5th army was in retreat. The British were at once ordered to retire to the second position; but by nightfall the Germans were advancing in overwhelming strength. At dawn on Aug. 24 a general retreat was ordered. At Frameries the British rearguard put up a magnificent defence, obliging the Germans to carry out a costly formal attack.

The extrication of the two British corps from an enveloping attack by four German corps (with a fifth in reserve) was a remarkable feat, especially as the Germans were far better supplied with motor transport and aircraft. The long and painful British retreat which followed during the next fortnight became generally, though not officially, remembered as the "retreat from Mons." British losses in the battle were 4,000-5,000, German losses approximately double. Mons became a symbol of glorious defeat, and it was noted as appropriate that in 1918, Canadian troops reached and entered Mons on the morning of Nov. 11, only a few hours before the armistice.

**MONSERRAT OR MONTSERRAT.** Mountain and monastery of Spain, in the prov. of Barcelona. Near

Monserrat, Spain. West side of the mountain monastery

the right bank of the Llobregat, it is 21 m. N.W. of Barcelona. A remarkable serrated mountain mass (Lat. *mons serratus*), its highest point, Turó de San Jerónimo, reaches an alt. of 4,070 ft. The Montsagràt of the Catalans and the Montsalvat of the Middle Ages, on the sacred or sawn mountain a monastery was founded in the 8th century. Its chapel contained an alleged miracle-working image of the Virgin Mary, which attracted thousands of pilgrims annually, and the monastery became one of the richest and most celebrated in Spain. In the Napoleonic Wars

the French sacked the monastery (1811), and it suffered again severely in the Carlist rising of 1827. It is now in ruins. The more modern buildings date from 1560.

**Monsieur Beaucaire.** Romantic comedy. Based by Mrs. E. G. Sutherland and Booth Tarkington on the latter's novel of the same name, it was produced, Oct. 25, 1902, at the Comedy Theatre, London. Louis d'Orleans, son of the Regent, comes to Bath disguised as a barber, and wins the love of the reigning toast, Lady Mary Carlisle. Lewis Waller played Beaucaire, and Grace Lane Lady Mary. In a film version, 1924, the parts were taken by Rudolph Valentino and Bebe Daniels.

**Monsieur de Pourceaugnac.** Farical comedy-ballet in three acts by Molière and Lully, produced at Chambord, October 6, 1669, the author acting the title-rôle. Pourceaugnac is a middle-aged rustic, between whom and Julie, the daughter of Oronte, the last named has arranged a marriage. The humour turns on the devices adopted by Julie's lover Eraste to drive Pourceaugnac back to Limoges.

**Monsignore** (Ital., my lord). Title of honour bestowed by the pope on prelates and high officials of the papal household.

**Mons Meg.** Old cannon of great size consisting of bars of hammered iron bound together by iron hoops. It gets its name from the fact that

**Mons Meg.** Cannon made at Mons in 1486. It was supposed to have been used at the siege of Dumbarton, 1489. It is now at Edinburgh Castle

it was made at Mons-and it is to be seen in Edinburgh castle. Traditionally supposed to have been constructed in 1486, it was removed to the Tower of London in 1754, but was restored to Edinburgh in 1829.

**Monsoon** (Ital. *monsone*; Arab. *mausim*, season). Winds which blow regularly and persistently during definite seasons of the year. They are prevalent in middle latitudes, especially over S. and E. Asia. The primary cause of these winds is the seasonal difference of temperature between the land and the sea. They are closely connected with the great changes of pressure which take place between winter and summer over the Asiatic

land mass. In the latitude of the Arabian Sea and the Bay of Bengal the normal wind is the cold, dry N.E. trade, and the monsoon is experienced only during the cool season (i.e. October-March), when the pressure distribution is dominated by the intense anticyclone. A sudden indraught of air from the S.E. trade crosses the equator and, owing to the change in the earth's rotational deflection, reaches India as the S.W. monsoon. Because of its long passage over the sea the summer monsoon (June-October)

**Monstera deliciosa.** Foliage and stems of the American climber

is heavily laden with moisture, which results in long spells of heavy rainfall; the rains steadily advance north-eastwards and last until the reversal of the wind in October.

Most of India receives from 60 to 90 p.c. of the total annual rainfall during the season of the S.W. monsoon; the fall varies from year to year and the comparative failure of the periodical downpours means famine and plague; the important economic event for the Indian is the annual "bursting" of the heavy clouds which the wind rolls over India from the Arabian Sea.

Similar reversals of the main oceanic wind occur, less markedly, elsewhere, e.g. the Gulf of Guinea, E. Africa, N. Australia, the lower Mississippi region of the U.S.A., and eastern Brazil. Frequently the term "monsoon" is applied to denote such summer rainfall without reference to the associated winds. See Wind.

**Mons Star.** Popular name for the 1914 Star, awarded during the First Great War to 350,330 British troops for service in France and Belgium between Aug. 5 and Nov. 22-23, 1914.

**Monster.** Word which has a number of senses. Commonly a monster is any huge animal, especially an extinct animal, e.g. prehistoric monsters as the dino-

saur, ichthyosaurs, mammoths, etc. It is also used in a somewhat similar sense in connexion with such fabulous creatures as mermaids, dragons, and the like. In general, anything abnormally big is called a monster, as a monster potato. The word is also used in the sense of monstrosity, i.e. anything ugly, abnormal, or deformed, and includes freaks like Siamese twins, two-headed men, etc. In 1934 considerable excitement was aroused by the so-called Loch Ness monster, which several people claimed to have seen. Observation and an examination of the banks of the loch failed to reveal the presence of anything unusual; and it was thought that seals, porpoises, black fish, or a semi-water-logged tree trunk, seen in a bad light or at a distance, had been mistaken for an aquatic monster.

**Monstera deliciosa.** Perennial climber of the family Araceae, a native of tropical America. The large, leathery, stalked leaves are heart-shaped, but, as they develop, the upper ones have part of their substance absorbed, so that their margins become lobed, and the more central areas have large perforations. The object of this extraordinary development appears to be to allow light to penetrate to the lower-growing parts of the plant. The large inflorescence is, like that of the calla, surrounded by a hood (spathe). The flowers are succeeded by a spike of berries, which are so crowded that they become six-sided at the surface, and within amalgamated into a fleshy, edible body like a banana, with the flavour of pineapple.

**Monstrance** (Lat. *monstrare*, to show). Sacred vessel of the R.C. Church, in which the Host is presented for adoration, carried in procession, and used in Benediction. It consists of a glass or crystal receptacle, called the *lunula* or *lunette*, in which the Host is placed. This is mounted in a gilded frame, frequently representing emanating rays, and is on a stem and foot.

**Montacute.** Country mansion of Somerset, England. Situated

**Monstrance.** Gothic pattern

Montacute. Elizabethan house near Yeovil, Somerset. It was completed at the end of the 16th century for Sir Edward Phelps, whose descendants lived there for over 300 years. It is now the property of the National Trust

about 5 m. W. of Yeovil, it is Elizabethan (1580-1611), but there is some doubt as to who was the architect. Some attribute the design to John of Padua; others to John Thorpe, builder of Longford Castle, near Salisbury. The imposing mansion remains as originally constructed, and is enriched by heraldic glass, fine ceilings, and panelling, with gardens among the finest in the country. Acquired in 1931 by the National Trust and the Society for the Protection of Ancient Buildings, it served as a repository for valuable objects removed from London during the Second Great War. It was reopened to the public in 1946 to house a collection of furniture.

**Montagna**, BARTOLOMEO (c. 1450-1523). Italian painter. Born at Orzinuovi, near Brescia, he probably studied under Alvise Vivarini and was influenced by Mantegna and Giovanni Bellini. His earliest known picture still extant is *The Virgin and Child*, 1487, at Bergamo. His *Madonna and Child*, in the National Gallery, was formerly ascribed to Bellini. Other important paintings are the *San Michele altar-piece*, 1499, *The Presentation in the Temple*, and *frescoes at Vicenza*. At Verona he painted the *frescoes in the chapel of S. Biagio*. He died at Vicenza, Oct. 11, 1523.

**Montagnana**. City of Italy, in the prov. of Padua. It stands on the river Frassina, 22 m. direct S.W. of Padua. Surrounded by old walls with medieval towers, it has a late Gothic cathedral with Renaissance choir, and the Palazzo Pisano, the work of Palladio. There is a fine collection of paintings in the cathedral, but others removed here from Florence suffered damage in the Second Great War.

**Montagnards**. Name given to members of the party, often called the Mountain (*q.v.*), formed during the French Revolution.

financial secretary to the Treasury, 1914-16; then succeeded Lloyd George as minister of Munitions. He left office with Asquith, but soon returned as secretary for India, 1917-22, being partly responsible for the Montagu-Chelmsford reforms. On a disagreement with Curzon, he resigned, and the same year lost his seat in parliament. He died Nov. 15, 1924.

**Montagu**, ELIZABETH (1720-1800). English writer. Daughter of Matthew Robinson, she was born at York, Oct. 2, 1720. In 1742 she married Edward Montagu, a wealthy son of the earl of Sandwich, and from about 1750 her salons, first in Hill Street, later at

Elizabeth Montagu, English writer

Montagu House, Portman Square, were centres of social and intellectual life in London. Among those who frequented them were Johnson, Burke, Garrick, and Reynolds. An occasional writer, she made a spirited reply to Voltaire in her *Essay on the Writings and Genius of Shakespeare*, 1769. Her May-day dinners to London chimney-sweeps were celebrated. She died at Montagu House, Aug. 25, 1800. See *Bluestocking*. Consult her *Letters*, new ed., E. J. Climençon, 1906.

**Montagu**, LADY MARY WORTLEY (1689-1762). English letter writer. A daughter of the duke of Kingston, she was born at Thoresby, Notts, and her father gave her a comprehensive education. In 1712 she married Edward Wortley Montagu (d. 1761), and on his appointment as ambassador at Constantinople in 1716 accompanied him there, already recognized as one of the most beautiful and the most accomplished women of her

time, and a great linguist. On the return of the Montagus to England they were persuaded by Pope to settle at Twickenham, but the friendship between Lady Mary and the poet gradually cooled and ultimately ended in a quarrel in which Pope behaved disgracefully. During 1739-61 ill-health compelled Lady Mary to live in Italy. She died in England, Aug. 21, 1762. Her gift for satirical verse was shown in her *Town Eclogues*, 1716, but it is as a letter writer that she excels. Her *Letters*, written during travels in Europe, Asia, and Africa, were first published in 1777; they reveal an unprejudiced mind with a wide if eccentric range of interests. She introduced to England the practice of inoculation against smallpox. Consult Lady M. W. M. and Her Times, G. Paston, 1907; *Life and Letters*, L. Melville, 1925.

**Montague**. Anglicised form of the name of one of the rival families of Verona (Montecchi), whose quarrels form the story on which Shakespeare based his *Romeo and Juliet* (*q.v.*). In the play it is represented by Montague, head of the house, Lady Montague, their son Romeo, and their nephew Benvolio.

**Montague**, CHARLES EDWARD (1867-1928). English writer. He was born Jan. 1, 1867, and went to the City of London school and Balliol College, Oxford. In 1890 he joined the Manchester Guardian and for 35 years helped C. P. Scott, whose daughter he married, to give literary distinction to that newspaper. A novel about journalism, *A Hind Let Loose*, 1910, was followed at once by a critical work on the theatre, *Dramatic Values*. Well over age, Montague served in France in the First Great War, joining the army as a private, and later becoming a press officer attached to H.Q. Intelligence. Disenchantment, 1922, revealing the rare beauty of his style, was also one of the first books to reveal something of the inner truth about the war. Two further novels—*Rough Justice*, 1926, and *Right Off the Map*, 1927—showed his fine mind still perturbed by the disillusionments of war and war-making. Other books were *Fiery Particles* (short stories), 1923, and *The Right Place* (essays), 1924. He died May 28, 1928.

Charles Edward Montague

**Montagu House.** A London building. The original Montagu House was built in 1731 for John, 2nd duke of Montagu, on a site in Whitehall gardens which was the extreme S. portion of the old palace of Westminster. In 1859 the old house was demolished and replaced by the present building in French Renaissance style, designed by William Burn, and completed in 1862. To prevent infiltration of river water, the building was constructed on a concrete raft made from the materials of the old house. This was the town residence of the dukes of Buccleuch from 1862 until 1917, when it was occupied by the ministry of Labour. In the Second Great War it was Combined Operations headquarters from May, 1942. In June, 1946, it was taken over by the ministry of Food. Another Montagu House, built for Ralph, 3rd baron, and later the 1st duke, in 1675, occupied the site of the British Museum (*q.v.*). *Consult* Private Palaces of London, E. B. Chancellor, 1908.

**Montagu Square.** London square. Between Upper George Street and Montagu Place, W., on the Portman estate, it was named after Elizabeth Montagu (*q.v.*). Built 1800-13, on ground once called Ward's Field, the site of Apple Village, its residents have included the mother of the 1st Baron Lytton, Anthony Trollope, and Sir Frederick Pollock.

**Montaigne, MICHEL D'EYQUEM, SEUR DE** (1533-92). French essayist. He was born Feb. 28, 1533, at the Château de Montaigne, near Bordeaux, in Périgord, a property bought by his great-grandfather, Raymond Eyquem. Montaigne thought the Eyquems intermarried with English residents in Guienne in the time of the Plantagenets. His great-grandfather and grandfather were merchants and exporters of wine, wood, and dried fish; hence the gibe of Joseph Scaliger that Montaigne was the son of a herring-monger. The essayist's father, Pierre d'Eyquem, followed Francis I to Italy and returned to Bordeaux when 33 to marry, take up the duties of alderman and mayor, carry on business as a wine-seller, rebuild the château, and help to found the college of Guienne. Pierre married Antoinette de Lopes, a lady of Jewish blood. Michel was their third son, and one of his brothers and two of his sisters were Protestants.

In accord with his father's views on education, Michel was put out to nurse with a peasant woman,

taught Latin by tutors who knew no French, and early encouraged to read Virgil, Ovid, Terence, and Plautus. He was sent to the college of Guienne, where George Buchanan was one of his teachers, and studied law, probably at Toulouse. He became a magistrate and attended the court of Francis II. His friendship, 1557-63, with Étienne de la Boétie, a young republican thinker, with whom he thought to seek a new home on the other side of the Atlantic, had a lasting effect on his character.

*Montaigne*

From a contemporary portrait

La Boétie left Montaigne his library, and appointed him his literary executor. Shortly after his marriage to Françoise de la Chassaigne, by whom he had five children, four of whom died in infancy, only a daughter surviving, Montaigne succeeded to the family estate, was made a knight of the order of S. Michael, and, giving up his magistracy, designed to live in retirement, for which purpose he built the famous tower containing his study. But he served as gentleman of the chamber to Henry III and Henry of Navarre, and had some experience of a military life.

A sufferer from stone, he sought recovery by a visit to the baths of Lucca, and in 1580-81 travelled to Italy by way of Switzerland and Germany, chiefly on horseback. In March, 1581, he was made a Roman citizen. Recalled from travel by his election as mayor of Bordeaux, he was re-elected and retained office until 1585. During a visit to Paris in 1588 he met Mlle. Marie le Jars de Gournay, a lady of noble family and some learning, who became his literary executrix.

During his later years he formed a friendship with Anthony Bacon, brother of Francis, and Pierre Charron. He died of quinsy, Sept. 13, 1592, receiving the last offices of the Church. His remains, buried near the château, and removed a few months later to the conventual church of S. Antoine, were, in March, 1886, reinterred in the new university buildings at Bordeaux.

Montaigne's first literary work was a translation, for his father, of the *Theologia Naturalis* of Raimond Sebond, 1568; it served as the text of one of his essays, the first two books of which appeared in 1580; a second edition came out in 1582, a third in 1587, and a fourth, with book 3, in 1588. Of two copies of the 1588 issue, annotated by Montaigne, one provided the material for that brought out by Marie de Gournay in 1595. Montaigne's *Journal de Voyage*, written in part by a secretary and in part by himself, was discovered in MS. at the Château de Montaigne in 1769-70 and, edited by M. de Querlon, was first printed in 1774. He had gone to Paris in 1570 to superintend the printing of the works of La Boétie.

Montaigne lived in an age distracted by religious strife and political upheaval. He, for the most part, maintained the position of onlooker; in religion a formal adherent of the Church, at heart religious without superstition, tolerant without impiety. In civil strife he sought also to avoid extremes. His standpoint was one of provisional doubt; his attitude to all knowledge was *Que sais-je?* (What know I?). To him the quest of truth was more engaging than its possession; the greatest virtue was sincerity. Cicero, Plutarch, Seneca, Diogenes Laertius, Horace, Plato, Virgil, and Lucretius are the authors most frequently quoted by him. The first of essayists in point of time, a prince of egoists who veils his personality and is apt to hide his serious thought in his self-portraiture, he was a founder of modern criticism, and has exerted much influence on his successors. As a writer he displays wit and a happy humour even when, as in his travel journal, writing in physical pain. In his private life he was a devoted son, and as husband and father was more devoted than his philosophy would seem at first sight to allow.

**Montalembert**, CHARLES FORBES DE TRYON, COMTE DE (1810-70). French politician and man of letters. Born in London, son of an émigré of noble family, he returned to France on the Restoration of 1815, and became known as the founder, with Lamennais (*q.v.*), of the journal *L'Avenir*, 1830, and a champion of the cause of religious liberty. He eventually broke with his colleague and submitted to papal condemnation of his work. He sat in the Chamber, 1848-57 and died in Paris, March 13, 1870. His books are *Vie de S. Elisabeth de Hongrie*, 1836 (Eng. trans. 1904); *Des Intérêts Catholiques au XIXe Siècle*, 1852; *Les Moines d'Occident depuis S. Benoît jusqu'à S. Bernard*, Eng. trans. 1896.

**Montalembert**, MARC RENÉ, MARQUIS DE (1714-1800). French authority on fortifications. Born at Angoulême, July 16, 1714, he entered the army in 1732. French commissioner with the Swedish army in the Seven Years' War, he fortified Anklam and Stralsund.

Marquis de Montalembert, French writer

He was elected a member of the French academy of sciences, and in 1776-86 published *La Fortification Perpendiculaire*. On his theory was founded the system of polygonal defence, first adopted by Prussia. Montalembert died March 29, 1800.

**Montana**. State of the U.S.A. It is bordered E. by the Dakotas, S. by Wyoming, W. by Idaho, N. by Canada. Its W. portion is traversed by the Rocky Mts., whence the surface descends E. to a rolling plain, interspersed with valleys; alt. ranges from 2,000 ft. in the E. to 5,000 ft. Headwaters of the Missouri and Columbia rivers rise in Montana, and the Yellowstone, Milk, and other Missouri affluents help to drain the state. Irrigation has been highly developed, and great reservoirs constructed along the Missouri and Madison.

With its large-scale farming the "treasure state" grows quantities of fruit, while wheat, oats, flaxseed, barley, rye, corn, and potatoes are among the crops. Chief mineral products are gold, silver, copper, zinc, coal, and petroleum. Rich in timber, Montana cultivates white pine, larch, spruce, and cedar. Unsurpassed for mountain scenery is the Glacier National Park, and the state contains seven Indian reservations.

First settled in 1809, Montana was admitted to the Union in 1889; it is divided into 56 counties, and sends two senators and two representatives to congress. The chief cities are Butte, Great Falls, Billings, Missoula, Helena (the capital), and Anaconda. Centres of education include the state university at Missoula, state college at Bozeman, and school of mines at Butte. There are 5,096 m. of steam rlys. and 95 airports. The state lost 15 p.c. of its working pop. during 1937-43, when miners emigrated to aircraft factories on the Pacific coast; farmers were victims of topsoil erosion, concentration of small farms, and backwardness in rural electrification. Cheap electric power was projected in 1948 by the Missouri Valley Authority. Area, 147,138 sq. m. Pop. 559,456. *Consult* Montana, J. K. Howard, 1943.

**Montanism**. Christian heresy which arose in Phrygia in the 2nd century under the teaching of Montanus. He claimed to be specially inspired by the Holy Spirit, and, together with two women, to be endowed with power to make known special revelations to the Church. His main teachings were that mortal sin may be pardoned by God, but cannot be forgiven by the Church; that second marriages are unlawful for Christians; that all Christians should lead ascetic lives; that no Christian should avoid or flee from persecution. Montanus became more or less identified by his more ignorant followers with the Holy Spirit Himself, and his later followers baptized converts in the name of the Father, the Son, and Montanus. The heresy was condemned by the council of Constantinople in 381.

**Montargis**. Town of France, in the dept. of Loiret. It stands on the river Loire, here met by the Vernisson, 47 m. by rly. E. of Orléans. It is a rly. junction, and, as the meeting-place of the three canals of the Loire, Orléans, and Briare, is an important trade centre. Pop. 14,615.

**Montauban**. Town of France, capital of Tarn-et-Garonne dept. It stands on the right bank of the Tarn, at its confluence with the Tescou, about 30 m. N. by W. of Toulouse, and is a rly. junction on the Paris-Toulouse line. Its foundation dates from 1144, when it was granted a charter by a count of Toulouse. Seat of a bishop, it was repeatedly raided by the Albigensians in the 13th century, and belonged to the English during 1360-1414. It has a long Protestant tradition, but after a Huguenot rebellion its fortifications were demolished by Richelieu. Notable buildings are the hôtel-de-ville with its library and museum; the cathedral (containing the Vow of Louis XIII, painted by Ingres, a native); and the church of S. Jacques. There is a 14th century bridge. Industries include cloth weaving, flour milling, and the making of furniture. Pop. 36,281.

**Montbéliard**. Town of France, in the dept. of Doubs. It lies 11 m. by rly. S.S.W. of Belfort, at the meeting of the Allaine and the Lissine, and on the Rhône-Rhine canal. Clock- and watch-making and cotton-spinning are carried on. The town was the capital of a county which, as Mömpelgard, formed part of Württemberg, 1397-1793. Pop. 14,301.

**Mont Blanc** (Fr., white mountain). Loftiest peak of the Alps, on the Franco-Italian frontier, in Haute-Savoie and Piedmont. The summit, which is in France, reaches an alt. of 15,781 ft. The main mass runs N.E. between the Little and Great St. Bernard Mts., and the principal peaks are the Dôme du Goûter (14,210 ft.), Aiguille du Midi (12,608 ft.), Grandes Jorasses (13,797 ft.), Aiguille Verte (13,540 ft.), Aiguille du Dru (12,320 ft.), and that of Argentière (12,820 ft.). It is mainly composed of granitic rock, and glaciers stretch down it. The snowline limit is about 8,500 ft. above sea level.

Mont Blanc was first ascended on Aug. 8, 1786, by Dr. Paccard and his guide, Balmat. It is now easily accessible from Chamonix (*q.v.*), and ascents are made nearly every day during a normal summer season. The principal passes are the Col de la Brenva (14,216 ft.), Col du Géant (11,060 ft.), and Col d'Argentière (11,537 ft.). Work on an 8 m. long road tunnel under Mont Blanc was begun in 1946. *See* Aiguille Verte; Alps; Crevasse; Glacier; Mer de Glace; Mountaineering.

**Montcalm de St. Véran, Louis Joseph, Marquis de** (1712-59). French soldier. Born near Nîmes,

*Montcalm*

Feb. 29, 1712, he joined the army young, and after seeing much service in Italy and Germany was appointed in 1756 to command the French forces in Canada. In 1757 he took Fort William Henry from the British, and in 1758 successfully defended Fort Ticonderoga against a superior British army. Then the tide turned. The French lost Louisburg and Fort Duquesne, and Montcalm was forced to retire to Quebec and prepared to defend it against the British under Wolfe. The latter succeeded in leading an army of 5,000 men up to the Plains of Abraham, where on Sept. 13, 1759, the French joined battle and were defeated. Wolfe was killed during the engagement and Montcalm was mortally wounded.

**Montceau-les-Mines.** Town of France, in the dept. of Saône-et-Loire. It lies in the busy industrial valley of the Bourbonnais, 14½ m. by rly. S. of Le Creusot, on a branch line from the Montchanin junction, and is on the Canal du Centre. It has extensive coal mines and some granite quarries. Pop. 26,726.

**Mont Cenis Tunnel.** Railway tunnel in the Alps between Savoy, France, and Piedmont, Italy. Eight m. long, the tunnel is not under the Mt. Cenis pass itself, but lies below Col de Fréjus, 17 m. to the W. Begun in 1857 on the Italian side, and in 1863 on the French, it was finished in 1870 at a cost of £3,000,000.

**Mont Cervin.** The French name for the Alpine peak commonly known as the Matterhorn (*q.v.*).

**Montclair.** Town of New Jersey, U.S.A., in Essex co. It stands on the Morris Canal, 5 m. N.N.W. of Newark, is served by the Erie and the Lackawanna rlys., and is a residential district of New York and a summer resort. It manufactures paper and hosiery. At one time part of Newark and later of Bloomfield, Montclair was incorporated in 1868. Pop. 39,807.

**Mont de Piété.** French national pawnbroking establishment. Founded in Paris, 1777, by royal ordinance, the original mont de piété started with a monopoly, and made large profits until its privileges were abolished at the

Revolution. Reopened in 1797 as a private concern, it had its monopoly renewed by Napoleon I. The mont de piété differs from the English pawnshop in that it is a state undertaking which retains traces of its Italian origin, part of the profits going to the support of the poor. In Italy monti di pietà were established to lend money to the poor in the middle of the 15th century, and thence spread over most of the continent of Europe. See Pawnbroker.

#### **Montdidier.**

Town of France. In the dept. of Somme, it stands on a hill near the river Don, 23 m. N.W. of Compiègne. Its buildings were almost destroyed during the First Great War. It was an important rly. junction, and its industries included tanning, printing, distilling, and making candles. The town existed in the time of the Frankish kings, and in the Middle Ages had its own counts. A fortified place, it was captured by the English in 1523. In 1814 it was occupied by the Cossacks, and in 1870 by the Prussians. It fell to the Germans on March 27, 1918, and was regained by the French on Aug. 10. Within the German zone of occupation from June, 1940, in the Second Great War, it was liberated during the British 2nd army's spectacular advance at the end of Aug., 1944. See Somme, Battles of the.

**Mont-Dore-les-Bains.** Town of France, in the dept. of Puy-de-Dôme. At an alt. of over 3,400 ft. among the Monts Dore, on the river Dordogne, 48 m. by rly. S.W. of Clermont-Ferrand, it is on a branch line from Laqueuille. It is famed for twelve mineral springs, which in summer attract sufferers from pulmonary affections, rheumatism, etc. There are numerous hotels, a small casino, and a funicular rly. ascending the neighbouring Salon de Capucin, 4,035 ft.

**Mont d'Or Tunnel.** Railway tunnel on the Paris-Milan route. It shortens the journey between Frasnay and Pontarlier by piercing Mont d'Or in the Jura range. It is 4 m. in length and contains a double track. Begun in 1910, the tunnel was opened in 1915.

**Montebello.** Town of Italy. In the prov. of Vicenza, it is 10 m. by rly. from its capital of the same name. In the vicinity the

Austrians were twice defeated by the French in 1796.

**Montebello.** Village of Italy, in the prov. of Pavia. It is 5 m. E. of Voghera. It is famed for two battles, June 9, 1800, and May 20, 1859, in which the Austrians were defeated by the French and the Franco-Sardinians respectively.

**Monte Carlo.** Town of the principality of Monaco. It lies on the N. shore of the Bay of Monaco,

Monte Carlo, Monaco. The Casino, containing the famous gaming rooms

adjoining the town of Monaco itself, and 150 m. by rly. E.N.E. of Marseilles. One of the most frequented resorts of the Riviera, it has an excellent climate, and is noted for the gaming rooms in its large casino, which, built in 1878, and adorned with beautiful statuary and paintings, contains also theatre, reading-room, etc. Roulette and trente-et-quarante are the chief games played. Besides numerous hotels, the town has a large palais des beaux-arts. A rly. runs to La Turbie, a mt. village 2 m. to the N.W. Pop. 10,681. See Casino; Monaco.

**Monte Cassino.** Monastery near Cassino, Italy. Situated on a hill 1,703 ft. high, about 45 m. N.W. of Naples, it was founded by S. Benedict in 529 on the site of a temple of Apollo, and was the first monastery of the order of Benedictines. Devastated by the Lombards in 589, it was rebuilt in 720, and again in 954 after destruction by the Saracens. Further rebuilding took place in the period 1637-1727. The imposing buildings, with their arcaded courts and cloister and the great abbey, were totally destroyed during the Second Great War (*see* Cassino). Its golden days were in the 11th century under Abbot Desiderius, later Pope Victor III. From 1886 a national monument, it was the centre of Western monastic organizations and an important educational establishment. The church was rich in marbles, mosaics, sculptures, paintings, and frescoes, and had beautifully carved choir stalls; in the library were more than 10,000 volumes, many rare MSS., including the 12th century work by Alberic which is

said to have inspired Dante's *Divina Commedia*, a collection of papal bulls, and other treasures, most of which perished in the disaster of 1944. Plans for the rebuilding of the monastery were soon put in hand after the war, and a committee was set up in April, 1947, to collect funds and to co-ordinate the work of the various national committees already formed in Europe and America to assist in its restoration. See Cassino, also illus. Consult *Storia della Badia di Monte Cassino*, L. Tosti, 1842-43; *The Monastery*, F. Majdalany, 1945.

**Montecatini.** Health resort and spa of Italy, in the prov. of Lucca. It is 19 m. by rly. E. of Lucca. The warm mineral springs, in the Nievole Valley, have been in use since the 14th century, and are beneficial in abdominal complaints, scrofula, etc. Pop. 3,400. There is a village of this name in the prov. of Pisa, 24 m. E.S.E. of Leghorn. It is noted for its warm saline springs. Near by are copper mines, worked since the 15th century.

**Monte Cristo.** Small island of the Tuscan Archipelago, N.W. Italy. It lies 26 m. S. of Elba, has an area of 6 sq. m. and an alt. of 2,120 ft. It contains many springs and the ruins of a monastery, destroyed by Corsairs in the 16th century. It is the ancient Oglasa.

**Monte Cristo, THE COUNT OF.** Romance by Alexandre Dumas the elder (assisted by A. Maquet), 1845. The hero is a Marseilles sailor, Edmond Dantès, who poses in various rôles during a succession of wonderful adventures of suffering and revenge. The story is perhaps the best of the many works of the great master of French romance.

**Monte Croce.** Pass in the Dolomite Alps, in Italy. It is a fine carriage road leading from Primiero in Tirol to Feltre in Belluno. Its alt. is 1,830 ft. It was the scene of fighting in the First Great War between the Austrians and Italians in 1915. See Dolomites.

**Montecuculi** or **MONTUCUCCI**, RAIMONDO, COUNT OF (1609-80). Austrian soldier. He was born Feb. 21, 1609, at Montecuculi, Italy, of an old noble family. About 1625 he entered the Austrian army and served almost continuously throughout the Thirty Years' War. He was present at the battles between the Imperialists and the Swedes, including Lützen, where he was wounded, and save for a period during which he was a prisoner, he was in the field until the year of 1648, being then a general. In 1657-60 he had a command

against the Swedes, but his reputation rests upon his campaigns against the Turks and the French, especially on his great victory over the former at St. Gotthard in 1664. Between 1672 and 1675 he was commanding the Austrians against the French and he retired in the latter year. Made a prince and duke of Melfi, he died Oct. 16, 1680.

**Monte della Disgrazia** (Ital., mount of misfortune). Mountain mass of Italy, in the prov. of Sondrio. It has an alt. of 12,065 ft., and lies N.W. of Sondrio and W. of the Val Malenco. See Alps.

**Montefiascone** (Ital., large bottle mountain). City of Italy, in the prov. of Rome. It stands on a hill at an alt. of 2,010 ft. at the S.E. side of Lake Bolsena, with a rly. station 9 m. N. of Viterbo. The unfinished cathedral dates from 1519, and the church of S. Flaviano from 1032. The city is noted for its muscatel wine. Pop. est. 9,600.

**Montefiore, SIR MOSES HAIM** (1784-1885). Jewish philanthropist. The eldest son of a merchant, Joseph Elias Montefiore, he was born at Leghorn, Oct. 24, 1784, but his early life was passed in London, where his family had settled. He became a stockbroker and soon made a fortune and retired from business. In 1837 he was sheriff of London, being made a knight, and in 1846 he became a baronet. A centenarian, and a strict Jew to the end, he died July 28, 1885. Montefiore's fame rests upon the work he did for the Jews throughout the world. He visited Palestine in their interests, also Turkey, Russia, and other countries, and his labours and charity relieved many of them from persecution and distress.

Sir Moses Montefiore,  
Jewish  
philanthropist

**Montefrio.** Town of Spain, in the prov. of Granada. It stands on the Bilano river 25 m. N.W. of Granada. It was a frontier fortress of the Moors, whose castle still stands. Alcohol, cotton, and soap are manufactured. Pop. 11,765.

**Monte Grappa.** Italian mountain. It is the highest point in the range between the Brenta and the Piave. During the First Great War it was the scene of heavy fighting following the battle of Caporetto (q.v.). See Piave, Battles of the.

**Monteleone** (anc. *Hipponium*). Town of Italy, in the prov. of Catanzaro. It stands on a hill, alt.

1,575 ft., overlooking the Gulf of Santa Eufemia, 70 m. by rly. N.E. of Reggio. It has a castle built by Frederick II. Monteleone was built on the site of the Roman Vibo Valentia, which succeeded the older Greek town. Traces of both still remain. Monteleone was shattered by an earthquake in Sept., 1905. Pop. 10,100. There is another Monteleone in Italy, in the prov. of Avellino. Pop. est. 13,000.

**Montélimar.** Town of France, in the dept. of Drôme. It stands on a hill on the left bank of the Rhône, 93 m. by rly. S. of Lyons, and has industries in silk and flour-milling, and local trade in agricultural produce and wine. There are remains of a 12th century keep. Capital of Valdaine in the Middle Ages, it was united with the Dauphiné to the French crown.

Montélimar was captured from the Germans by U.S. 7th army troops advancing up the Rhône valley Aug. 29, 1944. Pop. 15,972.

**Montem.** Name given to a custom formerly observed at Eton College. Every third year on Whit-Tuesday all the boys, led by the captain of the school, marched to an eminence called Salt Hill, whence the phrase *ad montem* (Lat. to the hill), and collected money—hence called salt—from the spectators of the ceremony. The sum collected sometimes exceeded £1,000, and was given to the captain of the school as a contribution towards the cost of his maintenance at the university. How the custom originated is not known. It was in existence as early as 1561 and was observed until 1844. See Eton.

**Montemayor, JORGE** (c. 1520-1561). Spanish novelist and poet. Of Portuguese descent, he was born at Montemor o Velho, near Coimbra, whence he derived his name, the Spanish form of which is Montemayor. He is known as the author of *Diana*, the first Spanish pastoral novel, which achieved 17 editions in the 16th century, and provided material for an episode in *The Two Gentlemen of Verona*. It was translated into French and English and was much parodied and imitated. Montemayor died Feb. 26, 1561.

**Montenegro** (Serb. *Crna Gora*, black mountain). Former kingdom of Central Europe, now a part of Yugoslavia. Forming part of the Karst limestone heights, it is a barren and mountainous region lying N.W. of Albania and bounded on the S.W. by the Adriatic, dropping steeply down to the sea and to the plains of

Serbia. As a province of Yugoslavia, its area is 3,733 sq. m. and its pop. 360,044. Maize, tobacco, and wine are produced, and cattle are reared on the uplands. The administrative capital is Cetinje, though Jakova is a larger town.

After the Serbian disaster at Kossovo in 1389, the Montenegrins established themselves in their mountain fastnesses under a Serbian dynasty. Danilo Petrovitch proclaimed himself *vladika* or prince bishop in 1897, and strengthened his position by an alliance with Russia. Montenegro maintained her independence despite perpetual conflict with Turkey, during which Cetinje was three times sacked. The treaty of Berlin, signed in 1878, formally recognized the country as a sovereign principality, at the same time granting it a coastline of 28 m. and a section of the plain surrounding Scutari. A constitution was adopted in 1903, and the first national assembly, met the next year. In 1910, on the jubilee of his accession, Nicholas I assumed the title of king.

Montenegro joined the Balkan League and fought beside Serbia in the Balkan wars, receiving in consequence accessions of territory which included nearly half of the Sanjak of Novi Pazar. When Austria declared war on Serbia, July 28, 1914, Montenegro at once threw in her lot with the Serbians, and a force of 40,000 invaded Bosnia in the initial stages of the war. With the Serbian armies finally driven out of Serbia, Austria undertook the conquest of Montenegro. The Montenegrins offered small resistance: a Bulgarian force took Jakova, Dec. 3, 1915, and the Austrians entered Cetinje, Jan. 13, 1916. Negotiations took place, Montenegro's object being to gain time for her forces to fall back to Podgoritz and Scutari, and thence into Albania; meanwhile the king and the royal family, with the government, escaped into Italy. By the end of Jan., 1916, the conquest was complete.

At the end of Oct., 1913, in view of the general situation, the Austrians withdrew from Montenegro without offering serious resistance. After the armistice, King Nicholas being an absentee in France and the country occupied by Serbian troops, a national assembly was elected and met at Podgoritz, Nov. 24, 1918. Within two days the king was deposed, and the country voted to join in the new kingdom of Yugoslavia. See Yugoslavia.

**Montenotte.** Village of Italy, in the prov. of Genoa. It stands among the Ligurian Alps, 8 m. N.W. of Savona. It gives its name to the battle fought April 12, 1796, when Napoleon gained his first victory over the Austrians. The battle was not decisive, and the whole of the French army was not engaged; but the Austrians, seeing their line of retreat threatened, fell back on Dego, which was stormed two days later. See Napoleonic Campaigns.

**Montepulciano.** City of Italy, in the prov. of Siena. It stands on a hill, alt. 2,000 ft., 23 m. (44 m. by rly.) S.E. of Siena. A walled and picturesque city, it has a Renaissance cathedral (slightly damaged by shell-fire in the Second Great War), several fine churches, the Palazzo Comunale, and many other palaces. It is noted for its wine. Pop. 16,000.

**Montereau.** Town of France, in the dept. of Seine-et-Marne. It lies at the meeting of the Yonne with the Seine, 13 m. by rly. E. of Fontainebleau, and is a rly. junction on the main Paris-Sens line. It has industries in porcelain, pottery, brickmaking, tanning, zinc-white, and cement. The church dates from the 13th-15th centuries. Montereau was the site of an 8th century monastery of S. Martin (Monasterium), and in the 14th century belonged to the king of Navarre. Here John the Fearless, duke of Burgundy, was assassinated in 1419. Near by was fought the battle of Montereau, Feb. 18, 1814, when Napoleon defeated the Württembergers and Austrians.

**Monterey.** City and seaside resort of California, U.S.A. It stands on Monterey Bay, 125 m. S. of San Francisco, and is served by the Southern Pacific rly. The industries include canning and fishing, and from a good harbour large quantities of oil are shipped. Owing to its beautiful situation and mild climate, it is visited by pleasure-seekers. In appearance it is still largely Mexican, though Chinese, Italians, and Portuguese in distinctive dress are seen.

The town owes its origin to a mission founded by the Franciscans in 1770, although the site had been visited and the place named by a Spanish sailor nearly two centuries before. It was then in the Mexican prov. of California, being for some years the capital. On July 7, 1846, it was taken by the U.S.A., and in 1849 the convention that drew up the constitution of California met here. In 1853 it was made a city. As "the old Pacific

capital," Monterey is described by Stevenson in *Across the Plains*, and John Steinbeck has brought it into his novels. Pop. 10,084.

**Monterey** or **MONTERREY.** The fourth city of Mexico. The capital of the state of Nuevo Leon, 1,625 ft. above sea level, it is 165 m. W. of Matamoros, and is served by rlys., also connected by highway with Mexico City. Situated in a range of the Sierra Madre, amid orchards and gardens, it is the seat of a bishopric. There are foundries, steel works, breweries, saw and flour mills, large smelters, and ice factories. Agriculture and silver mining occupy many. Formerly called León, Monterey was founded in 1560, and in 1599 became a city under its present name. In 1909 it was much damaged by flood, and more than 1,000 people lost their lives. Pop. 125,099.

**Monterey Bay.** Indentation of the coast of California, U.S.A. About 24 m. broad at the entrance, it forms a deep and commodious anchorage, and has two lighthouses. On the N. shore is Santa Cruz, and on the S. shore are Monterey and Pacific Grove.

**Monterey Cypress** (*Opuntia macrocarpa*). Large evergreen tree of the family Pinaceae, a native of

Monterey Cypress. Leaves and fruit of the Californian evergreen

California. It attains a height of over 50 ft., growing rapidly, and has close set branches and minute overlapping, scale-like, dark green leaves.

**Monte Rosa.** Mountain mass of the Pennine Alps (*q.v.*) on the Italo-Swiss border. It lies between the canton of Valais and Piedmont, 50 m. E. of Mont Blanc. Alt. 15,217 ft. Dufourspitze, the highest summit, is in Switzerland, and was first ascended in 1855 by G. and C. Smyth, Hudson, and their companions. On the N.W. is the Gorner glacier, and on the S. is the large Monte Rosa glacier. An observatory was established here in 1904 at 15,000 ft. See Alps.

**Monte San Giuliano** (anc. *Eryx*). City of Sicily, in the prov. of Trapani. It stands on the top of a steep hill, alt. 2,465 ft., overlooking the seaport of Trapani, 25 m. N.N.E. of Marsala. It has a cathedral dating from the 15th century and restored in 1865. The city occupies the site of the long-famous Eryx (*q.v.*), of which some of the prehistoric and Phoenician walls remain under the Roman fortifications.

**Monte Sant' Angelo**. Town of Italy, in the prov. of Foggia. It stands on the S. slope of Monte Gargano (*q.v.*), alt. 2,766 ft., 10 m. by road N.E. of Manfredonia. It has a picturesque 15th century castle, and the church of S. Michele, built in 491 over a grotto, a famous pilgrim resort. Pop. 23,000.

**Montesarchio**. Town of Italy. It is 13 m. N.N.W. of Avellino. On a neighbouring hill was the old Samnite Caudium (*q.v.*).

**Montespan**, FRANÇOISE ATHE-NAÏS DE ROCHECHOUART, MARQUISE DE (1641-1707). French courtier,

mistress of Louis XIV. Born at Ton- nay - Char- ente, she was the daughter of the duke of Mortemart, and went to court as a maid-in-wait- ing to the queen in 1660.

In 1663 she married Louis, marquis of Montespan, by whom she had two children. A woman of great beauty, she earned notoriety by her indulgence in black magic, and in 1667 became the king's mistress, the children of the union being made legitimate by the king in 1673, and a separation from her husband pronounced in 1674. After 1675, the liaison weakened, though the marquise, displaced now by Mme. de Maintenon, remained at court until 1691, when she left Versailles for a religious life. She died at Bourbon- l'Archambault, May 27, 1707. Her Memoirs appeared in 1829, Eng. trans. in 1895.

**Montesquieu**, CHARLES LOUIS DE SECONDAT, BARON DE (1689-1755). A French writer. Born in Gascony, Jan. 18, 1689, he was trained for the law, and succeeded his uncle, whose wealth and title of Montesquieu he inherited, as holder of a high legal office in the parlement of Bordeaux in 1716. There he remained until 1726, when he resigned and went

to live in Paris, being admitted to the Academy. A visit to England in 1729-30, part of a prolonged tour in Europe, made a deep impression upon him, and he settled down to literary work at his château of La Brède, near Bordeaux, ordering his estates and life on the model of an English landowner. He died Feb. 10, 1755.

Montesquieu early began to write, and continued to do so. Of his writings three stand out as serious contributions to human thought. *Lettres Persanes*, which appeared anonymously in 1721, pretend to be the outspoken comments of two Persians on their visit to Europe, and are a wonderful satire on the manners and customs of the age. *Considérations sur les Causes de la Grandeur et de la Décadence des Romains*, first published in Amsterdam in 1734, show the workings of a powerful and original mind, strengthened by wide reading and by the absence of fettering and conventional theories. The same qualities are revealed in his third and much longer great book, *De l'Esprit des Lois*, first published at Geneva in 1748. An edition of Montesquieu's writings appeared in 7 vols. in Paris, 1875-79, ed. by E. Laboulaye. See *Esprit des Lois*; *Government*; consult Montesquieu, Sir C. P. Ilbert, 1904.

**Montessori, MARIA** (b. 1870). Italian educationist, born near Ancona, Aug. 30, 1870. The first

Maria Montessori,  
Italian educationist

woman M.D. of Rome uni- versity, she took her medi- cal degree in 1894, and be- came assistant doctor at a psychiatric clinic for men- tally deficient children. Ex- perience there led her to evolve the Montessori method (*v.i.*) of child education, and she later founded clinics in Barcelona, Laren, Hol- land, and London. She lectured on her system at English universities, was appointed inspector of schools by the Italian government in 1922, organized a training course in Madras, 1939, and in 1947 directed the Montessori centre in London. Among her publications are *Peda-*

Baron de Montesquieu,  
French writer

gogical Anthropology, 1913; *The Advanced Montessori Method*, 2 vols., 1917-28; *The Child in the Church*, 1929; *The Secret of Childhood*, 1936.

**Montessori Method**. System of teaching young children evolved by Dr. Maria Montessori, who achieved remarkable success with mentally deficient children while directing the Scuola Ortofrenica in Rome at the beginning of the 20th century. Like Froebel, she believed that true education lies in self-development, and that the teacher's primary work is to assist it by providing an environment which will encourage physical and mental growth, stimulate activity, and promote self-reliance. The teacher is to direct and not repress the child's activities, through simple physical exercises, open-air work such as gardening and the care of animals, plastic work to develop a sense of touch and form, and training of the senses. Furni- ture is devised to give the utmost freedom of movement and to help the child to be independent in regard to personal habits. Prizes and punishments are discarded.

In 1907 the method was applied with much success to ordinary children, and schools organized on the Montessori system were estab- lished in Rome and Milan and abroad. The system attracted attention in the U.K. and in America, where the foundress lectured extensively. There is a Montessori training college at Cranleigh, Surrey.

**Monteverde, CLAUDIO** (1567-1643). Italian composer. Born at Cremona, he became a boy vio- linist in the

service of the duke of Man- tua. His tal- ents attracted notice, and in 1602 he was made master of the chapel there. Music master at S. Mark's, Venice

in 1613, he remained there until his death, Nov. 29, 1643. His operas, especially *Orfeo*, 1607, mark important advances, not only in the setting of operatic words, but in the freedom of harmony and the treatment of orchestral instruments. The har- monic style which he invented Monteverde outlined in a book and defended in controversies with rival musicians. He also composed madrigals. Consult *Life and Works*, H. Prunières, Eng. trans. 1926.

Claudio Monteverde,  
Italian composer

**Montevideo.** Maritime department of Uruguay, at the mouth of the Rio de la Plata. Its surface is hilly, with much pasture land for the grazing of cattle. Exports include beef and other animal products, and wine. Its area is 256 sq. m. Pop. 541,042.

**Montevideo.** City of Uruguay, capital of the republic and of the dept. of Montevideo. It originally

occupied a small peninsula between the Rio de la Plata and a bay, of which it formed the S. extremity. The city has spread some miles inland in an E. direction, and now lines the bay on its three sides. The Cerro, a low, conical hill, alt. 500 ft., at the head of the bay, is crowned by an old fort, still in use, and a light-house.

Montevideo is the principal seaport of the country and the terminus of several rly. lines. Built on a regular plan of *cuadradas*, or squares, the streets extend N., S., E., and W. from the old central point, the Plaza de la Independencia, and the closely built section of the town, standing on a long tongue of land thrust into the bay, continually enjoys sea breezes. This is one of the best built cities in the western hemisphere. The seat of an archbishopric with two suffragan bishops, it has a cathedral, numerous interesting churches, a university, schools, many theatres, and hospitals. The Plaza de la Constitución is the very heart of the city's life, and here are the cathedral, the old

Montevideo, Uruguay. Plan of the central districts of the capital

legislative buildings, clubs, hotels, and business and newspaper offices. Near the city are two racecourses and a bull-ring. A stadium seats 70,000 spectators. An immense harbour is somewhat exposed and obstructed by reefs, rendering it insecure from the heavy storms which frequently

occur. The seaside suburbs of Pocitos and Ramirez are popular resorts for citizens of Buenos Aires.

The climate is healthy, although a high summer temperature prevails. Beef, hides, and other animal products are exported. The city was founded 1726 as an outpost against the Portuguese, and cap-

Montevideo, Uruguay. Entrance to the Rio de la Plata (River Plate) seen from the fort on the Cerro

tured by the British in 1807, but was relinquished when General Whitelocke met with disaster at Buenos Aires. It became free in 1814, and was made capital of the republic in 1828. In Montevideo harbour the German battleship Graf Spee took refuge after the battle of the River Plate, Dec. 13, 1939, and was scuttled just outside the three-mile limit four days later. There is a British colony of about 1,000 in a pop. of 730,000. *See* Plate, Battle of the River; Uruguay.

**Monte Viso.** Peak in Piedmont, Italy. It is the highest point of the Cottian Alps. It stands near the sources of the Po, on the French frontier, and has an alt. of 12,615 ft. The starting point for the ascent is Crissolo.

**Montez, LOLA** (1818-61). Stage name of the Irish dancer, Marie Dolores Eliza Rosanna Gilbert.

Lola Montez,  
Irish dancer

Born at Limerick, she lost her father, an army officer, when a child in India. After a clandestine marriage in 1837, which ended in a divorce five years later, she appeared in London as Lola Montez, Spanish dancer. Touring Europe in 1847, she fascinated Ludwig I of Bavaria, who created her countess of Landsfeld, and she began to take part in politics. Returning to England after the revolution of 1848, she married a Guards officer, George Heald, but his relatives taking proceedings against her for bigamy, she induced him to take her to Spain and thence in 1851 to America, where she was again successful on the stage. On Heald's death the same year, she married and left her third husband, and devoted herself to works of charity. She died Jan. 17, 1861, in New York.

**Montezuma I** (c. 1390-1471). Aztec ruler of Mexico. He began to reign in 1437. He extended his dominions to the Pacific and the Gulf of Mexico, crushed the Tlascalans, annexed Chalco, and enlarged Tenochtitlan, his capital, on the site of which Mexico City is built. *See* Mexico.

**Montezuma II** (1466-1520). Last Aztec ruler of Mexico. Distinguished as warrior and legislator, he extended his conquests to Honduras and Nicaragua, but his arrogance and despotism led to the Spaniards, under Cortés (1519),

receiving a more cordial welcome than they otherwise might have had. He was killed while a prisoner in Spanish hands.

**Montferrat.** Former duchy of Italy. It was situated between the republic of Genoa, the river Po, and the Maritime Alps. Ruled by its own margraves, it existed from the dissolution of the empire of Charlemagne about 900 until 1305. The duchy consisted of upper and lower Montferrat, Casale being the capital. The reigning family, who laid claim to the throne of Piedmont, ended with John I, whose nephew, son of the Empress Irene of Constantinople, succeeded to the estates, and was the first of the Montferrat-Palaeologus house. On the extinction of this family in 1533, the duchy passed through the Gonzagas of Mantua to Savoy, and in 1703 became part of Piedmont.

**Montfort, LOUIS-MARIE DE** (1673-1716). French saint. Born at Montfort-la-Cane, Brittany, he entered the Jesuit college at Rennes, and was ordained priest in 1700. He embarked on his career as missionary in the W. provinces of France, preaching in the dioceses of St. Malo, Nantes, Poitiers, and La Rochelle, setting up calvaries, and restoring chapels during journeys on foot. He founded two religious congregations: the Company of Mary, for priests (Montfort Fathers), and the Daughters of Wisdom, for nuns. Canonised July 20, 1947.

**Montfort, SIMON DE** (c. 1208-65). English statesman. A younger son of Simon de Montfort,

Simon de Montfort,  
as represented in a  
window of Chartres  
Cathedral

count of Toulouse and earl of Leicester, who led the crusade against the Albigenses, he inherited the English earldom in 1232, and six years later married a younger sister of Henry III. Although long suspected as a foreigner, he took a leading position among the barons who were opposed to the king. Simon's unswerving love of justice, as he conceived it, his strong religious feeling, and his masterfulness gave him the title of Earl Simon the Righteous. He had at heart no less what he conceived to be the rights of the people than the privileges of the barons; he desired the pre-

dominance of law, but, like Cromwell, he could see no security except in what would have been virtually his own dictatorship. Governor of Gascony from 1248, he was accused of maladministration—with some justice—and retired to France.

In 1258 the contest with the crown came to a head, and in 1259 Montfort and the barons forced Henry to accept the provisions of Oxford, which placed the government of the country in the hands of baronial committees, in each of which Montfort was predominant. In 1261 Henry renounced the provisions. The dispute was referred to the arbitration of Louis IX of France, who gave his award, the Mise of Amiens (*q.v.*), against the barons, Jan. 23, 1264. Montfort took up arms, routed and captured the king at Lewes, May 14, and for a year was in effect dictator. In Jan., 1265, he summoned two representatives (borough members) from certain towns to a council sometimes regarded as the first parliament. Those barons who were jealous of Montfort's power then made common cause with the king. On Aug. 4 Montfort was defeated by the future Edward I, and killed at Evesham. *See* Evesham, Battle of; Lewes, Battle of. *Consult* Lives, G. W. Prothero, 1877; M. Creighton, 1895; C. Bémont, Eng. trans., 1930; B. C. Boulter, 1939.

**Mont Genève.** Pass of the Cottian and Graian Alps. Between Italy and France, it connects the valleys of the Dora Riparia and the Durance, on the road from Turin to Briançon. Reaching an alt. of 6,100 ft., it is one of the easiest of the Alpine passes. *See* Cottian Alps.

**Montgolfier, JOSEPH MICHEL** (1740-1810). A French inventor. He was born at Vidalon-lez-Annonay, and early became interested in aeronautics. With his brother, Jacques Étienne (1745-99), he studied the possibilities of making balloons. Their crude experiments, 1782-83, led to the later invention of the hydrogen balloon. They were honoured by Louis XVI, and Joseph was appointed to various offices by Napoleon. They wrote on aeronautics, including *Les Voyageurs Aériens*, 1784. Joseph died June 26, 1810 *See* Aeronautics; Balloon.

Montgolfier Brothers,  
French inventors  
From a plaque

**Montgomerie**, ALEXANDER (c. 1545-1611). Scottish poet. Son of Hugh Montgomerie of Hesselhead Castle, Ayrshire, he became attached to the Scottish court under the regent Morton, and travelled on the Continent. His poems are now only literary curiosities, with the exception of *The Cherrie* and *The Slae*, a combination of love poem and moral allegory, written in the 14-line stanza, and abounding in fine passages. They were edited by Cranston for the Scottish Text Society in 1886-87; additions by G. Stevenson, 1910.

**Montgomery**. Mun. bor. and co. town of Montgomeryshire, Wales. It stands near the Severn, 7 m. S. of Welshpool and has a rly. station  $1\frac{1}{2}$  m. distant. The name is that of a Norman family, one of whom built a castle here c. 1100. Around this the place grew, becoming a chartered town in 1227. There are ruins of the castle which was destroyed during the Civil War. Market day, Thurs. Pop. 841.

Montgomery arms

Montgomery, Wales. Ruins of the ancient castle

**Montgomery**. City of Alabama, U.S.A.; state capital, and the co. seat of Montgomery co. It stands on the Alabama river, at the head of navigation for large vessels, 178 m. by rly. N.E. of Mobile, and is served by rlys. A commercial and rly. centre, it has steamship communication with Europe, Panama, and New York. Its streets present a curious mixture of old houses, modern bungalows, hotels, rly. shops, and lumber mills intermingled. Montgomery thrives on the export of cotton, perhaps 500,000 bales in a year. Its manufactures include fertilisers, syrups, cigars, machinery, wagons, and cotton goods.

Settled in 1814, renamed New Philadelphia in 1817, it was incorporated in 1837, and superseded

Tuscaloosa as state capital ten years later. From Feb. to May, 1861, it was the seat of the Confederate govt., and it was taken by federal troops on April 12, 1865. Pop. 78,084, a large percentage being negroes.

**Montgomery**. District and town of Pakistan, in Multan division of W. Punjab. The district lies between the Sutlej and Ravi rivers, in the Bari Doab. The middle of the area is high and dry, and cultivation depends largely upon the irrigation canals, rainfall

being but 14 ins. a year. Wheat and pulses are the chief crops. The arid, higher ground is devoted to the herds of the pastoral Jats. The town is close to the Ravi, on the rly. from Multan to Lahore, and the Lower Bari Doab canal brings irrigation water. It dates from 1864, when the village of Sahiwal was made the dist. headquarters and renamed after Robert Montgomery, right-hand man of John Lawrence and lieutenant-governor of the Punjab, 1859-65. Area 4,204 sq. m. Pop., dist., 1,329,103.

## F.-M. LORD MONTGOMERY OF ALAMEIN

Sir Charles Gwynn, Commandant, Staff College, Camberley, 1926-30

*This account of the personal career of the British commander who achieved greatest fame during the Second Great War is supplemented by accounts of his campaigns under Alamein; Eighth Army; Europe, Liberation of Western; North Africa Campaign. See also Alexander, F.-M. Viscount, and Second Great War*

Born in Kennington vicarage, London, on Nov. 17, 1887, Bernard Law Montgomery came of a family long established in Ulster, that recruiting ground for field-m Marshals. His boyhood from two to 14 was spent in Tasmania during the period when his father was bishop of that island. Returning to England, he himself decided on the army as a career, and his education was completed at S. Paul's school and Sandhurst. Nevertheless, son of a bishop and grandson of Dean Farrar, he was brought up in a clerical atmosphere which clearly exercised a strong influence on his character: his abstemiousness, indifference to personal comfort, and powers of self-abnegation were outstanding characteristics of the man.

At school and at Sandhurst, although a notable player of games, he was not a success; but when in 1908 he was gazetted to the Royal Warwickshire regt. he showed exceptional keenness in his profession. With his battalion he went to France in 1914. Desperately wounded at Meteren in the autumn of that year, he was evacuated to England but, making an amazing recovery, was able to return to France. There, employed on the staff, he ended the war as chief staff officer of a div., a temporary lt.-col. with the D.S.O. and six mentions in dispatches to his credit. Demobilisation entailed reversion to permanent rank; but after being an instructor at Camberley staff college, he was given command of his battalion in 1931, serving with it in Egypt and Palestine. In Egypt, although at times in collision with authority, he was recognized

as a remarkable trainer of troops. In Palestine, then a responsibility of the Air ministry, he was senior officer of the army contingent and became impressed with the necessity of closer relations between the two services. On completion of his regimental command he became a senior instructor at Quetta staff college and later commanded a brigade in England. Selected 1938 to command an *ad hoc* div. for the suppression of the Arab rising in Palestine, he was invalided home

Montgomery

after a short time. On his recovery he was given command of the 3rd div. on Salisbury Plain. That div. he took to France when war broke out. With it he played a prominent part in the retreat and Dunkirk evacuation. In England he became, 1940, a corps commander in charge of an important section of the S. coast and was actively concerned in the reorganization and training of the army.

Such was Montgomery's background when in Aug., 1942, he was unexpectedly ordered to Egypt to take command of the 8th army there. In spite of his somewhat difficult characteristics the War office had recognized his merits; but he had not as yet attracted public attention. That he had given special thought as to how in modern warfare a high commander could assert personal influence on his troops was his own secret.

On his arrival in Egypt he had no time to lose in applying his own theories to the problem before him. A new attempt by Rommel to reach Alexandria was imminent, and the 8th army, still disorganized and depressed by disastrous experiences, was in a poor state to meet his attack. Montgomery was fortunate in having in Alexander,

Rommel, compelled to withdraw to his original position, in his turn prepared to meet attack. Supported by Alexander, in spite of pressure from above, Montgomery refused to strike prematurely; but when he had completed his reorganization and had gathered strength for a sustained effort, his promised offensive came and the battle of Alamein, beginning Oct. 23, was fought. In it Rommel's reputation for invincibility was shattered and world-wide fame came to the unknown general and to an army that had previously been dogged by misfortune.

The unconventional methods Montgomery used to impress his personality on his troops and his somewhat flamboyant utterances excited in some quarters derision and hostility; but his army and the general public were convinced that a commander of exceptional quality had arrived. Montgomery's long and sustained pursuit of Rommel through Libya and Tripoli is described under North Africa Campaign; it showed a new standard of co-operation between ground and air forces, and gave proof of organizing and team-building capacity in its commander in addition to tactical skill. Clearly he had an

admirable staff, but he was using it to the best advantage. Out-maneuvred at El Agheila and at the approaches to Tripoli, Rommel was forced to continue his retreat to the Tunisian border and beyond. In the battle of Tunis Montgomery, called away to plan the landing in Sicily, took no prominent part; but the 8th army shared in the fighting and its reputation induced Rommel's successor, von Arnim, to make fatally wrong dispositions.

For the strategy of the Sicilian and Italian campaigns Montgomery had no responsibility, but he carried through difficult tactical operations with marked success. (See Italy: Campaign in, 1943-45.) At the end of Dec., 1943, Montgomery was summoned to England to take part in the preparations for the intended Allied landing in France. Again his task was to be the executive conduct of a strategical plan prepared by others, although his advice helped materially to change the tactical plan originally envisaged. Placed initially in sole command of the Allied force to be landed, in addition to supervising preparations he devoted his energies to inspiring the troops with confidence, and workers in war industries with a realization of the importance of their labours; his innumerable personal visits to troops and to factories undoubtedly had immense effect in raising morale.

In due course the landing was successfully accomplished with honours equally shared by the three services. (For an account of the campaign, see Europe, Liberation of Western.) Operations followed broadly an agreed plan, but for a time progress seemed to be so slow that even Eisenhower thought a new plan might be necessary. Montgomery's confidence and determination, however, never faltered and, never losing the initiative, he forced his old opponent Rommel to expend his reserves piecemeal. As a result the break-out when it came had swifter and more decisive results even than had been anticipated. As had been arranged, General Eisenhower then took over direct control of the whole Allied force, leaving Montgomery, promoted field-marshal, Sept. 1, 1944, in command of the 21st army group, composed of the British 2nd and Canadian 1st armies, to carry out the tasks assigned to him.

Montgomery had strongly advocated a different policy from that General Eisenhower adopted. Both Eisenhower and Montgomery agreed that a crossing of the Rhine and capture of the Ruhr would make prolongation of German resistance impossible; but there were two alternatives: (a) to concentrate all available transport for the maintenance of a powerful, mainly armoured, thrust north-eastwards which, overcoming any resistance offered by the disorganized enemy, might secure a bridgehead over the Rhine as a gateway to the plains of N. Germany; (b) to pursue the enemy on a broad front with a view to lining up on the whole length of the Rhine before invading the heart of Germany. Course (a) was the more risky, and it would have entailed depriving a large part of the U.S. armies of mobility and offensive power; but it promised swifter results. Course (b) entailed disper-

Field-Marshal Lord (then General Sir Bernard) Montgomery addressing Canadian troops before the invasion of Italy, in 1943  
*British Official*

his chief, a man who not only himself inspired confidence, but was willing to accept responsibility and to give his subordinate a free hand, placing reinforcements of men and material that were arriving freely at his disposal.

Montgomery's immediate grasp of the situation and restoration of the confidence of the 8th army must rank as one of his greatest achievements. Warning his troops that there would be no further retreat and that they must fight where they stood, he promised them victory, first in a defensive battle and then in due course by a resumption of the offensive. The troops responded amazingly to the omnipresence, energy, and confidence of their new leader. In less than a month after his arrival the skillfully planned defensive battle of Alam el Halfa was won and

sion of effort, and although by engaging the enemy everywhere it gave him less opportunity of staging a counter-attack, it offered less chance of inflicting rapid and decisive defeat on him. General Eisenhower chose course (b), chiefly because he considered port facilities, especially at Antwerp, essential before the final invasion of Germany could be attempted. Under his plan 21st army group opened the Channel ports and Antwerp, and attempted to secure a bridgehead over the Maas and lower Rhine. With its immensely long line of communication, however, it proved not strong enough to carry through these tasks simultaneously. Whether plan (a) advocated by Montgomery would have succeeded must remain a matter for speculation. But despite their differences of opinion, Eisenhower's confidence in Montgomery was evident, for he placed the 1st and 9th U.S. armies under his command to help stem Rundstedt's counter-offensive in the Ardennes, Dec., 1944-Feb., 1945, the 9th remaining part of the 21st army group until the Ruhr was encircled at the beginning of April. That army group was the first to line up on the Rhine; the meticulously planned and admirably executed crossing of the Rhine followed, March 23-24. Fittingly enough, the commander of 21st army group received the first offer of unconditional surrender by the enemy, and was the first in Germany to accept the surrender of the whole enemy force opposed to him.

#### Unbroken Sequence of Victories

With this astonishing record, Montgomery gained a reputation as a commander in the field second to none. Although often opposed by the best of the enemy's commanders and troops, from the time he set foot in Egypt he had a virtually unbroken series of victories to his credit, gained under widely different conditions. It is true that, except in Libya and Tripoli, he was never in independent command, and was therefore responsible only for executive action and not for major strategic planning. That he showed himself a master of major tactics, versatile and determined both in attack and defence; and that he was a leader endowed with exceptional power of getting the best out of his troops are indisputable. The immediate influence he exercised in restoring the confidence of the 8th army and inspiring it to develop *esprit de*

*corps* to an unprecedented degree was all the more remarkable because the methods he adopted to bring his personal magnetism and qualities into play broke many British conventions and excited much criticism. To an exceptional extent he took his troops into his confidence before battle, and to that no doubt was due the response they gave to the heavy demands he made on them.

It was sometimes said that he showed himself unsuitable for team work. He was certainly an outspoken subordinate; but he was a remarkable team builder.

Montgomery was fortunate in as much as his opportunity came at a time when Allied power had begun to develop, and the enemy, having outrun his strength, had become vulnerable. He was fortunate, too, in having in Alexander and Eisenhower superiors ready to support him and to make allowances for his eccentricities and unconventionality; but there can be few cases in which a comparatively unknown general so completely rose to the occasion, and furthermore maintained a suddenly acquired reputation.

After the final surrender in Germany, Montgomery was c.-in-c. British army of the Rhine, military governor of the British zone of Germany, and British member of the Allied control commission in Berlin, May, 1945-Feb., 1946, when he was appointed C.I.G.S. and returned to Great Britain. In the new year honours, 1946, he received a viscounty, taking the title Viscount Montgomery of Alamein, of Hindhead. As C.I.G.S. he initiated reforms in the army aimed at making it both more attractive and more adaptable and efficient; and sought increasing integration of imperial defence. In 1948 he was appointed permanent military chairman of the committee of commanders-in-chief set up by the five Western Union nations.

*Consult* his Normandy to the Baltic, 1946; El Alamein to the R. Sangro, 1948; Montgomery, A. Moorehead, 1946.

**Montgomery, GABRIEL, COMTE DE** (c. 1530-74). French soldier. Grandson of a Scottish officer in the French service, he went to Scotland in 1545, with forces sent to Mary of Lorraine by Francis I. On June 30, 1559, in a tournament, he accidentally inflicted a mortal wound on Henry II of France. Taking refuge in England, he became a Protestant, and returned to join the Huguenot armies in 1562. He defended Bourges

and Rouen against royal forces, unsuccessfully attacked Mont St. Michel, 1563, and in 1569 invaded Béarn, capturing Orthez. He escaped from the massacre of S. Bartholomew, 1572, taking refuge in Jersey and again in England. In 1573 his attempt to enter La Rochelle failed, and he was captured at Domfront. Taken to Paris he was executed, May 25, 1574.

**Montgomery, JAMES** (1771-1854). Scottish poet. Born at Irvine, Nov. 4, 1771, the son of a

*After T. H. Illidge*

Moravian missionary, he was apprenticed to a baker, and in 1792 became a clerk in the office of the Sheffield Register. In 1795 he started the Sheffield Iris, which he edited until 1825, twice getting into trouble for publishing seditious matter. He was a man of exemplary character, reflected in the strong religious tone of his poems, of which *The World Before the Flood*, 1813, and *Greenland*, 1819, are best known. His hymns include *For ever with the Lord*, and *Hail to the Lord's Anointed*. He died at Sheffield, April 30, 1854. His *Poetical Works* were repr. 1881.

**Montgomery, JOHN** (1860-1911). American aeronaut. Born at San Diego, Calif., he studied the flight of seagulls, and in 1883 built a glider with twin wings with which he carried out soaring experiments. In 1890 Mahoney, a well-known balloon parachutist, was taken in one of Montgomery's gliders by a balloon to a height of 4,000 ft., when the glider was released and brought to earth after a controlled flight lasting 23 mins. Montgomery was killed when he crashed in one of his gliders. As he had never attempted to achieve powered flight, his work was overshadowed by that of the Wrights (*q.v.*). A film based on his life, *Gallant Journey*, was produced in 1946.

**Montgomery, ROBERT** (1807-55). British minor poet. Born at Bath, the natural son of a professional clown named Gomery, he became notorious by reason of Macaulay's devastating criticism in the *Edinburgh Review*, April, 1830, of two poems by him, *The Omnipresence of the Deity*, and *Satan*. Later he became a successful preacher in Glasgow and London, and died Dec. 3, 1855.

**Montgomeryshire.** An inland county of N. Wales. Its area is 797 sq. m. It is almost entirely surrounded by mountains, and is itself a hilly region. The Plynlimon range is in the S.W., and elsewhere on the borders are the

**Montgomeryshire.** Berwyn, Breidden, and Kerry Council Hills. The chief

rivers are the Severn, which rises here, and its tributaries, the Tanat and Vyrnwy, also the Wye. Herein is the artificial lake Vyrnwy. Oats are grown, sheep and ponies are reared, and slate is quarried.

The chief town is Montgomery, but Welshpool, Llanidloes, and Llanfyllin are larger. Newtown and Machynlleth are urban districts. Railways and the Montgomeryshire canal, 24 m. long, serve the county. There are some British and many Roman remains in the county, which, before it was made into a shire, was part of the district of Powys. It sends one member to parliament. Pop. 48,473. *Consult* Montgomeryshire, J. May and S. F. Wells, 1942.

**Month.** Period of time chiefly regulated by the moon's motion round the earth. There are various months according to the different methods of computation. (1) The lunar month, lunation, or synodic month, is the time which elapses between consecutive new or full moons, and its length on the average is 29 days, 12 hours, 44 mins., 2·8 secs. (2) The tropical month is the revolution of the moon with respect to the movable equinox. It is 27 days, 7 hours, 43 mins., 4·62 secs. (3) The anomalistic month is the time in which the moon returns to the same point of her movable elliptic orbit. It is 27 days, 13 hours, 18 mins., 37·4 secs. (4) The sidereal month is the interval between two successive conjunctions of the moon with the same fixed star. It is 27 days, 7 hours, 43 mins., 11·47 secs. (5) The nodical month is the time in which the moon accomplishes a revolution with regard to her movable nodes. It is 27 days, 5 hours, 5 mins., 35·8 secs. (6) The calendar month is the month recognized in the almanacs, consisting of an arbitrary number of days. (7) The solar month, the twelfth part of a solar year, consists of 30 days, 10 hours, 29 mins., 4 secs.

In statutes before Jan. 1, 1851, and deeds, wills, and contracts before Jan. 1, 1926, "month" in

the absence of any contrary indication usually means lunar month; but in statutes and documents after these dates it means calendar month unless the context otherwise requires. In mercantile transactions in the City of London and in all mortgages, "month" even before 1926 meant calendar month.

**Monti, VINCENZO (1754-1828).** An Italian poet. He was born at Fusignano, near Ravenna, Feb. 19,

Vincenzo Monti,  
Italian poet

1754. His lyrical tragedy, *Aristodemo*, 1786, rendering the grief of a father for having slain his daughter, was followed by a romantic tragedy, *Galeotto Manfredi*, 1788.

In 1793 he produced a Dantesque epic, *Basseviliana*, the subject being the murder in Rome of Hugo Basseville, representative of the French republic. This was translated into English by H. Boyd, 1805, and by Lodge, 1845. Monti became Napoleon's historiographer in Italy and his panegyrist, notably in *Mascheroniana*. He translated the *Iliad* into Italian. Died at Milan, Oct. 13, 1828.

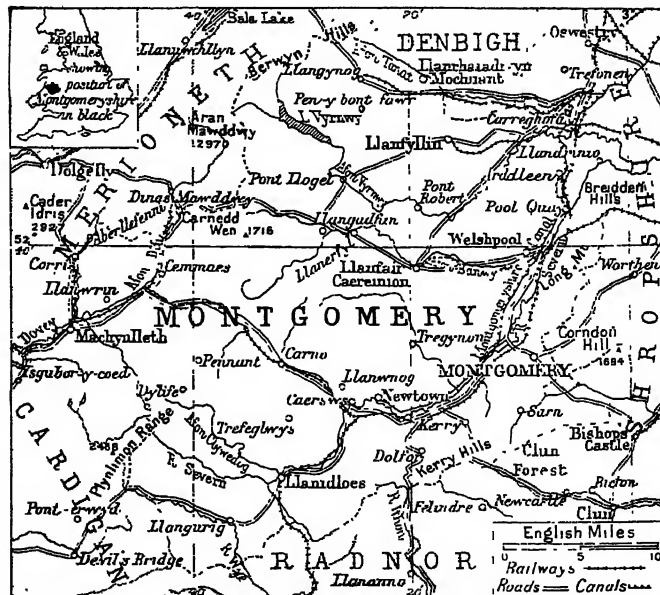

**Montian.** In geology, a division of the Upper Cretaceous system of rocks. See Cretaceous System.

**Monticello.** Home of Thomas Jefferson, 3rd president of the U.S.A., in Albemarle co., Va.,

which he designed. The house and its 640 acres are on a hillside 2 m. from Charlottesville, overlooking the Blue Ridge mts. and the Piedmont plateau. Jefferson began to build Monticello in 1770, and it was his home for 56 years. The style, predominantly Graeco-Roman and Palladian, greatly influenced Virginian domestic architecture. Unusual lighting and ventilating devices, folding doors, and disappearing beds are a feature of the house. Monticello was purchased in 1923 by the Jefferson memorial foundation for 600,000 dollars (then £120,000), and was dedicated as a national shrine on July 4, 1926, the centenary of Jefferson's death there.

**Montignies-sur-Sambre.** A town of Belgium, in the prov. of Hainaut. It lies 3 m. E. of Charleroi, on the left bank of the Sambre, in the midst of the thickly populated industrial area of the valley. The town has important coal mines in the vicinity, and various metal-working, engineering, and glass-making industries.

**Montilla.** Town of Spain, in the prov. of Córdoba. It stands on a spur of the Sierra de Montilla, alt. 1,165 ft., 31 m. by rly. S.S.E. of Córdoba. The dist. is noted for its exquisite wines. The birthplace of Gonzalo or Gonsalvo de Córdoba, it contains the ruined castle of his father, Fernandez. Montilla manufactures coarse linen, leather goods, olive oil, and pottery. Pop. 16,780.

Montgomeryshire. Map of the inland and pastoral county of North Wales

**Montluc** OR **MONTLUC**, BLAISE DE LASSARAN-MASSENCOME, SEIGNEUR DE (1502-77). French soldier. Born in Gascony, he became after his father the seigneur of an estate there. Beginning in the ranks, he saw much service in the French army in Italy. He made a name by his defence of Siena in 1555, and the king was glad of his services when civil war broke out in France. In 1574 he was made a marshal, and he continued in the field until his death. Montluc is known as the author of Commentaries which deal with his campaigns between 1521 and 1574. They afford valuable material for the history of that time. Henry IV named the book the Soldier's Bible. There is an ed. in 5 vols., 1864-72.

**Montluçon**. Town of France, in the dept. of Allier. It stands on the Cher, 50 m. S.W. of Moulins, and consists of an upper or old town and a newer one below. In the former are the churches of Notre Dame and S. Pierre, the latter a Romanesque building begun in the 12th century, and the castle. In the newer town are factories for making glass, chemicals, iron and steel goods, sewing machines, etc. In the neighbourhood are coal mines. Pop. 47,074.

**Montmartre**. Arrondissement of Paris, containing the *quartiers* of Grandes-Carrières, Clignancourt,

Commune broke out, Feb., 1871. The district is thickly populated, has many steep and narrow streets, and is noted chiefly for cabarets and night clubs which have grown up since about 1880. The large cemetery of Montmartre dates from 1798, and contains the graves of many distinguished men, including Murger and Gautier. The name is thought to be a corruption of Mont Martyr, given because in Roman times, so it is said, S. Denis and other martyrs were put to death here. There was a temple to Mercury on the hill. See Paris.

**Montmédy**. Town of France, in the dept. of Meuse. It lies on the river Chiers, 31 m. by rly. S.E. of Sedan, and from its junction a rly. runs into Belgium. The citadel is on a hill known in Latin as Mons Medius, whence the name of the town. There are industries in tanning, hat making, and vinegar, with miscellaneous local commerce. Formerly in the duchy of Luxemburg, Montmédy was taken by Louis XIV in 1657, and, after two days' bombardment, by the Prussians in 1870. The fortress, with works constructed by Vauban, was of great strategical importance at the start of the First Great War, for it dominated the rlys. from Belgian Luxemburg into France. The French evacuated it at the end of Aug., 1914, and it became a centre of German communications throughout the war. The Germans broke through N. of Montmédy in May, 1940, thus outflanking the Maginot line, and the town lay in the German zone of occupation during the Second Great War until liberated in the rapid Allied advance which took place at the end of Aug., 1944.

**Montmorenci**, ANNE, DUC DE (1492-1567). French soldier. He was born at Chantilly, March 15, 1492, and by 1522 had become a marshal, having distinguished himself at Marignano, 1515, and at the defence of Mézières, 1521. In 1525, with Francis I, he was defeated and taken prisoner at Pavia, but on the renewal of the war in 1536 he defeated Charles V at Susa, forced him to raise the siege of Marseilles, and two years later was made constable of France. In 1548 he crushed the insurrectionary movement in the

S.W. of France, and he took part in the war in the Boulonnais, 1549-50, and the disaster at St. Quentin, 1557. He was made a duke in 1551, and was mortally

wounded at St. Denis in 1567, fighting the Huguenots, and died in Paris on Nov. 12 of that year.

**Montmorenci**, HENRI, DUC DE (1595-1632). French soldier. A grandson of Anne de Montmorenci, he played a prominent part in the fighting against the Huguenots which began in 1621. For his defeat of the Spaniards in Piedmont in 1630 he was made a marshal. In 1632 he embraced the cause of Gaston d'Orléans, but was defeated at Castelnaudary, and executed at Toulouse, Oct. 30, 1632.

**Montmorency**. River of Quebec, Canada. A tributary of the St. Lawrence, it rises in the province, and flowing almost due south for about 80 m., falls into the larger river near Quebec. It is noted for the falls near the mouth, reached from Quebec, 8 m. away, by an electric rly. They are 265 ft. high, and supply Quebec with electric power. The river played an important part in the storming of Quebec by Wolfe, 1759.

**Mont Orgueil Castle**. Picturesque ruin on the island of Jersey, accessible by rly. from St. Helier. Standing on a rocky pinnacle dominating the village and harbour of Gorey, on the E. of the island, it was begun in the 10th century by the dukes of Normandy, and was given its name by the duke of Clarence, brother of Henry V. It successfully withstood a siege by the French in 1374. William Prynne (q.v.), while a prisoner here, 1637-40, wrote the poem *Mount Orgueil, or Divine and Profitable*

Anne, Duc de Montmorenci, French soldier

Montmartre, Paris. Place du Tertre. On the left is the church of S. Peter, and behind that the dome of the church of Sacré Coeur

Goutte-d'Or, and Chapelle. It lies to the N. of Paris, within the fortifications, built on a hill rising to the summit crowned by the large basilica of the Sacré Coeur, begun in 1875. The once famous Abbaye des Dames de Montmartre was founded in 1133. It was in Montmartre that the insurrection of the

Mont Orgueil Castle, Jersey, with the harbour and village of Gorey, from the St. Helier road

Meditations, raised from the Contemplation of these three Leaves of Nature's Volume: Rocks, Seas, Gardens. The castle was vested in the States by the crown in 1905.

**Montoro** (anc. *Epora*). Town of Spain, in the prov. of Córdoba. It stands on a peninsula caused by

Montoro arms

the winding of the Guadalquivir, here spanned by a fine 16th century bridge, 27 m. by rly. N.N.E. of Córdoba. It produces olive oil, timber, cattle, etc. Once a Moorish fortress, it has many Roman, Gothic, and Moorish remains. There are medicinal springs in the neighbourhood. Pop. 24,200.

**Montpelier**. City of Vermont, U.S.A., the capital of the state and the co. seat of Washington co. On the Winooski river 40 m. by rly. E.S.E. of Burlington, it is served by the Montpelier and Wells and the Central Vermont rlys. It has a fine capitol. Most of the citizens belong to the Vermont civil service or work for the life insurance companies which have headquarters here. Extensive granite quarries are in the neighbourhood. The town was subject to extensive flooding, but this was mitigated by dams built during the Roosevelt "New Deal" administrations. Settled in 1787, Montpelier became the capital of the state in 1805, was incorporated in 1855, and chartered as a city in 1894. Pop. 8,006.

**Montpellier**. Town of France, capital of the dept. of Hérault. It stands on a hill 7½ m. inland from the sea at Palavas, and 31 m. by rly. S.W. of Nîmes, is the junction of several rly. lines, and is the headquarters of an army corps. Its university, founded in 1289, and reconstituted in 1896 after suppression in 1794, is noted for its faculty of medicine. It has distilleries, tanneries, and printing works, leather, chocolate, and candle industries, and trades in corn, wine, and silk. The cathedral, a 14th century foundation, is chiefly modern, with a remarkable porch. The church of St. Anne is also modern. The Musée Fabre contains a large collection of paintings, French and Dutch schools being specially well represented, and houses also the town library. The botanical gardens were founded 1593, and are the oldest in France. The Peyrou is a promenade originally laid out in

Montpellier, France. Porchway and towers of the cathedral of St. Pierre

the 17th century, with a lofty aqueduct and ornamental basin.

Montpellier dates probably from the 8th century, gained a charter in 1141, and in the 16th century developed an autonomous constitution. A centre of Calvinism, it was taken by Louis XIII in 1622. Before the Revolution it was the capital of Languedoc. French troops took it from the occupying Germans on Aug. 31, 1944. Population 93,102.

**Montpensier, ANNE MARIE LOUISE D'ORLÉANS, DUCHESSE DE** (1627-93). Born in Paris, May 29,

Duchesse de Montpensier

1627, she was a daughter of Gaston d'Orléans, the brother of Louis XIII. In the Fronde La Grande Mademoiselle sided with the princes, and took a spirited personal part in the capture of Orléans. In Paris she took command at the Bastille, and in the Faubourg St. Antoine fighting, July 2, 1652, fired on the royal troops. After the collapse, she retired to her estates of St. Fargeau until 1657. In 1681 she married Antonin, duke of Lauzun (1632-1723), a union which Louis had refused to allow eleven years before: the marriage proved unhappy. She died in Paris, leaving Memoirs, published 1729, which cover the period 1630-88. See Fronde.

**Montreal**. Largest city of Canada and chief financial and commercial centre. It stands on the S.E. side of the island of Montreal (q.v.) at the junction of

the Ottawa and St. Lawrence rivers, in the county of Hochelaga, prov. of Quebec. Largest inland port in the world, it is 980 m. from the Straits of Belle Isle, 420 m. from New York and 2,750 m. from Liverpool. The city proper has a pop. (1941) of 903,007, with a further 236,914 in suburban areas. Outside Paris, it is the largest French-speaking city, but it includes a large British element.

Originally an Indian village named Hochelaga, first visited by Jacques Cartier, of St. Malo, in 1535, it was founded as the Ville Marie de Montreal by Paul de Chomedy, Sieur de Maisonneuve, in 1642. The early years of its existence were marked by constant struggles against the hostile Iroquois, but by 1672 it had 1,500 settlers and rapidly became the centre of the fur trade, a position it enjoyed for nearly two centuries. Montreal was the last place to be surrendered to the British (Sept., 1760), a year after the capture of Quebec. In 1775-76 the city was occupied by troops of the Continental Congress, but the citizens

Montreal city seal

resisted all persuasion to join in the revolution against British rule.

Montreal has always been distinguished for its civic energy, and most of its growth has been due to the initiative of its own citizens. Modern development dates from the opening of the Lachine canal in 1825, which, with the chain of artificial waterways that followed it, opened the way for direct communication across the Great Lakes to the heart of the N. American continent. In 1836 the first Canadian rly. was opened between Laprairie, opposite Montreal, and St. Johns, in the eastern townships. Twelve years later a second railway, from Longueuil to St. Hyacinthe, was built. Both were the enterprises of Montreal merchants. Further developments were the building of the Grand Trunk rly. (1852); the construction of the Victoria bridge spanning the St. Lawrence (1860); and the completion of the transcontinental system of the Canadian Pacific rly., 1886. The most important factor in the growth of the city as a port has been the constant deepening of the ship channel which, begun in 1844, had (1947) a depth of 32½ ft. at low water, and brings ocean-going steamships to its quays. Port

1. General view from Mount Royal, with the St. Lawrence beyond. 2. Montreal Soldiers' Memorial, 1914-1918. 3. S. James's Cathedral, modelled on S. Peter's, Rome, built in 1868; the roof-edge statues are of the twelve apostles. 4. The great church of

Notre Dame, built in 1824. 5. General view of the city with Mount Royal, behind, left. 6. Place D'Armes and statue of Paul de Chomedy, Sieur de Maisonneuve, founder of Montreal, and showing the headquarters of the Bank of Montreal, founded 1817

**MONTREAL: BUILDINGS AND SCENES IN THE COMMERCIAL CAPITAL OF CANADA**

Nos. 1, 2, 3, 4, 6 National Film Board of Canada, No 5, E N A

**Montreal.** Plan of the commercial capital of Canada, showing the principal buildings and docks on the St. Lawrence

facilities include 10 m. of deep draught wharf, four grain elevators with a total storage capacity of 15,162,000 bushels, a cold-storage warehouse of 4,628,000 cu. ft. capacity, 19 two-storey and 7 single-storey transit sheds, and a terminal rly. system of some 60 m. of which about 40 m. is electrified.

Montreal rises from the river in a series of terraces to the foot of Mount Royal (753 ft.), the city's most striking feature, and extends roughly for some seven miles along the St. Lawrence, and northwards for the same distance. It has an area of 50 sq. m. Beyond the great wharves of the harbour, with its rows of antiquated buildings, is the wholesale trade district: further along are the skyscrapers of the retail section, hotels, and theatres, while radiating from Mount Royal in all directions are the residential areas. The chief industrial plants are to the E. and W. In all, 12 bridges connect the island of Montreal with the mainland, the longest being Jacques Cartier bridge, 10,300 ft. and Victoria bridge, 6,600 ft.

Montreal is rich in ecclesiastical buildings. A huge cross crowning Mount Royal and illuminated at night, is visible for many miles. Mother-church of the city, Notre-Dame de Bonsecours is Perpendicular Gothic, with twin towers 227 ft. high. S. James's, a modified replica of S. Peter's at Rome, is the seat of the R.C. archdiocese of Montreal. S. Joseph's

Oratory, carved into and rising out of the rock of Mount Royal, is a celebrated shrine. Christ Church cathedral is the seat of the Anglican diocese of Montreal.

The city's numerous statues include those of Maisonneuve in the place d'Armes; MacDonald and Cartier, fathers of confederation, respectively in Dominion Square and at the foot of Mount Royal; Nelson in Jacques Cartier Place; and Queen Victoria in the square of the same name. There is a monument to the poet Burns.

Montreal has two universities, McGill, with a medical school, and Laval, an active centre of French culture. There are 49 hospitals, from the Hotel Dieu, founded in 1647, to the Royal Victoria, built in 1887, and there is an art gallery, as well as a city hall and other public offices. In the old city, the château de Ramezay, once the seat of the French governors, has become a museum of Canadiana. The chief daily papers are: (French) *La Presse*, *Le Canada*, *Le Devoir*, and (English) *the Gazette*, *the Herald*, and *the Star*.

Montreal has an abundant supply of electric power from Shawinigan Falls, Beauharnois, Rivière-des-Prairies, Chambly Cascades, and Cedar Rapids. The principal manufactures are: tobacco, cigars, and cigarettes, rly. rolling stock, clothing, ale and beer, electrical apparatus, boots and shoes, biscuits and confectionery, sheet metal products, castings and forgings, textiles,

cotton yarn, and cloth, paints, primary iron and steel products, and cement. It is also a printing and publishing and a copper refining centre. It is served by C.N.R., C.P.R., Rutland rly., Del. and Hudson, Central Vermont and N.Y.C. rlys.; by Trans-Canada air lines and Canadian Colonial Airways; and has two airports, St. Hubert and Dorval. The street rly. system of the city and suburbs has 280 m. of track, and there is also a bus service. The city is governed by a mayor and council, consisting of 90 councillors, of whom six are elected within the body to form the executive committee which administers the city's day-to-day business affairs.

**Montreal.** Island of Quebec prov., Canada, on which stands the city of the same name. It is 32 m. long by some 9 m. wide, and its total area of 200 sq. m. is the most densely populated in all Canada. Twelve bridges connect it with the mainland, of which the two longest are Jacques Cartier (10,300 ft.) and Victoria (6,600).

**Montreal, BANK OF.** Canadian banking company. Founded in 1817, it is the oldest bank in Canada. It has a paid-up capital of \$36,000,000, and acts as financial agent to the government of the Dominion of Canada in London. Its headquarters are in Montreal, and it has well over 500 branches throughout Canada and Newfoundland, and offices in New York, Chicago, and San Francisco. Its London offices are at 47, Threadneedle Street, E.C.2, and 9, Waterloo Place, S.W. 1.

**Montreuil.** Town of France, in the dept. of Pas-de-Calais. It is on the river Canche, 8 m. from its mouth, and 20 m. S.S.E. of Boulogne, and on the main rly. Boulogne-Amiens-Paris. Its ancient ramparts still survive. The church of S. Sauve dates from the 12th century. Once on the sea, as indicated by its official name Montreuil-sur-Mer, it was long a noted posting-stage on the Calais-Paris highway. It is referred to in Sterne's *A Sentimental Journey*. In the First Great War the École Militaire here was the British G.H.Q. from 1916 to 1919. During the Second Great War it lay in the German zone of occupation until liberated, Sept. 4, 1944, by units of the 1st Canadian army during their rapid advance on Boulogne. Pop. 69,838.

**Montreux.** Series of lakeside villages of Switzerland, in the canton of Vaud. They stand on the

N.E. shore of Lake Geneva, about 50 m. N.E. of Geneva, and extend from Clarens to Veytaux, including also Vernex, Les Planches, Glion, Colonges, and Territet. The central point is the town of Montreux-Vernex, with a rly. station and steamboat pier, quays, villas and gardens, a college, a kursaal, etc. There are English churches at Territet, Clarens, and Glion. Montreux is a tourist resort. Pop. 20,000.

**Montreux Conference.** Conference opened June 22, 1936, between the representatives of Turkey, Great Britain, France, Russia, Japan, Greece, Bulgaria, and Yugoslavia, for the purpose of revising the Straits convention signed at Lausanne in 1923. Under the new agreement, signed July 20, 1936, Turkey recovered her sovereignty over the Dardanelles with full right to remilitarise the zone. The international commission of the Straits was dissolved. Freedom of commerce was guaranteed in peace and in war, and limitations on the passage of foreign warships into and through the Black Sea were laid down; belligerents were denied the use of the Straits except with the authority of the League of Nations, and in case of war or threatened aggression Turkey had the right to close them to navigation, subject to a two-thirds vote of the League council. In 1946 Turkey refused a Russian demand for a share in the defence of the Dardanelles unless such a revision of the Montreux convention were agreed to by all the signatories.

**Montrose.** Royal, mun., and police burgh, and seaport of Angus, Scotland. It stands on a peninsula where the South Esk falls into the North Sea, the river here forming an estuary and also what is known as Montrose basin, these being S. and W. of the town respectively. It has rly. connexion with Dundee, and is 31 m. N.E. of that city. The buildings include the parish church, town hall, academy, infirmary, etc. There is a harbour with docks and other

Montrose arms

accommodation. In addition to fishing and shipping, the industries include flax-spinning and the making of linen, rope, etc., also shipbuilding, fruit and vegetable canning, brewing, and the manufacture of mashed potato powder. Montrose was made a burgh in the 12th century, and was a flourishing seaport in the later Middle Ages. The academy here was the first in Scotland where Greek was taught. The council supplies water, and owns two golf courses. During the First Great War there was an aerodrome here, which later became an R.A.F. maintenance unit. Montrose basin covers about 2 sq. m. In the estuary is the island of Rossie or Inchbraycock, connected by a bridge with the town proper. Market day, Fri. Pop. 11,000.

**Montrose, Duke of.** Scottish title borne since 1707 by the family of Graham. In 1488 the title was given to David Lindsay, earl of Crawford. It did not pass to his descendants, and, in 1505, William, 3rd Lord Graham, who had married a relative of the late duke, was made earl of Montrose. His grandfather had been made Lord Graham in 1445, and he himself was killed at Flodden. John, the 3rd earl, who succeeded to the title in 1571, was chancellor of Scotland, 1599-1604, and regent of the kingdom for James VI after that king succeeded to the English throne in 1603. He died in 1608. The 5th earl, the soldier, James Graham (*v.i.*),

was made a marquess 1644, and was the most famous of the family. James, the 4th marquess, was a leading politician at the time of the revolution of 1688. He supported the accession of George I, helped forward the union of the parliaments, and in 1707 was made a duke. He was a secretary of state and keeper of the great seal of Scotland, 1716-33. In 1853 the earl of Crawford claimed the dukedom, but his suit before the house of lords failed. The duke sits in the lords as Earl Graham, a title dating from 1722. His seats are Buchanan Castle, near Glasgow, and Brodick Castle, Isle of Arran. An eldest son is known as the marquess of Graham. James (b. 1878) became 6th duke in 1925.

**Montrose, James Graham, 1st Marquess of (1612-50).** Scottish soldier. He succeeded his father as 5th earl of Montrose, Nov. 14, 1626, and then went to the university of St. Andrews. His mother was Margaret, eldest daughter of the 1st earl of Gowrie. He married in 1629 Magdalen, daughter of the future earl of Southesk. In 1637 he took an active part in drawing up the National Covenant; in 1640 he was with the Presbyterian army invading England; but once Charles I had allowed Scotland to have its own church, Montrose found himself in complete antagonism to Argyll and became in Scotland the foremost champion of the crown. In 1644, when the Scots army entered England in alliance with the English parliament, Montrose obtained a commission as lieutenant-general from the king at Oxford, passed into Scotland in disguise, and on Aug. 30 raised the well-affected clans of the Highlands for the king. With a force numbering barely 2,000 men, Montrose, created mar-

quis, was made a marquess 1644, and was the most famous of the family. James, the 4th marquess, was a leading politician at the time of the revolution of 1688. He supported the accession of George I, helped forward the union of the parliaments, and in 1707 was made a duke. He was a secretary of state and keeper of the great seal of Scotland, 1716-33. In 1853 the earl of Crawford claimed the dukedom, but his suit before the house of lords failed. The duke sits in the lords as Earl Graham, a title dating from 1722. His seats are Buchanan Castle, near Glasgow, and Brodick Castle, Isle of Arran. An eldest son is known as the marquess of Graham. James (b. 1878) became 6th duke in 1925.

**Montrose, James Graham, 1st Marquess of (1612-50).** Scottish soldier. He succeeded his father as 5th earl of Montrose, Nov. 14, 1626, and then went to the university of St. Andrews. His mother was Margaret, eldest daughter of the 1st earl of Gowrie. He married in 1629 Magdalen, daughter of the future earl of Southesk. In 1637 he took an active part in drawing up the National Covenant; in 1640 he was with the Presbyterian army invading England; but once Charles I had allowed Scotland to have its own church, Montrose found himself in complete antagonism to Argyll and became in Scotland the foremost champion of the crown. In 1644, when the Scots army entered England in alliance with the English parliament, Montrose obtained a commission as lieutenant-general from the king at Oxford, passed into Scotland in disguise, and on Aug. 30 raised the well-affected clans of the Highlands for the king. Montrose, Angus. General view of the town, with the harbour and quays

Mont St. Michel, France. The south-east aspect of the rock, crowned by the Benedictine abbey, seen from the causeway

guess, conducted in the Highlands a brilliant series of campaigns, winning victory after victory over forces thrice as numerous as his own: at Tippermuir, Sept. 1; Aberdeen, Sept. 13; Inverlochy Feb. 2, 1645; Auldearn, May 9; Alford, July 2; Kilsyth, Aug. 15, when for once he had 5,000 men. This victory seemed to place the Lowlands at his mercy, but when he advanced the clansmen melted away, and he had fewer than 1,000 men when he was surprised and his troops were cut to pieces by David Leslie at Philiphaugh, Sept. 13. So ended the "year of victories."

Finding the royalist cause hopelessly lost, Montrose escaped abroad; but in 1649, when the English parliament had beheaded Charles I, he resolved on one more desperate effort on behalf of Charles II. He landed in Caithness, but few men rallied to his standard, his small force was dispersed at Corbiesdale, April 27, 1650, and he himself was captured and betrayed by Macleod of Assynt into the hands of the Scots government, by whom he was sentenced to be hanged and dismembered as a traitor. The sentence was carried out in Edinburgh on May 21. Eleven years later the remains of the "great marquess" were buried in S. Giles's, where a monument was erected in 1888. His romantic career, military genius, magnanimity, and the small body of his poetry have endeared Montrose to succeeding generations of Scots.

**Bibliography.** *Memoirs*, 2 vols., M. Napier, 1856; *Memoirs* trans. from the Latin of G. Wishart, A. Murdoch and H. Simpson, 1893; *Lives*, Lady Violet Greville, 1886; J. Buchan, repr. 1947.

**Mont St. Michel.** Village of France, in the dept. of Manche. It

is built on a steep granite rock about 160 ft. high, in the Bay of St. Michel, about  $\frac{1}{2}$  m. from the mainland to which a raised causeway runs. On top of the rock stands the old Benedictine abbey, and the picturesque effect of the rock crowned with the great church and spire, has made it a widely famous landmark.

The abbey, founded by S. Aubert of Avranches in 708, was one of the greatest religious houses of Normandy, a favourite place of pilgrimage, and became a notable centre of learning. Monks from the abbey of S. Maur replaced the Benedictines in 1622, but the buildings became state property at the Revolution. Under Napoleon III several political prisoners were kept here, but in 1863 it again became a religious house. Since 1874 it has been under the care of the Commission des Monuments Historiques. The church, begun in the 11th century, has a 15th century Gothic choir and a tower and spire; the 13th century cloisters are of carved granite, and the large building known as La Merveille is also notable. The bay is noted for dangerous quicksands; much land has been reclaimed on the S. shore near the Mont.

**Montserrat.** One of the Leeward Islands, British W. Indies. It is situated in the Caribbean Sea, 27 m. S.W. of Antigua, and has a length of 12 m. and maximum breadth of 8 m.; area about 32 $\frac{1}{2}$  sq. m. Of volcanic formation, it rises in Mt. Chances to over 3,000 ft. It has thermal springs, and at the Soufrière, the highest point on the island, are steam vents and sulphur and gypsum deposits. Well timbered and watered, it produces and exports cotton, cotton seed, limes, pineapples, oranges, bananas, tomatoes, onions, car-

rots, and other fruits and vegetables. Lime juice and citrate are manufactured. The chief town is Plymouth. First colonised by the English in 1632, Montserrat was occupied by the French for short periods in the 17th and 18th centuries. There are executive and legislative councils. Pop. 14,329.

**Montyon, Antoine Jean Baptiste Robert Augé, Baron de** (1733-1820). French philanthropist. Born in Paris, Dec. 23, 1733, he became a lawyer, and in 1775 was made a councillor of state. Emigrating at the outbreak of the Revolution, he remained abroad, mostly in London, until the Restoration, spending large sums of money in helping other *émigrés*. Returning to Paris in 1814, he reorganized a series of prizes instituted by him before the Revolution. Before his death, Dec. 29, 1820, he bequeathed £400 to each Paris hospital, and similar sums for works to ameliorate the conditions of the working classes.

Baron de Montyon, French philanthropist

**Monument.** Any considerable

Monument, London, from Fish Street Hill

work of architecture or sculpture designed to commemorate an act or person important in national or local history. The term also embraces public buildings, official and otherwise, without such historical significance. See *Ancient Monuments*.

**Monument,**

**THE.** A fluted column of the Doric order in Fish Street Hill, London. Designed by Wren to commemorate the Great Fire, it was completed in 1677 at a cost of £13,700, and stands near the house in Pudding Lane

in which the fire originated. The column is 202 ft. high and is surmounted by a metal urn and ball of fire 42 ft. high. Inside the column, a spiral stairway of 345 black marble steps leads to a railed platform surrounding the cornice. In the mid-19th century this platform was caged in after people had attempted to commit suicide by throwing themselves from the column.

Edward Pierce was the sculptor of the dragons at the four angles of the base of the column. C. G.

Monza, Italy. Façade of the 14th century cathedral of S. Giovanni Battista, in the Lombardo-Gothic style

Cibber executed the relief on the pediment, and Dr. Thomas Gale, dean of York, composed the Latin inscriptions. After the Titus Oates conspiracy, the City of London court of aldermen ordered the following inscription to be cut round the plinth of the monument in allusion to the unfounded charge that the Great Fire had been started by Catholics:

This pillar was set up in perpetual remembrance of that most dreadful burning of this Protestant city, begun and carried on by the treachery and malice of the Popish faction in the beginning of September in the year of our Lord 1666 in order to the carrying on of their horrid plot for extirpating the Protestant religion and old English liberty, and the introducing of Popery and slavery.

The inscription was obliterated by order of James II, but was cut deeper in the reign of William III, a circumstance inspiring Pope's indignant lines:

Where London's column, pointing  
at the skies,  
Like a tall bully, lifts the head and  
lies.

The inscription was finally erased in 1831. The Monument gives its name to a London Transport rly. station on the Inner Circle.

**Monumenta Germaniae Historicae.** Collection of ancient and medieval German documents. Its publication was started under the auspices of Stein in 1819. It comprises authors, laws, documents,

inscriptions, and letters, among which the work of historians and authors has yielded more than 60 huge volumes. From 1886 the undertaking was a matter of state. The Nazi government trusted it to the ministry of education and tried to exploit it for "racial" purposes. Much was lost with the destruction by bombing of the Prussian state library in Berlin.

**Monza.** City of Italy, in the prov. of Milan. The ancient Modicia, it is situated on the river Lambro, 8 m. by rly. N.N.E. of Milan, and was the ancient capital of the Lombard sovereigns. The treasures of the cathedral, founded 595 by Queen Theodelinda, include her crown and fan and the famous iron crown of Lombardy, with which Charlemagne was crowned in 774 and Napoleon in 1805. The church of San Gerardo is built in the form

of a rotunda. The town hall dates from 1293. Felt hats, cotton, silk, and leather goods are manufactured. Here, on July 29, 1900, King Humbert was assassinated. Pop. 43,750.

**Mood** (Lat. *modus*, manner) or **MODE**. In grammar, the form of a verb which indicates the special manner in which an action is regarded. Moods are the indicative (simple statement), subjunctive (contingent), imperative (command). The infinitive is not really a mood, but the case of a noun. The subjunctive, so common in other languages, has no distinct form in English, although phrases like "if it be true," "if I were to go" represent the shade of meaning.

**Mood.** In medieval music, the relations of the large, the long, and the breve. If the two former were involved, it was called greater; if the two latter, then it was called lesser. Either might be perfect or imperfect. In the greater mood perfect, one large equalled three longs; if imperfect, two longs only. In the lesser mood perfect, one long equalled three breves; if imperfect, two breves only.

**Moodkee** or **MUDKI.** Village of the Punjab, India. It is 26 m. S. of the Sutlej on the road from Karnal to Ferozepore. Here, on Dec. 18, 1845, was fought the first battle of the Sikh War of 1845-46. After a long and hasty march,

necessary owing to the rapid movements of the enemy, Sir Hugh Gough was unexpectedly attacked by the Sikhs, whose cavalry made a determined attempt to cut off the British line of retreat. A desperate battle ensued, marked by the flight of Gough's native troops, and, owing to the confusion, the firing of one white regiment into another. Eventually the British prevailed, and the Sikhs, leaving 17 guns behind them, fled. The British lost 872 killed and wounded out of 10,000 engaged. The Sikhs were perhaps 20,000 strong. See Sikh Wars.

**Moody, DWIGHT LYMAN** (1837-99). American revivalist. Born at Northfield, Mass., Feb. 5, 1837, he became a business man in Chicago. Later he took charge of a Y.M.C.A.; and after 1840 in company with Ira Sankey (1840-1908) travelled throughout America and Great Britain,

D. L. Moody

holding revival services. His later years were devoted to organizing a training institution for lay preachers at Northfield. He published volumes of sermons and addresses, and was associated with his colleague in the compilation of Sacred Songs and Solos, 1873. He died Dec. 22, 1899. There is a Life, by W. R. Moody, new ed. 1930.

**Moody, FANNY.** British soprano, whose career is noticed in the article on her husband, Charles Manners (q.v.).

**Moody, HELEN WILLS.** American lawn tennis player who became famous under her maiden name of Wills. See Wills-Moody.

**Moody, WILLIAM VAUGHAN** (1869-1910). American poet and dramatist. He was born at Spencer, Indiana, July 8, 1869, and educated at Harvard. After travelling in Europe he became instructor in English at Chicago university. The first of his poetic plays, *The Masque of Judgment*, 1900, was followed by *The Fire-Bringer*, 1904, and *The Faith-Healer*, 1909. In 1907 his prose play, *The Great Divide*, was produced in New York. He died Oct. 17, 1910, and in the same year was published *Gloucester Moors*. He collaborated with R. R. Lovett in *A History of English Literature*, 1907.

**Mook, HUBERTUS JOHANNES VAN** (b. 1894). Netherlands colonial administrator. He was born in

Batavia, and educated at Surabaya college and Amsterdam, Delft, and Leyden universities. He entered the legal department of the Netherlands Indies civil service in 1918. In 1940 he was chairman of the Netherlands delegation which discussed economic relations with Japan. After the Japanese occupation of the N.E.I., he escaped, reaching London in May, 1942, where he took up the posts

of colonial minister in the exiled Netherlands govt. and lieut.-gov. of the Indies. In Sept., 1944, he became head of a provisional govt. of the N.E.I. set up in Australia by Dutch royal decree; he returned to Batavia, Oct. 3, 1945, and played a leading part in setting up the united states of Indonesia (*q.v.*). But differences with the Netherlands govt. led to his resignation in 1948.

is proved by observation of the occultation of stars. This accords with expectation, as the surface gravity (about  $\frac{1}{6}$  that of the earth) is too small to retain an atmosphere for long.

To the naked eye the surface of the moon shows a number of grey spots; these were called "seas" by early observers, and the name remains, though they are merely plains, covered with some dark material. The chief of these bear the names Crises, Tranquility, Serenity, Vapours, Showers, Storms, Clouds, Humours, Nectar, and Fecundity. Numerous craters are striking, the larger being fully 60 m. across. A small telescope will suffice to show them, the best time to look being about first quarter, since the shadows are most conspicuous then, and help to throw the surface into relief. Copernicus, one of the grandest, is 56 m. across; the interior is fairly level, but has a few peaks 2,000 ft. high. The ring round the crater is 12,000 ft. high. It is broken into terraces, and has in places a slope of 60°. Copernicus, Tycho, Kepler, and Aristarchus are the centres of wonderful systems of bright rays or streaks which radiate from these craters, in star-like patterns, often several thousand miles in length. They are most conspicuous in the full moon, and pass indifferently over hill and valley, indicating their independence of these inequalities, and are probably formed of some crystalline substance, extruded from the interior through cracks in the crust.

There are a few continuous mountain ranges on the moon, in particular the Apennines, 460 m. long, well seen after first quarter. The Alps are a smaller range, but interesting from the great valley through them, whose sides are so straight that they might have been cleft with a hatchet. There are numerous smaller clefts on the moon, known as rills. Near the crater Thebit is the Straight Wall, with one side 1,000 ft. higher than the other.

The origin of the craters is a matter of dispute. There are two theories current: that they are volcanic in origin, and that they result from meteoritic bombardment. Both explain the observed facts equally well. Few changes

## THE MOON: ITS ASPECT AND PHASES

\* A. Hunter, Ph D., F.R.A.S., Royal Greenwich Observatory

*Related articles include those on Astronomy; Planet; Stars; Sun.*

*See also Observatory, Telescope; and the biographies of Halley, Herschel, and other eminent astronomers*

The moon is the satellite of the earth. It revolves round the earth in 27.32 days in a nearly circular orbit, at an average distance of 238,857 m., the greatest and least values being 252,710 m. and 221,463 m. Its diameter is 2,160 m., and it shines by reflecting sunlight. Apparent changes of shape are due to the different amounts of the sunlit hemisphere that are turned towards us as the moon revolves. When nearly between the earth and the sun, its dark side is towards us, and it is usually invisible; this is called new moon; when 90° distant from the sun, we see half the sunlit hemisphere; this occurs at first and last quarter. The full moon is opposite to the sun, and appears fully illuminated. The interval between two new moons, a lunation, is 29.53 days; longer than the revolution, since the sun has advanced during the 27.32 days, and the moon requires 2 days more to overtake it. The ordinary year of the Jews and many ancient nations consisted of 12 lunations or 354 days; seven years out of 19 had 13 lunations, the agreement with the solar year being approximately preserved.

The moon's path round the earth makes an angle of 5° 8' 40" with the ecliptic, and intersects the ecliptic at two points, the nodes, which have a backward motion, going completely round the sky in 18½ years. When new moon occurs near either node, there is an eclipse of the sun. These eclipses are total only over narrow zones of the earth's surface, but lunar eclipses, which occur when the full moon enters the earth's shadow, are seen over an entire hemisphere. Even

when totally immersed in the shadow, the moon generally remains visible, of a coppery hue; the sunlight being bent into the shadow by refraction in the earth's atmosphere.

The moon, the density of which is only  $\frac{3}{8}$  that of the earth, plays the chief part in causing tides in our oceans. It attracts every part of

Moon. Age 14 days, 1 hour

*Photographed at Luck Observatory, Mount Hamilton, California, U.S.A., by courtesy of the Director*

our globe, but the parts nearest to it are attracted more strongly than those farther away. A deformation is thus produced in the surface of the ocean. The moon's meridian passage gets later by about 50 minutes each day; the tides get later by about the same amount, but the matter is complicated by the fact that the sun also causes tides. The tide is a combination of the two gravitational forces.

The moon rotates on its own axis in the same time as that of its revolution round the earth, so always turning the same face to the earth. It is without an atmosphere, as

Aspect of the known face of the moon, showing the "seas," lakes, and craters. The chief craters are numbered as follows:—1. Newton. 2. Short. 3. Moretus. 4. Clavius. 5. Scheiner. 6. Bacon. 7. Maginus. 8. Longomontanus. 9. Schiller. 10. Schickard. 11. Wilhelm I. 12. Tycho. 13. Stoeffler. 14. Haenzel. 15. Walter. 16. Riccius. 17. Farmerius. 18. Piccolomini. 19. Pitavus. 20. Purbach. 21. Sacrobosco. 22. Fracastorius. 23. Petavius. 24. Arzachel. 25. Thebit. 26. Hippalus. 27. Gassendi. 28. Alpetragius. 29. Catherina.

30. Cyrillus. 31. Theophilus. 32. Vendelinus. 33. Langren. 34. Guttenberg. 35. Albatagnus. 36. Alphonsus. 37. Ptolemy. 38. Boupland. 39. Réaumur. 40. Hipparchus. 41. Letronne. 42. Grimaldi. 43. Flamsteed. 44. Encke. 45. Bioccoli. 46. Copernicus. 47. Stadius. 48. Pallas. 49. Pliny. 50. Menelaus. 51. Aristarchus. 52. Cleomedes. 53. Lignaeus. 54. Autolycus. 55. Aruillius. 56. Archimedes. 57. Cassini. 58. Struve. 59. Eudoxus. 60. Aristotle. 61. Plato. 62. Gartner. 63. Endymion. 64. Atlas. 65. Hercules.

#### MOON. APPEARANCE OF THE EARTH'S SATELLITE TO A TERRESTRIAL OBSERVER

Based on Nasmyth and Carpenter's Picture Map. By courtesy of John Murray

have ever been observed on the moon's airless, waterless surface, owing to the absence of weathering. The surface reflects sunlight and conducts heat as brown pumice dust would be expected to do.

The lunar seas were evidently once covered with liquid. Fracastorius, on the border of the sea of Nectar, was once a complete ring, but the wall towards the sea has been destroyed, leaving, however, a mark to show where it stood. Numerous marks of other ruined formations are discernible on the seas. The destroying agency is thought to have been liquid lava,

either ejected in sudden streams from the interior, or produced by the impact of some large body from outside.

While there is no present volcanic activity on the moon, there is an agency which may produce some changes in it; this is the great difference of temperature between day and night. The rocks in the sunshine probably reach the temperature of boiling water, while at night, a fortnight later by terrestrial reckoning, they reach  $-243^{\circ}\text{F}$ . The alternate expansion and contraction may cause the occasional collapse of

steep walls. Thus the crater Linnaeus, formerly described as very deep, is now a shallow, whitish depression.

The complex problem of the motion of the moon arises from the action of the sun, whose attraction on the earth and moon is appreciably different. The eccentricity of the orbit, the direction of its major axis, the orbit-plane, are all continually changing. The earth's equatorial protuberance and the planetary attractions also produce appreciable disturbances.

The precession of the equinoxes arises from the attraction of the

sun and moon, especially the latter, on the earth's equatorial protuberance. It is a slow reeling of the earth's axis, causing it to sweep out a circle in the sky,  $47^\circ$  in diameter, in a period of 26,000 years. It was discovered by Hipparchus. It enables us to fix the date when the constellations were mapped out and named (about 2,700 B.C.), that being the date when the south pole occupied the centre of the region left blank by the early observers.

**Bibliography.** The Moon, R. A. Proctor, 3rd ed. 1886; The Moon, Considered as a Planet, a World, and a Satellite, J. Nasmyth and J. Carpenter, 1903; The Moon, W. H. Pickering, 1904; The Moon, W. Goodacre, 1931.

**Mõõn.** Name sometimes used for the Estonian island of Muhu (q.v.) in the Baltic Sea.

**Moon, WILLIAM** (1818-94). British inventor. Born at Horsmonden, Kent, Dec. 18, 1818, he became partially blind as a child and totally blind in 1840. In 1845 he invented a system of embossed type for the blind, which was widely used. To facilitate the publication of the Bible in his type he invented a process of stereotyping which much reduced the cost of production. So successful was his system that he extended it to foreign languages. His wife, born blind, had imagined horses as standing upright on two legs. Moon thereupon produced pictures in relief, which could be studied by blind people. He died at Brighton, Oct. 10, 1894.

**Moonlighters.** Name given to perpetrators of outrages in the Irish agrarian disturbances of 1880-87. Following the rejection by the house of lords of the Compensation for Disturbances Bill, which was to check evictions and to restrain landlords, a series of outrages took place, usually at night. Murder, cattle-maiming, arson, and pillage were frequent, and the Moonlighters instituted a reign of terror which lasted until Balfour's Crimes Act of 1887. See Coercion Acts; Ireland.

**Moonlight Sonata.** Composition by Beethoven. Popular name given to the Sonata quasi una fantasia in C sharp minor, the second of two which together form Beethoven's op. 27. The title is said to have been derived from an expression of Rellstab, the critic, who compared the first movement to a boat wandering by moonlight on the Lake of Lucerne. One of the most popular of Beethoven's pianoforte works,

it was dedicated to the Contessa Gioletta Guicciardi.

**Moonrakers.** Name applied to natives of Wiltshire. It is traced to a story of some countrymen who, seeing the moon's reflection in a pond, tried to rake it out. But another version tells that they were smugglers who, surprised while dragging for hidden kegs of brandy, baffled the excisemen by assuming this simplicity.

**Moonstone.** Semi-precious stone. It is a translucent, colourless feldspar, mostly orthoclase or albite, which is usually cut *en cabochon*, but also faceted. It reflects a bluish milky light, hence its name. It is also known as fish's eye, wolf's eye, and water opal.

**Moonstone, THE.** Novel by W. Wilkie Collins (q.v.), first published in 1868. Turning upon the possession of a valuable diamond, the highly intricate plot, which abounds in dramatic situations, is developed in the successive narratives of the various parties to the drama. The novel is one of the first detective stories to command a place as serious literature.

**Moonta.** Township of S. Australia. It stands on Spencer Gulf, 134 m. by rly. N.N.W. of Adelaide, and has carried on copper mining since 1861. Pop. 3,300.

**Moonwort** (*Botrychium lunaria*). Fern of the family Ophioglossaceae. A native of Europe, and the

Moonwort. The two branches of frond

temperate and cold regions of both hemispheres, it has a small tuberous rootstock and fleshy roots. It produces a single annual frond which is divided, one branch bearing a double row of half-moon-shaped leaflets, the other branch having secondary branches which bear rows of leathery spore-capsules, ultimately splitting to release the spores. Formerly it was believed to have the magic power of loosening locks, bolts, nails, etc.

**Moor.** A term somewhat loosely applied to tracts of unenclosed, usually high lying land, not primarily used for pasture. It probably has its origin in a word meaning to die and thus originally connoted dead or sterile. The soil of moorland is characteristically acid, be it relatively dry, or a deep,

wet peat. Hence it is unfavourable to the growth of many crop plants. On the other hand soil acidity encourages the development of heather, bilberry, mat grass, and a number of other oxyphilous species, one or other of which forms the predominating vegetation of moorland. In this sense the term embraces the bogs of Ireland where sphagnum abounds, the mosses of the Pennine chain where cotton grass predominates, those areas covered with deer sedge in the west and north-west of Scotland, on Exmoor and Bodmin moor in S.W. England, and the granite areas of the last locality, which have purple moor grass as their chief plant inhabitant. In a more restricted sense, the heather-covered grouse moors of Scotland, similar areas in Somerset, of the Pennines, the Wicklow, and the Mourne mountains are more typical. Their vegetation resembles that of the lowland heath closely except in containing a greater proportion of lichens, liverworts, and mosses and in that bilberry occurs in place of heather. Both have moderately free soil drainage and a relatively thin layer of peat in contrast to the wet conditions of the bog and moss. The acid conditions present favour the development of the fungus *Phoma* with which heather must establish mycorrhizal relations in order to live. In both, too, conditions such as recurrent fires or strong winds prevail and so prevent the establishment of trees in numbers sufficient to compete with the heather to its ultimate extinction. See Mycorrhiza. Consult The British Islands and their Vegetation, A. G. Tansley, 1939.

**Moor, SIR FREDERICK ROBERT** (1853-1927). South African statesman. After working in the Kimberley diamond mines, 1872-80, he settled in Natal, and in 1886 was elected to the legislative assembly. Minister for native affairs, with a brief interval, from 1893 to 1906, he was identified with all movements furthering the self-government of the state, and in 1906 became premier. Attending the 1907 colonial conference of premiers, in 1910 he held, conjointly with the premiership, the portfolio of commerce and industries in the cabinet of South Africa. He was knighted in 1911, and died March 18, 1927.

**Moorcroft, WILLIAM** (1872-1945). British potter. Born Mar. 27, 1872, he studied art at S. Kensington and Paris. A skilled potter, painter, and chemist, he spent the greater part of his life in originat-

ing and developing the pottery named after him, exhibiting regularly at British and foreign exhibitions. In 1928 he was appointed potter to Queen Mary, and showed 11 pieces of his ware at the Exhibition of British Art in Industry, 1935. He died at Trentham, Staffs, Oct. 14, 1945. He is represented at the Museum of Fine Arts, Syracuse, N.Y., U.S.A., and at Toronto art gallery.

**Moore, ALBERT JOSEPH** (1841-1893). British painter. Born at York, Sept. 4, 1841, he studied

A. J. Moore,  
British painter

at the York School of Design before going to the R.A. schools in London in 1858. He went direct to nature, sketching in the Lake district, and the N. of France. He did much decorative work including mosaic panels for the central hall in the houses of parliament. In 1883 he painted Reading Aloud, his best-known work. His chief pictures include: Blossoms (Tate Gallery), 1881; Dreamers, 1882; Summer Night, 1890. He died Sept. 25, 1893.

**Moore, GEORGE** (1852-1933). An Irish writer. He was born at Moore Hall, co. Mayo, Ireland, on Feb. 24, 1852. Educated at Oscott, he spent 10 years studying art in Paris, where he met Manet (whose portrait of him is in the Metropolitan Museum, New York) and other Impressionists. Doubtful of his ability as a painter, he settled in London and became a writer. His first publications were poems, strongly influenced by Baudelaire: Flowers of Passion, 1872, and Pagan Poems, 1882. These were without merit, and he abandoned poetry for prose.

A Modern Lover, 1883, attracted little attention, but A Mummer's Wife, 1885, and A Drama in Muslin, 1886, were among outstanding novels of their time. Esther Waters, 1894, most ambitious of his realistic novels, established his fame, and marked the end of his first phase.

After the outbreak of the S. African War, Moore, who adopted a pro-Boer attitude, lived in Dublin until 1910. He wrote for the Abbey Theatre, and became absorbed in the revival of Irish as a living language. During his sojourn there he produced two important volumes, The Untilled Field (short stories), 1903; and

The Lake, 1905. Memoirs of My Dead Life, 1906, was the forerunner of a long autobiographical work first appearing as a trilogy Ave, Salve, Vale, 1911-14, and later published in two volumes as Hail and Farewell.

The Brook Kerith (dramatised as The Passing of the Essenes, 1931)—a romantic reconstruction of the life of Christ—marked the culmination of his powers as a stylist, though as literature it has been described as one of the most placid books in the language.

To Moore's later years belong two further autobiographical works notable for brilliant dialogues: Avowals, 1919; and Conversations in Ebury Street, 1924. The latter ranks with Hail and Farewell as a masterpiece of observation and philosophical disquisition. His last years were spent in revising his earlier works. He died in London Jan. 21, 1933.

Whimsical, individualistic, and perverse, Moore antagonised many by his love of self-dramatisation and exaggeration. In his artistry and eloquence as a writer he has few equals. *Consult* Lives, by S. Mitchell, 1916; J. Freeman, 1922; H. Wolfe, 1931; J. Hone, 1936. Letters (ed. J. Eglinton), 1942.

**Moore, GRACE** (1901-1947). American singer and film actress. Born at Jellicoe, Tenn., U.S.A.,

Grace Moore,  
American singer

Dec. 5, 1901, she was educated there, and studied singing at Washington. After making her debut in musical comedy at Boston, she later appeared in New York and in 1924 continued her singing studies in Europe, appearing in La Bohème at Milan. She repeated her performance at the New York Metropolitan and scored an immediate success. She first appeared at Covent Garden in 1935. Making her screen debut in 1930, she achieved great success in One Night of Love, 1935. Later films included Love Me Forever, The King Steps Out, For You Alone. She was killed in an air crash at Copenhagen airport on her way to Stockholm,

George Moore,  
Irish author

Jan. 26, 1947. Her autobiography You're Only Human Once appeared shortly after her death.

**Moore, HENRY** (1831-1895). British painter. Born at York, March 7, 1831, he studied under his father, and entered the R.A. schools in 1853. In 1886 he was elected A.R.A., and in 1893 R.A. A prolific artist and frequent exhibitor, his chief works, paintings of the sea, include A White Calm, 1858; Catspaws off the Land, 1885 (Tate Gallery); Clearness After Rain, 1887; A Breezy Day in the Channel, 1888; Summer at Sea, 1893. He died at Margate, June 22, 1895.

**Moore, HENRY** (b. 1898). British sculptor. Son of a coal miner, he was born at Castleford, Yorks, July 30, 1898, and educated at the grammar school there. After the First Great War he studied at Leeds and the Royal College of Art. Influenced by negro

Henry Moore,  
British sculptor

and Mexican sculpture, his work was characterised by monumentality and strength, displaying a strong feeling for the simple, rounded forms of life, and the effect of natural forces upon stone. In his later drawings, especially those inspired by scenes in London air raid shelters during the Second Great War, he achieved depth and originality of design more intricate than could be contained in isolated objects of stone. Appointed a trustee of the Tate Gallery, 1941, he occupied a leading position among contemporary sculptors, and held one-man exhibitions at the chief galleries of London and New York. Examples of his work are at the Tate Gallery and Victoria and Albert Museum, London, and Museum of Modern Art, New York. *See* Art illus. pp. 664-665.

**Moore, SIR JOHN** (1761-1809). British soldier. Born in Glasgow, Nov. 13, 1761, he was a son of Dr. John Moore (1729-1802), author of Zeluco. Educated at Glasgow High School, he entered the 51st Foot in 1776, and served in America during the War of Independence. In 1794 he was in Corsica, after which he went on an expedition to Santa Lucia. He served against the Irish rebels in 1798, in the Netherlands in 1799, and in Egypt in 1802, by which time his reputation as a soldier stood very high.

Having been knighted, he was, in 1803, chosen to command the troops at Shorncliffe, and it was there that he trained the regiments, among them the 43rd and 52nd, of the light division.

*John Moore*  
After Lawrence

In 1806 Moore was sent to the Mediterranean, and in 1808 he led a division on an abortive attempt to assist Sweden. Returning therefrom he was ordered to Portugal, and was soon in command of the British troops there. Events made it necessary for him to fall back to Corunna, where his men turned and fought the French, Jan. 16, 1809. Moore was mortally wounded and died on the 17th. The circumstances of his burial are known through Rev. C. Wolfe's poem. For six years, 1784-90, Moore was a Scottish M.P. He enjoyed the friendship of Pitt and the duke of York, who, like others in authority, thought highly of his soldierly qualities. *See* Corunna illus. p. 2392; *Peninsular War*; *consult* Lives, J. C. Moore, 1834; J. F. Maurice, 1897; *Diary*, ed. J. F. Maurice, 1904.

**MOORE, MARY** (1861-1931). British actress. Born in London, she made her stage début in 1885. After the death of her first husband James Albery (*q.v.*) in 1889, she appeared under the management of Charles Wyndham, in whose productions she played the lead. Her earliest success was in the rôle of Ada Ingot in David Garrick, and she later appeared in plays by H. A. Jones and H. H. Davies. She married Wyndham in 1916, and was joint proprietor with him of the Wyndham's and New Theatres. She died April 6, 1931.

Mary Moore,  
British actress  
Claude Harris

**MOORE, THOMAS** (1779-1852). Irish poet and biographer. Born in Dublin, May 28, 1779, the son of a grocer, he was educated at Trinity College, and came to London in 1799. In London, as elsewhere, his engaging personality and unusual gifts quickly procured for him a large circle of distinguished friends.

A volume entitled *Poetical Works of the Late Thomas Little* appeared in 1801. In 1803 he was appointed registrar of the Admiralty Court, Bermuda, but returned to England after a year, leaving a deputy.

In 1806 appeared his *Odes and Epistles*, which included the Canadian Boat Song. A scathing criticism in *The Edinburgh Review* led to an abortive duel with Jeffrey (*q.v.*), after which the two combatants became firm friends. In 1807 the publication began of the

*Thomas Moore*  
After Lawrence  
(courtesy of  
Mr. John Murray)

*Irish Melodies*, with music by Sir John Stevenson, upon which Moore's fame largely rests. Like all his poetry, they are tuneful, graceful, but often artificial and without depth. The *Melodies* brought a fixed income of £500 a year, the brilliant and enormously successful Eastern poem *Lalla Rookh* (*q.v.*), 1817, brought £3,000, and Moore enjoyed a vogue second only to that of Byron. But the default of Moore's deputy in Bermuda for £8,000 brought financial disaster, and Moore was compelled to seek refuge in Paris till 1822. He returned to London, and at his country house, Sloperton Cottage in Wiltshire, spent the remainder of his life. In 1811 he married Bessie Dyke (d. 1865), an actress.

The great work of the latter part of Moore's life is his biography of Byron, 1830, which, though deficient on the critical side, remains the standard authority. He also issued an edition of Byron's works, and wrote biographies of Sheridan, 1825; and Lord Edward FitzGerald, 1831. He received a literary pension of £300 in 1835, and a civil list pension in 1850. He died Feb. 25, 1852.

**MOORE, THOMAS STURGE** (1870-1944). British poet and artist. He was born Mar. 4, 1870, and educated at Dulwich. He became a pupil of Charles Ricketts (of whom he later wrote a short biography) and was a distinguished wood engraver. His first volume,

T. Sturge Moore,  
British poet and artist

*The Vinedresser and Other Poems*, appeared in 1899, and he published his *Collected Poems* in 1932. His prose works included *Art and Life*, 1910; and *Armour for Aphrodite*, 1929. He died July 18, 1944.

**Moorfields**. London thoroughfare. Between Finsbury Pavement and Moor Lane, E.C., it opens N. out of Fore Street. Its name is all that is left of an area once fenland, and more recently known as Finsbury Fields. First drained in 1511, laid out into walks 1606, it was built over in the 18th and early 19th centuries. Bethlem hospital, formerly a convent, stood here from 1676 until its removal in 1815 to St. George's Fields, Lambeth. The old fields are covered by Finsbury Circus and Square. Near by is the well-known Moorfields eye hospital.

**Moorgate**. London thoroughfare. Running N. from Lothbury to London Wall and Finsbury Pavement, it was named from a postern gate in the old city wall which opened into Moorfields. The gate was set up in 1415, rebuilt in 1472, and taken down in 1762. In 1922 Moorgate Street with Finsbury Pavement became Moorgate. It was comparatively untouched by the bombing of the Second Great War. *See* Finsbury.

**Moor Hen**. Alternative name for the Water Hen (*q.v.*).

**Moorings**. Arrangement of chains, anchors, or heavy iron blocks, and buoys, to which ships can make fast. They are laid permanently in a harbour. Vessels lying alongside a jetty are said to be moored there. Moorings for airships take the form of a lofty lattice mast of steel, to the top of which the airship is fastened by the nose, swinging in any direction with the wind. A lift running inside the mast carries passengers, crew, and cargo from the ground to the airship, while pipes carry supplies of water, gas, and engine fuel. One of the largest airship mooring masts was erected at Cardington, Beds.

**Moorish Architecture**. Term commonly applied to the Hispano-Moresque style developed by the Moorish conquerors of Spain, and illustrated in such buildings as the mosque of Córdoba and the Alhambra at Granada. It formed a distinctive phase of Mahomedan architecture (*q.v.*). *See* Arch.

**Moor Park**. Name of two English parks. One is 1 m. E. of Rickmansworth, Herts, and was enclosed about 1460. The mansion was built in 1673, and reconstructed in 1720. The park was bought by Lord Leverhulme, 1919,

and turned into a residential district. It has a famous golf course. Moor Park is a station on the Met. rly.

The house and land on the banks of the Wey 2 m. E. of Farnham, Surrey, was formerly known as Compton Hall, its name being altered to Moor Park, after the place in Herts, when it was bought by Sir William Temple about 1682. Here Swift, when Sir William's secretary, wrote *The Battle of the Books* and *Tale of a Tub*, and first met Esther Johnson (Stella). The place is also associated with Dorothy Osborne.

**Moors.** Name in popular usage for the Muslim population of mixed Berber and Arab descent in N.W. Africa. The Mauri of the Mauretanian kingdom of Roman writers were Berbers. The Arab irruption of the 8th century which led to the invasion of Spain resulted in some racial blending, and the subsequent return to Morocco of Hispanified Saracens (Moriscos) brought in an Andalusian element. The Arabic-speaking Moor is thus the resultant of many forces, social and ethnic. The name was extended by early Portuguese adventurers to the Arabian settlers in India and Ceylon. See Morocco; Spain.

**Moose** (*Alces Americana*). Largest living member of the deer family, distinguished by its size, long pendant muzzle, and broadly palmated antlers. It occurs under the name of elk in Europe; but the name moose is restricted to the American species, which occurs in Canada and in the U.S.A. from Maine to N. Dakota. Alaska is now its chief home; incessant hunting has made it rare in the less remote forests of N. America. A fine male stands nearly 7 ft. high, and weighs over 1,000 lb. It keeps to the more secluded parts of the forest regions.

In the summer it visits the swampy ground near lakes, but in winter resorts to the higher ground. Here it is usually found in families, consisting of the male and female and the young of the past two seasons; and a "yard" is formed by treading down the deep snow. In the mating season the males are highly dangerous, fight furiously, and are often lured to destruction by hunters who imitate the cry of

the cow moose. Notwithstanding its great size and clumsy appearance, the moose travels at great speed and with curious noiselessness through the densest forests. It is mainly hunted for sport, but its flesh makes good venison, and its hide is converted into leather. See Deer; Elk; Ice Age.

**Moosehead.** Lake of Maine, U.S.A. The most extensive lake in New England, lying on the borders of Piscataquis and Somerset cos., it measures 35 m. by 12 m. at extremes, and covers about 120 sq. m. The Kennebec issues from its W. side. The lake lies at an alt. of 1,000 ft., abounds in fish, and is the gateway to wild country frequented by sportsmen.

**Moose Jaw.** City of Saskatchewan, Canada. It stands on Moose Jaw river, 398 m. W. of Winnipeg and 420 m. E. of Calgary, and is a divisional point on the C.P.R., served also by C.N.R. and Soo Line. An agricultural centre, it has the biggest stockyards W. of Winnipeg. Pop. 22,599.

**Moot.** Literally a meeting, the word being akin to meet. It was used among the Anglo-Saxons for meetings of freemen, and so we hear of folkmoths, shiremoths, and the like, while Witanagemot is another compound. It survives in English in the moot hall. Law students at the Inns of Court call their legal debates moots. See Folkmoot; Witanagemot.

**Mop Fair.** Statute fair formerly held in England at which farmers engaged servants and labourers.

The name was derived from the circumstance that servants carried a mop as an indication that they were waiting to be hired. Carters fastened to their hats a piece of whipcord, shepherds a tuft of wool, groomers a sponge, and so on. Sometimes a second fair was held soon after the

statute fair for the benefit of those persons not already engaged. Engagements made at a mop fair were for one year, but with the growing practice of hiring for shorter periods, mop fairs degenerated into pleasure fairs.

**Moplahs.** A people partly of Arab origin mainly living in Malabar. Tradition has it that the Moplahs, whose local name is

Mappilla, are descended from the union of Malabar women with Arab traders, who arrived on the Malabar coast in the 3rd century. As the fathers usually returned to Arabia, the custom grew up of giving the children the names of their mothers; hence the word "Mappilla," and matriarchal customs survived. By religion the Moplahs are fervent Muslims and their fanaticism has on occasion burst out in violence. The last serious outbreak was in 1922 and was suppressed only after serious fighting involving heavy casualties. An attempt was made to enlist Moplahs into the Indian Army, and in 1897 a battalion was raised. The experiment proved a failure and the battalion was disbanded. The number of Moplahs is estimated at 1,500,000.

**Mopsus.** In Greek legend, the name of two famous soothsayers: (1) The son of Manto, the daughter of Tiresias (q.v.) and Apollo. Having built the city of Mallos in Cilicia, together with Amphilocheus, the son of Amphiarus, a quarrel arose concerning the possession of it, in which both were slain. Mopsus had oracles at Colophon and Mallos, and Mopsuestia is named after him. (2) One of the Lapithae. Son of Apollo and one of the nymphs, he took part in the voyage of the Argonauts, for whom he acted as seer. He died during the journey from the bite of a snake in Libya.

**Moquegua.** Maritime prov. of S. Peru. It is bounded S. by Tacna and W. by the Pacific. Traversed by the Andes, whose slopes are fertile and well populated, it produces copper, silver, coal, marble, sulphur, etc.; the vine is widely cultivated. Its area is 5,549 sq. m. Pop. 34,152.

Moquegua, the capital of the prov., is 68 m. by rly. N.E. of the port of Punta Coles on the Pacific, which is connected by rly.

**Mora** (Lat., delay). Term in Scots law for delay in pursuit of a legal remedy disentitling a person to relief by the courts. See Laches; Limitations.

**Morá** (*Dimorphandra mora*). Forest tree of the family Leguminosae, native of British Guiana and Trinidad. It attains a height of 150-200 ft.; its leaves are divided into two rows of leaflets, and the small flowers are combined in dense spikes. The large, woody pods each contain a kidney-shaped seed. The timber is of great value to the shipbuilder, being hard, tough, and close grained like oak, with no tendency to splintering.

Moose. Specimen of the great Alaskan moose  
Amer. Mus. Nat. Hist.

**Moraceae.** Botanical term for the mulberry family, often included in Urticaceae (*q.v.*). See Mulberry.

**Moradabad.** Dist. and town of India in the Rohilkhand division, Uttar union. The dist. is situated on the plains E. of the Ganges. The chief crops are wheat and millet. The town is on the Ramganga, and has small manufactures in brass and tin. Area, 2,288 sq. m. Pop. dist., 1,473,151; town, 142,414.

**Moraine** (French). Rock waste accumulated on the surface of a glacier or ice sheet. Lateral moraines are found each side of a glacier, and are formed from the detritus which falls down the valley sides. The uniting of two tributary glaciers produces a medial moraine. Beneath the glacier or ice sheet is the ground moraine or *moraine profonde*. Material transported by the glacier and deposited at its snout by the melting of the ice forms a crescentic terminal moraine. See Glacier.

**Morality** OR **MORAL PLAY.** Early form of the drama, which most probably developed out of the earlier mystery and miracle plays. It is believed to have grown into popularity in the first half of the 15th century. The morality differed from the miracle play in that it was not concerned with the presenting of an established Biblical story with named characters, but was rather a play enforcing a moral truth or lesson by means of personified abstractions. The fact that such personifications appeared in some of the miracle plays suggests that in them may be found the origin of the moralities. Everyman, which allegorises man's life and death, Mankind, Youth, Lusty Juvenuts, Nature of the Four Elements, Hickscorner, and Magnificence, by John Skelton, are notable examples. See Drama.

**Bibliography.** The Medieval Stage, E. K. Chambers, 1903; English Miracle Plays, Moralities and Interludes, A. W. Pollard, 4th ed. 1914; English Miracle Plays and Moralities, E. H. Moore, 1907.

**Moral Rearmament.** Name given by Frank N. D. Buchman (*q.v.*) to the religious campaign inaugurated by him in East Ham town hall, June, 1938. World Assemblies for Moral Rearmament were held at Interlaken, 1938, and Monterey, California, 1939. The movement attracted great attention and numbered several popular figures among its converts; but it was rather discredited when some of its prominent followers declared themselves conscientious objectors to war, a doctrine which in view of the threat from

Germany at that time was unpopular among the masses. Dr. Buchman's book, *Moral Rearmament*, was published in 1938; but the campaign died down when he returned to America in 1939. See Oxford Group.

**Morand, PAUL** (b. 1889). A French diplomat and writer. Born in Paris, March 13, 1889, he was educated at the Sorbonne and Oxford university. Entering the French diplomatic service, he was secretary to the French embassy in London, 1913-16, and later held similar posts in Rome and Madrid. He was appointed French chargé d'affaires in Siam, 1925. Liaison officer between the British ministry of economic warfare and the French ministry of blockade, 1939-40, he became ambassador at Berne, 1944.

In 1921 he published his first novel, *Green Shoots*, but it was with the publication of *Ouvert la Nuit* (1922) and *Ferme la Nuit* (1923), both of which were translated into English, that he established a reputation as a graphic delineator of the sophisticated society of urban Europe after the First Great War. His principal characters were women, and his style, considerably influenced by the more tinsel side of the cinema, captured to a remarkable degree the after-the-war abandon of the 1920s. His next book, *L'Europe Galante*, is a daring series of stories about women, while *Budha Vivant* (1926) was a not very successful attempt to probe the soul of Asia. Among his later novels were *Black Magic*, 1927; *Flûte d'Orient*, 1931; *A Frenchman's London*, 1933; and *Les Extravagants*, 1937. He also wrote a considerable amount of free verse, and in 1942 published a life of de Maupassant.

**Morane-Saulnier.** Firm of French aircraft designers and manufacturers with works at Puteaux and Ossun. Formed in 1911, the company built some of the most successful monoplane fighters used by the French and British in the First Great War. In the latter stages of the war, the company developed small, high-speed fighter biplanes, similar to the Fokker fighter used by the German air force. Between the wars Morane-Saulnier concentrated upon single-seater fighters, and the M.S. 406, which was the standard fighter in l'Armée de l'Air in 1939, was in action up to the fall of France in 1940. During the occupation the Morane-Saulnier factory was compelled to work for the Germans and

produced for the Luftwaffe the Fieseler Storch army cooperation monoplane. After the war the company specialised in fighters, trainers, and light civil aeroplanes.

**Morant, SIR ROBERT LAURIE** (1863-1920). British civil servant. He was born April 7, 1863, and educated at Winchester and New College, Oxford. He became tutor to the royal family of Siam, and was given the task of reorganizing the national system of education. Returning to England, he joined the board of education as examiner in 1894. In 1895 he was made assistant director of special inquiries and reports, and he made his reputation by framing the Education Act of 1902. Permanent secretary of the board of education, 1903-11, and knighted in 1907, Morant was selected by Lloyd George in 1911 as first chairman of the health insurance commission, and was made secretary of the ministry of health in 1919. He died on March 13, 1920.

**Morar.** Loch or lake of Inverness-shire, Scotland. It is 12 m. long, with an extreme breadth of 2 m. In the very W. of the county, its waters are carried to the sea by a short stream. The district around is known as Morar.

**Morat** (Ger. *Murten*). Town of Switzerland, in the canton of Fribourg. It stands on the S.E. side of the lake of Morat, 18 m. by rly. W. of Berne, and is connected by steamboat and rly. with Neuchâtel. Its old town gate and walls are well preserved, and in its town hall is a unique collection of Burgundian weapons. Its 13th century castle, with a garrison of 1,500 men, resisted the artillery of Charles the Bold for 10 days before the battle of Morat, June 22, 1476, when Charles sustained a disastrous defeat. Morat was taken from Savoy by the Swiss in 1475, and annexed to Fribourg in 1814. The lake has an area of 10½ sq. m., and is connected by the Broye with that of Neuchâtel. On its banks prehistoric dwellings have been found. Morat is the only German-speaking and Protestant town in Fribourg. Pop. 3,000.

**Moratalla.** Town of Spain, in the prov. of Murcia. It stands on an affluent of the river Segura, 40 m. N.W. of Murcia, and 6 m. E. of Calasparra station. Wine and oil are produced, and a coarse kind of cloth, soap, and alcohol manufactured. Pop. 13,400.

**Moratorium** (Lat. *mora*, delay). Literally, postponement, a period in which no business engagements can be completed, or debts or

other liabilities enforced. In times when a financial panic is feared, a government will sometimes declare a moratorium for a certain number of days, thus giving public confidence a chance to recover. On the outbreak of the First Great War a royal proclamation declared a moratorium of a month in Great Britain for all bills of exchange. On the outbreak of the Second Great War, the Courts (Emergency Powers) Act prevented the recovery of most debts without the leave of the court.

**Morava.** River of Moravia, also known as the March (*q.v.*).

**Morava.** River of Yugoslavia. It is formed by the junction of the southern Morava and the western Morava, which occurs near Krushevatz. The S. Morava rises in the height of land stretching E. from the Kara Dag, above Üsküb, partly in Serbia and partly in Bulgaria, from the other side of which flows the Vardar, and its course is N. to its junction with the W. Morava, which rises in the Gotija range, S. of Ushitë. The combined rivers, known as the Morava, wind N., and fall into the Danube, after a course of about 250 m., near Semendria. The Morava and the Vardar form a great natural sunken corridor in the Balkans from Belgrade to Salonica.

**Moravia.** Central portion of the republic of Czecho-Slovakia, formerly the Austrian prov. of Mähren in Austria-Hungary.

Physically it is separated from the rest of the republic and is almost wholly the basin of the March or Morava, sloping S. towards the basin of Vienna from the Sudetes on the N.W., except in the N.E., where the Moravian Gate, between the Sudetes and the Carpathians, leads N. to Silesia and Galicia. The Thaya valley is roughly the S. boundary, separating Moravia from Slovakia. The height of land between Moravia and Bohemia averages 1,500 to 2,000 ft., with passes near Jihlava and Zwittau. The March is the chief river, for the Oder and the Vistula merely begin within the province; its main affluent is the Thaya, which is fed by the Jihlava, Svitava, and Suratka.

A quarter of the country is forested, chiefly with pines and oaks. Rather more than half is cultivated, and, the soil being fer-

tile, Moravia was in many respects the most productive agricultural province of the Dual Monarchy of Austria-Hungary. In the S., maize, fruit, and vines; in the centre, wheat, barley, and sugar beet; and in the N., rye, oats, flax, and potatoes are the staple farm products. Cattle are numerous, especially in the Moravian Gate; horses thrive in the centre; goats and merino sheep are numerous. Coal is mined on the Silesian border, W. of Brno; iron ore is mined in the Sudetes. Brno is the capital; other towns being Ost-rava, Olomone, Jihlava, and Pre-rov. The rly. system partially centres on Brno, but in the S.W. and on the E., main lines from Prague and Silesia respectively run to Vienna without touching Brno; the main line between Brno and Prague is not direct, but is diverted to the N.

Before the advent of the Magyar hordes in central Europe, Moravia was inhabited by Slavs. In the 9th century the people became Christians, at the instance of the Greek missionaries, Cyril and Methodius. Moravia was held by the Czech rulers of Bohemia during the 10th century, and Ottakar II, 1253-78, who had governed Moravia during his father's lifetime, extended the Czech power to the Adriatic. King Matthias of Hungary also ruled over Moravia and Silesia, and was succeeded by Vladislav of Poland, who had been elected to the throne of Bohemia in 1471. After the fateful fight at Mohacs, the Hapsburgs came to power; in 1612 Matthias, who had ruled Moravia for four years, became king of Bohemia, and Moravia became part of the empire definitely under Hapsburg control. In 1849 Moravia was made a separate prov. of Austria. From 1918 its history belongs to that of Czecho-Slovakia, of which it ceased to be an administrative unit in 1948.

**Moravians** OR **MORAVIAN BRETHREN.** Protestant sect, also known as the Unitas Fratrum or Bohemian Brethren. Descent is claimed from a division of the Hussites at Prague about 1450, which secured episcopacy from a Waldensian bishop in Austria in 1467, but endured much persecution, especially in Bohemia. In 1722 a few families fled from Moravia to Saxony under the leadership of a carpenter named Christian David, and united with a Lutheran community founded by Count Zinzendorf (1700-60) at Berthelsdorf. The community was originally called Bethel and

later Herrnhut (Watch of the Lord); it definitely separated from Lutheranism in 1727, when the title Moravian Brethren was revived. Elders were now elected and one was consecrated bishop.

Zinzendorf was banished from Saxony in 1736 on a charge of political intrigue, and spent the rest of his life travelling about Europe and establishing branches of the sect. He visited England in 1737, and for a time had influence with the Wesleys. In 1749 he purchased Lindsey Place, Chelsea, and secured a lease of the site of Beaufort House. The stables were turned into a chapel, and the other premises into a residence for the families connected with it. Later used as an orphanage, it was sold in 1770. An Act of parliament (22 Geo. II c. 30) was secured by Zinzendorf to exempt Moravians from military service, and Bishop Wilson of Sodor and Man undertook a general supervision of the community. A chapel was opened in Fetter Lane, London, and several branches, among them the community at Fulneck, near Leeds, were formed.

The sect is said to number about 100,000 adherents; it had in 1948 in the U.K. 42 congregations and preaching stations with 3,043 communicants. Organized in four provinces in Great Britain, N. America, S. America, and Germany, it is famed for its missionary zeal, having sent out over 2,000 missionaries to the heathen. Its theological position is practically that of Evangelical Lutherans.

**Moray.** One of the ancient provinces of Scotland. It included roughly the modern counties of Moray, Nairn, and Banff, and part of Inverness.

**Moray** OR **MURRAY, EARL OF.** Scottish title borne since 1561 by the family of Stewart. Moray was the name of one of the seven old Scottish earldoms, held early in the 14th century by Sir Thomas Randolph, a kinsman of Robert Bruce. After the death of the 3rd Randolph earl in 1346, it was held by Henry, duke of Lancaster, and then by several members of the Dunbar family. No family held it very long until it came to the Stuarts.

The best known of all earls of Moray was James Stewart (*v.i.*). The title passed to his daughter's husband, James Stuart, and to his descendants in turn until the present day. Alexander, 5th earl (d. 1700), was secretary of state in Scotland before the Revolution of 1689. Francis, 9th earl, was

Moravia arms

made a British peer as Baron Stuart in 1796. Archibald, 19th earl (b. Nov. 14, 1894), succeeded his brother in 1943. The eldest son is known as Viscount Doune. *Pron.* Murry.

**Moray, James Stewart, 1st Earl of** (c. 1530-70). Scottish noble. An illegitimate son of James V, his mother was Margaret

Earl of Moray,  
Scottish noble

Erskine. He was sent to the university of St. Andrews, and was soon heard of as leading a force that repelled a small French invasion of Fife. He became prominent in Scotland soon after the accession of his half-sister Mary to the throne. A supporter of the reformed teaching, he joined the lords of the congregation in opposing the queen mother, and, having got military aid from England, brought about the treaty of Edinburgh and the departure of the queen's French auxiliaries. For a time after Mary returned from France in 1561, Moray had great influence with her, but a breach soon came, its immediate cause being her marriage with Darnley. Moray was exiled, and was still away when on Mary's abdication in 1567 he was chosen regent. He was responsible for her defeat at Langside, and he ruled the country, on the whole successfully, until shot as he rode through Linlithgow, Jan. 21, 1570, by James Hamilton of Bothwellhaugh. He was buried in St. Giles's, Edinburgh.

Moray married a Keith, daughter of the 1st Earl Marischal, and left two daughters. His character has been fiercely attacked, especially his conduct towards Mary, but there is no reason to believe that he was more treacherous, avaricious, or hypocritical than other nobles of his times. *See* Mary Queen of Scots.

**Moray Firth.** Arm of the North Sea on the N.E. coast of Scotland. It extends inland for nearly 40 m. and has a breadth from Tarbat Ness to Burghhead of 16 m., but is sometimes said to embrace the whole extent of water between Duncansby Head, in Caithness, to Kinnairds Head in Aberdeenshire.

**Morayshire.** Maritime co. of Scotland, also known as Elginshire. Its area is 476½ sq. m., and it has a coast-line of 33 m. on the Moray Firth. The co. is moun-

tainous in the S., where are the Cromdale Hills, with heights exceeding 2,000 ft., but it becomes less so as the low district along the coast is approached. Among rivers are the Spey, Findhorn, Lossie, and Divie. There are several small lakes; Lochindorb is the largest; Spynie, having been drained, is but a fraction of its former size. Wheat, oats, and potatoes are grown; cattle, horses, and pigs are reared, and there are valuable fisheries. The co. is served by rly.

The chief places are Elgin, the co. town, Lossiemouth, Forres, Rothes, Burghhead, Fochabers, and Grantown-on-Spey. The Culbin Sands were deposited by a storm c. 1694; in 1829 the lower parts of the co. were visited by devastating floods. The chief antiquities are ecclesiastical remains at Elgin, Plusscarden, and Kinloss; ruined castles at Spynie, Lochindorb, and New Duffus; and Sweno's Stone at Forres. The co., whose name was changed from Elgin to Moray in 1920, unites with Nairnshire to elect an M.P. Pop. est. 44,100.

**Morbihan.** Dept. of France, part of the old prov. of Brittany. With an area of 2,738 sq. m. it has an irregular and indented seaboard on the Atlantic and is contiguous with the depts. of Finistère, Côtes-du-Nord, Ille-et-Vilaine, and Loire-Inférieure. Except for the Montagnes Noires on its N. boundary, there are few hills; the Landes de Lanvaux form a barren plateau some 30 m. long, running E. and W. The land-locked gulf of Morbihan and Quiberon Bay, with the Vilaine estuary, are features of the coast; Belle-Île and Groix are the chief islands. Vannes is the capital, other towns being Lorient, Ploërmel, Pontivy, Quiberon, and Hennebont. Pop. 506,884.

**Mordant.** Substance used to fix the colour in dyed textiles by the formation of an insoluble coloured compound in the fibres. The process has been used since early times, the most important mordant being madder, of which the colouring principle is alizarine. With

Morayshire. Map of the maritime county on the east coast of Scotland also called Elginshire

certain metals, notably aluminium (red), iron (violet), and chromium (maroon), insoluble compounds fast to light are formed. The discovery by Nicholson in 1862 that insoluble dyes can be converted to soluble compounds by sulphonation greatly increased the range of colours which could be produced by mordants. In wool dyeing, the usual process is to dye the fibre and develop the insoluble compound by treatment with the mordant. Other basic mordants are aluminium salts, especially the sulphate, alum, and tartarate, while iron, tin, and chromium salts are also used. Basic dyes require acid mordants, chiefly tannic acid and antimony tannate. This class of mordant is used mainly for silk and cotton goods; the cotton is first treated with solution and then dyed. Complex phospho-tungsten-molybdenum compounds as mordants give exceptionally fast dyes.

**Mordecai.** Character in the O.T. book of Esther. Esther was his cousin and adopted daughter. *See* Esther; Haman.

**Morden.** Part of the urban dist. of Merton and Morden (*q.v.*).

**Morden College.** House near Blackheath, London, built by Wren for Sir John Morden, now a home of rest for aged merchants in distressed circumstances.

**Mordovsk.** Autonomous republic of the R.S.F.S.R. It lies E. of Moscow region, and is connected with the capital by rly. The river Moksha flows through its W. districts. Formerly an agricultural

region, it is now industrialised. The chief towns are Saransk, the capital, and Krasnoslobodsk.

**Mordred**, or **MODRED**, **SIR**. One of the Knights of the Round Table in the Arthurian legends. In Arthur's absence Mordred has usurped the kingdom, and in the last great battle he is slain by Arthur at the very moment that he gives the king his deathblow. In some versions of the Legend he is the lover of Queen Guinevere. See *Morte d'Arthur*.

**Mordvin**. People of Finnic stock, mostly in the middle Volga region of Russia. Numbering about 1,000,000, apart from a few in Siberia and central Asia, they comprise in the S. the dark Moksha, in the N. the blond Erzya. They are settled husbandmen and wood-workers. Their Finno-Ugric speech is disappearing, but nature-worship survives under a veneer of Christianity. See *Finland*.

**Møre**. Fylke or co. of Norway, sometimes known as Romsdal. It is situated between the Dovrefjeld and the Atlantic, and has a long coastline indented by many fjords, of which the Romsdal, Halse, and Harø are the largest. Most of the area is part of the plateau above 3,000 ft. alt. The chief towns are Kristiansund, Aalesund, and Molde. Fishing is the principal industry. The area is 5,812 sq. m. Pop. 181,089.

**More**, **SIR ANTHONY** (c. 1512-c. 1576). Dutch portrait painter. Anthonis Mor, also called Antonio

Sir Anthony More,  
Dutch painter

Moro, was born at Utrecht, was a pupil of Jan van Scorel, and was influenced by Joost van Cleef. He was admitted to the guild of Utrecht

1547, and went to Brussels, Rome, and in 1552 to Spain, where he became court painter to Philip II. In England, 1553-54, he painted a portrait of Queen Mary and was knighted, but he returned to the Netherlands and was patronised by Alva. He died at Antwerp. His chief works are Five Members of the Order of S. John of Jerusalem, 1541; Two Canons of Utrecht, 1544; Philip II and Mary of Parma; Sir T. Gresham, in the National Portrait Gallery.

**More**, **HANNAH** (1745-1833). British author. Born Feb. 2, 1745, at Stapleton, Glos, she was the daughter of a schoolmaster and

a precocious child. Her first considerable work was a pastoral drama, *The Search after Happiness*, 1762. Coming to London in 1774, she became intimate with Garrick. Johnson, Burke, and other literary lights. Garrick produced

two of her tragedies, *Percy*, 1777 and *The Fatal Falsehood*, 1779. She spent her later years in retirement at Cowslip Green, near Bristol, where she wrote *On Female Education*, 1799; and a novel, *Coelebs in Search of a Wife*, 1809. Famous for charitable activities, she died Sept. 7, 1833. Her life was written by H. Thompson, 1838; A. M. B. Meakin, 1911; and some of her letters were ed. by R. B. Johnson, 1925.

**More**, **SIR THOMAS** (1478-1535). English statesman, author, and saint. He was born in Milk Street, Cheapside, Feb. 7, 1478. His father, John More, became a knight and a justice of the king's bench. His mother was Agnes, daughter of Thomas Graunger. From S. Anthony's grammar school in Threadneedle Street he was admitted, about 1489, into the household of Cardinal Morton. In 1492-94 he was at Oxford, where, a pupil of Grocyn and Linacre, filled with enthusiasm for the new learning, he studied Greek, Latin, French, theology, and music, and began his lifelong friendship with John Colet. In London began his friendship with Erasmus, and in 1501 he was called to the bar.

More lectured on S. Augustine's *De Civitate Dei* at S. Lawrence's, Old Jewry, was for three years reader at Furnival's Inn, and with a view to holy orders placed himself under the direction of the brothers of the Charterhouse. He secretly wore a hair shirt, fasted much, and each day heard Mass, but gave up the idea of the priesthood in 1503. He became M.P. in Jan., 1504, and, continuing his close study of the new learning, was especially influenced by the *Life and Writings of Pico della Mirandola*, a translation of which from the original Latin he published in 1510. He visited Louvain and Paris in 1508, and became bencher of Lincoln's Inn, 1509, and reader, 1511 and 1516. Under-sheriff of London, 1510, while an envoy in Flanders, 1515, he planned his fascinating *Utopia*, 1516.

Regarded with apparent high favour by Henry VIII, he was appointed speaker of the house of commons, 1523, and staunchly defended the privileges of the house against Wolsey, whom he succeeded as lord chancellor in 1529. An ardent reformer of the school of Erasmus, he took alarm at the course which the Reformation was taking in England. Conscience compelled him to resign the chancellorship in 1532, when Henry claimed to be the one supreme head of the Church of England. Though willing to swear political fidelity to the king, he refused in 1534 to take any oath that should impugn the spiritual authority of the pope. Committed to the Tower, April 17, 1534, and indicted for

Tho. More Esq (Tho. More Kt)  
After Holbein

high treason in Westminster Hall, July 1, 1535, he was executed on July 6, 1535, the king changing the sentence from hanging to beheading. His body was buried in the church of S. Peter ad Vincula in the Tower, and, according to tradition, reinterred in Chelsea Old Church.

More was twice married, first, in 1505, to Jane Colte, of Newhall, Essex, by whom he had three daughters (Margaret, Elizabeth, and Cicely) and one son (John), and, secondly, about 1511, to Alice Middleton, a widow. His family included also his stepdaughter Alice and an adopted daughter Margaret Giggs. His domestic life is described as his *Utopia* writ large. His house at Chelsea, built 1520, was demolished in 1740. In part of what was once the garden stands the reconstructed Crosby Hall. In addition to the *Utopia*, More is the reputed author of a *Life of Richard III*; he also wrote a tractate on *The Four Last*

Things, and in the Tower his Dialogue of Comfort. *See* Utopia.

In 1935 More, with John Fisher, was canonised *per via straordinaria*; i.e., he was made a saint in view of his martyrdom, although he had not performed the two miracles generally held necessary for canonisation. The gesture marked the pope's interest in England and his pleasure at the large number of English pilgrims who had visited Rome during the Holy Year. The ceremony was performed on May 19, 1935, in the presence of some of More's descendants and 8,000 British pilgrims led by the R.C. archbishop of Westminster. More was the first British saint since the Reformation. His festival is July 6.

**Bibliography.** Lives, W. H. Hutton, 2nd ed., 1900; C. Hollis, 1934; R. W. Chambers, 1935; J. R. O'Connell, 1935; D. Sargent, 1936; A. Cecil, 1937. The Utopia, with Roper's Life of More and some letters, W. G. Sampson, 1914.

**Morea**, THE (perhaps from Slav. *more*, the sea, or Gr. *moron*, mulberry, from its resemblance in shape to a mulberry leaf). Medieval and modern name for the Peloponnesus, a term by which it has been largely replaced since the liberation of Greece from Turkish rule. *See* Greece; Peloponnese.

**Moréas**, JEAN (1856-1910). Greek-born French poet. Born at Athens, April 15, 1856, he became a leader of the Symbolist school of poetry in France. His early works included *Les Cantilènes*, 1886, and *Le Pèlerin Passionné*, 1891. Later he adopted a classic severity of style in such volumes as *Poésies*, 1898; *Contes de la Vieille France*, 1903; and in his verse-drama, *Iphigénie à Aulis*, 1905, strongly reminiscent of Euripides. He died March 31, 1910.

**Moreau**, GUSTAVE (1826-98). French painter. Born at Paris, April 6, 1826, he studied at the *École des Beaux-Arts*, and exhibited at the Salon, 1852. The Athenians and the Minotaur was exhibited, 1855, and Oedipus and the Sphinx at the Salon, 1864.

Morecambe and Heysham. Part of the promenade of this popular Lancashire holiday resort

Other important works are: Orpheus, Jason, Golgotha (all in the Luxembourg), Diomed, 1866, Salomé, and Helène, 1880. He died April 18, 1898.

**Moreau**, JEAN VICTOR MARIE (1763-1813). French soldier. Born Aug. 11, 1763, at Morlaix, the son

J. V. M. Moreau, French soldier

of a lawyer, he was educated for the law at Rennes, where he made himself notorious by his leadership of the students in their disorders. In 1790 he joined the revolutionary army, and, coming early to the front, was, in 1793, made a general. He commanded a division in Flanders, after which he led an army into Germany. After some successes he was compelled to retreat, this able performance, however, adding to his reputation. In 1797, suspected as a traitor, he lost his command but in 1799 he was given a high position with the army in Italy, where he led another masterly retreat.

In 1800 Moreau assisted Bonaparte to overthrow the Directory. He then led an army against the Austrians, ending a successful campaign with the victory at Hohenlinden (*q.v.*), Dec. 3. Partly because of his republican views, he fell under his master's displeasure. He was tried and, although the charge was not proved, was banished for complicity in a plot against Napoleon, and spent the next few years in America, where he married a Creole. In 1812 he joined the Allied service, and was mortally wounded at the battle of Dresden, Aug. 27, 1813. He died on September 2.

**Morecambe and Heysham**. Seaport, watering place, and mun. bor. of Lancashire. It stands on Morecambe Bay, 5 m. from Lancaster. Heysham harbour, completed 1904 and covering 300 acres, is a British Rlys. (formerly L.M.S. Rly.) passenger and goods seaport to and from N. Ireland, with additional services to the Isle of Man. S. Peter's church in the old village of Heysham is mainly Norman. Morecambe, to the immediate N., is a large holiday resort with a great range of popular enter-

tainments. It has been called the "gateway to the Lakes." The fine promenade gives magnificent views across the bay of the mountains in the Lake District, but except at high tide there is little sea. During the Second Great War there was an important R.A.F. training centre here. Pop. 42,000.

Morecambe and Heysham arms

**Morecambe Bay**. Extensive inlet on the coast of Lancashire and Westmorland, England. It extends 17 m. inland to the mouth of the river Kent, and measures 10 m. in breadth from the S.E. point of Walney Island to Fleetwood. Besides the Kent, the Lune, Wyre, and several smaller rivers empty into Morecambe Bay. At high tide a bore runs up the river estuaries; at low water much of the area is bare sand, the rivers forming narrow impermanent channels.

**Moree**. Municipality of New South Wales, Australia. On the Gwydir river, it is 413 m. by rly. N.N.W. of Sydney on a branch with a railhead at Mungindi on the Queensland border. It has medicinal baths and a state experimental farm. Pop. 4,100.

**Morel** (*Morchella esculenta*). Edible fungus of the family Ascomycetes. A native of temperate

Morel. Specimens of the edible fungus

regions in both hemispheres, it has a short, white, tapering stem, and a swollen head, whose surface is broken into a network of ribs enclosing deep polygonal pits, varying in colour from yellowish, through brown, to olive. Both stem and head are hollow. Morels have been considered a delicacy since classical times, and are generally dried and used for flavouring. They seem to prefer disturbed ground and burnt areas. There are several allied species, equally good as food, one of them, Smith's Morel (*M. crassipes*, var. *Smithiana*) attaining a height of a foot, with a diameter of 7 ins. *See* Mushroom.

**Morelia.** City of Mexico. The capital of Michoacan state, it stands in a mountainous district, 6,400 ft. alt., 230 m. W. of Mexico City by rly. Its most prominent buildings are the handsome cathedral and the state-house. Chief among its educational establishments is San Nicolas de Hidalgo college, the oldest institution of the kind in Mexico. Cotton and woolen goods, sugar, cigars, cheese, and pulque are manufactured. Founded as Valladolid in 1541, Morelia became the state capital in 1582, and received its present name in 1828 in honour of Morelos, a revolutionary. Pop. 44,304.

**Morella.** Town of Spain, in the prov. of Castellón. Perched high up in the mts., 36 m. S.W. of Tortosa, it is built

Morella arms

in the form of an amphitheatre, and girdled by Moorish walls and towers. It was a medieval fortress protecting Valencia against Aragon, and has a Gothic church, founded in 1317. Blankets and sashes are made. Morella was the chief stronghold of the Carlist Cabrera, who twice defeated the forces of Queen Christina here in 1838, but it was bombarded and taken by Espartero in 1840.

**Morelos.** Small inland state of Mexico. It is situated immediately S. of the Federal dist. which surrounds the city of Mexico. In the mountainous N., the climate is cold; the S. occupies part of the slope of the Mexican plateau, and has a hot climate. The first sugarcane plantations were established here by Cortes, and the sugar industry is still predominant; rice, coffee, cereals, and fruits are grown. Silver, copper, and zinc are mined. Cuernavaca is the capital. Area 1,916 sq. m. Population 182,711.

**More Pork.** Popular name for a species of nightjar, *Podargus curvieri*. It occurs in Australia and Tasmania, and is so called from the sound of its cry. It is also called frogmouth, in allusion to its large mouth. It is dull grey in colour.

**Moresnet.** Village and dist. of Belgium. It lies on the E. frontier of the prov. of Liège, 4 m. S.W. of Aix-la-Chapelle (Aachen), and contains rich zinc deposits, under the Vieille Montagne, or Altenberg, worked by a Belgian company. During 1816-1919 Moresnet was a neutral state, until 1841 under joint Belgian and Prussian admini-

stration, thereafter under the government of its own burgomaster and council, the inhabitants making choice of Belgian or German legal rights and military service. The village of Neutral-Moresnet, or Kalmis, was the centre of the state. In 1919 Moresnet was incorporated with Belgium. Pop. 2,850. *Pron.* Mor-ay-nay.

**Moreton Bay.** Harbour of Queensland, Australia. It measures 49 m. by 17 m., and is enclosed by the narrow sandy islands of Moreton and Stradbroke. Brisbane River enters it, Brisbane being 15 m. S.W. of the bay. The neighbouring locality developed into Queensland.

**Moreton Bay Chestnut** (*Castanospermum australe*). Tall evergreen tree of the family Leguminosae, and a native of Australia. It has a smooth bark, and the large leaves are broken into two rows of pointed oblong leaflets. The flowers are at first canary-coloured, becoming a rich scarlet, and hang in loose sprays. The large, oblong, woody pods contain

Moreton Bay Chestnut. Foliage, flower, and fruit of the Australian evergreen

beans, which are said to taste, as they look, like chestnuts, hence the name. The heart-wood is dark-coloured, and is valued by cabinet-makers and turners; but it shrinks considerably in drying.

**Moretonhampstead.** Market town of Devon, England, on the edge of Dartmoor, 11 m. S.W. of Exeter, with a rly. station. A row of almshouses is notable for its stone façade fronting the main street. The 15th century church has a turreted tower with a 13th century arch looking into the nave.

Near the town is much beautiful scenery, notably along the Exeter road. Pop. 1,587.

**Moreton-in-the-Marsh.** Market town of Gloucestershire, England, 16 m. N.E. of Cheltenham. It has a broad main street and fine

Moreton-in-the-Marsh, Gloucestershire. The market hall, left, and the old tollhouse, right

17th century houses. The White Hart inn is associated with Charles I, and in the cottage hospital are preserved the chair, cushion, and footstool used by him at his trial. Moreton is a rly. junction, and the Four Shires Stone, 1½ m. outside the town, marks the meeting place of Glos, Oxon, Warwickshire, and Worcs. Pop. 1,382.

**Moretto, L.** (1498-1554). Italian painter. Born at Rovato, near Brescia, his real name was Alessandro Bonvicino, and he was a pupil of Ferramola. Influenced by Romanino, Titian, and Raphael, he painted religious pictures and some portraits. In 1521 he was engaged on frescoes with Romanino, in S. Giovanni, Brescia. His other works include Christ with His Cross, at Bergamo, 1518; The Ascension, 1526; Martinengo Cesaresco, 1526, in the National Gallery, London; Madonna with S. Cecily, 1540; Christ in the House of Levi, 1542. The master of Moroni, he was noted for technique in chiaroscuro. He died Dec. 22, 1554. Il Moretto means the blackamoor.

**Morgan, Charles Langbridge** (b. 1894). British novelist and essayist. Born Jan. 22, 1894, he entered the Royal Navy as a cadet, served in the Atlantic and on the China station, and in the First Great War; then was at Brasenose College, Oxford. He

Charles Morgan, British novelist

joined the Times in 1921, and was its dramatic critic 1926-39. His first publication was *The Gun-room*, 1919, and he made his name as a novelist with *Portrait in a Mirror*, 1929 (Femina Vie Heureuse prize). *The Fountain*, 1932 (Hawthornden prize); *Sparkenbroke*, 1936; *The Voyage*, 1940 (James Tait Black prize); *The Judge's Story*, 1947, were placed among novels for connoisseurs of style. In 1942 Morgan began a brilliant series of essays (under the title *Menander's Mirror*) in *The Times Literary Supplement*; published as *Reflections in a Mirror* and *Second Reflections in a Mirror*, these were translated into 15 languages. His play of "impersonal passion," *The Flashing Stream*, was produced at the Lyric Theatre, London, 1938. He married the novelist Hilda Vaughan in 1923.

**Morgan, GEORGE CAMPBELL** (1863-1945). An English divine. Born at Tetbury, Dec. 9, 1863, the

G. Campbell Morgan,  
British preacher  
Russell

son of a Congregational minister, he was educated at Douglas school, Cheltenham, and ordained in the Congregational Church in 1889. Asschool teacher and evangelist he acquired a profound knowledge of the Bible, which later distinguished his writing and preaching. He visited America, attracting large congregations, and held ministries at Rugeley and Birmingham. Pastor of Westminster Chapel from 1904, he resigned in 1917 on account of poor health. Back in America, he became extension lecturer of the Los Angeles Bible Institute, 1927-30. He returned to Westminster Chapel as preacher in 1933, and was minister there from 1935 to 1945, dying May 16 that year. He published an *Analysed Bible* in 10 vols.; *The Crises of Christ*; *The Bible and the Child*.

**Morgan, SIR HENRY** (c. 1635-88). Welsh buccaneer. He belonged to a Glamorganshire family, and, according to tradition, was kidnapped as a youth in Bristol and sold in Barbados. Later he got to Jamaica, joined the buccaneers, and rapidly rose to leadership. He took part in daring exploits against the Spaniards in Panama, Cuba, and elsewhere. In 1672 he was sent back

to England in disgrace, but won the favour of Charles II, was knighted, and returned to Jamaica as lieutenant-governor of Jamaica, dying there in Aug., 1688.

Sir Henry Morgan,  
Welsh buccaneer

*Consult* *Buccaneers of America*, A. O. Exquemeling, 1684, repr. 1891; *History of Buccaneers of America*, J. Burney new ed. 1907; *Lives*, W. A. Roberts, 1933; E. A. Cruikshank, 1935; R. Forbes, 1948.

**Morgan, JOHN PIERPONT** (1837-1913). American financier. Born at Hartford, Conn., April 17, 1837, he was educated at Boston and Göttingen. Inheriting a large fortune from his father, he joined the banking firm of Duncan Sherman in 1857, and three years later became the American agent of George Peabody and co., of London. During 1864-71 he was a partner in Dabney, Morgan and co., and then joined Drexel, Morgan—later known as J. P. Morgan and co., of New York—which henceforth was the leading financial house in America.

Under him it carried through enormous transactions, and in the U.S.A. financed great railway and shipping schemes. One of the most successful industrial enterprises created by Morgan was the U.S. Steel Corporation, or steel trust, with a capital of £220,000,000, and he was at the head of the Atlantic shipping combine. The firm restored financial stability in the U.S.A. after the panic of 1893. Morgan gave princely donations to Harvard, Yale, other educational institutions, hospitals, churches, etc. In his day he was the world's greatest art collector, and owned priceless pictures, china, and books. Keenly interested in yachting and other sports, he frequently visited Europe, and had a house in London. He died in Rome, March 31, 1913. (*Consult* *Life*, F. L. Allen, 1949.) Morgan was succeeded in his business by his son, also John Pierpont (1867-1943). Born Sept. 7, 1867, he graduated from Har-

J. P. Morgan,  
American financier  
Russell

vard in 1889 and spent eight years in the London house now known as Morgan, Grenfell and co. Under his direction, J. P. Morgan and co. acted as American agents for the British government during the First Great War, and after 1918 issued loans to various countries totalling \$1,700,000,000. Morgan presented his house in Princes Gate, London, for the American Embassy in 1920, and his father's library for a research institution in 1923. The firm dropped its security underwriting in 1933 and concentrated on private deposit banking; the investment business was turned over to a new firm headed by Morgan's son Henry. In 1940 the "House of Morgan" was recreated as an incorporated bank. "J. P. junior" died in Florida, March 13, 1943.

**Morgan, LEWIS HENRY** (1818-81). American anthropologist. Born at Aurora, N.Y., Nov. 21, 1818, he graduated at Union College, 1840; practised law at Rochester, N.Y.; and entered the state senate, 1868. His *League of the Iroquois*, 1851, inaugurated the systematic study of tribal life. In *Ancient Society*, 1877, he classified human culture into lower, middle, and upper savagery; lower, middle and upper barbarism; and civilization. *Houses and House-life of the American Aborigines*, 1881, is a standard work on the evolution of primitive dwellings. Died at Rochester, Dec. 17, 1881.

**Morgan, LADY SYDNEY** (1783-1859). Irish novelist. She was born in Dublin, the daughter of an actor, Robert Owenson. She first became known by a successful first novel, *St. Clair*, 1804, and there followed some 20 books, of which the best-known are *The Wild Irish Girl*, 1806, and *O'Donnell*, 1814. In 1812 she married Thomas, afterwards Sir Thomas, Morgan, a doctor. She died in London, April 14, 1859.

**Morgan, THOMAS** (d. 1743). English writer. About 1700 he became an independent minister at

L. H. Morgan,  
American anthropologist

Lady Sydney Morgan,  
Irish novelist

Burton in Somerset, his native county, and afterwards at Frome and Marlborough, but his advanced views led, after a few years, to the loss of his office. He later made a reputation as a religious controversialist, his opinions being akin to those of the Deists. He wrote *The Moral Philosopher*, 1736, and *The Philosophical Principles of Medicine*, a subject he had studied. He contributed many tracts on the Trinitarian controversy. Morgan died Jan. 14, 1743.

**Morgan, THOMAS HUNT** (1866-1945). American biologist. Born in 1866, he was educated at Kentucky and Johns Hopkins universities. Professor of experimental zoology, Columbia university, 1904-1928, he was appointed director of the William Kerkhoff laboratories of biological sciences, California institute of technology, in 1928, where his work in biology and physiology earned him the Nobel prize in 1933. He was president of the American association for the advancement of science in 1929 and president of the national academy of sciences in 1927 and 1931. He was awarded the Copley medal of the Royal Society, 1939. He died Dec. 4, 1945. His principal publications included: *Evolution and Adaptation*, 1903; *Experimental Zoology*, 1907; *Heredity and Sex*, 1913; *Mechanism of Mendelian Heredity*, 1915; *Critique of the Theory of Evolution*, 1916; *The Physical Basis of Heredity*, 1919; *The Theory of the Gene*, 1926; *Experimental Embryology*, 1927; *The Scientific Basis of Evolution*, 1932; *Embryology and Genetics*, 1934.

**Morganatic Marriage.** Union of a member of a royal or princely family with one of lower rank. The marriage, which was usual in Europe, especially among Teutonic peoples, is binding and the children are legitimate; but they are debarred from succeeding to their father's titles and inheritance, and occupy a position assigned to them by the morganatic contract. These unions are sometimes called left-handed marriages, because the left hand was given in the marriage ceremony instead of the right. The word comes from the German *morgen*, referring to the *morgengabe*, or morning gift formerly made by the husband to his wife on the morning after the marriage night. In Great Britain morganatic marriage, as such, is not recognized, but the Royal Marriage Act requires the consent of the sovereign to the marriage of persons of the blood royal.

**Morgan le Fay, MORGAIN OR MORQUE.** One of the three half-sisters of King Arthur in the Arthurian legends. She is otherwise represented as a fay or fairy, with the power of assuming various forms. Her part in the Arthurian stories varies greatly in the different versions. In Malory's *Morte d'Arthur* she is said to be married to King Uriens of the land of Gore, and to have been one of the three queens who bore the stricken Arthur to the isle of Avalon.

In Italian legends her name, Fata Morgana (*q.v.*), is given to a mirage in the Straits of Messina. Consult *British Fairy Origins*, L. Spence, 1946.

**Morgantown.** City of Monongalia co., W. Virginia, U.S.A. It stands on the Monongahela R., which is navigable here, and on two lines of rly., and lies in a rich and active coal area. Until 1929 the city was important for glass production, powered by natural gas, but only three glass plants and a shirt factory remained after the economic depression of that year. The university of W. Virginia, founded in 1867, which in 1947 had 2,700 students, is a well-known centre of education. The university's school of mines conducts important research in coal production and oil and gas engineering. The university campus covers 66 acres on which a stadium which seats 40,000 was built in 1924. The town was founded about 1770, given a corporation in 1785, and made a city in 1905. Pop. 16,655.

**Morgarten.** Mountain of Switzerland. It stands in the centre of Zug, at the S.E. end of the Lake Aegeri, near Settel station on the rly. from Zürich to Schwyz. In 1315 trouble arose between the men of Schwyz and the Hapsburgs, the lords of the country. Leopold of Hapsburg collected an army of 15,000 men at Zug and marched towards Schwyz. To reach the town, his men pressed up the lower slopes of Morgarten, where about 1,500 Swiss were waiting for them, Nov. 15, 1315. Boulders and trunks of trees were rolled upon them as they advanced, and in the end they were driven down to the lake. This was the beginning of the struggle that ended in the freedom of the Swiss. A monument marks the site of the battle. See Switzerland.

**Morgat.** Village of France, in the dept. of Finistère. It lies near Crozon on the bay of Douarnenez, 5 m. N. of the Cap de la Chèvre, and is noted as a bathing resort. See Grotto.

**Morgen** (Ger., morning). Word used in Scandinavia, Prussia, Holland, and especially in S. Africa as a measure of land. In S. Africa a morgen is about two acres, in Prussia and Scandinavia it is less than one. It is supposed that the word originated in the amount of land ploughed during a morning.

**Morgenthau, HENRY** (1856-1946). American financier. Born at Mannheim, Germany, of Jewish parents, April 26, 1856, he went to the U.S.A. in 1865. He was ambassador to Turkey, 1913-16, but was better known as a leading financier. He was president of the Central Realty Bond and Trust co., 1899-1905, and of Henry Morgenthau co., 1905-13. His publications include *Secrets of the Bosphorus*, 1919; *An International Drama*, 1930; and a volume of reminiscences, *All in a Lifetime*, 1923. He died Nov. 25, 1946.

**Morgenthau, HENRY, JR.** (b. 1891), American politician. Born May 11, 1891, son of Henry Morgenthau (*v.s.*) he was educated at Cornell university. Editor of the *American Agriculturist*, 1922-34, he was conservation commissioner of N.Y. State, 1931, and government farm credit administrator, 1933. Roosevelt made him under-secretary of the treasury, 1933, and he became secretary the following year, resigning in 1945 to return to his private business. His book, *Germany is Our Problem*, was published in 1945.

*Pron.* Morgan-thaw.

**Morghen, RAPHAEL SANZIO** (1758-1833). An Italian engraver. Born at Florence, June 19, 1758, he was instructed by his father and uncle, who were engravers, and sent to Rome as a pupil of Volpato. He engraved Raphael's figures of Poetry and Theology in the Vatican in 1781. In 1787 he produced Guido's *Aurora*. He also engraved *The Last Supper* after Leonardo, *The Transfiguration* and *The Madonna della Sedia* after Raphael, and Van Dyck's *Duke of Moncada*. Morghen died at Florence, April 8, 1833.

**Morgue, THE.** Former building in Paris. It was situated behind Notre-Dame, and in it the corpses of unknown persons, mainly those recovered from the Seine, were exposed here on marble slabs,

R. S. Morghen,  
Italian engraver  
After P. Caronni

pending identification. The building, which was erected in 1864, replaced an edifice with the same name and function built on the Quai du Marché-Neuf at the time of the Revolution. In 1924 the Morgue was pulled down and a new mortuary erected on the riverside at the Quai de la Rapin. The site of the original Morgue is now a public garden.

**Morhange** OR MÖRCHINGEN. Town of Lorraine, France, in Moselle dept., about 20 m. S.E. of Metz. The battle of Morhange in the First Great War was fought between French and German forces, Aug. 14-23, 1914. The French offensive resulted in initial gains, but the French were checked on coming up against the German prepared positions and forced to retire behind the Meurthe, suffering heavy casualties.

**Moriche Palm** (*Mauritia flexuosa*). Large tree of the family Palmae, native of S. America.

Moriche Palm. South American palm tree; left, inset, a single flower spray

The enormous leaves are fan-shaped, forming a huge crown to the lofty trunk. The fruits have a tessellated appearance due to a covering of hard, shining scales. From the young fruits a beverage is prepared, and the sap, fermented, becomes palm wine. A sago-like food is yielded by the soft inner part of the stem; and the young leaves torn into strips are twisted into string and cordage.

**Moriez**, ZSIGMOND (b. 1879). Hungarian novelist. Born June 30, 1879, at Csécs, he became a journalist. He was editor of the literary periodical Nyugat (The

West), wrote many powerful novels, especially about Hungarian peasant life, some of which were translated into other languages, and a number of successful plays, among which *Sári Biro*, 1910, stands out. He was considered a leader of naturalism in Hungarian literature.

**Morier**, JAMES JUSTINIAN (c. 1780-1849). British diplomatist and writer. Member of a family of diplomatists, he was born at Smyrna (Izmir), held an appointment at the Persian court, and wrote books on his travels in Persia, Armenia, and Asia Minor, and a delightful Oriental romance, *The Adventures of Hajji Baba of Ispahan*, 1824. Died at Brighton, March 19, 1849.

J. J. Morier, British diplomatist After W. Bozall

**Mörrike**, EDUARD (1804-75). German poet. He was born at Ludwigsburg, Württemberg, Sept. 8, 1804, and had already published a novel, *Maler Nolten*, 1832, when in 1834 he became pastor at Cleversulzbach, Württemberg. In 1838 his poems won him fame. In 1843, owing to ill-health, he resigned his pastorate, but he was professor of German literature at Stuttgart, 1851-66. He died June 4, 1875.

**Morillo**, PABLO (1778-1837). Spanish soldier. Born May 5, 1778, he fought against Napoleon, and in 1815 was sent with an army to S. America to reduce the rebels to obedience. In Colombia and Venezuela he acquired a sinister reputation by his cruelties. He secured possession of Cartagena and Bogotá, but afterwards was defeated by Bolívar and returned to Spain in 1820. In 1823 he submitted to the French and was exiled, but in 1832 he was again in Spain, fighting against the Carlists. He died July 27, 1837.

**Morin**. Name of two small rivers in France. The Grand Morin joins the Marne near Esbly, and the Petit Morin, rising in the marshes of St. Gond, N. of Fère-Champenoise, joins the Marne at La Ferté-sous-Jouarre. Both were prominent in the First Great War. See Marne, Battles of the.

**Morina**. Genus of perennial herbs of the family Dielsaceae, natives of Asia. They have long, slender, spiny-toothed and opposite leaves, and tubular flowers in whorls above the upper leaves. In the most frequently cultivated

species, *M. longifolia*, they are at first white, then pink, later crimson. In *M. coultieriana* they are pale yellow.

**Morioka**. Town of Japan, in Honshu. An island town, on the N.E. rly., 330 m. N. by E. of Tokyo, it is the prefectural capital of Iwate on the banks of the Kitakami. It contained in feudal times the seat of the Nambu family; Nambufuji, or Iwate-san, lying 22 m. to the N.W. It is the centre of an agricultural dist. noted for horse rearing. Textiles and hardware are the chief industrial products. Pop. 69,127.

**Moriscos**. Name given to the Moors in Spain after their conquest in 1492. After various measures of persecution and restriction of rights, notably during 1500-25 and under Philip II in 1568, they were finally expelled from Spain under Philip III in 1609-10, with the exception of those who had become Christians, and of the children under four, who were retained and baptized. See Moors; Spain: History.

**Morison**, JAMES AUGUSTUS COTTER (1832-88). British author. Born in London, April 20, 1832, he passed his childhood in France. He was educated at Highgate school and Lincoln College, Oxford, and became associated with the Positivists. His book, *The Service of Man*, 1887, is an argument for Positivism; he also produced a fine *Life of S. Bernard*, 1863. He died Feb. 26, 1888.

**Morison**, ROBERT (1620-83). Scottish botanist. Born at Aberdeen, he was educated at the university there, and was intended for the ministry, but abandoned that career to serve against the Covenanters. Dangerously wounded at the battle of the Brigg of Dee, he fled to Paris, studied botany and zoology, and took a medical degree at Angers. About 1650 he received an appointment in the

Morina. Foliage and flower whorls of *M. longifolia*. Inset, single flower

household of the duke of Orleans as one of his physicians and helped in the oversight of his gardens at Blois. Morison crossed to England with Charles II, who made him his senior physician and botanist. Professor of botany at Oxford. from 1669, he died Nov. 10, 1683. His work in identifying genera and species made him one of the greatest pioneers in classification.

**Morisot, BERTHE MARIE PAULINE** (1841-95). French painter. Born at Bourges, Jan. 14, 1841, she studied under Oudinot, with whom she painted landscape. Later she met Manet, painted figure subjects under his direction, and married his brother Eugene in 1874. An exhibitor at the Salon from 1864, she joined the Impressionists and showed work at their first exhibition in 1874. The finest example of her art, *A Young Girl at a Ball*, is in the Luxembourg. She died March 2, 1895.

**Morlaix.** Town of France, in the dept. of Finistère. It lies on the river Morlaix, formed by the streams Jarlot and Queffieu, 37 m. by rly. E.N.E. of Brest, and 4 m. from the sea. The tidal river allows of a small harbour, and there is trade in grain, vegetables, dairy produce, horses, etc., and a tobacco factory in the town. A branch rly. runs to Roscoff and other coastal villages. The 16th century church of S. Melaine has interesting carvings. Pop. 15,121.

**Morland, GEORGE** (1763-1804). British painter. Born in London, June 26, 1763, he was instructed by his father, H. R. Morland, and influenced by George Stubbs, the animal painter. He exhibited at the R.A. from 1778 to 1804, and at the Society of Artists, 1777-

George Morland, British painter

82, almost wholly subjects of a domestic nature and country scenes with animals. Morland married in 1786 the sister of William Ward, whose engravings helped to popularise his work. He painted with facility, but loose living involved him in constant financial difficulties, and he died in a sponging-house in London, Oct. 27, 1804. His masterpiece, *The Inside of a Stable*, 1791, is in the National Gallery, London. Of his *Dancing Dogs* 500 engraved copies were sold in a few weeks. See *Engraving*; consult *Life and Works*, G. C. Williamson, 1904.

George Morland. *Horses in a Stable*; a characteristic example of the artist's treatment of animal life, now in the Victoria and Albert Museum

**Morley.** Mun. bor. of the W. Riding of Yorkshire, England. It is 4 m. S. of Leeds, and connected therewith by rly. S. Peter's church is modern, as is the town hall. Industries include the manufacture of woolen goods. Mentioned in Domesday, Morley was a village until the industrial developments of the 19th century. It became a corporate town in 1885, and since 1918 it has united with Batley to send a member to parliament. The 1st earl of Oxford and Asquith was born here. Since 1937 the bor. has included Ardsley, Drighlington, and Gildersome. Near is Howley Hall, long the seat of the Saviles. Market days, Fri. and Sat. Pop. 39,625.

**Morley, JOHN MORLEY, 1ST VISCOUNT** (1838-1923). British author and politician. The son of a surgeon, he was born at Blackburn, Dec. 24, 1838, and educated at Cheltenham and Lincoln College, Oxford. While studying for the bar he edited the *Literary Gazette*, and in 1867 published his first book, a study of Burke. That year he became editor of the *Fortnightly Review*, and during 1868-70 was in charge also of the *Morning Star*. Fine studies of Voltaire, Rousseau, and Diderot and

the *Encyclopédistes* appeared in the 1870's, and were included in his *Critical Miscellanies*. During 1880-83 he was editor of the *Pall Mall Gazette*. Morley edited Macmillan's series on English men of letters and English statesmen, contributing volumes on Burke, Walpole, and Cromwell.

He entered politics as Liberal M.P. for Newcastle-on-Tyne in 1883, which involved severing his connexion with journalism though not with publishing. Within three years he was Gladstone's chief secretary for Ireland, a post he held again 1892-95. From 1896 to 1908, when he was created Viscount Morley of Blackburn, he sat for Montrose burghs; he was secretary for India, 1905-10, carrying through the Morley-Minto reforms, and then lord president of the council, resigning in 1914 upon Great Britain's declaration of war.

When the Order of Merit was instituted in 1902, Morley was made a member, and from 1908 he was chancellor of the university of Manchester. From 1895 he was engaged on his monumental *Life of Gladstone*, published 1903. In 1891 he had become a bencher of Lincoln's Inn, and in 1894 a trustee of the British Museum. In 1902 Carnegie presented to him the library bought from Lord Acton's executors, and this Morley handed over to Acton's university, Cambridge. *Recollections*, published 1917, gave confidential glimpses of politics, and its literary grace charmed readers. Morley died Sept. 23, 1923. Consult *Collected Works*, 15 vols., 1920; *Life*, J. H. Morgan, 1924; *Free Minds*: J. M. and His Friends, F.W. Knickerbocker, 1945.

Morley arms

Lord Morley, British statesman  
Baines

**Morley, CHRISTOPHER DARLINGTON** (b. 1890). American writer. Of British descent, he was born at Haver-

ford, Pa., May 5, 1890. He went to the university there and to New College, Oxford. Having been with the publishing firm of Doubleday, Page and Co., 1913-17, and on the New York Evening Post, 1920-24, he was contributing editor of the Saturday Review of Literature, 1924-39. He made new friends in Great Britain by his part in the international radio feature, Transatlantic Quiz. As a novelist he began with *The Eighth Sin*, 1912, but made his name with *Thunder on the Left*, 1925, a finely-written fantasy, later dramatised. Essays followed in 1927, and *The Trojan Horse*, 1937; *Kitty Foyle*, 1939; *The Middle Kingdom* (poems), 1944; *The Old Mandarin*, 1947; *The Man Who Made Friends with Himself*, 1949.

**Morley, EDWARD W.** (1838-1923). American physicist, for whose work on relativity with A. A. Michelson see Michelson.

**Morley, HENRY** (1822-94). British man of letters. Born in London Sept. 15, 1822, the son of a doctor, he was educated at Newwied, Germany, and King's College, London. He became associated with Household Words, *All the Year Round*, and *The Examiner*, of which he was editor

1859-64. In 1865 he became professor of literature at University College, and in 1878 at Queen's College. He was principal of University Hall, Gordon Square, 1882-90, and died May 4, 1894. Sound in criticism and an excellent teacher, he edited several libraries, including Morley's *Universal and Cassell's National*, and wrote a series of volumes on English writers down to Shakespeare, 1887-95; also *Lives of Palissy*, 1852; *Cornelius Agrippa*, 1856; *Marot*, 1871.

**Morley, SAMUEL** (1809-86). British merchant. Born in London, Oct. 15, 1809, the son of a hosiery merchant, he entered the family firm of I. and R. Morley, and became sole owner in 1855. Under

his guidance it became the largest of its kind, with several factories in and around Nottingham and branches all over the world.

A strong Nonconformist, he generously supported the Congregationalists. In 1865 he entered parliament as Liberal M.P. for Nottingham, but the following year he was unseated on a petition. In 1868 he was elected for Bristol and remained an M.P. until 1885. He was greatly interested in education, supported temperance, and was eager to remove Nonconformist disabilities. At one time a proprietor of the *Daily News*, and for some years a member of the London School Board, he died Sept. 5, 1886, having refused a peerage. In 1912 his eldest son, Samuel Hope Morley, became Baron Hollenden.

**Morley, THOMAS** (1557-c. 1603). English composer. A pupil of William Byrd, he studied music at Oxford, and in 1592 was made a gentleman of the chapel royal. He was at one time organist of St. Paul's, and in 1598 secured a monopoly for the issue of song books. He composed many ballets, madrigals, and canzonets for voices as well as instrumental music, his best known piece being the music to *It was a Lover and His Lass*, in *As You Like It*. His *Plaine and Easie Introduction to Practicall Musicke*, 1597, was the first treatise of this kind published in England.

**Morley College.** A London institution for the education of adolescents and adults from the age of 16. The college was founded in 1885 as part of the Old Vic, and was named after Samuel Morley, who gave it generous financial help. Opened in Waterloo Road, it was transferred to 61, Westminster Bridge Road, S.E.1, in 1924. A new wing was built in 1937, and this was the only part of the building remaining after the college was hit by a German bomb in Oct., 1940. The college is an aided institute under the L.C.C., from which it receives an annual maintenance grant. It offers evening classes in social science and history, philosophy and psychology, languages, English, drama, mathematics, science, art, music, dancing, and gymnastics. Weekly lec-

tures, open to non-students, are held on subjects of general interest.

**Mormon, BOOK OF.** Scriptures of the Mormon Church, purporting to be a translation of an alleged revelation to Joseph Smith. In 1827 Smith asserted that under angelic guidance he had discovered these scriptures engraved on a number of gold plates which, by Divine assistance, he professed himself able to translate. The work appeared in 1830, and is a curious story of the prehistoric inhabitants of N. America, couched in an imitation of Biblical phraseology and full of anachronisms, many of which were corrected in later editions. Smith asserted that the original was written in "reformed Egyptian" characters and in a dialect of Hebrew, which he was able to translate by looking through two crystals he called Urim and Thummim.

The Book of Mormon was first published for the "translator" by E. B. Grandin of Palmyra, N.Y., in 1830. Many editions have been published in English; and it has been translated into many other languages. The original MS. is in the custody of Frederick M. Smith, of Independence, Mo.. U.S.A.

**Mormons.** Usual designation of a religious sect founded in U.S.A. under the title of The Church of Jesus Christ of Latter Day Saints. The origins of the Mormon religion are to be found in the life of Joseph Smith, upon whose alleged revelation their tenets are based. Having produced the Book of Mormon (v.s.) and communicated his "revelations" to his friends, in 1830 he formally organized the church of which he was the presiding elder. There were five other members present, and from these six arose the organization of the Church of Latter Day Saints. The earnestness of its founders, and their advent at a time when religious revivals were stirring people throughout the New England states, caused the movement to spread rapidly. From the beginning a great feature of Mormonism was the sending out of missionaries, and by the close of the year many converts had been baptized. The doctrines of the Church at that time are described under the article *Mormons, The Reorganized*.

In 1831 the Church moved to Kirtland, Ohio, where a temple was built. The inhabitants, however, resented the Mormons' intrusion, disliked their doctrines, and finally insisted upon their departure. Ever moving westwards, the headquarters of the Church were trans-

W. & D. Downey

ferred in 1838 to Far West, Missouri. Persecution followed, Smith and others being charged with treason, and when they escaped the church moved to Commerce, Illinois, which they renamed Nauvoo. The city grew rapidly, and it seemed as though Zion had been reached. All this time missionaries had been busy in Europe, especially in England, and the stream of immigrants steadily increased. It was, however, in the midst of this prosperity that Joseph Smith received his fatal "revelation" on polygamy, 1843. At first he and those to whom he communicated the revelation refrained from announcing it to the world; some missionaries, indeed, whilst stoutly denying the truth of the rumours which had rapidly gone abroad, were secretly polygamists.

Amongst the Mormons themselves there was great opposition to the doctrine, and in 1844 plurality of wives was denounced in a Nauvoo paper. The indignation of the Gentiles, as the Mormons called their neighbours, was intense, and they resolved to drive the Mormons out by force. In the commotion which ensued, Smith and his brother Hyrum, who were in gaol on a charge of treason, were dragged out and shot. After much irresolution, Brigham Young was elected first president. Amid the confusion in their own ranks and the bitter hatred of their neighbours, the Mormon Church would have fallen to pieces had it not been for his able though unscrupulous management.

In 1846, under his guidance, the whole church began migration westward, and in July, 1847, the first party reached Great Salt Lake, near which they decided to build their city. Crops were planted, houses were built, yet another temple erected, and over all Young ruled with a rod of iron. The population increased with immigration, and in 1852 numbered over 25,000. In that year the polygamy revelation was published and the Reorganized Church (*v.i.*) broke away. Young had been trying to obtain the recognition of the Salt Lake settlement as a state, under the name of Deseret, but the publication of the revelation was fatal to his hopes. The Territory of Utah was organized instead, and Young was made governor; but he so misused his power that troops were sent to uphold government authority and the Mormon War broke out in 1857. There was, however, little friction with the troops; Young

gave in and never afterwards set himself so resolutely against the Federal power.

From 1862 the U.S. government did its utmost to suppress polygamy, but with little success until in 1882 the Edmunds Law was passed, disenfranchising polygamists and convicting nearly 500 persons of unlawful cohabitation. Young had died in 1877, and in 1890 the president of the Church, Wilford Woodruff, published a manifesto advising his followers "to refrain from contracting any marriage forbidden by the law of the land." On the condition that no plural marriages should thenceforward take place, Utah was in 1896 made a state. Ostensibly polygamy was abandoned, but in 1903 Joseph Fielding Smith (1838-1918), grandson of the "prophet" and president of the Church, admitted on oath that since 1890 he had lived with his four wives who had borne him children. On Smith's death in 1918 the presidency was given to Heber J. Grant, himself a polygamist.

The doctrines of the Utah Church, as distinguished from those of the Reorganized Church, are baptism for the dead, and celestial marriage, a doctrine teaching that, whereas death dissolves all earth-made marriages, a celestial marriage is for eternity, and women who are "sealed" to a man are his in heaven, where the greater the number of wives and children, the greater the glory. Moreover, as later teaching unfolded, the more children begotten, the more bodies for the reception of disembodied spirits.

In the court of common pleas, Lake City, Ohio, it was decided in 1880 that the Reorganized Church was, so far as property was concerned, the legal successor and continuation of the Church founded by Joseph Smith, but the main body has always remained in communion with Brigham Young and his successors.

In 1948 the total membership was about 870,000, mostly in Utah, where they constituted about two-thirds of the pop. in 1940 (they were about three-quarters of the pop. in the 1920s). There are a

number of Mormons also in Idaho and Arizona. Of their eight temples, four are in Utah, one each in Arizona and in Idaho, at Hilo in Hawaii, and at Cardston, Alberta.

*Bibliography.* History of Salt Lake City, F. W. Tullidge, 1886; The Founder of Mormonism, I. W. Riley, 1902; The Story of the Mormons, W. A. Linn, 1902; Scientific Aspects of Mormonism, N. L. Nelson, 1904; The Mystery of Mormonism, S. Martin, 1920.

**Mormons, THE REORGANIZED.** Church of Latter Day Saints. After the death of Joseph Smith in 1844 a number of the Mormons, distrusting Brigham Young and refusing to acknowledge his election to the presidency of the Church, established in Zarahemia, Wis., the Reorganized Church of Jesus Christ of Latter Day Saints, 1851-

Mormon Temple at Salt Lake City, Utah, with statue of Brigham Young in foreground

52. In 1860 they were joined by Joseph Smith, the "prophet's" eldest son, who became president. They denied the doctrines of polygamy and baptism for the dead.

They believe that through apostasy from the primitive doctrines of the Christian church, the authority to administer in the ordinances of the gospel was lost. This authority was restored to earth by angelic administration in 1829-30, and men were set apart to serve in the various grades of the priesthood. These men and their successors in the work taught the principles of the Gospel, including those enumerated in the epistle to the Hebrews; faith, repentance, baptism by immersion in water, laying on of hands. The promised gifts and powers of the gospel are enjoyed by the faithful; including the gifts of prophecy, revelation, healing, visions, tongues. The "Saints" look forward to the second personal advent of Christ. Another ideal is that of a people gathered and educated in righteousness, equal in all things temporal and spiritual. The present headquarters of the

Church are in Independence, Mo., and membership is about 113,000. *Consult* History of the Church of Jesus Christ of Latter Day Saints, H. C. Smith, 1901.

**Morning Advertiser**, THE. London morning newspaper and organ of the Licensed Victuallers' Association. It was established Feb. 8, 1794. Under the editorship (1850-71) of James Grant, it was one of the first London papers to accept Reuter's telegrams. Lord Brougham and Sir David Brewster were early contributors, and the editors have included Capt. Hamber, Col. A. B. Richards, and Hamilton Fyfe.

**Morning Glory** (*Ipomea purpurea*). Major convolvulus of the seedsman. A twining, climbing herb, one of the family Convolvulaceae, it is a native of tropical America. The leaves are heart-shaped, alternate, and without teeth, the flowers large and funnel-shaped. *See* Convolvulus.

Morning Glory. Spray of foliage and flower

**Morning Heroes**. A choral symphony by Arthur Bliss. It was composed in honour of those who fell in the First Great War, with words selected from poets ranging from Homer to Wilfred Owen. It was first performed at the Norwich Festival in 1930.

**Morning Post**, THE. Former London daily newspaper. It was the oldest daily political newspaper and was established by Henry Bate, Nov. 2, 1772, as The Morning Post and Daily Advertiser, and edited by him during 1775-80. Its early contributors included Lamb, Coleridge, Southey, Wordsworth, Sir J. Mackintosh, Arthur Young, and Mackworth Praed. In 1795 it was acquired by Peter and Daniel Stuart for £600. It passed into the hands of the Cromptons, paper manufacturers, in 1849, when Peter Borthwick, became first manager and then editor, being succeeded in 1852 by his son Algernon, afterwards Lord Glenesk, who became proprietor in 1876 and left it to his only surviving daughter. She in 1893 married the 7th earl Bathurst. It was sold to a group of Conservatives in 1924.

Its editors have included Sir William Hardman, 1872-90; Alger-

non Locker, 1895-97; J. Nicol Dunn, 1897-1905; Fabian Ware, 1905-11; and H. A. Gwynne. The later success of the paper dated from the reversion in 1881 from 3d. to its original price of 1d., but during the First Great War it was raised to 2d. In 1927 it was again reduced to 1d. For many years it represented generally the political views of the Right Wing of the Conservative party, though maintaining a sturdy independence of opinion. The last number appeared on Sept. 30, 1937; the paper was then absorbed by the Daily Telegraph, which became the Daily Telegraph and Morning Post. A memorial by W. H. Hindle was published in 1937; *consult also* Lord Glenesk and the Morning Post, R. Lucas, 1910.

**Mornington**. Village of co. Meath, Eire. It stands on the Boyne, 2 m. from Drogheda. From it the family of Wesley, or Wellesley, to which the duke of Wellington belongs, took the title of earl, still held by the duke. Richard Colley, M.P., who took the name of Wesley on succeeding to some estates, was made Baron Mornington in 1746, and his son Garret was made an earl in 1760. The 2nd earl was the Marquess Wellesley.

Mornington is the name of the largest of the Wellesley Islands, Queensland. It is situated at the S. end of the gulf of Carpentaria. Another Mornington is a watering-place of Victoria and yet another is a suburb of Dunedin, N.Z.

**Morny**, CHARLES AUGUSTE LOUIS JOSEPH, DUC DE (1811-65). French statesman. He was born in Paris, Oct. 21, 1811, an illegitimate son of Hortense, queen of Holland, and half-brother to Napoleon III. In 1842 he was elected deputy and, having taken part in the coup d'état of Dec. 2, 1851, he became Napoleon III's first minister of the interior. He was president of the Corps Législatif from 1854 onwards, fulfilled a mission to Russia, 1856, and was made duke in 1862. He wrote several vaudeville pieces, under the pseudonym of M. de St. Rémy. He died in Paris, March 10, 1865. *Consult* Imperial Brother, M. Chapman, 1932.

**Moro** (Spanish, Moor). Mahomedan people in the Philippine islands. Numbering 277,500, one half are in Mindanao, the other mostly in Palawan and the Sulu archipelago, with offshoots on the Borneo coast. Mainly of Indonesian stock, already Muslimised when they arrived prior to the Spanish conquest, they betray

Arab admixture, and were formerly addicted to piracy.

**Morobe**. Town of New Guinea. Situated on the shore of Hercules Bay in the narrow E. portion of the island, it is one of the chief harbours.

**Morocco**. Country of Africa, an associated state of the French Union, but with a Spanish zone. It lies W. of Algeria, with a coastline along the Mediterranean Sea and the Atlantic Ocean.

Morocco arms

The High, Middle, and Anti-Atlas ranges cross the country N.E. from Agadir, the highest areas exceeding 15,000 ft. in elevation. The Rif, a much lower range, flanks the N. coast. The parallel ridges of the Atlas form part of the great system of fold mountains which stretches discontinuously across the world from N.E. India and includes the Alps and Apennines; for this reason N. Morocco is physically European in character, and Africa may be said to begin at the edge of the Sahara. Perennial streams, the Moulouia (Muluya) and Sebou (Sebu), drain the N. slopes. S. is the Sahara, and the S. streams, Ziz, Dra, Guir, terminate on the desert edge. The S. side of the Sebou valley is forested.

Agriculturally and commercially the country is in a state of transition. Colonisation by Europeans is actively encouraged and experimental gardens and nurseries have been established by the authorities. The cultivation of barley and other crops is being extended. In the Sebou valley there are thousands of acres of vineyards under native tillage; European vineyards have prospered near Casablanca. There are extensive orchards of olive, fig, orange, lemon, palm, and almond trees. Tunny and sardines are caught in Mediterranean waters. Copper, lead, antimony, silver, gold, and petroleum occur, and iron ore is exported from the Spanish zone. Cotton goods and sugar are the principal imports; barley, eggs, and wool being the chief exports. Trade is almost entirely with France and Algeria, with the latter both by sea and land; the United Kingdom supplies about a quarter of the imports. Nearly half the shipping at Moroccan ports flies the French flag.

Railways connect Marrakesh with Casablanca, Rabat, Meknes, Fez, and Oudja, beyond which a

short extension of 9 m. makes a junction with the rly. system of Algeria. A narrow gauge line connects Ceuta with Tetuan. Roads, many of which are suitable for motor traffic, connect the large towns and are being extended rapidly; a main coast road joins Rabat to Mogador.

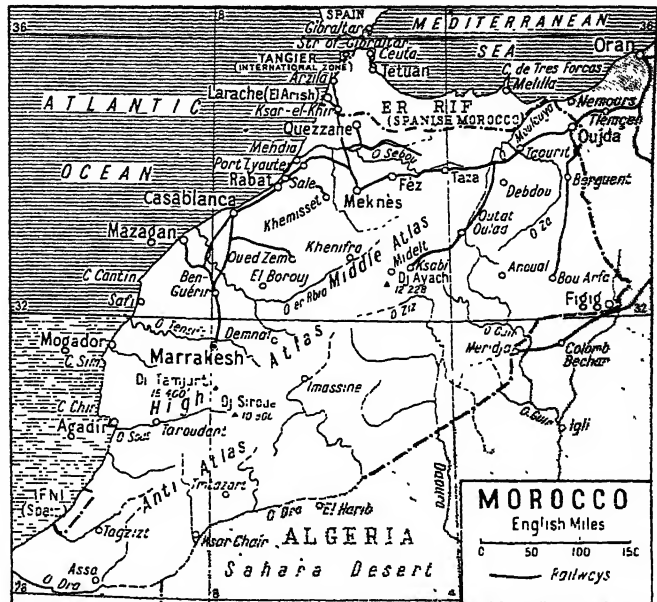

Morocco was a Roman province, called Mauretania. Throughout the Middle Ages it was in the hands of Mahomedan invaders, who used it to obtain reinforcements for the Moorish conquests and occupation of Spain. After the Moors were expelled from Spain in 1492, the Spanish Moors and Jews were a source of strength to Morocco. In 1577 both France and England had accredited representatives in the country, and Tangier was occupied by the English, 1662-84. French penetration of the country led to the Conference of Madrid in 1880, when the powers drew up a code defining the status and rights of foreigners. French progress in Algeria led to an active participation in Moroccan affairs, and in 1904 England gained a free hand in Egypt by granting the same privilege to France in Morocco.

#### The Agadir Incident

Spanish fears were pacified by the establishment of the Spanish zone, but Germany intervened in 1905 and prevented the acceptance by the sultan of the reforms proposed by France; this led to the Algeiras Conference, 1906, where the way for French control of Morocco was opened. In 1911 France and Spain were busy with military occupations, the German Mannesmann brothers were intriguing in the S., and the German warship Panther appeared at Agadir and precipitated a crisis, as a consequence of which France purchased the right to protect Morocco by concessions of territory adjacent to German Cameroons.

The sultanate of Morocco was formerly an independent state, being the last of the Barbary empires. In 1912, however, the sultan accepted the protectorate of France, and by the Franco-Spanish treaty of the same year the country was divided into three areas with different administrations. Tangier and dist., about 140 sq. m. in area with 60,000 inhabitants, was made a special zone; the N. coast area became a Spanish zone, about 11,000 sq. m. in extent, with about 550,000 people. The remainder was left to the sultan controlled by a French resident-general.

In 1923 both France and Spain were engaged in the pacification

MOROCCO. Map of this North African country, an associated state of the French Union, with coastlines on the Atlantic and Mediterranean

of their respective spheres. Marshal Lyautey (q.v.), the French resident-general, arrived at Taza in April to organize a campaign against the dissident tribesmen of the Beni-Warain, and in the Wazanf region. In June of that year Spanish troops were successful against Raisuli, but in July, 1921, they suffered a severe reverse in the Melilla zone. At Sidi Dris and elsewhere heavy defeats were experienced. A column under General Navarro was cut off at Monte Arruit and destroyed after a stout resistance. General Silvestre, the commandant-general, and thousands of troops were killed at Anual, and in August Melilla was invested by the tribesmen.

#### The Rising of the Riffs

Severe fighting between the Spaniards and the tribesmen continued throughout 1924. Abdel Krim, the Riff leader, compelled the retirement of the Spanish forces in the western zone of the Spanish protectorate in Dec., and in Jan., 1925, captured Raisuli, now Spain's native auxiliary. The Marquis de Estella, as commander-in-chief in Morocco, supervised the retirement to the coastal zone.

In May, 1925, the victorious Riffs carried the war into the French portion of Morocco, but this proved fatal. The French and Spanish forces together took the offensive with such good results that in the middle of 1926 Abdel Krim surrendered. After this the

pacification of the country was rapidly completed.

The sultan of Morocco resides in the French zone, usually at Rabat, but all effective power in that zone is exercised by the French resident-general. The protectorate authorities have created a large body of modern law, edicts of which are issued by the sultan, but promulgated and enforced by the resident-general. In the Spanish zone the sultan's powers are delegated to a khalifa, chosen from two candidates presented by the Spanish govt. Administration is controlled by a Spanish high commissioner at Tetuan. The Spanish civil war of 1936-39 began with a rising of Spanish troops in Morocco in July, 1936, and throughout the hostilities in Spain Moorish troops formed a large proportion of Gen. Franco's forces. In 1937 there was considerable German infiltration into Spanish Morocco, which was clearly intended to develop military as well as commercial interests.

British capitulations in French Morocco, which had existed since 1856, were abolished by an Anglo-French convention on July 29, 1937, and British subjects became liable to the jurisdiction of the same tribunals as the French. British capitulations in Spanish Morocco continue in force, and the British postal agency at Tetuan is subordinate to the central British post office at Tangier.

After the defeat of France in 1940, French Morocco adhered to Vichy France, but, following the British-U.S. landings in N. Africa in 1942, the territory became an important allied military, air, and naval base and source of raw materials.

The sultan's capitals are Fez, Marrakesh, and Rabat. The last-named is the chief seat of government and contains the main residence of the resident general. The French area contains 220,000 sq. m. Pop. 8,993,000. *See Africa.*

**Bibliography.** The Khalfate of the West, D. Mackenzie, 1911; Morocco, P. Loti, 1914; Le Maroc, A. Bernard, 4th ed. 1918; La France au Maroc, B. Georges-Gaulis, 1920; Morocco That Was, W. B. Harris, 1921; Morocco at the Parting of the Ways, E. F. Cruickshank, 1935; Le Maroc, St. R. Taillandier, 1940.

**Morocco Leather.** Leather made from tanned goatskins. It was first made in Morocco and introduced into Europe by way of Spain in the 15th cent. It is used principally for upholstering furniture, book binding, and in the making of bags. *See Leather.*

**Moron** (Gr. *moros*, dull). Term for an adult whose mental development is arrested at about that of a 7-year-old child.

**Morón.** Town of Spain in the prov. of Seville, near the river Guadaira. Its church dates from the 16th century. Famous for marble and chalk. Pop. 18,700.

**Moroni, GIAMBATTISTA** (c. 1520-78). Italian painter. Born at Bondo, near Bergamo, he

studied under Il Moretto at Brescia and was influenced by Lorenzo Lotto. He died at Bergamo, Feb. 5, 1578. His paintings of religious subjects are of small importance, but his portraits attained a very high level and had some influence on Van Dyck. The most notable are the Portrait of a Tailor, and the Portrait of a Lawyer, both in the National Gallery, London.

**Morosini, FRANCESCO** (1618-94). Italian soldier. A member of an ancient Venetian family, he first distinguished himself in the Venetian navy at Naxos, 1650. He defended Candia heroically against the Turks, 1667-68, and in 1684 rapidly conquered the Peloponnesus and captured Athens at the cost of destroying the Parthenon. Awarded the name

Peloponnesiaeo and elected doge in 1688, he sailed against the Turks for the last time in 1693, but they withdrew in terror. He died Jan. 6, 1694.

**Morpeth.** Mun. bor. and market town of Northumberland. It stands on the Wansbeck, 17 m.

Morpeth arms

from Newcastle. The church of S. Mary dates from the 14th century, and the grammar school from the 16th. Of the castle only the keep survives. There is a town hall, a gaol, and in the main street a clock tower. At Newminster, near the town, an abbey was established in the 12th century, and there are remains of other old buildings in the neighbourhood. The industries include engineering works and iron foundries, while in the neighbourhood are extensive collieries and market gardens. It is a rly. junction. An important cattle fair is held. The town grew up around the castle, once held by the Daecres. It is a bor. by prescription, and is governed by a mayor and council. Morpeth gives its name to a county constituency. Market day, Wed. Pop. 10,000.

**Morpheus** (Gr. *morphe*, form, shape). In Greek mythology, the son of sleep and god of dreams.

**Morphia** or MORPHINE. Alkaloid contained in opium, of which it is the active principle. In medicine it is the best drug for the relief of pain, and thus induces sleep. It may be either taken by mouth or injected under the skin. When used as a routine measure a craving for morphia may be induced in the patient (*see Drug*). Emetics, artificial respiration, and heart and respiratory stimulants are serviceable antidotes to morphia poisoning. Morphia was first isolated in 1816 by the German chemist Sertürner, and forms crystalline salts soluble in water. The supply of morphia is controlled by the Dangerous Drugs Acts. *See Opium.*

**Morphology.** The branch of physical sciences concerned with the form of organisms. In the

narrow sense it infers the study of the externally apparent features such as, in plants, the system of branching, phyllotaxis, leaf shape, inflorescences, and general flower structure; and, in animals, segmentation, and number and type and form of appendages and of surface covering. Since the external features are to a great extent dependent on the internal construction, the meaning of the term often includes studies of the internal parts which can best be carried out by cutting them apart. Strictly speaking, this is anatomy, especially when the method of approach is used for gaining knowledge of the grosser internal features themselves. If on the other hand cutting has for its end the study of the tissues as such rather than their distribution, such studies constitute histology and, when aimed at the details of cell structure, cytology.

Morpeth, Northumberland. Market place, looking towards the old clock tower

Valentine

As a branch of biology, morphology is primarily important to the taxonomist since the external form of organisms provides sets of readily acquired facts upon which recognition of types, similarities, and differences can be based and so has been the foundation of classification (*q.v.*) of organisms according to nearness of relationship. But morphology is not entirely dependable for this purpose. Organisms may have features which are similar because they have common origin, or because of similarity of function of organs of different origin (analogous structures); or alternatively organs may differ in appearance but nevertheless be considered logically as having originated from the same ancestral type (homologous structures). On this account there is a rapidly growing tendency to supplement, if not to supplant, morphology with anatomical, cytological, physiological, and ecological facts.

Giambattista Moroni,  
Italian painter

**Morphy, PAUL CHARLES** (1837–84). American chess player. Born in New Orleans, June 22, 1837, he defeated the leading players in New Orleans before he was twelve years old. In 1857 he won the first prize at the American chess congress, and later he was in Europe. In 1864 he returned to the U.S.A. and his brain gave way. He died in New Orleans, July 10, 1884. By some Morphy is regarded as the greatest chess player of all time, and Morphy's Games of Chess, ed. J. Lowenthal, 1860, is still a classic.

**Morris, SIR DANIEL** (1844–1933). British botanist. Born at Loughor, Glam, May 26, 1844, he was educated at Cheltenham, the Royal College of Science, S. Kensington, and Trinity College, Dublin. He made a special study of the plant life of the West Indies, being director of the botanic department in Jamaica in 1879 and president of the West Indian Agricultural Conferences, 1899–1908. The successful introduction of sea island cotton cultivation into the West Indies was due to Morris, who published many books on the products of Britain's colonies in the New World. Knighted in 1903, he died Feb. 9, 1933.

**Morris, GOUVERNEUR** (1752–1816). American statesman. Born at Morrisania, New York, Jan. 31, 1752, he was descended from one of Cromwell's soldiers who had emigrated to America in 1660. His father, Lewis Morris (1698–1762), was a New York judge, his mother was of a Huguenot family, whence his Christian name.

Entering public life just when the trouble between Britain and her American colonies began, Morris was a member of the congress of his own state, and of that called by the seceding states as a whole. Until 1783 he was continually employed in the cause of the Americans. He was chairman of the committee that discussed the possibilities of reconciliation with the British representatives in 1778. A prominent member of the convention of 1787, he influenced the nature of the amended constitution, and drafted its final form.

In 1789, when the French Revolution broke out, Morris was in Paris, and he remained in Europe

until 1798, acting for two years as minister to the French republic, and at other times reporting privately on European affairs to Washington. During 1800–03 he was a member of the Senate, and was afterwards chairman of the Canal Commission. He died Nov. 6, 1816. His *Diary and Letters*, published in 1888, give an account of the outbreak of the French Revolution. *Consult* Lives, J. Sparks, 1832; T. Roosevelt, 1891.

**Morris, GOUVERNEUR** (b. 1876). American writer. Great-grandson of the American statesman, he was educated at Yale university, and became a well-known writer of adventure stories. He published his first novel, *A Bunch of Grapes*, in 1897, and later works included *Putting on the Screws*, 1909; *Yellow Men and Gold*, 1921; *Tiger Island*, 1934; *Diary of the French Revolution*, 1939.

**Morris, SIR LEWIS** (1833–1907). Welsh poet. Born in Carmarthen, Jan. 23, 1833, and educated at Sherborne School and Jesus College, Oxford, he made a name as a poet with the first series of *Songs of Two Worlds*, 1871. In 1876–77 appeared *An Epic of Hades*, which was followed by *Gwen*, a dramatic poem, 1879; *Songs Unsung*, 1883; *Gylcia*, a tragedy, 1886; *Songs of Britain*, 1887; and *The New Rambler*, 1906. Knighted in 1896, he died Nov. 12, 1907.

**Morris, MARGARET** (b. 1891). British dancer and educationist. Born in London, Mar. 10, 1891, she studied dancing under Raymond Duncan, and after appearing with Ben Greet and Benson, appeared in the London production of *The Blue Bird* in 1910. She founded her own school, and her educational theory was based on a synthesis of all the arts. In 1918 she founded a school for the general education of children, and in 1925 began the application of dancing as a remedial exercise. She was appointed a member of the National Advisory Council for Physical Training and Recreation in 1937.

**Morris, THOMAS** (1821–1908). A Scottish golfer. Born at St. Andrews, June 16, 1821, he began to play golf at six years of age. In 1851 he took over the links at Prestwick and superintended the

laying out of this course. It was while he was at Prestwick that the Open Championship was inaugurated in 1860. This was won by him in 1861, 1862, 1864, and 1867. In 1863 he was made custodian of the Royal and Ancient Golf Club at St. Andrews. On the occasion of his 75th birthday a subscription was raised which totalled £1,250. He retired in Sept., 1903, and died May 24, 1908. *Consult* The Life of Tom Morris, W. W. Tulloch, 1907.

Thomas Morris, senr.,  
Scottish golfer

**Morris, WILLIAM** (1834–96). British poet. He was born March 24, 1834, at Walthamstow and educated at Marlborough and Exeter College, Oxford. Attracted by the High Church movement, he intended to take orders; but at Oxford he rapidly passed to a deeper interest in

the arts and crafts, and the making of poetry. He met Burne-Jones, and both worshipped Rossetti from afar. Thus it came that both men, rebelling like the pre-Raphaelites against Greek academism in art, and against the Renaissance, went back to the Italian primitives and the Gothic, not realizing that the mimicry of the Gothic was just as academic as mimicry of the Greeks. Morris, fascinated by the life of the Middle Ages, spent his vigorous years in trying to replant on modern life a dead thing. More profitable was his championship of the social aims of the people.

Having £900 a year on coming of age, Morris came to London and articulated himself to Street, the architect, at whose office he met his close friend, Philip Webb. Soon thereafter he met Rossetti, but the rugged personality of Morris was too marked to become utterly enslaved; and, while Rossetti urged him to paint pictures, Morris kept a keener interest in architecture and the beautifying of things in common use. Thus early he revealed his life-thought. Just as he weighed the prosperity of a people by the state of its poor,

Margaret Morris,  
British dancer  
Elliott & Fry

not of its rich, so he judged the art of an age by its craftsmanship, rather than by its genius in easel-pictures. But it is said he erred in condemning machine-made things wholesale, instead of trying to improve their design.

Morris took rooms with Burne-Jones at 17, Red Lion Square.

Morris Dance. A figure in the old English dance, performed by the Polesworth (Warwickshire) Dancers. Above, sword dance, and boy riding a hobby horse

where he began at once the art revolution by designing furniture. In 1857 he took part in Rossetti's decorating of the debating hall of the Oxford Union with tempera paintings from the Morte d'Arthur, work which was soon wrecked by the decay of the material; it was Morris's foreground of sunflowers that started the much-chafed badge of the Aesthetes. In April, 1859, Morris married the beautiful Jane Burden. Desiring an ideal home, and finding an orchard and meadow at Bexley Heath, in Kent, he there engaged Philip Webb to build him the famous Red House. The difficulty of getting furniture to suit it led to the foundation of the firm of Morris and co., which undertook the beautifying of everything, from the wallpapers and stained-glass windows and furniture to the cups and saucers, dishes, and dog-irons.

Illness soon compelled Morris to move to town; and, selling the Red House, he settled in an old house in Queen Street, Bloomsbury, in 1865. Morris was now able to devote his time to poetry again, and composed his epic, *The Life and Death of Jason*, 1867, *The Earthly Paradise*, a series of tales from Greek and medieval sources, 1868-70, and *Love is Enough*, 1872, and was soon acknowledged as a great poet. In 1871 Morris, with Rossetti, took the beautiful old house in the Thames valley called Kelmscott Manor House. The very charm of the place made him fret over the sordid lives of the workpeople.

In 1871 he went to Iceland; in 1873 to Italy; and, bored by the Renaissance, back to Iceland again.

In 1875 the Morris firm broke up, and in 1878 he went to live in his picturesque house at Hammer-smith Mall on the river's edge. He had translated the *Volsunga* saga with Magnusson in 1870; in 1876 appeared his *Sigurd the Volsung*. About 1877 Morris stepped into the arena of politics to prevent England from interfering over the Bulgarian atrocities. He was soon in the van of the Socialist movement—a movement which, as he maintained, by revolution

alone could rid the privileged classes of economic power; in 1883 he publicly declared this.

Of Morris's prose romances, the best-known are the *Dream of John Ball*, 1888, and *News from Nowhere*, 1891. Having mastered tapestries, Morris turned to printing. In 1888 he decided to print his prose romance *The House of the Wolfings*, and in 1889 *The Roots of the Mountains* in his Kelmscott Press. Then followed other prose romances, *The Glittering Plain*, *The Wood Beyond the World*, *The Well at the World's End*, *The Water of the Wondrous Isles*, and *The Sundering Flood*. He died Oct. 3, 1896. See Art; Kelmscott Press; Pre-Raphaelites.

**Bibliography.** Works, 24 vols., 1910-15; *The Books of W. M.*, H. B. Forman, 1897; *A Study in Clough, Arnold, Rossetti and Morris*, A. Stopford Brooke, 1908; *Lives*,

A. Vallance, 1897; J. W. Mackail, 2 vols., 1899; A. Noyes, 1909; A. Clutton-Brock, 1914; H. Jackson, 1926; P. Bloomfield, 1934; M. R. Grennan, 1946; E. and S. Goodwin, 1948; E. Meynell, 1948.

**Morris Dance** (Span. *morisco*, Moorish). Popular dance, said to have been ac-

quired from the Moors perhaps on the return of John of Gaunt from Spain in the reign of Edward III. In Tudor times it was well established in England as a festival dance, especially on May day, and references to it abound in English literature. Stock characters figuring in the dance around the maypole were Maid Marian (*q.v.*), frequently impersonated by a man, her paramour, her jester, Friar Tuck, a gentleman, clown, Bavarian fool, hobby-horse, and foreigners, perhaps Moriscos or Moors.

The music used for Morris dancing differs in various parts of England, and there seems to be a good deal of freedom in using old popular song tunes as well as the few undoubtedly genuine Morris tunes. The majority of the tunes are in 2-4 or 4-4 time, but 6-8 and 3-4 are not unknown. The oldest recorded Morris tune is found in Arbeau's, or Tabourot's *Orchésographie*, 1589, and runs as follows:

Some of the tunes are named after their places of origin or usage, such as the Staines Morris, beginning:

**Morrison.** Mt. of Formosa. The peak, whose altitude is variously given as 13,075, 13,945, and 14,272 ft., is the culminating point of the Niitaka range, the S. portion of the mountainous backbone of the island. The Japanese name is Niitaka-yama.

**Morrison.** ARTHUR (1863-1945). British novelist. Born Nov. 1, 1863, he became a clerk in the civil service, writing in his leisure hours. In 1890 he took up journalistic work on the

Arthur Morrison  
British author  
Russell

National Observer and elsewhere, and gained a reputation with his stories of life in the E. end of London, *Tales of Mean Streets*, 1894, and *A Child of the Jago*, 1896. Other novels include the detective stories, *Adventures of Martin Hewitt*, 1896; *Cunning Murrell*, 1900; *The Red Triangle*, 1903; *Green Ginger*, 1909. He also collaborated in the writing of three plays. An authority on Oriental art, Morrison published *The Painters of Japan*, 1911. He died on Dec. 4, 1945.

**Morrison, HERBERT STANLEY** (b. 1888). British politician. Born in Brixton, Jan. 3, 1888, Morrison

Herbert Morrison,  
British politician

was educated at an elementary school and went to work as an errand-boy at the age of 14. In turn shop assistant, telephone operator, and deputy circulation manager of a newspaper, he became secretary of the London Labour party in 1915. After being mayor of Hackney, 1919-20, he was elected to the L.C.C. in 1922, and became leader of the Socialists there; he became an alderman in 1931, and from 1934 to 1940 was leader of the council, in which capacity he was responsible for the evacuation of London children at the beginning of the Second Great War. He was M.P. for S. Hackney in 1923-24, 1929-31, and 1935-45, for E. Lewisham 1945-50, then for S. Lewisham. He was minister of Transport in the Labour government of 1929, and in 1931 became a Privy Councillor. In March, 1931, he introduced the legislation that set up the London Passenger Transport Board. Defeated at the 1931 parliamentary election, Morrison concentrated on his work in the L.C.C.; but he returned to the house of commons in 1935, and in 1940 joined Churchill's coalition government as minister of Supply. In Oct., 1940, he became home Secretary and minister of Home Security, and was a member of the war cabinet, 1942-45. In 1945 when Labour returned to power Morrison became lord president of the council and leader of the house of commons. He wrote *Socialisation and Transport*, 1933; *How Greater London is Governed*, 1935; *Looking Ahead*, 1943.

**Morrison, ROBERT** (1782-1834). British missionary. He was born at Morpeth of Scottish parentage,

Jan. 5, 1782, and in 1807 was sent by the L.M.S. as a missionary to Canton. Two years later he be-

came an official translator to the East India Company. He translated the Bible into Chinese, prepared a grammar and dictionary, and was the founder of the Anglo-Chinese College at Malacca. He died at Canton, Aug. 1, 1834.

**Morrison, WILLIAM SHEPHERD** (b. 1893). British lawyer and politician. Born Aug. 10, 1893, he was

educated at George Watson's college and Edinburgh university, and was called to the bar in 1923. After being private secretary in turn to the solicitor-general and the attorney-general, he was Conservative M.P. for Cirencester and Tewkesbury from 1929. Financial secretary to the Treasury in 1935, he was appointed minister of Agriculture and Fisheries in 1936, chancellor of the Duchy of Lancaster in 1939, minister of Food in 1939, postmaster-general in 1940, and minister of Town and Country Planning, 1943-45. During 1931-36 he was a member of the Medical Research Council and the Industrial Health Research Board. He was made a privy councillor in 1936.

**Morrison Shelter.** All-steel indoor air-raid shelter introduced in the U.K., Feb., 1941, for the protection of house occupants during air raids. Named after Herbert Morrison, then minister of Home Security, it was in the form of a table, 6 ft. long by 4 ft. high, and 4 ft. wide, the top and corner posts being of sheet steel and the sides enclosed with steel-wire mesh. During the day it was used as a table. It protected the occupants from the debris of a collapsing house, and afforded a certain amount of protection against blast. Just over a million were manufactured and supplied by the ministry of Home Security and distributed free to families with an annual in-

come below £350. It could also be purchased by others. The public had great confidence in this type of shelter, which saved the lives of countless people. See Air Raid Shelter illus.

**Morrison.** River of Ross-shire and Inverness-shire, Scotland. It rises near Loch Clunie and falls into Loch Ness at Invermoriston in Inverness-shire. Its length is 18 m. The beautiful district through which it flows is known as Glen Morrison, also spelt Moriston (see Inverness-shire). Morrison is also the name of an industrial suburb of Swansea, at one time a separate village. It has a rly. station, and is 2 m. from the town proper in a N.E. direction. See Swansea.

Morrison. The Scottish river where it descends into Loch Ness at Invermoriston

**Morristown.** Town of New Jersey, U.S.A., the co. seat of Morris co. On the Whippany river, 22 m. by rly. W. of Newark, it is served by the New Jersey and Pennsylvania and other rlys. Large estates of the wealthy surrounded the town until 1920-30, but smaller suburban homes have now largely replaced these. Settled about 1710, Morristown was incorporated in 1865. Twice during the Revolution—in 1777 and in 1779-80—it was the headquarters of Washington. Pop. 15,270.

**Morris Tube.** Rifled steel tube of .22 calibre inserted into the barrel of a .303 rifle, to permit of small bore cartridges being fired from the larger calibre weapon. It permits rifle practice to be carried out at short range. In the Royal Navy, Morris tubes are inserted into guns of all calibre to provide target practice without the expenditure of full-sized ammunition. See Musket; Rifle.

**Morse, SAMUEL FINLEY BREESE** (1791-1872) American inventor. He was born April 27, 1791, at Charlestown, Mass., and graduated at Yale, 1810. He studied art in

England with Allston and Benjamin West, exhibiting at the R.A. in 1813. Two years later he returned to New York and settled down as a portrait painter. In 1826 he was appointed first president of the national academy of design. He was interested in science and experimented in the phenomena of electricity, conceiving the possibility of using it as a means of communication, with the result that in 1835 he produced a telegraph at New York university, half a mile in length. A public exhibition of his invention in 1837 led to his association with the New Jersey firm of Vail.

S. F. B. Morse,  
American inventor

He was at first unable to interest American or European governments in his invention, but in 1843 Congress voted money for a line from Washington to Baltimore, and the first telegraph message, reading: "What hath God wrought?" was dispatched from the capital, May 24, 1844. Morse helped to introduce daguerreotyping into America, and conceived the idea of an Atlantic cable. He died at New York, April 2, 1872. *Consult Life, S. I. Prime, 1875; Letters and Journals, ed. E. S. Morse, 1914.*

**Morse Code.** System of signals for the telegraphic transmission of alphabetic letters, numerals, punct-

In 1851 an international conference compiled a code, partly from the American and partly from three other systems. This international code is now used universally for civil and military purposes. It distinguishes the letter signals by limiting the elements to a maximum of four, the numeral signals and punctuation signals being uniformly composed of five and six elements respectively. The length of the dash is three times that of the dot. When sending long lists of figures the short numerals are used. Although Morse is called the dot-and-dash system, the two symbols are not necessarily short and long in transmission. They may represent uniform needle-deflections to left and right of a median line, and in the siphon recorder used on long distance cables are printed in a continuous zig-zag from side to side. Dots and dashes are usually longer when transmitted by flag, lamp, or heliograph. *See Code; Signalling.*

**Mortagne.** Town of France. In the dept. of Orne, it crowns a steep hill, 25 m. E. of Alençon. The lofty tower of the fine Gothic church, which was built in the 15th-16th centuries, collapsed in 1890. Textiles and gloves are manufactured.

Mortagne was captured by U.S. troops on Aug. 3, 1944; but the Germans retook the town on Aug. 7, only to lose possession the same day to a counter-attack made by U.S. units. On Aug. 9, German tanks recaptured Mortagne, but were finally driven out on Aug. 12.

**Mortain.** Village of France in the department of Manche, 34 m. S.S.W. of Saint Lô. The area was the scene of heavy fighting in Aug., 1944. U.S. forces, having cleared the Cotentin pen., turned S.W. from St. Lô, took Avranches and Granville on July 31, and advanced rapidly

W. into Brittany. On the night of Aug. 6-7 the Germans made a powerful armoured counter-attack westward from the Mortain area, near the junction of the British and U.S. fronts, in the hope of reaching the coast and splitting the Allied forces. Supported by British aircraft, American infantry and armoured met and held the enemy, and in the subsequent counter-attack

prevented the German armour from disengaging while the Falaise (q.v.) gap was closing. This was the last German tank offensive but one—the last being Rundstedt's in the Ardennes (q.v.). Mortain itself changed hands several times in the fighting; it was secured by the Americans on Aug. 12.

**Mortality** (Lat. *mors*, death). Literally, the state of being mortal. It is sometimes used as a synonym for death rate, e.g. the mortality from tuberculosis is very heavy. Tables of mortality consist of figures showing the number and proportion of persons of a given age who will die each year. Bills of mortality are abstracts from parish registers showing the number of persons who died in the parish during certain periods. These were rendered unnecessary by the introduction of compulsory registration of births, marriages, and deaths. *See Death Rate; Infant Mortality.*

**Mortal Sin.** Term used in Roman Catholic moral theology for sins necessarily and immediately fatal to spiritual life unless sincerely confessed, repented of, and pardoned. Sins of a lesser degree are known as venial ones. Mortal sin has been defined as a direct and wilful transgression against some known command of God, either by omission or commission. Seven sins are reckoned as mortal or deadly, i.e. pride, avarice, lust, envy, gluttony, anger, and sloth. In the Roman Catholic Church it is held that mortal sin can only be forgiven by absolution after confession, while venial sins are forgiven by simple contrition and by a renewal of grace through Holy Communion or otherwise. *See Sin.*

**Mortar.** Mixture of fine aggregate, usually sand, and cementing material, first mixed dry and then with water. It is used for cementing together bricks, stones, and clay and concrete blocks in building construction. Lime mortar was formerly in extensive use, but has now been largely replaced by cement mortar, though if this is very rich in cement the free salts present may cause efflorescence and decay of the walling bricks or blocks. A mortar of one part Portland cement to three parts clean sand is used in walls where good strength and durability are required.

Cement-lime mortar is not so strong as cement mortar, but has certain advantages. It does not shrink very much and so crazing and cracking is avoided, and the low proportion of cement greatly

Morse Code. Alphabet, numerals, and punctuation symbols used in the United Kingdom

uation marks, and conventional phrases. The original code, devised in 1837 in collaboration with Alfred Vail, was introduced by S. F. B. Morse for use with his self-recording telegraph. A revised code, 1844, now known as American Morse, is still in local use within the U.S.A. and Canada. It allocates to the letters most frequently used the shortest signals.

reduces the risk of efflorescence. It is widely used for house walls. A suitable mix consists of one part Portland cement, one part hydrated lime or lime putty, and four parts clean sand. This mix works and spreads easily. Sand should consist of a variety of grain sizes from small to large, evenly graded. It must be clean, as any vegetable or free chemical impurities will greatly reduce the strength of the mortar, and may cause decay. Sufficient water should be used to produce a mix easily worked, but not thin enough to allow the mortar to squeeze out under the bricks or blocks. Grout is a very thin semi-liquid mortar used for filling interior spaces and fissures. It is poured, but a tube or a cement gun may be used to assist the process.

**Mortar.** Close-support infantry weapon which reached a high degree of efficiency in the Second

Mortar employed in old warfare, with large shot, which was fitted with handles for carrying

Great War. It was developed from the medieval bombard used for throwing projectiles over walls. At the siege of Constantinople in 1453 Mohammed II used bombards capable of firing stone shot weighing 1,800 lb. to a distance of 800 yds. A century later the French organized bombard companies to support their infantry. By the 16th century the bombard had developed into the mortar, firing metal shot at controlled ranges, and was essentially a cannon of large calibre and short range. After the introduction of rifled artillery in the 19th century, the mortar fell into disuse; its projectile lacked the penetrating power of a shell, and its accuracy was influenced by wind.

It was revived during the trench fighting of the First Great War, when various types were used. The earliest was a cylinder of cast iron open at one end and closed at the other, where there was a touch-hole. The bomb consisted of a tin can fitted with fragments of metal and a bursting charge. Wrapped gunpowder was dropped into the muzzle, poked with a stick to break the paper covering, and the

bomb slid in on top. A fuse was then pushed in and lit. Later the Stokes gun was introduced; the largest had a bore of 9.5 ins. and threw a 150-lb. projectile. They were inaccurate, and their ammunition, even when fired by ballistite cartridge, was always liable to premature explosion.

At the outbreak of the Second Great War the British army was equipped with a 2-in. mortar, which could fire H.E. or smoke projectiles weighing 2 lb. 2 oz. to a maximum range of 500 yds. at the rate of 20 a minute. This gave quick, close support to infantry on ground not covered by artillery observation. Its disadvantage was its short range and low destructive effect against concrete and armour.

In 1941 this was replaced by the 3-in. mortar, which had a range of 1,000 yds. and discharged a 3-lb. H.E. or smoke projectile. A standard weapon for parachute troops, it was effectively used at Arnhem. A 4.2-in. mortar was introduced in the N. Africa campaign. It had a maximum range of 2,400 yds. and could fire five 20-lb. bombs a minute. It was issued to infantry support groups. In 1943 a 6-in. mortar was developed for mounting on tanks as a close-support weapon. It was used by the Royal Engineers and first went into action during the Normandy landings on June 6, 1944.

Germany used large numbers of mortars in the Second Great War, their earlier types being similar to the British. They later introduced the mobile multiple-mortar; one of these had ten barrels. Towards the end of the war Germany had completed, but never put into service, a self-propelled mortar which weighed 120 tons and threw a one-ton projectile to a distance of 8 m. In 1943 the Luftwaffe introduced a 21-cm. mortar for use on fighter aircraft, but it was generally ineffective. The U.S. army used 12-in. mortars in defence of Corregidor (p. 7), and at the end of the war was proving a self-propelled mortar 38 ft. long which fired a two-ton projectile capable of penetrating 10 ft. of concrete at a range of four miles. Russian and Japanese mortars of the Second Great War were mostly based on German designs. The heaviest Japanese mortar, used in the defence of Okinawa, threw a projectile weighing 1,000 lb.

The 6-in. mortar mounted on tanks has a fire power equal to that of a heavy and much less mobile howitzer, and in addition, the supreme advantage of keeping pace with the advance.

**Mortara.** Town of Italy, in the prov. of Pavia. It stands on the Arbogna river, 32 m. S.W. of Milan, and is an important rly. junction, with iron works and factories for making hats, cheese, and machinery. Its old church contains some notable paintings. On March 21, 1849, the Austrians defeated the Sardinians here.

**Mortara Case, THE.** Diplomatic incident caused by the alleged abduction of a Jewish child in 1858. Edgar Mortara, son of a Bologna Jew, was baptized Jan. 24, 1858, when five or six years old, by his Christian nurse who thought that an illness was likely to prove fatal. The archbishop of Bologna thereupon claimed the child as a Christian, took him away from the parents, June 23, and concealed his whereabouts. England, France, and Prussia made representation to Pope Pius IX in 1859, but he refused to interfere, and beyond the fact that the pope himself had adopted the lad, nothing more was heard of Edgar Mortara until 1870, when the Italians entered Rome and found him in a seminary. He refused to revert to Judaism, and eventually became an Augustinian monk and an able preacher.

**Mortarboard.** Academic cap, also called cater (i.e. four-cornered cap or trencher). It consists of a

Mortarboard as worn at universities

skull cap surmounted by a stiff, square cloth-covered board and silk tassel, and derives its popular name from its resemblance to the square board with a handle used by bricklayers. It originated in the old ecclesiastical *biretum*, or barret cap, the ridged sutures of which were emphasised until it was nearly square with a flat top; this surface was enlarged and the *biretum* became the square cap of the English high churchmen of the 17th century. In the 18th century the square was stiffened with wood or cardboard and a tassel was substituted for the original ornamental knot. See Cap.

**Morte d'Arthur, THE.** Name of several works in verse and prose embodying the medieval legends of King Arthur and the Knights of the Round Table. Of these the most important is the compilation, mainly from French sources, completed by Sir Thomas Malory in 1470, and first printed by Caxton in 1485. Malory's work, of deep intrinsic interest, is remarkable for its selection and arrangement of

the more notable features of the Arthurian story, the loves of Lancelot and Guinevere, and the Quest of the Holy Grail. It is the finest extant example of 15th century English prose, a foundation stone of English prose fiction, and proved a source of inspiration to Spenser, Matthew Arnold, Swinburne, Morris, and Tennyson, whose Idylls of the King are largely based upon it. There are editions by J. Gollancz, 1900; E. Strachey, 1898, repr. 1904; E. Rhys, 1909. See Arthur; Elaine; Malory; Tennyson.

**Mortgage.** In English law, the creation in property of an interest which is to cease when a certain sum of money, usually with interest, is paid on a certain date. When the owner of land, leasehold or freehold, wishes to borrow money on the security of his land, he usually does so by mortgage.

In some mortgages—*e.g.* building society mortgages—it is intended that the borrower (mortgagor) shall repay the sum lent to the lender (mortgagee) by instalments; in others—*e.g.* where the money is lent by trustees—the mortgage is regarded as a permanent investment and it is not intended that any part of the sum lent shall be repaid until the whole of it is called in. The law of mortgages was much changed by legislation in 1925 relating to real property. Mortgages may be either legal or equitable. A legal mortgage is effected by deed in which the borrower grants a lease of the land to the lender for 3,000 years if the land is freehold, or if it is leasehold a sub-lease for some period shorter by a few days than his own lease. An equitable mortgage is effected by the borrower depositing with the lender the title deeds of the land. Both kinds may be made by a document creating a charge on the land. An equitable mortgage is mainly used where money is to be borrowed for a short time only. Any mortgage not protected by the lender taking possession of the title deeds is registrable as a land charge.

A mortgage deed usually provides that the money lent shall be repaid in six months from the date of the loan, although the parties rarely intend this to be done. After six months the borrower may still redeem the land on giving six months' notice and paying all that is due. This right is known as his equity of redemption. He loses this right when the lender exercises his power of sale or forecloses, *i.e.* applies to the court for an order that the land shall belong to him

unless the borrower repays the money within six months. The lender can sue the borrower for the money; he can enter into possession of the land; he can sell it; or he can appoint a receiver of the rents and profits.

The Rent Restriction Acts fix a standard rate of interest for mortgages on houses within the Acts, and, except where the mortgage provides for repayment of the capital by instalments spread over 10 years or more, prevent the lender from calling in the mortgage or enforcing his security except on certain grounds. See Land Laws; Rent Restriction.

**Mortification** (Lat. *mortuus*, dead; *facere*, to make). In Scots law, a gift of land made inalienably for ecclesiastical or charitable purposes. The word is also applied to lands so given, and to funds or institutions supported from the revenues therefrom. It is equivalent to the English mortmain (*q.v.*).

**Mortillet**, LOUIS LAURENT GABRIEL DE (1821–98). French anthropologist and zoologist. Born at Meylan, Isère, Aug. 29, 1821, he studied in Paris. The propaganda of a newspaper which he acquired led, after the 1848 revolution, to a sentence of imprisonment. To elude this he resided abroad, mostly in Italy and Switzerland. Work at the Geneva natural history museum induced him to study the Swiss lake-dwellings. Returning to Paris in 1864, he became in 1868 curator of the St. Germain museum. He died Sept. 25, 1898.

**Mortimer.** Famous English family. Of Norman origin, the name is taken from Mortemer, their home in Normandy. Ralph de Mortimer followed William the Conqueror to England and obtained a good deal of land in the border counties, where the name is perpetuated by Mortimer's Cross and Clebury Mortimer. In 1086, according to Domesday, he had land in eleven counties, and his successors, whose chief stronghold was first Wigmore Castle and later Ludlow Castle, were equally powerful. Roger Mortimer helped to win the battle of Evesham for Henry III, and another Roger obtained by marriage great estates in Ireland. The latter was the baron who, the lover of Isabella, helped to overthrow her husband, Edward II. In 1328 he was made earl of March and, after his death as a traitor, his title and estates were restored to his grandson, Edmund. This earl married Philippa, daughter of Lionel, duke of Clarence, and the Mortimers were thus members of

the group in whom the succession to the crown lay. The house became extinct when Edmund, the 5th earl, died Jan. 19, 1425. See March, Earl of; Wigmore.

**Mortimer's Cross**, BATTLE OF. Fought during the Wars of the Roses, Feb. 2, 1461. Mortimer's Cross is near Wigmore in Herefordshire. Edward of York, afterwards King Edward IV, was then at Shrewsbury, and the news of his father's death and the Yorkist disaster at Wakefield encouraged the Lancastrian lords to collect against him. The details of the engagement are lost, but it ended in a Yorkist victory. Owen Tudor was one of the captives executed by Edward after the battle.

**Mortlake.** Parish and district of the mun. bor. of Barnes, Surrey, England. It flanks the Thames, and has a rly. station on the Waterloo-Richmond line. The chief building is S. Mary's church. Famous chiefly as the finishing point of the Oxford and Cambridge boat race, Mortlake was at one time celebrated for tapestries, a factory, said to be the first in England, having been set up here in 1616. For centuries it has been a centre for brewing and malting. Mortlake House was long a residence of the archbishops of Canterbury. Pop. (est.) 23,850.

**Mortlake Ware.** Enamelled delft and stoneware. It was manufactured at Mortlake between 1764 and 1820. Under Wagstaffe, and then Wisker, fine landscape and figure painting was applied to punch-bowls, panels, etc. See Pottery.

**Mortmain** (Fr. *mort*, dead; *main*, hand). Term used for land that cannot be alienated owing to the fact that it is in a dead hand. In England in early times a great deal of land was given by the kings to religious corporations. This process was disliked by the great nobles, and was inequitable, mainly because, as the corporations never died, the land in question never paid the dues, which were the medieval equivalent of the modern death duties. Consequently, in 1279, a law called the statute of mortmain prohibited "any person whatsoever, religious or other, to buy or sell, or under colour of any gift, term, or other title, to receive from anyone any lands or tenements in such a way that such lands and tenements should come into mortmain."

This law was designed to check the growing wealth of the church, for a practice had grown up of conveying lands to the church, the con-

veyance being accompanied by a private bargain allowing control to remain with the grantor and his heirs, who thus avoided feudal dues. Later statutes of mortmain were designed to close the loopholes of evasion in the enactment.

Under the Mortmain and Charitable Uses Act, 1888, which repealed all the old statutes and partly re-enacted them, no land or interest in land may be acquired by a corporation except under specific licence from the crown or by virtue of some statute. See Land Laws.

**Morton, EARL OF.** Scottish title borne since 1458 by a branch of the family of Douglas. One of the family, James (d. 1430), was called lord of Dalkeith, and his descendant, another James, was made Lord Aberdour and earl of Morton in 1458, the year when he married Joan, daughter of King James I. The 3rd earl had no sons, but his daughter married a Douglas who became the 4th earl and figures in history as the regent Morton. Upon his execution the earldom was given to a Maxwell, but later the earldom was restored to a Douglas.

William, earl of Morton in the time of Charles I, was lord treasurer of Scotland. To obtain funds for the king's cause, he sold Dalkeith to the Scott family, obtaining a grant of the islands of Orkney and Shetland. This was contested, but the islands were kept by the earls until about 1750, when they were sold to Baron Dundas, ancestor of the marquess of Zetland. James (d. 1768) became president of the Royal Society. The eldest son of the earl is known as Lord Aberdour. The numbering of the earls is uncertain, but Sholto Charles John Hay Douglas (b. April 12, 1907), who succeeded his grandfather in 1935, is usually described as the 21st earl. See Douglas.

**Morton, JAMES DOUGLAS, 4TH EARL OF** (c. 1526-81). Scottish statesman. A son of Sir George Douglas, he married Elizabeth, daughter of the 3rd earl. In 1553 he succeeded to the title and estates, and was made lord chancellor in 1563, and was one of those

4th Earl of Morton  
Scottish statesman

who arranged the murder of Rizzio. He was largely responsible for the defeat of Mary Queen of Scots, at Langside. In 1572 he was made regent of Scotland, and after a

short period of enforced retirement, he recovered his influence over the young king, retaining power until 1580, when he was accused of having shared in the murder of Darnley. Found guilty, he was put to death by the maiden (q.v.), his own invention, June 2, 1581.

**Morton, HENRY VOLLAM** (b. 1892). British journalist and author. He was born July 26, 1892, and, after working on the Birmingham Gazette, 1910-12, he became a sub-editor on the Daily Mail, later transferring successively to the Evening Standard (1919), Daily Express (1921) and Daily Herald (1931). Between 1925 and 1940 he published a series of travel books: The Heart of London, In Search of England, In Search of Scotland, In Search of Ireland, In Search of Wales, In the Steps of the Master, etc., all highly popular.

**Morton, JOHN** (c. 1420-1500). English prelate. Born in Dorset, he was educated at Cerne Abbey, and at Balliol College, Oxford. He was active on the Lancastrian side in the Wars of the Roses. After the battle of Tewkesbury, Morton submitted to Edward IV, and in 1473 he was made master of the rolls, in 1479 becoming bishop of Ely. He was imprisoned by Richard III, but escaped and joined the exiled Richmond, the future Henry VII, in Flanders. After Henry obtained the crown, he made Morton archbishop of Canterbury and lord chancellor. Created a cardinal in 1493, he remained the king's chief counsellor until his death at Knole, in Kent, Sept. 15, 1500: His name is perpetuated by Morton's Dyke, which he built from Wisbech to Peterborough, and by Morton's Fork, a fiscal device for extracting money from both rich and poor.

**Morton, JOHN CAMERON ANDRIEU BINGHAM MICHAEL** (b. 1893). British writer, known as J. B. Morton, also famous as "Beachcomber." Educated at Harrow and Worcester College, Oxford, he published his first book, The Barber of Putney (a war novel), 1919. In 1924 he began to write the satirical by the Way feature in the Daily Express, inventing the imaginary public school Narkover and the popular character Mr. Thake. Morton's many books include historical studies, e.g. The Bastille Falls, 1936; The Dauphin, 1937; Saint-Just, 1939.

**Mortuary** (late Lat. *mortuarium*, from *mortuus*, dead). In the modern meaning of the word, a place for the reception of dead bodies, pending burial. Every

sanitary authority in London must provide a mortuary and every local authority and parish must also do so if required by the ministry of Health.

**Morvan, LE.** Mountain dist. of France, lying in the depts. of Nièvre, Côte-d'Or, Yonne, and Saône-et-Loire. The chain of hills, with Bois-du-Roi (2,960 ft.) and Mt. Beuvray (2,690 ft.) as its chief points, is mostly of gneiss and granite formations, and is covered with beech and chestnut forests.

**Morveau, LOUIS BERNARD GUYTON DE** (1737-1816). A French chemist. He was born Jan. 14, 1737, at Dijon, and was avocat-général to the parlement of Dijon, 1755-82, also teaching chemistry there for 15 years. In 1772 he published his Digressions Académiques. The following year he introduced fumigation as a safeguard against contagion. In 1782 he began, with Lavoisier and others, the great work on chemical nomenclature, the first volume of the Dictionnaire de Chimie being published in 1786. Elected to the Convention, 1792, he voted for the death of Louis XVI, and became a member of the committee of public safety. He died Jan. 2, 1816.

**Morvi.** State and town of India in the Machhu Kautha district. The state was in the Western India agency until the 1947 partition of India. Its area is 942 sq. m. The town is 35 m. from Rajkot, on the bank of the Machhu, where the river is bridged. Pop.: state, 141,761; town 23,600.

**Mosaic** (Low Lat. *musaicus*, belonging to the Muses, artistic). Term applied (1) to the tessellated work in ancient Roman pavements, and (2) to classical and medieval decorations executed with inlaid cubes of various stones, metals, and glass. Mosaic was derived from Hellenistic art. Its principal use in Roman times was to imitate coloured woollen carpets spread on pavements. The early Christians, searching for a technique capable of producing images resplendent in light and colour, found it in mosaics of melted coloured glass and squares of gold. In the Constantinian period inlaid marbles of various sizes (*opus sectile*) and fragments of marble and hard stone (*opus alexandrinum*), put together so as to form a geometrical design, were largely employed for mural decoration.

As the technique was enriched by the addition of glass and enamel, the art was no longer confined to geometrical patterns, but took the place of pictorial fresco decora-

tion. These pictures in mosaic were entirely restricted to the interiors of Constantinian basilicas; it was not until the 12th or 13th century that they began to appear on the façades. Fine interior mosaics of the 4th and 5th centuries are preserved in S. Maria Maggiore and the baptistery of S. John Lateran at Rome and in the churches at Ravenna. In the baptistery of the Orthodox at Ravenna the mosaics of the cupola and drum are esteemed the most complete and best preserved of all baptistery mosaics. Those of S. Mark's, Venice, are also notable. The remains of fine medieval mosaics are to be seen on the shrine of the Confessor, Westminster Abbey.

In all Byzantine architecture (*q.v.*) mosaic is the recognized decoration for walls, ceilings, or pavements. The pieces were laid on a ground of fresh stucco of lime and marble dust of such consistency and firmness that when dry

the first skeleton was discovered at St. Petersburg on the Meuse. Somewhat similar to a snake in appearance, with strong paddles, it attained a length of 40 ft. Numerous specimens have been found in the Cretaceous deposits of Europe and N. America.

**Mosaylima** OR **MOSAILIMA** (d. 643). Arabian prophet. Of the Beni-Henifah tribe, from Yamama, he was contemporary with Mahomet and was already known for his piety when the prophet began his

**Mosaic.** This example from ancient Pompeii, representing a dog, with the warning *Canem, beware of the dog*, is now in the National Museum, Naples. The upper picture shows a section of the modern mosaic pavement in the National Gallery, London, the work of a Russian artist Boris Anrep. The whole pavement depicts the activities of mankind: this part represents farming

the mosaic could be polished smooth. Mosaic was impervious to water, wind, and sunshine. The modern practice is restricted, though there are fine examples in the dome of S. Paul's Cathedral, in the chapels of Westminster Cathedral and (by Brangwyn) in S. Aidan's church, Leeds. *See Art; Byzantine Art; Justinian; S. Mark's.*

**Mosaic Diseases.** Diseases of plants which result in the mottling or streaking especially of the foliage with yellow, white, or abnormally dark green areas. Additional symptoms such as crinkling, curling, and blistering are common, and necrosis may occur. The diseases are due to the presence of a virus (*q.v.*), which in size is on the borderline of microscopical visibility. Such viruses are known in many instances to be communicated to the plant by insects such as

teaching. His claims to divine inspiration and vocation as a leader of the people were repudiated by Mahomet, and when Mosaylima set up a rival sect, he was killed in battle by Khalid and his sect almost extinguished.

**Moschatel** (*Adoxa moschatellina*). Perennial succulent herb of the family Caprifoliaceae. It is a native of Europe, N. Asia, and N. America. It has a tuberous, creeping rootstock, from which in early spring arise the obscurely four-angled stems, each with only two leaves, which are divided into three-lobed leaflets. The stem ends in a squarish head of five small

**Moschatel.** Foliage and flower head of this succulent herb

green flowers, which have a musky odour, whence the plant derives its name. Juicy, green berries follow.

**Moscheles**, **IGNAZ** (1794-1870). Bohemian composer and pianist. Born at Prague of Jewish parents,

white flies, leaf hoppers, aphids, beetles, and thrips, in the bodies of which they may persist in an active condition for considerable periods. *Consult* Recent Advances in the Study of Plant Viruses, K. M. Smith, 1933.

**Mosasaurus** (Lat. *Mosa*, the Meuse; Gr. *sauros*, lizard). Extinct marine reptile, so called because

Ignaz Moscheles,  
Bohemian com-  
poser

servatoire. He died there, March 10, 1870. Moscheles played as well as taught the piano, and was a great favourite in London, where he last appeared in 1865.

**Moschus** (2nd century B.C.). Greek poet. Born at Syracuse, he became a pupil of the grammarian Aristarchus of Samothrace at Alexandria. Neither he nor Bion (q.v.) is really a bucolic poet, although they are generally so described. Of two extant poems attributed to him one is a mytho-

logical epic on the Carrying off of Europa by Zeus in the form of a bull. The Lament for Bion is now considered to belong to a much later date.

**Moscicki, Ignace** (1867-1946). Polish president and scientist. Born in Warsaw, he became a professor of electro-chemistry at Lwow in 1912, and organizer of a chemical research institute at Warsaw, 1920. A distinguished scientist with over 600 patents to his credit, he discovered the whirling arc method of recovering nitric acid from free nitrogen. Elected to the Polish diet in 1922, he was a close friend of Pilsudski, and assumed the presidency at the time of Pilsudski's *coup d'état* in 1926, holding it until the fall of Poland in Sept., 1939. He then went with the government to Rumania, where he resigned the presidency. Moving to Switzerland, he died there Oct. 2, 1946.

1935, which stipulated that the total pop. of the capital should not be allowed to rise above 5,000,000, was the blueprint which has made Moscow what it is. It laid down that the essential shape of the city, with its concentric semi-circular streets and thoroughfares, should be maintained, but that within the older parts slum clearance and other improvements should be carried out. At the same time, the city's area was gradually to be doubled, the main extensions being planned in the south-western direction beyond the Lenin hill. Huge blocks of flats, clubs, hospitals, and schools, government and administrative buildings, were to be constructed, gardens and squares were to be laid out, and a green belt with a depth of 10 km. (6½ m.) was to be created around it. Moscow's water, gas, and electricity supplies, telephones, street and river traffic, rly. termini, slaughterhouses, cold storage, bakeries, sanitation, health services, etc. were to be completely reorganized.

#### The New Moscow

During 1935-37 an imposing proportion of these projects was completed. The first line of Moscow's luxurious underground rly., or Metro., with its marble-halled stations, was opened to traffic in 1935; bus, trolley-bus, and new tramway lines were created; the Moscow-Volga canal and seven new wide bridges over the river Moskva were completed; granite-faced quay-sides along the river with new broad riverside drives were built; new streets and avenues were cut, and old ones were transformed. Okhotny Ryad (Hunters Row), formerly a narrow slum, is now a broad avenue with some of Moscow's most imposing buildings, e.g. the house of peoples' commissars and the hotel Moskva. Other outstanding new buildings, spread about the city, include the central theatre of the Red army, the palace of culture, the Lenin library (next to the well-preserved 18th century Pashkov house, where the Rumyantsev museum and public library used to be), the Tchaikovsky concert hall, the office of Pravda, and the Stalinets stadium. Every known style has been tried—from the severely classic to the glass, cement, and metal box style. The most ambitious and at the same time the oddest structure, the Palace of Soviets, will, when completed—including a 328 ft. high statue of Lenin in stainless steel on top of it, 1,365 ft. high—compare with

## MOSCOW: CAPITAL OF THE U.S.S.R.

George Solov'yechik, Author of Russia in Perspective

*The history, monuments, and physical characteristics of the ancient city, first capital of Russia and capital again since 1918, are here described. See also Kremlin; Moscow-Volga Canal; Red Square, etc.*

Moscow (Russ. *Moskva*), which celebrated its 800th anniversary on Sept. 7, 1947, became the capital of the Union of Soviet Socialist Republics, Dec. 30, 1922, and of the Russian Socialist Federal Soviet Republic, March 11, 1918. It is also Russia's intellectual, artistic, religious, commercial, industrial, and transport metropolis and the headquarters of the All-Russian Communist (Bolshevik) party. It was the seat of the Third (Communist) International (Comintern) from its foundation in March, 1919, to its dissolution in May, 1943. The Lenin mausoleum has made it an ideological and national shrine in a way unprecedented in the country's history.

Like Rome, Moscow lies on seven hills, 500-800 ft. in altitude, of which the best known is the former Sparrow hill, renamed Lenin hill. The city covers a large and almost circular area and is traversed from W. to E. by the winding river Moskva, a trib. of the Oka which flows into the Volga at Gorky (formerly Nijni Novgorod). In 1937 another direct link with the Volga was created through the completion of the Moscow-Volga canal, which not only solved the perennial problem of the city's water supply by replenishing the inadequate stream of the Moskva, but also turned Moscow into an important port for

goods and passenger traffic. The Soviet capital now has direct water routes to the Caspian, the White, and the Baltic seas; a projected canal from Stalingrad to the river Don will provide a connexion with the Black Sea.

The Moscow of today is a curious and in many ways wholly unharmonious mixture of 20th century structures and installations with the quaint old buildings and other characteristic landmarks of the ancient city, which, having established its ascendancy over the other principalities, was the capital of the Great Princes of Muscovy and then of the Russian empire from the 14th century until 1712, when Peter the Great made his new city of St. Petersburg the capital of his Europeanised realm (see Leningrad).

Moscow had a pop. (1939) of 4,137,018, twice that of 1926, three times that of 1917. Except for a serious setback in the early days of the Soviet regime, the growth of the pop., which passed the 1,000,000 mark at the turn of the century, has been constant. The city is divided into 23 administrative dists., of which the largest in area is the October dist., while the Kuibishev and the Sverdlov are most densely populated.

The comprehensive general plan for the reconstruction of the city of Moscow, adopted on July 10,

Moscow. Plan of the central districts of the capital of the U.S.S.R.

the 1,250 ft. of the Empire State building in New York.

The palace of soviets is to occupy the site of the former church of Christ the Saviour, an unattractive monument to the Napoleonic war of 1812, erected in 1837-1838 by the German architect Constantine Thon, and pulled down by the Soviets. Large-scale demolition of many old buildings, as well as the disappearance or renaming of well-known streets and squares, has been the inevitable consequence of this vast reconstruction programme. Thus the famous chapel of the Iberian Mother of God—the most venerated religious shrine in the city—has been demolished and the icon itself moved to the church of the Resurrection, where the election of the present Patriarch, Alexis, also took place in 1946. Moscow used to count some 600 churches. Of these, c. 50 have been reopened for worship; a few particularly precious monuments of Russian architecture have been transformed into museums; a substantial number are used as clubs, schools, libraries, cinemas, or flats; and many have been pulled down.

Most of the new street names are either those of famous Bolsheviks and outstanding events of the Revolution, or of Russia's foremost writers, e.g. Tolstoy, Chekov.

The former Vozdvizhenka Street was renamed Comintern Street, until the Comintern was suspended in 1943, when it became Kalinin Street. Among old street names surviving the best known are Kuznetski Most, Petrovka, Spasskaya, Sretenka, and Tverskoi Boulevard. Moscow's most famous historical landmark, the Kremlin (*q.v.*), has been restored and its ancient treasures cleaned.

#### The Kremlin

Archaeologists have not traced the name Kremlin to any definite source, but it is known that Prince Yury Dolgoruky, who founded the city in 1147, built his first fortification on the present site in 1156, and called it the Kremlin. Ivan I (1328-1341), under whom Moscow became the acknowledged metropolis of the then Russian state, enclosed his city with walls of oak, which were replaced by masonry in 1367, and strengthened by a moat in 1394. At the close of the 15th century, under Ivan III, when the state of Muscovy and its capital were being rapidly expanded and modernised, Italian masters built the new Kremlin fortifications in brick. These walls have survived for the most part to the present, and with their subsequent extensions are 7,280 ft. in circumference, have 18 towers and five gates. Most of the buildings within the Kremlin have survived

the frequent fires, riots, and foreign invasions which have ravaged the city.

The last occasion when foreign invaders set foot in "the mother of Russian towns" or "the holy city," as Moscow is sometimes called by the Russians, was in 1812 when Napoleon and his troops were there from Sept. 14 to Oct. 10; but then Moscow was deliberately burnt down by her own people; three-quarters of her houses and half the churches were lost in the great conflagration. However, the city was rebuilt with astonishing speed, and much embellished in the process. Towards the end of the 19th century it became Russia's industrial and commercial centre, the wealthiest and the most nationally-conscious city in the realm. Her rich merchants became great patrons of the arts, presented Moscow with museums, libraries, and picture galleries, endowed theatres and institutions of learning, hospitals, and innumerable other foundations. But the rarest art treasure remains the Kremlin itself, wherein the Terem and the Granovitaya Palata, 15th century reception halls of the tsars of Muscovy, are still being used.

Next to the Kremlin, and originally also enclosed by a wall, is a district called, for no discoverable reason, Kitai Gorod (Chinese City), the best-known landmarks of which are the Red square (so called long before the revolution; since 1924 it has contained the Lenin mausoleum) with the picturesque cathedral of Vasily Blashenny (S. Basil the Beati-fied) at its S. end, built in 1554 by the Russian masters Barma and Postnik; the monument to Minin and Posharsky; and the ancestral home of the Romanovs—an instructive illustration of Russian boyar life in the Middle Ages. Embracing the Kremlin and Kitai Gorod (which since c. 1880 has become the business centre of Moscow), and shaped like a shoehorn, is Byely Gorod (White City) and, beyond it, as a still larger semi-circle, Semlyannoy Gorod (Earthen City), while across the river lies the dist. of Samoskvoretchye (beyond the river Moskva). These five ancient dists. constitute the actual city, to which several suburbs have been added.

Here are some memorable dates out of Moscow's history:

1325, the Metropolitan of All Russia made Moscow his official seat. 1404, Moscow had its first striking clock. 1564, Moscow had

1. Red Square : in the middle distance is the cathedral of S. Basil, founded by Ivan the Terrible, 1554. 2. The University. 3. Lenin Library. 4. Komsomol Square, showing October railway station on left, the underground station next to it, and Northern railway station on right ; in right foreground is seen a corner

of Kazan railway station. 5. The great Palace of the People's Commissariat of Health. 6. Sverdlov Square with Ochotny Ryad underground railway station in left foreground, and Bolshoi Theatre in centre. 7. Gorki Park of Rest and Culture ; it has cinemas, library, restaurant, billiards rooms, sports grounds, etc.

**MOSCOW : VIEWS AND BUILDINGS IN THE CAPITAL OF THE U.S.S.R.**

its first printing press. 1589, first Patriarch elected (lapsed 1700, restored 1917 and 1943). 1613, first Romanov (Michael) elected Tsar. 1689, first stone bridge built. 1703, first newspaper in Russia. 1755, first university in Russia, inaugurated Jan. 12, day of S. Tatiana, who became its patron saint. 1812, occupation by Napoleon and Great Fire of Moscow. 1824, Bolshoi (Great) Imperial Theatre of Opera and Ballet built. 1838-49, great Kremlin palace rebuilt on ancient foundations. 1851, Moscow joined to St. Petersburg by rly., the second in Russia. 1861, liberation of the peasant serfs, which completely transformed Moscow's economic position. 1861, Rumyantsev museum and library moved to Moscow from St. Petersburg. 1892, the brothers Tretyakov, wealthy Moscow merchants, presented to the city their unique picture gallery of Russian masters. 1898, Moscow Arts Theatre, world famous dramatic company, founded by Stanislavsky and Nemirovitch-Danchenko. 1905, violent risings during the revolution. 1918, Lenin moved the capital to Moscow.

**Moscow Declaration.** Signed in Moscow by representatives of the U.K., U.S.A., U.S.S.R. and China, Oct., 1943, this was the first step in the creation of the United Nations organization. It declared that their countries would continue for the maintenance of peace the united action they had pledged for the prosecution of war against their various enemies, and to that end would inaugurate a system of security. See United Nations.

**Moscow Trials.** Name used to describe certain trials held in Moscow in 1933, 1936, and 1937. In March, 1933, six British employees of Metropolitan-Vickers, M. Monkhouse, W. H. Thornton, J. Cushny, W. H. MacDonald, C. Nordwell, and A. Gregory, were arrested by the Russian secret police and committed to prison charged with unspecified acts of sabotage in connexion with electrical works being carried out under contract in Russia by their firm. Following unsuccessful representations for their release to the Kremlin by the British embassy in Moscow, the British govt. broke off current negotiations for a new Anglo-Soviet trade agreement, and on April 5 brought in a bill to impose an embargo on Russian imports into Great Britain.

On April 12, the Britons were brought to trial, and all pleaded not guilty except MacDonald, who, however, during the first day's hearing retracted his plea of guilty, but after an interview with the O.G.P.U. guards again

pleaded guilty. The prosecution then put in an alleged confession by Thornton, which the latter disowned as having been extracted under moral pressure. On April 18, the court sentenced Thornton to three years', MacDonald to two years' imprisonment; Monkhouse, Cushny, and Nordwell to deportation. Gregory was acquitted. Mutual embargoes on trade were enforced by the British and Russian govts.; but negotiations between Litvinov and Sir John Simon led to the release of the British prisoners on July 1, and their deportation. Both countries lifted their import embargoes preparatory to negotiating a fresh trade treaty.

In August, 1936, a group of Communists, including Kameniev and Zinoviev, ex-chairman of the Communist International, were arrested and tried in Moscow on a charge of assisting the exiled Trotsky to negotiate with Germany for help against Stalin in return for the cession of the Ukraine. Although the prosecution was unable to bring evidence substantiating the charges, the prisoners, who had vied with each other in confessing their alleged misdeeds, pleaded guilty and were executed. In Feb., 1937, a second group of 17 Communists, called the Trotskyite-and-Right-Wing Bloc, were tried on similar charges; 14 were sentenced to death. Three months later eight high-ranking officers of the Soviet army, arrested and tried in camera on charges of conspiring with the German general staff, were shot.

**Moscow-Volga Canal.** Artificial waterway of the R.S.F.S.R., 80 m. in length. Started in 1933 under the second five year plan, it was opened to traffic May 2, 1937. It connects the Volga and Moskva rivers, so that shipping from the Caspian, Baltic, and White seas can reach Moscow.

There are 11 locks for the raising and lowering of ships in transit, while 11 dams increased the depth of the Moskva river and tributaries, previously scarcely navigable. The reservoir formed by the dams increased Moscow's water supply by 50 galls. daily per head of pop., while the overflow drives 8 generating stations. To make way for the canal the inhabitants of 203 settlements with 40,000 buildings on the route, were moved to new centres.

**Moseley.** Suburb of Birmingham, England. It comprises the ecclesiastical districts of St. Anne and St. Mary in the S. of the city.

**Moseley, HENRY GWYN JEFFREYS** (1887-1915). British physicist. Born in 1887, he was educated at Eton and Trinity College, Oxford. Appointed a lecturer in Rutherford's laboratory at Manchester university, he later became a John Harling fellow there before going to Oxford. His work in radio-activity resulted in a series of brilliant researches proving the existence of a single relationship between the X-ray spectrum of an element and its atomic number. This established a new and valuable method of chemical analysis which solved the outstanding problems of atomic structure and spectral lines. Moseley was killed in action in Gallipoli, Aug 10, 1915, while serving with the Royal Engineers.

**Moselle.** Delicate, aromatic wine, generally of the white variety. It has a low percentage of alcohol, and is made from grapes grown in the lower valley of the Moselle. Unlike most wines, Moselle does not improve by keeping. It is either still or sparkling. The latter is distinguished by a pronounced grape flavour, and is one of the lightest of effervescing wines.

**Moselle** or **MOSEL**. River of France and Germany. It rises in the S. Vosges, near Bussang, and flows in a N.W. direction into Lorraine. At Toul it turns N., skirts Luxemburg, and passes into Germany, following a winding course to the N.E. until it reaches the Rhine at Coblenz. Its chief tributaries are the Vologne, Meurthe, Seille, Orne, Sarre, and Kyll, and the chief towns on its banks are Remiremont, Épinal, Toul, Pont-à-Mousson, Metz, Thionville, Trèves, Berncastel, Cochem, and Coblenz. Its length is 320 m.

**Moselle.** Dept. of N.E. France. It is bounded N. and N.E. by Luxemburg and Germany, E. and S.E. by Bas-Rhin, S. and W. by Meurthe-et-Moselle, and consists chiefly of a low plateau drained by the river Moselle. There are important coal and iron mines, and the chief industries include salt working, metal founding, and cement making. Manufactures include machinery, chemical products, textiles, boots and shoes, pipes, and paper. The Moselle valley is famous for vineyards. The dept. has 9 arrondissements, 36 cantons, and 763 communes. Metz is the capital. Moselle is coterminous with the province of Lorraine ceded by France to Germany in 1871 and restored in 1919. Area, 2,403 sq. m. Pop. 696,246. For history, see Lorraine.

**Moses.** Hebrew law-giver and leader of the Israelites from Egypt. Son of Amram, a Levite, and Jochebed, and younger brother of

Moses. Sculpture representing the law-giver of Israel, by Michelangelo. Church of S. Pietro in Vincoli, Rome

Miriam and Aaron, he was adopted by Pharaoh's daughter, and brought up as an Egyptian prince. According to the Biblical narrative (Exodus-Deut.), after slaying an Egyptian taskmaster who had ill-treated an Israelite, he fled to Midian, and married Zipporah, daughter of Jethro, a shepherd. At Mt. Horeb he received a Divine command to return to Egypt, from which he later led the Israelites to the confines of Canaan, receiving the Decalogue from Jahveh, at Mt. Sinai. After glimpsing the Promised Land from Pisgah, he died at the age of 120 years, leaving two sons, Gershom and Eliezer. He was buried in an unknown grave.

By a late Jewish tradition, Moses was thought to be the author of the Pentateuch, a work now usually regarded as the product of several compilers from older documents, only parts of it being definitely ascribed to Moses. Moses figures largely in the Koran, in Islamic legend, and in the pages of Josephus. See Aaron; Decalogue; Exodus; Pentateuch.

**Bibliography.** The Story of Moses and Joshua, J. Telford, 1893; Encyclopaedia Biblica, T. K. Cheyne, 1899-1903; Lives, H. L. Taylor, 1913; E. Fleg, 1938; E. L. G. Watson, 1929; Martin Buber, 1947; Moses and Monotheism, S. Freud, 1939.

**Mosheim, JOHANN LORENZ VON** (1694-1755). German historian. He was born at Lübeck, Oct. 9, 1694, and became professor of the theology at Helmstedt, Brunswick, in 1723. In 1747 he was appointed

professor of divinity and chancellor of Göttingen university. He died Sept. 9, 1755. His *Institutiones Historiae Ecclesiasticae*, 1726, the work which established his fame, was translated into English by A. Maclaine, 1764, and again in 1832, by J. Murdock (new edition, 1892).

**Moskva.** River of central Russia, a tributary of the Oka. It rises in the Moscow region, flowing E. and then S.E., joining the Oka below Kolomna, after a course of 300 m. The battle between the French and the Russians, called the battle of Borodino (*q.v.*) was fought along it, Sept. 7, 1812.

**Moslem.** The spelling favoured in this Encyclopedia is Muslim. See Mahomedanism; Muslim League.

**Mosley, SIR OSWALD ERNALD** (b. 1896). British politician. Born Nov. 16, 1896, son of Sir Oswald

Mosley, Bart., to whose title he succeeded in 1928, he was educated at Winchester and Sandhurst and commissioned in the 16th Lancers. In 1918 he was Conservative M.P. for Harrow, but left the party and sat as an Independent, 1922-24. In 1924 he joined the Labour party. Defeated at the 1924 general election, he became M.P. for Smethwick, 1926, and was chancellor of the duchy of Lancaster, 1929-30. In the latter year, contemptuous of what he considered the "spineless apathy" of the Socialists, he founded the New party; but was defeated at the general election of 1931, as was every New party candidate; and, when it became clear that he was increasingly inclining towards fascism, the party broke up. Almost at once he formed the British Union of Fascists. He visited Italy to study fascism at first hand, and adopted as his own much of the Italian party's manners and methods, e.g. a black-shirted uniform. Mosley's policy included a virulent anti-Semitism, and his supporters earned notoriety for their violent and provocative actions. He opposed the waging of war against Germany in 1939, and in May, 1940, he was arrested under the Defence Regulations and imprisoned first in Brixton jail, and from 1941, with his wife, in Holloway jail, until his release in Nov., 1943, on the grounds of health; he was suffering from thrombo-phlebitis. After the war

Sir Oswald Mosley, British politician

he founded Mosley Publications Ltd. as a basis for further political activity, but, discredited in the eyes of the public, he gained no considerable support. His book *My Answer*, 1946, formulated his later political ideas, and in Feb., 1948, he announced the formation of a new Union movement, designed to unite 51 organizations.

Mosley married, in 1920, Lady Cynthia Blanche Curzon (1898-1933), the daughter of Lord Curzon of Kedleston. She was Labour M.P. for Stoke in 1929, and followed her husband when he formed the New party. She died May 16, 1933. In 1936 Mosley married the Hon. Diana Guinness, a daughter of the 2nd Baron Redesdale (*q.v.*).

**Mosque** (Arabic, *mesjid*). Mahomedan place of worship. Noteworthy examples are at Cairo, Delhi, Mecca, Medina, Jerusalem, Damascus, and in various parts of India. In the U.K. there are mosques at Woking, Surrey; Southfields, London; and Cardiff. Varying in form in different countries, mosques generally have a central dome, minarets, and a court provided with a tank for ceremonial ablutions. Within is a pulpit, a lectern, a niche indicating the direction of Mecca, and carpets, but no seats. The interior decoration is restricted to arabesques and texts from the Koran. See Arabia; Cairo; Damascus; Delhi; Mahomedan Art and Architecture.

**Mosquito** (Span. diminutive of *mosca*, a fly). Name given to species of blood-sucking flies of the family Culicidae or gnats. They closely resemble midges (*q.v.*) in appearance but are distinguished by their piercing mouth-parts and the presence of scales on the body, wings, and other appendages. In their early stages they are aquatic, usually in fresh water, and less often in saline or brackish waters. The eggs float, either singly as in *Anopheles*, or in compact masses or rafts as in *Culex*. Mosquitoes occur all over the world but are most abundant in the tropics. About 2,000 species are known, and of these 29 kinds occur in Great Britain. The blood-sucking habit is confined to the females, the males largely feeding on plant juices. Many species of *Anopheles* act as carriers of the pathogenic organism causing malaria and in Europe *Anopheles maculipennis* is of great importance in this. The malarial parasite is conveyed to the female mosquito when she sucks the blood of an infected person. The parasite finds its way into the walls of the insect's stomach where

Mosquito. Stages in development. 1. Egg-rafts and half grown mosquito larvae diving. 2. Full grown larvae breathing at surface of water. Moulded larvae skins on left, active pupae on right. 3. Mosquito emerging from pupa skin on surface of water. 4. Mosquito fully emerged and ready for flight

it multiplies, forming large cysts. The latter rupture, and liberate the parasites into the body-cavity. They then make their way to the salivary glands. When a mosquito punctures the skin the parasites enter the blood with the saliva, infecting a person with malaria.

Other species of mosquito, in special *Aedes aegypti*, are carriers of the virus of yellow fever from infected to uninfected persons. The disease of elephantiasis is due to minute filarial worms disseminated by the mosquito and particularly by the species *Culex fatigans*. Various measures for controlling mosquitoes are practised. The elimination of standing water and the drainage of marshes destroy breeding places. The spraying of ponds and ditches with kerosene, or oil mixtures, which spread as a thin film, kill the larvae when they come to the surface to breathe. Larger areas, when dusted with finely powdered arsenical compounds discharged from aeroplanes, become freed of mosquitoes. The introduction of fishes known to feed on mosquito larvae is a further

measure. See Malaria: Yellow Fever. Consult British Mosquitoes, J. F. Marshall, 1938; Insects of Medical Importance, Smart, 1943.

**Mosquito.** Type of military aeroplane designed by the De Havilland Aircraft Co., Ltd., as the D.H.98 for service with the R.A.F. in the Second Great War. Originally an unarmed high-speed light bomber, it was later used as a night fighter, fighter-bomber, and photographic reconnaissance machine. A modified type was employed for transport and as the Sea Mosquito for naval work. The basic structure was entirely of wood, for ease of manufacture; furniture-makers and other sub-contractors were introduced to step up production, and by the end of hostilities over 8,000 Mosquitoes had been delivered. Despite its size (wing span 54 ft. 2 ins., crew of two), the Mosquito was the first standard R.A.F. type to have a maximum speed of over 400 m.p.h. The final operational version (Mark 34), powered by two 1,625 h.p. Rolls-Royce Merlin engines, had a maximum speed of 425 m.p.h. and an extreme range of 3,500 miles. See Aeroplane illus., p. 129.

**Mosquito** (native form, *Missquito*). Tribe of Central American Indians. They inhabit the E. coast of Nicaragua, thence known as the Mosquito Coast. They are exceptionally intelligent, and speak a Sumo dialect. Their dark colour is attributed to intermarriage with shipwrecked negro slaves.

**Mosquito Coast** or **LA MOSQUITIA**. Maritime region of Central America. It embraces the S.E. coast of Honduras, and the E. coast of Nicaragua. It fronts the Caribbean Sea, is low lying, and contains several lagoons, the largest being Caratasca in Honduras and Pearl Cay in Nicaragua.

The Mosquito Territory or Reserve, wholly in the latter republic, now forms the dept. of Bluefields. It is inhabited chiefly by Mosquito and Zambo Indians, with negroes from Jamaica. The region was a matter of diplomatic controversy between the U.S.A. and Gt. Britain, but under the

treaty of April 19, 1905, the U.S.A. acknowledged the claims of Nicaragua, and withdrew.

**Moss** (*Musci*). One of the two classes of Bryophyta, the other class being the Hepaticae. Bryophyta come in systematic botany between Thallophytes and Pteridophytes. Like Thallophytes (algae, fungi, diatoms, etc.), their structure is simple, there being neither vessels nor woody tissue, though they have conducting cells which to some extent serve the purpose of vessels. They have stems, which are clothed with simple leaves which differ essentially in form and internal structure from the foliar organs of the flowering plants.

Mosses are reproduced by spores which are contained in an urn-like capsule produced by a sexual process. We have thus an alternation of generations as in the ferns, but with the difference that the asexual generation (spore capsule) grows on the sexual. The sexual elements are contained in what are popularly styled the "flowers" of the moss—technically the perichaetium. This is formed at the apex of the stem, and consists of mere crowded whorls of "leaves" enclosing either the male or the female elements, or both in the same flower. The male flowers contain antheridia, the females archegonia.

The antheridia consist of a number of cells, each containing a coiled-up antherozoid which makes its way through a mucilage accompanying its liberation to the archegonium, and fertilises the contained ovum. The latter ultimately develops into a capsule filled with dust-like spores and covered with a

Moss. 1. Germinating spore. 2. Moss-protonema. 3. Protonema which gives rise to a bud developing into leafy moss-shoot. 4. Longitudinal section of tip of male shoot. 5. Tips of female shoot with archegonia, two of which are enlarged to show the calyptra or caps which are thrown off when the spores are ripe. 6. Leafy female shoot with fully developed capsule. All highly magnified. From Kerner's Natural History of Plants (Blackie)

cap (calyptra), thrown off when the spores are ripe. The spore-capsule is then seen to have a distinct lid, and when this falls off the spores are protected in certain orders by a peristome—a series of long hygroscopic teeth. These open out in a dry atmosphere to liberate the spores, and close down in damp to keep them dry. There are variations of this mechanism in different orders of mosses. The spore on germination produces a hair-like thread which branches, and develops buds which grow into leafy stems—the moss-plant. Mosses are ubiquitous, growing even on bare rock and brick wall, preparing the way for higher vegetation by forming a humus of their dead bodies and the minute particles of organic matter which every tuft of moss collects from the air. *See Bog Moss; Botany; Hair Moss; consult Synopsis of the British Mosses, C. P. Hobkirk, 1873; The Student's Handbook of British Mosses, H. N. Dixon, 1904.*

**Moss.** Seaport of Norway, in the co. of Akershus. It stands on a small bay of Oslo Fjord, 33 m. due S. of the capital. There are extensive iron mines in the vicinity, and a quantity of timber is exported. The act of union between Norway and Sweden was signed here Aug. 14, 1814. Pop. 17,008.

**Mossamedes.** A seaport of Angola, W. Africa. It is situated on Little Fish Bay. Its industries are connected with fishing, whaling, and oil refining. There is a rly. from Mossamedes as far as the Chela Mountains. Pop. 5,000.

**Mossel Bay.** Seaport of Cape Province, S. Africa. It lies 318 m. by rly. E. of Cape Town, almost midway between that city and Port Elizabeth. The bay on which it is built was frequently used by the Portuguese navigators in the early 16th century. Pop. 7,227.

**Mossley.** Mun. bor. of Lancashire, England. It stands on the Tame, 10 m. E.N.E. of Manchester by rly. It is also served by the Huddersfield canal. The industries include cotton and woollen mills, also engineering works. Mossley became a borough in 1885. Near the town are some British remains known as Bucton Castle. Market day, Thurs. Pop. 12,042. Mossley Hill is a suburb of Liverpool, with a rly. station.

**Mossop, HENRY** (c. 1729–c. 1774). Irish actor. Son of the Rev. John Mossop, he was educated at Trinity College, Dublin, but his tastes led him to the stage. In 1749 he made his first appearance in Dublin, and in 1751 in London

as Richard III, under the patronage of Garrick. After a few successful years he quarrelled with Garrick, and in 1759 returned to Dublin where he opened a theatre of his own. There, as in London, he had many successes, but financially his theatre was a failure, and he became bankrupt in 1771. He was some time in prison for debt.

**Moss Side.** Suburb of Manchester, England. It comprises the eccles. dist. of S. James and Christ Church on the S. side of the city. *See Manchester.*

**Moss Trooper.** Name given in Scotland to the marauders and cattle thieves who in the 17th century infested the border and frequently carried out raids on towns and villages of Northumberland. Moss troopers figure in S. R. Crockett's novel *The Men of the Moss Hag*.

**Most.** Town of Czecho-Slovakia. Situated on the river Biela, it is 83 m. by rly. N.W. of Prague, at the centre of the principal coalfield in the country. There are also sugar, distilling, and machine making industries. The famous Seidlitz mineral springs are in the vicinity. The town is in that part of Sudetenland ceded to Germany in 1938 and recovered by Czecho-Slovakia after the Second Great War. Pop. 23,110.

**Mostaganem.** Small seaport of Algeria. It stands between Ōran and Algiers, and is directly connected with the former, via Arzeu, by rly. It is identified with the *Portus Magnus* of the Romans. The harbour is exposed. Alfalfa is the chief export. Pop. 36,961.

**Mostar.** Town of Yugoslavia, in Herzegovina. It stands on the Narenta, in a narrow valley within a district of great fertility, 47 m. S.W. of Sarajevo, with which it has rly. connexion. Many of the modern buildings are Italian in character, although the town is predominantly Turkish. There are many mosques and a fine Greek cathedral. Mostar has been the seat of Greek and R.C. bishops. Tobacco is the principal manufacture. Pop. 20,295.

#### **Most Favoured Nation Clause.**

In commercial treaties, a clause granting preferential treatment to particular countries in regard to duties imposed on goods imported from those countries. Such preference is frequently conditional upon reciprocal treatment being granted by the most favoured nation or nations. *See Free Trade; Imperial Preference; Protection; Reciprocity; Tariff Reform.*

**Mosul or Mossul.** City of Iraq, capital of a vilayet of the same name. It stands on the Tigris, about 220 m. N. of Bagdad. Opposite it, on the E. side of the river, are the vast mounds which are the remains of Nineveh. It is the seat of a patriarch of the Chaldean Catholics. It once was famous for its muslin, the name being

Mosul, Iraq. Street scene in the bazaar of the city

derived from that of the town. From it an important caravan road leads through Rovanduz into N.W. Persia.

There are oilfields in the vilayet, and a concession to work them was granted to a British company before the First Great War. By a decision of the Allies at San Remo in 1920, the validity of this concession was upheld, and the French government were allotted the former German interests in the British company. Before and during the war Mosul was the headquarters of a Turkish army corps, and after the granting by the Allies of the armistice to Turkey in Oct., 1918, it was occupied by the British. The claim of Turkey to the vilayet or province of Mosul was the subject of a conference held at Istanbul in May–June, 1924, between Great Britain and Turkey. This conference proved abortive, and the question was referred to the League of Nations, which sent a committee to the Mosul district to study and report upon the conditions. The League decided that it should be part of Iraq and in 1926 the boundary was fixed in accordance with this decision. A neutral zone was established for 50 miles on each side. Turkey obtained for 25 years a royalty of 10

per cent of the oil revenues of Iraq. During the Iraqi rebellion in 1941, German aircraft arrived at Mosul on May 15 and were bombed at intervals by the R.A.F. until the rising collapsed on May 30. Mosul was occupied by British troops on June 3, 1941. Pop. vilayet, 553,488; city, 80,000. See Iraq.

**Moszkowski, MORITZ** (1854-1925). Polish composer. Born at Breslau, Aug. 23, 1854, he studied at Dresden and Berlin, and, after a successful career as pianist and composer, he settled in Paris in 1897. His works included two books of Spanish dances for the piano, a violin concerto, two orchestral suites, a symphony, and many songs. An opera *Boabdil* was produced at Berlin in 1892, and a ballet *Laurin* in 1896. He frequently appeared in London as pianist and conductor, his final appearance being in 1908 at Queen's Hall when he conducted a programme of his own works. He died in Paris, March 8, 1925.

**Motala.** Town of Sweden, in the län or co. of Östergötland. It is on the E. shore of Lake Wetter, 42 m. W.S.W. of Norrköping. The river Motala enters the lake close to the town. Pop. 5,985.

**Motet.** Vocal music in the contrapuntal style. Formerly it was set to either secular or sacred words, but since the beginning of the 14th century it has been exclusively reserved for the latter, and employed in the service of the Church. Its best period was from about 1500 to 1600, contemporary with the golden age of its secular counterpart, the madrigal. The best composers of that century produced both kinds. More modern compositions by Haydn, Mozart, Cherubini, Mendelssohn, and others, which bear the name, have little in common with the true motet style, and may be regarded rather as anthems or short sacred cantatas. See Counterpoint.

**Moth.** Class of insects forming the greater number of the order Lepidoptera. They are distinguished from the butterflies (*q.v.*) by the following characters. In butterflies the antennae end in a club or knob, whereas in moths the antennae are without a knob at the extremity. The wings of moths usually bear an interlocking mechanism absent in butterflies. This consists of a long bristle, or group of bristles, borne on the base of the hind wing, which become engaged in a hook-like "catch" on the under side of the fore wing. Too much stress has been laid in the past on the distinctions be-

tween butterflies and moths, resulting in their separation into two sub-orders—the *Rhopalocera* and *Heterocera* respectively. It is now recognized that butterflies form only one superfamily (*Papilionoidea*) among the several that constitute the order Lepidoptera, the remainder comprising the moths. Many moths resemble butterflies in being diurnal and some are equally magnificent in brilliancy of coloration and even larger in size. The giant atlas moths of India have a wing-spread of nearly a foot, and the *Erebos* of America equals or exceeds that dimension. More than 2,000 species of moths are found in the British Isles. The largest is the death's head hawk moth with a wing-spread of 5½ ins. and the smallest are minute creatures of the genus *Nepticula* with a wing-expanse often not exceeding 3 mm. In many species the individuals of the two sexes are very different; thus the male of the drinker moth and emperor moth is smaller than the female and more deeply coloured; also the antennae are comb-like in the male sex and simple in the female. In several cases, including the whiter moth and March moth, the females are either wingless or have those organs reduced to vestiges. Moths include many kinds of which the caterpillars are injurious to human welfare. Thus the caterpillars of the goat moth and wood leopard moth damage the wood of living trees. Those of the swift moths destroy the roots of plants. Those of the cabbage moth attack vegetables; and the European corn borer causes great damage to maize, etc. The codling moth, lackey moth, and whiter moth are highly destructive to fruit-trees. In contrast we have the silkworm moth the caterpillar of which yields the silk of commerce. Along with it are certain Saturniid moths whose caterpillars yield "eri," "tossar," and "muga" silk. Certain other moths have caterpillars which attack noxious plants. The most famous is the *Cactoblastis*, a small moth introduced into Australia where its caterpillars are the main agents controlling prickly pear in that country. See colour plates facing pp. 5880-81; consult Larvae of British Butterflies and Moths, W. Buckler, 1885-1895; Revised Handbook of British Lepidoptera, R. Meyrick, 1938; Moths of the British Isles, R. South, 1939.

**Moth.** Light aeroplane designed by the De Havilland Aircraft co., Ltd. The D.H.60, with an 80 h.p.

Cirrus engine, was designed in 1925, and for the first time made club and private flying in Great Britain a practical proposition. Famous record flights with this type (later with the more powerful D.H. Gipsy engine) included that of Amy Johnson (*q.v.*). Progressively developed over the next 20 years there were many other successful Moth designs, some of them monoplanes, but the original two-seat open-cockpit biplane was perpetuated in the D.H. 82 Tiger Moth, a standard primary trainer of the R.A.F. throughout the Second Great War.

**Mother.** Word common, like father, to most Indo-European languages, the form varying in accordance with phonetic laws. It denotes the female parent. The mother-child relationship, like that of the father and child, has been adapted to religious ideas, many religions including a mother goddess concept. In English law the mother had no rights over her legitimate children until an Act of 1839, and did not acquire equal rights of guardianship with the father until the Infants Custody Act of 1925.

On the death of the father the mother is natural guardian of the children of the marriage and may act jointly with any guardian appointed by the father. She may also appoint a guardian to act jointly with the father after her death. The court may remove her from guardianship. During the marriage or on divorce the court has also power to give the mother the custody of the children if that is in their interests. A mother may be required under the poor law to maintain her child. If a person dies intestate and without issue the mother and father are entitled to succeed to the estate subject to the rights of the wife (or husband). If an illegitimate person dies intestate and without issue the mother succeeds to all the estate subject to the rights of the deceased person's wife (or husband).

#### Mother Carey's Chickens.

Name given by sailors to the stormy or storm petrel (*Thalassidroma pelagica*). Mother Carey is a corruption of *mater cara* or dear mother, meaning the Virgin Mary. French sailors call these birds *oiseaux de Notre Dame* or birds of Our Lady. They are supposed to give warning to sailors of an approaching storm, and it is regarded as very unlucky to kill one. The legend is that each bird contains the soul of a dead seaman.

**Mothering Sunday.** Name given in England to the fourth Sunday in Lent. According to an ancient custom, apprentices were enabled on that day to go home to visit their mothers, bringing them a small present of flowers or the like. The custom is still observed in many parts of the country. Refreshment Sunday falls on the same day. See Sunday.

**Mother-of-Pearl.** Inner layer of the shells of many bivalve molluscs, including pearl oysters. It possesses some resemblance to pearls, and has much the same composition. On account of its beautiful iridescence and its high polish, mother-of-pearl is used in thin sheets to decorate articles of ornament and for the toilet, knife handles, and jewelry. Though mostly derived from bivalves of the torrid zones, a good variety is obtained from pearl mussels in the Mediterranean Sea.

**Mother of Thousands.** Popular name applied equally to *Saxifraga sarmentosa* and *Linaria cymbalaria*. The first named, also known as creeping sailor and wandering Jew, is a native of China and Japan, with roundish, lobed leaves, which sends out long pink runners giving rise to young plants at frequent intervals. The flowers are white with a few spots of yellow and red. *Linaria cymbalaria* is a much smaller plant,

Mother of Thousands. Spray of leaves and flowers of *Linaria cymbalaria*

a native of Europe, rooting in the crevices of rocks and old walls. Its glossy leaves are ivy-shaped, and its spurred flowers are lilac. It is also called ivy-leaved toadflax.

**Mother's Day.** Day set aside in the U.S.A. in honour of motherhood. The idea was conceived by Miss Anna Jarvis, of Philadelphia, who coined the slogan: "In honour of the best mother that ever lived—your mother." On May 10, 1913, a resolution was passed by the senate and house of representatives, to make the second Sunday in May a public holiday in honour of motherhood. On that day Americans give a present to their mothers.

**Motherwell and Wishaw.** A police burgh of Lanarkshire, Scot-

land. The two formerly separate burghs were united in 1920. Motherwell lies N.E. of the river Clyde, which it touches on the S.W., 13 m. S.E. of Glasgow and 2 m. from Hamilton, and has rly. services. It owes its growth to its situation on the great Lanarkshire coalfield; in addition to the col-

Motherwell and Wishaw arms

lieries there are large engineering works, boilers, bridges, railway rolling stock, clocks, and electrical equipment being among its products. The public buildings include a town hall and two public libraries. Pop. 68,000.

**Motherwort** (*Leonurus cardiaca*). Perennial herb of the family Labiatae. A native of Europe and N. and W. Asia, it has a stout rootstock, and erect, four-angled, leafy stems. The opposite leaves are deeply cut into

Motherwort. Foliage and flower whorls. Inset, single flower

five or seven lobes, and the rosy-pink flowers are arranged in a series of whorls, which convert the upper part of the stem into a long leafy flower-spike. The whole plant is downy.

**Moth-flies.** Name given to minute moth-like flies, the body and wings of which are densely clothed with hairs, forming the family Psychodidae. About 70 species are British, some of which are often seen on window panes. In warm countries the species of *Phlebotomus*, or sand-flies, are troublesome owing to the blood-sucking habits of the females. *P. argentipes* and *P. chinensis* are known to transmit the disease of kala-azar in India and China, while other species are carriers of the virus of sand-fly fever in S. Europe and elsewhere.

**Moth Orchid** (*Phalaenopsis*). Genus of epiphytes of the family Orchidaceae, natives of the Malay Archipelago and Eastern India. They have no pseudo-bulbs, but have permanent short leafy stems,

Moth Orchid. Flower sprays of a hybrid form

and the broad leathery leaves are in two ranks. The large showy flowers form a loose spray. They are supposed to bear some resemblance to moths on the wing. A beautiful species is *P. schilleriana*, from the Philippines, with rosy flowers and mottled leaves.

**Motion** (Lat. *motio*). In mechanics, change of position of a body. All motion is relative, e.g. a body moving on the earth is treated usually as though the earth were at rest, though it is moving round the sun, and the latter is moving through space, both of which motions are imparted to the moving body. The laws of motion, first enunciated by Newton, are dealt with under Mechanics.

**Motion.** In music, the progression of voices or parts from note to note. The motion of a single part may be upward; downward; conjunct, proceeding by single degrees; disjunct, proceeding by skips. Comparing one part with another motion may be of three kinds: similar, when the parts move in the same direction; contrary, when they move in opposite directions; oblique, when one is stationary while another moves up or down.

**Motive** (Lat. *motivum*, from *movere*, to move). The mental cause of a voluntary decision or action. Usually an important choice will have more than one motive, though one may predominate. Motives used to be defined as "incentives to the will"; as the concept of a will was discarded, they were regarded as forces supporting the contestants in a mental struggle. If conscience is at odds with some forbidden impulse, various memories, beliefs, feelings, ideals, etc., will be marshalled on either side, each constituting a motive which will affect the final choice of the mind.

It used to be thought that a man could discover his own motives,

and much value is still set by some religious bodies on self-examination. Now it is realized that unconscious elements play a large part in determining human behaviour. This fact does not destroy all the value of honest self-scrutiny, but acts as a useful check when lofty motives are adduced for dubious behaviour. The motive of an action may be contrasted with its intention, the latter taking account of known and accepted consequences. Desire to produce these effects may be a motive; on the other hand, the motive may be an impulse so strong that it leads a man to "damn the consequences."

**Motley, JOHN LOTHEP (1814-77).** American historian. Born at Dorchester, Mass., April 15,

1814, he was educated at Harvard, Göttingen, and Berlin. Having worked with the American legation in St. Petersburg, he became U.S.

minister in Vienna, 1861-67, and in London,

1869-70. He passed much time in England, and at Frampton Court, Dorchester, Dorset, he died, May 29, 1877. One of his daughters married Sir William Harcourt.

Motley began his literary career with novels, *Morton's Hope*, 1839, and *Merry Mount*, 1849. He had already formed the idea of writing the history of the Dutch, and he spent time in Holland, Belgium, and Germany studying authorities. In 1856 his *Rise of the Dutch Republic*, 3 vols., at once made him famous. It was translated into French, German, and Dutch, and was followed by the *History of the United Netherlands*, 1860-68, another great success. Motley writes with real enthusiasm about the struggles of the Dutch for freedom. His style is clear and vigorous, rising occasionally into passages of noble prose. He wrote also *The Life and Death of John of Barneveld*, 1874. His correspondence was edited by G. W. Curtis, 1889. *Consult J. L. M. and His Family*, ed. S. St. J. Mildmay, 1910.

**Motor.** A machine supplying motive power. The name has come to be applied to prime movers other than the steam engine, e.g. electric motor; petrol motor; spring motor. The driver of an electric train in Great Britain is

commonly called a motorman, as distinct from the "engine driver" of a steam locomotive. Spring motors are used for driving gramophones, shop display machines, time switches, etc.; the mechanism resembles that of a clock. Weight-driven motors are similar except that a descending weight supplies the driving force. In model aeroplanes the energy stored up in twisted strips of rubber drives an airscrew as the rubber unwinds—another form of spring motor. (See Clock; Internal Combustion Engine; Spring.)

**ELECTRIC MOTOR.** Machines for converting electrical energy into mechanical energy may be classified in various ways. The fundamental division is into machines for use with direct current and with alternating current.

Direct current motors differ from D.C. dynamos only in detail. All general principles are the same, and the same types of field wind-

Motor. Diagram showing curves of speed variations with load for different types or direct current motors. A, series; B, shunt; C, compound; D, reverse and differential compound

ings (series, shunt, and compound) are used (see Dynamo). *Series* motors have a speed characteristic which varies inversely with the load; they will reach dangerous speed if the load is removed. They are used for traction work, etc., where a high starting torque is required. *Shunt* motors have a more stable characteristic, which drops slightly from no load to full load; they are used in most machine drives where this is of value. *Compound* motors have the normal characteristics of a shunt machine with a slightly greater drop in speed, but the series field enables them to cope with high starting torques and momentary overloads. *Reverse compound* machines (where the series field opposes the shunt field) have a remarkably constant

speed characteristic, but little or no overload capacity.

Alternating current motors, in addition to classification as single phase or polyphase types, may be subdivided into *synchro* motors, running at one fixed speed, and *asynchro* motors, which can run at various speeds. Synchronous motors resemble alternators in the same way that D.C. motors resemble dynamos: an alternator connected with another source of electric power will, if its prime mover stops, continue running like a D.C. dynamo. A synchronous motor will develop torque only when in absolute synchronism with the supply frequency; if unduly overloaded, it will stop, and it is not self-starting.

Asynchronous motors may be further subdivided into *induction* and *commutator* motors. The former are probably the most widely used of any, owing to their simple and robust construction. They have two main classes: *slip-ring*, with a conventional type of wound rotor, and *squirrel-cage*, with a simple rotor consisting of a cage-like structure of copper bars embedded in the iron stampings. Induction motors normally run at a speed slightly lower than the appropriate synchronous speed.

Commutator machines are of many designs. A simple series motor, providing it does not have solid iron field magnets, will run on A.C. as well as D.C.; the motor of a domestic vacuum cleaner is of this pattern. The *Schrage* motor allows a wide range of speed by shifting the relative position of two sets of brushes on the commutator. Hybrid designs, such as *series-repulsion* and *repulsion-induction*, are intended to partake of the advantages of two or more types.

Motors may be classified according to their mechanical construction and method of enclosure, such as *open type*; *protected*; *drip-proof*; *totally enclosed pipe ventilated* (for dusty situations); *totally enclosed radiator cooled*. There are variations such as vertical or horizontal mounting, and skeleton motors supplied as a stator and rotor unit without enclosure of bearings, for building directly into machine tool units as an integral part of the machine. See Electro-Magnetic Machine.

**Motor Boat.** Small vessel propelled by a motor, especially by an internal combustion engine. Its inception dates from 1885, when a launch was successfully propelled by a motor engine. Slow progress was made until 1904, when the Royal Automobile Club held a

cross-Channel race for motor boats, with resultant publicity.

Motor boats may be divided roughly into two categories: displacement craft and hydroplanes.

vehicles, but more because of greatly extended services. Moreover, the charabanc was associated with special trips rather than regular service. While motor buses.

point threatened with invasion. Motor coaches took women and children from areas likely to be attacked by German aircraft early in the Second Great War.

**Motor Cycle.** Any mechanically propelled vehicle, other than an invalid tricycle, with less than four wheels and an unladen weight not exceeding 8 cwt. This is the legal definition of a motor cycle, a term which thus includes three-wheeled cars or runabouts as well as the two-wheeled power-driven motor cycle (the solo motor cycle), the motor cycle with sidcar, and the autocycle, or motorised bicycle.

The adoption of the high-tension magneto, c. 1905, marked the achievement of reliability in the motor cycle, and after the First Great War this vehicle became the most numerous type of powered vehicle on the roads.

Motor cycles are classified according to their type (i.e. for transport, touring, or sport), and the capacity of their engines in c.c. Autocycles are fitted with pedals and, as a rule, have an engine of under 100 c.c. The power units of autocycles and of lightweight motor cycles are usually single-cylinder two-stroke engines in which there is one power impulse per revolution of the crankshaft.

The parts of the two-stroke engine are shown in the diagram. Such power units in the smaller sizes develop approx. the same power as a four-stroke engine of equivalent size. The limiting factor is the short period during which the charge of fresh gas is induced. The popularity of the two-stroke for light machines arises from its simplicity, low cost of manufacture, and lasting qualities. Lubrication is usually effected by mixing oil with the petrol—mixture referred to as "petrol."

Single-cylinder engines are used in nearly all machines up to 250 c.c. Above this size there are both single- and twin-cylinder engines and, in the luxury class, some four-cylinder engines. There are power units with the two cylinders arranged in "V" formation and others with the cylinders horizontally opposed to each other, but the most popular type of twin is

Motor Boat. Diagram of deck and broadside. A, twin Diesel engines. B, propeller shaft. C, steering position. D, sink. E, lavatory. F, stove. By courtesy of Yachting World

In the former the same amount of water is displaced, no matter at what speed the boat travels. A hydroplane rises partly out of the water when running fast, which reduces the amount of water displaced. Displacement craft range from cabin cruisers, 20 ft. in length and upwards, to outboard motor boats. A cruiser has cabin accommodation and is usually seaworthy in moderately rough conditions. The power unit is generally a heavy oil engine, giving a speed of 8-10 knots. Outboard motors, complete with propeller, propeller drive, and fuel tank, are attached to the sterns of small boats used in sheltered waters. Specially designed craft use these power units for racing. The engines are of the two-cycle type, weigh about 40 lb., and are usually rated at 1½-2½ h.p.

Hydroplanes range from the open launch with a speed of 20-30 knots and powered by a specially adapted motor car engine of some 30 h.p., to the Blue Bird, fitted with two aero engines, that attained a speed of 141.74 m.p.h. on Lake Coniston in 1939. High speed motor launches were used by the Air-Sea Rescue service (q.v.) in the Second Great War. Motor vessels (q.v.) are of considerable tonnage, fitted with Diesel-type engines, and capable of remaining at sea in all weathers; many steamship companies now use them.

**Motor Coach.** Vehicle used for long distance passenger transport. In the 1920s the term charabanc, taken over from horse-drawn vehicles, was replaced by that of motor coach, partly owing to the additional comfort of newer

which are stage carriages, ply for hire in towns or over relatively small distances, with frequent stops, motor coaches maintain services which form a network like a railway system, with stops at fixed points only. Fares are paid at a booking office and not on the vehicle. Expansion, convenience, and low fares of motor coach ser-

Motor Cycle. Diagram showing arrangement of single-cylinder two-stroke engine

vices attracted thousands of travellers before the Second Great War; this volume of heavy traffic was one reason for the improvement of highways, while outlying districts were brought into closer contact with centres of population. In 1940 R.A.S.C. motor coach companies were formed in Great Britain to transport troops to any

**Motor Cycle.** Diagram showing the principal parts of a modern 500 c.c. vertical twin-cylinder motor cycle

the vertical twin, in which the cylinders are side by side and the two pistons move up and down together. This gives one power impulse per engine revolution—a smooth torque or turning moment—but with single-cylinder balance.

The majority of four-stroke engines are of overhead-valve (o.h.v.) type, with the valves arranged at an angle in a hemispherical combustion chamber and operated by rocking levers and push rods from cams mounted in an extension of the crankcase. Overhead valves are preferred to side-by-side valves because a smaller area is in contact with the burning gases, so that less heat is wasted and there is greater freedom from cylinder distortion. Overhead valves are used in touring as well as sports engines. Lubrication is automatic and usually on the dry-sump system, in which one mechanical pump passes a continuous stream of lubricant from the oil container to the engine—generally direct to the heavily loaded big-end bearing of the connecting rod—and a second, larger pump draws the oil from the crankcase (thus keeping it “dry”) and returns it to the oil container ready, after passing through a filter, for further use.

Engine cooling is almost invariably by ribs cast on the cylinder and cylinder head; these dissipate the excess heat by conduction, radiation, and convection—when the motor cycle is moving, mainly by conduction. Carburation, once the engine has been started, is automatic and is controlled by a single lever usually in the form of a rotatable right handlebar grip. Transmission is by roller chain or chains except on some of the more expensive motor cycles, which have a cardan shaft with either spiral bevel or worm gearing. Four-speed foot-controlled gear boxes

with hand clutches and pedal (kick) starters are standard on nearly all motor cycles; autocycles have a single gear or, at the most, a simple two-speed gear, plus a hand clutch.

All motor cycles are fitted with sprung front forks, generally in the

form of a pair of telescoping legs controlled hydraulically. Similar rear-wheel suspension is available on many larger motor cycles. Except on lightweight machines, tyres are of 3½-in. section or larger. Motor cycles have internal-expanding brakes, and are exceptional in their braking efficiency, 30 ft. from 30 m.p.h. being usual.

Under the Road Traffic Act, 1934, the minimum age for riding a motor cycle is 16 years. The learner-rider of a solo motor cycle, unlike the driver of a car, need not be accompanied by an experienced driver, but may not carry a pillion passenger—other than one who has passed the driving test or holds a full driving licence. It is an offence for more than one person in addition to the driver to ride on a two-wheeled motor cycle, and for even one person in addition to the driver if that person is not sitting astride on a proper seat behind the driver. See Internal Combustion Engine.

## MOTORING AND MOTORING LAW

*The development of the use of the motor vehicle for recreation is here described. An account of motor racing, and a full explanation of the law relating to motoring and motor vehicles in the United Kingdom, follow. See also Motor Vehicle*

Motoring, the usual term for the use of a motor vehicle for recreation, increased greatly in popularity between the First and Second Great Wars, becoming the chief week-end recreation of millions, whereas before it had been enjoyed chiefly by the well-to-do. In the U.S.A. it was even more widespread than in Great Britain, there being a motor car registration there for every five persons in 1946. Motoring holidays were increasingly popular, motoring associations relieving owners of most of the worries connected with taking a car abroad. Another form of holiday was the motor camping tour with towed caravan. Petrol rationing and the shortage of new vehicles in Great Britain during and after the Second Great War severely curtailed private motoring there.

The invention of steam-propelled road vehicles in the 19th century (see Motor Vehicle) aroused the opposition of the stagecoach and rly. companies and in 1865 a law enacted in the U.K. required that every road locomotive must be preceded at 100 yds. by a man on foot carrying a red flag, must be in charge of three men, and must not exceed a speed of 4 m.p.h. It was not abolished until 1896, by the Locomotives on

Highways Act, which introduced a speed limit of 14 m.p.h., reduced by the local government board to 12 m.p.h.

The Motor Car Act of 1903 increased the speed limit to 20 m.p.h.; authorised local authorities to impose a speed limit of 10 m.p.h. within certain areas; made driving licences compulsory and “dangerous driving” an indictable offence; and introduced the registration of all self-propelled vehicles.

The Ministry of Transport was formed in 1919, and in 1920 the Road Fund was established; the duties and liabilities of taxation were transferred from the customs and excise authorities to the county councils. The receipts of this taxation, originally intended for road improvements, benefit general revenue. The Road Traffic Act of 1930 abolished the 20 m.p.h. speed limit for private cars and motor cycles, Jan. 1, 1931. The Road Traffic Act, 1934, reimposed a speed limit in built-up areas (30 m.p.h.) and made provision for driving tests.

Taxation, under the 1896 Act by weight, replaced under the 1903 Act by a nominal registration fee, under the Finance Act of 1909–10 was according to engine power, as determined by the R.A.C. formula, and varied from

£2 2s. 0d. for up to  $6\frac{1}{2}$  h.p. to £42 for cars over 60 h.p., with, in addition, a petrol tax of 3d. per gallon, which was increased to 6d. per gall. during the First Great War. The Finance Act of 1920 repealed the petrol tax and substituted a tax of £1 per h.p. by R.A.C. rating. In 1928 the petrol tax was reintroduced. After an experiment in 1947 of taxing cars first registered that year by cubic capacity, a flat rate of £10 was introduced, 1948, for all cars first registered in 1947 or later.

#### Growth of Motoring

Production of motor vehicles in Great Britain rose from 10,500 in 1908 to 447,561 in 1938; number of vehicles in use rose from 73,568 in 1908 to 2,644,202 in 1938, to which must be added 35,247 motor cycles in 1908, and 466,265 in 1938.

The increase in the speed of traffic which came with the application of mechanical motive power to vehicles led to a great improvement in road surfaces, the straightening and widening of existing roads, the introduction of the circular movement of traffic ("roundabouts") at dangerous road crossings, and, in towns, of one-way traffic streets. New roads, bypassing towns, were constructed, and along these occurred ribbon development (*q.v.*). Filling stations for the supply of petrol, oil, and tires, which usually also did repairs, sprang up in towns and villages, and along country roads. Old inns and hotels revived and a new type of inn called a road-house, supplying dancing, swimming, refreshments and sometimes accommodation, came into being.

**MOTOR RACING.** Speed and endurance contests between mechanically propelled vehicles, sometimes specially designed as racing vehicles, have become a leading sport, and an increasingly popular spectacle, since *Le Petit Journal* in 1894 organized a competition for "carriages propelled without horses" of a minimum speed of  $7\frac{1}{2}$  m.p.h. For that competition 102 cars entered, 21 of which reached the required speed in a preliminary test; three covered the 78 m. between Paris and Rouen at over 12 m.p.h. Next year, in a test run from Paris to Bordeaux, nine out of 22 cars finished, one achieving an average of 15 m.p.h. Road racing on closed circuits has since remained supreme on the Continent. For many years, however, road racing in the U.K. was not permitted, and track events at Brooklands (*q.v.*) were the nursery of British racing

drivers. The R.A.C. eventually organized road races on the lines of the Monaco grand prix, the first being held in the Isle of Man in 1933. In 1934 road racing started at Donington, Leicestershire.

Sports-car racing has been closely allied to the development of touring cars, and in this field Great Britain can look back on a long list of successes in *e.g.* the Tourist Trophy races on the Ards circuit in Ulster, the Phoenix Park events in Dublin, the Mannin Moar and Mannin Beg races at Douglas, Isle of Man, the Double-Twelve-Hours' race at Brooklands, and the International Grand Prix and other events at Donington.

Famous meetings abroad were the Monte Carlo rally, an annual reliability trial; the German grand prix at Nuremberg; the Tripoli grand prix and the French grand prix. The Indianapolis 500-m. race is the main event in the U.S.A.

#### Speed Records

Some speed records are: 1898, an electrically-driven vehicle achieved 39.24 m.p.h. over a kilometre; 1902, an internal combustion engine vehicle reached 76.08 m.p.h.; 1904, 103.56 m.p.h.; 1927 Segrave raised it to 203.79 m.p.h.; 1932, Campbell passed the 250 m.p.h. mark at 253.97 m.p.h. Intense competition between Campbell, Eyston, and Cobb culminated in 1939 in the achievement of 368.7 m.p.h. by Cobb, at Bonneville Flats, Utah, U.S.A. Cobb in 1947 set up a new record of 394.196 m.p.h.

**LAW RELATING TO MOTORING.** Under the Road Traffic Acts motor vehicles are defined in Great Britain as mechanically propelled vehicles intended or adapted for use on roads, and are classified as heavy or light locomotives, motor tractors, heavy motor cars other than public service vehicles, motor cars, public service vehicles, motor hackney carriages, invalid carriages, and motor cycles.

Heavy locomotives, light locomotives, and motor tractors are vehicles of various weights which may draw trailers but may not carry loads themselves. The vehicles that carry loads of goods or passengers are heavy motor cars (weight over  $2\frac{1}{2}$  tons) and motor cars (weight up to 3 tons for passenger vehicles designed to carry more than 7 passengers in addition to driver and not over  $2\frac{1}{2}$  tons in other cases). An invalid carriage is a vehicle not over 5 cwt. in weight designed and constructed for the use of persons with a physical defect. A motor cycle is a vehicle not over 8 cwt.

which has less than 4 wheels, and is not an invalid carriage.

There are regulations prescribing the construction and use of each class of vehicle. The regulations applicable to construction of all motor vehicles make the following compulsory: parking brakes (except for motor cycles and invalid carriages); a speed indicator (exceptions include invalid carriages and motor cycles with cylinder capacity not over 100 c.c.); a driving mirror (exceptions include motor cycles); a wind-screen wiper (unless the windscreen can be opened to enable the driver to see without looking through it); a warning instrument (this must not be a gong, bell, or siren except in certain official vehicles, *e.g.* police cars); a silencer; safety glass on the windscreen and all windows facing to the front on the outside (except windows on the upper deck of a bus).

The most important further requirements are (i) for motor cars: maximum width, 7 ft. 6 ins.: an efficient braking system with two independent means of operation; if weight exceeds one ton, all tires must be pneumatic subject to minor exceptions; wings must be fitted; (ii) for invalid carriages: maximum width 7 ft. 2 ins.; an efficient braking system operating on at least 2 wheels; wings must be fitted; (iii) for motor cycles: braking system with two means of operation; pneumatic tires; wings must be fitted.

#### Maintenance and Use

The following are the requirements as to maintenance. All vehicles, trailers, and their parts and accessories, and the load carried, shall be in such a condition that no danger is likely to be caused. The load must be well secured. Windscreen wiper, speed indicator, brakes, steering gear, tires, and glass must be properly maintained.

The following regulations relate to the use of all vehicles. There must be no excessive noise due either to any defect in the vehicle or to the way it is loaded; the engine must be stopped when the vehicle is stationary, except when held up in traffic, or when it is necessary to have the engine running to examine it because of some breakdown. No warning instrument may be sounded when a vehicle is stationary or between 11.30 p.m. and 7 a.m. in a built-up area. The vehicle must not be reversed for a greater distance than is reasonably necessary, and it must not cause any unnecessary

obstruction of the road. The driver must always be in a position in which he has proper control of the vehicle and a full view of the road and traffic ahead. He must not leave the vehicle without first stopping the engine and setting the brake.

Among miscellaneous requirements are the following: if one vehicle tows another, the tow rope must not be more than 15 ft. long and must be made easily distinguishable; on a vehicle registered on or after Oct. 1, 1937, no mascot with a sharp projection may be carried in any position in which it is likely to strike or cause harm to any person in a collision.

A police officer and certain other officials may insist on inspecting the brakes, silencer, or steering gear of any vehicle. It is illegal to sell a vehicle in a condition not complying with the regulations. Before a motor vehicle may be driven on the public road, it must be registered and licensed, the driver must hold a driving licence, and there must be an insurance policy in force against certain third party risks.

**Registration.** The vehicle is registered by the local council when it is first licensed and receives an identification mark consisting of an index mark made up of a series of letters and a registration number. The identification mark must be on a plate of the prescribed size and must be exhibited on the vehicle. If it is not so fixed or is obscured, the driver is liable to a fine. For privately owned cars it has white lettering on a black ground. A registration book is issued to the owner and must be produced on request to a police officer or local taxation officer. If the vehicle changes ownership the book is handed to the new owner, who sends it to the council; the old owner must also notify the council. Any alteration to the vehicle which makes the details in the book inaccurate must also be notified.

The fact that a person holds a registration book in which he is described as the owner of the vehicle is no evidence that he is, legally, the owner; e.g. when a vehicle is on hire purchase, the hirer having no right to dispose of it, the hirer will nevertheless appear as the owner.

**Licensing.** Mechanically propelled vehicles (with a few exceptions) must be licensed. The licence must be obtained from the local council and must be affixed

to the vehicle. A certificate of insurance must be produced before a licence will be issued. Members of the armed forces, while they are on leave, may, in certain circumstances, obtain a permit entitling them to use a vehicle belonging to them without a licence. When a vehicle is sold the licence may be transferred to the new owner. The cost of a licence varies with the type of vehicle. Motor vehicles used for the carriage of goods for reward or in connexion with any trade or business require special licences under the Road and Rail Traffic Act, 1933, unless they are vehicles belonging to the British Transport commission under the Transport Act 1947. Licences are normally issued for the calendar year, but may be taken out for certain parts of the year.

#### Trade Licences

Motor manufacturers, repairers, and dealers can obtain either a general, or a limited, trade licence, the plate of which, usually with red lettering on a white ground, may be affixed to any vehicle while that vehicle is in use. A vehicle with a general trade licence may be used for any purpose connected with the business of a motor manufacturer, repairer, or dealer. A vehicle with a limited trade licence may be used only for certain specified purposes, e.g. for testing or trials, or for delivery to a purchaser, and not more than 2 passengers in addition to the driver may be carried and these must be either employees or a prospective purchaser. No passengers may be carried on Sundays, bank holidays, Christmas day, Good Friday, or any other public holiday. No goods except ballast for testing the vehicle may be carried.

**Driving Licence.** No one may drive a motor vehicle on a public road unless he holds a driving licence. No one under 16 may drive any motor vehicle. Persons aged 16 or over may drive a motor cycle or invalid carriage, persons aged 17 or over may drive any class of motor vehicle except a heavy or light locomotive, a motor tractor, or heavy motor car. These last vehicles may be driven only by persons 21 or over. Driving licences are issued by the local county or borough councils. The fee is 5s. and the licence lasts for one year from the date of issue. When application is made for a licence the applicant must make a declaration stating whether he is suffering from certain disabilities, such as epilepsy, or sudden attacks of giddiness, and whether he can,

with glasses if worn, read a number plate at a distance of 25 yards. If he is suffering from certain disabilities, e.g. loss of a hand or foot, he has a right to demand to be submitted to a special driving test; certain other disabilities, e.g. epilepsy or bad eyesight, make an applicant ineligible for a licence.

Subject to one exception, all persons must pass a driving test before being licensed to drive, unless they have already passed the test or held a licence before April 1, 1934. During the Second Great War driving tests were discontinued, and as an exceptional measure emergency licences were issued without any test. A person who had held an emergency licence for 12 months could within a year after Feb., 1947, when the issue of these licences ceased, apply for an ordinary licence and renew that licence annually without passing a test as to his competence to drive so long as he had not been convicted of any serious motoring offence while holding an emergency licence.

#### Learner Drivers

A person proposing to take a driving test obtains a provisional licence (fee 5s.) valid for three months. The holder of this licence can drive the vehicle only when he has in the vehicle with him a person who has held a licence for 2 years or has passed the driving test. This does not apply to a solo motor cycle (see Motor Cycle). The vehicle must have an L sign affixed. When the holder of a provisional licence considers himself proficient, he applies to undergo the test. He must show himself not only competent to drive but also fully conversant with the Highway Code (q.v.). If he fails he may not attempt the test again until a month has elapsed, but a magistrate's court has the power to curtail this period.

A person who proposes to drive a heavy goods vehicle must obtain an additional licence from the local traffic commissioners, or else be licensed to drive public service vehicles. He must pass a further driving test. This licence remains in force for three years. Drivers of public service vehicles also require special driving licences. Every person driving a motor vehicle must at the request of a police officer produce his licence for examination either by the officer or, within five days, at some police station specified by him.

**Insurance.** Under the Road Traffic Act, 1930, with certain

1. *Acherontia atropos* (Death's Head), Britain. 2. *Anesita* 6-10, N India. 3. *Erasmia pulchella*, India, China. 4. *Ophiocla fulvipes*, Africa, Asia, America, Australia. 5. *Mimodes discolor*, W Africa. 6. *Chrysiridia madagascariensis*, Madagascar. 7. *Pericallia galactini*, China,

India, Borneo. 8. *Egythia vaillantiana*, Africa. 9. *Attacus atlas* (Atlas Moth), India, China, Ceylon. 10. *Dobraea uera* (Oleander Hawk Moth), Britain. 11. *Zeryx niphendula* 6-spotted, Borneo, Britain. 12. *Glorina ornata*, N India.

India. 28. *Sphinx ligustris* (Privet Hawk Moth), Britain, to China and Japan.

**MOTH: EXAMPLES OF SPECIES FROM ALL PARTS OF THE WORLD**

See over |

To face page 533r

exceptions (e.g. police cars) no motor vehicle may be used on a road unless it is covered by a policy of insurance or a security against the death or bodily injury of any person, except death or bodily injury (i) arising out of and in the course of the employment by the person insured of the person killed or injured; (ii) to persons being carried in the vehicle or entering or getting into or alighting from it unless they are carried for hire or reward or under a contract of employment; and (iii) liability under contract. The policy must also cover hospital expenses (up to £50 for an in-patient and £5 for an out-patient) and the fees of any doctor giving emergency treatment. A policy of insurance is of no effect until an insurance certificate is issued by the insurance company.

**Speed Limits.** A speed limit has been fixed for 18 classes of vehicles. The only vehicles not specifically limited as to speed are those constructed solely for the carriage of passengers and their effects if fitted with pneumatic tires, adapted to carry not more than seven passengers exclusive of the driver, and not drawing a trailer other than a gas producer. If such a passenger vehicle is drawing a two-wheeled trailer (except a gas producer)—e.g. a caravan—its speed limit is 30 m.p.h. Goods vehicles which are "motor cars" or "motor-cycles" may move at 30 m.p.h. if they have pneumatic tires. Other goods vehicles are limited to lower speeds. In built-up areas, indicated by specific road signs, all motor vehicles are subject to a speed limit of 30 m.p.h. To prove that a vehicle has exceeded the speed limit the evidence of one witness is insufficient unless corroborated—e.g. by a stop-watch.

**Motoring Offences.** The most important motoring offences are dangerous driving; careless driving; road racing; driving on land not part of a road, except on to land within 15 yds. of a road for the purpose of parking; driving while under the influence of drink or a drug; driving away a motor vehicle without the consent of the owner or other lawful authority; failing to stop when required by a police officer; failure to obey directions of a police officer controlling traffic or any traffic sign; exceeding the speed limit. Maximum penalties range from £5 for a first offence in

the case of driving on to land not part of a road, to £100 plus four months' imprisonment for a second conviction of driving under the influence of drink. In addition any court may disqualify a driver from holding an ordinary driving licence for any offence in connexion with the driving of a motor vehicle except on a first or second conviction for exceeding the speed limit. The court is bound by law, unless there are special circumstances, to disqualify a driver for at least a year for dangerous driving on a second or subsequent conviction; on conviction for driving under the influence of drink or drugs; for driving a vehicle not validly insured, or for road racing.

A person disqualified for more than six months may after six months apply to have his licence restored, and if refused may apply again at intervals of three months. A person convicted of careless or dangerous driving may be disqualified until he has passed the driving test again.

#### Endorsement of Licence

When a person is convicted of an offence in connexion with the driving of a motor vehicle, the court may, and in the case of a conviction for reckless or dangerous driving or any disqualification must, order the conviction to be endorsed on his licence. A person whose licence has been endorsed on a conviction for exceeding the speed limit may after a year obtain a clean licence if he has had no further endorsements during that year and he held, or was entitled to, a clean licence before he was convicted. A person whose licence has been endorsed for a more serious offence may after three years obtain a clean licence if he has had no further endorsement during that time.

**Pedestrian Crossings.** Free and uninterrupted passage must be given to any pedestrian on the carriageway at a crossing not controlled by the police or by lights, the pedestrian having precedence. A driver approaching a crossing must, unless he can see there is no pedestrian on it, proceed at such a speed that he can if necessary stop before reaching the crossing. Where traffic at a crossing is controlled by police or by lights, every pedestrian who has begun to cross before the driver is given the signal to proceed must be allowed free and uninterrupted passage. A vehicle must not stop on a pedestrian crossing except to avoid an accident or when the

driver is unable to proceed by circumstances beyond his control.

**Accidents.** Where an accident occurs owing to the presence of a motor vehicle on the road and damage or injury is caused to any person, vehicle, or animal (which means any horse, cattle, ass, mule, sheep, pig, goat, or dog, but not a cat) the driver of the vehicle must stop and, if required to do so by any person having reasonable grounds for so requiring, must give his own name and address, and the name and address of the owner, and the identification marks, of the vehicle. If for any reason he does not give his name and address he must report the accident to a police officer or police station as soon as possible, in any event within 24 hours. Where the accident causes personal injury to some other person the driver must either produce his insurance certificate at the time to a police officer, or to some person having reasonable grounds for requiring its production, or he must report the accident and produce the certificate to a police officer or at a police station within 24 hours. He will, however, not be convicted for failing to produce the certificate if he produces it within five days at a police station specified by him at the time of the accident.

#### Liability for Damage

In addition to any criminal liability for, e.g., careless or dangerous driving that a motorist may incur as a result of an accident in which he has been involved, he may also be made to pay damages to compensate any person who has sustained personal injury or damage to property by reason of the accident. The test of liability to pay damages is failure to take reasonable care. Suppose A's vehicle collides with B. If A is solely to blame he is liable for all the damage suffered by B, and cannot call on B to pay any part of his (A's) damage. A similar result follows if B is solely to blame. If, however, A and B were each partly to blame, even though one was much more to blame than the other, the result until 1945 was that neither could recover any damages from the other. The Law Reform (Contributory Negligence) Act 1945 provided that a person partly to blame should be entitled to recover damages, but the amount he recovered should be reduced according to the degree in which he was to blame.

**Lighting.** Between one hour after sunset and one hour before sunrise during summer time, and between half an hour after sunset and half an hour before sunrise during the rest of the year, vehicles must carry two white lights in front (one white light for solo motor bicycles and invalid carriages) and one red light to the rear. Vehicles may be exempted from showing these lights in certain parking places. Lights which swivel while the vehicle is in motion, other than dipping headlights, are prohibited. A solo motor bicycle need not show any lights if it is being wheeled by a person on foot on the left hand side of the road.

**Consult** Motor Dictionary, B. R. Dierfield, 1939; Motor Driving Made Easy, R. F. Broad, 1940; About a Motor Car, P. Ladyman, 1946; Motorists' Law of the Road, 1946; Development of Road Motors, R. W. Kidner, 1947; Motor Manual, annually; Motorists' Diary, annually.

**Motor Insurers' Bureau.** Company set up in 1946 by motor vehicle insurers which, by agreement with the ministry of Transport, undertook to pay damages awarded by the courts to persons injured, or to the personal representatives of persons killed, in road accidents caused by motor vehicles where the damages cannot be recovered either because the motorist has failed to insure or because the policy is for some reason inoperative. The liability of the motorist must first be established. In cases where the motor vehicle concerned cannot be traced an *ex gratia* payment may be made. Notice must be given to the bureau not later than 21 days after legal proceedings against the motorist have been started.

**Motorised Troops.** Military units provided with their own mechanical transport. Infantry included in armoured divisions have their own vehicles, which they drive and maintain themselves, to enable them to advance at approximately the same speed as armoured fighting vehicles; such units are known as motorised infantry. Troops supplied with transport for some particular task only are termed lorry-borne. Broadly speaking all arms of the British army are motorised, except infantry battalions outside armoured divisions, and these are frequently transported in troop-carrying vehicles of the R.A.S.C.

**Motor Nerves.** Nerves which conduct impulses from the brain

or spinal cord to the voluntary or involuntary muscles, and cause them to contract. When, for instance, a person wishes to raise his arm, an impulse starts from the brain and, travelling down the motor nerves, stimulates the appropriate muscles, which perform the action intended. The reaction seems ultimately to depend on the liberation of a chemical substance at the junction of nerve and muscle. See Nervous System.

**Motor Roads.** Highways specially constructed for fast vehicular traffic. Found chiefly on the Continent and in the U.S.A., they eliminate crossings and sharp curves. See Autobahn; Road.

**Motor Torpedo Boat.** Small high-speed vessel designed for night attack on enemy convoys or warships. Mostly built for the Royal Navy during the Second Great War, they operated in the North Sea and English Channel, where with other coastal craft they obtained ascendancy over the German light forces. German craft known as E-boats were similar to the British but slightly faster. Italian anti-submarine boats were smaller and had a range of only some 250 m., but like the others carried two torpedo tubes, machine-guns, and automatic shell-firing guns. See Coastal Craft; E-boat.

## MOTOR VEHICLE DESIGN & MECHANISM

A. G. Douglas Cleese, Associate Editor, The Autocar

*A brief history of the application of mechanical power to vehicles is followed by a detailed description of the component parts of a typical motor car, and some indication of the differences to be found in other types of motor vehicle. See also Diesel Engine; Electric Traction; Internal Combustion Engine; Motoring*

To Nicolas Cugnot is generally attributed the first steam-driven vehicle, in 1768-70; in Great Britain Richard Trevithick in 1802 constructed a steam vehicle which travelled from Camborne to Plymouth and is said to have attained a speed of 9 m.p.h. In 1830 a steam vehicle built by Ogle and Summers demonstrated before a special commission of the house of commons attained a speed of 35 m.p.h. on the level. Bollee, in 1872, drove a steam omnibus from Paris to Vienna at an average speed of 18 m.p.h. Six years later Bouton and Trepardoux, working with the Comte de Dion, produced a steam-driven tricycle. Serpollet followed in 1887 with a tricycle which used a "flash" boiler.

In 1884 came what is, perhaps, the most important event in the history of motoring—the introduction by Gottlieb Daimler of the petrol gas motor, in which the ignition was by means of a red-hot platinum tube, the advantages of which were speedily recognized. The chief prize in the 1894 race from Paris to Rouen went to a petrol-driven car; in the 1895 race from Paris to Bordeaux steam cars were hopelessly beaten.

In 1895 the first car designed by F. W. Lanchester, inventor of an epicyclic gear box, live axle, wire wheels, and electric ignition, was produced. A few years later came the first Wolseley. Various Daimler models were also being produced. In 1900 63 cars started in a 1,000 m. trial. Improvements in comfort and increase in speed and mechan-

ical efficiency have been continuous since then, both Great Wars having led to particularly rapid mechanical developments.

**CAR DESIGN.** There is much variation in the design of all types of motor vehicle. A typical private car of the popular 8 h.p. and 10 h.p. classes will have a four-cylinder engine with which the clutch and gear box form a unit. This is mounted at the front of a steel chassis frame and the power is transmitted to the rear axle by an open propeller shaft. In the rear axle is a spiral bevel final drive from which the half-axle shafts transmit the power to the rear wheels. The front wheels are pivoted to the ends of the axle beam, so that they can be inclined to one side or the other in order that the vehicle may be steered. The steering gear consists of a worm and worm wheel, or a variation of a worm and wheel; the worm is at the foot of the inclined steering column at the upper end of which is the steering wheel. The worm wheel is on a short shaft from the end of which depends a lever known as a drop arm. From the end of the drop arm a rod runs forward to a lever projecting from the moving portion of the front axle which carries the off-side front wheel. Thus movement of the steering wheel causes movement of the front wheel, which is linked to its fellow by a transverse rod known as a tie-rod.

Brakes are necessary to retard and arrest the motion of the car when desired. Brakes are provided

on all four wheels, and consist of steel drums containing two shoes shod with a friction material. These shoes are expanded against the inner surface of the brake drums by cams or wedges actuated by a system of rods or levers, or by small hydraulic cylinders containing pistons. The brakes are applied by a pedal operated by the driver's right foot.

Between the front and rear axles and the chassis frame springs are interposed. On the average car these are half-elliptic

which can be opened in fine weather. In body design there is much variation and even the smaller cars may have four or six windows, may possibly be wide enough to seat three on the rear seat, and will have some accommodation for luggage in a rear locker. A spare

in shape and consist of a number of leaves clipped together. Their purpose is to absorb shocks due to road inequalities, so that the wheels may follow the road surface without disturbing the forward motion in a horizontal plane of the car as a whole. The action of the springs is controlled by dampers or shock absorbers, in order to give additional comfort to the passengers.

On the chassis frame is mounted the body, and in mass produced cars this is usually of steel pressings, provides seating for four passengers, has four doors, and probably a sliding roof panel

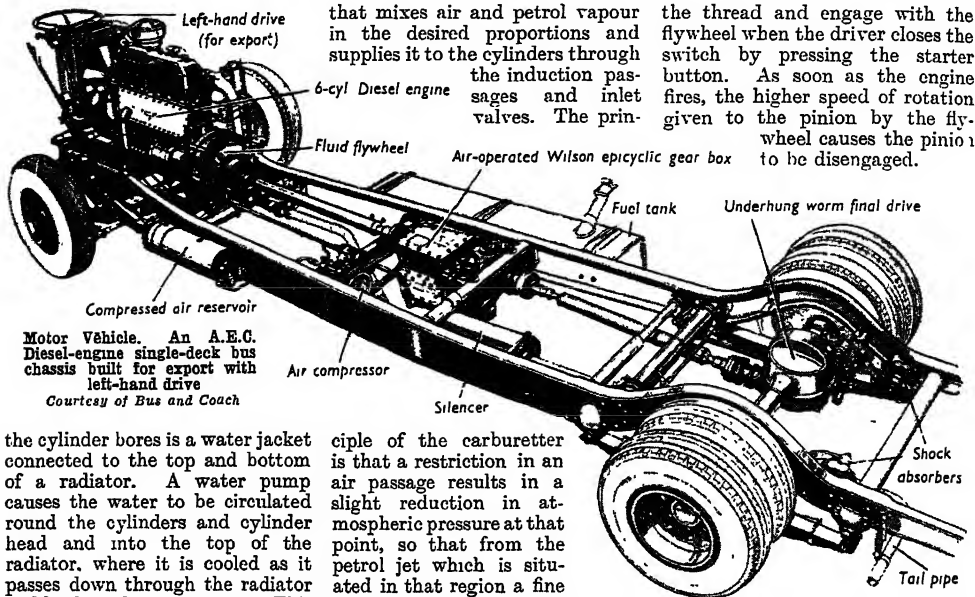

ment beneath the luggage locker.

**THE POWER UNIT.** The typical power unit has the cylinders and crankcase formed in a single iron casting. Valves may be side by side or overhead; in some cases the inlet valves are of overhead type and the exhaust valves of side type. The cylinder head is detachable, of cast iron or aluminium. Pistons are usually of one of the aluminium alloys, and the connecting rods are of high-tensile steel, usually of H-section. The crankshaft is carried in bearings formed in the crankcase, and lined with white metal; similar bear-

ings are used for the connecting rods. Enclosing the bottom of the crankcase is a steel pan or sump which also acts as an oil reservoir. Also in the crankcase is a shaft with cams or projections which operate the valves. This camshaft is driven from the crankshaft by a chain running over the sprockets on the two shafts, or by gear wheels, the drive being "geared down" so that the crankshaft makes two revolutions for one revolution of the camshaft.

From a small gear in the camshaft is driven a vertical shaft which projects down into the sump to drive the oil pump. Often the upper end of this shaft is used to drive the distributor of the coil ignition system. The oil pump delivers oil under pressure to the bearings and cylinders, filters being provided. Generally water cooling is provided. Surrounding

Motor Vehicle. An A.E.C. Diesel-engine single-deck bus chassis built for export with left-hand drive  
Courtesy of Bus and Coach

the cylinder bores is a water jacket connected to the top and bottom of a radiator. A water pump causes the water to be circulated round the cylinders and cylinder head and into the top of the radiator, where it is cooled as it passes down through the radiator and back to the water pump. This pump may have fan blades on its spindle so arranged that they draw air through the multitude of passages in the radiator block, and the pump and fan are usually driven by a rubber and canvas belt of V section passing over a pulley on the crankshaft and a similar pulley on the fan spindle. This belt drive is often made use of to drive the dynamo of the electrical system. Current from the dynamo charges a storage battery and is used for the ignition, the starting motor, the lamps, the direction indicators, the fuel gauge, and sometimes a fuel pump.

Many engines have mechanical fuel pumps operated by a special cam on the camshaft. From the fuel pump a petrol pipe runs to the carburettor, which is the unit

that mixes air and petrol vapour in the desired proportions and supplies it to the cylinders through the induction passages and inlet valves. The prin-

ciple of the carburettor is that a restriction in an air passage results in a slight reduction in atmospheric pressure at that point, so that from the petrol jet which is situated in that region a fine spray of petrol is drawn, and mixes intimately with the air. Ignition of the charge in the cylinders is by an electric spark at the sparking plugs, caused by the sudden surge of high tension current from the coil when the low tension current to the coil is interrupted by the contact breaker combined with the distributor. The starting motor has a pinion or gear wheel which engages with teeth cut in the circumference of the flywheel when the starter switch is closed. This pinion is mounted on a screw thread on the shaft of the starting motor and its inertia causes it to move along

the thread and engage with the flywheel when the driver closes the switch by pressing the starter button. As soon as the engine fires, the higher speed of rotation given to the pinion by the flywheel causes the pinion to be disengaged.

**THE CLUTCH.** Unlike a steam or electric locomotive, a vehicle driven by an internal combustion engine cannot be started from rest until the engine is running. It is for this reason that a friction clutch is necessary. The dry single-plate clutch is almost universally used. It consists of a disk of steel to which a lining of friction material is riveted. This is mounted on a splined hub on a short shaft which is co-axial with the flywheel and crankshaft, in such a manner that it is normally held in contact with the face of the flywheel by the action of springs.

Motor Vehicle. A sectional drawing of a modern four-door saloon 8 h.p. motor car  
Courtesy of The Autocar

In this position the clutch is "engaged" or "in" and power is transmitted from the flywheel to the clutch shaft, which is connected to the gear box.

When, however, the driver depresses the clutch pedal with his left foot he causes the clutch disc to move slightly away from the flywheel, or to disengage. There is then no transmission of power from the engine to the gear box. There is also another possible disconnection in the transmission, i.e., that given by the gear box when its gear lever is in the neutral position, when there is no connection between input and output shafts of the gear box.

To start a motor vehicle from rest, therefore, the driver first makes sure that the gear lever is in the neutral position. He then starts the engine, and depresses the clutch pedal. Now he can engage first gear, and start the vehicle from rest by gently releasing the clutch pedal, meanwhile increasing the power given by the engine by gently depressing the accelerator, as the small pedal which opens the throttle is generally called.

**THE GEAR BOX.** As the power developed by an internal combustion engine is a function of its speed of rotation, and as more power is required in climbing a steep hill than in running on the level, the engine is made to run faster while the vehicle is running more and more slowly as a hill becomes steeper by the gear box, which allows the driver to select one of a choice of gear ratios. The average car will have four gear ratios, a few have only three, some heavy commercial vehicles may have five or six.

A typical four-speed box of sliding gear type is shown in Fig. 1. This type of gear box is still used on commercial vehicles,

Motor Vehicle. Fig. 1. Diagram of a four-speed sliding gear box. For lettering, see text

but most private cars have a synchromesh box. The principle of this, however, is the same, although it differs in detail con-

struction in that the gear wheels are always in mesh, but are not always in use. The wheels required to transmit power are brought into use by sliding dogs, and spring-

Motor Vehicle. Fig. 2. Epicyclic Gear: A, direct drive; B, second speed; C, reverse. a, annulus; b, sun wheel; c, planet wheel; d, arm; e, band brake; f, shaft.

loaded cone clutches cause the dogs to be running at the same speed before they actually engage. Hence changes of gear can be made without any special skill.

In the four-speed sliding gear box shown shaft A, driven by the clutch, embraces shaft C which projects from the rear of the box. To A are fixed pinion D and the internally toothed ring N. The lay or intermediate shaft B carries fixed pinions E (meshing with D), L, H, and F. Pinions M, K, and G (the two last joined together) revolve with C, but can slide along it when moved by forks in collars X, Y, forming part of the gear-changing mechanism. As shown all the sliding pinions are in their neutral positions, and A and B are able to revolve without influencing C.

To engage first gear, KG are moved to the right and G meshes with F. Power is then transmitted from A to B through the constant mesh pinions D and E, and from B to C through F and G. For second gear KG are moved to the left and K meshes with H. For third gear M is moved to mesh with L, and for top or direct gear M is slipped into N, thus locking A and C together. Reverse is obtained by another pinion, not shown, which meshes with F and G.

**EPICYCLIC GEARS.** At one time epicyclic gears were more widely used than

at present, but it is not unlikely that they will again become well known. In the epicyclic gear (Fig. 2) the sun wheel is coupled direct

to the crankshaft of the engine. Meshing with the sun wheel are planet wheels which revolve on spindles carried by an arm on the driven shaft. Also meshing with

the planet wheels is a ring gear or annulus to which an external brake band may be applied.

The operation of the epicyclic gear is as follows: if the whole mechanism is locked together so that it revolves as a whole, direct drive is obtained and the driven shaft will run at the same speed as the crankshaft. If, however, the brake band is applied to the annulus so as to prevent it from rotating, then the rotation of the sun wheel by the engine causes the planet wheels to rotate on their spindles in the opposite direction. They can do this, however, only by running round the stationary annulus in the same direction of rotation as the sun wheel, thereby carrying their spindles, and the arm and shaft to which the spindles are attached, in the same direction. Since the planet wheels are smaller than the sun wheel the engine will revolve a number of times before the driven shaft completes one revolution. In other words, therefore, there is a gear reduction between the crankshaft and the driven shaft.

The simple epicyclic train described is in reality a two-speed gear inasmuch as it gives direct drive and a reduction. Additional trains would provide further reductions if desired. This has, in fact, been done in the Wilson pre-selective gear box, and in the Cotal electro-magnetically controlled gear box in which electro-magnetic clutches are used instead of band brakes.

**THE DIFFERENTIAL.** From the gear box power is transmitted by a universally jointed propeller shaft to the final drive in the rear axle casing. With this is incorporated the differential, which is necessary to allow the drive to be transmitted to the wheels in a manner which

leaves them free to revolve at different speeds when travelling on a curve. Fig. 3 explains the principle of the gear.

Bevel B on the propeller-shaft S meshes with C, which carries round with it bevels D<sup>1</sup> and D<sup>2</sup>, free to revolve on centre pins

and in gear respectively with E<sup>1</sup>, keyed to A<sup>1</sup>, and E<sup>2</sup>, keyed to A<sup>2</sup> (A<sup>1</sup> and A<sup>2</sup> are the half-axle shafts). Assume the driving wheels to be off the ground and C to revolve 20 times per minute, then A<sup>1</sup> and A<sup>2</sup> will both be drawn round by D<sup>1</sup> and D<sup>2</sup> at that rate. If the right-hand wheel be held, E<sup>2</sup> becomes a rack on which D<sup>1</sup> and D<sup>2</sup> run, and, as their axes are half-way between E<sup>1</sup> and E<sup>2</sup>, E<sup>1</sup> and A<sup>1</sup> revolve 40 times a minute. The average speed of E<sup>1</sup> and E<sup>2</sup> is still the same as that of C; and this averaging condition exists when either wheel runs faster than the other.

The bevel pinion B and crown wheel C, which have curved teeth on up-to-date vehicles, are called spiral bevels. These run more quietly than bevels with straight teeth. Some commercial vehicles have a worm and worm wheel in place of a spiral bevel.

To damp out vibration and prevent it from reaching the occupants of the vehicle, it is usual to mount the power unit in the chassis frame on rubber blocks which are bonded to steel brackets by a special process. Frequently there will be three such mountings, one at each side of the engine at the front, and a third at the rear of the engine or beneath the gear box.

**CHASSIS FRAME.** Channel section steel pressings are used for the construction of the chassis frame; a usual design consists of two main longitudinal members strongly braced by a number of transverse members. Cruciform cross bracing at about the middle of the chassis just to the rear of the gear box is general. The main members may taper outwards from front to rear in order to give room for the front wheels to move for steering, or the main members may be inswep at the front for the same reason. Over the rear axle the side members are generally upswept to give clearance for axle movement, an alternative being to sweep the frame down beneath the axle.

In a car with independent front springing there will be no axle beam, and from a strong front cross member of the frame there will project on each side two wishbone links or pivoted levers, one above the other, to the ends of which the steering heads are pivoted. A coil spring may be interposed between the lower link and the frame, or the

lower link may be attached to one end of a torsion bar of which the other end is anchored to a bracket on the frame. In this case the springing effect is given by the twisting of the bar. Independent suspension for the rear wheels is sometimes adopted.

In a few cases a separate chassis frame is dispensed with by making the steel body shell sufficiently strong to withstand the stresses normally taken by the frame. The body is suitably reinforced to receive the springs and also the power unit. The advantage of this form of construction is a saving in weight; it is used also in single-deck buses and coaches.

**DIESEL ENGINE.** Many passenger and load carrying vehicles are powered by the compression ignition or Diesel engine, burning an oil fuel instead of petrol. The carburettor is replaced by a fuel injection pump and there is no ignition system. On the induction stroke air alone is drawn into the cylinders, not a mixture of air and fuel. On the following compression stroke the air is compressed to such an extent that it attains a temperature which is sufficient in itself to ignite the oil fuel, when this is injected in the form of a fine spray at the top of the compression stroke. The compression ratio may be as high as 16 to 1, or higher, as compared with an average of about 6.5 to 1 for a petrol engine. Advantages of the Diesel engine are its lower fuel cost and the reduced risk of fire owing to the nature of its fuel.

On some vehicles, both private cars and commercial, the transmission system may have a fluid flywheel or hydraulic coupling in place of a friction clutch. The hydraulic coupling consists of a driving member or impellor and a driven member, the two being encased and containing oil. The impellor is formed as part of the engine flywheel and it has in it a series of radial vanes. The driven

member is similarly vanned and is set close to the impellor so that the spaces between the vanes form a series of pockets or cells. Rotation of the impellor when the engine is running causes the oil to be circulated in the cells in the form of a vortex; kinetic energy is imparted to the oil by the impellor and is, in turn, given up by the oil to the driving member which is therefore also caused to rotate. There is thus no direct mechanical connexion between the impellor and the driven member; hence the action of the fluid coupling is extremely smooth. Usually the fluid coupling is used in conjunction with the Wilson pre-selective epicyclic gear box.

#### Variations in Design

Large cars may have six-cylinder-in-line engines, or eight-cylinder engines with the cylinders either in line or arranged in two blocks of four in V formation. Engines with 12-cylinders set in two blocks of six in V formation have also been used. The spiral bevel final drive of the rear axle may be replaced by a hypoid bevel which has the bevel pinion centre line set below the centre line of the crown wheel; the advantage of this is that the propeller-shaft is thus located a little lower in the chassis, and no tunnel is necessary to give clearance to the propeller-shaft, and it is therefore possible to have a perfectly flat floor in front of the rear seats.

**COMMERCIAL VEHICLES.** In general, vehicles for load carrying follow the same lines of design as private cars, especially in the smaller sizes. In such vehicles petrol engines are used, because it has not been found easy to produce a very small Diesel engine at an economical price. The problem of fuel injection is alone extremely difficult in very small engines, because the quantity of fuel required to be injected is so minute that there is great difficulty in producing an injection pump of sufficiently small capacity. In the larger sizes, however, the Diesel is widely used for load carrying and public service vehicles.

The smaller load carrying vehicles are four-wheelers; for heavy loads it is common to use six- or eight-wheelers, that is, vehicles with three or four axles. When three axles are used the two rear axles are set close together, and usually both are driving axles, although sometimes only the front one of the two is a driving axle, the rear one serving only to carry part of the load.

Motor Vehicle.  
Fig. 3. Diagram  
of a differential  
gear. See text

Vehicles with four axles have two at the front, the four wheels all steering, and two at the rear.

Many commercial vehicles have servo-motors to supplement the driver's foot pressure on the brake pedal. Servo-motors are cylinders containing pistons linked to the brake mechanism. The cylinders are connected to the engine induction system through valves and a vacuum reservoir. The engine draws air out of the vacuum reservoir, so that a partial vacuum is caused therein. Then when the driver applies his foot brake the control valve places the vacuum reservoir in connexion with the cylinder, and the piston moves up the cylinder, thus applying more force to the brake gear than the driver could exert unaided.

**Motor Vessel.** Sea-going ship powered by Diesel or Diesel-type compression engines using heavy fuel oil. The first of any size to go into regular service was the 1,000-ton *Selandia*, launched in Great Britain in 1912, since when motor vessels of considerable tonnage have been built for commercial purposes. Increasingly popular as fast cargo liners, they show economy of bunker space, rapidity of refuelling, and cleanliness. Their disadvantages against the steamship are that their engines require more maintenance, and, unless carefully designed in relation to the hull, are liable to cause excessive vibration. Power plants for early motor vessels were made in Switzerland; then came the German Krupp and M.A.N. engines. The first British marine Diesel was the Duxford opposed piston engine. The average motor vessel displaces 9,500 tons and has a speed of 15 knots. Approximately one-third of the ships under construction in 1947 were motor vessels.

**Motril.** Town of Spain, in the prov. of Granada. It stands on a small river about a mile from the

Motril arms

Mediterranean, 34 m. by road S. by E. of Granada. In a fertile district, where cotton, sugar cane, and sugar beet are grown, it has sugar mills and manufactures cotton, flour, soap, wine, and brandy. It exports dried figs, almonds, barley, etc., and there are antimony, lead, zinc, and copper mines in the neighbourhood. The ancient port of Granada, the port of Motril now implies Calahonda and the roadstead of Baradero. Pop. 17,000.

**Mott, Sir Frederick Walker** (1853-1926). British physician. He was born at Brighton, and received his medical education at University College and Hospital, London. A specialist in neurology and mental subjects, he was Croonian Lecturer at the Royal College of Physicians, 1900. He served in the R.A.M.C. during the Great War, and was consulting physician to Charing Cross Hospital. Among his publications are *The Brain and the Voice in Speech and Song*, 1910; *Nature and Nurture in Brain Development*, 1914; *War Neurosis and Shell Shock*, 1919. He was knighted in 1919, and died June 8, 1926.

**Mott, John Raleigh** (b. 1865). American evangelist. Born in New York, May 25, 1865, he assisted in

J. R. Mott, American evangelist

the formation of the student volunteer movement for foreign missions, and founded and became general secretary of the world's student Christian federation, 1895. General secretary of the international committee of the Y.M.C.A., 1915-32, he was president of the world alliance of the Y.M.C.A. in 1926, and from 1910 to 1941 chairman of the international missionary council, presiding at the world missionary congresses at Edinburgh, 1910, Jerusalem, 1928, and Madras, 1938. He was awarded a half share of the Nobel Peace prize in 1947, and was honoured by the governments of France, America, Japan, China, Italy, Poland, Sweden, and Finland. His many books include *Evangelisation of the World in This Generation*, 1900; *Future Leadership of the Church*, 1908; *World's Student Christian Federation*, 1923; *Liberating the Lay Forces of Christianity*, 1932; *The Larger Evangelism*, 1944.

**Motta, Giuseppe** (1871-1940). Swiss statesman. Five times president of the Swiss federation, he was born Dec. 29, 1871, at Airolo, Canton Ticino. He received his early education partly in Italy and partly in Switzerland, and later graduated in law at Heidelberg. At the age of 22 he was elected to the council of state, becoming a federal councillor in 1911. For the 23 years during which he held cabinet office he dominated Swiss politics; and he was president in 1915, 1920, 1927, 1931, and 1937.

In 1920 he was appointed foreign minister and his country's chief representative at the League of Nations. He died Jan. 23, 1940.

**Motte.** Central mound sometimes found within the walls of a castle and characteristic of a Norman fortress. From an encircling ditch earth was removed to raise a platform, the bailey enclosed within a palisaded bank, and also a mound on which the commander's tower stood. Motte-and-bailey earthworks were erected on the site of Cardiff Castle c. 1090.

**Mottistone, John Edward Bernard Seeley, 1st Baron** (1868-1947). British politician.

Born May 31, 1868, and educated at Harrow and Trinity College, Cambridge, he was called to the bar in 1897. Liberal M.P. for Isle of Wight, 1900-06, and during 1923-24, he represented Abercromby div., Liverpool, 1906-10, and Ilkeston div., Derby, 1910-22. Under-secretary for the colonies, 1908-10, and under-secretary for war, 1911, he was secretary for war, 1912-14. After serving in the First Great War, he was under-secretary for air and president of the air council, 1919. He was raised to the peerage, 1933. His publications included *Adventure*, 1930; *Fear and Be Slain*, 1931; *For Ever England*, 1932; *Oaths of Happiness*, 1938. He died Nov. 7, 1947, and was succeeded by his son, Henry John Alexander Seeley (born May 1, 1899).

Lord Mottistone, British politician

**Motto.** In heraldry, short, pithy sentence, sometimes a single word, usually placed on a scroll beneath the coat of arms or crest, or round the shield. They were personal to the bearer, but were commonly perpetuated in families.

The motto differs from the *Guerre*, war cry, or slogan, which is placed on a scroll above the crest or badge. See *Heraldry*.

**Mottram, Ralph Hale** (b. 1883).

British novelist. Born at Norwich, Oct. 30, 1883, he was educated at Lausanne, and worked in a bank for many years. He established his reputation with

R. H. Mottram, British novelist

The Spanish Farm, 1924 (awarded the Hawthornden prize) which with *Sixty-Four, Ninety-Four!* 1925, and *The Crime at Vanderlynden's*, 1926, formed a trilogy, describing life in Holland during the First Great War. Mottram's later novels included *Our Mr. Dormer*, 1926; *The English Miss*, 1928; *Early Morning*, 1935; *The World Turns Slowly Round*, 1942; *Visit of the Princess*, 1945. His other publications included a life of John Crome, 1931; *East Anglia*, 1933; and *Buxton the Liberator*, 1946.

**Motza.** Name given to the unleavened bread eaten by the Jews at the Passover. There are about seven large, dry cakes or biscuits to a pound of motza bread, one egg being used in each cake. It is made in the home, or can be bought at a Jewish grocer's or baker's, in which cases the motza should be soaked in water and drained before eating. See Passover.

**Mouflon** OR **MOUFFLON.** Species of European wild sheep, *Ovis Aries*, found only in Corsica and Sardinia. It is about 28 ins. high at the withers, and the wool of the upper parts is reddish brown, with white on the underparts. The curved horns in the male sometimes reach 3 ft. in length. The animals are found in flocks on the highest peaks of the hills, and are very difficult to approach.

**Moujik.** Russian peasant, from the Russian *muzhik*. The word was formerly used to describe a loose fur cloak worn by ladies, similar to those worn by Russian peasants *Pron. moo'-zhik*.

**Mould.** Collective term for any fluffy or cushiony growth of fungi appearing on dead or decaying vegetable matter—especially if damp, e.g. leather, bread, fruit, etc. Such fungi are nearly always in the "imperfect" stage, i.e. they reproduce almost exclusively by asexually formed spores and rarely form sexual organs. Examination under a lens or microscope shows a dense mass of tangled threads (*hyphae*) which constitute the fungus body or *mycelium* and from this there generally arise a number of upright *hyphae* bearing spores either enclosed in a sporangium or in chains at the tip of the *hyphae*. Some moulds have now been shown

to be stages of sexually-reproducing fungi principally Ascomycetes. The commonest moulds are the green moulds, i.e. species of *Penicillium*, some of which assist in the "ripening" of cheese such as gorgonzola, and others can cause fermentation in sugary liquids; decaying fruit is generally covered with brownish cushions of *Monilia*; the black pin mould *Rhizopus* and the white mould *Mucor* occur on jams, bread, decaying vegetables, etc. Moulds are not confined to an aerial habitat, but also occur in aquatic situations. The most familiar example is probably the white "fur" that often develops on fish—particularly if kept in small jars with infrequently changed water. This is a species of *Saprolegnia*, but there are a number of other water moulds which may attack many forms of water life. See Fermentation: Penicillin.

**Mould.** Piece of apparatus used for shaping molten or plastic material by the process of casting. Metals may be made into suitable shapes by heating them until they are completely

liquid; the liquid metal is then poured into a mould, which is so formed that when it is removed it leaves the cast metal in the desired shape. The mould is provided with a "runner," down which the metal is poured, and a "riser," so that the air may be completely displaced; the pieces of metal solidified in these spaces are attached to the casting and they must be cut off before the article is ready for use. Moulds are made from carefully selected and graded sands, which are first sieved into the mould boxes. See Bronze Statuary; Casting; Foundry; Glass; Plaster Cast; Plastics.

**Moulding.** In architecture and joinery, the surface formed on any piece of stone, timber, or other material by casting or cutting according to a continuous pattern; by extension, the piece of material so moulded. The mouldings in Greek architecture have been elaborately classified as the ovolo, ogee, cyma recta, torus, scotia or trochilus, cavetto, astragal, and fillet or annulet. The cyma recta and cavetto were mainly used as purely decorative finishings; the ovolo and ogee as supports to other members of the composition; the torus

and astragal for the tops and bottoms of columns; the scotia as a means of separating one part of a base from the other; the fillet for every kind of architectural profile.

**Moulding.** Types in use in architecture and joinery. a, ovolo; b, torus; c, cavetto; d, ogee or cyma recta; e, cyma reversa or reverse ogee; f, scotia; g, bead; h, solid or "laid-in"; moulding contrasting with i, stuck or planted moulding; k, compound moulding, quirk, ovolo and bead; l, bolection moulding.

Roman and Renaissance forms of moulding were based on the Greek, and certain classic mouldings were adopted by the Gothic architects, who used mouldings of every description lavishly. The medieval mason worked according to a system almost as rigid as the classical one, though the far greater variety drawn upon might point to a contrary conclusion. In Britain Norman architects usually used the plain cylindrical roll; but the introduction of the pointed arch and lancet windows opened the way for numbers of new forms. These were employed so systematically at different points that the dates of certain Gothic buildings can be told from the mouldings alone. Early English mouldings, which include the roll, fillet, and dog-tooth, are generally of finer workmanship than those of later date. Perpendicular work is flatter and harder. See Panelling.

**Moulin Rouge, LE** (Fr., the red mill). Parisian place of amusement. Situated in the Boulevard de Clichy, and built on the site of the old Bal de la Reine-Blanche, it was opened Oct. 5, 1889, and destroyed by fire Feb. 28, 1915. A spacious establishment, attached to which was a magnificent garden, its daily programme included a concert, followed by dance music. The Moulin Rouge owed its name to

**Mouflon.** Ewe and lamb of the Corsican wild sheep.

the windmill which towered above the entrance, the sails of which were illuminated by red lights. Rebuilt in 1921, it remained open throughout the Second Great War, and is still unique among Parisian entertainments.

**Moulins.** City of France. The capital of the dept. of Allier, it stands on the river Allier, 36 m. by rly. S.S.E. of Nevers, and is a rly. junction. Cutlery, textiles, hats, and glass are the chief manufactures. The Gothic cathedral of Notre Dame has two fine towers. Its choir was originally the chapel of the castle, and the chief of its many treasures is a beautiful triptych. The church of the Sacré Coeur is modern. Other buildings include the town hall, palais de justice, and a 15th century belfry. There are remains of a castle, once the residence of the Bourbon family. Therein is a museum containing the famous Bible, dating from 1115, from the priory of Souvigny. From 1368 to 1527 Moulins was the capital of the Bourbonnais. Pop. 23,254.

**Moulmein** OR MAULMAIN. Seaport of Burma, in the Amherst dist. It is situated near the mouth of the Salween, sheltered by Bhilu Island from the Gulf of Martaban, but is rainy during the monsoon. In 1824 it was a

fishing village, but it is now the second port of Burma, with a great export of teak floated in rafts down the Salween, and of rice. It has connexion by rly. with Pegu and Rangoon.

Raided by Japanese aircraft in Jan., 1942, Moulmein was evacuated by British forces on Jan. 31. The town remained in enemy

Moulins, France. Place d'Allier, looking towards the church of the Sacré Coeur

hands until the surrender of the Japanese forces in Burma on Sept. 13, 1945. Pop. 65,506.

**Moulting.** Name given to the periodical shedding of the outer covering of animals. The period is essentially one of growth, for the shedding of the old coat is due to the beginning of the growth of the new. It is best

known in the birds, which usually shed and renew their feathers after the nesting season. This is apparently a time of ill-health and of strain on the constitution, and birds are usually silent and inactive during it. Moulting is also seen in the periodic shedding of the carapace in growing crustaceans, in the sloughing of the skins of snakes, and in the shedding of the skins of myriapoda, spiders, and insects, the process being known as ecdysis. Many mammals also shed their hair in the spring and grow a thicker coat again at the approach of winter. See Animal Mammal.

**Moulton,** RICHARD GREEN (1849-1924). Anglo-American man of letters. Born at Preston, Lancashire, May 5, 1849, he was educated at Christ's College, Cambridge, and

London university. He was a university extension lecturer, 1874-90, and in 1891 he settled in the U.S.A. In 1892 he was made professor of English literature at Chicago, and in 1901 head of the department of general literature. A scholarly interpreter of Shakespeare, he wrote Shakespeare as a Dramatic Artist, 1885, 3rd ed. 1897; Shakespeare as a Dramatic Thinker, 1907; The Modern Study of Literature, 1915. He was also responsible for a rearrangement of the Bible according to modern ideas. He died Aug. 15, 1924.

**Moultrie.** City of Georgia, U.S.A. and co. seat of Colquitt co. Situated in the S. part of the state, it is served by the Georgia and Florida, the Atlanta, Birmingham and Coast, and other rlys. It is the trading centre of a farming area and has cotton mills, sawmills, and meat-packing plants, and makes turpentine and clothing. It was founded in 1856 and incorporated in 1859. Pop. 10,147 of whom about 40 p.c. are negroes.

**Mound.** Hillock of earth or stones, especially when heaped up artificially. In the Mississippi basin and the American Gulf states are numerous pre-Columbian structures by aboriginal agricultural peoples, hence called mound-builders. The mounds are conical, pyramidal, animal-shaped, or mural. Their use was sepulchral,

or ritual, domiciliary, or defensive. The conical grave-

mounds, 6 ft. to 300 ft. across, and up to 100 ft. high, resemble the European barrow and tumulus. The largest, at Grave Creek, Moundsville, W. Virginia, 320 ft. across, 79 ft. high, has two stone-capped timber chambers; one with two skeletons, the other—30 ft.

above it—with one. Among the contents of the graves were shell beads and copper bracelets.

Cahokia mound, Illinois—the largest U.S. earthwork—is 1,080 ft. by 710 ft., 99 ft. high, and surrounded by about 70 lesser mounds. Etowah mound, Georgia, is 380 ft. by 300 ft., 61 ft. high. The effigy mounds, mostly in Wisconsin, represent panthers, turtles, birds, and other forms, often associated with mural earthworks up to 900 ft.

Moulmein, Burma. New and old pagodas, the former in foreground

Mound. Section and plan of a mound constructed by N. American tribes at E. Dubuque, Illinois. The vault measured 13 ft. by 7 ft. and contained 11 skeletons

Mound. Two further examples of mounds constructed by N. American tribes. Upper picture, Avondale mound, Washington co., Mississippi, a typical series of mound tombs. Lower picture, burial of a chieftain, illustrated by De Bry (c. 1620). Tribesmen mourn around the mound, about the base of which arrows are stuck in the ground. On the mound is the chief's shell cup

long. The so-called Elephant mound bore a much-discussed effigy 140 ft. long. In Ohio the Serpent mound bore a sinuous embankment 4 ft. high, 1,330 ft. long; the so-called Alligator mound may represent a lizard. In Georgia two represent birds. The strongholds, comparable with British earthworks, notably in Ohio, exhibit remarkable precision in their geometrical forms. The trees on some mounds, when first observed by Europeans, date them at least two centuries before the discovery of America; some are undoubtedly older. The cultural remains point to immigrant influences from the W. which farther S. developed the Mexican *teocalli* and worship of serpent and sun. See *Celt; Tumulus*.

**Bibliography.** Mound-builders, J. P. McLean, 1879; Burial Mounds of the Northern Sections of the United States, Cyrus Thomas, 1887; Report on the Mound Explorations of the (American) Bureau of Ethnology, Cyrus Thomas, 1894.

**Mound Bird.** Popular name for the Megapodiidae, a family of game birds that deposit their eggs in mounds of decaying vegetable matter, where they are hatched by the combined heat of the sun and of the decomposition of their surroundings. There are about 15 species, found mainly in Australasia, notably the brush turkey.

**Moundville.** City of West Virginia, U.S.A., the co. seat of Marshall co. On the Ohio river, 11 m. S. of Wheeling, it is served by the Baltimore and Ohio rly., and river steamers. For the remarkable Indian burial mound after which the city is named, see *Mound*, Pop. 14,168.

**Mounet-Sully, JEAN** (1841-1916). French actor. He was born at Bergerac, Feb. 27, 1841, and made his first appearance as King Lear at The Odéon in 1868. From 1872 he was principal actor at the Comédie Française. He was regarded by connoisseurs as one of the greatest tragedians of the 19th century. He died in Paris, March 1, 1916.

**Mount Abu.** The culminating point of the Aravalli Hills, India. It is in Rajputana, 68 m. W. of Udaipur. The sanatorium, known by the same name as the mountain on which it stands, is 3,945 ft. in elevation. There are two fine

temples built by the Jains. Of white marble, they date from the 12th and 13th centuries, and are held to be the finest extant specimens of Hindu architecture. The altitude of Mt. Abu is 5,650 ft.

**Mountain.** Term used, somewhat loosely, to describe an elevated portion of the earth's surface. Usage depends on local circumstances, and an isolated elevation of less than 1,000 ft. is often termed a mountain, though elsewhere ground well over that height may be referred to as hills.

Mountains have been formed by accumulation; by block faulting; by folding; by erosion. Mountains of accumulation are typically volcanoes (*q.v.*), where the cone or dome is built up of ashes and lava flows ejected from one or more craters. Some high mountains are of this type: Cotopaxi, 19,613 ft., in Ecuador; Orizaba, 18,240 ft., in Mexico; Mts. Shasta and Rainier, both over 14,000 ft. and other peaks in the Cascade range of west U.S.A.; Elburz, 18,500 ft., in the Caucasus; Vesuvius, 3,890 ft.; and island mts. such as Teneriffe, 12,190 ft. and Mauna Loa, Hawaii, 13,760 ft. above sea level. The last rises from the floor of the Pacific with a depth of over 15,000 ft. making a total mountain height above its base of approx. 30,000 ft.

Block fault mountains are features resulting from the elevation or tilting of fragments of the earth's crust between faults (*q.v.*). The earth movements involved are more or less vertical, and while the elevated ridges are formed by uplift, the valleys either lie along

Mountain. Figs. 1-4, illustrating the formation of mountain ranges. See text

the line of faults between adjacent blocks, or along narrow down-faulted strips. The Basin ranges of the west U.S.A. and the flanking Sierra Nevada and Wasatch mts. have been formed in this way (Fig. 1). The Ruwenzori mts. of

Mountain Ash. Flower and leaves of the tree also called the rowan

**Mountain Ash** OR **ROWAN TREE** (*Pyrus aucuparia*). Small tree of the family Rosaceae. It is a native of Europe, including Great Britain, and the Canaries, N. and W. Asia,

and N. America. Its leaves are divided into six to eight pairs of slender leaflets. The small creamy-white flowers are produced in numerous clusters, and are succeeded by bright scarlet fruits.

**Mountain Ash.** Urban dist. of Glamorganshire, Wales. It is 4 m. S.E. of Aberdare, and 18 m. N.N.W. of Cardiff, and stands on the Cynon, a tributary of the Taff. It is served by rlys. The urban district includes a number of mining villages, among them Mountain Ash itself, Abercynon, and Cwmpennar, that became populous with the opening of coal mines in the 19th century. The Welsh name for Mountain Ash is Aberpennar. Market day, Sat. Pop. 32,370.

## MOUNTAINEERING AS A SPORT

H. E. Kretschmer, late member of the Alpine Club

*An account of the nature of this exhilarating but hazardous sport, and the equipment necessary for it, as well as a history of its development. See also Alps; Everest; Himalayas; Matterhorn; Mont Blanc; Rock-climbing; Skiing, etc.*

Mountaineering is the art of ascending mountains. In its widest sense it embraces all forms of movement in mountainous country. The art lies in overcoming obstacles and perils safely, and with the greatest economy of effort compatible with the use of only a reasonable minimum of extraneous aids.

The weather in the mountains is more uncertain and changeable than in the plains. Surprising extremes of heat and cold may be experienced in a short space of time. Gales and blizzards may spring up with sudden violence. High winds, lightning, and mists become particularly dangerous on exposed ground. Mountains are subject to a continual process of decay and erosion which loosens pieces of rock, ice, and other matter. These may drop from ridges and other steep places, often just after the hottest part of the day. On high mts. there are usually some places which are under continuous bombardment by falling stones at certain hours of the day. Loose rock may also become dangerous to the unwary if used as support for hand or foot. Avalanches may occur where driven snow has been compacted into wind slab, where new snow has not bonded with layers of old snow, etc. Steepness, exposed aspect, bluffs of rock may be contributory causes of the instability of snow slopes. The imperceptibly slow, but constant, movement of glaciers, combined with unevenness of ground over which they flow,

causes the formation of crevasses which are often very deep, and may be hidden under treacherously insecure snow bridges.

Essential extraneous aids include weatherproof clothing and special footwear. In steep and exposed places a rope is necessary for safety. The use of oxygen apparatus to facilitate breathing at exceptionally high alts. (above 25,000 ft.) constitutes a borderline case of what is considered a reasonable mountaineering aid. All equipment should be bought from reputable specialists. Outer clothing should be of tough, closely-woven texture and it must allow complete freedom of movement. It must afford protection against wind. The boot soles should either consist of a special rubbery composition with moulded nail-like protuberances or be nailed. An ice axe is carried for cutting steps in ice and hard snow. When thrust into a slope it can be used to arrest a slip before it becomes a disastrous fall. It is also used for balance, for sounding snow, and as a belaying point for the rope. Climbing ropes and their uses are dealt with under Rock Climbing. To cross glaciers with hidden crevasses safely, roped parties of more than two persons are necessary.

For walking with security on ice slopes, ice claws or crampons are attached to the boot and this may save hours of step cutting. Dark glasses are essential to protect the eyes from ultra-violet rays reflected from snow at high alts.

Mountaineering proper is primarily concerned with overcoming the specific difficulties presented by some particular part of a mountain. The actual ascent is only a secondary objective. For this, rock climbing or snow and ice craft or both are required. The gymnastic exercises and dexterities of the sport are relatively easy to acquire, but acquisition of the essence of mountain craft, which is route finding, judging relevant objective and subjective conditions, and ability to move at all times with economy of effort, requires a long apprenticeship.

Mountaineering expeditions should be undertaken only by persons who are physically fit and capable of dealing with the difficulties to be encountered. Parties with insufficient knowledge and experience of mountains should engage a professional guide. In most countries there is a system of licensing to ensure the competence of local guides. Generally there are fixed tariffs for the services of a guide on particular ascents.

**HISTORY.** The earliest recorded mountaineering feats were of a military nature, such as the crossing of the Alps in 218 B.C. by Hannibal's army. Among others reported as early climbers are Philip III of Macedon (181 B.C.), and the emperor Hadrian (126 B.C.). Petrarch ascended Mt. Ventoux in 1336. Antoine de Ville was said to have climbed the rocks of Mt. Aiguille in 1492. Naturalists, clerics, and artists were the first promoters of mountaineering. In 1760 De Saussure, a French scientist, offered a prize for the first ascent of Mt. Blanc. This was gained by Michael Paccard and Jacques Balmat in 1786. Other important first ascents followed in the Alps with the Grossglockner (1800), the Ortler (1804), the Jungfrau (1811), and the Monte Rosa (1819). From the middle of the 19th century the English played an important part in mountain exploration. The ascent of the Wetterhorn in 1854 by Charles Wills marks the beginning of mountaineering as a sport. In 1857 the Alpine club was formed in London to enlarge "the community of feeling among those who in the life of the high Alps have shared the same enjoyments, the same labours, and the same dangers." Similar clubs were soon founded in other countries, and in 1939 European Alpine clubs had an aggregate membership of over 120,000.

John Tyndall, Charles Hudson, F. E. Tuckett, E. S. Kennedy,

Leslie Stephen, and other English mountaineers were the pioneers of mountaineering, the outstanding event of which was Whymper's conquest of the Matterhorn in 1865. Soon every major peak in the Alps had been climbed. A second generation of Alpine explorers, among whom Guido Rey, Mummery, Freshfield, Moore, Conway, Coolidge, the Zsigmondy brothers, Meier, Purtscheller, and G. Winthrop Young were foremost, set about conquering the old peaks by new routes with such effect that by the turn of the century Mt. Blanc, for instance, had been climbed by more than 20 routes.

The Caucasus, including the highest mts. in Europe, was first explored by Freshfield's party in 1868. Conway started the exploration of Arctic and Spitsbergen mountains, Whymper those of Greenland, Shackleton those of the Antarctic. The German, Wilhelm Reid, climbed Cotopaxi in 1872, Whymper climbed Chimborazo in 1880. In Africa Ruwenzori was scaled by the duke of Abruzzi and Mt. Kenya by MacKinder. The highest peak of N. America, Mt. McKinley, was not climbed till 1913. W. W. Graham's numerous Sikkim ascents in 1883 were the beginning of the Himalayan exploration. He was followed in 1892 by Conway's Karakoram expedition. Mummery lost his life in an attempt to climb Nanga

Parbat. Douglas Freshfield, the Workmans, the duke of Abruzzi, and T. G. Longstaff contributed greatly to the early exploration of the Himalayas. A British party climbed the 25,447 ft. summit of Mt. Kamet in 1931, Americans climbed Minya Konka (25,256 ft.) in 1932. The highest peak yet climbed is Nanda Devi (25,645 ft., 7,814 metres). Assaults by Americans on Mt. Godwin-Austen, or K 2 (28,278 ft.), by Germans on Nanga Parbat (26,629 ft.) and Kinchinjunga (28,146 ft.), and by Frenchmen on Dhaulagiri (26,828 ft.) were unsuccessful. Several attempts have been made to reach the 29,141 ft. summit of Everest.

Some of the technical terms used in mountaineering are: *Aiguille*, a rock spire or needle. *Alp*, a mountain pasture. *Arete*, a ridge. *Bergschrund*, a crevasse separating the main portion of a glacier from the upper slopes of the mountain. *Col*, a pass or the low point of a ridge. *Cornice*, a projecting mass of snow as on a ridge. *Couloir*, a gully. *Glissade*, sliding down on snow or ice. *Karabiner*, a metal snap ring through which the rope

may be passed for security. *Moraine*, rock and debris carried down of pushed out by a glacier. *Scree*, gravel-like collection of stones and rock chips covering slopes below gully, steep rock faces, etc. *Verglas*, thin veneer of ice on rock.

**Mountain Gun.** Artillery unit formed for military operations in hilly country, or where wheeled carriages cannot travel. The guns and their mountings are carried on pack mules or by men. Generally the equipment makes about five or six mule loads, as a mountain battery has neither limbers nor wagons. The gun is jointed, so that the breech ring can be carried separately. The 3-75 in. gun howitzer can be unpacked from muleback and assembled in 3½ minutes. It weighs about 1,450 lb. and divides into 6 loads. The gun fires a shell of 20 lb. and has a range of between 3 and 4 m.

**Mountain Laurel** (*Umbellularia californica*). Californian Sassafras, or spice bush. A tall evergreen tree of the family Lauraceae, and a native of

California, its alternate, lance-shaped leaves emit a strong odour like camphor. The greenish-yellow flowers are clustered in umbels. The name mountain laurel is sometimes applied to *Kalmia latifolia*. See American Laurel.

**Mountain Meadows Massacre.** Outrage committed by the Mormons, on Sept. 11, 1857. A party of 130 immigrants from Arkansas, with 40 wagons and over 200 horses and cattle, were passing through Utah territory to California, when they were attacked by Indians and Mormons in Indian disguise. In response to an urgent message for help, John Doyle Lee, a prominent Mormon bishop, with a number of followers, hastened to the spot. The immigrants, who had barricaded themselves behind their wagons, welcomed Lee as their saviour; but no sooner had the Mormons gained their confidence than at a signal from Lee a general massacre took place, only 17 infants, too young to inform, being spared. Although the Mormon church denied responsibility, evidence given at Lee's trial implicated the highest officials. Twenty years after the crime Lee was

Mountain Laurel in full foliage

Mountaineering. Achieving two difficult ascents in the Swiss Alps. Left, a well-equipped climber negotiates a sharp crag; right, using an ice axe to secure a better foothold on a glacier in the Alpes des Grisons

brought to justice, and was executed at the scene of the massacre, March 23, 1877.

**Mountain Railway.** Term in civil engineering applied to lines on which the grip of the locomotive's wheels on the rails is not

Mountain Railway. A rack railway up Mount Pilatus, Switzerland, with an average gradient of 1 in 3. The engine and carriage form a single car seating 32 people

sufficient to permit it to draw or push a train, so necessitating other means of obtaining the required adhesion. These are generally some form of rack, or central rail gripped by horizontal toothed wheels on the locomotive. Also included are the ladder rack, formed of bars; the locker rack, in which the teeth are on two sides of a central rail and the toothed wheels engaging them are horizontal; and the Abt rack, with two or three flat racks side by side, their teeth being arranged stepwise, so as not to come in line with each other. The modern form of motive power is electricity. There are mountain railways working on the tooth and rack principle at Mount Washington, U.S.A.; St. Illo, Italy; in the Harz mountains; and in the Bernese Oberland.

**Mountain Sickness.** Symptoms appearing in persons ascending into high altitudes. The symptoms appear at varying heights, in varying individuals, but generally at about 20,000 ft. They are caused by deficiency in the oxygen content of the air and so in the arterial blood, while the carbon-dioxide content remains the same. Breathlessness, lassitude, and nausea characterize the condition. In those remaining at a height for

some weeks the blood-forming organs show the strain of supplying extra red cells to carry what oxygen is available. Mental symptoms are frequent when rapid ascents are made, as in modern flying. Mental apathy may come on suddenly, judgement is badly disturbed, and in fighting, cowardice or dare-devilry may equally obtain. Ability to hear almost disappears. On touching-down memory is blurred and temper is irritable. Since symptoms are due entirely to shortage of oxygen they can be entirely avoided by the use of an adequate oxygen apparatus.

**Mountains of the Moon.** Alternative name of the Ruwenzori (q.v.) mountain range, in the region of the border between Uganda and the Belgian Congo. Herodotus mentioned them in 457 B.C. as containing the source of the Nile, and the name Mountains of the Moon was used for them by Ptolemy, A.D. 150. Ancient maps depicted them as a range running across the entire African continent from Abyssinia to the Gulf of Guinea. The origin of the Nile legend doubtless lay in the existence in the range of the source of the Ruamuli, a stream which runs into the Nile.

**Mount Allison.** University of New Brunswick, Canada. Founded in 1843 by C. F. Allison, it was at first a Wesleyan academy. In 1853 it obtained the right to confer degrees, and in 1913 took its present name. It is controlled by the

United Church of Canada, but is unsectarian. The buildings are at Sackville, N.B. There are engineering workshops for the school of applied sciences.

**Mount Auburn.** Cemetery in Cambridge, Massachusetts, U.S.A. It is 6 m. W. of Boston, on the Boston and Maine rly. Here are the graves of Longfellow, Lowell, Motley, Charles Sumner, Phillips Brooks, Oliver Wendell Holmes, and other famous Americans.

**Mount Barker.** Town in S. Australia. It is a rly. junction, 22 m. E. of Adelaide, on a plateau of Mount Lofty Ranges, in an agricultural and vine-growing district.

**Mountbatten.** Name taken by the English members of the family of Battenberg (q.v.). In 1917 Louis Prince of Battenberg (1854-1921) renounced his title and was created marquess of Milford Haven; at the same time he, and also the children of his younger brother Henry (1858-96), took the name Mountbatten. The children of the 1st marquess of Milford Haven were Alice (b. 1885), who married Prince Andrew of Greece, and whose youngest child Philip (b. 1921) was created duke of Edinburgh on his marriage to Elizabeth, heir presumptive to the British crown, in Nov., 1947; Lady Louise Mountbatten (b. 1889), who married the crown prince of Sweden, 1923; George, the 2nd marquess (1892-1938); and Louis (b. 1900), created earl of Mountbatten (v.i.) 1947. See Philip, Prince.

## EARL MOUNTBATTEN OF BURMA

*A sailor by profession and inclination, and an administrator of marked ability in war and in peace, Lord Louis Mountbatten, great-grandson of Queen Victoria, proved himself one of the outstanding personalities of the Second Great War*

Louis Francis Albert Victor Nicholas was born on June 25, 1900, at Frogmore House, Windsor, youngest of the four children of Louis of Battenberg and Victoria, granddaughter of Queen Victoria. He was himself known as Prince Louis Francis of Battenberg until 1917, when his father renounced his German princely title, took the name of Mountbatten, and was created marquess of Milford Haven.

Lord Louis Mountbatten, as Prince Louis Francis then became, inherited his father's love of the sea and ships, and in 1914 entered the R.N. as a cadet, passing through Osborne and Dartmouth and becoming a midshipman in 1916. He saw active service during the First Great War in the

battleships Lion and Queen Elizabeth, and in a submarine, and at the time of the armistice in 1918 was sub-lieutenant in command of a P-boat. After a course at Cambridge, Mountbatten accompanied his cousin the prince of Wales (later Edward VIII) during the latter's tours of Australia and New Zealand in 1920, of India and the Far East in 1921.

Mountbatten, a born leader, rose steadily in rank in the inter-war years. In 1932, as a commander, he was fleet wireless officer, Mediterranean fleet, and was known in the service as the author of technical and linguistic manuals. His first command was of H.M.S. Daring, a destroyer, in 1934; he was at the Admiralty in 1936, and was promoted captain 1937.

At the outbreak of the Second Great War, he had just taken command of the new flotilla-leader Kelly and of the 5th destroyer flotilla. In May, 1940, he brought home the Kelly (already the survivor of a mine in Dec., 1939) after she had been torpedoed in operations off the German coast; she had been four days in tow. While the Kelly was under repair, Mountbatten transferred to the Javelin; she was also torpedoed (in the English Channel, Nov., 1940), but was brought safely to port. The Kelly met her end in a dive-bombing attack off Crete in May, 1941, Mountbatten being among the survivors picked up. He was awarded the D.S.O. for gallantry in these actions.

His next command, the carrier *Illustrious*, was short-lived, as on Oct. 19, 1941, he was appointed adviser on combined operations (in succession to Sir R. Keyes), becoming chief of combined operations, March 18, 1942, with the acting rank of vice-admiral and the honorary rank of lieutenant-general and air marshal. Lord Louis directed a number of commando raids on the coasts of German-occupied Europe—notably that on Dieppe, Aug. 19, 1942—and following consultation with U.S. service chiefs in Washington (June, 1942) perfected the British plans for the Allied landings in N. Africa in November.

Mountbatten's appointment as supreme allied commander in the newly created S.E. Asia theatre of war was announced, Aug. 23, 1943, at Quebec after an inter-Allied conference there between Churchill, Roosevelt, and Soong (representing China). He was given the acting rank of admiral. The success of the "Supremo," as he was called by those under his command, in both the strategic and political spheres was complete. His h.q. was truly Allied; his fighting troops included Indian, Gurkha, and Chinese, British and U.S. formations. Constantly on the move, Mountbatten would be one day at a commanders' conference and the next flying to speak to his front-line troops. As the tide of battle turned in S.E. Asia, it was his responsibility to institute military govt. pending the reintroduction of civil administration.

During July, 1945, Mountbatten spent the 12th–14th with MacArthur in Manila, and on the 25th arrived in London after attending a conference of combined chiefs of staff at Potsdam. He was all ready for a combined operations descent on Malaya simultaneous

with the anticipated Allied invasion of Japan when the Japanese surrendered on Aug. 14. On Sept. 12 he received at Singapore the official surrender of all Japanese forces in S.E. Asia.

*Mountbatten*

Created viscount 1946, Lord Louis took the title Mountbatten of Burma. He remained in S.E. Asia until the command was dissolved (1946), when he was made K.G., promoted rear-admiral, and appointed to a Mediterranean command. In March, 1947, his selection as last viceroy of India was announced. As such he carried through the negotiations for the transfer of power from British to Indian hands. At the request of the govt. of the dominion of India, he was appointed its first gov.-gen. On the same day, Aug. 15, he received an earldom. He relinquished the office in mid-1948, after a term in which he had earned the respect and affection of India, and returned to the navy as flag-officer commanding 1st cruiser squadron. He was made fourth sea lord, 1950. He married in 1922 Cynthia Ashley, daughter of the 1st Lord Mount Temple.

**Mount Bischoff.** Tin mine in Tasmania 90 m. W. of Launceston. Discovered in 1871, it was at one time the richest in the world, with from 70 p.c. to 80 p.c. pure ore, but is now producing only small quantities of tin. The township Waratah, 1 m. from the mine, has a pop. of about 1,000.

**Mount Carmel.** Bor. of Pennsylvania, U.S.A., in Northumberland co. It is 43 m. N. by E. of Harrisburg. Adjacent are 12 coal mines, some running 4 m. underground. Organized as a town in 1848, Mount Carmel was incorporated in 1862. Pop. 17,967. For the hill in Palestine see Carmel.

**Mount Desert.** Island of Maine, U.S.A., forming part of Hancock co. Lying to the W. of Frenchman's Bay, its surface is hilly, the highest elevation being about 1,500 ft. Its beautiful lakes and rugged coast make it a favourite summer resort. Among the places chiefly frequented are Bar Harbour on the N.E. coast, Southwest Harbour and Northeast Harbour at the mouth of Somes Sound, and Seal Harbour. Presidents Theodore Roosevelt and Taft had summer residences at Bar Harbour. The island is joined to the mainland by a bridge, and there is also ferry communication.

**Mounted Infantry.** Foot soldiers mounted on horses. They differed from cavalry in carrying a rifle as weapon, in the slower speed of their mounts, and in the fact that they only rode to action, generally fighting dismounted as infantry. The dragoons, as at first established in the 17th century, were mounted infantry. Napoleon unsuccessfully endeavoured to organize a similar body, and in both Russia and Prussia something of the kind was attempted. Some units usually referred to as cavalry were in reality mounted infantry, as those used in the American Civil War, 1862–64, and the Boers in the S. African War, 1899–1902, gave proof of the value of mobile infantry. The British had battalions of mounted infantry in the same war.

Before the First Great War the British had a scheme for the raising and training of definite units of mounted infantry, and a mounted infantry school was established at Longmoor. Trench warfare furnished little opportunity for their use in France. In Palestine and elsewhere, under different conditions, the Australian mounted divisions and others answered the description. The mechanisation of armed forces between the two Great Wars rendered cavalry and mounted infantry obsolete, as was proved by the inability of the Polish mounted divisions to impede the German advance during the Polish campaign of Sept., 1940. **Lord Mountevans,** British sailor  
*See Cavalry.*

**Mountevans, Edward Radcliffe Garth Russell Evans, 1st Baron (b.1881).** British sailor and explorer, known as Evans of the Broke. The son of a barrister,

he was born Oct. 28, 1881. From Merchant Taylors' School he went to the training ship Worcester, and entered the Royal Navy in 1897. He served in S.Y. Morning, which went to the rescue of the Discovery at the South Pole, 1902-04, and was second in command of the British Antarctic expedition of 1909-13, taking command after the death of Scott. In 1912 he was promoted commander. During the First Great War he was twice mentioned in dispatches, and received the D.S.O. and special promotion to captain when his ship, H.M.S. Broke, took part with the Swift in a successful action against six German destroyers in 1917; in the course of the engagement Evans gave the historic order: "Stand by to repel boarders." In 1921 he was awarded Lloyd's medal for saving life at sea, specially struck in gold instead of the usual silver or bronze, for his gallantry (on the cruiser Carlisle) in bringing off survivors from the steamer Hong Moh in the China Sea. Evans commanded the battle-cruiser Repulse, 1926-27, and was rear-admiral

was on the outbreak of the Second Great War appointed London Regional Commissioner for Civil Defence, a post he held throughout the war. The recipient of many British and foreign decorations, he was created Baron Mountevans of Chelsea in 1945. He published *Keeping the Seas*, 1920; *South with Scott*, 1921; numerous boys' books; and his reminiscences, *Adventurous Life*, 1946. He contributes the articles Antarctic Exploration and Arctic Exploration to this Encyclopedia.

**Mount Gambier.** Town in S. Australia. It is situated near the Victorian border, 305 m. by rly. S.E. of Adelaide. Its volcanic soil makes it a rich grain producer. Pop. 10,000. Mt. Gambier is an extinct volcano of which much of the original crater cone has collapsed, leaving its S. portion as the present summit. Valley, Blue, Crater, and Leg of Mutton lakes have formed

he succeeded the earl of Essex as lord-deputy in Ireland, in 1599. He suppressed the insurrection of O'Neill, earl of Tyrone, notably by his victory at Kinsale, Dec. 24, 1601, and after Elizabeth's death received the submission of Tyrone to James I. In April, 1603, he put down risings in Cork and the S.E. counties, leaving Ireland in the same year. He received the earldom of Devonshire and other rewards, and undertook diplomatic negotiations with Spain, 1604. The circumstances of his marriage, in 1605, with Lady Penelope Rich, who had long been his mistress, caused considerable scandal. Mountjoy died in London, April 3, 1606.

**Mount Lofty.** Range in South Australia, at the foot of which lies Adelaide. The highest point has an alt. of 2,334 ft.

**Mount Lyell.** Mine in Tasmania. It is situated at Queenstown near the middle of the W. coast, and was first discovered in 1883. Worked first for gold, it has since developed into one of the richest of copper mines, yielding a large portion of the mineral output of Tasmania. It is worked by electric power derived from Lake Margaret since 1914 added to by supply from the state hydro-electric system. Queenstown has a population of 4,000. *See* Copper.

**Mountmellick.** Market town of Laoighis co., Eire. It stands on a small stream called the Owenass, with a station on the Eire state rly., 6 m. from Portlaoighise (Maryborough), and 50 S.W. of Dublin. It is also served by the Grand Canal. It has a trade in agricultural produce and tanning, malting, woollen, and salt manufactures are carried on. The Society of Friends established a school here in 1796. Market days, Mon. and Sat. Pop. 2,300.

**Mount Morgan.** Town in Queensland. It is 23 m. by rly. S.W. of Rockhampton, and is practically maintained by the mine of this name, which has produced £25,000,000 from its gold and copper. Pop. 7,214. *See* Australia.

**Mount Palomar Observatory.** Astronomical observatory in California, U.S.A. It is situated at an altitude of 5,600 ft., and is 90 m. S.E. of the Mount Wilson (q.v.) observatory, with which it works in close conjunction. It houses a 200-inch reflector, which, when installed in 1947, completed the largest telescope in the world; its construction and erection

Mount Palomar Observatory, California. The interior of the dome showing the frame which holds the world's largest telescope; its 200-inch reflector is seen at top right

commanding the Royal Australian Navy, 1929-31. During 1933-35 he was c.-in-c., Africa station. In 1933, as acting high commissioner of Bechuanaland, he deposed the chief Tschekedi for the alleged flogging of a European; the case attracted much attention, and Tschekedi was eventually reinstated, but no blame was attached to Evans. In 1935 he was made c.-in-c., the Nore, and became a K.C.B. Having retired in 1939, he

chapter house, and some separate houses or cells.

**Mountjoy, CHARLES BLOUNT, 8TH BARON (1563-1606).** English administrator. He was educated at Oxford university, entering the Inner Temple, and about 1583 began to attract the favour of Queen Elizabeth. He sat as member for Beeralston, Devonshire, from 1586, and took part in the campaigns in the Netherlands and Brittany, 1586-93. Made K.G. in 1597,

in the hollows; Blue Lake, about 250 ft. deep, is at the foot of cliffs 250 ft. high. *See* Crater Lake.

**Mount Grace.** Ecclesiastical ruin about 3½ m. from Northallerton, Yorkshire. It is the remains of a Carthusian priory, regarded as the most perfect of its kind in England. It was founded in 1397 and dissolved under Henry VIII. The existing buildings consist of the church and

and some separate

had occupied 12 years. By its aid the moon can be brought within an apparent distance of 25 m. and nebulae 1,000,000,000 light years away have been photographed.

**Mounts Bay.** Inlet on the S. coast of Cornwall, England. It is an important pilchard fishing station, and contains St. Michael's Mount (*q.v.*). The bay is 21 m. across, with Penzance on the W. shore.

**Mountsorrel.** Market town of Leicestershire. It stands on the Soar, 4 m. from Loughborough, and 7 from Leicester. The rly. station is Sileby. In the vicinity are extensive granite quarries; other industries are boot and shoe, hosiery, and cardboard box manufacture. The chief buildings are two churches, one at North End and the other at South End, and a market house, dating from 1793. Pop. 3,500.

**Mount-Temple, WILLIAM FRANCIS COWPER-TEMPLE, 1ST BARON (1811-88).** British politician. Born Dec.

1st Baron Mount-Temple.  
British politician

13, 1811, a younger son of the 5th earl Cowper, he was educated at Eton, and entered the house of commons as a Liberal in 1835. During 1846-55, he was

in the Liberal and Coalition ministries; was vice-president of the council, 1857-59, and first commissioner of works, 1860-66. His mother married Lord Palmerston as her second husband, and he inherited Palmerston's Hampshire seat, Broadlands, taking the ad-

Mount Vernon, Virginia. House in which George Washington lived, now a national monument

ditional name of Temple. He was made a peer in 1880. Mount-Temple is chiefly remembered as the author of the Cowper-Temple Clause (*q.v.*). On his death, Oct. 16,

1888, his title became extinct. His estates passed to the Hon. Evelyn Ashley (1836-1907), whose son later took the name Mount-Temple.

**Mount Vernon.** City of Illinois, U.S.A., the co. seat of Jefferson co. It is 75 m. by rly. E.S.E. of St. Louis, and is served by the Louisville and Nashville and other rlys. Its manufactures include lumber and machine-shop products. Settled in 1819, it was incorporated in 1837, and became a city in 1872. Pop. 14,724.

**Mount Vernon.** City of New York, U.S.A., in Westchester co. A residential and N. suburb of New York City, it stands on Bronx river, and is served by the New York, New Haven, and Hartford and other rlys. Machinery and clothing are manufactured. Dating from 1852, Mount Vernon was incorporated in 1853, and became a city in 1892. Pop. 67,362.

**Mount Vernon.** City of Ohio, U.S.A., the co. seat of Knox co. On the Kokosing river, 24 m. N.N.W. of Newark, it is served by the Baltimore and Ohio and the Pennsylvania rlys. It has engineering works, flour and sawmills, and furniture and glass factories. Natural gas and lumber are obtained locally. Organized in 1805, Mount Vernon was incorporated in 1845, and became a city in 1853. Pop. 10,122.

**Mount Vernon.** Village of Virginia, U.S.A., in Fairfax co. Standing on the Potomac river, 15 m. S. of Washington, it was the home of George Washington. The mansion in which he resided is a wooden two-storey building occupying an elevated position overlooking the river. A little distance away, on the edge of a wooded ravine, is the tomb containing the remains of Washington. In 1859, after both the government of the U.S. and the commonwealth of Virginia had

declined to purchase it, the estate, 200 acres in all, was bought by the Mount Vernon Ladies' Association of the Union, which is pledged to restore the mansion and its surroundings as far as possible to their appearance in Washington's time and to preserve them for future generations. Much of the furniture used by Washington and

Mount Wilson Observatory, California. The giant telescope, for 30 years the world's largest, which embodies a 100-inch reflector

family is in its rooms. The building and grounds are open daily to visitors, whose entrance fees meet the cost of maintenance.

**Mount Wilson Observatory.** Solar and astrophysical observatory 15 m. N.E. of Los Angeles, California, U.S.A. Founded in 1904 by G. E. Hale, it is controlled by the Carnegie Institution of Washington. It is situated on the forested top of Mt. Wilson at an altitude of 5,680 ft. Its equipment includes a 100-in. reflector, erected in 1917 and for 30 years the world's largest telescope; a 60-in. reflector; a large spectroheliograph, and much laboratory apparatus for spectroscopic work. Its work is chiefly concerned with solar physics, stellar motions and distances, and research on extragalactic nebulae and the structure of the universe. Situated above the cloud-line, it was ideally placed at its foundation, but since then the development of artificial lights in Pasadena, 8 m. to the S.W., has seriously affected some types of work. The observatory works in conjunction with Mount Palomar (*q.v.*) observatory.

**Mourne.** Mountain range of N. Ireland. In the S. of co. Down, it extends for 14 m. in a S.W. to N.E. direction. Slieve Donard, the culminating summit, attains 2,796 ft.

**Mourning.** Outward expression of sorrow, particularly for the dead. In the modern civilized world it takes the form of wearing black garments and using that colour in other ways, e.g. on writing paper. White is also a mourning colour, while purple or mauve is traditionally associated with mourning for royal personages, as well as for the so-called "half-mourning."

Mourning customs are usages and rites attending the public manifestation of sorrow for the dead. In primitive society some conventional signs of mourning denote a condition of taboo, or a desire to placate the ghost, or to avoid recognition, as with dishevelment. The most widespread demonstration of grief affects the raiment, which may be white, as in imperial Rome, Japan, and W. Africa; red, Gold Coast; blue, Turkey and Ancient Egypt; grey, Abyssinia; yellow, China; or black, Europe. The coat may be reversed, as with the Ainu. The material may be hemp, as in China; haircloth, the sackcloth of Gen. 37; network, as in Australia; or grass mantles, or white shell-necklets, as in Melanesia.

The body may be smeared with clay, mud, ashes, or black paint. The hair may be allowed to grow, or shorn and burned; it may be buried with the dead, or hung upon trees. Laceration as practised anciently, in Arabia and Scythia, and forbidden by Moses (Lev. 29), still endures, and special scarifiers may be used, as in Polynesia. Finger-amputation survives from Palaeolithic Europe. Wailing tends to develop a class of professional mourners, as with the Pueblo Indians, Semites, and Irish keeners.

In the English-speaking world, and to some extent elsewhere, the tendency of the 20th century has been to reduce the signs and time of mourning very considerably. The heavy crepe worn by widows in the Victorian era has almost disappeared, while the long periods, extending to two years, during which black garments were worn, have been greatly reduced. The mourning ring has gone, too, and

black-edged notepaper is much less common. Many bereaved families adopt no further sign of mourning than crepe sleeve bands or mere patches, and these are worn less as an ostentation of grief than as a tactful warning to strangers to avoid embarrassing topics of conversation. Generally, children do not wear mourning. In all this is seen the influence of the two Great Wars which not only made bereavement a common experience but demanded a less wasteful fashion. On the death of a royal personage a period of mourning for those attending court is prescribed, and instructions are issued about the clothes to be worn. These periods, too, have become noticeably shorter. See Africa; Burial Customs; Funeral Rites.

**Mousa** (Norse, moory isle). Uninhabited islet, about 1½ m. long, off the S.E. coast of Mainland, Shetland. Upon a rocky promontory facing the sound, 13 m. S. of Lerwick, stands a broch, the most perfectly preserved of the so-called Pictish towers of Scotland, and now scheduled under the Ancient Monuments Protection Acts. The unroofed court, 30 ft. across, with well and hearthstone, is surrounded by two walls 15 ft. thick overall, containing three beehive-roofed chambers, above which six galleries lit by slits in the inner wall penetrate to the parapet, 45 ft. high. The outward bulge of the upper courses, giving to the tower the aspect of a dice-box, rendered this prehistoric stronghold unscalable. It was unsuccessfully besieged by Harold, earl of Orkney, in 1154. See Broch.

**Mouscron** (Flemish, Moescroen). Town of Belgium, in the prov. of W. Flanders. It lies close to the French frontier, 7 m. S.S.W. of Courtrai and 5 m. N.E. of Tournai, on the Ghent-Tournai rly. It has spinning mills, soap works, tobacco factories, and miscellaneous industries. Pop. 35,225.

**Mouse.** Name popularly applied to many small rodents, but cor-

rectly only to the smaller species of the genera *Mus*, *Apodemus*, and *Micromys*. Three species occur on the mainland of Great Britain, the house mouse, the harvest mouse, and the long-tailed field mouse. The first (*Mus musculus*) is found almost wherever man exists. It is brown in colour, with large ears and long tail and is altogether 4-5 ins. in length.

The harvest mouse (*Micromys minutus soricinus*), described by Gilbert White, is in the U.K. confined to England and the S. and E. of Scotland. One of the smallest of British mammals and the only one with a prehensile tail, it is bright orange brown on the upper parts and white below. It constructs a globular nest among the stems of standing corn.

The long-tailed field mouse (*Apodemus sylvaticus sylvaticus*) swarms in the fields, and is one of the most prolific of mammals. In general form it closely resembles the house mouse, but has a longer tail. Other species and varieties occur in the Western Isles of Scotland. In America the word mouse is also applied to a large number of voles. See Field Mouse; Shrew; Vole.

**Mouse Deer.** Popular name for the chevrotain (*g.v.*), a small ungulate mammal placed by zoologists between deer and camels.

**Mousehold.** Heath or open space near Norwich, England. Within the city boundaries, it overlooks it on the N.E. Here in 1549 the insurgents under Robert Ket encamped. Crome has immortalised it in several of his paintings, while it figures in Borrow's writings. The heath itself is public property.

**Mousehole.** Village of Cornwall, England. It is about 3 m. S. of Penzance and faces Mounts Bay. A port in the 13th century, it is now one of the most picturesque fishing villages, much visited by artists. Spaniards raiding Mousehole in 1595 burnt the church of S. Paul. The place was once known as Porth Enys (island port). Pron. Mowzle.

**Moussorgsky, Modeste Petrovich** (1835-81). Russian

Mouse. 1. House m., *Mus musculus*. 2. Harvest m., *Micromys minutus*. 3. Field m., *Apodemus sylvaticus*

rectly only to the smaller species of the genera *Mus*, *Apodemus*, and *Micromys*. Three species occur on the mainland of Great Britain,

composer. Born at Karevo, Pskov, March 28, 1835, he entered the army, but, growing very interested in music, threw up his

composer. Born at Karevo, Pskov, March 28, 1835, he entered the army, but, growing very interested in music, threw up his

commission in 1857 to devote himself to composition. Severe poverty was relieved only when he was given a minor post in the civil service, but this he also gave up in 1868, to live in St. Petersburg until his death, March 28, 1881. Moussorgsky's dominant idea was to bring music into closer relationship with everyday life. Of the group of nationalist composers, he was most influenced by literary and political movements. His chief work, the opera Boris Godounov, 1874, was first given in a revised version (by Rimsky-Korsakov) in England in 1913. A second opera, Khovantschina, 1880, was even more nationalistic. In Moussorgsky's songs the psychology of Russian peasantry and children is finely reflected. His programme music includes Pictures from an Exhibition, for piano, and a tone-poem, A Night on the Bare Mountain. *Consult* Life, M. D. Calvocoressi, new ed. 1946.

**Moustierian.** The closing period of the lower Palaeolithic age in Europe. After the Acheulian period the climate varied—the bison, musk-ox, steppe horse, reindeer, and Arctic fox are found—and systematic cave life began. The institution of ceremonial burial identifies the race, especially at Chapelle-aux-Saints in Corrèze and Le Moustier in Dordogne, whence the name. The flints include side-scrapers, points, lance-heads; sling-stones and rude bone tools are also found. Stations existed from Crayford in the Thames valley eastward to Asia Minor and the Nile valley.

**Mouth.** External orifice in the head of human beings and other animals, together with the cavity behind it. The human mouth, which contains the tongue and the teeth, is divided into two parts: the vestibule, which is the space between the teeth and the lips and cheeks; and the mouth proper, which is the cavity behind the teeth. This is roofed with the hard palate, with teeth and gums in front of it and at its sides. At the back it opens into the throat. *See* Lip; Teeth; Tongue.

**Mouth Organ.** Small musical instrument of the reed-organ type. Fixed metal reeds are slotted into a metal plate some 4 ins. long, and enclosed within a box. Each reed has a separate channel for wind, and the channels are in parallel rows at right angles to the length of the box. It is played by being passed across the lips with an alternate blowing and suction action, the notes not required

being stopped by the tongue. It was invented in 1829, possibly by Sir C. Wheatstone, but for many years the instruments were the monopoly of a German firm who produced them in millions. The cheerful music of the mouth organ was extremely popular among troops of all countries during both Great Wars. Remarkable harmonies can be produced; indeed, exceptional performers, e.g. Larry Adler and Borrah Minnevitche, have achieved a surprising virtuosity as professional players of the harmonica, as these artists prefer it to be called.

**Mouvement Républicain Populaire** or M.R.P. (People's Republican Movement). French political party, formed in 1944 under the leadership of Georges Bidault (*q.v.*) from the R.C. democratic section of the resistance movement. It put up candidates for the first time at the first municipal elections after the liberation of France, held April, 1945, when it gained control of 447 out of 35,307 communes. In the constituent assembly elected Oct., 1945, it held 150 out of 586 seats, its closest rivals being the Communists, 159, and the Socialists, 139; in that elected June, 1946, it secured 167 seats. In the national assembly elected Nov., 1946, M.R.P. secured 172 out of 617 seats (Communists 182, Socialists 101). In the council of the republic of 1946, it had 70 out of 315 seats; in that of 1948, 18 (de Gaulle's rally of the French people having absorbed much of its former support). Members of M.R.P. served in de Gaulle's 1944 govt. and later coalition govts., including more than one premier.

**Movement.** In music, distinct part of an extended composition, e.g. symphony. *See* Sonata.

**Movement.** Biological phenomenon of widespread occurrence. It may be readily apparent as with the swimming of a fish, or less easily observable, as with a part of an organism which is free in its surroundings, such as a sperm or a chromosome. Parts of organisms may become rearranged in relation to the rest of the body though attached to them, as occurs when an animal muscle contracts or expands or a plant tendril curls. All such movements require the expenditure of energy. In the protoplasm occurs a process of respiration which is undoubtedly connected with the liberation of the required energy.

In plants movement is on the whole relatively simple. Move-

ments may be directed by conditions in the surroundings or may occur irrespective of these. The former are called taxis and may be exemplified in the phototaxis of motile algae, directed by light acting as a stimulus to them, and the chemotaxis of anthozooids, induced by the differential concentration of soluble material in the water in which they swim. Movements independent of surroundings are autonomic movements: whatever it is that institutes the movement must originate within the organism itself. Similar categories of movement by parts of plants may be recognized. Paratonic movements are induced by conditions in the environment and are either tropisms, e.g. the geotropic bending of roots into the vertical under the influence of gravity, or nastic movements, e.g. the pulvinar movements of *Mimosa pudica*, which result after shock. Both autonomic and paratonic movements may be manifestations of differential growth, as are nutations and geotropic curvatures, or may be due to reversible changes in sap pressure of cells, as in Desmodium and Mimosa. In the case of tropic movements the differential growth is the ultimate outcome of the effect of unilateral stimulation on the distribution of auxin, and a similar diffusion of substance is known to be the means of transmission of shock stimulus to the pulvini of Mimosa.

#### Movement in Animals

In animals movement is so diverse as to evade simple classification. It may be accomplished in lowly forms in an amoeboid manner, by means of cilia, e.g. Paramecium or other cell processes, e.g. Hydra, Vorticella, by the change in shape of cells or cell aggregates, as for example muscles. Striped muscles come under the direct control of the central nervous system and are concerned with the outward movements of the body, e.g. in walking, and plain muscles cause movements of the internal parts. Thus in their ultimate initiation animal movements may be autonomic or induced. In the more complicated types movements are coordinated either by nervous means or by hormones and form parts of the general behaviour of the organism. This may take the form of maintenance activity in which movement has such ends as escaping from harm, finding food or other conditions suitable to the satisfactory life of the

creature. It may be instinctive behaviour, habit, or intelligent reaction to environment.

**Mowat.** ROBERT BALMAIN (1883-1941). British historian. Born at Edinburgh, Sept. 26, 1883, he became a fellow and tutor of Corpus Christi College, Oxford, 1907, and in 1928 was appointed professor of history at Bristol university. His chief writings included *The Wars of the Roses*, 1913; *A History of Great Britain*, 1920-21; *The Concert of Europe*, 1930; *England in the 18th Century*, 1932; *The Continent of Europe in the 18th Century*, 1934. He was killed in an air crash in Sept., 1941.

**Mowbray, BARON.** An English title dating from 1283. Notable of the early members of the Norman family of Mowbray were Roger, one of the barons who rose against Henry II, and William, who was among the barons who forced Magna Carta from John. A later Roger was summoned to Parliament as a baron in 1283, and his son John was hanged for rebelling against Edward II. John, the 4th baron, married a great heiress, and their younger son, Thomas, who became the 6th baron, was made earl of Nottingham and duke of Norfolk. In 1475, with the death of John, the 4th duke, the male line of the Mowbrays became extinct. The estates were divided between the families of Howard and Berkeley, and the barony fell into abeyance. In 1877 it was revived for Alfred Joseph, 20th Baron Stourton, and his grandson William (b. 1895) became in 1936 the 25th Baron Mowbray. Bramber Castle, Sussex, was one of the seats of the Mowbrays. See Norfolk, Duke of.

**Mowing.** Operation of cutting a fodder crop, either by a mowing machine or by the scythe, the latter being also used at times for cereals. A good scytheman, swinging the implement from the body, and not employing arm work only, can mow about two acres per day. The point of the scythe is put in at the required height, and swung evenly through so as to leave a level stubble.

A mowing machine is a two-wheeled machine used for cutting grass and seed crops. The work is done by sharp "fingers" attached to a finger beam, or cutting bar, which adjusts itself to the shape of the ground. See Lawn Mower; Scythe.

**Moyale.** British frontier post on the Kenya-Abyssinian border. It owed its importance to the wells,

which lay outside the walls of the post, and its capture on July 15, 1940, was hailed as a great victory by the Italians. Across the frontier was another post of the same name, "Italian" Moyale. The position Mega-Moyale was a strong one; but the Italians evacuated Moyale after the capture of Mega by S. African forces, and it was entered without opposition, Feb. 22, 1941, by a patrol of Abyssinian irregulars sent forward by the S. Africans. See East Africa Campaign.

**Moyné, WALTER EDWARD GUINNESS, 1ST BARON** (1880-1944). British politician. Third son of the 1st earl of Iveagh, he was born in Dublin, March 29, 1880, and educated at Eton. He was M.P. for Bury St. Edmunds from 1907 to 1931. He served in the First Great War and was awarded the D.S.O. In 1922 he became financial secretary, and in 1925 minister, of Agriculture. While holding the latter office he introduced the system of the national mark for eggs in 1929. Raised to the peerage in 1932, he became secretary of state for the Colonies and leader of the house of lords in 1941, and was appointed resident minister in the Middle East in 1944. He was assassinated by Jewish fanatics in Cairo, Nov. 6 the same year, and was succeeded in the peerage by his son, Bryan Walter Guinness (b. Oct. 27, 1905).

**Moynihan, BERKELEY GEORGE ANDREW MOYNIHAN, 1ST BARON** (1865-1936). A British surgeon. Born in Malta, Oct. 2, 1865, he received his medical training at Leeds medical school and practised in Leeds, where he became professor of clinical surgery in the university. Specialising in the abdomen,

Lord Moynihan,  
British surgeon

Mozambique. Map of the Portuguese colony in E. Africa

he became one of the most eminent surgeons of his time, and was knighted in 1912. He served in France during the First Great War, rising to the rank of major-general. He was created a baronet in 1922 and a baron in 1929. Founder of the *Journal of Surgery*, he published a number of books on diseases of the digestive organs, including *Abdominal Operations*, 4th ed., 1925. He died Sept. 7, 1936, and was succeeded in the title by his son Patrick Berkeley Moynihan (b. 1906).

**Mozambique** (MOÇAMBIQUE), or PORTUGUESE EAST AFRICA. Portuguese colony in E. Africa. Roughly triangular in shape, it is bounded on the N. by Tanganyika Territory, W. by Nyasaland Protectorate, Rhodesia, and the Transvaal, and E. by the Mozambique channel, which separates Madagascar from the African continent. It has an area of 297,730 sq. m., and is divided into four provinces, Sul do Save, Zambezia, Niassa, and Manica and Sofala, the last acquired by the govt. from the chartered Companhia de Moçambique in July, 1942.

From the coastal swamps the land rises gradually to forested hills and the African plateau. The whole country is extremely fertile, with a flourishing export trade in sugar, maize, cotton, copra, and sisal, as well as mineral products. The principal ports are the capital, Lourenço Marques; Beira; and

Mozambique, the former capital. Other towns of importance are Quelimane, Mopeia, and Chinde, which lies on the only navigable outlet of the Zambezi river. The pop. of the colony in 1940 was 5,085,630, 27,438 Europeans.

The Delagoa Bay rly. connects Lourenço Marques with Pretoria; the Beira rly. links up with the Rhodesian rly. system; and there are other lines, bringing the total mileage inside the colony up to 477 m. The Lower Zambezi bridge, opened Jan. 14, 1935, is 12,064 ft. long, then the longest bridge in the world. The unit of currency is the Portuguese escudo.

Mozambique was visited in 1498 and 1502 by Vasco da Gama, and in 1505 by Albuquerque, who established it as a Portuguese province. In the 18th and the early part of the 19th centuries it became a stronghold of the slave trade. In 1875 and in 1885-91 disputes arose with Great Britain regarding the precise boundaries of the Portuguese territories around Delagoa Bay and Mashonaland, Matabeleland, and Manicaland, which were settled by arbitration on July 24, 1875, and by the Anglo-Portuguese convention of 1891. Certain territory S. of the Rovuma, formerly part of German E. Africa, was allotted to Portugal as the "original and rightful owner" by the Treaty of Versailles, Sept. 23, 1919.

The seaport of Mozambique (pop. 8,000) has been eclipsed in importance by Lourenço Marques. It stands on a small coral island of the same name, at the mouth of Mosuril Bay, 3 m. from the coast. It has a harbour, deep enough to admit vessels drawing 28 ft., and the fortifications built by the Portuguese in the early sixteenth century still stand. Founded in 1508, it was the capital of the colony until 1907, and is the seat of a Roman Catholic bishopric. Its full name is San Sebastian de Mozambique.

**Mozambique Channel.** Strait of Africa. It is between the coast of Portuguese East Africa and the island of Madagascar, and was at one time a noted resort of pirates and slave-raiders.

**Mozarabes.** In Spain, term applied to those Christians who, under the Moorish domination, maintained their old life and religious practices amid the Muslims, as in Toledo. The liturgy preserved by these people is known as the Mozarabic, Gothic, or Isidorian, and the introduction of the Roman rite was frequently resisted by the

Mozarabes, e.g. in Castile and Leon, 1077, and Toledo, 1085. Gradually the use was suppressed or died out, but the rite is still performed in the Mozarabic chapel in the cathedral of Toledo and at Salamanca. See Moors; Spain.

**Mozart, WOLFGANG AMADEUS** (1756-91). Austrian composer. He was born at Salzburg, Jan. 27,

After J Lange

1756. At the age of three he displayed a keen musical ear and a good memory, and under the guidance of his father quickly learned to play on the harpsichord and to compose simple minuets; at what is usually the nursery age he was taken around the countries of Europe, showing off his astonishing gifts as a player of harpsichord, organ, and violin, and as a composer—first to Paris, then to London (where he composed two symphonies and a set of sonatas for harpsichord and violin), Amsterdam, Rome, Milan, Naples, Mannheim, Vienna, Potsdam, Berlin. In 1769 the archbishop of Salzburg appointed Mozart his concertmaster, a post he filled, despite long absences while touring as a virtuoso, until 1781.

In 1777 he became friendly with the Webers of Mannheim, falling in love with the second daughter, Aloysia, a gifted singer. The affair came to nothing, and in 1782 Mozart married the younger sister, Constanze, with rather unhappy results. This same year was important as marking the beginning of a great friendship with Haydn. Although there was a difference of 24 years between their ages, each composer learned a great deal from the other.

When the boy prodigy arrived at manhood, the aristocrats who had once pampered and petted him, and showered gold pieces and snuff boxes upon him, took no further interest. Until his death, when real success was almost within his grasp, Mozart eked out a livelihood as composer, virtuoso, and teacher. Despite incessant work, lack of money, and later ill-health, Mozart's kindly nature and lively spirits were never damped, at least not in the presence of other people. Of all great composers Mozart is probably the most enigmatic, for only in some of his last compositions does his music give the slightest hint of an emotional state that might suggest mental distress. He died Dec. 5, 1791, from typhus fever, and was buried in a pauper's grave.

Mozart was a natural composer, with a seemingly unending flow of ideas and an extraordinary technical facility. A large proportion of his work was completed in his head before being put on paper. In this way he is said to have conceived the overture, *The Marriage of Figaro*.

He was an accomplished composer at the age of eight. But his early compositions were little more than stylistic copies of the works of contemporaries. Having absorbed all that his masters could teach him, he gradually developed a style of his own, as individual as that of Handel, Beethoven, or Wagner. In his short life of less than 35 years his output was prodigious. For a quarter of a century he poured out an unending stream of good works, many being masterpieces, nearly all written to order. He excelled particularly in the symphony, piano concerto, and string quartet, and in opera. Into each of these branches of composition Mozart put the whole of himself. And a study of any one branch is sufficient to give one a complete knowledge of Mozart's development from the highly polished elegancies of his youth to the profound and expressive works of his maturity, such as his last three symphonies, no. 39 in E flat, no. 40 in G minor, and no. 41 (Jupiter) in C, or the string quintet in G minor, or the piano concerto no. 24 in C minor. Throughout his life he persisted in thinking primarily in terms of the elegant aristocracy for whose delectation he expressly wrote. But although he more or less accepted the conventions of his day, particularly as regards musical form,

within those conventions he uttered the most profound, personal, and intimate things.

To whatever heights Mozart may have risen in instrumental music, he soared even higher in his operas. Despite the infinitely greater musical and dramatic resources at the disposal of later composers such as Wagner and Verdi, at least three of Mozart's operas, *The Marriage of Figaro* (1786), *The Magic Flute* (1791), and *Don Giovanni* (1787), remain as unsurpassed masterpieces for powerful characterisation and richness of melodic invention.

An exhaustive catalogue of Mozart's works was publ'd. 1862 by Ludwig von Köchel (1800-77), and his numbering is now customarily used to distinguish particular compositions, e.g. Linz symphony in C maj., K. 425.

#### Ralph Hill

**Bibliography.** *Standard Life*, O. Jahn, Eng. trans. 1882; standard guide to the music, W. A. Mozart, H. Abert, new ed. 1923-24; Mozart, D. Hussey, 1928; E. W. Blom, 1935; W. J. Turner, 1938; Alfred Einstein, 1947; Letters, ed. E. Anderson, 3 vols., 1938; *Mozart's Operas*, E. J. Dent, new ed. 1947; *Symphonies of Mozart*, G. de Saint-Foix, 1947.

**Mpongwe** or **Pongo**. Name applied by the Portuguese to the Abuka, a negroid tribe in the Gabun colony, French Equatorial Africa. Their Bantu dialect extends from the N. Gabun peninsula along the coast to the Ogowe. They are industrious cultivators, traders, and boatmen, using craft 60 ft. long, hollowed out by fire. See Bantu; Negro.

**Mpororo**. Upland region on the S.W. border of Uganda. Extending from the Kagera river-boundary between Tanganyika Territory and Ankole to Mt. Mfumbiro in Belgian Congo, it comprises scantily timbered grass-steppes 4,600 ft. above sea-level, with mountainous ridges up to 7,600 ft., and marshy valleys. It possesses a healthy, temperate climate, with big game in abundance, and fertile soil, and is ruled by the Batusi, who have subjugated the primitive negroid population.

**Mr. Midshipman Easy**. Novel by Capt. F. Marryat. It was first published in 1836, and tells the story of a midshipman whose father believes in natural equality, and who gets into many scrapes by his liberal interpretation of his father's teaching. It long enjoyed popularity as an adventure story of the sea, characterised by robust humour.

**Msta.** River of the R.S.F.S.R., in Leningrad region. Rising in Lake Mstino it flows generally W. and after a winding course of about 150 m. discharges itself into Lake Ilmen, S.E. of Novgorod. It is connected with the Volga by a system of canals.

**Muang T'ai**. Official native name of Siam. On June 24, 1939, the words Siam and Siamese were changed to Muang T'ai (Thailand) and T'ai respectively by the council of ministers. The inhabitants have long called themselves T'ai, or the free people. See Siam.

**Much Ado About Nothing**. Romantic comedy by Shakespeare. While the friends of Beatrice and Benedick plot successfully to bring about their marriage, Don John, bastard brother of the prince of Arragon, plots to make Claudio, the prince's favourite, think that Hero, his betrothed, is unfaithful, but is thwarted by the unwitting agency of the simple-minded constables Dogberry and Verges.

The play, in which tragedy, comedy, and farce are blended, was first printed in quarto in 1600. The scene is laid in Messina. Much of the plot is Shakespeare's, but he derived materials from Bandello's *Timbreo di Cardona*, 1554; the story of Aridante and Geneva in Ariosto's *Orlando Furioso*; and that of Phaon and Claribel in Spenser's *Faerie Queene*. To the modern mind the main interest in the play is in the characters of Benedick, a lord of Padua, pledged to bachelorhood, and Beatrice, a lady as apt at scornful speech as disdainful of men, but full of nobility of soul, displayed in her defence of her cousin Hero. Beatrice and Benedick afford perhaps the earliest examples of character development in Shakespeare's plays, the first being a favourite impersonation with Mrs. Abington, Mrs. Siddons, and Ellen Terry; the second a favourite with Charles Kemble, Macready, Charles Kean, and Henry Irving. Notable modern revivals have been at The Lyceum, 1882, with Irving and Ellen Terry; Strand, 1924, with Nicholas Hannen and Athene Seyler; Lyric, Hammersmith, 1927, with Lewis Casson and Sybil Thorndike; and the Winter Garden, 1945, with Donald Wolfit and Rosalind Idon.

**Much Hadham**. Parish in Herts, England. It is noted under Hadham.

**Much Wenlock**. Name for the parish in Shropshire which forms part of the bor. of Wenlock (q.v.).

**Mucic Acid**. White crystalline powder. It was first prepared by Scheele in 1780 by the action of nitric acid on milk sugar. Fourcroy and Vauquelin afterwards discovered that it could be made from various gums and mucilages, and they gave it its present name. Mucic acid is isomeric with saccharic acid.

**Mucilage** (Lat. *mucus*, slime). Viscid sticky liquid secreted by many plants. Their distribution and quality vary, but the seeds of mustard, quince, and flax yield considerable quantities when macerated. The tubers of some species of Liliaceae and Orchidaceae and the hairs of many contain mucilage. The chemical constitution is not thoroughly understood, but generally they contain complex compounds related to cellulose and the sugars (carbohydrates).

The term is also applied, particularly in the U.S.A., to artificial preparations used for adhesives and as suspending agents in medicine, e.g. solutions of gum arabic and of gum tragacanth. In Britain the term is usually reserved for cloudy preparations, e.g. gum tragacanth, as distinct from clear solutions, e.g. gum arabic.

**Mucin**. Substance consisting of protein combined with a carbohydrate derivative. It occurs in epithelial cells and forms the chief constituent of the cementing substance between cells. It is found also in the saliva, gastric juice, bile, etc. See Mucus.

**Muck**. Island of the Inner Hebrides, Argyll, Scotland. Situated off the coast of Inverness, it is 5 m. S.S.W. of Eigg and is about 2 m. in length.

**Muckers** (Ger. *Mucker*, hypocrite). Fanatical sect of German mystics. It was founded about 1835 at Königsberg by two Lutheran pastors named Diestel and Ebel. The members, who were mostly connected with the German aristocracy, Frederick William IV being said to hold their views, professed to lead a life of "higher purity," with the result that grave charges of immorality were brought against them, and their leaders were degraded from the ministry and imprisoned, 1839-42.

**Muckrakers**. American political nickname. It was suggested by Bunyan's character, "the man with the muckrake," and was applied by Theodore Roosevelt in 1906 to a group of writers who at that time were exposing municipal and business corruption in the U.S.A. The most notable

examples were Ida M. Tarbell (History of the Standard Oil Company), Lincoln Steffens (The Shame of the Cities), Thomas W. Lamont (Frenzied Finance), and Upton Sinclair (The Jungle). The use of this term was resented by those who maintained that the writers were animated by zeal for reform. The exposures in fact resulted in many improvements in political and business practices.

**Mucous Membrane.** Membrane composed of epithelium on a basement layer. It contains mucous glands, and lines the cavities and canals of the body which communicate with the external surface, such as the alimentary canal and bladder, the nose, and the mouth.

**Mucus.** Word of Greek origin, meaning the secretions of the mucous membranes. It is applied especially to the secretions of the nose in human beings, but also to the secretions of snails, slugs, and other molluscs.

**Mud.** In geology. name given to exceedingly finely divided rock debris. Particles are of the order of 0.005 mm. diam. or less, and require still water in which to settle. They can therefore drift far out to sea before being deposited, though flocculation of particles carried into salt water may result in their settling near shore and in estuaries. The majority of the particles belong to the clay mineral group. With loss of water on compaction mud grades to clay, and thence to shale or mudstone, and may even be altered to form slate. Deep-sea muds are found beyond the continental shelf between depths of 500 and 1,500 fathoms. They are coloured red, green, or blue.

**Mudar** (*Calotropis gigantea*). Evergreen shrub of the family Asclepiadaceae, native of India. The large, opposite leaves are broad, wedge-shaped, and woolly on the under side. The rose and purple flowers are clustered. A smaller species (*C. procera*), native of India, has white flowers, with a purple spot on each petal. Both plants yield an acrid, milky juice, used, as is the bark of the roots, as a remedy for skin diseases; and the inner bark of the younger branches provides a fibre which resembles that of hemp.

Mudar. Leaves and flowers of this evergreen shrub

**Mud-fish or LUNG FISH.** Popular name applied to several species of fish constituting the sub-class

Mud-fish. Pictorial diagram showing the African species in its hole

Dipnoi. The first order, Monopneumona, have one lung and consist of the single Queensland species, *Ceratodus forsteri*, described in the article *Ceratodus*. The Dipneumona, with a double lung, consist of the genus *Protopterus*, native of mid-Africa, and the S. American *Lepidosiren paradoxa* of the Amazon and its affluents. *Protopterus annectans* is an eel-like fish, about 6 ft. long, with slender and feeble paired fins, useless for locomotion, which devolves chiefly upon the tail. It subsists upon frogs, crustaceans, worms, and insects in the shallow water of river marshes; has a lung in addition to gills; and rises repeatedly to the surface to replenish it with fresh air.

It aestivates through the hot season when the pools dry up, by boring into the mud to a depth of 1½ ft., then coiling on itself, and secreting from the skin a coating of mucus which hardens into a cocoon. A tubular opening connected with its mouth enables it to breathe, and in this way it waits for the rainy season to release it, living in the meantime on the fat stored around its kidneys. See Bowfin; Fish.

**Mud Flow.** Rapid descent of wet mud and rock down a mountainside. Such flows occur in regions where rainfall is intermittent but heavy, and where loose

fine-grained soil, clay, or decomposed rock debris is available in large quantities. Mud flows derived from glacial boulder clay have occurred in the Alps, and from deeply weathered rock material in semi-arid regions. Flows tend to follow streams. Besides mud they carry boulders which become grooved and striated during movement. Volcanic mud flows, termed *lahars* (Javanese), result from mixture of water with unconsolidated ash from the volcano. The water may be derived from crater lakes or from condensation of steam or torrential rain accompanying an eruption. Herculaneum was buried by a rain lahar in A.D. 79. See Volcano.

**Mudie,** CHARLES EDWARD (1818-90). Founder of Mudie's Library. The son of a newsagent, he was born in Chelsea, Oct. 18, 1818. In 1840 he started in business for himself as a bookseller in Southampton Row, Bloomsbury, and did also a little publishing, but a development came when he began to lend books on business lines. The idea caught on, and in 1852 he moved "Mudie's Select Library" into New Oxford Street. He died Oct. 28, 1890. The business, soon known in every part of the land, became a limited company in 1864. It moved its headquarters to Kingsway in 1931 and closed down in 1937. Mudie, who was a Congregationalist, is known as the author of hymns.

C. E. Mudie, Library founder

**Mudros.** Town and bay on the S. coast of the Greek island of Lemnos, in the Aegean Sea. During the First Great War its port became the chief naval base for the Dardanelles operations, and in addition was used as a military base for the campaign in Gallipoli. The armistice between the Allies and Turkey was signed here, Oct. 30, 1918. See Aegean Sea; Gallipoli, Campaign in; Lemnos.

**Mud Volcano.** Small volcano, the cone of which consists chiefly of solidified mud. These volcanoes discharge mud and gases, chiefly hydrocarbons, and may reach a height of 300 ft. They may occur in non-volcanic areas, e.g. near Baku, on the Caspian Sea.

**Muezzin** (Arab. *mu'adhdhin*, one who calls to prayer). Official in a mosque who proclaims the

Muezzin calling the faithful to prayer, from the painting by V. L. Gérôme  
By courtesy of Goupil & Co.

times of prayer. In the Mahomedan day there are five times for prayer: dawn, noon, 4 p.m., sunset, and midnight. The call, which is sounded from the minaret, consists of the following sentences: Allah is great (thrice); There is no God but Allah (twice); Mahomet is the Prophet of God (twice); Come to prayer (twice); There is no God but Allah (twice). Appointed by the imam (*q.v.*) of the mosque, the muezzin is an official of some importance, and in virtue of his office is entitled to a place in Paradise. See Mahomedanism; Mosque.

**Muff** (Old Fr. *moufle*, thick glove). Article of dress, open at either end, and made of fur, velvet, silk, etc., padded with cotton wool, and carried to keep the hands warm. In the 17th and 18th centuries muffs were used by men as well as women. Snuffkin or snoskyn is an old word for a muff.

**Muffle**. In metallurgy, a container used for smelting a sample of metal or ore, or for heating a metal article out of contact either with the heating fuel or with the products of combustion. Usually roughly box-like in form, and made of fireclay or other refractory material, closed except for a small opening at one end, it is placed in a furnace so that hot gases pass round it and heat it to the necessary degree. Muffles are also used in assaying and in tempering or hardening of metals.

**Mufimbiro** OR MFIMBIRO. Range of active volcanic mountains of Africa. They are N. of Lake Kivu, partly in Congolese territory and partly in Uganda, and attain an alt. of nearly 15,000

ft. They were first seen by Captain Speke in 1861. The range consists of eight prominent peaks, of which Karisembi, 14,780 ft. in alt., is the highest. Other principal peaks are Muhavura, Miken, Visoke, Sabinio, Namlagira, and Nina Gongu.

**Muffi**. Mahomedan consulting canon lawyer. Upon application he gives legal opinions on points of Islamic law. The use of the word for plain or civilian clothes instead of uniform was originally Anglo-Indian. The loose, flowing robes of a muffi compared with a tight-fitting uniform may have suggested it. See Grand Mufti.

**Muggletonians**. English religious sect. It was named after Lodowicke Muggleton (1609-98), who declared that he stood in the same relation to his cousin, the Puritan, William Reeve, that Aaron stood to Moses, and the two, professing the gift of prophecy and declaring that they were the two witnesses foretold in Rev. 11, attracted a large following. They taught that God has a human body; denied the existence of the Trinity; held that the Devil was incarnate in Eve, and that God the Father suffered on the Cross, leaving Elijah to govern Heaven while He came to earth to die. Consult Reeve and Muggleton's Transcendent Spiritual Treatise, 1652; Acts of the Witnesses, with Letters and Autobiography, L. Muggleton, 1699; Complete Collection of the Works of Reeve and Muggleton, 1756, reprinted 1832.

**Mugwort** (*Artemisia vulgaris*). Perennial herb of the family Compositae, native of Europe, Asia, and N. Africa. It has erect, reddish, grooved, and branching stems. The alternate broad leaves are deeply cut into long-pointed segments, and the lower surface is white and silky. The small reddish-yellow flower-buds form slender sprays. See Wormwood.

Mugwort. Spray of foliage and flowers. Inset, left, single flower; right, segmented leaf

**Mugwump**. American political nickname. At the 1884 presidential election many influential Republicans objected so strongly to the party's choice of J. G. Blaine as its candidate that they either abstained from voting or supported Grover Cleveland, the Democratic candidate. They formed no party organization of their own. Their critics accused them of regarding themselves as superior to other Republicans in character and intelligence, and dubbed them "mugwumps," an Algonquin word denoting "chiefs" or "big men." The name is sometimes applied nowadays to voters independent of any party.

**Mühlberg**. A town of E. Germany, in Saxony-Anhalt, on the Elbe, 35 m. N.N.W. of Dresden. Its main church dated from the 13th century; others, and a castle, from the 15th and 16th. There is a trade in timber and agricultural produce, while beet sugar is manufactured. After being long part of Saxony, the town was given to Prussia in 1815. Pop. (1950) 5,000.

Mühlberg is famous for the battle fought here between the emperor Charles V and John Frederick, elector of Saxony, one of the leaders of Protestantism, April 24, 1547. With the assistance of Maurice of Saxony, Charles suddenly invaded Saxony, which its ruler, John Frederick, hastened from S. Germany, where he commanded the army of the Protestant league, to defend. The armies met at Mühlberg, where the emperor's troops, aided by the genius of Maurice, were victorious. John Frederick, taken prisoner, surrendered his electorate to Maurice.

In the Second Great War it was captured by the U.S. 1st army, April 5, 1945. After the German surrender it lay in the Russian zone of occupation.

**Mühlhausen**. Town of E. Germany, in Thuringia, on the Unstrut, 25 m. N.W. of Gotha, with which it is connected by rly. Of many old buildings, the chief are the 16th century town hall and the churches of S. Mary and S. Blasius, both 14th century edifices, though later reconstructed. Around the old town are modern suburbs. There are manufactures of textiles, machinery, chemicals, tobacco, and leather. After being in Thuringia, it was made a free city, but this privilege was taken away in 1802, and in 1815 it became part of Prussia. Armoured columns of the U.S. 3rd army captured Mühlhausen on April 5, 1945, meeting with only light German resistance.

The town lay after the German surrender within the Russian zone of occupation. Pop. 39,367.

**Muhu** or **Mõõn**. Island of the Baltic, off the coast of Estonia, of which it forms part. It is 14 m. broad and 14 m. long, and lies between the mainland and the islands Dago and Osel, granted by Estonia to Russia as military bases in Sept., 1939. Occupied by the Germans in 1940, Muhu was recaptured by the Russians, Sept. 30, 1944.

**Muilrea**. Mt. in the S.W. of co. Mayo, Eire. It stands on the N. side of Killary Bay. Alt. 2,688 ft.

**Muir**, **JOHN RAMSAY BRICE** (1872-1941). British historian and politician, known as Ramsay Muir.

He became lecturer, 1900, and professor, 1906, of modern history at Liverpool, and in 1913 occupied the chair of history at Manchester, resigning in

Ramsay Muir,  
British historian

1921. Entering politics, he was elected Liberal M.P. for Rochdale, 1923-24, and for many years fought in the Liberal cause, acting as chairman, 1931-33, and president, 1933-36, of the National Liberal Federation. His works included *Atlas of Modern History*, 1911; *The Expansion of Europe*, 1917; *The Interdependent World and its Problems*, 1933. He died May 4, 1941.

**Muir Glacier**. Alaskan glacier fed by the heavy snowfall common to the N.W. of N. America. It discharges into Glacier Bay, a fjord to the W. of Juneau. Nine ice streams flow from an amphitheatre on Mt. Fairweather, 35 m. across, to form the main stream, which is from 6 to 10 m. wide and terminates in an ice cliff at the head of the bay. The cliff was much broken in 1899 by an earthquake; it advances about 7 ft. daily during its period of greatest movement, but has receded over 25 m. since 1794. The base of the cliff is 900 ft. thick and 760 ft. below sea level. Giant bergs break away and float seawards.

**Muirkirk**. Town of Ayrshire, Scotland. On the river Ayr, 28 m. from Ayr, it has a rly. station, with chief industries coal and ironstone mining and ironworks. Pop. 4,358.

**Mukden**. City of N.E. China. The capital of Liaoning prov., Mukden is the cradle of the Manchu dynasty, which reigned over China for 268 years. It is the centre of heavy industry for the N. In the

Mukden. Scene in one of the principal thoroughfares of this city of N.E. China

vicinity are the tombs of the Imperial family. The circuit of the town walls is 10 m., with an inner wall of 3 m. containing the palace and government buildings. The town was opened to foreign trade by agreement with the U.S.A. in 1903. It is served by the Peking-Mukden rly., and by the South Manchuria rly. In 1931 Japanese troops occupied the former Chinese province of Manchuria, and in Feb., 1932, a new state called by the Japanese Manchukuo had Mukden as its largest city.

Russian forces occupied Mukden Aug. 19-20, 1945, Chinese govt. troops entering the city on Dec. 13. The Russians left on March 12, 1946, taking with them industrial equipment which they claimed as former enemy property, and therefore as reparations. Mukden was entered by Chinese Communist forces, Oct. 31, 1948. Pop. 1,135,801. See Manchuria.

**Mukden, BATTLE OF**. Fought between the Russians and the Japanese, Feb. 20-March 10, 1905. In Oct., 1904, the Russians had attacked Japanese positions on the Sha-Ho, and the rival forces were still occupying much the same lines. Both had strengthened their defences, the Russians holding a front about 60 m. long. Their general Kuropatkin had about 300,000 men; the Japanese under Oyama were almost equal.

Strengthened by the army that had just captured Port Arthur, Oyama proceeded to execute his plan for breaking the Russian front. On Feb. 20 a new Japanese army, the 5th, working through the mountains towards the Russian left, came into contact with the foe, and after severe fighting two passes were stormed. On Feb. 27 Oyama's centre opened an attack on the opposing Russians, but more important was the appearance, quite unexpected by the Russians, of the 4th army, the

men of Port Arthur, upon their right flank. Kuropatkin, misled as to his foe's intentions, drew in his right wing, while the Japanese were curving round the two ends of his army. Japanese losses were terribly high, but the danger to Russian communications made a retreat inevitable. This took the form of a series of rearguard actions and after a time the Russians became demoralised. Mukden was evacuated by March 10, and battle and pursuit were soon over. The Russians lost 26,500 killed and 40,000 prisoners; the Japanese had 41,000 killed and wounded. See Russo-Japanese War.

**Mula**. Town of Spain, in the prov. of Murcia. It stands on the river Mula, a small tributary of the Segura, 20 m. W.N.W. of Murcia. Trade is carried on in wine, oil, and farm produce. In the vicinity are the Baños de Mula, with thermal sulphur springs. Pop. 13,460.

**Mulatto** (Sp. *mulato*, young mule). Half-breed, especially the offspring—and their descendants—of parents whereof one is of white, the other of a negro race. The hair is usually negroid, the colour intermediate. The offspring of a mulatto and a white is a quadroon (one-fourth black); of a quadroon and a white an octoroon (one-eighth black). See Negro.

**Mulberry** (*Morus*). Name given to trees and shrubs of the family Moraceae, natives of the N. temperate regions. There are ten species, of which the best known are the black mulberry (*M. nigra*), the white (*M. alba*), and the red (*M. rubra*). All have heart-shaped leaves with toothed edges, and inconspicuous greenish-white unisexual flowers, produced in spikes and wind-fertilised. The compound fruit is somewhat similar in form to that of the raspberry, but has a very different origin, the latter being the product of a single flower, whilst each mulberry is due

to the coalescence of all the fruits from a spike of female flowers. The black or common mulberry, a native of the Orient, was introduced to England in 1548, the first trees being planted at Syon House, Isleworth. James I fostered the planting of mulberry gardens around London, in the belief that the silk industry might be established there.

The tree succeeds in any deep, rather damp soil, but the two others named prefer a dry soil. The white mulberry, a native of China, was introduced to Great Britain in 1596, for the sake of its leaves, which are better for silkworm culture. Red mulberry, with long, purple, pleasant-flavoured fruit, is a N. American tree of larger proportions (40-70 ft. high). Mulberries may be raised from seed, but more expeditiously by large cuttings, or layering in autumn.

**Mulberry.** Code name for the operation by which the prefabricated harbours used off the Normandy beaches to support the Allied invaders of Europe in 1944 were constructed. The Allied assault on the Continent was a gigantic undertaking which, it was estimated, would require the landing of 12,000 tons of stores and 2,500 vehicles daily for a period of 90 days. The enemy was known to have fortified the ports on the French coast with great strength, and the virtual impossibility of capturing one by direct assault from the sea was demonstrated by the attack on Dieppe in Aug., 1942 (see Dieppe: Dieppe Raid, 1942). It was therefore decided that the invasion would have to be made over open beaches, and already in 1942 Winston Churchill had given orders: "Piers for use on flat beaches. They must float up and down with the tide."

Early in 1943 prototypes of a pier and a pierhead were constructed and tested, and the construction of two artificial harbours was part of the invasion plan submitted to, and approved by, the combined chiefs of staff at Quebec in Aug., 1943. Despite the problems of man-power—20,000 workers were needed to construct the caissons (*v.i.*) alone—and material resources, it was decided that the harbour units should be constructed in Great Britain; the greater facilities existing in America being outweighed by risks of the long tow across the Atlantic.

Each of the two artificial harbours, Mulberry A for the American sector, Mulberry B for the British, was designed to enclose a

water area roughly equivalent to that of Dover harbour, and consisted of an inner fixed breakwater made of concrete caissons (code name Phoenix). Floating piers built on the pontoon principle ran out from the beaches to spud pierheads against which ships could tie up sheltered by the caisson breakwater. For technical reasons, the caissons could not be laid in water deeper than  $5\frac{1}{2}$  fathoms, which would limit the use of the harbours to moderate sized ships of the coaster type; a second, or outer, breakwater of floating bombardons was therefore designed. Eventually, owing to the time required for construction and the number of tugs for towing, the plan for the bombardon breakwater was curtailed, and a preliminary breakwater of blockships (code name Gooseberry) was decided on. Some 60 naval and merchant ships, including the old target ship Centurion, the French battleship Courbet, and the Dutch cruiser Sumatra, were used to make five sections with a total length of 24,000 ft. off the invasion beaches.

#### Building the Caissons

The concrete box-shaped caissons, of which 212 were built, were of six sizes, the largest displacing 6,044 tons, the smallest 1,672 tons.

These caissons were built in graving docks at Southampton, Goole, Middlesbrough, Tilbury, and the East India dock, London, in an entrance lock at Plymouth, on slipways at Langston, Portsmouth, and Southampton, and in shallow basins excavated in open land alongside the Thames; 600,000 tons of concrete, 31,000 tons of steel girders, 1,500,000 yds. of steel shuttering, 45,000,000 ft. of timber, and 100 m. of wire cable went into them; 147 were completed before D-day (June 6, 1944), the remaining 65, used as additional breakwaters and as replacements, by early Aug. Each caisson had quarters for a crew, and for artillery detachments to man during transit the defensive armament of Bofors guns.

The piers were designed to remain stable at the shore end on a shelving beach with a rise and fall of the tide exceeding 20 ft. Each pier was made up in 80 ft. spans, was supported on pontoons called Beetles, had a road width of 10 ft., and weighed 30 tons. The piers were towed across the Channel in 500 ft. lengths; that is, six spans and the shore-ramp float. Seven miles of piers were built for the two harbours.

Most of the pierheads, or spuds, were built in Scottish ports, a prototype having been tested in the Solway Firth in April, 1943. Each pierhead weighed over 1,000 tons, was 200 ft. long, had a beam of 60 ft., and consisted of a steel pontoon riding within four steel legs or spuds, which were power-operated and driven into the sea bed. The pierheads slid up or down the legs according to the tide, so that they maintained a fairly constant level. Each pierhead contained generating sets, storage space, and accommodation for the personnel serving it.

The piers carrying the roadways were flexibly attached to the pierheads so that in beam winds they could slew right or left a distance of 40° without interrupting the flow of traffic passing over them at a speed of 25 m.p.h. The roadway itself also had considerable flexibility, as it was composed of separate panels loosely bolted to the cross members.

The blockships crossed the Channel safely behind the assault forces and were then sunk by explosive charges during the five days following June 6. Meanwhile the caissons, breakwaters, and piers, about 1,000,000 tons in all, were being towed over 100 m. at an average speed of 4 knots—some 210 tows for which 85 tugs were used. The concrete caissons were accurately sunk in places selected off Arromanches for Mulberry B, off St. Laurent for Mulberry A, by a special surveying party which landed on D-day. Royal Engineers ("Seabees" in the U.S. harbour), with a naval beach commando and a detachment of Royal Marines, also landed on D-day, cleared mines, cut ramps in the esplanades, and prepared roadways down to the beaches ready to receive the shore ends of the piers. By June 18 more than half the caissons were in position, one pier hundreds of yards long and several pierheads were completed, and coasters could unload at any state of the tide.

The operations had gone according to plan with very few sea accidents, and, owing to Allied air superiority, little enemy interference; but on June 19 there blew up from the N.E. the worst June gale for 40 years. It continued for three days, the half-constructed harbours being exposed to its full force. Mulberry A, in the angle between the coast of Calvados and the Cotentin pen., suffered severely, the piers being twisted beyond repair. The Americans

Mulberry B, shown here, was assembled off Arromanches, Normandy, following the first landings of the Allies there, June 6, 1944. 1. Concrete caisson under tow for crossing the channel. 2 Spud pierhead

arriving off Arromanches. 3. Wharf formed from pierheads in line. 4. Inshore end of pier completed. 5. Pier giving exit to Arromanches. 6 General view of Mulberry B when completed and in use

**MULBERRY: BRITISH PREFABRICATED PORT WHICH MADE HISTORY IN 1944**

*British Official*

captured Cherbourg June 30, and therefore abandoned Mulberry A. Mulberry B, partially protected by the Calvados reef, suffered less.

The experimental floating breakwater of bombardons broke up; but whereas unloading directly on the beaches was impossible during the storm, 800 tons of petrol and ammunition as well as many troops were landed at the piers

at Arromanches even on the worst day. All pier equipment on passage when the gale began was sunk, but only one caisson was lost on the journey. After the gale, a long spell of rough weather prevented pier equipment from being towed across the Channel, so that the harbour was not of maximum value until well into July. In the first 100 days after June 6, 2,200,000 men were landed with 4,000,000 tons of stores and 500,000 vehicles.

Spare Mulberry caissons were towed from England to Walcheren island in 1945, where they were used to stop the gaps blown in the dykes by the R.A.F. in Oct., 1944, before the Allied seaborne assault on the island.

The British harbour on the Normandy coast is to be preserved as a war memorial to the British by the French government. *Consult* Operation Neptune, K. Edwards, 1946.

**Mulcaster**, RICHARD (c. 1530-1611). English schoolmaster. A native of Cumberland, he was educated at Eton under Udall; at King's, Cambridge; and at Christ Church, Oxford. He was the first headmaster of Merchant Taylors' school, 1561-86; vicar of Cranbrook, Kent, 1590; high master of S. Paul's school, 1596-1608; and became in 1598 rector of Stanford Rivers, Essex, where he died April 15, 1611, and is buried. He wrote educational works, including *Positions*, 1581, and believed in good education for girls and thorough training of teachers.

**Mulch**. Dressing of moist stable manure, leaf mould, straw, bracken, or other manurial substance applied to soil round transplanted trees or shrubs. Its object is to afford protection from frost, conserve moisture, and supply nutriment which rain will carry down to the roots of the plants.

**Mule**. Name strictly applying to a hybrid between a male ass and a mare. All the various members of the horse

Mule. Specimen bred from a Catalonian jack-ass and an English mare  
W. S. Berridge, F.Z.S.

in appearance and the mother in size. Hence mules are large animals of ass-like character.

In order to secure size, mules are usually bred from the Poitou and Spanish jack-asses, which are of exceptional height and are kept almost exclusively for this purpose. A good mule may stand 16 hands high at the withers and be almost equal in strength to a horse of the same size. The long ears, small hoofs, and tendency to a tufted tail always distinguish the mule from the horse.

Mules are exceedingly useful for draught and pack work, especially in mountainous and difficult country, being much harder than the horse, less liable to disease, less particular in the matter of food, of greater endurance, longer lived, and very sure footed. A mule is fit for work when four years old, is at its prime from eight to 12, and will continue to work well till 14 or 15. In spite of its proverbial character, the mule is not as a rule obstinate when well treated, but is particularly docile.

**Mule**. Machine used for spinning. It was invented by Samuel Crompton and improved by Richard Roberts, both connected with the textile industry in Lancashire. The mule is an intermittent machine for converting rovings into yarn, and it performs a complex cycle of movements. The rovings are drawn from large bobbins carried upon the upright creel at the back of the machine, and they pass through pairs of

geared rollers which draft or elongate the lightly twisted roving. The material is carried forward to an inclined spindle mounted upon the movable carriage of the mule. The spindle is driven by a band from the cylinder known as the tin roller. First the carriage carrying the spindles travels forward, thus stretching the roving, and during this period the spindle is turning at high speed without winding up the yarn. Stretching and twisting going on simultaneously, the weak places in the roving are continually being reinforced, as the twist lends strength to the weak portions. The carriage backs slightly, and the speed of the spindles is reduced. The carriage begins to run in, and the yarn stretched and twisted on the outward journey is wound upon the spindles during the inward run, the position of the yarn being controlled by the movement of faller and counter-faller wires.

This machine belongs pre-eminently to the Lancashire cotton industry, and it gives a full and spongy yarn. Mules of a slightly modified type are used for woollens and, especially upon the Continent, for worsteds. More floor space is occupied by mules than by the continuous spinning frames, and more skill is required in their manipulation, but with suitably adjusted mule machinery yarns of every variety from the coarsest to the ultra-fine are produced to perfection. The mule is capable of great delicacy of operation, and the details of its construction have been the subject of immense study. *See* Cotton; Spinning.

**Mulgrave Castle**. Seat of the marquess of Normanby at Sandesend, W. of Whitby, in the N. Riding of Yorkshire, England. In the grounds are the remains of the 11th century stronghold of a Saxon duke named Wada. About 1625 the property passed to Edmund,

Mule used in cotton spinning. The machine illustrated has 1,300 spindles, spinning and winding 4,000 miles of thread in a day

Lord Sheffield of Butterwick, created earl of Mulgrave, a title revived in 1812 in favour of Sir Henry Phipps, an ancestor of the marquess of Normanby.

**Mulhacen** OR MULAHACEN, CERRO DE. Mountain of Spain, in the prov. of Granada. The culminating point of the Sierra Nevada, it is the loftiest peak in Spain, reaching an alt. of 11,420 ft. The snow line occurs at approximately 10,000 ft.

**Mülheim**. Name of two towns in Germany. Both are river ports, one being on the Rhine and the other on the Ruhr.

Mülheim-on-Rhine lies on the right bank of the river 2 m. below Cologne, with which it was incorporated in 1914. It has a ship-building yard and a commodious river harbour; its industries include tanning, brewing, and the manufacture of velvet and silk. It became a corporate town in 1322 and much of its later prosperity was due to the Protestants who settled there from Cologne, which in the Second Great War fell to troops of the U.S. 1st army, March 6, 1945, and was included after the German surrender in the British zone of occupation. Pop. (pre-war) 60,000.

Mülheim-on-the-Ruhr lies on the river Ruhr 7 m. W. of Essen. Its chief industry is iron-working; it also manufactures leather, tobacco, paper, and beer, and is a rly. centre. It received municipal rights in 1508. Its twelfth-century church was severely damaged in the Second Great War. Captured by units of the U.S. 9th army, April 9, 1945, it was subsequently in the British occupied zone. Pop. (1939) 136,805.

**Mulhouse** (Ger. *Mülhausen*). Town of Alsace, France. It stands on the Ill, 56 m. S. by W. of Strasbourg, and on the Rhine-Rhône canal. It has been a centre of cotton manufacture since the mid-18th century; other industries include engineering, dyeing, and paper manufacture. The town possesses the remnants of the bishop of Strasbourg's castle, a town hall built in 1431 and renovated in 1552, and S. Stephen's church (14th century). Made a free city in 1261, it was for long linked with Swit-

zerland, but afterwards became German. In 1797 it was united with France, and in 1871 became a part of Germany. The scene of heavy fighting in the First Great War, it was restored to France in 1919. Occupied by German forces shortly before the Franco-German armistice of 1940, Mulhouse was liberated by the French 1st army on Nov. 22, 1944. Pop. 87,655.

**Mulkear**. River of Eire, which rises in two head-streams—one in the W. of co. Tipperary and the other almost wholly in co. Limerick—and flows N.W. for 32 m. to the Shannon, which it enters 4 m. above Limerick city.

**Mull**. Name for a headland or long promontory, derived from the Gaelic. Examples of its use in western Scotland are the mull of Kintyre, and the mull of Galloway.

**Mull**. Island of Inner Hebrides, Argyllshire, Scotland. It is 7 m. W. of Oban and separated from the mainland by the firth of Lorne and the Sound of Mull. The third largest of the Western Islands, it has a mountainous surface (Ben More, 3,169 ft.) and a rugged and deeply indented coast, fringed on the W. with a number of smaller islands. It is almost entirely underlain by lavas and rocks related to the volcanic activity of Tertiary times. Grazing is the principal industry. There are a number of picturesque glens and fresh water lochs. Tobermory, in the N., is the chief town. Length 30 m., breadth 29 m.

**Mull**. Sound or channel between the island of Mull and Morven peninsula, Argyllshire, Scotland. There is beautiful scenery along its shores. It is 20 m. long and from  $1\frac{1}{2}$  to 3 miles wide.

**Mullah** OR MOLLAE. Mahomedan term for a teacher or scholar, particularly one learned in civil and ecclesiastical law. It is also applied to a mosque officer, and in India is the usual term for a

Mahomedan schoolmaster. The influence and fanaticism of the so-called "mad Mullahs" have caused serious disturbances in India and Somaliland. The raids by the leader of the rebel dervishes in the latter country provoked punitive expeditions by the British, 1901–05. See Somaliland.

**Mullein** OR AARON'S ROD (*Verbascum thapsus*). Biennial herb of the family Scrophulariaceae, native of Europe and N. and W. Asia. The first year it forms a cluster of large, oval, lance-shaped, very woolly leaves from 1 ft. to 18 ins. long. The second year a stout, woolly, leafy stem 3 ft. high is sent up, ending in a long spike of yellow flowers. Wool from leaves and stem was utilised for lamp-wicks. See Aaron's Rod, illus.

**Müller, FRIEDRICH MAX**. See Max Müller.

**Müller, GEORGE** (1805–98). German-born British philanthropist. Born near Halberstadt, Sept. 27, 1805, he was educated in Germany. In 1829 he came to England with a view to becoming a missionary to the Jews, but in 1830 undertook a pastorate at Teignmouth, Devon, becoming a naturalised British subject. He practised theretheideals he followed throughout his life, trusting to prayer to supply material wants. In Bristol he started an orphanage. Soon he had over 2,000 children under his care, and later erected five large buildings to house them at Ashley-down. His book, *The Lord's Dealings with George Müller*, greatly helped him to obtain funds. He died at Bristol, March 10, 1898.

**Müller, HERMANN JOSEPH** (b. 1890). American geneticist. He was born on Dec. 21, 1890, in New York City, and educated at Columbia university. While professor of zoology at Texas university, 1920–25, he began his research in the problems of heredity. He was senior geneticist at the Institute of Genetics, Moscow, 1933–36, and lecturer at the Institute of Animal Genetics, Edinburgh, 1937–40. In 1946 he received a grant from the American cancer society, and in the same year was awarded the Nobel prize in medicine and physiology. His work on heredity changes caused by X-rays striking the genes and chromosomes of living cells

George Müller, British philanthropist

Mulhouse, France. The medieval town hall, showing the covered entrance steps

assumed added significance after the dropping of atomic bombs on Hiroshima and Nagasaki.

**Müller, JOHANNES** (1801-58). German physiologist. Born at Coblenz, July 14, 1801, he was educated at Bonn,

Johannes Müller,  
German physiologist

where he studied physiology. In 1826 he was made professor of physiology there, and in 1833 occupied a chair at Berlin. His important contributions to our knowledge of the complex mechanism of the human body have caused him to be regarded as the founder of modern physiology. He died April 28, 1858. His chief work was *Handbook of Human Physiology*, Eng. trans. 1840-49.

**Müller, PAUL** (b. 1899). Swiss chemist, awarded the Nobel prize for medicine, 1948. See N.V.

**Müller, WILLIAM JOHN** (1812-45). British painter. Born at Bristol, June 28, 1812, he was the son of a German, the curator of the Bristol museum. He travelled on the Continent and in Egypt and Asia Minor, making many sketches, but exhibited few pictures—some at the R.A. He died at Bristol, Sept. 8, 1845. The Tate Gallery possesses examples of his work in oils and in water-colours.

**Mullerian Duct.** A term in embryology. In the embryo of any vertebrate the coelom communicates with the exterior by a duct which will subsequently be concerned with the removal of genital products, i.e. eggs or sperms. In the embryo destined to develop into a female, a shelf along the wall of the coelom curls up to form a tube, which is the Mullerian duct. It forms the oviduct, and is quite distinct in origin from the duct which removes the sperms in the male. Its development is encouraged by the secretion of oestrogens (*q.v.*). Vestiges of the Mullerian system persist in the male in the prostate gland (*q.v.*).

**Müller's Larva.** Free-swimming larval form of the group of Platyhelminth worms known as Polyclads. It is oval in shape, with a series of elongated processes fringed with long cilia. It is sufficiently similar to the free swimming larval stage (trochophore) of Annelid worms to indicate that there is close phylogenetic relationship.

**Mullet.** Name applied generally to the numerous species comprised in two unrelated genera of

Mullet. Specimen of red mullet,  
*Mullus barbatus*

marine food fishes. Red mullets (*Mullus*), of which there are about 40 species, are represented in Great Britain by the common red mullet of the markets. It has a fine flavour, and its beautiful colour adds to its attractiveness. Grey mullets (*Mugilidae*) include about 70 species, of which three occur in the British seas. They are found largely in the brackish water of river estuaries, and are important food fishes.

**Mullet.** In heraldry, a star of five, six, or more points. It is the mark of cadency (*q.v.*) for the third son and his house. When borne pierced, mullets undoubtedly represent spur rows. They differ from stars which have wavy points.

**Mulligatawny** (Tamil, *milaḡattannir*, pepper water). Soup made hot with curry-powder. Boiled fowl and rice form a usual basis, though other meat may be used.

**Mullingar.** Market town and co. town of Westmeath, Eire. Almost encircled by the Royal Canal, it stands on the Brosna river, 50 m. W.N.W. of Dublin, and is a junction on the Eire state rlys. The buildings include the R.C. cathedral for the diocese of Meath and those erected for county business. There is a trade in agricultural produce, and a few manufactures, while important horse and cattle fairs are held. Pop. 5,237.

**Mullion.** In architecture, the vertical division between the lights of a window. It originated with the reduction in width of the solid pier (*q.v.*) or piers between coupled lancet windows, and is mainly a development of late Gothic building. In church architecture and that of large domestic dwellings, the mullion is of stone, in lesser structures of wood. The traditional mullion of the 15th century is a splayed or moulded shaft, but with the spread-

Mullion. Window  
with stone mullion,  
indicated by A

ing of Renaissance influences this gave place to a rectangular shaft scrolled with a floriated or arabesque design; the Tudor mullion is mainly like this. In pure Renaissance work mullions disappear.

**Mullion.** Village and parish of Cornwall, England. It stands on Mount's Bay, 5 m. N.W. of Lizard Head. It has an old church, S. Melan's, in which are some interesting carved bench ends. Mullion Cove, or Porthmullion, a beauty spot, belongs to the National Trust. It can be reached by road from Helston. Pop. 954.

**Mulready, WILLIAM** (1786-1863). British painter. Born at Ennis, Clare, Ireland, April 1, 1786, he

removed with his family from Dublin to London in 1792. A pupil of Baynes and Banks, the sculptor, he entered the R.A. schools in 1800. In 1802 he gained the silver palette of the Society of Arts, in 1804 exhibited at the R.A., and between 1807 and 1809 illustrated children's books. He painted mainly genre pictures in the style of the Dutch masters, but later developed a more personal manner. He died in Bayswater, July 7, 1863.

Mulready's best pictures include *Choosing the Wedding Gown*, *The Sonnet*, *The Convalescent*, all in the Victoria and Albert Museum, South Kensington; *The Bathers*, *The Toy Seller*, both in the National Gallery of Ireland; *The Last In*, Tate Gallery. He designed the first penny postage envelope, 1840. This Mulready envelope bore on its face an allegorical representation of Britannia sending out messages all over the world by means of elephants, etc., and was effectively caricatured by John Leech in *Punch*. Perfect specimens are rare and much valued by collectors.

**Multan** or **MOOLTAN**. Div. and dist. of Pakistan in W. Punjab. The div. comprises six districts in the S.W. of the prov. The people are chiefly Mahomedans. A third of the area is cultivated, wheat and cotton being the chief crops. The dist. consists of the S. of the Bari doab. Rainfall is only 6 ins. per annum, and cultivation, which covers a quarter of the area, is entirely dependent upon irrigation. Area, div., 31,763 sq. m.; dist., 5,653 sq. m. Pop., div., 6,365,817; dist., 1,484,333.

William Mulready,  
British painter

**Multan** OR MOOLTAN. City of Pakistan, in W. Punjab. It stands on the Chenab below its confluence with the Ravi. A town of great antiquity, it has been identified as the capital of the Malli, who were conquered by Alexander the Great. Multan is a great trading centre, which collects cotton, wheat, wool, etc., for export S. down the Indus valley, and supplies Afghan traders from Kandahar with indigo, cottons, sugar, and shoes in exchange for drugs, raw silk, and spices. It manufactures shawls and carpets. Pop. 142,768.

**Multiple** (Lat. *multiplex*, with many folds). Term applied to something having many parts. A multiple shop (*q.v.*), business owns many shops; multiple stars are a cluster of three or more individual stars relatively isolated in space; the law of multiple proportions is known to chemists. Multi- (Lat., many) may replace multiple as an adjective, *e.g.* multi-purpose tool.

In mathematics a multiple of a number has the latter as one of its factors; 35 is a multiple of 5 and of 7, while  $8a^3$  is a multiple of  $2a$ . A common multiple of certain numbers has each of them as one factor: thus 420 is a common multiple of 2, 3, 5, 7, since each of those numbers will go into it exactly. The least common multiple (L.C.M.) of certain numbers is the smallest number that has each of them as a factor; thus, 210 is the L.C.M. of 2, 3, 5, 7. Many mathematical operations require the resolution of multiples into their factors and the elimination of common factors.

**Multiple Shop.** Shop operating a number of branches under the same ownership. The term covers not only chain stores (*q.v.*), but also

with growing prosperity opened branches. Others started as wholesalers, later selling goods to the public direct and thus receiving both wholesale and retail profits. "Tied" public houses are in a sense branches of a multiple shop.

Many retailers entered the wholesale trade, and their goods, becoming known to the public, were distributed not only through the firm's own branches, but also by local retailers acting as agents. The advantages of the multiple trader over the small shopkeeper are a widespread goodwill and the ability to buy on a larger scale. Many multiple shops have also effected economies not available to the small trader by forming their own subsidiaries to deal with building, transport, etc.

**Multiplication.** In mathematics, the operation of repeated addition. Multiplication of £1 10s. by 3 means £1 10s. plus £1 10s. plus £1 10s. The process is indicated by the sign  $\times$  ( $7 \times 12 = 84$ ), or by a dot on the line ( $7.12 = 84$ ), or by placing a multiplier outside a bracket  $3(6-2) = 12$ . In algebra simple juxtaposition with or without brackets is generally sufficient (thus  $ab$  means  $a$  times  $b$ ). Repeated multiplication of a number by itself is denoted by an index:  $3^4$  means  $3.3.3.3$ , or 81. Such a product is termed a power of the number; here the 4th power of 3.

Multiplication may be lightened by using tables of squares, of quarter-squares (which use the fact that  $ab = \frac{1}{2}(a+b)^2 - \frac{1}{2}(a-b)^2$ ), specialized tables of areas, volumes, interest, wages, prices, etc., tables of logarithms (*q.v.*), and by slide rules, calculators, and calculating machines (*q.v.*). See Algebra; Arithmetic.

#### M u m b l e s.

Village and watering-place of Glamorganshire, Wales. It stands on the W. shore of Swansea Bay on the non-nationalised Mumbles light rly. (electric). Oyster fishing is carried on. Mumbles Head, at the W. end of

the bay, includes two small islands, on one of which is a lighthouse.

**Mumbo Jumbo.** Name of a spirit worshipped by the Mandingos of W. Africa. Mungo Park relates that he is invoked for the purpose of punishing women offenders, after which a man appears,

disguised in the garb of Mumbo Jumbo, ties the culprit to a post, and scourges her. In a wider sense the term is applied to any object of irrational superstition.

**Mummy** (Arab. *mumiya*, bitumen). Dead body embalmed with preservative substances in prepara-

Mummy. Examples of the embalmed and swathed bodies of Egyptians who died 3,000 years ago

tion for burial. In Neolithic Egypt interment in skins or mats in sand-pits resulted in a measure of preservation by natural desiccation. When closed coffins were devised, the speedier decay of the body led to experiment with artificial preservatives, at first perhaps limited to crude natron. The earliest attempt at mummification yet found came from a II dynasty tomb at Sakkara; the earliest mummy enswathed in bandages smeared with resinous paste from a V dynasty tomb at Medum.

In the course of centuries other substances were employed, including bitumen, caustic soda, balsams, spices, honey, and drugs. By the XXI dynasty, after 1100 B.C., the process involved incision of the left flank with a flint knife for removing the viscera, extraction of the brain, usually through the nostrils with bronze hooks, and stuffing of the cavities with packing materials.

Each limb and digit was separately swathed in mummy-cloth, consisting of linen bandages 2 to 10 ins. wide and up to 17 ft. long. An outer sheet 8 ft. by 4 ft. lay over all.

The bodies, laid out in the extended position, were protected by amulets and ritual texts, enswathed in bead network, accompanied by mummy-like statuettes called ushabtis, enclosed in one or two mummy-cases of sycamore, cedar, cartonnage, or faience,

Mumbles, South Wales. Lighthouse and telegraph station off Mumbles Head Frith

businesses not originally founded as multiple shops which have opened new branches to take advantage of increasing trade. Multiple shops in Great Britain are organized on various lines. Some are chain stores proper. Others began with a single store and

protected by oblong coffins, and, if royal or wealthy personages, enshrined in stone sarcophagi. The face was treated with fidelity, sometimes by encasing in a plaster mask, out of which grew, after 100 B.C., the Greco-Roman custom of placing portraits in tempera over the enswathed head. Christian Copts continued the practice in modified forms, and it survived until about A.D. 700.

Mummification was applied also to sacred animals, such as the particular cat that personified the Bast goddess, and the bull sacred to Apis. Afterwards all animals of the species secured this form of immortality, and great cemeteries have been found of cats at Bubastis, fish at Esna, ibises near Abydos, and the like. These mummied animals were sometimes gilded and enclosed in coffins.

In 1881 and 1898 there were recovered at Thebes hoards of royal mummies, which were removed from their original tombs in order to frustrate tomb-robbers. Removed to Cairo, they were found to include the mummied remains of famous Pharaohs of the XVIII and XIX dynasties, including Thothmes III, Amenhotep III, Seti I, Rameses II, and Menephtah. See Animal Worship; Burial Customs; Embalming.

**Mumps** or EPIDEMIC PAROTITIS. Acute infectious disease. The micro-organism responsible has not yet been isolated, but is almost certainly a filterable virus. It is most frequent in childhood and adolescence, males being more often attacked than females, and is generally more prevalent in spring and autumn than at other seasons. The incubation period is from two to three weeks. The onset is marked by fever, which rarely exceeds 101° F., but exceptionally may be as high as 104° F. Pain is felt below the ear, and within 48 hours there is marked swelling of the neck and cheek. A day or two later the other side usually becomes swollen as well, as may the glands under the chin.

The patient finds difficulty in opening his mouth, and speech and swallowing are affected. After a week or 10 days the swelling subsides and recovery is rapid. Risk of conveying the disease to others is slight after disappearance of the swelling. Swelling and inflammation of the testes in males and of the breasts and ovaries in females may arise, but usually are serious only in the male, for whom mumps may be a cause of sterility as destroying sperm-producing tis-

sues. Treatment consists in keeping the patient in bed with light, soft diet and attention to working of the bowels. Pain in the neck may be relieved by applying either hot or cold compresses.

**Muncaster Castle.** Residence at Ravensglass, Cumberland, England, until 1917 the seat of Baron Muncaster. On the site of a Roman fortress known as Mulcastre, or the castle on the meols or sandhills, it is half-way up Muncaster Fell and commands beautiful views up the valley of the Esk. In the possession of the Pennington family since the Conquest, it was rebuilt in 1800. After the battle of Hexham, 1461, Henry VI took refuge here, and is said to have given to Sir John Pennington the curious glass cup, known as The Luck of Muncaster, from which the family have been baptized ever since.

**Munch, EDVARD** (1863-1944). Norwegian painter. Born at Loeten, Dec. 12, 1863, he studied art in Oslo and worked with an Impressionist group in Paris. Influenced by Seurat's *pointillisme*, he held his first exhibition in Berlin, 1892, and so revolutionary was his style that the show had to be closed. He painted in 1907 his *Frieze of Life*, a masterpiece which was sold and distributed between museums in Oslo, Berlin, and Lübeck. At the greatest of Munch's exhibitions, in 1927, nearly 500 works were shown. Essentially an innovator, he founded the German expressionist movement. His work was banned by the Nazis in 1933. He died in Oslo, Jan. 23, 1944.

**Munchausen, OR MÜNCHHAUSEN, KARL FRIEDRICH HERONIMUS, BARON VON** (1720-97). German hero of incredible adventures. Born at Bodenwerder, Hanover, May 11, 1720, he was a cavalry officer in Russian campaigns against the Turks, retired in 1760, and died Feb. 22, 1797. A collection of the stories attributed to him, compiled by his compatriot and acquaintance, Raspe, and taken in part from Bebel's *Facetiae Bebelianae*, 1508, and from Lange's *Deliciae Academicæ*, 1765, was first published in English under the title of Baron Munchausen's Narrative of his Marvellous Travels and Campaigns in Russia, 1785. Later editions contain matter stolen from Lucian's *True History* and stories designed to ridicule Montgolfier's balloon ascents, Bruce's African explorations, and other contemporary sensations. Many stories in the first edition may be regarded as

authentic Munchausen, whether actually true or false.

**München-Gladbach.** Town in the German Rhineland. It is 12 m. W. of Düsseldorf, and was famous as a centre of the textile industry. It was founded by a count of Charlemagne's court, who built the first church; a cathedral erected in 975 stood until the town was virtually destroyed by heavy bombing from the air and ground fighting during the Second Great War. It had a baroque town hall (1663), but was otherwise modern. One-third of the pop. of 127,115 was engaged at textile plants and clothing workshops, while there were metal, engineering, and electrical industries. From ancient times a seat of linen manufacture, the place rapidly developed with the cotton and wool industry in the 19th century. During 1929-33, it was united with Rheyt and Odenkirchen. It fell on March 1, 1945, to the U.S. 9th Army, and after the German surrender lay in the British zone of occupation.

**Muncie.** City of Indiana, U.S.A., the co. seat of Delaware co. It stands on the White river, 55 m. N.E. of Indianapolis, and is served by several rlys., including an extensive inter-urban electric system. It has glass and glassware industries, and manufactures iron and steel, motor vehicles, clothing, and gas engines. Coal and natural gas are obtained locally. Settled in 1834, Muncie received a city charter in 1865. This was the place described in various books by R. and H. Lynd as Middletown (*q.v.*). Pop. 49,720.

**Munda.** Primitive tribe in N. India. Numbering 700,000, they live mostly in Bengal, Bihar, and Orissa, though some work on Assam tea plantations. Dark-brown and long-headed, one-third of them are Hinduised, and a few are Christian. The Munda sub-family of languages, spoken by nearly four million people, includes the Santali, Mundari, Bhumij, and Ho dialects of Kherwari, besides Juang and Kurku. It forms, with the Mon-Khmer sub-family, the Austroasiatic family. See *Austrie*; *Kol*.

**Munday, ANTHONY** (1553-1633). English writer. A Londoner, he was in turn stationer's apprentice, actor, writer of pamphlets against the Jesuits, messenger of the queen's chamber, and City pageant-writer. Concerned in 18 plays, among them Sir John Oldcastle, and The Downfall of Robert, Earl of Huntingdon, he translated romances, including *Palladio of England*, from the

French and Spanish, wrote ballads, and revised Stow's Survey of London. An industrious but inferior writer, he was attacked by Jonson and Marston. He was buried in S. Stephen's church, Coleman Street.

**Mundella, ANTHONY JOHN** (1825-97). British politician. Born in Leicester, March 28, 1825, of

A. J. Mundella,  
British politician  
Russell

mixed Italian and English parentage, he was apprenticed to a hosiery manufacturer, and in 1858 had become a partner in the Nottingham firm of Hine and Co. Active in municipal politics, he won fame in 1866 by his establishment of one of the earliest conciliation boards for the settlement of trade disputes. In 1868 Mundella was returned as a strong Radical to the house of commons by Sheffield. In 1880 he entered Gladstone's government as vice-president of the council, and was responsible in 1881 for the Act which extended the system of compulsory education, and in 1882 for a new and important educational code. President of the board of trade in 1886, he created the labour department. In 1892 he returned to the board, and continued his efforts to better the conditions of workers, but retired in 1894, owing to a public inquiry into the liquidation of a company with which he had been connected. He was returned to parliament unopposed for Brightside, Sheffield. He died July 21, 1897.

**Münden.** W. German town, in Lower Saxony. It is at the point where the Fulda and Werra form the river Weser, 15 m. S.W. of Göttingen, and is a rly. junction, river port, and health resort. Carborundum, chemicals, rubber, tobacco, and wood provide industries. There are two palaces of the Brunswick dukes, dating back to 1070 and 1619; churches of the 15th and 17th centuries; timber buildings; and memorials of the siege by Tilly in 1626. Pop. 20,300.

**Munden, JOSEPH SHEPHERD** (1758-1832). British actor. Born in London, he worked in a shop before joining a strolling company. In the provinces he made a reputation as a comedian, and also managed a group of theatres. He appeared in London in 1790, and at Covent Garden and The Hay-

market became the most popular comedian of his time. From 1813 he acted at Drury Lane until his retirement in 1824. He died Feb. 6, 1832. Munden played Shakespeare's comic characters and appeared in *The Beggar's Opera*, *Tristram Shandy*, and *Every Man in His Humour*. Lamb wrote an essay on his art.

**Mundesley.** A watering-place and seaside village of Norfolk, England. It lies 7 m. S.E. of Cromer and has a rly. station. Once interested in fishing, it has been popularised and its church has been restored, while encroachment of the sea has been checked by walls. The cliff scenery is impressive. Pop. 990.

**Mungo.** A short, fine, woollen fibre recovered from densely compacted rags or cloth-cuttings. It is used in conjunction with longer fibre in manufacturing new cloth, especially in obtaining a close and fine surface upon the new goods.

**Mungo** (c. 518-603). Scottish saint, also known as S. Kentigern (q.v.). The name Mungo is formed from two Gaelic words meaning "dear one."

**Muni, PAUL** (b. 1895). An Austrian-born American film actor. Born Sept. 22, 1895, of Jewish parents at Lwow (then Lemberg, Austria), he went to the U.S.A. as a child, was educated in Chicago, and performed at the Yiddish Theatre, N.Y., 1908. A member of the Jewish art theatre company, he toured the country on the Yiddish stage until 1926. Entering films in 1929, he proved to be a great character actor. He was a gangster in *Scarface*, 1932; impersonated Pasteur, 1936, and Zola, 1938; and played a Chinese in *The Good Earth*, 1938. He appeared on the London stage in the leading role in *Death of a Salesman*, 1949.

**Munich** (Ger. *München*). Capital of Bavaria, generally reckoned to rank as Germany's third largest city. It stands on the river Isar, at a height of 1,700 ft. (and is thus the highest large city in Germany) on a plateau adjoining the Alps; its climate, owing to its location, is very variable. Munich, the centre of communications not merely for Bavaria, but for the lines Berlin-Rome, Paris-Istanbul, etc., has a number of stations and an important aerodrome; and is one of the most important centres

of German industry, art, and literature. Before the Second Great War, Munich university was second only to that of Berlin. In the main a modern town with wide, regular streets, beautiful gardens and squares, Munich preserved many remarkable buildings and monuments, e.g. old gates like the Karlstor and the Isartor, S. Peter's basilica (begun 1181), the cathedral of Our Lady (1468-88) with its curious, cupola-crowned twin towers, the Greek church S. Saviour's (1494), S. Cross (1480-85); the old town hall (1470, renovated), the old armoury, later a museum (1500); the great palace, 16th to 19th century; the Antiquarium, the Grottenhof, the Treasury, the Royal theatre (1750-56), the Preysing palace (1723-28), the Jesuit church of S. Michel (1583-97). Most of these, as well as numerous Renaissance and Baroque piles, were laid in ashes by Allied air raids during the Second Great War.

The New and the Old Pinakothek and the Glyptothek contained masterpieces by Rembrandt, Dürer, Titian, Raphael, Rubens, Holbein; famous antique sculptures; the best of the modern and 19th century schools of art. The Schackgalerie displayed all outstanding 19th century masters, from Spitzweg to Boecklin; the National museum held medieval treasures; and the huge German museum, completed only between the two wars, showed the development of technique and mechanics. There were scores of other art and art-craft collections, and a world famous art school; Germany's second biggest library with 1½ million vols., including 50,000 manuscripts; a national and a number of other outstanding theatres. Besides the university and the technical university (together 430 teachers, 13,000-14,000 students) there were academies of music and of art and many other scientific institutes and learned societies. The supreme finance court of the Reich and other authorities were located at Munich, as well as the Bavarian government, the seat of an archbishop and of a papal nuncio.

Schwabing, a suburb, is mentioned in the 8th century; Munich itself, whose name derives from a monks' settlement, became a largish village c. 1158 A.D. under Henry the Lion. It was a flourishing town in the 15th century, was a seat of the arts in the 16th, a centre of tourism in the 18th, and a trade and industrial centre in the

Munich arms  
climate, owing to its location,  
is very variable. Munich, the  
centre of communications not  
merely for Bavaria, but for the  
lines Berlin-Rome, Paris-Istan-  
bul, etc., has a number of stations  
and an important aerodrome; and  
is one of the most important centres

19th century. Brewing, building, printing industries were first; followed by locomotive and motor engineering, textile and furniture making, electric and optical industries, and the famous Nymphenburg porcelain manufactory.

Munich's face was altered considerably when Hitler turned it into the Nazi party h.q. in 1931; but few of the huge, dull buildings he erected survived the Second Great War.

Munich became important first as the centre of the salt trade of the neighbouring salt mines of Reichenhall, Hallein, and Berchtesgaden; its city rights were confirmed 1294, and the emperor Louis the Bavarian (1314-47) gave it many privileges. Italian and other artists came, galleries were created under Albrecht V (1550-79), the academy of science was founded 1759, that of art 1809; but it was King Louis I (1825-48) who secured Munich's reputation as the city of art, "Isar-Athens," and Louis II (1864-86), Richard Wagner's Maecenas, who joined music and the theatre to its embellishments. Here, Nov. 8, 1918, the first republic was proclaimed in Germany, and on April 7, 1919, a short-lived Soviet republic; here, Nov. 8-9, 1923, Hitler tried his first "putsch." It was one of the centres of the 1944 July Plot (*q.v.*).

Munich was captured April 29-30, 1945, by the U.S. 7th army, and after the surrender of Germany

Great Britain and France, Czecho-Slovakia had agreed on Sept. 21, and provided that Czech evacuation and German occupation of the area should take place between Oct. 1 and Oct. 10 in stages in accordance with markings on a map attached to the agreement; and that conditions governing the evacuation should be laid down by an international commission composed of representatives of Germany, the U.K., France, Italy, and Czecho-Slovakia, which commission should also ascertain what further areas were of predominating German character, and should determine the final frontiers between Germany and Czecho-Slovakia. With the occupation of Bohemia and Moravia by Nazi forces, March 15, 1939, the agreement became a dead letter. See Czecho-Slovakia.

**Munich Crisis.** Popular name in Great Britain for the situation of international tension in Sept., 1938. The agreement which eased it was signed at Munich, hence this name. International tension had been growing since Hitler's re-occupation of the Rhineland in 1936, and after he occupied Austria, March, 1938, it became alarm. Czecho-Slovakia, where the German-speaking inhabitants of the Sudeten area had for some time been agitating for autonomy under the Nazi-inspired leadership of Henlein, appeared to be next on the list of victims.

ginning of Aug., Lord Runciman was sent to Prague by the British govt. as an "unofficial adviser" to the Czech govt. on the Sudeten German question; but in Sept. rioting broke out in the Sudeten area, Henlein demanding its inclusion in the Reich. His party was suspended by the Czech govt. and he himself fled to Germany.

In this situation, Chamberlain (*q.v.*), the British prime minister, believing that war was all but inevitable, flew to Berchtesgaden on Sept. 15 to see Hitler. On his return, Daladier, the French premier, and Bonnet, the French foreign minister, flew to London. Under the joint pressure of France and the U.K., Czecho-Slovakia agreed to the cession to the Reich without plebiscite of areas including more than 50 p.c. Sudeten Germans, and the neutralisation of the rest of the country. Chamberlain flew to Godesberg, Sept. 22, for a second meeting with Hitler, who now insisted on the handing over by Oct. 1 of considerable areas shown on a map he presented. Back in London, Chamberlain again met Daladier and Bonnet.

Meanwhile President Benes had ordered a general mobilisation of the Czech army at 10 p.m. on Sept. 23. By midnight on the 24th France had more than a million men under arms; the British home fleet had left Invergordon for an unknown destination and the Mediterranean fleet was concentrating at Alexandria. In a speech made before 30,000 people in Berlin, and broadcast, Hitler on Sept. 26 attacked Czecho-Slovakia and Benes violently, announcing that his patience was nearing its end, but insisted that if this question were settled according to his demands there would be no more international problems.

In the U.K., distribution of gas masks to the people began on Sept. 25; parliament, which was in recess, was summoned to meet on the 28th. A.A. and coastal defence units of the Territorial army, the Observer Corps, and defensive units of the Auxiliary Air Force were called up on the 26th; and the War office announced the formation of a women's service, the Auxiliary Territorial Service. Chamberlain broadcast to the nation on the evening of Sept. 27, and in London trenches were being dug in the parks to serve as rough air raid shelters. The fleet was mobilised on Sept. 28, on which day Chamberlain gave the commons an account of his negotiations. While reporting that he had that

a few days later came within the U.S. zone of occupation. It became the capital of the *Land* of Bavaria, set up by the Americans Sept. 27. Pop. (1945) 865,500.

**Munich Agreement.** Agreement signed at Munich, Sept. 30, 1938, by Germany, Great Britain, France, and Italy. It confirmed the cession by Czecho-Slovakia to Germany of the Sudeten German area to which, under pressure by

France already in 1937 had assured Czecho-Slovakia that she would stand by their treaty of 1924 if Czecho-Slovakia were attacked; she repeated the assurance in March, 1938, when the Soviet government also gave her a pledge of immediate assistance in case of attack, and the German government assured her of its determination to respect her integrity. But tension still grew. At the be-

morning telegraphed to Mussolini asking him to intervene, a message was handed to him: it was an invitation from Hitler to Chamberlain and Daladier to meet himself and Mussolini at Munich the next day. At this meeting, to which no Czech representative was admitted, the dismemberment of Czecho-Slovakia in accordance with Hitler's demands was confirmed. On his return Chamberlain was wildly acclaimed. He brought with him a document signed by Hitler and himself in which each agreed that any differences between their two countries should be resolved by peaceful means. Before cheering crowds in Downing Street, Chamberlain claimed that he had brought back "peace with honour," adding: "I believe it is peace for our time." See Munich Agreement.

**Municipal Bank.** The only bank owned by a municipality in England is that of Birmingham, established in 1916 largely by the efforts of Neville Chamberlain, then lord mayor. It has for objects the receipt of deposits and their use primarily as loans to depositors for the purchase of dwelling houses and land in Birmingham. The bank is managed by a committee appointed annually by the city corporation. With certain exceptions, it restricts the amount of money which may be deposited annually, and withdrawn at any one time, by the depositors, to whom it allows interest. In 1946 the amount standing to the credit of depositors was £74,281,359, more than half in government securities.

**Municipal Corporations Act.** Measure passed by the parliament of the U.K. in 1835 for reforming the municipal corporations of England and Wales. Until then the boroughs were governed in a great variety of ways, and the corporations were frequently corrupt and never democratic. The Act provided a uniform constitution for all boroughs, which were

to have a council composed of mayor, aldermen, and councillors. Another Municipal Corporations Act followed in 1882. To look after

**Munich Crisis.** Neville Chamberlain acclaimed at Downing Street on his return from Munich, September 30, 1938, when he "believed that he had brought back 'peace for our time'."

the interests of these bodies there is in London an Association of Municipal Corporations.

**Municipal Election.** Election of the members of a borough (or burgh) council in the U.K. Councillors are chosen for three years, but one-third of the council retires annually, so that municipal elections occur every year. The mayor and aldermen are elected by the councillors, the former for one and the latter for six years. Regulations for municipal elections are laid down in the Municipal Corporations Act of 1882, as subsequently amended. By the Representation of the People Act, 1945, the franchise, previously confined to owners or tenants of premises, was extended to all those qualified to vote in parliamentary elections. See Borough; Election; Local Government.

**Municipality.** Word derived from the Latin *municipium*. a term which was applied to urban communities subject to Rome, whose members were liable to all the burdens of Roman citizenship and enjoyed the more important of its privileges. These privileges included a large measure of local autonomy. At the present day the word is used to connote any corporate city or town organized for self-government. See Borough.

**Municipal Trading.** Term to denote the provision by a local authority of a service or commodity for which a direct charge is made. Commoner forms of municipal trading are the supply of water, gas, electricity, tram and bus services, markets, baths and swimming baths, cemeteries, housing, and meals (in civic restaurants, canteens, etc.). A trading element may enter into the collection and disposal of refuse and salvage, maternity hospitals and other medical services, smallholdings, private street works, parks and places of recreation. Some local authorities own harbours, docks, piers, canals, quays, and ferries. Birmingham has a Municipal bank (*q.v.*).

Since 1900 there has been a great growth in municipal trading, partly as an expression of civic spirit—as an alternative to the control of private utility supply companies—to meet needs not met by private enterprise; and partly as a result of two wars. Some municipalities protested strongly against the complete substitution of regional or national control for municipal control of undertakings concerned with electricity, gas, and transport. Housing and Town Planning Acts have increased the opportunities for municipal trading in building materials, domestic fittings, etc.

Proposed extensions of municipal trading are a frequent cause of acute controversy. In their favour it is argued that the local authority can divert to public use profits that would otherwise accrue to monopolists; that prices can be reduced and services improved; that public health can be advanced. Those opposing municipal trading claim that it is seldom so efficient as private enterprise since it lacks the spur of competition; that it creates opportunities for corruption; that it generally increases rates.

In 1942-43 the receipts of local authorities in England and Wales from trading services and the corresponding expenditure (given in brackets) were as follows (in £ millions): cemeteries, 1.4 (2.2); water, 25.6 (27.4); gas, 26.3 (26.1); electricity, 76.2 (76.3); transport, 34.3 (33.1); harbours, docks, piers, canals, and quays, 13.3 (15.0); other trading services, 12.1 (12.8). Expenditure includes contributions to sinking funds for the repayment of capital.

**Muni River Settlements** OR RIO MUNI. Mainland portion of the colony of Spanish Guinea (*q.v.*).

**Munitions** (Lat. *munire*, to fortify). Term originally applied to the projectiles discharged from firearms, as distinct from armaments, which referred to the actual weapons. In modern warfare, however, the term munitions covers all warlike equipment and stores except clothing and food.

Until the First Great War each of the fighting services of Great Britain was responsible for the supply of its own munition requirements and the development and production of new weapons, most of the demands being met through the royal ordnance factories. But when the war began, the method of supplying munitions proved inadequate to arming and equipping the increasing numbers of men being absorbed into the army. Munition factories were dependent upon Germany for many essential components and materials, including sulphuric acid and toluol, which were essential in the manufacture of high explosives.

During the campaign of 1914-15, the British c.-in.-c. repeatedly complained that his artillery ammunition was so scarce that guns had to be rationed to four rounds a day, while the infantry were obliged to make their own hand-grenades from empty jam and meat tins. At that time, munition plants were working at half-pressure, few were running night shifts, and trade union regulations hampered production. There was a lack of coordination between the munition demands of the navy and army, and these services frequently overlapped each other in the placing of contracts for even the same type of article.

Despite the complaints of commanders in the field, the govt. emphatically denied any shortage, and on April 20, 1915, Asquith, the prime minister, quoting Lord Kitchener, minister for War, dismissed the criticisms as mischievous. On May 14, 1915, the military correspondent of *The Times* stated that British operations at Festubert had failed because of the lack of suitable ammunition for reducing German strongpoints. A week later an article in the *Daily Mail* accused Kitchener of starving the army of high explosive shells. Although these articles aroused some resentment, it was difficult to deny the allegations, and on June 9, 1915, the govt. established a Ministry of Munitions to expedite and control production of munitions of war for army and navy. Lloyd George resigned office as chancellor of the exchequer to

organize the new department, and within a few months the ministry was turning out war material on an increasing scale. Strikes and lock-outs were forbidden, and profits limited. Munition towns were built at Gretna and elsewhere, and by the end of the war 2,300,000 men and 900,000 women were employed on munitions. The total expenditure of the ministry from its inception until 1920, when it was succeeded by a disposals board, was £2,019,507,941. The ministry was also responsible for the development of new equipment, and designed special devices for specific military requirements.

In Aug., 1939, the British govt., seeking to avoid repetition of the 1914-15 munition problem in any future war, set up a ministry of

Sir Alfred Munnings, P.R.A., 1944-49. This distinguished painter of horses at work in his studio. The canvas portrays the start of a race at Newmarket

Supply to direct and coordinate production of all war materials for the army. The navy and R.A.F. were not at first within its purview. It was given wide powers over labour and materials. Eventually the ministries of Supply and of Aircraft Production became responsible for the development, production, and distribution of munitions, equipment, and clothing to the army, navy, and R.A.F. In 1943, the peak period of production, 4,250,000 men and women were engaged on munitions. After the war the ministry of Aircraft Production was merged into that of Supply, which continued to function as a purchasing agency for the government rehabilitation schemes. See Supply, Ministry of.

**Munkacsy, MICHAEL** (1844-1900). Hungarian painter. Born at Munkacsy, Feb. 20, 1844, he was really named Lieb. After a youth spent in poverty he studied at the art society in Pest and made his way to Vienna, Munich, and Düssel-

dorf where he painted the *Last Days of a Condemned Prisoner*. In 1872 he settled in Paris, where his *Milton Dictating Paradise Lost* won a medal in 1878. After a brilliant career he became insane and died at Enderich, Germany, May 1, 1900. He is best known by his immense religious pictures, *Christ Before Pilate*, and *The Crucifixion*, sold for more than £30,000 each, and *Ecce Homo*. *The Apotheosis of the Renaissance* was painted for the ceiling of the Austrian art historical museum, 1884. *Pron. Moonkachy*.

**Munku Sardyk**. Sacred mountain of Central Asia. On the borders of Outer Mongolia, Tannu-Tuva, and the Buriat-Mongol republic of Russia, it is 7 m. N. of Kossogol, and from its glaciers rise the Oka, Irkut, and Ulu-kem, one of the head-streams of the Yenisei. It was first ascended by Radde in 1859. Graphite is found near. Alt. 11,450 ft.

**Munnings, SIR ALFRED JOHN** (b. 1878). British painter. Born at Mendham, Suffolk, Oct. 8, 1878, he studied art at Norwich and Paris. He early made a reputation as a painter of horses, first exhibiting at Burlington House in 1898, and rendered scenes of race meetings, e.g. *Epsom Downs, Derby Week*, also of hunts and gipsy life. In the Tate Gallery are his *City and Suburban Day: From My Bedroom Window*; *Their Majesties Return from Ascot*. Elected A.R.A. 1919 and R.A. 1925, he was a stubborn opponent of modern art. He was president of the R.A. 1944-49 and was knighted 1944.

**Munro, HECTOR HUGO** (1870-1916). British writer, especially of short stories, under the pseudonym Saki. Born in Burma, he was at school at Exmouth and Bedford before joining the Burma mounted police. He began about 1890 to write articles as Saki in the *Westminster Gazette*, and political satires, e.g. *The Westminster Alice*. Short stories, many of them models of compression, were collected in several volumes, including *Reginald*, 1904; *Reginald in Russia*; *The Chronicle of Clovis*. They show a mastery of form allied to a biting wit and an outstanding gift of describing the macabre. A novel, *The Unbearable Bassington*, anticipated ten-

Hector H. Munro ("Saki"), British novelist *Hoppé*

dencies of post-war satires. He wrote *The Toys of Peace*, to which a memoir by R. Reynolds was added in 1919; *The Square Egg*, with biography by E. Munro, 1924. Munro, who acted as correspondent in St. Petersburg and Paris 1902-08, served in the First Great War and was killed Nov. 14, 1916, near Beaumont-Hamel.

**Munro, Hugo Andrew Johnstone** (1819-85). British scholar. Born at Elgin, Oct. 19, 1819, he was educated at Shrewsbury and Trinity College, Cambridge. A brilliant classical scholar, he became fellow and lecturer at Trinity and was professor of Latin in the university, 1869-72. He died in Rome, March 30, 1885. Munro's reputation rests on his edition and translation of Lucretius, 1860-64, regarded as one of the finest modern examples of classical scholarship. He also wrote *Criticisms and Elucidations of Catullus*, 1878.

**Munro, Neil** (1864-1930). Scottish novelist, born at Inveraray, June 3, 1864. He became editor of

Neil Munro,  
Scottish novelist

the *Glasgow Evening News* in 1918. He had attracted attention by stories collected as *The Lost Pibroch*, 1896. Many of his tales had a setting in the Western High-

lands; they included *John Splendid*, 1898; *Doom Castle*, 1901; *Fancy Farm*, 1910; *The New Road*, 1914; *Jaunty Jock*, 1918. Munro, who also wrote humorous character studies under the pseudonym of Hugh Foulis, died on December 22, 1930.

**Munro, Sir Thomas** (1761-1827). British soldier and administrator. Born May 27, 1761, the son of a Glasgow

merchant, he entered the service of the East India Company as an infantry cadet in 1780, participating in operations

Sir Thomas Munro,  
British soldier  
After M. A. Shee, R.A.

against Haider Ali. He was engaged in civil administration 1792-99, and then served against Tippeco Sahib. Later he was appointed administrator of Kanara. Returning home in 1807, he went out again to Madras in 1814 on a mission of administrative reform, but his work being inter-

rupted by a fresh Mahratta war he defeated the Peshwa in a brilliant campaign. From 1819 until his death from cholera, July 6, 1827, he was governor of Madras.
